If the function needs more parameter, undefined values are used to fill up.
If the function needs less parameters, additional ones are dropped.

Returns the result of the function converted to a variant.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
See also:

- 103.3.8 CallFunctionMT(Name as String, ParamArray Params as Variant) as Variant 17995

103.3.10 DateComponentsToTime(date as JavaScriptDateComponentsMBS) as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts date components to time.
Example:

```
Dim j As New JavaScriptEngineMBS

Dim d As New JavaScriptDateComponentsMBS
d.Year = 1970
d.Month = 1
d.day = 1

// shows zero as that's the start point in time for unix
MsgBox "Start Time: "+Str(j.DateComponentsToTime(d))
```

Notes:

Convert components (year, month, day, etc), interpreted in UTC, into a time value. The weekday argument is ignored in the conversion. If the component values are invalid, an error is thrown.

There are some differences to the ECMAScript Date.UTC() built-in:

- There's no special handling of two-digit years. For example, Date.UTC(99, 0, 1) gets interpreted as 1999-01-01. If time is 99, it's interpreted as the year 99.
- The milliseconds component is allowed fractions (sub-millisecond resolution) so that the resulting time value may have fractions.

Like the ECMAScript primitives, the components can exceed their natural range and are normalized. For example, specifying minute as 120 is interpreted as adding 2 hours to the time value. The components are expressed as Integers to allow large and negative values to be used.

103.3.11 Destructor

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

103.3.12 Evaluate(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Example:

```
Dim j As New JavaScriptEngineMBS

Dim v As Variant = j.Evaluate("2+3")
MsgBox v.StringValue
```

Notes:

This may include definition of functions and objects and using them.
Result is converted to variant and returned.

103.3.13 EvaluateMT(JavaScript as String) as Variant

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Notes:

Threaded version of Evaluate. If events or delegates are called on main thread, the preemptive thread waits for answer.

This may include definition of functions and objects and using them.
Result is converted to variant and returned.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

103.3.14 EvaluateToString(JavaScript as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a JavaScript expression.
Example:

```
Dim j As New JavaScriptEngineMBS

Dim s As String = j.EvaluateToString("2+3")
MsgBox s
```

Notes:

This may include definition of functions and objects and using them.
Result is converted to string in JavaScript and returned as Xojo string.

103.3.15 LoadFunction(Name as String, Data as Memoryblock) as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads a global function from byte code.
Example:

```
Dim j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
```

```
Dim m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
dim b as Boolean = j.LoadFunction("adder2", m)

// call it
Dim r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes:

Load a buffer containing bytecode, recreating the original ECMAScript function (with some limitations). You must ensure that the bytecode has been dumped with a compatible Duktape version and that the bytecode has not been modified since. Loading bytecode from an untrusted source is memory unsafe and may lead to exploitable vulnerabilities.

Returns true in case of success or false on failure.

103.3.16 Now as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current time as double value.
Notes:

This is seconds since 1st January 1970 multiplied by 1000 and may contain fraction with microseconds.

Get current time in POSIX milliseconds, as seen by the ECMAScript environment. The return value matches Date.now() with the reservation that sub-millisecond resolution may be available.

103.3.17 RegisterFunction(Name as String, theDelegate as JavaScriptEngineDelegateMBS, ArgCount as Integer = -1, tag as Variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers a global function with given name to call delegate.
Example:

```
Dim j As New JavaScriptEngineMBS

j.RegisterFunction "MyFunction", AddressOf testFunction, 1, Nil

// call in JavaScript
```

```
Dim x As Variant = j.Evaluate("MyFunction(123);")

// call via plugin
Dim r As Variant = j.CallFunction("MyFunction", "Hello")

Break

'Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
' MsgBox params(0).StringValue
' Return "ok"
'End Function
```

Notes:

ArgCount can be in range from -1 to 15.
If -1 is passed, we allow variable number of arguments.
Tag is passed to delegate and allows you to pass a context object to the delegate.

103.3.18 SaveFunction(Name as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries byte code for global JavaScript function.
Example:

```
Dim j As New JavaScriptEngineMBS

// just add a function
j.AddFunction "adder", "function (x,y) { return x+y; } "

// get byte code
Dim m As MemoryBlock = j.SaveFunction("adder")

// and load back with new name
dim b as Boolean = j.LoadFunction("adder2", m)

// call it
Dim r As Variant = j.CallFunction("adder2", 2, 3)
break // check result in debugger
```

Notes: Dump an ECMAScript function at stack top into bytecode, replacing the function with a buffer containing the bytecode data. The bytecode can be loaded back using LoadFunction().

103.3.19 TimeToDateComponents(time as Double) as JavaScriptDateComponentsMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts time to date components.
Example:

```
Dim j As New JavaScriptEngineMBS

// get now
Dim t1 As Double = j.Now

// as compoents
Dim d1 As JavaScriptDateComponentsMBS = j.TimeToDateComponents(t1)
Dim s1 As String = d1.SQLDateTime
// looks right?

Break
```

Notes:

Convert a time value to components (year, month, day, etc) interpreted in UTC. If the time value is invalid, e.g. beyond the valid ECMAScript time range, an error is thrown.

There are some differences to the ECMAScript Date UTC accessors like Date.prototype.getUTCMinutes():

The time value is allowed to have fractions (sub-millisecond resolution) so that the millisecond component may also have fractions.

103.3.20 Properties

103.3.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.3.22 MemoryBlocks as Dictionary

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with references memoryblocks.
Notes:

Just for debugging to inspect.
Memoryblocks need to stay here to avoid them being destructed too early, which can cause crashes.
(Read only property)

103.3.23 ObjectCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries global object counter.
Notes:

A fresh JavaScript engine already has about 400 objects for the built-in functionality.
(Read only property)

103.3.24 StringCount as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries global string counter.
Notes:

A fresh JavaScript engine already has about 1000 strings.
(Read only property)

103.3.25 GlobalMemoryBlock(PropertyName as String) as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query or assign a global property to reference memoryblock.
Notes:

A normal memoryblock passed as parameter to a function or property would be copied.
This method allows you to define a buffer in JavaScript to reference the bytes in a memoryblock, so all changes are visible in Xojo directly.

You can assign nil as value to clear a memoryblock.
(Read and Write computed property)

103.3.26 GlobalProperty(PropertyName as String) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a global property.
Example:

```
Dim j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MsgBox j.GlobalProperty("Hello")
```

Notes:

Values are converted to/from variant.
(Read and Write computed property)

103.3.27 GlobalPropertyJSON(PropertyName as String) as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a global property as JSON.
Example:

```
Dim j As New JavaScriptEngineMBS

j.GlobalProperty("Hello") = "World"
MsgBox j.GlobalPropertyJSON("Hello")

j.GlobalPropertyJSON("test") = " [ 1,2,3 ] "
MsgBox j.GlobalPropertyJSON("test")
```

Notes:

Same as GlobalProperty, but needs JSON text.
(Read and Write computed property)

103.3.28 Events

103.3.29 Input(values() as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The input event.
Notes:

Called in JavaScript with Input() function call.
Takes variable number of arguments, which are provided as variants here.
Return a value, which we pass through to JavaScript as function result.

103.3.30 Print(values() as Variant)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The print event.
Notes:

Called in JavaScript with Print() function call.
Takes variable number of arguments, which are provided as variants here.

103.3.31 Delegates

103.3.32 JavaScriptEngineDelegateMBS(Name as String, Params() as Variant, tag as Variant) as Variant

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The delegate definition for RegisterFunction function.
Example:

```
Public Function testFunction(Name as String, Params() as Variant, tag as Variant) as Variant
MsgBox params(0).StringValue
Return "ok"
End Function
```

Notes:

We pass name of function, parameters and tag value.
Result is returned to JavaScript.

103.4 class JSClassMBS

103.4.1 class JSClassMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The class for a class in javascript.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

103.4.2 Methods

103.4.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The private constructor.

103.4.4 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript object for current class.

103.4.5 Properties

103.4.6 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The context for this class.
Notes: (Read only property)

103.4.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The handle for the class object.
Notes: (Read and Write property)

103.4.8 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The tag value.
Notes:

You can store anything here and as long as the JSClass object exists, this value is kept referenced.
(Read and Write property)

103.5 class JSContextMBS

103.5.1 class JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The class for a javascript execution context.
Example:

```
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSValueMBS = c.EvaluateScript("1+2", "", nil, e)

if e <>nil then
// show error
MsgBox e.StringValue
else
// show result
MsgBox str(v.doubleValue)
end if
```

Notes: See also JavaScriptEngineMBS class for cross platform projects.

103.5.2 Methods

103.5.3 CheckScriptSyntax(script as string, sourceURL as String, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Checks for syntax errors in a string of JavaScript.
Example:

```
dim c as new JSContextMBS
dim e as JSValueMBS
if c.CheckScriptSyntax("1+", "", e) then
MsgBox "OK"
else
// show error

MsgBox e.StringValue
end if
```

Notes:

Script: A string containing the script to check for syntax errors.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValue in which to store a syntax error exception, if any.

Returns true if the script is syntactically correct, otherwise false.

103.5.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: Creates a global JavaScript execution context.

103.5.5 EvaluateScript(script as string, sourceURL as String, thisObject as JSValueMBS, startingLineNumber as Integer = 1, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Evaluates a string of JavaScript.
Example:

```
dim c as new JSContextMBS
dim e as JSValueMBS
dim v as JSValueMBS = c.EvaluateScript("1+", "", nil, e)

if e <>nil then
// show error
MsgBox e.StringValue
else
// show result
MsgBox str(v.doubleValue)
end if
```

Notes:

script: A string containing the script to evaluate.

thisObject: The object to use as "this," or nil to use the global object as "this."
sourceURL: A string containing a URL for the script's source file. This is used by debuggers and when reporting exceptions. Pass "" if you do not care to include source file information.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from evaluating script, or nil if an exception is thrown.

103.5.6 GarbageCollect

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Performs a JavaScript garbage collection.
Notes:

JavaScript values that are on the machine stack, in a register, protected by JSValueProtect, set as the global object of an execution context, or reachable from any such value will not be collected.

During JavaScript execution, you are not required to call this function; the JavaScript engine will garbage collect as needed. JavaScript values created within a context group are automatically destroyed when the last reference to the context group is released.

103.5.7 NewArray(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript Array object.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSObjectMBS = c.NewArray(nil, e)
v.SetPropertyAtIndex(0, c.valueWithString("Hello"), e)
v.SetPropertyAtIndex(1, c.valueWithString("World"), e)
MsgBox v.JSONString
```

Notes:

arguments: A JSValue array of data to populate the Array with.

JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is an Array.
The behavior of this function does not exactly match the behavior of the built-in Array constructor. Specifically, if one argument is supplied, this function returns an array with one element.
Requires Mac OS X 10.6 or newer.

103.5.8 NewDate(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript Date object, as if by invoking the built-in Date constructor.
Example:

```
dim c as new JSContextMBS

dim year as JSValueMBS = c.valueWithDouble(2015)
dim month as JSValueMBS = c.valueWithDouble(5)
dim day as JSValueMBS = c.valueWithDouble(12)

dim e as JSValueMBS // exception
dim d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox d.JSONString
```

Notes:

arguments: A JSValue array of arguments to pass to the Date Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a Date.
Requires Mac OS X 10.6 or newer.

103.5.9 NewError(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript Error object, as if by invoking the built-in Error constructor.
Example:

```
dim c as new JSContextMBS

dim parameters() as JSValueMBS
Parameters.Append c.valueWithString("Hello")
```

```
dim ex as JSValueMBS
dim e as JSValueMBS = c.NewError(Parameters, ex)
MsgBox e.StringValue
```

Notes:

arguments: A JSValue array of arguments to pass to the Error Constructor.
JSException: A JSValueMBS in which to store an exception, if any.

Returns a JSObject that is a Error.
Requires Mac OS X 10.6 or newer.

103.5.10 NewFunction(name as string) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Convenience method for creating a JavaScript function which raises FunctionCalled event on invokation.
Notes:

name: A string containing the function's name. This will be used when converting the function to string. Pass NULL to create an anonymous function.
Returns a JSObject that is a function. The object's prototype will be the default function prototype.
See also:

- 103.5.11 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS 18011

103.5.11 NewFunction(name as string, parameterNames() as string, Body as String, SourceURL as string = "", startingLineNumber as Integer = 0, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a function with a given script as its body.
Example:

```
dim c as new JSContextMBS

// create a function
dim parameterNames() as string = array("value")
dim body as string = "return value*value;"
```

```
dim name as string = "test"

dim e as JSValueMBS
dim v as JSValueMBS = c.NewFunction(name, parameterNames, body, e )

MsgBox v.StringValue

// put it in global memory
c.globalObject.SetProperty "test", v, e

// and call it
dim r as JSValueMBS = c.EvaluateScript("test(5)", "", nil, e)
MsgBox r.StringValue
```

Notes:

name: A string containing the function's name. This will be used when converting the function to string. Pass "" to create an anonymous function.
parameterNames: A string array containing the names of the function's parameters.
body: A string containing the script to use as the function's body.
sourceURL: A string containing a URL for the script's source file. This is only used when reporting exceptions. Pass "" if you do not care to include source file information in exceptions.
startingLineNumber: An integer value specifying the script's starting line number in the file located at sourceURL. This is only used when reporting exceptions. The value is one-based, so the first line is line 1 and invalid values are clamped to 1.
exception: A JSValueMBS in which to store a syntax error exception, if any. Pass nil if you do not care to store a syntax error exception.
A JSObject that is a function, or nil if either body or parameterNames contains a syntax error. The object's prototype will be the default function prototype.
Use this method when you want to execute a script repeatedly, to avoid the cost of re-parsing the script before each execution.
See also:

- 103.5.10 NewFunction(name as string) as JSObjectMBS 18011

103.5.12 NewObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a new object.

103.5.13 NewRegExp(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript RegExp object, as if by invoking the built-in RegExp constructor.
Notes:

arguments: A JSValue array of arguments to pass to the RegExp Constructor.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSObject that is a RegExp.
Requires Mac OS X 10.6 or newer.

103.5.14 valueWithBool(value as boolean) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript value of the boolean type.
Example:

```
dim c as new JSContextMBS
dim v as JSValueMBS = c.valueWithBool(true)
MsgBox v.JSONString
```

103.5.15 valueWithDouble(value as Double) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript value of the number type.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithDouble(5.6)
MsgBox v.StringValue
```

103.5.16 valueWithJSON(JSON as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript value from a JSON formatted string.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
dim o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

dim e as JSValueMBS
dim p as JSValueMBS = o.GetProperty("length", e)

MsgBox p.StringValue // shows 3
```

Notes:

Returns a JSValue containing the parsed value, or nil if the input is invalid.
Available on Mac OS X 10.7 and newer

103.5.17 valueWithNull as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript value of the null type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
MsgBox "null"
end if
```

103.5.18 valueWithString(value as string) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript value of the string type.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

103.5.19 valueWithUndefined as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript value of the undefined type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
MsgBox "undefined"
end if
```

103.5.20 Properties

103.5.21 globalObject as JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Gets the global object of a JavaScript execution context.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox c.globalObject.JSONString
```

Notes: (Read only property)

103.5.22 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.5.23 Name as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The name.
Example:

```
dim c as new JSContextMBS

c.Name = "Hello"
MsgBox c.Name
```

Notes:

Requires Mac OS X 10.10 and newer.
(Read and Write property)

103.5.24 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The tag value.
Notes:

You can store anything here and as long as the JSContext object exists, this value is kept referenced.
(Read and Write property)

103.5.25 Events

103.5.26 FunctionCalled(functionObject as JSObjectMBS, thisObject as JSObjectMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: .

Function: The event called when your custom function is called.
Notes: Please return a value and in case of error set exception.

103.6 class JSObjectMBS

103.6.1 class JSObjectMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The class for a Javascript Object.
Notes:

Subclass of the JSValueMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

103.6.2 Methods

103.6.3 CallAsConstructor(arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Calls an object as a constructor.
Notes:

self: The JSObject to call as a constructor.
arguments: A JSValueMBS array of arguments to pass to the constructor.
JSException A pointer to a JSValueMBS in which to store an exception, if any.
Returns the JSObject that results from calling object as a constructor, or nil if an exception is thrown or object is not a constructor.

103.6.4 CallAsFunction(thisObject as JSValueMBS, arguments() as JSValueMBS, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Calls an object as a function.
Notes:

self: The JSObject to call as a function.
thisObject: The object to use as "this," or nil to use the global object as "this."
arguments: A JSValueMBS array of arguments to pass to the function.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the JSValue that results from calling object as a function, or nil if an exception is thrown or object is not a function.

103.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The private constructor.

103.6.6 DeleteProperty(name as string, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Deletes a property from an object.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox v.JSONString

call v.DeleteProperty "Hello", e

MsgBox v.JSONString
```

Notes:

Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if the delete operation succeeds, otherwise false (for example, if the property has the kJSPropertyAttributeDontDelete attribute set).

103.6.7 GetProperty(name as string, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Gets a property from an object.
Example:

```
dim c as new JSContextMBS
```

```
dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e

MsgBox v.GetProperty("Hello", e).StringValue
```

Notes:

object: The JSObject whose property you want to get.
Name: A string containing the property's name.
JSException: A JSValueMBS in which to store an exception, if any.
Returns the property's value if object has the property, otherwise the undefined value.

103.6.8 GetPropertyAtIndex(propertyIndex as Integer, byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Gets a property from an object by numeric index.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithJSON(" [ 1,2,3 ] ")
dim o as JSObjectMBS = JSObjectMBS(v) // arrays are objects

dim e as JSValueMBS
dim p as JSValueMBS = o.GetProperty("length", e)

MsgBox "Length: "+p.StringValue

dim n as JSValueMBS = o.GetPropertyAtIndex(2, e)
MsgBox "3rd value in array: "+n.StringValue
```

Notes:

The JSObject whose property you want to get.
propertyIndex: An integer value that is the property's name.
JSException: A JSValueMBS in which to store an exception, if any.

Returns the property's value if object has the property, otherwise the undefined value.

Calling GetPropertyAtIndex is equivalent to calling GetProperty with a string containing propertyIndex, but GetPropertyAtIndex provides optimized access to numeric properties.

103.6.9 HasProperty(name as string) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether an object has a given property.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSObjectMBS = c.NewArray(nil, e)
MsgBox str(v.HasProperty("length"))
```

Notes:

name: A string containing the property's name.
Returns true if the object has a property whose name matches propertyName, otherwise false.

103.6.10 PropertyNames as String()

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Gets the names of an object's enumerable properties.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e

MsgBox Join(v.PropertyNames, EndOfLine)
```

103.6.11 SetProperty(name as string, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Sets a property on an object.
Example:

```
dim c as new JSContextMBS

dim v as JSObjectMBS = c.globalObject
dim e as JSValueMBS

v.SetProperty "Hello", c.valueWithString("World"), e
v.SetProperty "Value", c.valueWithDouble(5), e
```

Notes:

Name: A string containing the property's name.
Value: A JSValue to use as the property's value.
JSException A pointer to a JSValueRef in which to store an exception, if any.

103.6.12 SetPropertyAtIndex(propertyIndex as Integer, value as JSValueMBS, byref JSException as JSValueMBS)

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Sets a property on an object by numeric index.
Notes:

propertyIndex: The property's name as a number.
value: A JSValue to use as the property's value.
exception: A JSValueMBS in which to store an exception, if any.

Calling SetPropertyAtIndex is equivalent to calling SetProperty with a string containing propertyIndex, but SetPropertyAtIndex provides optimized access to numeric properties.

103.6.13 Properties

103.6.14 isConstructor as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether an object can be called as a constructor.
Notes:

Returns true if the object can be called as a constructor, otherwise false.
(Read only property)

103.6.15 isFunction as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether an object can be called as a function.
Example:

```
dim c as new JSContextMBS
dim f as JSObjectMBS = c.NewFunction("Hello")

MsgBox str(f.isFunction)
```

Notes:

Returns true if the object can be called as a function, otherwise false.
(Read only property)

103.6.16 Prototype as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: An object's prototype.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

dim o as JSObjectMBS = JSObjectMBS(j)
MsgBox "object prototyp: "+o.Prototype.StringValue
```

Notes: (Read and Write property)

103.7 class JSValueMBS

103.7.1 class JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The class for a Javascript value.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(1)
MsgBox j.StringValue
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

103.7.2 Methods

103.7.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The private constructor.

103.7.4 DoubleValue(byref JSException as JSValueMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Converts a JavaScript value to number and returns the resulting number.
Notes: Returns the numeric result of conversion, or NaN if an exception is thrown.
See also:

- 103.7.15 doubleValue as Double 18026

103.7.5 IsEqual(OtherValue as JSValueMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether two JavaScript values are equal, as compared by the JS == operator.
Example:

```
dim c as new JSContextMBS
dim s1 as JSValueMBS = c.valueWithJSON("""Hello""")
dim s2 as JSValueMBS = c.valueWithJSON("""Hello""")
dim e as JSValueMBS
MsgBox str(s1.IsEqual(s2, e))
```

Notes:

OtherValue The second value to test.
exception: A JSValueMBS in which to store an exception, if any.
Returns true if the two values are equal, false if they are not equal or an exception is thrown.

103.7.6 IsInstanceOfConstructor(ConstructorFunction as JSObjectMBS, byref JSException as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value is an object constructed by a given constructor, as compared by the JS instanceof operator.
Notes:

ConstructorFunction: The constructor to test against.
JSException: A JSValueMBS in which to store an exception, if any.
Returns true if value is an object constructed by constructor, as compared by the JS instanceof operator, otherwise false.

103.7.7 IsObjectOfClass(ClassObject as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value is an object with a given class in its class chain.
Notes:

ClassObject The JSClass to test against.
Returns true if value is an object and has jsClass in its class chain, otherwise false.

103.7.8 IsStrictEqual(OtherValue as JSValueMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether two JavaScript values are strict equal, as compared by the JS === operator.
Example:

```
dim c as new JSContextMBS
dim j1 as JSValueMBS = c.valueWithDouble(1)
dim j2 as JSValueMBS = c.valueWithDouble(2)

MsgBox str(j1.IsStrictEqual(j2)) // false
MsgBox str(j1.IsStrictEqual(j1)) // true
```

Notes:

OtherValue: The second value to test.
Returns true if the two values are strict equal, otherwise false.

103.7.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"":""Hello"", ""value"":1 } ")
dim e as JSValueMBS
MsgBox j.JSONString(5, e)
```

Notes:

Requires Mac OS X 10.7 and newer.

The number of spaces to indent when nesting. If 0, the resulting JSON will not contains newlines. The size of the indent is clamped to 10 spaces.
JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of serialization, or nil if an exception is thrown.
See also:

- 103.7.25 JSONString as string 18031

103.7.10 ObjectValue(byref JSException as JSValueMBS) as JSValueMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Converts a JavaScript value to object and returns the resulting object.
Notes:

JSException: A JSValueMBS in which to store an exception, if any.
Returns the JSObject result of conversion, or nil if an exception is thrown.

103.7.11 StringValue(byref JSException as JSValueMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Notes:

JSException: A JSValueMBS in which to store an exception, if any.
Returns a JSString with the result of conversion, or nil if an exception is thrown.
See also:

- 103.7.26 StringValue as String 18031

103.7.12 Properties

103.7.13 booleanValue as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Converts a JavaScript value to boolean and returns the resulting boolean.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.booleanValue)
```

Notes: (Read only property)

103.7.14 context as JSContextMBS

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The context for this value.
Notes: (Read only property)

103.7.15 doubleValue as Double

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Converts a JavaScript value to number and returns the resulting number.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(5.3)
MsgBox str(j.doubleValue)
```

Notes:

Returns the numeric result of conversion, or NaN if an exception is thrown.
(Read only property)
See also:

- 103.7.4 DoubleValue(byref JSException as JSValueMBS) as Double 18023

103.7.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

103.7.17 isArray as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value is an array.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isArray)
```

Notes:

Returns true if value is an array, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

103.7.18 isBoolean as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value's type is the boolean type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)
MsgBox str(j.isBoolean)
```

Notes:

Returns true if value's type is the boolean type, otherwise false.
(Read only property)

103.7.19 isDate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value is a date.
Example:

```
dim c as new JSContextMBS

dim year as JSValueMBS = c.valueWithDouble(2015)
dim month as JSValueMBS = c.valueWithDouble(5)
dim day as JSValueMBS = c.valueWithDouble(12)

dim e as JSValueMBS // exception
dim d as JSValueMBS = c.NewDate(array(year, month, day), e)

MsgBox str(d.isDate)
```

Notes:

Returns true if value is a date, otherwise false.
Requires OS X 10.11 or newer.
(Read only property)

103.7.20 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value's type is the null type.
Example:

```
dim c as new JSContextMBS
dim n as JSValueMBS = c.valueWithNull

MsgBox str(n.isNull)
```

Notes:

Returns true if value's type is the null type, otherwise false.
(Read only property)

103.7.21 isNumber as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value's type is the number type.
Example:

```
dim c as new JSContextMBS

dim j as JSValueMBS = c.valueWithDouble(5)
MsgBox str(j.isNumber)
```

Notes:

Returns true if value's type is the number type, otherwise false.
(Read only property)

103.7.22 isObject as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value's type is the object type.
Example:

```
dim c as new JSContextMBS

dim e as JSValueMBS
dim v as JSValueMBS = c.NewArray(nil, e)

MsgBox str(v.isObject)
```

Notes:

Returns true if value's type is the object type, otherwise false.
(Read only property)

103.7.23 isString as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value's type is the string type.
Example:

```
dim c as new JSContextMBS
dim s as JSValueMBS = c.valueWithJSON("""Hello""")
MsgBox str(s.isString)
```

Notes:

Returns true if value's type is the string type, otherwise false.
(Read only property)

103.7.24 isUndefined as Boolean

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Tests whether a JavaScript value's type is the undefined type.
Example:

```
dim c as new JSContextMBS

dim j as JSValueMBS = c.valueWithUndefined
MsgBox str(j.isUndefined)
```

Notes:

Returns true if value's type is the undefined type, otherwise false.
(Read only property)

103.7.25 JSONString as string

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Creates a JavaScript string containing the JSON serialized representation of a JS value.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.JSONString
```

Notes:

Requires Mac OS X 10.7 and newer.
(Read only property)
See also:

- 103.7.9 JSONString(indent as Integer = 0, byref JSException as JSValueMBS) as string 18025

103.7.26 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Converts a JavaScript value to string and copies the result into a JavaScript string.
Example:

```
dim c as new JSContextMBS

dim v as JSValueMBS = c.valueWithString("Hello")
MsgBox v.StringValue
```

Notes:

Returns a JSString with the result of conversion, or NULL if an exception is thrown.
(Read only property)
See also:

- 103.7.11 StringValue(byref JSException as JSValueMBS) as string 18026

103.7.27 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: The tag value.
Notes:

You can store anything here and as long as the JSValue object exists, this value is kept referenced.
(Read and Write property)

103.7.28 Type as Integer

MBS MacFrameworks Plugin, Plugin Version: 15.4, Platform: macOS, Targets: All.

Function: Returns a JavaScript value's type.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS

j = c.valueWithDouble(1) // double
'j = c.valueWithNull // null
'j = c.valueWithUndefined // undefined
'j = c.valueWithString("Hello") // string
'j = c.valueWithJSON(" { ""tag"": 1 } ") // object
'j = c.valueWithBool(true)

Select case j.Type
case JSValueMBS.kJSTypeUndefined
MsgBox "undefined"
case JSValueMBS.kJSTypeNull
MsgBox "null"
case JSValueMBS.kJSTypeBoolean
MsgBox "boolean "+str(j.booleanValue)
case JSValueMBS.kJSTypeNumber
MsgBox "number "+str(j.doubleValue)
case JSValueMBS.kJSTypeString
MsgBox "string "+j.StringValue
case JSValueMBS.kJSTypeObject
MsgBox "object "+j.JSONString
else
Break
end Select
```

Notes: (Read only property)

103.7.29 Constants

103.7.30 kJSTypeBoolean = 2

MBS MacFrameworks Plugin, Plugin Version: 15.4.

Function: One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithBool(true)

if j.Type = JSValueMBS.kJSTypeBoolean then
MsgBox "boolean "+str(j.booleanValue)
end if
```

Notes: A primitive boolean value, one of true or false.

103.7.31 kJSTypeNull = 1

MBS MacFrameworks Plugin, Plugin Version: 15.4.

Function: One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithNull

if j.Type = JSValueMBS.kJSTypeNull then
MsgBox "null"
end if
```

Notes: The unique null value.

103.7.32 kJSTypeNumber = 3

MBS MacFrameworks Plugin, Plugin Version: 15.4.

Function: One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithDouble(1) // double
```

```
if j.Type = JSValueMBS.kJSTypeNumber then
MsgBox "number "+str(j.doubleValue)
end if
```

Notes: A primitive number value.

103.7.33 kJSTypeObject = 5

MBS MacFrameworks Plugin, Plugin Version: 15.4.

Function: One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithJSON(" { ""tag"": 1 } ")

if j.Type = JSValueMBS.kJSTypeBoolean then
MsgBox "object "+j.JSONString
end if
```

Notes: An object value (meaning that this JSValueMBS is a JSObjectMBS).

103.7.34 kJSTypeString = 4

MBS MacFrameworks Plugin, Plugin Version: 15.4.

Function: One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithString("Hello")

if j.Type = JSValueMBS.kJSTypeString then
MsgBox "string "+j.StringValue
end if
```

Notes: A primitive string value.

103.7.35 kJSTypeUndefined = 0

MBS MacFrameworks Plugin, Plugin Version: 15.4.

Function: One of the type constant identifying the type of a JSValue.
Example:

```
dim c as new JSContextMBS
dim j as JSValueMBS = c.valueWithUndefined

if j.Type = JSValueMBS.kJSTypeUndefined then
MsgBox "undefined"
end if
```

Notes: The unique undefined value.

Chapter 104

JavaScript Object Notation

104.1 class JSONMBS

104.1.1 class JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for JSON object parsing and creating.
Example:

```
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "Hello", JSONMBS.NewNumberNode(1)
o.AddItemToObject "World", JSONMBS.NewNumberNode(2)

MsgBox o.toString
```

104.1.4 Methods

104.1.5 AddItemToArray(item as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an array.
Notes:

If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

104.1.6 AddItemToObject(label as string, value as JSONMBS)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds an item to an object with given label.
Notes:

If you add item from new nodes created with plugin, we add them to the tree.
If you add items from existing node from other JSON tree, we add references.

104.1.7 ArrayItem(index as integer, Clone as Boolean = false) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array item with given index.
Notes:

Added Clone parameter for version 20.4.
If Clone is true, we duplicate the JSON, so the new JSONMBS object does not point to origin JSONMBS object and exist independent.

104.1.8 ArrayItems(Clone as Boolean = false) as JSONMBS()

MBS Util Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array items.
Notes: If Clone is true, we duplicate the JSON, so the new JSONMBS objects do not point to origin JSONMBS object and exist independent.

104.1.9 Child(label as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the Child node for the node with the given label.
Example:

```
dim jv as JSONMBS = JSONMBS.NewStringNode("value")
dim jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox jo.Child("key").ValueString
```

Notes: Similar to JSONItem.Child()

104.1.10 Clone as JSONMBS

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the JSON tree.

104.1.11 Close

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Frees node.
Notes:

No need to call this as destructor does the same.
But this call allows you to release circular references.

104.1.12 Constructor

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty object.
Notes: Lasterror is set.
See also:

- 104.1.13 Constructor(text as string) 18040

104.1.13 Constructor(text as string)

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses the given JSON String into the tree where this node is the root.
Example:

```
dim o as new JSONMBS(" { ""text"":""Hello World"" } ")
MsgBox o.toString
```

Notes:

Lasterror is set.
Text should be UTF-8.

Starting with version 15.0, you may see a ParseError and still have all the content which was parsed until that error.
See also:

- 104.1.12 Constructor 18040

104.1.14 Convert as Variant

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts JSON object to Xojo variant.
Example:

```
// build some JSON:

Dim j As New JSONMBS

j.AddItemToObject "test", JSONMBS.NewNumberNode(123)
j.AddItemToObject "name", JSONMBS.NewStringNode("Joe")

// convert to Dictionary
Dim v As Variant = j.Convert

// and back
Dim o As JSONMBS = JSONMBS.Convert(v)

// show
MsgBox o.toString
```

Notes: Depending on the JSON content, you get variants containing values (string, double, boolean or nil), dictionaries or array of variants.
See also:

- 104.1.15 Convert(value as variant) as JSONMBS 18041

104.1.15 Convert(value as variant) as JSONMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts Xojo variant to JSON object.
Example:

```
Dim d As New Dictionary
dim n as Double = 1/3

d.Value("number") = n // default double handling

// custom formatted number
Dim j As JSONMBS = JSONMBS.NewNumberNode(Str(n, "-0.0000000000"))

d.value("customNumber") = j
d.Value( "int64") = 1000000000000000000
d.Value("uint64") = 8000000000000000000

Dim a() As String
a.Append "Hello"
a.Append "World"

d.Value("array") = a
```

```
d.Value("dictionary") = New Dictionary("a":1, "b":2, "c":3)

Dim r As JSONMBS = JSONMBS.Convert(d)
MsgBox r.toString
```

Notes:

Converts values in variant to matching JSON structures.
Currency is converted to double. Color is converted to integer. Dates are converted to string.
We detect arrays of String, Object, Variant, Single, Double, Int32, Int64, Boolean and Currency and convert them to JSON arrays. Dictionaries are converted to JSON objects with texts for keys.
Anything else can raise an exception about an unsupported type.

Please note that Xojo variants don't make a difference between signed and unsigned integers, so we always convert using signed integers.

With version 19.3, the array/dictionary can also contain JSONMBS objects.
See also:

- 104.1.14 Convert as Variant 18040

104.1.16 DeleteItem(index as Integer)

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an item from an array/object by index.
Example:

```
Dim j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MsgBox j.toString

// delete named item
j.DeleteItem "Hello"

MsgBox j.toString

// delete first item
j.DeleteItem 0

MsgBox j.toString
```

Notes: Index is zero based.
See also:

- 104.1.17 DeleteItem(label as string) 18043

104.1.17 DeleteItem(label as string)

MBS Util Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes a named item from an object.
Example:

```
Dim j As New JSONMBS

j.AddItemToObject "Hello", j.NewStringNode("Testing")
j.AddItemToObject "World", j.NewStringNode("Another node")

MsgBox j.toString

// delete named item
j.DeleteItem "Hello"

MsgBox j.toString

// delete first item
j.DeleteItem 0

MsgBox j.toString
```

See also:

- 104.1.16 DeleteItem(index as Integer) 18042

104.1.18 EqualContent(Other as JSONMBS) as Boolean

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks two JSON objects for equality in content.
Notes: We compare the values, so 1 as number and "1" as text are the same.

104.1.19 Equals(Other as JSONMBS) as Boolean

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two JSON are equal.
Example:

```
dim j1 as JSONMBS = JSONMBS.NewNumberNode(5)
dim j2 as JSONMBS = JSONMBS.NewNumberNode(5)
dim j3 as JSONMBS = JSONMBS.NewNumberNode(6)

if not j1.Equals(j2) then
break // failed
end if

if j3.Equals(j2) then
break // failed
end if

Break // okay
```

Notes:

We compare recursively all nodes.
If structure and values are the same, we return true, otherwise false.
Objects do not need to have same order for entries.

104.1.20 FindValueInArray(Other as JSONMBS, ByContent as boolean = false) as Integer

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries index of value in array.
Example:

```
dim j1 as JSONMBS = JSONMBS.NewIntegerArray(array(3,4,5,6,7))
dim j2 as JSONMBS = JSONMBS.NewNumberNode(5)
dim j3 as JSONMBS = JSONMBS.NewNumberNode(8)
dim j4 as JSONMBS = JSONMBS.NewStringNode("5")

dim index1 as integer = j1.FindValueInArray(j2) // we can find this
dim index2 as integer = j1.FindValueInArray(j3) // value not found
dim index3 as integer = j1.FindValueInArray(j4) // can't find string in number array

if index1 = 2 and index2 = -1 and index3 = -1 then
Break // okay
```

```
else
Break // failed
end if
```

Notes:

Returns zero based index or -1 if not found.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

104.1.21 FindValueInObjectArray(Name as String, Other as JSONMBS, ByContent as boolean = false) as Integer

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries index of value in object array.
Example:

```
dim j1 as JSONMBS = JSONMBS.NewArrayNode
dim j2 as JSONMBS = JSONMBS.NewObjectNode

j2.AddItemToObject "Hello", JSONMBS.NewStringNode("World")
j2.AddItemToObject "ID", JSONMBS.NewStringNode("123")

j1.AddItemToArray j2

dim index1 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("123")) // we can find this
dim index2 as integer = j1.FindValueInObjectArray("ID", JSONMBS.NewStringNode("456")) // value not found
dim index3 as integer = j1.FindValueInObjectArray("xxx", JSONMBS.NewStringNode("123")) // value not found

if index1 = 0 and index2 = -1 and index3 = -1 then
Break // okay
else
Break // failed
end if
```

Notes:

Returns zero based index or -1 if not found.

We look into each object in the array, check if it has a value for the given label and compare that to the one to find.

Version 20.0 or newer allows with ByContent parameter = true to find by content, so number can be found via text.

104.1.22 hasChild(label as string) as Boolean

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a child node for the node with the given label exists.
Example:

```
dim jv as JSONMBS = JSONMBS.NewStringNode("value")
dim jo as JSONMBS = JSONMBS.NewObjectNode

jo.AddItemToObject("key", jv)

// shows { "key": "value" }
MsgBox jo.toString
MsgBox str(jo.hasChild("key"))
```

Notes: Similar to JSONMBS.Child(), but without returning the actual objct.

104.1.23 JSONObjectCount as Integer

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: For debugging, the plugin counts how many JSONMBS objects we have.

104.1.24 NewArrayNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node for an array.
Example:

```
dim n as JSONMBS = JSONMBS.NewArrayNode
MsgBox str(n.Type)+" = "+str(n.kTypeArray)
```

104.1.25 NewBoolNode(value as boolean) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new boolean node.
Example:

```
dim j as JSONMBS = JSONMBS.NewBoolNode(true)
MsgBox j.toString
```

104.1.26 NewDoubleArray(values() as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
dim n() as Double = array(1.0,2,3)
dim j as JSONMBS = JSONMBS.NewDoubleArray(n)
MsgBox j.toString
```

Notes:

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

104.1.27 NewFalseNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new false node.
Example:

```
dim n as JSONMBS = JSONMBS.NewFalseNode
MsgBox str(n.Type)+" = "+str(n.kTypeFalse)
```

Notes: This is a node which represents a boolean false value.

104.1.28 NewInt64Node(value as Int64) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node based on Int64 value.
Example:

```
dim x as int64 = 92233720368547758
dim n as JSONMBS = JSONMBS.NewInt64Node(x)

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

104.1.29 NewIntegerArray(values() as Integer) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
dim n() as Integer = array(1,2,3)
dim j as JSONMBS = JSONMBS.NewIntegerArray(n)
MsgBox j.toString
```

Notes:

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

104.1.30 NewNullNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new null node.
Example:

```
dim n as JSONMBS = JSONMBS.NewNullNode
MsgBox str(n.Type)+" = "+str(n.kTypeNull)
```

Notes: This is a node which represents a nil value.

104.1.31 NewNumberNode(value as Double) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number node.
Example:

```
dim n as JSONMBS = JSONMBS.NewNumberNode(123)
MsgBox str(n.Type)+" = "+str(n.kTypeNumber)
```

See also:

- 104.1.32 NewNumberNode(value as string) as JSONMBS 18049

104.1.32 NewNumberNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 17.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number node with given number as text.
Example:

```
dim n as JSONMBS = JSONMBS.NewNumberNode("92233720368547758")

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

Notes: This allows you to control formatting of large integer and floating point values.
See also:

- 104.1.31 NewNumberNode(value as Double) as JSONMBS 18049

104.1.33 NewObjectNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object node.
Example:

```
dim n as JSONMBS = JSONMBS.NewObjectNode
MsgBox str(n.Type)+" = "+str(n.kTypeObject)
```

104.1.34 NewStringArray(values() as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a json array object with the given values.
Example:

```
dim n() as string = array("Hello", "World")
dim j as JSONMBS = JSONMBS.NewStringArray(n)
MsgBox j.toString
```

Notes:

This is a convenience method to quickly create an array.

Version 17.0 and newer return empty JSON array node in case of empty string array.
Older versions returned nil.

104.1.35 NewStringNode(value as string) as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string node.
Example:

```
// some string with single/double quote and EndOfLine
dim s as string = "Hello'World"+EndOfLine+"this is "" a test."

// make string node
dim j as JSONMBS = JSONMBS.NewStringNode(s)

// get as JSON
dim d as string = j.toString
// show
MsgBox d

// parse again
j = new JSONMBS(d)

MsgBox j.ValueString
```

104.1.36 NewTrueNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new true node.
Example:

```
dim n as JSONMBS = JSONMBS.NewTrueNode
MsgBox str(n.Type)+" = "+str(n.kTypeTrue)
```

Notes: This is a node which represents a boolean true value.

104.1.37 NewUInt64Node(value as UInt64) as JSONMBS

MBS Util Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new node based on UInt64 value.
Example:

```
dim x as UInt64 = 92233720368547758
dim n as JSONMBS = JSONMBS.NewUInt64Node(x)

MsgBox "String: "+n.ValueString+EndOfLine+"ToString: "+n.toString+EndOfLine+"Double: "+str(n.ValueDouble,"-0")+EndOfLine+"Int64: "+str(n.ValueInteger,"-0")
```

104.1.38 Sort

MBS Util Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sorts the JSON array or object.
Example:

```
Dim j As JSONMBS = JSONMBS.NewDoubleArray(Array(123.0,3.1,3.2,5, -5))
j.Sort
MsgBox j.toString
```

Notes:

Sorts either array values or object key names.
If two values in array are both number in type, we compare the numeric values.

104.1.39 SuffixObject(nextItem as JSONMBS) as JSONMBS

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends an array item on a previous item in the same array.
Example:

```
// test code for SuffixObject:
const UseFastMode = true

dim o as JSONMBS = JSONMBS.NewArrayNode

dim startTime as Double = Microseconds
dim last as JSONMBS
for i as Integer = 0 to 10000

dim j as JSONMBS = JSONMBS.NewStringNode("test" + str(i))

# if UseFastMode = False
// slow
o.AddItemToArray(j)

# else
// 10 times faster

if last = nil then
o.AddItemToArray(j)
last = o.ChildNode
else
last = last.SuffixObject(j)
end if
# endif
next

dim endTime as Double = Microseconds

MsgBox (str(endTime - startTime))
```

Notes:

This method is an optimization for AddItemToArray.
You can call SuffixObject only on the last item of an array to add another one.
Only add new nodes there.
Any other use could lead into crashes or memory leaks.

Returns in version 16.0 and newer the new reference node.

104.1.40 ToHTML(NoHeader as boolean = false, CSS as string = "") as String

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts JSON to HTML.
Notes:

We build for you a HTML with tables for each array and object. We include values and tag rows with even/odd CSS classes.
If NoHeader is true, you get just the raw table without header/footer.
Anything in CSS parameter is inserted before the table.
Returns HTML, which can be loaded in htmlviewer.

Example for CSS to do even/odd line backgrounds:

```
/* CSS style to include */
"<style>
td
{
vertical-align:top;
}

.odd
{
background-color: white;
}

.even
{
background-color: # DDD;
}
</style>"
```

104.1.41 toString(formatted as boolean) as string

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Produces a JSON markup text document from a document tree.
Example:

```
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows " { "text":"Hello World" } "
```

Notes: Returns "" on any error. Lasterror is set.
See also:

- 104.1.53 toString as String 18057

104.1.42 Properties

104.1.43 ArraySize as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries size of array.
Notes: (Read only property)

104.1.44 ChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first child node.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim n as JSONMBS = o.ChildNode // first child
MsgBox n.ValueString // shows 1
```

Notes: (Read only property)

104.1.45 Handle as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the JSON object.
Notes:

It is possible to have two Xojo objects with the same handle pointing to the same JSON node.
(Read only property)

104.1.46 IsInt64 as Boolean

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an 64-bit integer number.
Notes:

Returns true if

- it is type number
- it has no significant part after decimal point
- it is in the range for int64.

(Read only property)

104.1.47 LastChildNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last child node.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.LastChildNode
MsgBox k.ValueString // shows 4
```

Notes: (Read only property)

104.1.48 Name as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this node.
Notes: (Read only property)

104.1.49 NextNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next node on the same level.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.ChildNode
while k<>nil
MsgBox k.ValueString // shows 1, 2, 3, 4

k=k.NextNode
wend
```

Notes: (Read only property)

104.1.50 ParseError as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parse error string.
Notes:

When parsing fails, this may be an useful message so you know what went wrong.
(Read only property)

104.1.51 PreviousNode as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The previous node on the same level.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode

o.AddItemToArray JSONMBS.NewNumberNode(1)
o.AddItemToArray JSONMBS.NewNumberNode(2)
o.AddItemToArray JSONMBS.NewNumberNode(3)
o.AddItemToArray JSONMBS.NewNumberNode(4)

dim k as JSONMBS = o.LastChildNode
while k<>nil
MsgBox k.valuestring // shows 4, 3, 2, 1

k=k.PreviousNode
wend
```

Notes: (Read only property)

104.1.52 Root as JSONMBS

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The root object.
Notes:

The root node owns the references to all children.
(Read only property)

104.1.53 toString as String

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Produces a JSON markup text document from a document tree.
Example:

```
dim o as JSONMBS = JSONMBS.NewObjectNode

o.AddItemToObject "text", JSONMBS.NewStringNode("Hello World")

MsgBox o.toString // shows " { "text":"Hello World" } "
```

Notes:

Returns "" on any error. Lasterror is set.
(Read only property)

See also:

- 104.1.41 toString(formatted as boolean) as string 18053

104.1.54 Type as Integer

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of the node.
Example:

```
dim n as JSONMBS = JSONMBS.NewNullNode

MsgBox str(n.Type)
```

Notes: (Read only property)

104.1.55 TypeName as String

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows type of this node as string.
Example:

```
dim o as JSONMBS = JSONMBS.NewArrayNode
MsgBox o.TypeName
```

Notes:

This property was added for debugging so you can see type in debugger.
(Read only property)

104.1.56 Valid as Boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether node is valid.
Notes:

The handle is not zero and there are no error nodes in JSON tree.
Returns true if valid, else false.

(Read only property)

104.1.57 ValueBoolean as Boolean

MBS Util Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The boolean value of this json node.
Notes:

Returns true if type is kTypeTrue, false if kTypeFalse or true if ValueInteger <>0.
(Read only property)

104.1.58 ValueDouble as Double

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

104.1.59 ValueInteger as Int64

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

104.1.60 ValueString as String

MBS Util Plugin, Plugin Version: 13.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the node.
Notes: (Read only property)

104.1.61 Constants

104.1.62 kTypeArray = 6

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For an array node.

104.1.63 kTypeError = 0

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: The parse failed and you got an invalid node.

104.1.64 kTypeFalse = 1

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For a false node.

104.1.65 kTypeNull = 3

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For a null node.

104.1.66 kTypeNumber = 4

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For a number node.

104.1.67 kTypeObject = 7

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For an object node.

104.1.68 kTypeString = 5

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For a string node.

104.1.69 kTypeTrue = 2

MBS Util Plugin, Plugin Version: 13.3.

Function: One of the node type constants.
Notes: For a true node.

Chapter 105

JPEG

105.1 class JPEG2000MBS

105.1.1 class JPEG2000MBS

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for compress/decompress of JPEG 2000 images.
Example:

```
dim file as FolderItem = GetFolderItem("test.jp2")
dim stream as BinaryStream = BinaryStream.Open(file)
dim data as string = stream.Read(stream.Length)

dim jp2 as new JPEG2000MBS
if jp2.InitDecompress(data) then
MsgBox str(jp2.Width)+" x "+str(jp2.Height)
end if
```

Notes:

Currently only supports RGB, RGBA and Grayscale images.

Please note that Jasper library used here is not very memory efficient and may run out of memory with huge images.

105.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 15.4pr4

105.1.3 Methods

105.1.4 Close

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs cleanup.
Notes:

Called automatically by destructor for you.
You can call it after you are done to free memory now.

105.1.5 Compress as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compresses image.
Notes:

Please use first InitCompress, than loop over rows and use SetRow to fill in data.
This method will compress image and set ImageData property.
Returns true on success and false on failure.

105.1.6 Decode(Data as MemoryBlock) as Picture

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a JPEG 2000 images.
Example:

```
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
dim p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```

Notes:

Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 105.1.7 Decode(Data as string) as Picture 18065

105.1.7 Decode(Data as string) as Picture

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a JPEG 2000 images.
Notes:

Returns on success the picture object.
Can raise exception if data is invalid.
See also:

- 105.1.6 Decode(Data as MemoryBlock) as Picture 18064

105.1.8 Encode(pic as picture, Quality as Integer = 80) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a picture as JPEG 2000 image.
Example:

```
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)
dim p80 as Picture = JPEG2000MBS.Decode(j80)

window1.Backdrop = p80
```

Notes: Returns image data on success or nil on failure.

105.1.9 GetRow(Index as Integer, Row as MemoryBlock = nil) as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries image data for a row.
Notes:

If you pass in a memoryblock, we use it, else we create a new one.
So you can pass in memoryblock from last call to GetRow.

Returns nil in case of error.

105.1.10 InitCompress(Width as Integer, Height as Integer, BytesPerPixel as Integer, BytesPerRow as Integer = 0) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the compression for a new image.
Example:

```
dim p as Picture = LogoMBS(200)
dim pp as new PictureMBS(p)

// compress RGB in PictureMBS
dim je as new JPEG2000MBS
if je.InitCompress(pp.Width, pp.Height, 3, pp.RowSize) then
dim h as Integer = pp.Height-1

for i as Integer = 0 to h
dim rowData as MemoryBlock = pp.RowInFormat(i, pp.ImageFormatRGB)
if not je.SetRow(i, rowData) then
Break
exit
end if
next
if je.Compress then
dim ImageData as MemoryBlock = je.ImageData
if ImageData <>nil then
// and decode to show
dim pic as Picture = JPEG2000MBS.Decode(ImageData)
window1.Backdrop = pic
end if
end if
end if
```

Notes:

Returns true on success or false on failure.
If BytesPerRow is zero, we calculate it based on BytesPerPixel and Width.
BytesPerPixel can be 1 for gray, 3 for RGB and 4 for RGBA.

105.1.11 InitDecompress(ImageData as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the decompression for given image data.
Example:

```
dim p as Picture = LogoMBS(200)

dim j80 as MemoryBlock = JPEG2000MBS.Encode(p, 80)

// decompress to PictureMBS
dim jd as new JPEG2000MBS

if jd.InitDecompress(j80) then
dim pi as new PictureMBS(jd.Width, jd.Height, PictureMBS.ImageFormatRGB)
dim h as Integer = pi.Height-1

dim r as MemoryBlock
for i as Integer = 0 to h
// get row. Recycle MemoryBlock, so we don't create new one each row.
r = jd.getRow(i, r)
pi.RowInFormat(i, pi.ImageFormatRGB) = r
next

// get picture
window1.Backdrop = pi.CopyPicture
end if
```

Notes:

Returns true on success or false on failure.
BytesPerPixel is set to 1 for gray, 3 for RGB and 4 for RGBA.

105.1.12 SetRow(Index as Integer, Row as MemoryBlock) as Boolean

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets data for a row.
Notes: Returns true on success.

105.1.13 Properties

105.1.14 BytesPerPixel as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The number of bytes per pixel.
Notes:

One for gray, 3 for RGB and 4 for RGBA.
Set by InitCompress or InitDecompress.
(Read only property)

105.1.15 BytesPerRow as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The bytes per row.
Notes:

Only used to create memoryblock or check memoryblock size.
Set by InitCompress or InitDecompress.
(Read only property)

105.1.16 Height as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The height of the image.
Notes:

Set by InitCompress or InitDecompress.
(Read only property)

105.1.17 ImageData as MemoryBlock

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The image data.
Notes:

Set by Compress method on success.
(Read only property)

105.1.18 Options as String

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Options to pass to Jasper library for compression.
Notes:

e.g. "rate=80"
(Read and Write property)

105.1.19 Width as Integer

MBS Images Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The width of the image.
Notes:

Set by InitCompress or InitDecompress.
(Read only property)

105.2 class JPEGExporterMBS

105.2.1 class JPEGExporterMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for JPEG Exporting.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

105.2.3 Methods

105.2.4 Export

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports the picture.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
```

```
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

This methods saves 32bit pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

You may use the function picture.bitmap to make sure that the picture is a bitmap, because this function works only for bitmap pictures.

This method uses the YieldTicks property and may yield time to other threads.

105.2.5 ExportCMYK(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from CMYK data in a memoryblock.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
```

```
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes:

This methods saves 32bit CMYK pictures to a file using JPEG Compression. Using the properties of the class you can specify the quality in range between 0 and 100%

This method is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

The picture must be in the format that one byte is used for each channel and the channels are ordered in memory in Cyan, Magenta, Yellow and Black.
If rowbytes is 0, the plugin uses width*4 for rowbytes.

This method uses the YieldTicks property and may yield time to other threads.

105.2.6 ExportGray

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports an 8 bit grayscale picture.
Notes: Same as Export, but writes grayscale picture. The picture from picture property is converted to

grayscale internally for this.
See also:

- 105.2.7 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32) 18074

105.2.7 ExportGray(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports an 8 bit grayscale picture.
Notes:

Same as Export, but writes grayscale picture using data in memoryblock.
If rowbytes is 0, the plugin uses width for rowbytes.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 105.2.6 ExportGray 18073

105.2.8 ExportRGB(data as memoryblock, width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from RGB data in a memoryblock.
Example:

```
dim f as FolderItem
dim ji as new JPEGImporterMBS
dim je as new JPEGExporterMBS
dim m as MemoryBlock
dim i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import

m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
```

```
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes: The memoryblock data must be in the format with bytes in the order RGB.

105.2.9 ExportRGBwithRowDataEvent(width as UInt32, height as UInt32, rowbytes as UInt32)

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Exports a picture from RGB data in memoryblocks from the GetRowData event.
Notes:

You need to implement the GetRowData event by subclassing this class.
The memoryblock data must be in the format with bytes in the order RGB.

105.2.10 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

105.2.11 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes:

Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGExporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

105.2.12 Properties

105.2.13 API as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of API used.
Notes:

Either libjpeg or libjpeg-turbo.
(Read only property)

105.2.14 data as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination string.
Notes:

If file is nil, the compressed data is saved in this property.

The returned string has the encoding set to MacRoman. If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.
(Read and Write property)

105.2.15 DCTMethod as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which DCT/IDCT algorithm to use.
Notes:

Possible values:

-1	Plugin does not change setting
0	slow but accurate integer algorithm (default)
1	faster, less accurate integer method
2	floating-point: accurate, fast on fast Hardware

Default is Integer slow.
(Read and Write property)

105.2.16 ErrorCode as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error code from the Export method.
Example:

```
dim j as new JPEGExporterMBS

// do something

MsgBox str(j.ErrorCode)+" "+j.ErrorMessage
```

Notes:

The last function was successfull if ErrorCode is 0.
If the parameters are not valid, the value is set to -1.
Other values are Mac OS error codes.
(Read and Write property)

105.2.17 ErrorMessage as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Example:

```
dim j as new JPEGExporterMBS

// do something

MsgBox j.ErrorMessage
```

Notes: (Read and Write property)

105.2.18 EXIFData as String

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The EXIF data for this file.
Example:

```
// Read a picture file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim ji as new JPEGImporterMBS

ji.ReadExifData=true
ji.File=f
ji.Import

// Write a new picture file
dim o as FolderItem = SpecialFolder.Desktop.Child("out.jpg")
dim je as new JPEGExporterMBS

je.File=o
je.EXIFData = ji.ExifData
je.Picture = ji.Picture
je.Export
```

Notes:

The export methods use this property.
(Read and Write property)

105.2.19 file as folderitem

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Example:

```
dim p as Picture = LogoMBS(500)

'Save the scan
dim je as new JPEGExporterMBS
je.file = SpecialFolder.Desktop.Child("just a test.jpg")
```

```
je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes:

If file is nil and path is "", the destination is the data property.
(Read and Write property)

105.2.20 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution.
Example:

```
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

105.2.21 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should ask the compressor to optimize the huffman coding tables.
Example:

```
dim j as new JPEGExporterMBS
j.OptimizeCoding = true
```

Notes:

This usually provides a small percentage decrease in file size.

(Read and Write property)

105.2.22 Path as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destination file.
Example:

```
Dim p As Picture = LogoMBS(500)

'Save the scan
Dim je As New JPEGExporterMBS

// using file
'je.file = SpecialFolder.Desktop.Child("just a test via file.jpg")

// using path
Dim f As folderitem = SpecialFolder.Desktop.Child("just a test via path.jpg")
Dim pa As String = f.NativePath
je.path = pa

je.quality = 75
je.picture = p
je.VerticalResolution = 72
je.HorizontalResolution = 72
je.ResolutionUnit = 1
je.export
```

Notes:

If file is nil and path is "", the destination is the data property.
(Read and Write property)

105.2.23 Picture as Picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture to use.
Example:

```
dim MyPic as Picture = LogoMBS(500)
dim j as JPEGExporterMBS // your exporter
j.picture=MyPic
```

Notes:

Should be a bitmap picture without alpha channel or mask.
(Read and Write property)

105.2.24 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An ICC profile to write to the file.
Example:

```
dim f as FolderItem
dim j as JPEGImporterMBS
dim p as LCMS2ProfileMBS
dim e as JPEGExporterMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MsgBox "no profile"
Return
end if

p=LCMS2ProfileMBS.CreatesRGBProfile

f=SpecialFolder.Desktop.Child("test3.jpg")
e=new JPEGExporterMBS
e.File=f
e.Picture=j.Picture
e.ProfileData=p.SaveProfileToString
e.Quality=75
e.Export
```

Notes:

the string must contain the binary data of the profile. For example SaveProfileToString of the CMProfileMBS class returns such a string.
If the string is empty, no profile is written.
(Read and Write property)

105.2.25 Progressive as Boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to make a progressive compressed image.
Example:

```
dim j as new JPEGExporterMBS
j.Progressive = true
```

Notes:

Default is true.
(Read and Write property)

105.2.26 Quality as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The quality to use.
Example:

```
dim je as new JPEGExporterMBS
je.quality = 75
```

Notes:

Range from 0 to 100. Default is 75.
(Read and Write property)

105.2.27 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The unit of the resolution properties.
Example:

```
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes:

Values:

0	unknown
1	dots per inch
2	dots per cm

(Read and Write property)

105.2.28 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution.
Example:

```
dim j as new JPEGExporterMBS

// setup 300 dpi
j.VerticalResolution = 300
j.HorizontalResolution = 300
j.ResolutionUnit = 1
```

Notes: (Read and Write property)

105.2.29 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Example:

```
dim j as new JPEGExporterMBS

// do something

MsgBox j.WarningMessage
```

Notes: (Read and Write property)

105.2.30 XMPData as String

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XMP data for this file.
Notes:

The export methods use this property.
(Read and Write property)

105.2.31 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim j as JPEGExporterMBS // your exporter

j.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

105.2.32 Markers(Index as Integer) as string

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Additional markers.
Example:

```
dim j as new JPEGExporterMBS

j.Picture = LogoMBS(500)
j.Markers(5) = "Hello World"
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Export

// now open jpeg file in text editor and you see hello world near beginning
```

Notes:

Index from 0 to 15.
Index zero is used for JFIF header.
Index one is normally used for EXIF or XMP.
Index 13 is often used for Photoshop.

see also
http://www.ozhiker.com/electronics/pjmt/jpeg_info/app_segments.html

You can use this markers to embed a given string in the file. You can encrypt data and store it next to the image as you like.
Of course this will not survive if image is loaded and saved again. But can work as a container to hide data and user sees only image.
(Read and Write computed property)

105.2.33 Events

105.2.34 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all error messages from the jpeg library.

105.2.35 GetRowData(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called to query for the next data block.
Notes:

The memoryblock data must be in the format with bytes in the order RGB.
Index is from 0 to height-1.
Returning nil will result in an error on the JPEG compression.

105.2.36 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all information messages from the jpeg library.
Notes:

msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

105.2.37 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all warning messages from the jpeg library.

105.3 class JPEGImporterMarkerMBS

105.3.1 class JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a JPEG marker.

105.3.2 Properties

105.3.3 Data as String

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The actual data read as a binary string.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

dim data as string = j.MarkerItem(0).Data

// work with data
```

Notes: (Read and Write property)

105.3.4 DataLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data length in bytes of the data string.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem
```

```
f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).DataLength)

// work with data
```

Notes: (Read and Write property)

105.3.5 Marker as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this datablock.
Example:

```
dim j as JPEGImporterMBS
dim f as folderitem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).Marker)

// work with data
```

Notes:

For example & hE0 for the first user defined block.
(Read and Write property)

105.3.6 OriginalLength as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original data length in the file.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

MsgBox str(j.MarkerItem(0).OriginalLength)

// work with data
```

Notes:

Maybe smaller than datalength because of compression.
(Read and Write property)

105.4 class JPEGImporterMBS

105.4.1 class JPEGImporterMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for JPEG Importing.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

This class is not depending on any library! It works without QuickTime even on System 7, but as it contains everything needed this method is around 100 KB big!

Bases on libjpeg.

- MBS Xojo / Real Studio Plugins, version 13.4pr3
- JPEG String to Picture

105.4.3 Xojo Developer Magazine

- 18.3, page 40: Virus Modeling, Simulating the spread of COVID-19 with Xojo by Marc Zeedar
- 17.5, page 10: News

105.4.4 Methods

105.4.5 BlueTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(0,0,255).
Notes: Just for testing how well the plugin picture code works.

105.4.6 CleanMarkers

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the marker list.

105.4.7 FinishJPEG

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Releases all memory buffers needed for the JPEG decompression.
Notes:

This must be called if you used InitJPEG!
Else you have a memory leak.

105.4.8 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 9.1 for version 9b.

105.4.9 GreenTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(0,255,0).
Notes: Just for testing how well the plugin picture code works.

105.4.10 Import

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports the picture.
Example:

```
dim f as FolderItem
dim ji as new JPEGImporterMBS
dim je as new JPEGExporterMBS
dim m as MemoryBlock
dim i,c as Integer

// read jpeg
f=SpecialFolder.Desktop.Child("input.jpg")

ji.Mode=ji.ModeRGB // read RGB to memoryblock
ji.File=f
ji.Import
```

```
m=ji.PictureData

// add red
c=m.Size-1
for i=0 to c step 3
m.Byte(i)=255
next

// write jpeg
f=SpecialFolder.Desktop.Child("test.jpg")

je.File=f
je.ExportRGB(m,ji.Width, ji.Height, ji.Width*3)
```

Notes:

This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

This method uses the YieldTicks property and may yield time to other threads.
Depending on the mode this method can read CMYK and RGB. RGB either to memoryblock or to a picture object.
The memoryblock data must be in the format with bytes in the order RGB.

105.4.11 ImportCMYK

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Imports a CMYK picture.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
```

```
g=getOpenFolderItem("image/jpeg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData

// export it
f=SpecialFolder.Desktop.child("test.jpg")
je=new JPEGExporterMBS
je.HorizontalResolution=300
je.VerticalResolution=300
je.ResolutionUnit=1
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes:

This methods should read all JPEG files you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

The read CMYK values are stored in the picturedata property.

This method uses the YieldTicks property and may yield time to other threads.

105.4.12 InitJPEG as boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the JPEG decompressor for use with LoopJPEG.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// this code copies a JPG: CMYK or RGB

// import it
g=SpecialFolder.Desktop.Child("PICT1533.JPG")
ji=new JPEGImporterMBS
```

```
ji.File=g
ji.AllowDamaged=true
ji.CMYK=true // if it is cmyk
if ji.InitJPEG then
do
loop until ji.LoopJPEG<>0
ji.FinishJPEG
end if

// export it
f=SpecialFolder.Desktop.child("PICT1533 copy.JPG")
je=new JPEGExporterMBS
je.File=f
je.Quality=75

if ji.CMYK then
m=ji.PictureData
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
else
je.Picture=ji.Picture
je.Export
end if
```

Notes:

Call FinishJPEG even if this failes.
Returns true if you can loop using LoopJPEG.

105.4.13 LoopJPEG as Integer

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decompresses one line of the picture.
Example:

```
dim j as new JPEGImporterMBS
// fill properties...

if j.initJPEG then
do
loop until j.LoopJPEG<>0
end if
j.FinishJPEG

backdrop=j.Picture // nil if failed
```

Notes:

Return values:

0	Decompression was okay
1	Finished decompression
2	if there was an error.
3	Not initialized
4	Header only was requested

105.4.14 MarkerCount as Integer

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of markers found in the JPEG data stream.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MsgBox str(j.MarkerCount)
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

105.4.15 MarkerItem(index as Integer) as JPEGImporterMarkerMBS

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the marker with the given index.
Example:

```
dim j as JPEGImporterMBS
```

```
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // needed to fill ExifData property

// do the import

dim data as string = j.MarkerItem(0).Data

// work with data
```

Notes: Only available if ReadMarkers was true on reading the JPEG data.

105.4.16 ReadHeader as boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read the header of the JPEG data in a file or a memoryblock.
Example:

```
dim f as FolderItem
dim j as JPEGImporterMBS

f=SpecialFolder.Desktop.Child("Jaguar1600.jpg")
j=new JPEGImporterMBS
j.file=f
if j.ReadHeader then
MsgBox str(j.Width)+" x "+str(j.Height)
else
MsgBox "no JPEG"
end if
```

Notes:

You can use this function to see if the file is a JPEG image and which dimension it has.
This function calls InitJPEG and FinishJPEG, so we get all the metadata, but no picture.

105.4.17 RedTestPicture as picture

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a 100x100 pixel big picture filles with RGB(255,0,0).
Notes: Just for testing how well the plugin picture code works.

105.4.18 SetAPI(API as Ptr = nil)

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets API to use.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

Notes:

Set to nil to use built in jpeglib.
Can be set to JPEGTurboMBS.API to use libjpeg-turbo.

Changing API while you have instances of JPEGImporterMBS or methods in use on other thread using the JPEG Library, may result in a crash.

105.4.19 Properties

105.4.20 AllowDamaged as boolean

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether you want damaged pictures to be returned.
Notes:

If AllowDamaged is false, nil will be returned if the picture is damaged.
Default value is false.
(Read and Write property)

105.4.21 API as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries name of API used.
Notes:

Either libjpeg or libjpeg-turbo.
(Read only property)

105.4.22 BlockSmoothing as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do interblock smoothing.
Notes:

Default value is true.

This setting is relevant only when decoding a progressive JPEG image. During the first DC-only scan, block smoothing provides a very "fuzzy" look instead of the very "blocky" look seen without it; which is better seems a matter of personal taste. But block smoothing is nearly always a win during later stages, especially when decoding a successive-approximation image: smoothing helps to hide the slight blockiness that otherwise shows up on smooth gradients until the lowest coefficient bits are sent.
(Read and Write property)

105.4.23 CMYK as Boolean

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the decompressor has imported the picture as a CMYK image into a memoryblock.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS

g=getFolderItem("a_auf")
ji=new JPEGImporterMBS
ji.File=g
if ji.InitJPEG then

if ji.CMYK then
MsgBox "CMYK"
else
MsgBox "not"
end if
end if
```

Notes:

This property sets the Mode property to ModeCMYK.

(Read and Write property)

105.4.24 ColorComponentCount as Integer

MBS Images Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of color components.
Notes:

1	Grayscale
3	RGB
4	CMYK

(Read and Write property)

105.4.25 ColorSpace as Integer

MBS Images Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space of the image.
Example:

```
dim j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")

if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MsgBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MsgBox "RGB"
case j.ColorSpaceGrayScale
MsgBox "Gray"
else
MsgBox "unknown? "+str(j.ColorSpace)
end Select

j.FinishJPEG
end if
```

Notes:

See also the Colorspace constants.
(Read and Write property)

105.4.26 CurrentDepth as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The depth of the picture property.
Notes:

In the current implementation always 32bit.
0 if the loading of the picture failed.
(Read and Write property)

105.4.27 data as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source string.
Notes:

If file is nil, the compressed data is taken from this property.
(Read and Write property)

105.4.28 ErrorMessage as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Notes: (Read and Write property)

105.4.29 ExifData as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exif data stored in the file.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem
```

```
f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

dim data as string = j.ExifData

// work with data
```

Notes:

Only used when ReadExifData is set to true before you import the image.
The string contains the binary content of a exif data on disc.
Value is "" if no data was found.
(Read and Write property)

105.4.30 ExifOrientation as Integer

MBS Images Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries orientation from EXIF data.
Notes:

ReadExifData property must be set earlier to have the import process load EXIF data.
Returns -1 in case of error.
Valid values are in range of 1 to 8. See kOrientation* constants.

For new development, please use ExifTagsMBS class instead.
(Read only property)

105.4.31 ExifThumbnail as String

MBS Images Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts an embedded thumbnail in EXIF data.
Example:

```
Dim g As New JPEGImporterMBS

g.File = SpecialFolder.Desktop.Child("test.jpg")
g.ReadExifData = True
```

```
// not load, but just read header & metadata
If g.ReadHeader Then

// get thumbnail
Dim Thumbnail As String = g.ExifThumbnail

// show it
window1.Backdrop = picture.FromData(Thumbnail)

// if nil, use ScaleFactor and read scaled down version
End If
```

Notes:

ReadExifData property must be set earlier to have the import process load EXIF data.
Returns string containing JPEG compressed image data.

For new development, please use ExifTagsMBS class instead.
(Read only property)

105.4.32 FancyUpsampling as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to do fancy upsampling.
Notes:

Default value is true.

If true, use direct DCT scaling with DCT size >8 for downsampling of chroma components. If false, use only DCT size <= 8 and simple separate downsampling. Default is true. For better image stability in multiple generation compression cycles it is preferable that this value matches the corresponding FancyUpsampling value in decompression.
(Read and Write property)

105.4.33 file as folderitem

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Example:

```
Dim ji As New JPEGImporterMBS
```

```
ji.file = SpecialFolder.Desktop.Child("test.jpg")
ji.Import

Backdrop = ji.Picture
```

Notes:

If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

105.4.34 FileOffset as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The offset inside the file.
Notes: (Read and Write property)

105.4.35 Height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes:

0 if the loading of the picture failed.
(Read and Write property)

105.4.36 HorizontalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution.
Notes: (Read and Write property)

105.4.37 Mode as Integer

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The operation mode.
Notes:

Can be either ModePicture (Default), ModeRGB or ModeCMYK.
(Read and Write property)

105.4.38 OriginalDepth as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original depth of the picture.
Notes:

Value maybe 8 for grayscale pictures and 24 or 32 for colored pictures.
0 if the loading of the picture failed.
(Read and Write property)

105.4.39 Path as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file.
Example:

```
Dim ji As New JPEGImporterMBS

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
ji.path = f.NativePath
ji.Import

Backdrop = ji.Picture
```

Notes:

If file is nil and path is "", the source is taken from the data property.
(Read and Write property)

105.4.40 Picture as Picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture as the result.
Notes:

Set to nil on any error.

(Read and Write property)

105.4.41 PictureData as MemoryBlock

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cmyk picture data after importing.
Example:

```
dim g as FolderItem
dim ji as JPEGImporterMBS
dim je as JPEGExporterMBS
dim f as FolderItem
dim m as MemoryBlock

// import it
g=getFolderItem("CMYK Example.jpg")
ji=new JPEGImporterMBS
ji.File=g
ji.AllowDamaged=true
ji.ImportCMYK

m=ji.PictureData
msgBox g.name
// export it
f=SpecialFolder.Desktop.child("CMYK Example2.jpg")
je=new JPEGExporterMBS
je.File=f
je.Quality=75
je.ExportCMYK m, ji.Width, ji.Height, ji.Width*4
```

Notes:

Basicly a memoryblock with one byte for each channel.
For ReadByRow methods this property contains memoryblock for a row of the image.
(Read and Write property)

105.4.42 ProfileData as String

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ICC profile stored in the file.
Example:

```
dim f as FolderItem
dim j as JPEGImporterMBS
dim p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("test2.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all
j.ReadProfileData=true // needed to fill ProfileData property
j.file=f

j.Import

if j.ProfileData="" then
MsgBox "no profile"
Return
end if

p=LCMS2ProfileMBS.OpenProfileFromString(j.ProfileData)
MsgBox p.Name
```

Notes:

Only used when ReadProfileData is set to true before you import the image.
The string contains the binary content of a profile file on disc. So you can pass it to the CMOpenProfileFromDataMBS function or write it to a file using the binarystream class.
Value is "" if no profile was found.
(Read and Write property)

105.4.43 ProgressiveMode as Boolean

MBS Images Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a progressive jpeg file.
Notes:

Loading progressive files needs more memory.
(Read and Write property)

105.4.44 ReadExifData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the exif data.

Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadExifData=true // needed to fill ExifData property

// do the import

dim data as string = j.ExifData

// work with data
```

Notes:

If there is exif data, it will be stored in the ExifData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

105.4.45 ReadMarkers as Boolean

MBS Images Plugin, Plugin Version: 6.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether importer should read markers.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadMarkers=true // else no metadata is read at all

// do the import

MsgBox str(j.MarkerCount)
```

Notes: (Read and Write property)

105.4.46 ReadProfileData as Boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the icc profile.
Example:

```
dim j as JPEGImporterMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.jpg")
j=new JPEGImporterMBS

j.ReadProfileData=true // needed to fill ProfileData property

// do the import

dim Profile as string = j.ProfileData

// work with profile data
```

Notes:

If there is a profile, it will be stored in the ProfileData property.
Setting this value to true will set ReadMarkers to true, too.
A profile is stored in one or more markers, so it is needed to read them before extracting the profile.
(Read and Write property)

105.4.47 ReadXMPData as Boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin should read in the xmp data.
Notes:

If there is xmp data, it will be stored in the XMPData property.
Setting this value to true will set ReadMarkers to true, too.
The data is stored in one or more markers, so it is needed to read them before extracting the data.
(Read and Write property)

105.4.48 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The unit of the resolution properties.
Notes:

Values:

0	unknown
1	dots per inch
2	dots per cm

(Read and Write property)

105.4.49 ScaleFactor as Integer

MBS Images Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG Library can scale down the picture on the fly.
Notes:

Allowed values: 0, 1, 2, 4, 8
0 and 1 disable scaling.
Default valus is 0 for no scaling.
(Read and Write property)

105.4.50 VerticalResolution as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution.
Notes: (Read and Write property)

105.4.51 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Notes: (Read and Write property)

105.4.52 Width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes:

0 if the loading of the picture failed.
(Read and Write property)

105.4.53 XMPData as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The XMP Data stored in the file.
Notes:

Only used when ReadXMPData is set to true before you import the image.
The string contains the binary content of a xmp data on disc.
Value is "" if no data was found.
(Read and Write property)

105.4.54 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim j as JPEGImporterMBS // your importer
j.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

105.4.55 Events

105.4.56 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all error messages from the jpeg library.

105.4.57 HeadersRead as boolean

MBS Images Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called when headers are read.
Notes:

This allows you to set Mode, ScaleFactor, FancyUpsampling, BlockSmoothing properties.
Return true to cancel Import/InitJPEG methods early.

105.4.58 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all information messages from the jpeg library.
Notes:

msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

105.4.59 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all warning messages from the jpeg library.

105.4.60 Constants

105.4.61 ColorSpaceCMYK = 4

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the color spaces.
Example:

```
dim j as new JPEGImporterMBS

j.File = SpecialFolder.Desktop.Child("cmyk.jpg")

if j.InitJPEG then

Select case j.ColorSpace
case j.ColorSpaceCMYK, j.ColorSpaceYCCK
MsgBox "CMYK"
case j.ColorSpaceRGB, j.ColorSpaceYCbCr
MsgBox "RGB"
case j.ColorSpaceGrayScale
MsgBox "Gray"
else
MsgBox "unknown? "+str(j.ColorSpace)
end Select

j.FinishJPEG
end if
```

Notes: C/M/Y/K

105.4.62 ColorSpaceGrayScale = 1

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the color spaces.
Notes: Gray

105.4.63 ColorSpaceRGB = 2

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the color spaces.

Notes: red/green/blue

105.4.64 ColorSpaceUnknown = 0

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the color spaces.
Notes: Not set.

105.4.65 ColorSpaceYCbCr = 3

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the color spaces.
Notes: Y/Cb/Cr (also known as YUV)

105.4.66 ColorSpaceYCCK = 5

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the color spaces.
Notes: Y/Cb/Cr/K

105.4.67 kOrientationBottomLeft = 4

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 bottom, col 0 lhs

105.4.68 kOrientationBottomRight = 3

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 bottom, col 0 rhs

105.4.69 kOrientationLeftBottom = 8

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 lhs, col 0 bottom

105.4.70 kOrientationLeftTop = 5

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 lhs, col 0 top

105.4.71 kOrientationRightBottom = 7

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 rhs, col 0 bottom

105.4.72 kOrientationRightTop = 6

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 rhs, col 0 top

105.4.73 kOrientationTopLeft = 1

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 top, col 0 lhs

105.4.74 kOrientationTopRight = 2

MBS Images Plugin, Plugin Version: 20.1.

Function: One of the orientation constants.
Notes: row 0 top, col 0 rhs

105.4.75 ModeAuto = 30

MBS Images Plugin, Plugin Version: 15.2.

Function: One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Mode = j.ModeAuto
j.Import
// check Mode after to see if we got ModeRGB, ModeGray or ModeCMYK here.
```

Notes:

Load the image into the picturedata property.
Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.

105.4.76 ModeAutoByRow = 31

MBS Images Plugin, Plugin Version: 15.2.

Function: One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS
j.File = SpecialFolder.Desktop.Child("test.jpg")
j.Mode = j.ModeAutoByRow
j.Import
// check Mode after to see if we got ModeRGBbyRow, ModeGraybyRow or ModeCMYKbyRow here.
```

Notes:

Load the image into the picturedata property.
Switches on import to RGB, Gray or CMYK depending on color space of JPEG file.

105.4.77 ModeCMYK = 2

MBS Images Plugin, Plugin Version: 8.4.

Function: One of the mode constants.
Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses 4 bytes per pixel.

105.4.78 ModeCMYKbyRow = 12

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the mode constants.
Notes:

Same as ModeCMYK, but PictureData contains only the current row
The PictureData Memoryblock uses 4 bytes per pixel.

105.4.79 ModeGray = 3

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS

j.Mode=j.ModeGray
j.File=SpecialFolder.Desktop.Child("testGray.JPG")
j.Import

MsgBox str(j.Width)+" x "+str(j.Height)
```

Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses one byte per pixel.

105.4.80 ModeGraybyRow = 13

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the mode constants.
Notes:

Same as ModeGray, but PictureData contains only the current row
The PictureData Memoryblock uses one byte per pixel.

105.4.81 ModePicture = 0

MBS Images Plugin, Plugin Version: 8.4.

Function: One of the mode constants.
Notes: Load the image into the picture property.

105.4.82 ModeRaw = 20

MBS Images Plugin, Plugin Version: 13.4.

Function: One of the mode constants.
Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses 1 to 4 bytes per pixel.

Check the colorspace property to know which color space is used.

105.4.83 ModeRGB = 1

MBS Images Plugin, Plugin Version: 8.4.

Function: One of the mode constants.
Example:

```
dim j as new JPEGImporterMBS

j.Mode=j.ModeRGB
j.File=SpecialFolder.Desktop.Child("testRGB.JPG")
j.Import

MsgBox str(j.Width)+" x "+str(j.Height)
```

Notes:

Load the image into the picturedata property.
The PictureData Memoryblock uses 3 bytes per pixel.

105.4.84 ModeRGBbyRow = 11

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the mode constants.
Notes:

Same as ModeRGB, but PictureData contains only the current row
The PictureData Memoryblock uses 3 bytes per pixel.

105.5 class JPEGMovieMBS

105.5.1 class JPEGMovieMBS

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to write a movie with JPEGs.
Example:

```
// get a picture
dim p as Picture = LogoMBS(500)

// start movie building
dim m as new JPEGMovieMBS

m.Width = 500
m.Height = 500
m.SecondsPerFrame = 0.5

// add frames where we count up
for i as integer = 1 to 20
dim c as new Picture(500, 500)
dim g as Graphics = c.Graphics
g.ForeColor = &c000000
g.TextSize = 50
g.DrawPicture p, 0, 0
g.DrawString str(i), 20, 50

dim j as string = c.GetData(c.FormatJPEG)
m.AddFrame j

next

// generate movie
dim MovieData as string = m.BuildMovie

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.mov")
dim b as BinaryStream = BinaryStream.Create(f, true)
b.Write MovieData
```

Notes:

This is a self written class to create a QuickTime Movie with one video track using JPEG images.
You can use this to quickly write a slideshow video if needed.

Does play in Quicktime player and VLC, but not Windows Media Player.

- MBS Xojo Plugins, version 17.2pr1
- JPEGs to Movie

105.5.3 Xojo Developer Magazine

- 15.4, page 9: News

105.5.4 Methods

105.5.5 AddFrame(Image as MemoryBlock)

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 105.5.6 AddFrame(Image as String) 18121

105.5.6 AddFrame(Image as String)

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a frame.
Notes: Image must be a JPEG compressed image.
See also:

- 105.5.5 AddFrame(Image as MemoryBlock) 18121

105.5.7 BuildMovie as String

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds the movie.
Notes: Either you get an exception or you get a movie which you can write to a file on disk.

105.5.8 Properties

105.5.9 Duration as Double

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The duration of the video.
Notes:

In Seconds.
(Read only property)

105.5.10 FrameCount as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of frames.
Notes: (Read only property)

105.5.11 Height as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the video.
Notes:

Must match the JPEGs you use.
(Read and Write property)

105.5.12 SecondsPerFrame as Double

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds to show a frame.
Notes:

Default 1 second.
(Read and Write property)

105.5.13 TimeScale as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time scale to use.
Notes:

Defines how fine granular you can define time.
Default is 600 units per second.
(Read and Write property)

105.5.14 Width as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target width of the video.
Notes:

Must match the JPEGs you use.
(Read and Write property)

105.6 class JPEGTransformationMBS

105.6.1 class JPEGTransformationMBS

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to wrap the jpegtran utility.
Notes:

Although rotating and flipping data expressed as DCT coefficients is not hard, there is an asymmetry in the JPEG format specification for images whose dimensions aren't multiples of the iMCU size. The right and bottom image edges are padded out to the next iMCU boundary with junk data; but no padding is possible at the top and left edges. If we were to flip the whole image including the pad data, then pad garbage would become visible at the top and/or left, and real pixels would disappear into the pad margins — perhaps permanently, since encoders & decoders may not bother to preserve DCT blocks that appear to be completely outside the nominal image area. So, we have to exclude any partial iMCUs from the basic transformation.

Transpose is the only transformation that can handle partial iMCUs at the right and bottom edges completely cleanly. Mirror horizontal can flip partial iMCUs at the bottom, but leaves any partial iMCUs at the right edge untouched. Similarly mirror vertical leaves any partial iMCUs at the bottom edge untouched. The other transforms are defined as combinations of these basic transforms and process edge blocks in a way that preserves the equivalence.

The "trim" option causes untransformable partial iMCUs to be dropped; this is not strictly lossless, but it usually gives the best-looking result for odd-size images. Note that when this option is active, the expected mathematical equivalences between the transforms may not hold. (For example, -rot 270 -trim trims only the bottom edge, but -rot 90 -trim followed by -rot 180 -trim trims both edges.)

We also offer a "force to grayscale" option, which simply discards the chrominance channels of a YCbCr image. This is lossless in the sense that the luminance channel is preserved exactly. It's not the same kind of thing as the rotate/flip transformations, but it's convenient to handle it as part of this package, mainly because the transformation routines have to be aware of the option to know how many components to work on.

Bases on libjpeg.

105.6.2 Blog Entries

- MBS REALbasic Plugins, version 11.2pr1

105.6.3 Methods

105.6.4 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

105.6.5 Transform as boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the transformation.
Notes:

Outputfile and Inputfile should never be identical, because this will corrupt the file.

Returns only false if the file specifications are invalid.
So after true is returned you still need to check the errorcode property.

105.6.6 Properties

105.6.7 CopyOption as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: What to copy from the meta information.
Notes:

Values:

JCOPYOPT_NONE	0	copy no optional markers
JCOPYOPT_COMMENTS	1	copy only comment (COM) markers
JCOPYOPT_ALL	2	copy all optional markers

(Read and Write property)

105.6.8 DebugLevel as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The debug level for the jpeg library.
Notes: (Read and Write property)

105.6.9 ErrorCode as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code reported.
Notes: (Read and Write property)

105.6.10 ErrorMessage as String

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message reported.
Notes: (Read and Write property)

105.6.11 Grayscale as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to reduce to grayscale (omit color data).
Notes:

If true the a color image is converted to grayscale.
(Read and Write property)

105.6.12 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input file.
Notes:

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

105.6.13 MaxMemoryToUse as Integer

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum memory to use.
Notes:

Unit is bytes.
(Read and Write property)

105.6.14 MirrorHorizonal as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the left-right mirror transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.15 MirrorVertical as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the top-bottom mirror transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.16 OptimizeCoding as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Optimize Huffman table (smaller file, but slow compression)
Notes: (Read and Write property)

105.6.17 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output file.
Notes:

On Mac OS X, this function uses the short file name (31 characters).
So you may consider to save to a temporary file and rename it after the transformation was successfull.

Outputfile and Inputfile should never be identical, because this will corrupt the file.
(Read and Write property)

105.6.18 Progressive as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to create progressive JPEG file.
Notes: (Read and Write property)

105.6.19 Rotate180 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 180° clockwise rotation transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.20 Rotate270 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 270° clockwise rotation transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.21 Rotate90 as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to use the 90° clockwise rotation transformation.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.22 Transpose as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to transpose the image across UR-to-LL axis.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.23 Transverse as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to tanspose the image across UL-to-LR axis.
Notes:

Only one transformation can be used.
(Read and Write property)

105.6.24 Trim as Boolean

MBS Images Plugin, Plugin Version: 3.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: whether to drop non-transformable edge blocks.
Notes:

if true, trim partial MCUs as needed.
(Read and Write property)

105.6.25 WarningMessage as String

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last warning message reported.
Notes: (Read and Write property)

105.6.26 Events

105.6.27 Error(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all error messages from the jpeg library.

105.6.28 Info(message as string, msglevel as Integer, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all information messages from the jpeg library.
Notes:

msglevel is one of:

-1:	recoverable corrupt-data warning, may want to abort.
0:	important advisory messages (always display to user).
1:	first level of tracing detail.
2,3,...:	successively more detailed tracing messages.

105.6.29 Warning(message as string, ErrorCode as Integer)

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: .

Function: This events reports all warning messages from the jpeg library.

105.7 module JPEGTurboMBS

105.7.1 module JPEGTurboMBS

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module to use libjpeg-turbo in Xojo.
Example:

```
// switch API to libjpeg-turbo:
JPEGExporterMBS.SetAPI JPEGTurboMBS.API
JPEGImporterMBS.SetAPI JPEGTurboMBS.API
```

105.7.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr7
- libjpeg-turbo for Xojo

105.7.3 Methods

105.7.4 API as Ptr

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns API pointer.
Notes: This returns pointer to internal MBS data structure with function pointers to JPEG library functions.

105.7.5 GetJPEGVersion as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries JPEG library version.
Notes: Currently reporting 8.0 for version 8.0.

105.7.6 Constants

105.7.7 Version = "2.0.3"

MBS Images Plugin, Plugin Version: 19.5.

Function: The version string for JPEG Turbo library.

105.8 Globals

105.8.1 JPEGStringToPictureMBS(buf as string) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
dim s as string
dim h as new HTTPSocket

s=h.Get("http://www.monkeybreadsoftware.de/xojo/images/rbplugin.jpg",90)

Backdrop=JPEGStringToPictureMBS(s)
```

Notes: Short version of the "JPEGStringToPicture(buf as string,allowdamaged as Boolean) as picture" method. allowdamaged is set to false.
See also:

- 105.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture 18133

105.8.2 JPEGStringToPictureMBS(buf as string,allowdamaged as Boolean) as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a picture from a JPEG file.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = PictureToJPEGStringMBS(p, 80)

s = leftb(s, lenb(s)-1000) // remove last 1000 bytes

dim q as Picture = JPEGStringToPictureMBS(s, true)

Backdrop = q
```

Notes:

This methods should read all JPEG file data you can get, but I've only tested it for 32 bit color and 8 bit grayscale.

I wrote it mainly because Xojo's built in OpenAsJPEG code crashes badly if your picture is not full downloaded. For example if you have a webbrowser you can now show JPEGs while you download them. Normally you can see a good picture allready with 50% of the data.

Xojo's OpenAsPicture in contrast crashes if the picture is not 100% downloaded or instead of a crash you get a white picture.

See the "JPEGToString example", "jpeg load crashtest" and "SaveJPEG without QuickTime" examples.
See also:

- 105.8.1 JPEGStringToPictureMBS(buf as string) as picture 18133

105.8.3 PictureToJPEGStringMBS(pic as picture, quality as Integer = 80) as string

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture into a string using JPEG compression.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = PictureToJPEGStringMBS(p, 80)
dim q as Picture = JPEGStringToPictureMBS(s)

Backdrop = q
```

Notes:

This methods saves 32bit pictures to a file using JPEG Compression. Using the parameter you can specify the quality in range between 25 and 100%

The picture should be a bitmap picture without alpha channel or mask.
Use the JPEGExporterMBS class for more options.

The returned string has the encoding set to binary (no encoding). If you want to concat the string with another you should change the encoding, so both strings have the same encoding. If you don't handle that RB may convert the JPEG data to UTF8 (Unicode) which will destroy it.

The picture is always encoded with 72 dpi. If you want to set a different dpi value, please use the JPEGExporterMBS class.

Chapter 106

Keychain

106.1 class KeychainAccessControlMBS

106.1.1 class KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Defines access rights for items.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

106.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.5
- MBS Xojo Plugins, version 18.5pr5

106.1.3 Methods

106.1.4 Constructor

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The private constructor.

106.1.5 CreateWithFlags(protection as String, Flags as Integer, byref error as Variant) as KeychainAccessControlMBS

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Creates new access control object based on protection type and additional flags.
Notes:

Created access control object should be used as a value for kSecAttrAccessControl attribute in AddItem or UpdateItem functions. Accessing keychain items or performing operations on keys which are protected by access control objects can block the execution because of UI which can appear to satisfy the access control conditions, therefore it is recommended to either move those potentially blocking operations out of the main application thread or use combination of kSecUseAuthenticationContext and kSecUseAuthenticationUI attributes to control where the UI interaction can appear.

protection: Protection class to be used for the item. One of kSecAttrAccessible constants.
flags: If no flags are set then all operations are allowed.
error: Additional error information filled in case of failure. a CFErrorMBS object.

Returns newly created access control object.

106.1.6 kSecAttrAccessibleAfterFirstUnlock as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

106.1.7 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.

106.1.8 kSecAttrAccessibleAlways as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.

106.1.9 kSecAttrAccessibleAlwaysThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

106.1.10 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.

106.1.11 kSecAttrAccessibleWhenUnlocked as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.

106.1.12 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as String

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the Accessible values.
Notes: Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate

to a new device, so after a backup is restored to a new device, these items will be missing.

106.1.13 Properties

106.1.14 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

106.1.15 Constants

106.1.16 kSecAccessControlAnd = & h8000

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Constraint logic operation: when using more than one constraint, all must be satisfied.

106.1.17 kSecAccessControlApplicationPassword = & h80000000

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Application provided password for data encryption key generation. This is not a constraint but additional item encryption mechanism.

106.1.18 kSecAccessControlBiometryAny = 2

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Touch ID (any finger) or Face ID. Touch ID or Face ID must be available. With Touch ID at least one finger must be enrolled. With Face ID user has to be enrolled. Item is still accessible by Touch ID even if fingers are added or removed. Item is still accessible by Face ID if user is re-enrolled.

106.1.19 kSecAccessControlBiometryCurrentSet = 8

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Touch ID from the set of currently enrolled fingers. Touch ID must be available and at least one finger must be enrolled. When fingers are added or removed, the item is invalidated. When Face ID is re-enrolled this item is invalidated.

106.1.20 kSecAccessControlDevicePasscode = 16

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Device passcode

106.1.21 kSecAccessControlOr = & h4000

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Constraint logic operation: when using more than one constraint, at least one of them must be satisfied.

106.1.22 kSecAccessControlPrivateKeyUsage = & h40000000

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Create access control for private key operations (i.e. sign operation)

106.1.23 kSecAccessControlTouchIDAny = 2

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Touch ID (any finger) or Face ID. Touch ID or Face ID must be available. With Touch ID at least one finger must be enrolled. With Face ID user has to be enrolled. Item is still accessible by Touch ID even if fingers are added or removed. Item is still accessible by Face ID if user is re-enrolled.

106.1.24 kSecAccessControlTouchIDCurrentSet = 8

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: Touch ID from the set of currently enrolled fingers. Touch ID must be available and at least one finger must be enrolled. When fingers are added or removed, the item is invalidated. When Face ID is re-enrolled this item is invalidated.

106.1.25 kSecAccessControlUserPresence = 1

MBS MacClassic Plugin, Plugin Version: 18.5.

Function: One of the control flags.
Notes: User presence policy using biometry or Passcode. Biometry does not have to be available or enrolled. Item is still accessible by Touch ID even if fingers are added or removed. Item is still accessible by Face ID if user is re-enrolled.

106.2 class KeychainItemMBS

106.2.1 class KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a keychain item.
Example:

```
Const kDomain = "koingosw.com"
Const kUsername = "koingosoftware"
Const kPath = ""
Const kProtocol = "http"

Dim xPassword As MemoryBlock = "testpassword"
Dim xAdded As KeychainItemMBS

Dim dQuery as new Dictionary
dQuery.Value(KeychainManagerMBS.kSecAttrAuthenticationType) = KeychainManagerMBS.kSecAttrAuthen-
ticationTypeHTMLForm
dQuery.Value(KeychainManagerMBS.kSecClass) = KeychainManagerMBS.kSecClassInternetPassword
If Len(kDomain) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrServer) = kDomain
If Len(kUsername) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrAccount) = kUsername
If Len(kProtocol) <>0 Then dQuery.Value(KeychainManagerMBS.kSecAttrProtocol) = kProtocol
dQuery.Value(KeychainManagerMBS.kSecAttrComment) = "default"
dQuery.Value(KeychainManagerMBS.kSecAttrDescription) = "Web form password"
dQuery.Value(KeychainManagerMBS.kSecAttrLabel) = kDomain + " (" + kUsername + ")"
dQuery.Value(KeychainManagerMBS.kSecValueData) = xPassword

If Not KeychainManagerMBS.AddItem(KeychainManagerMBS.Default,dQuery) Then
Break
End If
```

106.2.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr12
- Keychain Plugin rewritten

106.2.3 Methods

106.2.4 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes a keychain item from the default keychain's permanent data store.
Notes: Lasterror is set.

106.2.5 ItemClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the item class for this item.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.itemclass // shows genp for generic password
```

Notes: Lasterror is set.

106.2.6 Keychain as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the keychain object of a given keychain item.
Notes: Lasterror is set.

106.2.7 PersistentReference as Memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a persistent reference for a keychain item.
Notes:

Unlike normal references, a persistent reference may be stored on disk or passed between processes. You can convert a persistent reference into an ordinary keychain item reference (KeychainItemMBS) by calling the KeychainManagerMBS.ItemFromPersistentReference function.
Lasterror is set.

106.2.8 Properties

106.2.9 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

106.2.10 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes:

You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

106.2.11 Account as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the account attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.12 AttributeData(attributeName as string) as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set an attribute as raw data (memoryblock).
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim data as MemoryBlock = item.AttributeData(item.kSecCreationDateItemAttr)
dim text as string = DefineEncoding(data, encodings.UTF8)
MsgBox text
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.13 AttributeText(attributeName as string) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get or set an attribute as an UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim text as string = item.AttributeText(item.kSecCreationDateItemAttr)
MsgBox text
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.14 Comment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the comment attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.15 Description as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the description attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.Description
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.16 Label as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the label attribute as UTF-8 text.
Example:

```
dim items() as KeychainItemMBS = KeychainManagerMBS.AllItems(nil, KeychainManagerMBS.kSecGenericPasswordItemClass)
dim labels() as string

for each item as KeychainItemMBS in items
labels.append item.label
next

break // see array of labels
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.17 Password as memoryblock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the password or sets a new one.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

dim passwordData as MemoryBlock = item.Password
dim password as string = DefineEncoding(passwordData, encodings.UTF8)
MsgBox Password
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.18 Service as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience property to get/set the service attribute as UTF-8 text.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)
MsgBox item.Service
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.2.19 Constants

106.2.20 kSecAccountItemAttr = "acct"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the account attribute.
You use this tag to set or get a string that represents the user account. It also applies to generic, Internet, and AppleShare password items. Keychain strings should use UTF-8 encoding.

106.2.21 kSecAddressItemAttr = "addr"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the address attribute.
You use this tag to set or get a value of type string that represents the AppleTalk zone name, or the IP or domain name that represents the server address. This is unique to AppleShare password attributes. Keychain strings should use UTF-8 encoding.

106.2.22 kSecAlias = "alis"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes: Indicates an alias.

106.2.23 kSecAuthenticationTypeItemAttr = "atyp"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the authentication type attribute.
You use this tag to set or get a value of type SecAuthenticationType that represents the Internet authentication scheme. For possible authentication values, see "Keychain Authentication Type Constants." This is unique to Internet password attributes.

106.2.24 kSecCertificateEncoding = "cenc"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes: Indicates a CSSM_CERT_ENCODING type.

106.2.25 kSecCertificateType = "ctyp"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes: Indicates a CSSM_CERT_TYPE type.

106.2.26 kSecCommentItemAttr = "icmt"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the comment attribute.
You use this tag to set or get a string value that represents a user-editable string containing comments for

this item. Keychain strings should use UTF-8 encoding.

106.2.27 kSecCreationDateItemAttr = "cdat"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the creation date attribute.
You use this tag to get a string value that represents the date the item was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ"). This is the native format for stored time values in the CDSA specification (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in the CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). When specifying the creation date as input to a function (for example, SecKeychainSearchCreateFromAttributes), you may alternatively provide a numeric value of type UInt32 or SInt64, expressed as seconds since 01 January 1904.

106.2.28 kSecCreatorItemAttr = "crtr"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the creator attribute.
You use this tag to set or get a value of type FourCharCode that represents the item's creator.

106.2.29 kSecCrlEncoding = "crnc"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes: Indicates a CSSM_CRL_ENCODING type.

106.2.30 kSecCrlType = "crtp"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes: Indicates a CSSM_CRL_TYPE type.

106.2.31 kSecCustomIconItemAttr = "cusi"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the custom icon attribute.
Use of this attribute is deprecated. Custom icons for keychains are not supported in OS X.

106.2.32 kSecDescriptionItemAttr = "desc"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the description attribute.
You use this tag to set or get a string value that represents a user-visible string describing this particular kind of item, for example "disk image password". Keychain strings should use UTF-8 encoding.

106.2.33 kSecGenericItemAttr = "gena"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the generic attribute.
You use this tag to set or get a value of untyped bytes that represents a user-defined attribute. This is unique to generic password attributes.

106.2.34 kSecInvisibleItemAttr = "invi"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the invisible attribute.
You use this tag to set or get a value of type Boolean that indicates whether the item is invisible (that is, should not be displayed).

106.2.35 kSecLabelItemAttr = "labl"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the label attribute.
You use this tag to set or get a string value that represents a user-editable string containing the label for this item. Keychain strings should use UTF-8 encoding.

106.2.36 kSecModDateItemAttr = "mdat"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the modification date attribute.
You use this tag to get a string value that represents the date the item was created, expressed in Zulu Time format ("YYYYMMDDhhmmssZ"). This is the native format for stored time values in the CDSA specification (defined as CSSM_DB_ATTRIBUTE_FORMAT_TIME_DATE in the CSSM_DB_ATTRIBUTE_FORMAT enumeration, Section 17.2.6.). When specifying the creation date as input to a function (for example, SecKeychainSearchCreateFromAttributes), you may alternatively provide a numeric value of type UInt32 or SInt64, expressed as seconds since 01 January 1904.

106.2.37 kSecNegativeItemAttr = "nega"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the negative attribute.
You use this tag to set or get a value of type Boolean that indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn't want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user. The item, which is typically invisible and with zero-length data, acts as a placeholder.

106.2.38 kSecPathItemAttr = "path"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.

Notes:

Identifies the path attribute.
You use this tag to set or get a string value that represents the path. This is unique to Internet password attributes. Keychain strings should use UTF-8 encoding.

106.2.39 kSecPortItemAttr = "port"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the port attribute.
You use this tag to set or get a value of type UInt32 that represents the Internet port number. This is unique to Internet password attributes.

106.2.40 kSecProtocolItemAttr = "ptcl"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the protocol attribute.
You use this tag to set or get a value of type SecProtocolType that represents the Internet protocol. For possible protocol type values, see "Keychain Protocol Type Constants." This is unique to AppleShare and Internet password attributes.

106.2.41 kSecScriptCodeItemAttr = "scrp"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the script code attribute.
You use this tag to set or get a value of type ScriptCode that represents the script code for all strings. Use of this attribute is deprecated; string attributes should always be stored in UTF-8 encoding.

106.2.42 kSecSecurityDomainItemAttr = "sdmn"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the security domain attribute.
You use this tag to set or get a value that represents the Internet security domain. This is unique to Internet password attributes.

106.2.43 kSecServerItemAttr = "srvr"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the server attribute.
You use this tag to set or get a string that represents the Internet server's domain name or IP address. This is unique to Internet password attributes. Keychain strings should use UTF-8 encoding.

106.2.44 kSecServiceItemAttr = "svce"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the service attribute.
You use this tag to set or get a string that represents the service associated with this item, for example, "iTools". This is unique to generic password attributes. Keychain strings should use UTF-8 encoding.

106.2.45 kSecSignatureItemAttr = "ssig"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the server signature attribute.
You use this tag to set or get a value of type SecAFPServerSignature that represents the server signature block. This is unique to AppleShare password attributes.

106.2.46 kSecTypeItemAttr = "type"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the type attribute.
You use this tag to set or get a value of type FourCharCode that represents the item's type.

106.2.47 kSecVolumeItemAttr = "vlme"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the keychain item attributes.
Notes:

Identifies the volume attribute.
You use this tag to set or get a string value that represents the AppleShare volume. This is unique to AppleShare password attributes. Keychain strings should use UTF-8 encoding.

106.3 module KeychainManagerMBS

106.3.1 module KeychainManagerMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The module for global keychain functions.
Example:

```
// build query
dim query as new Dictionary

dim domain as string = "test.test"
dim username as string = "testuser"

query.value( KeychainManagerMBS.kSecAttrServer ) = Domain
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassInternetPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne

// Build Dictionary with new values
dim newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

106.3.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 18.5pr6
- MBS Real Studio Plugins, version 13.1pr17
- MBS Real Studio Plugins, version 13.1pr12

106.3.3 Methods

106.3.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Example:

```
// add password with password in MemoryBlock
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, PasswordData)

dim e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes:

keychain: A reference to the keychain in which to store a generic password. Pass nil to specify the default keychain.
serviceName: The service name.
accountName: The account name.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
Lasterror is set.

The result code errSecNoDefaultKeychain indicates that no default keychain could be found. The result code errSecDuplicateItem indicates that you tried to add a password that already exists in the keychain. The result code errSecDataTooLarge indicates that you tried to add more data than is allowed for a structure of this type. Call ErrorMessageString function to get a human-readable string explaining the result.

This function adds a new generic password to the specified keychain. Required parameters to identify the password are serviceName and accountName, which are application-defined strings.

You can use this function to add passwords for accounts other than the Internet. For example, you might add AppleShare passwords, or passwords for your database or scheduling programs.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.
See also:

- 106.3.5 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS 18157

106.3.5 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Example:

```
// add password with password in string
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim Password as string = "mysecret"
dim keychain as KeychainMBS = nil // use default

call KeychainManagerMBS.AddGenericPassword(keychain, ServiceName, Username, Password)

dim e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes: Takes UTF-8 text from password string for the password. Else the same as AddGenericPassword with memoryblock.
See also:

- 106.3.4 AddGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS 18156

106.3.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes:

keychain: A reference to the keychain in which to store an Internet password. Pass nil to specify the user's default keychain.
serverName: The server name.
securityDomain: The security domain. This parameter is optional. Pass "" if the protocol does not require it.
accountName: The account name.
path: The character string representing the path.
port: The TCP/IP port number. If no specific port number is associated with this password, pass 0.
protocol: The protocol associated with this password. See Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: A buffer containing the password data to be stored in the keychain.

Returns the new keychain item.
Lasterror is set.

This function adds a new Internet server password to the specified keychain. Required parameters to identify the password are serverName and accountName (you cannot pass "" for both parameters). In addition, some protocols may require an optional securityDomain when authentication is requested. This function optionally returns a reference to the newly added item.

This function sets the initial access rights for the new keychain item so that the application creating the item is given trusted access.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.
See also:

- 106.3.7 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS 18158

106.3.7 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Example:

```
// add password with password in string
dim serverName as string = "mytest.com"
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)
dim keychain as KeychainMBS = nil // use default
dim securityDomain as string = "ftp://mytest.com"
dim accountName as string = "myusername"
dim path as string = "/test"
dim port as Integer = 22
dim protocol as string = KeychainManagerMBS.kSecAttrProtocolFTP
dim authenticationType as string = KeychainManagerMBS.kSecAttrAuthenticationTypeDefault

call KeychainManagerMBS.AddInternetPassword(keychain, serverName, securityDomain, accountName, path,
port, protocol, authenticationType, PasswordData)

dim e as Integer = KeychainManagerMBS.LastError
MsgBox str(e)+": "+KeychainManagerMBS.ErrorMessageString(e)
```

Notes:

See KeychainManagerMBS.AddInternetPassword for details.
The password is stored as data with UTF-8 encoding.
See also:

- 106.3.6 AddInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS 18157

106.3.8 AddItem(attributesDictionary as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Adds one or more items to default keychain.
Notes: See other method variant for details.
See also:

- 106.3.9 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 18160
- 106.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 18160
- 106.3.11 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 18161

106.3.9 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Adds one or more items to default keychain.
Notes: See other method variant for details.
See also:

- 106.3.8 AddItem(attributesDictionary as dictionary) as boolean 18159
- 106.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 18160
- 106.3.11 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 18161

106.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to a keychain.
Example:

```
dim a as new Dictionary

dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

if KeychainManagerMBS.AddItem(nil, a) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes: See other method variant for details.

- 106.3.8 AddItem(attributesDictionary as dictionary) as boolean 18159

- 106.3.9 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 18160
- 106.3.11 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean 18161

106.3.11 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary, byref result as Variant) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds one or more items to a keychain.
Example:

```
dim a as new Dictionary

dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim Password as string = "mysecret"
dim PasswordData as MemoryBlock = ConvertEncoding(Password, encodings.UTF8)

a.value( KeychainManagerMBS.kSecAttrAccount ) = Username
a.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
a.value( KeychainManagerMBS.kSecValueData ) = PasswordData
a.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

dim r as Variant
if KeychainManagerMBS.AddItem(nil, a, r) then
dim item as KeychainItemMBS = r
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes:

attributesDictionary: A dictionary containing an item class key-value pair ("Keychain Item Class Keys and Values") and optional attribute key-value pairs ("Attribute Item Keys and Values") specifying the item's attribute values.
result: Optional. On return, a reference to the newly added items. The exact type of the result is based on the values supplied in attributes, as discussed below.

Lasterror is set.

You specify attributes defining an item by adding key-value pairs to the attributes dictionary. To add multiple items to a keychain at once use the kSecUseItemList key (see section "Item List Key") with an array

of items as its value. This is currently only supported for non-password items.

If you want the new keychain item to be shared among multiple applications, include the kSecAttrAccessGroup key in the attributes dictionary. The value of this key must be the name of a keychain access group to which all of the programs that will share this item belong.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODE_SIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. If you add such a property-list file to the application bundle, then the access group corresponding to the application-identifier entitlement is treated as the last element in the access groups array. If you do not include the kSecAttrAccessGroup key in the attributes dictionary when you call the AddItem function to add an item to the keychain, the function uses the first access group in the array by default. If there is no kSecAttrAccessGroup key in the attributes dictionary and there is no keychain-access-groups entitlement in the application bundle, then the access group of a newly created item is the value of the application-identifier entitlement.

For example, a development group in Apple might have the ID:

659823F3DC53.com.apple

and the application identifiers of their two applications might be:

659823F3DC53.com.apple.oneappleapp and

659823F3DC53.com.apple.twoappleapp

If both applications add a keychain-access-groups entitlement with one value in the array of access groups:

659823F3DC53.com.apple.netaccount

then both applications would add new keychain items to the 659823F3DC53.com.apple.netaccount access group by default and both applications would have access to keychain items in that group. In addition, each application would still have access to its own private keychain items: OneAppleApp would have access to items in keychain access group 659823F3DC53.com.apple.oneappleapp and TwoAppleApp would have access to items in 659823F3DC53.com.apple.twoappleapp.

Return types ("Search Results Constants") are specified as follows:

To obtain the data of the added item as an object of type Memoryblock, specify the return type key kSecReturnData with a value of true.
To obtain all the attributes of the added item as objects of type Dictionary, specify kSecReturnAttributes with a value of true.
To obtain a reference to the added item of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef), specify kSecReturnRef with a value of True. This is the default behavior if a return type is not explicitly specified.
To obtain a persistent reference to the added item (an object of type Memoryblock), specify kSecReturnPersistentRef with a value of True. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
If more than one of these return types is specified, the result is returned as an object of type Dictionary containing all the requested data.

Available in OS X v10.6 and later.

- 106.3.8 AddItem(attributesDictionary as dictionary) as boolean 18159
- 106.3.9 AddItem(attributesDictionary as dictionary, byref result as variant) as boolean 18160
- 106.3.10 AddItem(Keychain as KeychainMBS, attributesDictionary as dictionary) as boolean 18160

106.3.12 AddItemAsync(attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Asynchronous version of AddItem.
Notes: Work performs on a thread and the given delegate handler is called with result.
See also:

- 106.3.13 AddItemAsync(Keychain as KeychainMBS, attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil) 18163

106.3.13 AddItemAsync(Keychain as KeychainMBS, attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Asynchronous version of AddItem.
Notes: Work performs on a thread and the given delegate handler is called with result.
See also:

- 106.3.12 AddItemAsync(attributesDictionary as dictionary, handler as AddItemAsyncCompletedMBS, tag as Variant = nil) 18163

106.3.14 AllItems(keychain as KeychainMBS, itemClass as string) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all items.
Notes:

Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

106.3.15 CopyMatching(Query as dictionary, byref result as Variant) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"

// Build query
dim query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitOne
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and show values from attribute dictionary
dim r as Variant
if KeychainManagerMBS.CopyMatching(query, r) then
if r isa Dictionary then
dim d as Dictionary = r

// show values
MsgBox "Creation Date: "+d.value(KeychainManagerMBS.kSecAttrCreationDate).dateValue.shortdate
MsgBox "Modification Date: "+d.value(KeychainManagerMBS.kSecAttrModificationDate).dateValue.short-
date
end if
```

end if

Notes:

query: A dictionary containing an item class specification and optional attributes for controlling the search. See
result: On return, a reference to the found items. The exact type of the result is based on the search attributes supplied in the query, as discussed below.

Lasterror is set.

You specify attributes defining a search by adding key-value pairs to the query dictionary.

A typical query consists of:

- The class key ("Item Class Key Constant") and a class value constant ("Item Class Value Constants"), which specifies the class of items for which to search.
- One or more attribute key-value pairs ("Attribute Item Keys and Values"), which specify the attribute data to be matched.
- One or more search key-value pairs ("Search Keys"), which specify values that further refine the search.
- A return-type key-value pair ("Search Results Constants"), specifying the type of results you desire.

Return types ("Search Results Constants") are specified as follows:

- To obtain a reference (of type Memoryblock) to the data of a matching item, specify kSecReturnData with a value of true.
- To obtain a dictionary (of type Dictionary) containing the attributes of a matching item, specify kSecReturnAttributes with a value of true.
- To obtain a reference (of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef) to a matching item, specify kSecReturnRef with a value of true.
- To obtain a persistent reference (of type Memoryblock) to a matching item, specify kSecReturnPersistentRef with a value of true. Note that unlike normal references, a persistent reference may be stored on disk or passed between processes.
- If more than one return type is specified (for example, kSecReturnRef and kSecReturnAttributes), the results are returned as a dictionary (that is, an object of type Dictionary) containing all the requested data.

By default, this function returns only the first match found. To obtain more than one matching item at a time, specify the search key kSecMatchLimit with a value greater than 1. The result will be an object of type Array containing up to that number of matching items.

Note: You cannot combine the kSecReturnData and kSecMatchLimitAll options when copying password items (items of class kSecInternetPasswordItemClass or kSecGenericPasswordItemClass), because copying each password item could require additional authentication. Instead, request a reference or persistent reference to the items, then request the data for only the specific passwords that you actually require.
By default, this function searches for items in the keychain. To instead provide your own set of items to be filtered by this search query, specify the search key kSecMatchItemList and provide as its value a Array containing items of type SecKeychainItemRef, SecKeyRef, SecCertificateRef, or SecIdentityRef. The objects in the provided array must all be of the same type.

To convert from persistent item references to normal item references, specify the search key kSecMatchItemList with a value that consists of an object of type array referencing an array containing one or more elements of type Memoryblock (the persistent references), and a return-type key of kSecReturnRef whose value is true. The objects in the provided array must all be of the same type.

When you use Xcode to create an application, Xcode adds an application-identifier entitlement to the application bundle. Keychain Services uses this entitlement to grant the application access to its own keychain items. You can also add a keychain-access-groups entitlement to the application and, in the entitlement property list file, specify an array of keychain access groups to which the application belongs. The property list file can have any name you like (for example, keychain-access-groups.plist). The Xcode build variable CODE_SIGN_ENTITLEMENTS should contain the SRCROOT relative path to the entitlement property list file. The property list file itself should be a dictionary with a top-level key called keychain-access-groups whose value is an array of strings. When you call the SecItemAdd function to add an item to the keychain, you can specify the access group to which that item should belong. By default, the SecItemCopyMatching function searches all the access groups to which the application belongs. However, you can add the kSecAttrAccessGroup key to the search dictionary to specify which access group to search for keychain items.

Availability
Available in OS X v10.6 and later.

106.3.16 CopyMatchingAsync(Query as dictionary, handler as CopyMatchingAsyncCompletedMBS, tag as Variant = nil)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Asynchronous version of CopyMatching.
Notes: Work performs on a thread and the given delegate handler is called with result.

106.3.17 CopyMatchingDictionaries(Query as dictionary) as Dictionary()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
// Build query
dim query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll

// search all items
dim dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
dim dic as Dictionary = dics(0)

// and display
MsgBox "Service: "+dic.Value(KeychainManagerMBS.kSecAttrService)+EndOfLine+_
"Account: "+dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

Notes: This is a variant of CopyMatching which uses kSecReturnAttributes to query array of dictionaries.

106.3.18 CopyMatchingItems(Query as dictionary) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns one or more keychain items that match a search query, or copies attributes of specific keychain items.
Example:

```
// Build query
dim query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll
query.Value( KeychainManagerMBS.kSecAttrAccount ) = "myusername"

// search all items
dim items() as KeychainItemMBS = KeychainManagerMBS.CopyMatchingItems(query)

if UBound(items) = -1 then
```

```
MsgBox "nothing found."
else

// pick first
dim item as KeychainItemMBS = items(0)

// and display
MsgBox "Service: "+item.Service+EndOfLine+"Account: "+item.Account
end if
```

Notes: This is a variant of CopyMatching which uses kSecReturnRef to query array of KeychainItemMBS.

106.3.19 Default as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the default keychain.
Example:

```
MsgBox KeychainManagerMBS.Default.Path
```

Notes: Lasterror is set.

106.3.20 DeleteItem(Query as Dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Deletes items that match a search query.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"

// Build query
dim query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName

// search the item and delete it
```

```
if KeychainManagerMBS.DeleteItem(query) then
MsgBox "Deleted"
else
MsgBox "Failed."
end if
```

Notes:

query: A dictionary containing an item class specification and optional attributes for controlling the search. Lasterror is set.

See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

By default, this function deletes all items matching the specified query. You can change this behavior by specifying a key, as follows:

- To delete an item identified by a transient reference, specify the kSecMatchItemList search key with a reference returned by using the kSecReturnRef return type key in a previous call to the SecItemCopyMatching or SecItemAdd functions.
- To delete an item identified by a persistent reference, specify the kSecMatchItemList search key with a persistent reference returned by using the kSecReturnPersistentRef return type key to the SecItemCopyMatching or SecItemAdd functions.
- If more than one of these return keys is specified, the behavior is undefined.

Available in OS X v10.6 and later.

106.3.21 DomainDefault(domain as Integer) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the default keychain from a specified preference domain.
Example:

```
dim SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
msgbox SystemKeychain.name
```

Notes:

domain: The preference domain from which you wish to retrieve the default keychain. See Preference Domain Constants for possible domain values.

Returns the keychain object of the default keychain in the specified preference domain.
Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the default keychain for a specific preference domain. Use the KeychainManagerMBS.Default function if you want the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.
Available in OS X v10.3 and later.

106.3.22 DomainSearchList(domain as Integer) as KeychainMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves the keychain search list for a specified preference domain.
Example:

```
dim SearchList() as KeychainMBS = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)
dim names() as String

for each k as KeychainMBS in SearchList
names.Append k.Name
next

MsgBox Join(names, EndOfLine)
```

Notes:

domain: The preference domain from which you wish to retrieve the keychain search list. See Preference Domain Constants for possible domain values.

Returns the keychain search list of the specified preference domain.
Lasterror is set.

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to retrieve the keychain search list for a specific preference domain. Use the SearchList function if you want the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.
Available in OS X v10.3 and later.

106.3.23 ErrorMessageString(error as Integer) as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns a string explaining the meaning of a security result code.
Notes:

status: A result code of type OSStatus or CSSM_RETURN, returned by a security or CSSM function.

Returns a human-readable string describing the result, or empty string if no string is available for the specified result code.
Available in OS X v10.5 and later.

106.3.24 FindGenericItem(keychain as KeychainMBS, serviceName as string, accountName as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic keychain item based on the attributes passed.
Example:

```
dim ServiceName as string = "mytest"
dim Username as string = "myusername"
dim keychain as KeychainMBS = nil // use default

dim item as KeychainItemMBS = KeychainManagerMBS.FindGenericItem(keychain, ServiceName, Username)

MsgBox "Label: "+item.label+EndOfLine+_
"Comment: "+item.comment+EndOfLine+_
"Account: "+item.Account
```

Notes: Same as KeychainManagerMBS.FindGenericPassword, but returns item instead of password.

106.3.25 FindGenericPassword(keychain as KeychainMBS, serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic password based on the attributes passed.

Notes:

keychain: A reference to a single keychain, or nil to search the user's default keychain search list.
serviceName: The service name.
accountName: The account name.
password: A memoryblock that holds the password data.

Returns the item object of the generic password.
Lasterror is set.

This function finds the first generic password item that matches the attributes you provide. Most attributes are optional; you should pass only as many as you need to narrow the search sufficiently for your application's intended use. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.

106.3.26 FindInternetItem(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password item based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

106.3.27 FindInternetPassword(keychain as KeychainMBS, serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password based on the attributes passed.
Notes:

keychain: A single keychain or nil to search the user's default keychain search list.

serverName: The server name.
securityDomain: The security domain. This parameter is optional, as not all protocols require it. Pass "" if it is not required.
accountName: The account name.
path: The string representing the path.
port: The TCP/IP port number. Pass 0 to ignore the port number.
protocol: The protocol associated with this password. See Keychain Protocol Type Constants for a description of possible values.
authenticationType: The authentication scheme used. See Keychain Authentication Type Constants for a description of possible values. Pass the constant kSecAuthenticationTypeDefault, to specify the default authentication scheme.
password: On return, a memoryblock containing the password data.

Returns the item object of the Internet password.
Lasterror is set.

This function finds the first Internet password item that matches the attributes you provide. This function optionally returns a reference to the found item.

This function decrypts the password before returning it to you. If the calling application is not in the list of trusted applications, the user is prompted before access is allowed. If the access controls for this item do not allow decryption, the function returns the errSecAuthFailed result code.

This function automatically calls the function Unlock to display the Unlock Keychain dialog box if the keychain is currently locked.
Available in OS X v10.2 and later.

106.3.28 GetPassword(Query as dictionary, byref result as Memoryblock) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Returns one keychain item that match a search query.
Example:

```
// build query
dim query as new Dictionary

dim ServiceName as string = "mytest"
dim Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
```

```
// query password
dim passwordData as MemoryBlock
if KeychainManagerMBS.GetPassword(query, passwordData) then
// and show it
dim password as string = DefineEncoding(passwordData, Encodings.utf8)
MsgBox "OK: "+password
else
MsgBox "Failed."
end if
```

Notes:

This is a variant of CopyMatching which uses kSecReturnData to query the data of one keychain item. Returns password of first item found in result parameter. If you expect text, be sure to use DefineEncoding to define as encodings.UTF8.

106.3.29 ItemFromPersistentReference(data as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Provides a keychain item reference, given a persistent reference.
Notes:

Returns a keychain item reference for the item for which you provided a persistent reference.
Available in OS X v10.6 and later.

106.3.30 kSecAttrAccess as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

A SecAccessRef object describing the access control settings for this item.
Available in OS X v10.7 and later.

106.3.31 kSecAttrAccessControl as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is KeychainAccessControlMBS instance which contains access control conditions for item.

Notes:

Available on Mac OS X 10.10 and newer.
IMPORTANT: This attribute is mutually exclusive with kSecAttrAccess attribute.

See KeychainAccessControlMBS class.

106.3.32 kSecAttrAccessGroup as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is a CFStringRef indicating which access group a item is in.
Notes:

Available on Mac OS X 10.9 and newer.
The access groups that a particular application has membership in are determined by two entitlements for that application. The application-identifier entitlement contains the application's single access group, unless there is a keychain-access-groups entitlement present. The latter has as its value a list of access groups; the first item in this list is the default access group. Unless a specific access group is provided as the value of kSecAttrAccessGroup when SecItemAdd is called, new items are created in the application's default access group. Specifying this attribute in SecItemCopyMatching, SecItemUpdate, or SecItemDelete calls limits the search to the specified access group (of which the calling application must be a member to obtain matching results.) To share keychain items between multiple applications, each application must have a common group listed in its keychain-access-groups entitlement, and each must specify this shared access group name as the value for the kSecAttrAccessGroup key in the dictionary passed to SecItem functions.

106.3.33 kSecAttrAccessible as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value indicates when your application needs access to an item's data.
Notes:

You should choose the most restrictive option that meets your application's needs to allow the system to protect that item in the best way possible. See the kSecAttrAccessible* methods for a list of values which can be specified.

IMPORTANT: This attribute is currently not supported for OS X keychain items, unless the kSecAttrSynchronizable attribute is also present. If both attributes are specified on either OS X or iOS, the value for the kSecAttrAccessible key may only be one whose name does not end with "ThisDeviceOnly", as those cannot sync to another device.

106.3.34 kSecAttrAccessibleAfterFirstUnlock as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes: Item data can only be accessed once the device has been unlocked after a restart. This is recommended for items that need to be accesible by background applications. Items with this attribute will migrate to a new device when using encrypted backups.

106.3.35 kSecAttrAccessibleAfterFirstUnlockThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes:

Item data can only be accessed once the device has been unlocked after a restart.
This is recommended for items that need to be accessible by background applications. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device these items will be missing.
Available on Mac OS X 10.9 and newer.

106.3.36 kSecAttrAccessibleAlways as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes:

Item data can always be accessed regardless of the lock state of the device. This is not recommended for anything except system use. Items with this attribute will migrate to a new device when using encrypted backups.
Available on Mac OS X 10.9 and newer.

106.3.37 kSecAttrAccessibleAlwaysThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes:

Item data can always be accessed regardless of the lock state of the device. This option is not recommended for anything except system use. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.

Available on Mac OS X 10.9 and newer.

106.3.38 kSecAttrAccessibleWhenPasscodeSetThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes:

Item data can only be accessed while the device is unlocked. This is recommended for items that only need to be accessible while the application is in the foreground and requires a passcode to be set on the device. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing. This attribute will not be available on devices without a passcode. Disabling the device passcode will cause all previously protected items to be deleted.
Available on Mac OS X 10.9 and newer.

106.3.39 kSecAttrAccessibleWhenUnlocked as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes:

Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will migrate to a new device when using encrypted backups.
Available on Mac OS X 10.9 and newer.

106.3.40 kSecAttrAccessibleWhenUnlockedThisDeviceOnly as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: One of the values for kSecAttrAccessible key.
Notes:

Item data can only be accessed while the device is unlocked. This is recommended for items that only need be accesible while the application is in the foreground. Items with this attribute will never migrate to a new device, so after a backup is restored to a new device, these items will be missing.
Available on Mac OS X 10.9 and newer.

106.3.41 kSecAttrAccount as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Account attribute key.
The corresponding value is of type String and contains an account name. Items of class kSecClassGenericPassword and kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

106.3.42 kSecAttrApplicationLabel as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Application label attribute key.
The corresponding value is of type String and contains a label for this item. This attribute is different from the kSecAttrLabel attribute, which is intended to be human-readable. This attribute is used to look up a key programmatically; in particular, for keys of class kSecAttrKeyClassPublic and kSecAttrKeyClassPrivate, the value of this attribute is the hash of the public key.
Available in OS X v10.6 and later.

106.3.43 kSecAttrApplicationTag as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Private tag attribute key.
The corresponding value is of type Memoryblock and contains private tag data.
Available in OS X v10.6 and later.

106.3.44 kSecAttrAuthenticationType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Authentication type attribute key.

The corresponding value is of type integer and denotes the authentication scheme for this item (see "Authentication Type Values").
Available in OS X v10.6 and later.

106.3.45 kSecAttrAuthenticationTypeDefault as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

The default authentication type.
Available in OS X v10.6 and later.

106.3.46 kSecAttrAuthenticationTypeDPA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

Distributed Password authentication.
Available in OS X v10.6 and later.

106.3.47 kSecAttrAuthenticationTypeHTMLForm as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

HTML form based authentication.
Available in OS X v10.6 and later.

106.3.48 kSecAttrAuthenticationTypeHTTPBasic as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

HTTP Basic authentication.
Available in OS X v10.6 and later.

106.3.49 kSecAttrAuthenticationTypeHTTPDigest as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

HTTP Digest Access authentication.
Available in OS X v10.6 and later.

106.3.50 kSecAttrAuthenticationTypeMSN as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

Microsoft Network default authentication.
Available in OS X v10.6 and later.

106.3.51 kSecAttrAuthenticationTypeNTLM as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

Windows NT LAN Manager authentication.
Available in OS X v10.6 and later.

106.3.52 kSecAttrAuthenticationTypeRPA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrAuthenticationType attribute key.
Notes:

Remote Password authentication.
Available in OS X v10.6 and later.

106.3.53 kSecAttrCanDecrypt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Decryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to decrypt data.
Available in OS X v10.6 and later.

106.3.54 kSecAttrCanDerive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Derivation attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to derive another key.
Available in OS X v10.6 and later.

106.3.55 kSecAttrCanEncrypt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Encryption attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to encrypt data.
Available in OS X v10.6 and later.

106.3.56 kSecAttrCanSign as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Signature attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to

create a digital signature.
Available in OS X v10.6 and later.

106.3.57 kSecAttrCanUnwrap as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Unwrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to unwrap another key.
Available in OS X v10.6 and later.

106.3.58 kSecAttrCanVerify as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Signature verification attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to verify a digital signature.
Available in OS X v10.6 and later.

106.3.59 kSecAttrCanWrap as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Wrap attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key can be used to wrap another key.
Available in OS X v10.6 and later.

106.3.60 kSecAttrCertificateEncoding as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Certificate encoding attribute key.
The corresponding value is of type integer and denotes the certificate encoding (see the CSSM_CERT_ENCODING enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.61 kSecAttrCertificateType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Certificate type attribute key.
The corresponding value is of type integer and denotes the certificate type (see the CSSM_CERT_TYPE enumeration in cssmtype.h). Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.62 kSecAttrComment as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Comment attribute key.
The corresponding value is of type string and contains the user-editable comment for this item.
Available in OS X v10.6 and later.

106.3.63 kSecAttrCreationDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Creation date key.
The corresponding value is of type date and represents the date the item was created. Read only.
Available in OS X v10.6 and later.

106.3.64 kSecAttrCreator as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Creator attribute key.
The corresponding value is of type integer and represents the item's creator. This number is the unsigned integer representation of a four-character code (for example, 'aCrt').
Available in OS X v10.6 and later.

106.3.65 kSecAttrDescription as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Description attribute key.
The corresponding value is of type String and specifies a user-visible string describing this kind of item (for example, "Disk image password").
Available in OS X v10.6 and later.

106.3.66 kSecAttrEffectiveKeySize as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Effective number of bits attribute key.
The corresponding value is of type Integer and indicates the effective number of bits in this cryptographic key. For example, a DES key has a kSecAttrKeySizeInBits of 64, but a kSecAttrEffectiveKeySize of 56 bits.
Available in OS X v10.6 and later.

106.3.67 kSecAttrGeneric as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Generic attribute key.
The corresponding value is of type Memoryblock and contains a user-defined attribute. Items of class kSec-

ClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

106.3.68 kSecAttrIsInvisible as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Invisible attribute key.
The corresponding value is of type boolean and is true if the item is invisible (that is, should not be displayed).
Available in OS X v10.6 and later.

106.3.69 kSecAttrIsNegative as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Negative attribute key.
The corresponding value is of type Boolean and indicates whether there is a valid password associated with this keychain item. This is useful if your application doesn't want a password for some particular service to be stored in the keychain, but prefers that it always be entered by the user.
Available in OS X v10.6 and later.

106.3.70 kSecAttrIsPermanent as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Permanence attribute key.
The corresponding value is of type Boolean and indicates whether this cryptographic key is to be stored permanently.
Available in OS X v10.6 and later.

106.3.71 kSecAttrIssuer as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Issuer attribute key.
The corresponding value is of type Date and contains the X.500 issuer name of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.72 kSecAttrKeyClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Key class attribute key.
The corresponding value is of type CFTypeRef and specifies a type of cryptographic key. Possible values are listed in "Key Class Values." Read only.
Available in OS X v10.6 and later.

106.3.73 kSecAttrKeyClassPrivate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes:

A private key of a public-private pair.
Available in OS X v10.6 and later.

106.3.74 kSecAttrKeyClassPublic as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes:

A public key of a public-private pair.
Available in OS X v10.6 and later.

106.3.75 kSecAttrKeyClassSymmetric as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyClass attribute key.
Notes:

A private key used for symmetric-key encryption and decryption.
Available in OS X v10.6 and later.

106.3.76 kSecAttrKeySizeInBits as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Number of bits attribute key.
The corresponding value is of type Integer and indicates the total number of bits in this cryptographic key.
Compare with kSecAttrEffectiveKeySize.
Available in OS X v10.6 and later.

106.3.77 kSecAttrKeyType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Algorithm attribute key.
The corresponding value is of type integer and indicates the algorithm associated with this cryptographic key (see the CSSM_ALGORITHMS enumeration in cssmtype.h and "Key Type Values").
Available in OS X v10.6 and later.

106.3.78 kSecAttrKeyType3DES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.

106.3.79 kSecAttrKeyTypeAES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

AES algorithm.
Available in OS X v10.7 and later.

106.3.80 kSecAttrKeyTypeCAST as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

CAST algorithm.
Available in OS X v10.7 and later.

106.3.81 kSecAttrKeyTypeDES as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

DES algorithm.
Available in OS X v10.7 and later.

106.3.82 kSecAttrKeyTypeDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

DSA algorithm.
Available in OS X v10.7 and later.

106.3.83 kSecAttrKeyTypeEC as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

Elliptic curve algorithm.
Available in OS X v10.9 and later.

106.3.84 kSecAttrKeyTypeECDSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

Elliptic curve DSA algorithm.
Available in OS X v10.7 and later.

106.3.85 kSecAttrKeyTypeRC2 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

RC2 algorithm.
Available in OS X v10.7 and later.

106.3.86 kSecAttrKeyTypeRC4 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

RC4 algorithm.
Available in OS X v10.7 and later.

106.3.87 kSecAttrKeyTypeRSA as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrKeyType attribute key.
Notes:

RSA algorithm.
Available in OS X v10.6 and later.

106.3.88 kSecAttrLabel as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Label attribute key.
The corresponding value is of type String and contains the user-visible label for this item.
Available in OS X v10.6 and later.

106.3.89 kSecAttrModificationDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Modification date key.
The corresponding value is of type date and represents the last time the item was updated. Read only.
Available in OS X v10.6 and later.

106.3.90 kSecAttrPath as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Path attribute key.
The corresponding value is of type String and represents a path, typically the path component of the URL.
Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

106.3.91 kSecAttrPort as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Port attribute key.
The corresponding value is of type integer and represents an Internet port number. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

106.3.92 kSecAttrPRF as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Pseudorandom function attribute. Possible values are described in "kSecAttrPRF Value Constants."
Available in OS X v10.7 and later.

106.3.93 kSecAttrPRFHmacAlgSHA1 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes:

Use the SHA1 algorithm.
Available in OS X v10.7 and later.

106.3.94 kSecAttrPRFHmacAlgSHA224 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes:

Use the SHA224 algorithm.
Available in OS X v10.7 and later.

106.3.95 kSecAttrPRFHmacAlgSHA256 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.

Notes:

Use the SHA256 algorithm.
Available in OS X v10.7 and later.

106.3.96 kSecAttrPRFHmacAlgSHA384 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes:

Use the SHA384 algorithm.
Available in OS X v10.7 and later.

106.3.97 kSecAttrPRFHmacAlgSHA512 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Constants used for the kSecAttrPRF key in the parameters dictionary passed to KeyDeriveFromPassword.
Notes:

Use the SHA512 algorithm.
Available in OS X v10.7 and later.

106.3.98 kSecAttrProtocol as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Protocol attribute key.
The corresponding value is of type integer and denotes the protocol for this item (see "Protocol Values").
Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

106.3.99 kSecAttrProtocolAFP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

AFP over TCP.
Available in OS X v10.6 and later.

106.3.100 kSecAttrProtocolAppleTalk as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

AFP over AppleTalk.
Available in OS X v10.6 and later.

106.3.101 kSecAttrProtocolDAAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

DAAP protocol.
Available in OS X v10.6 and later.

106.3.102 kSecAttrProtocolEPPC as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

Remote Apple Events.
Available in OS X v10.6 and later.

106.3.103 kSecAttrProtocolFTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

FTP protocol.
Available in OS X v10.6 and later.

106.3.104 kSecAttrProtocolFTPAccount as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

A client side FTP account.
Available in OS X v10.6 and later.

106.3.105 kSecAttrProtocolFTPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

FTP proxy.
Available in OS X v10.6 and later.

106.3.106 kSecAttrProtocolFTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

FTP over TLS/SSL.
Available in OS X v10.6 and later.

106.3.107 kSecAttrProtocolHTTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

HTTP protocol.
Available in OS X v10.6 and later.

106.3.108 kSecAttrProtocolHTTPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

HTTP proxy.
Available in OS X v10.6 and later.

106.3.109 kSecAttrProtocolHTTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

HTTP over TLS/SSL.
Available in OS X v10.6 and later.

106.3.110 kSecAttrProtocolHTTPSProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

HTTPS proxy.
Available in OS X v10.6 and later.

106.3.111 kSecAttrProtocolIMAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

IMAP protocol.
Available in OS X v10.6 and later.

106.3.112 kSecAttrProtocolIMAPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

IMAP over TLS/SSL.
Available in OS X v10.6 and later.

106.3.113 kSecAttrProtocolIPP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

IPP protocol.
Available in OS X v10.6 and later.

106.3.114 kSecAttrProtocolIRC as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

IRC protocol.
Available in OS X v10.6 and later.

106.3.115 kSecAttrProtocolIRCS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

IRC over TLS/SSL.
Available in OS X v10.6 and later.

106.3.116 kSecAttrProtocolLDAP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

LDAP protocol.
Available in OS X v10.6 and later.

106.3.117 kSecAttrProtocolLDAPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

LDAP over TLS/SSL.
Available in OS X v10.6 and later.

106.3.118 kSecAttrProtocolNNTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

NNTP protocol.
Available in OS X v10.6 and later.

106.3.119 kSecAttrProtocolNNTPS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

NNTP over TLS/SSL.
Available in OS X v10.6 and later.

106.3.120 kSecAttrProtocolPOP3 as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

POP3 protocol.
Available in OS X v10.6 and later.

106.3.121 kSecAttrProtocolPOP3S as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

POP3 over TLS/SSL.
Available in OS X v10.6 and later.

106.3.122 kSecAttrProtocolRTSP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

RTSP protocol.
Available in OS X v10.6 and later.

106.3.123 kSecAttrProtocolRTSPProxy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

RTSP proxy.
Available in OS X v10.6 and later.

106.3.124 kSecAttrProtocolSMB as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

SMB protocol.
Available in OS X v10.6 and later.

106.3.125 kSecAttrProtocolSMTP as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

SMTP protocol.
Available in OS X v10.6 and later.

106.3.126 kSecAttrProtocolSOCKS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

SOCKS protocol.
Available in OS X v10.6 and later.

106.3.127 kSecAttrProtocolSSH as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

SSH protocol.
Available in OS X v10.6 and later.

106.3.128 kSecAttrProtocolTelnet as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

Telnet protocol.
Available in OS X v10.6 and later.

106.3.129 kSecAttrProtocolTelnetS as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Values that can be used with the kSecAttrProtocol attribute key.
Notes:

Telnet over TLS/SSL.
Available in OS X v10.6 and later.

106.3.130 kSecAttrPublicKeyHash as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Public key hash attribute key.
The corresponding value is of type memoryblock and contains the hash of a certificate's public key. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.131 kSecAttrRounds as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

The number of rounds for the pseudorandom function specified by kSecAttrPRF.
Available in OS X v10.7 and later.

106.3.132 kSecAttrSalt as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

A memoryblock object containing the salt to use for this key.
Available in OS X v10.7 and later.

106.3.133 kSecAttrSecurityDomain as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Security domain attribute key.
The corresponding value is of type String and represents the Internet security domain. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

106.3.134 kSecAttrSerialNumber as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Serial number attribute key.
The corresponding value is of type Date and contains the serial number data of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.135 kSecAttrServer as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Server attribute key.
The corresponding value is of type String and contains the server's domain name or IP address. Items of class kSecClassInternetPassword have this attribute.
Available in OS X v10.6 and later.

106.3.136 kSecAttrService as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Service attribute key.
The corresponding value is a string of type String that represents the service associated with this item. Items of class kSecClassGenericPassword have this attribute.
Available in OS X v10.6 and later.

106.3.137 kSecAttrSubject as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Subject attribute key.
The corresponding value is of type CFDataRef and contains the X.500 subject name of a certificate. Items

of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.138 kSecAttrSubjectKeyID as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Subject key ID attribute key.
The corresponding value is of type date and contains the subject key ID of a certificate. Items of class kSecClassCertificate have this attribute. Read only.
Available in OS X v10.6 and later.

106.3.139 kSecAttrSynchronizable as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is a Boolean indicating whether the item in question can be synchronized.
Notes:

To add a new item which can be synced to other devices, or to obtain synchronizable results from a query, supply this key with a value of true. If the key is not supplied, or has a value of false, then no synchronizable items will be added or returned. A predefined value, kSecAttrSynchronizableAny, may be provided instead of true if both synchronizable and non-synchronizable results are desired.

IMPORTANT: Specifying the kSecAttrSynchronizable key has several caveats:

- Updating or deleting items using the kSecAttrSynchronizable key will affect all copies of the item, not just the one on your local device. Be sure that it makes sense to use the same password on all devices before deciding to make a password synchronizable.
- Only password items can currently be synchronized. Keychain syncing is not supported for certificates or cryptographic keys.
- Items stored or obtained using the kSecAttrSynchronizable key cannot specify SecAccessRef-based access control with kSecAttrAccess. If a password is intended to be shared between multiple applications, the kSecAttrAccessGroup key must be specified, and each application using this password must have a 'keychain-access-groups' entitlement with the specified access group value.
- Items stored or obtained using the kSecAttrSynchronizable key may not also specify a kSecAttrAccessible value which is incompatible with syncing (namely, those whose names end with "ThisDeviceOnly".)

- Items stored or obtained using the kSecAttrSynchronizable key cannot be specified by reference. You must pass kSecReturnAttributes and/or kSecReturnData to retrieve results; kSecReturnRef is currently not supported for synchronizable items.
- Persistent references to synchronizable items should be avoided; while they may work locally, they cannot be moved between devices, and may not resolve if the item is modified on some other device.
- When specifying a query that uses the kSecAttrSynchronizable key, search keys are limited to the item's class and attributes. The only search constant which may be used is kSecMatchLimit; other constants using the kSecMatch prefix are not supported at this time.

Available on Mac OS X 10.9 and newer.

106.3.140 kSecAttrSynchronizableAny as string

MBS MacClassic Plugin, Plugin Version: 15.0, Platform: macOS, Targets: All.

Function: Specifies that both synchronizable and non-synchronizable results should be returned from this query.
Notes:

This may be used as a value for the kSecAttrSynchronizable dictionary key in a call to SecItemCopyMatching, SecItemUpdate, or SecItemDelete.
Available on Mac OS X 10.9 and newer.

106.3.141 kSecAttrType as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the keychain item attribute keys.
Notes:

Type attribute key.
The corresponding value is of type integer and represents the item's type. This number is the unsigned integer representation of a four-character code (for example, 'aTyp').
Available in OS X v10.6 and later.

106.3.142 kSecClass as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Key constant used to set the item class value in a search dictionary.
Notes:

Dictionary key whose value is the item's class code.
Possible values for this key are listed in Item Class Value Constants.
Available in OS X v10.6 and later.

106.3.143 kSecClassCertificate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:

Certificate item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCertificateType
kSecAttrCertificateEncoding
kSecAttrLabel
kSecAttrSubject
kSecAttrIssuer
kSecAttrSerialNumber
kSecAttrSubjectKeyID
kSecAttrPublicKeyHash

Available in OS X v10.7 and later.

106.3.144 kSecClassGenericPassword as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:

Generic password item.

The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription

kSecAttrComment
kSecAttrCreator
kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrService
kSecAttrGeneric

Available in OS X v10.7 and later.

106.3.145 kSecClassIdentity as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:

Identity item.

An identity is a certificate together with its associated private key. Because an identity is the combination of a private key and a certificate, this class shares attributes of both kSecClassKey and kSecClassCertificate.

Available in OS X v10.7 and later.

106.3.146 kSecClassInternetPassword as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:

Internet password item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrCreationDate
kSecAttrModificationDate
kSecAttrDescription
kSecAttrComment
kSecAttrCreator

kSecAttrType
kSecAttrLabel
kSecAttrIsInvisible
kSecAttrIsNegative
kSecAttrAccount
kSecAttrSecurityDomain
kSecAttrServer
kSecAttrProtocol
kSecAttrAuthenticationType
kSecAttrPort
kSecAttrPath

Available in OS X v10.6 and later.

106.3.147 kSecClassKey as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: One of the values used with the kSecClass key in a search dictionary.
Notes:

Cryptographic key item.
The following attribute types ("Attribute Item Keys and Values") can be used with an item of this type:

kSecAttrAccessible
kSecAttrAccessGroup
kSecAttrKeyClass
kSecAttrLabel
kSecAttrApplicationLabel
kSecAttrIsPermanent
kSecAttrApplicationTag
kSecAttrKeyType
kSecAttrKeySizeInBits
kSecAttrEffectiveKeySize
kSecAttrCanEncrypt
kSecAttrCanDecrypt
kSecAttrCanDerive
kSecAttrCanSign
kSecAttrCanVerify
kSecAttrCanWrap
kSecAttrCanUnwrap

Available in OS X v10.7 and later.

106.3.148 kSecMatchCaseInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then case-sensitive string matching is performed.
Available in OS X v10.6 and later.

106.3.149 kSecMatchDiacriticInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then diacritic-sensitive string matching is performed.
Available in OS X v10.7 and later.

106.3.150 kSecMatchEmailAddressIfPresent as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Email address attribute key.
The corresponding value is of type string and contains an RFC822 email address. If provided, returned certificates or identities are limited to those that either contain the address or do not contain any email address.
Available in OS X v10.6 and later.

106.3.151 kSecMatchIssuers as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Issuers attribute key.

The corresponding value is of type array, where the array consists of X.500 names of type Memoryblock. If provided, returned certificates or identities are limited to those whose certificate chain contains one of the issuers provided in this list.
Available in OS X v10.6 and later.

106.3.152 kSecMatchItemList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Item list attribute key.
To provide your own set of items to be filtered by a search query rather than searching the keychain, specify this search key in a call to the SecItemCopyMatching function with a value that consists of an object of type array where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or memoryblock items. The objects in the provided array must all be of the same type.
To convert from persistent item references to normal item references, specify this search key in a call to the CopyMatching function with a value of type array where the array contains one or more CFDataRef elements (the persistent references), and a return-type key of kSecReturnRef whose value is True.
To delete an item identified by a transient reference, specify the kSecMatchItemList search key in a call to the SecItemDelete function with a reference returned by using the kSecReturnRef return type key in a previous call to the CopyMatching or SecItemAdd functions.
To delete an item identified by a persistent reference, specify the kSecMatchItemList search key in a call to the SecItemDelete function with a persistent reference returned by using the kSecReturnPersistentRef return type key to the CopyMatching or SecItemAdd functions.
Available in OS X v10.6 and later.

106.3.153 kSecMatchLimit as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Match limit attribute key.
The corresponding value is of type Integer. If provided, this value specifies the maximum number of results to return or otherwise act upon. For a single item, specify kSecMatchLimitOne. To specify all matching items, specify kSecMatchLimitAll. The default behavior is function-dependent.
Available in OS X v10.6 and later.

106.3.154 kSecMatchLimitAll as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

An unlimited number of results may be returned; used as a value for the kSecMatchLimit attribute key.
Available in OS X v10.6 and later.

106.3.155 kSecMatchLimitOne as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Results are limited to the first item found; used as a value for the kSecMatchLimit attribute key.
Available in OS X v10.6 and later.

106.3.156 kSecMatchPolicy as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Match policy attribute key.
The corresponding value is of type SecPolicyRef. If provided, returned certificates or identities must verify with this policy.
Available in OS X v10.6 and later.

106.3.157 kSecMatchSearchList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Example:

```
// We pass a keychain for searching only in this keychain
dim keychains() as KeychainMBS = KeychainManagerMBS.SearchList
dim keychain as KeychainMBS = keychains(1) // we pick second keychain
dim keychainname as string = keychain.name

// Build query
```

```
dim query as new Dictionary

query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword
query.Value( KeychainManagerMBS.kSecReturnAttributes ) = true
query.Value( KeychainManagerMBS.kSecMatchLimit ) = KeychainManagerMBS.kSecMatchLimitAll
query.Value( KeychainManagerMBS.kSecMatchSearchList ) = array(keychain)

// search all items
dim dics() as Dictionary = KeychainManagerMBS.CopyMatchingDictionaries(query)

// pick first
dim dic as Dictionary = dics(0)

// and display
MsgBox "Service: "+dic.Value(KeychainManagerMBS.kSecAttrService)+EndOfLine+_
"Account: "+dic.Value(KeychainManagerMBS.kSecAttrAccount)
```

Notes: Available in OS X v10.6 and later.

106.3.158 kSecMatchSubjectContains as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Subject attribute key.
The corresponding value is of type string. If provided, returned certificates or identities are limited to those whose subject contains this string.
Available in OS X v10.6 and later.

106.3.159 kSecMatchSubjectEndsWith as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject ends with this string.
Available in OS X v10.7 and later.

106.3.160 kSecMatchSubjectStartsWith as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject starts with this string.
Available in OS X v10.7 and later.

106.3.161 kSecMatchSubjectWholeString as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Subject attribute key.
The corresponding value is of type String. If provided, returned certificates or identities are limited to those whose subject is exactly equal to this string.
Available in OS X v10.7 and later.

106.3.162 kSecMatchTrustedOnly as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Trusted anchor attribute key.
The corresponding value is of type Boolean. If this attribute is provided with A value of True, only certificates that can be verified back to a trusted anchor are returned. If this value is False or the attribute is not provided, then both trusted and untrusted certificates may be returned.
Available in OS X v10.6 and later.

106.3.163 kSecMatchValidOnDate as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Valid-on-date attribute key.

The corresponding value is of type Date. If provided, returned keys, certificates or identities are limited to those that are valid for the given date. Pass a value of nil to indicate the current date.
Available in OS X v10.6 and later.

106.3.164 kSecMatchWidthInsensitive as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to set search attributes in a keychain search dictionary.
Notes:

Case sensitivity attribute key.
The corresponding value is of type Boolean. If this value is False, or if this attribute is not provided, then width-sensitive string matching is performed (for example, the ASCII character a does not match the UTF-8 full-width letter a (U+FF41).
Available in OS X v10.7 and later.

106.3.165 kSecReturnAttributes as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return attributes attribute key.
The corresponding value is of type Boolean. A value of True indicates that a dictionary of the (unencrypted) attributes of an item should be returned in the form of a Dictionary.
Available in OS X v10.6 and later.

106.3.166 kSecReturnData as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return data attribute key.
The corresponding value is of type Boolean. A value of True indicates that the data of an item should be returned in the form of a Memoryblock. For keys and password items, data is secret (encrypted) and may require the user to enter a password for access.
Available in OS X v10.6 and later.

106.3.167 kSecReturnPersistentRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return persistent reference attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.
The corresponding value is of type Boolean. A value of True indicates that a persistent reference to an item (Memoryblock) should be returned.
Available in OS X v10.6 and later.

106.3.168 kSecReturnRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used to specify the type of results that should be returned by the CopyMatching or AddItem function.
Notes:

Return reference attribute key.
The corresponding value is of type Boolean. A value of True indicates that a reference should be returned. Depending on the item class requested, the returned references may be of type KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or Memoryblock.
Available in OS X v10.6 and later.

106.3.169 kSecUseAuthenticationContext as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is LAContextMBS to be used for keychain item authentication.
Notes:

As LAContext is 64-bit only for Mac, this will do nothing in 32-bit.

- If the item requires authentication and this key is omitted, a new context will be created just for the purpose of the single call.
- If the specified context has been previously authenticated, the operation will succeed without asking user for authentication.
- If the specified context has not been previously authenticated, the new authentication will be started on this context, allowing caller to eventually reuse the sucessfully authenticated context in subsequent

keychain operations.

106.3.170 kSecUseAuthenticationUI as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value to define whether UI is allowed.
Notes: Value can be one of kSecUseAuthenticationUIAllow, kSecUseAuthenticationUIFail, kSecUseAuthenticationUISkip.

106.3.171 kSecUseAuthenticationUIAllow as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the values for kSecUseAuthenticationUI to allow user interface.

106.3.172 kSecUseAuthenticationUIFail as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the values for kSecUseAuthenticationUI to disallow user interface and fail.

106.3.173 kSecUseAuthenticationUISkip as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: One of the values for kSecUseAuthenticationUI to disallow user interface and skip.

106.3.174 kSecUseItemList as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Key used to specify a list of items to search or add.
Notes:

Item list key.
The corresponding value is of type CFArrayRef, where the array contains either KeychainItemMBS, SecKeyRef, SecCertificateRef, SecIdentityRef, or (for persistent item references) Memoryblock items. If provided, this array is treated as the set of all possible items to search (or to add if the function being called is AddItem). The items in the array must all be of the same type.

Available in OS X v10.6 and later.

106.3.175 kSecUseKeychain as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Key used to specify a list of items to search or add.
Notes:

Keychain reference key.
Specifies a SecKeychainRef object that references the keychain to which AddItem should add the provided items.
Available in OS X v10.7 and later.

106.3.176 kSecUseNoAuthenticationUI as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Whether to show authentication user interface.
Notes:

OS X only. Specifies a dictionary key whose value is a boolean. If provided with a value of true, the error errSecInteractionNotAllowed will be returned if the item is attempting to authenticate with UI.
Available in macOS 10.10 or newer and deprecated in 10.11 in favor of kSecUseAuthenticationUI.

106.3.177 kSecUseOperationPrompt as string

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: Specifies a dictionary key whose value is a string that represents a user-visible string describing the operation for which the application is attempting to authenticate.
Notes: The application is responsible for the text localization.

106.3.178 kSecValueData as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes:

Data attribute key. A persistent reference to a credential can be stored on disk for later use or passed to other processes.

The corresponding value is of type memoryblock. For keys and password items, the data is secret (encrypted) and may require the user to enter a password for access.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

106.3.179 kSecValuePersistentRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes:

Persistent reference attribute key.
The corresponding value is of type CFDataRef. The bytes in this memoryblock can be stored by the caller and used on a subsequent invocation of the application (or even a different application) to retrieve the item referenced by it.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

106.3.180 kSecValueRef as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Keys used in the results dictionary for CopyMatching or Additem, indicating the type of values returned.
Notes:

Reference attribute key.
The corresponding value, depending on the item class requested, is of type KeychainItemMBS, SecKeyRef, SecCertificateRef, or SecIdentityRef.
Available in OS X v10.6 and later.
You can specify zero or more of these types depending on the function you are calling.

106.3.181 LockAll

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks all keychains belonging to the current user.
Notes:

Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.

Lasterror is set.

106.3.182 Open(file as folderitem) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens a keychain.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
dim k as KeychainMBS = KeychainManagerMBS.Open(file)

MsgBox k.Name
```

Notes:

You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it.
Lasterror is set.
See also:

- 106.3.183 Open(path as string) as KeychainMBS 18218

106.3.183 Open(path as string) as KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Opens a keychain.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.keychain")
dim k as KeychainMBS = KeychainManagerMBS.Open(file.UnixpathMBS)

MsgBox k.Name
```

Notes:

You may use this function to retrieve a pointer to a keychain object given the path of the keychain. You do not need to close the keychain, but you should release the memory that the pointer occupies when you are finished with it.
Lasterror is set.
See also:

• 106.3.182 Open(file as folderitem) as KeychainMBS 18218

106.3.184 PreferenceDomain as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets or sets the current keychain preference domain.
Example:

```
dim n as Integer = KeychainManagerMBS.PreferenceDomain
Select case n
case KeychainManagerMBS.kSecPreferencesDomainCommon
MsgBox "common"
case KeychainManagerMBS.kSecPreferencesDomainDynamic
MsgBox "dynamic"
case KeychainManagerMBS.kSecPreferencesDomainSystem
MsgBox "system"
case KeychainManagerMBS.kSecPreferencesDomainUser
MsgBox "user"
else
MsgBox "unknown"
end Select
```

Notes:

A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. The default preference domain for system daemons (that is, for daemons running in the root session) is the system domain. The default preference domain for all other programs is the user domain. Use the PreferenceDomain function to change the preference domain.

This function changes the preference domain for all subsequent function calls; for example, if you change from the system domain to the user domain and then call Lock specifying nil for the keychain, the function locks the default system keychain rather than the default user keychain. You might want to use this function, for example, when launching a system daemon from a user session so that the daemon uses system preferences rather than user
(Read and Write computed property)

106.3.185 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a search object matching a list of zero or more attributes.

Example:

```
dim AttributeKeys() as string
dim AttributeValues() as string
dim keychain as KeychainMBS = nil // default

dim search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychain, "genp",
AttributeKeys, AttributeValues)
dim items() as KeychainItemMBS

dim item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Append item
item = search.NextItem
wend

MsgBox str(UBound(items)+1)+" items found."
```

Notes:

keychains: An array of keychains to search, a single keychain, or nil to search the user's current keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 106.3.186 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

106.3.186 SearchCreateFromAttributes(keychains() as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a search object matching a list of zero or more attributes.
Example:

```
dim AttributeKeys() as string
dim AttributeValues() as string

dim keychains() as KeychainMBS

AttributeKeys.Append KeychainManagerMBS.kSecAttrAccount
AttributeValues.Append "myusername"
keychains = KeychainManagerMBS.DomainSearchList(KeychainManagerMBS.kSecPreferencesDomainUser)

dim search as KeychainSearchMBS = KeychainManagerMBS.SearchCreateFromAttributes(keychains, "genp",
AttributeKeys, AttributeValues)
dim items() as KeychainItemMBS

dim item as KeychainItemMBS = search.NextItem
while item<>Nil
items.Append item
item = search.NextItem
wend

MsgBox str(UBound(items)+1)+" items found."
```

Notes:

keychains: An array of keychains to search, a single keychain, or nil to search the user's current keychain search list. Use the function SearchList to retrieve the user's default search list.
itemClass: The keychain item class. See "Keychain Item Class Constants" for valid constants.
AttributeKeys: List of zero or more keychain attribute keys to match.
AttributeValues: List of zero or more keychain attribute values to match.

Returns the current search object.
Lasterror is set.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. You look up an item in a keychain by its attributes. If you find a match, you can then retrieve the item's data. Use the search object created by this function as input to the SecKeychainSearchCopyNext function to find a a keychain item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
See also:

- 106.3.185 SearchCreateFromAttributes(keychain as KeychainMBS, itemClass as string, AttributeKeys() as string, AttributeValues() as string) as KeychainSearchMBS 18219

106.3.187 SearchList as KeychainMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves a keychain search list.
Example:

```
dim SearchList() as KeychainMBS = KeychainManagerMBS.SearchList
dim names() as String

for each k as KeychainMBS in SearchList
names.Append k.Name
next

MsgBox Join(names, EndOfLine)
```

Notes:

Returns keychain search list.
Lasterror is set.

106.3.188 SetDomainDefault(domain as Integer, keychain as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the default keychain for a specified preference domain.
Notes:

domain: The preference domain for which you wish to set the default keychain.
keychain: A reference to the keychain you wish to set as default in the specified preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to set the default keychain for a specific preference domain. Use the SetDefault function if you want to set the default keychain for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

106.3.189 SetDomainSearchList(domain as Integer, list() as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the keychain search list for a specified preference domain.
Notes:

domain: The preference domain for which you wish to set the default keychain search list. See "Keychain Preference Domain Constants"for possible domain values.
searchList: A keychain search list to set in the preference domain.

Lasterror is set.
A preference domain is a set of security-related preferences, such as the default keychain and the current keychain search list. Use this function if you want to set the keychain search list for a specific preference domain. Use the SetSearchList function if you want to set the keychain search list for the current preference domain. See the PreferenceDomain function for a discussion of current and default preference domains.

106.3.190 SetSearchList(list() as KeychainMBS)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the list of keychains to use in the default keychain search list.
Notes:

searchList: An array of keychain references specifying the list of keychains to use in the default keychain search list. Passing an empty array clears the search list.

Lasterror is set.
The default keychain search list is used by several functions; see for example SearchCreateFromAttributes, FindInternetPassword, or FindGenericPassword. To obtain the current default keychain search list, use the SearchList function.

The default keychain search list is displayed as the keychain list in the Keychain Access utility. If you use SetSearchList to change the keychain search list, the list displayed in Keychain Access changes accordingly.

106.3.191 UpdateItem(Query as Dictionary, attributesToUpdate as dictionary) as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: Modifies items that match a search query.
Example:

```
// build query
```

```
dim query as new Dictionary

dim ServiceName as string = "mytest"
dim Username as string = "myusername"

query.value( KeychainManagerMBS.kSecAttrAccount ) = Username
query.value( KeychainManagerMBS.kSecAttrService ) = ServiceName
query.value( KeychainManagerMBS.kSecClass ) = KeychainManagerMBS.kSecClassGenericPassword

// Build Dictionary with new values
dim newValues as new Dictionary
newValues.value( KeychainManagerMBS.kSecAttrComment ) = "Just a test"

// and update
if KeychainManagerMBS.UpdateItem(query, newValues) then
MsgBox "OK"
else
MsgBox "Failed."
end if
```

Notes:

query: A dictionary containing an item class specification and optional attributes for controlling the search. Specify the items whose values you wish to change. See "Search Keys" for a description of currently defined search attributes.
attributesToUpdate: A dictionary containing the attributes whose values should be changed, along with the new values. Only real keychain attributes are permitted in this dictionary (no "meta" attributes are allowed.) See "Attribute Item Keys and Values" for a description of currently defined value attributes.

Lasterror is set.
See the discussion section of the CopyMatching function for information about how to construct a search dictionary.

Available in OS X v10.6 and later.

106.3.192 UserInteractionAllowed as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Indicates whether Keychain Services functions that normally display a user interaction are allowed to do so.
Example:

```
MsgBox str(KeychainManagerMBS.UserInteractionAllowed)
```

```
KeychainManagerMBS.UserInteractionAllowed = false
MsgBox str(KeychainManagerMBS.UserInteractionAllowed)
```

Notes:

Lasterror is set.
A Boolean value indicating whether user interaction is permitted. If true, user interaction is allowed, and Keychain Services functions that display a user interface can do so as appropriate.
(Read and Write computed property)

106.3.193 Version as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the version of Keychain Services installed on the user's system.
Example:

```
MsgBox str(KeychainManagerMBS.Version)
```

Notes:

Your application can call the Version function to find out which version of Keychain Services is installed on the user's system.
Lasterror is set.

106.3.194 Properties

106.3.195 LastError as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The last error code returned by one of the methods.
Notes:

You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read only property)

106.3.196 Constants

106.3.197 ErrorAuthorizationFailed = -25293

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: The user name or passphrase you entered is not correct.

106.3.198 ErrorDuplicatedItem = -25299

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: The specified item already exists in the keychain.

106.3.199 ErrorFailedToAllocated = -108

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: Failed to allocate memory.

106.3.200 ErrorFailedToDecode = -26275

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: Unable to decode the provided data.

106.3.201 ErrorInteractionNotAllowed = -25308

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: User interaction is not allowed.

106.3.202 ErrorInvalidParameter = -50

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: Invalid Parameters.

106.3.203 ErrorNone = 0

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: No error.

106.3.204 ErrorNotAvailable = -25291

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: No keychain is available. You may need to restart your computer.

106.3.205 ErrorNotFound = -25300

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the error codes.
Notes: The specified item could not be found in the keychain.

106.3.206 kSecAppleSharePasswordItemClass = "ashp"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Specifies a keychain item's class code.
Notes: Indicates that the item is an AppleShare password.

106.3.207 kSecGenericPasswordItemClass = "genp"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Specifies a keychain item's class code.
Notes: Indicates that the item is a generic password.

106.3.208 kSecInternetPasswordItemClass = "inet"

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Specifies a keychain item's class code.
Notes: Indicates that the item is an Internet password.

106.3.209 kSecPreferencesDomainCommon = 2

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Defines constants for the keychain preference domains.
Notes:

Indicates the preferences are common to everyone.
Available in OS X v10.3 and later.

106.3.210 kSecPreferencesDomainDynamic = 3

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Defines constants for the keychain preference domains.
Notes:

Indicates a dynamic search list (typically provided by removable keychains such as smart cards).
Available in OS X v10.4 and later.

106.3.211 kSecPreferencesDomainSystem = 1

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Defines constants for the keychain preference domains.
Notes:

Indicates the system or daemon preference domain preferences.
Available in OS X v10.3 and later.

106.3.212 kSecPreferencesDomainUser = 0

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: Defines constants for the keychain preference domains.
Notes:

Indicates the user preference domain preferences.
Available in OS X v10.3 and later.

106.3.213 Delegates

106.3.214 AddItemAsyncCompletedMBS(Keychain as Variant, attributesDictionary as dictionary, Result as Variant, Lasterror as Integer, Tag as Variant)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate to be called when AddItemAsync is done.

106.3.215 CopyMatchingAsyncCompletedMBS(Query as Dictionary, Result as Variant, Lasterror as Integer, Tag as Variant)

MBS MacClassic Plugin, Plugin Version: 18.5, Platform: macOS, Targets: All.

Function: The delegate to be called when CopyMatchingAsync is done.

106.4 class KeychainMBS

106.4.1 class KeychainMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a keychain.

106.4.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr12
- Keychain Plugin rewritten

106.4.3 Methods

106.4.4 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Notes: See AddGenericPassword in KeychainManagerMBS for details.
See also:

- 106.4.5 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS 18230

106.4.5 AddGenericPassword(serviceName as string, accountName as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new generic password to a keychain.
Notes: See AddGenericPassword in KeychainManagerMBS for details.
See also:

- 106.4.4 AddGenericPassword(serviceName as string, accountName as string, password as memoryblock) as KeychainItemMBS 18230

106.4.6 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: See KeychainManagerMBS.AddInternetPassword for details.
See also:

- 106.4.7 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS 18231

106.4.7 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new Internet password to a keychain.
Notes: See KeychainManagerMBS.AddInternetPassword for details.
See also:

- 106.4.6 AddInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, password as memoryblock) as KeychainItemMBS 18231

106.4.8 AllItems(itemClass as string) as KeychainItemMBS()

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries all items.
Notes:

Keychain: If not nil, searches only this keychain.
ItemClass: The item class to find. For example kSecGenericPasswordItemClass.
Lasterror is set.
Returns array of keychain items.

106.4.9 Delete

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Deletes one or more keychains from the default keychain search list, and removes the keychain itself if it is a file.
Notes:

Lasterror is set.

The keychain may be a file stored locally, a smart card, or retrieved from a network server using non-file-based database protocols. This function deletes the keychain only if it is a local file.

106.4.10 FindGenericItem(serviceName as string, accountName as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic keychain item based on the attributes passed.
Notes: See KeychainManagerMBS.FindGenericItem for details.

106.4.11 FindGenericPassword(serviceName as string, accountName as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first generic password based on the attributes passed.
Notes: See KeychainManagerMBS.FindGenericPassword for details.

106.4.12 FindInternetItem(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password item based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

106.4.13 FindInternetPassword(serverName as string, securityDomain as string, accountName as string, path as string, port as Integer, protocol as string, authenticationType as string, byref password as memoryblock) as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first Internet password based on the attributes passed.
Notes: See KeychainManagerMBS.FindInternetPassword for details.

106.4.14 IsUnlocked as boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if keychain is unlocked.
Example:

MsgBox str(KeychainManagerMBS.Default.IsUnlocked)

Notes: Lasterror is set.

106.4.15 Lock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Locks a keychain.
Notes:

Your application should not call this function unless you are responding to a user's request to lock a keychain. In general, you should leave the keychain unlocked so that the user does not have to unlock it again in another application.
Lasterror is set.

106.4.16 Name as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the file name of a keychain.
Example:

MsgBox KeychainManagerMBS.Default.Name

Notes:

Similar to path, but name without file extension only.
Lasterror is set.

106.4.17 Path as string

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines the path of a keychain.
Example:

MsgBox KeychainManagerMBS.Default.Path

Notes:

Returns POSIX path of the keychain as a UTF-8 encoded string.
Lasterror is set.

106.4.18 SetDefault

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the default keychain.
Notes:

Lasterror is set.
In most cases, your application should not need to set the default keychain, because this is a choice normally made by the user. You may call this function to change where a password or other keychain items are added, but since this is a user choice, you should set the default keychain back to the user specified keychain when you are done.

106.4.19 Status as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves status information of a keychain.
Example:

```
dim values() as string
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim status as Integer = DefaultKeychain.status

if BitwiseAnd(status, KeychainMBS.StatusUnlocked) = KeychainMBS.StatusUnlocked then
values.Append "unlocked"
else
values.Append "locked"
end if

if BitwiseAnd(status, KeychainMBS.StatusReadable) = KeychainMBS.StatusReadable then
```

```
values.Append "readable"
else
values.Append "not readable"
end if

if BitwiseAnd(status, KeychainMBS.StatusWritable) = KeychainMBS.StatusWritable then
values.Append "writable"
else
values.Append "not writable"
end if

MsgBox Join(values, ", ")
```

Notes:

Lasterror is set.
This function retrieves the status of a specified keychain. You can use this function to determine if the keychain is unlocked, readable, or writable. Note that the lock status of a keychain can change at any time due to user or system activity. Because the system automatically prompts the user to unlock a keychain when necessary, you do not usually have to worry about the lock status of a keychain.

106.4.20 Unlock

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks a keychain.
Notes:

In most cases, your application does not need to call this function directly, since most Keychain Services functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

- 106.4.21 Unlock(password as string) 18235

106.4.21 Unlock(password as string)

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks a keychain.
Notes:

password: The password to use.
In most cases, your application does not need to call this function directly, since most Keychain Services

functions that require an unlocked keychain do so for you. If your application needs to verify that a keychain is unlocked, call the function GetStatus.
Lasterror is set.
See also:

- 106.4.20 Unlock 18235

106.4.22 Properties

106.4.23 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

106.4.24 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes:

You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

106.4.25 Settings as KeychainSettingsMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtains or sets a keychain's settings.
Example:

```
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

Notes:

Lasterror is set.
(Read and Write computed property)

106.4.26 Constants

106.4.27 StatusReadable = 2

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the status constants.
Notes: Indicates the keychain is readable.

106.4.28 StatusUnlocked = 1

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the status constants.
Notes: Indicates the keychain is unlocked.

106.4.29 StatusWritable = 4

MBS MacClassic Plugin, Plugin Version: 13.1.

Function: One of the status constants.
Notes: Indicates the keychain is writable.

106.5 class KeychainSearchMBS

106.5.1 class KeychainSearchMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a running keychain search.

106.5.2 Methods

106.5.3 NextItem as KeychainItemMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the next keychain item matching the given search criteria.
Notes:

Returns object of the next matching keychain item, if any.

Each item stored in the keychain contains data (such as a certificate), which is indexed by the item's attributes. Use the SearchCreateFromAttributes function to specify attributes to search for. If the NextItem function finds a match, you can use the methods and properties on the item.

To find and obtain data from a password keychain item, use the FindInternetPassword or FindGenericPassword function.
Lasterror is set.

106.5.4 Properties

106.5.5 Handle as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

106.5.6 Lasterror as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code returned by one of the methods.
Notes:

You can use KeychainManagerMBS.ErrorMessageString function to get a text message.
The error code -1 is set by plugin if function is missing or parameters are wrong.
(Read and Write property)

106.6 class KeychainSettingsMBS

106.6.1 class KeychainSettingsMBS

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: The class for information about keychain settings.
Example:

```
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

106.6.2 Properties

106.6.3 lockInterval as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: An unsigned 32-bit integer representing the number of seconds before the keychain locks. If you set useLockInterval to false, set lockInterval to INT_MAX to indicate that the keychain never locks.
Example:

```
dim SystemKeychain as KeychainMBS = KeychainManagerMBS.DomainDefault(KeychainManagerMBS.kSecPreferencesDomainSystem)
dim settings as KeychainSettingsMBS = SystemKeychain.Settings
MsgBox str(settings.lockInterval)
```

Notes: (Read and Write property)

106.6.4 lockOnSleep as Boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the keychain locks when the system sleeps.
Example:

```
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.lockOnSleep)
```

Notes: (Read and Write property)

106.6.5 useLockInterval as Boolean

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the keychain automatically locks after a certain period of time.
Example:

```
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.useLockInterval)
```

Notes: (Read and Write property)

106.6.6 version as Integer

MBS MacClassic Plugin, Plugin Version: 13.1, Platform: macOS, Targets: All.

Function: An unsigned 32-bit integer representing the keychain version.
Example:

```
dim DefaultKeychain as KeychainMBS = KeychainManagerMBS.Default
dim settings as KeychainSettingsMBS = DefaultKeychain.Settings
MsgBox str(settings.version)
```

Notes:

Is always 1.
(Read and Write property)

Chapter 107

Large Picture

107.1 class PictureFactoryMBS

107.1.1 class PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The factory class for pictures.
Notes:

This class gives you a global event where you can provide your own pictures.
Whenever the plugin needs a new PictureMBS object for the result of a function or for temporary storage, you can provide one.

This is mainly for the case where you use virtual memory or you want to reuse pictures.

Used for temporary or result pictures for BoxBlur, DitherFilter, EngraveFilter, GainFilter, GammaFilter, NeonFiltrer, OilFilter, PictureMatrix, Rotate, SolarizeFilter and TransferFilter.

107.1.2 Blog Entries

- MBS Xojo Plugins, version 19.3pr4

107.1.3 Methods

107.1.4 NewPictureMBS(Width as integer, Height as integer, ImageFormat as integer) as PictureMBS

MBS Images Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new picture.
Notes:

This may invoke the event.
If no factory is registered, we use our default implementation.
If the event or our implementation raises exception, you may need to catch it, e.g. OutOfMemoryException.
See also:

- 107.1.9 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS 18244

107.1.5 SetFactory(factory as PictureFactoryMBS)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global factory object.
Notes: You can set to nil to delete the existing factory.

107.1.6 Properties

107.1.7 currentFactory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current factory.
Notes:

Use SetFactory method to change it.
(Read only property)

107.1.8 Events

107.1.9 NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The factory event.
Example:

```
function NewPictureMBS(Width as Integer, Height as Integer, ImageFormat as Integer) as PictureMBS

return new PictureMBS(width, height, ImageFormat)

end function
```

Notes:

This event is called whenever a picture is requested.
Return an picture you created.
The plugin will check the Valid property for this picture and use it only if Valid is true.
See also:

- 107.1.4 NewPictureMBS(Width as integer, Height as integer, ImageFormat as integer) as PictureMBS 18244

107.2 class PictureMBS

107.2.1 class PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The MBS picture class for really large pictures.
Example:

```
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes:

Using virtual memory you are only limited to hard disc space for swapping.

The Xojo picture class is limited to 2 GB and to width/height being in platform specific ranges. This class works with pictures up to 100 million pixels width and 2 billion pixels height.

107.2.4 Methods

107.2.5 AlphaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The alpha channel as a new PictureMBS object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.AlphaChannel
```

```
r.fillrect(100) // fill only alpha channel
```

Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
dim matrix(24) as Integer
dim x,y as Integer
dim value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=value // fill matrix
next
next

dim s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix)
```

Notes:

MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.7 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS 18249
- 107.2.8 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS 18250

107.2.7 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
dim matrix(24) as Integer
dim x,y as Integer
dim value as Integer

for y=0 to 4
for x=0 to 4
matrix(x+y*5)=value // fill matrix
next
next

dim s,d as PictureMBS // make source and dest somewhere

d=s.ApplyMatrix(d, 5, matrix, 5)
```

Notes:

MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS 18248
- 107.2.8 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS 18250

107.2.8 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer, ScaleFactor as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a 5x5 matrix to the picture.
Example:

```
dim matrix(24) as Integer
dim x,y as Integer
dim value as Integer

for y=0 to 4
for x=0 to 4
```

```
matrix(x+y*5)=1 // fill matrix
next
next

dim s,d as PictureMBS // make source and dest somewhere

s = new PictureMBS(LogoMBS(500))
d = new PictureMBS(500, 500, PictureMBS.ImageFormatRGB)

// Blur with 5x5 Matrix
d=s.ApplyMatrix(d, 5, matrix, 1, 1.0/25.0)

Backdrop = d.CopyPicture
```

Notes:

MatrixDimension: Size of the matrix: 1 to 50. This is the width and height of the matrix.
matrix: The matrix array must contain exactly MatrixDimension*MatrixDimension values. (ubound(matrix)=MatrixDimension*MatrixDimension-1)
delta: Optional value. Default is 0.
ScaleFactor: Optional value. Default is 1.0.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For each pixel in the dest image the following operation is done:

- Make sum of all source pixels multiplied with their matrix entry.
- add to the sum the delta value
- multiply the sum by ScaleFactor

See the example project for several example matrices.

A matrix value of 255 or more leaves the dest pixel away from the sum.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.6 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer) as PictureMBS 18248

- 107.2.7 ApplyMatrix(dest as PictureMBS, MatrixDimension as Integer, matrix() as Integer, delta as Integer) as PictureMBS 18249

107.2.9 AutoLevel as boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
call p.AutoLevel
window1.Backdrop = p.CopyPicture
```

Notes:

The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 107.2.10 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean 18252

107.2.10 AutoLevel(x as Integer, y as Integer, w as Integer, h as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies auto levels on the picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
call p.AutoLevel(0,0,50,50)
window1.Backdrop = p.CopyPicture
```

Notes:

The histogram is built, white and back points are searched and all pixels adjusted.
Returns true on success and false on any error.

Works only with RGB pictures.
See also:

- 107.2.9 AutoLevel as boolean 18252

107.2.11 BlackChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black channel of a CMYK picture as a new PictureMBS object.
Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.12 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blend picture with mask and background.
Notes:

Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

- 107.2.13 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean 18253

107.2.13 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color, X As Integer, Y As Integer, Width As Integer, Height As Integer) as Boolean

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Blend picture with mask and background.
Notes:

Works for gray and RGB pictures, not for CMYK.
Returns true on success and false on failure.
Blends source and dest image into result image.
If mask is nil, we just copy pictures.
If mask is not nil, we blend using either DestImage (if non nil) or background color.
Alpha channels are not used.
See also:

- 107.2.12 BlendPicturesWithMaskWithBackground(SourceImage as PictureMBS, DestImage as PictureMBS, Mask as PictureMBS, Result as PictureMBS, BackgroundColour as Color) as Boolean 18253

107.2.14 BlueChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue channel as a new PictureMBS object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.BlueChannel
r.fillrect(100) // fill only blue channel
```

Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.15 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter.
Example:

```
Dim boxPic,tempObj As PictureMBS
dim logo as Picture = LogoMBS(500)
dim pictureObj as new PictureMBS(logo)
```

```
tempObj = New PictureMBS(pictureObj.Width, pictureObj.Height, pictureObj.ImageFormat)
boxPic = pictureObj.BoxBlurFilter(tempObj, 3.0, 3)

Backdrop=boxpic.CopyPicture
```

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.16 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS 18255

107.2.16 BoxBlurFilter(dest as PictureMBS, Radius as Double, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Vertical and Horizontal define whether effect is applied horizontal and/or vertical.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.15 BoxBlurFilter(dest as PictureMBS, Radius as Double, Iterations as Integer, Vertical as boolean = true, Horizontal as boolean = true) as PictureMBS 18254

107.2.17 BoxBlurFractionalFilter(dest as PictureMBS, Radius as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The box blur filter for the radius fraction.
Notes:

If you call BoxBlurFilter and BoxBlurFractionalFilter with a radius of 3.5 the BoxBlurFilter does the 3.0 and BoxBlurFractionalFilter does the 0.5.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

107.2.18 CalculateMemory(width as Integer, height as Integer, theImageFormat as Integer) as Int64

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the memory needed for allocating the image.
Example:

```
dim n as int64 = PictureMBS.CalculateMemory(1000, 1000, PictureMBS.ImageFormatRGB)
MsgBox str(n)
```

Notes: Returns number of bytes needed.

107.2.19 CanAllocateImage(width as Integer, height as Integer, theImageFormat as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Can the image with this size be allocated?
Example:

```
dim n as Boolean = PictureMBS.CanAllocateImage(1000, 1000, PictureMBS.ImageFormatRGB)
MsgBox str(n)
dim x as Boolean = PictureMBS.CanAllocateImage(100000, 100000, PictureMBS.ImageFormatRGB)
MsgBox str(x)
```

Notes:

Retruns true if possible and false if the size is too big.
To figure out if allocation will work, we simply allocate and release memory and see if that worked.

107.2.20 Channel(index as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the channel with the given index as a new picture object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.Channel(0)
r.fillrect(100) // fill only red channel
```

Notes:

Returns nil on any error. May raise an out of bounds exception on invalid index. Index is zero based.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.
See also:

- 107.2.148 Channel as String 18337

107.2.21 ChannelOffset(index as integer) as integer

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries channel offset within pixel.
Notes: For RGB the red channel has offset 0, the green channel has offset 1 and the blue channel has offset 2.

107.2.22 Channels as String()

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channels of an image.
Example:

```
dim p as new Picture(100,100,32)
dim q as new PictureMBS(p)
```

```
dim channels() as string = q.Channels

dim cr as PictureMBS = q.RedChannel
dim cg as PictureMBS = q.GreenChannel
dim cb as PictureMBS = q.BlueChannel
dim c0 as pictureMBS = q.Channel(0)
dim c1 as pictureMBS = q.Channel(1)
dim c2 as pictureMBS = q.Channel(2)

dim crn as string = cg.Channel
dim cgn as string = cg.Channel
dim cbn as string = cg.Channel
dim c0n as string = c0.Channel
dim c1n as string = c1.Channel
dim c2n as string = c2.Channel

Break // check in debugger
```

107.2.23 ClearCache

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears picture cache.
Notes:

If target of this PictureMBS is a Xojo picture, this method clears the Xojo cache for the picture to make sure it recognizes changes.
Does nothing if there is no target picture or there is no cache.

107.2.24 ClearRect

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all pixels.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.ClearRect
window1.Backdrop = p.CopyPicture
```

Notes:

Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.25 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer) 18259

107.2.25 ClearRect(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all pixels in the given area.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.ClearRect(0,0,100,100)
window1.Backdrop = p.CopyPicture
```

Notes:

Writes zeros over all pixels and all channels.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.24 ClearRect 18258

107.2.26 ClipImage as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object for the same picture content.
Notes: This may be useful if you need a second PictureMBS object. For example if two threads work on different rows.
See also:

- 107.2.27 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS 18259

107.2.27 ClipImage(x as Integer, y as Integer, width as Integer, height as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws only into a portion of the existing image.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

// clip it
dim c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
dim q as PictureMBS = c.Clone

// and see result in debugger
dim pic as Picture = q.CopyPicture

Break
```

Notes: This may be useful to apply an effect only on a portion of an existing image.
See also:

- 107.2.26 ClipImage as PictureMBS 18259

107.2.28 Clone as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of a picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

// clip it
dim c as PictureMBS = p.ClipImage(100, 100, 300, 300)

// clone it
dim q as PictureMBS = c.Clone

// and see result in debugger
dim pic as Picture = q.CopyPicture

Break
```

Notes:

Does not work for pictures using virtual memory.
(Fails if IsMapping=True)
Copies the whole picture even if you clone just one channel.

Returns nil on low memory.

107.2.29 Close

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the picture by releasing all memory.
Notes: This calls the destructor internally.

107.2.30 CMYKChannels as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The CMYK channels as a new PictureMBS object.
Notes:

Returns nil if the image is not a CMYK picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the CMYK pixels directly without modifying an alpha channel
The resulting PictureMBS object is a CMYK picture.

107.2.31 Combine(Image As PictureMBS, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
dim DestImage As PictureMBS
dim Image As PictureMBS
dim Mask As PictureMBS
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
```

```
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels
if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and

pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
dim DestImage As PictureMBS
dim Image As PictureMBS
dim Mask As PictureMBS
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
```

```
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,true, & cFF0000, & cFF0000)
then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
dim DestImage As PictureMBS
dim Image As PictureMBS
dim Mask As PictureMBS
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
```

```
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500

// we create a little mask for a smooth fade
dim m as Picture = New Picture(500,500,32)
dim g as Graphics = m.Graphics

for y as Integer = 0 to 499
dim n as Integer = y*255/499
g.ForeColor = rgb(n, n, n)
g.DrawLine 0,y,499,y
next

// uncomment to see our mask:
'Backdrop = m
'return

image=new PictureMBS(LogoMBS(500))
Mask=new PictureMBS(m)
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

// this will only copy the pixels
if DestImage.Combine(image,false,Mask,DestX,DestY,SourceX,SourceY,Width,Height,false) then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

- 107.2.40 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 18280
- 107.2.41 Combine(Mask As PictureMBS, X as Integer, Y as Integer, Width as Integer, Height as Integer, BackColour As color) as boolean 18282

107.2.38 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.
DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha

channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from one picture into another picture with some options.
Example:

```
dim DestImage As PictureMBS
dim Image As PictureMBS
dim Mask As PictureMBS
dim DestX as Integer=100
dim DestY as Integer=100
dim SourceX as Integer=0
dim SourceY as Integer=0
dim Width as Integer=500
dim Height as Integer=500
dim UseColours as Boolean = false
dim ForeColour as color = & cFF0000

image=new PictureMBS(LogoMBS(500))
Mask=nil
DestImage=new PictureMBS(700,700,PictureMBS.ImageFormatRGB)

if DestImage.Combine(image,Mask,DestX,DestY,SourceX,SourceY,Width,Height,UseColours,ForeColour) then
window1.Backdrop=DestImage.CopyPicture
end if
```

Notes:

Returns true on success and false on failure.

This function has 4 behaviors depending on the parameters:

1. If mask is nil and no ForeColour and MaskColour values are passed, the pixels a copied to the destination picture.

2. But if there is a mask, the pixels are copied with applying the mask.

3. If the mask color is not defined, the the pixels are filled with the fore color applying the mask.

4. As the last variation the pixels are copied and the forecolor, the mask color or black is used with the image as the mask. If UseColours parameter is false black is used for this.

Parameters:
Image: the source picture, must not be nil.
PreMultipliedSource: Optional parameter. If true the image must be premultiplied. Default is false.
Mask: the mask picture, can be nil.

DestX: destination position
DestY: destination position
SourceX: source position
SourceY: source position
Width: width of the area to copy
Height: height of the area to copy
UseColours: whether to use the mask colour.
ForeColour: the fore colour, optional, can be integer or color
MaskColour: the mask color, optional, can be integer or color

This function is 5 times in the plugin defined to implement having the last two parameters optional and either integer or color. You can pass a negative number for MaskColour or ForeColour to disable this parameter.

The images you use can be Gray, RGB with or without alpha channels. But most variants here ignore alpha channels. To make sure the alpha channel is not touched, use the PictureMBS.RGBChannels function and pass that new PictureMBS.

- 107.2.38 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour As color, MaskColour As color) as boolean 18276
- 107.2.39 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer) as boolean 18277
- 107.2.40 Combine(Image As PictureMBS, PreMultipliedSource as boolean, Mask As PictureMBS, DestX as Integer, DestY as Integer, SourceX as Integer, SourceY as Integer, Width as Integer, Height as Integer, UseColours As Boolean, ForeColour as Integer, MaskColour as Integer) as boolean 18280

107.2.42 CompareImages(other as PictureMBS) as Int64

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two pictures.
Example:

```
dim p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// fill random
p.FillRectRandom

dim q as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

// copy pixels
call q.CopyPixels(p, 0, 0, 1000, 1000, 0, 0)
q.FillRect(0,0,10,10,0) // fill 100 pixels

// show image
Backdrop = q.CopyPicture

// and compare
Title = str(p.CompareImages(q)) // shows 100
```

Notes:

Returns -1 if both pictures are not from the same structure. (e.g. compare gray with RGB)
Else returns the number of different pixels.

107.2.43 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PictureMBS object based on a memoryblock.
See also:

- 107.2.44 Constructor(pic as picture, UseAlpha as boolean=false) 18284
- 107.2.45 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 18285
- 107.2.46 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 18285

107.2.44 Constructor(pic as picture, UseAlpha as boolean=false)

MBS Images Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Creates a PictureMBS which shares memory with the given picture.
Example:

```
// Create a picture with mask:
dim p as Picture = LogoMBS(200)
dim g as Graphics = p.mask.Graphics

g.ForeColor = & cFFFFFF
g.FillRect 0,0,g.Width,g.Height

g.ForeColor = & c000000
g.Filloval 0,0,g.Width,g.Height

canvas1.Backdrop = p

// create PictureMBS
dim pic as new PictureMBS(p, true)
dim mask as new PictureMBS(p.mask)

// draw mask into alpha channel
call pic.AlphaChannel.CopyPixels(mask,0,0,mask.Width,mask.Height,0,0)

// and copy back to Xojo picture
canvas2.Backdrop = pic.CopyPictureWithMask
```

Notes:

All drawings in the Picture and in the PictureMBS object will be visible in both objects.
This function works on Mac OS and Windows with both 24 bit and 32 bit pictures.
On Mac this function can fail if the picture is not a GWorld (Bitmap) picture.

The Valid property is set to true on success.

If you set UseAlpha=True, the 4th channel in a 32 bit picture is available for you as an alpha channel. Xojo does not use the 4th channel in the picture data and 24 bit pictures do not have one. So you can use 32 bit pictures, copy the pictures mask in the alpha channel (using PictureMBS.AlphaChannel. inverting may be needed), perform some operations and later make a copy of the of the image to a picture and extract the alpha channel back into the pictue's mask.

Added support for Console/Web targets in 12.2 plugins. Please be aware that alpha channel of pictures with alpha channel has only a range from 0 to 127 for the values.

- 107.2.43 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 18283
- 107.2.45 Constructor(width as Integer, height as Integer, ImageFormat as Integer) 18285
- 107.2.46 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 18285

107.2.45 Constructor(width as Integer, height as Integer, ImageFormat as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object with the given size and Imageformat.
Notes:

ImageFormat must be one of the ImageFormat constants.
The Valid property is set to true on success.

The constructor allocated address space for the image.
Physical memory is allocated based on write access to pixels.
See also:

- 107.2.43 Constructor(Buf as MemoryBlock, width as Integer, height as Integer, ImageFormat as Integer, RowSize as Integer) 18283
- 107.2.44 Constructor(pic as picture, UseAlpha as boolean=false) 18284
- 107.2.46 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem) 18285

107.2.46 Constructor(width as Integer, height as Integer, ImageFormat as Integer, BlockSize as Int64, FilePath as folderitem)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a PictureMBS object using virtual memory.
Example:

```
dim mm as int64 = Picturembs.CalculateMemory(7000, 150000, PictureMBS.ImageFormatRGB)
// shows that this size needs 3 GB in memory

// create image
dim blocksize as Integer = 100*1024*1024
dim file as FolderItem = GetTemporaryFolderItem
dim pic as new PictureMBS(7000, 150000, PictureMBS.ImageFormatRGB, blocksize, file)
```

```
// draw dots on it
for x as Integer = 0 to pic.Width step 500
for y as Integer = 0 to pic.Height step 500
pic.FillRect(x, y, 100, 100, 175)
next
next

// write to tiff
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS

if pic <>nil then
t = new TiffPictureMBS

if t.Create(F) then

const PLANARCONFIG_CONTIG = 1
const PHOTOMETRIC_RGB = 2
const FILLORDER_MSB2LSB = 1
const RESUNIT_INCH = 2
const ORIENTATION_TOPLEFT = 1
const COMPRESSION_LZW = 5

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = PLANARCONFIG_CONTIG
t.Photometric = PHOTOMETRIC_RGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = FILLORDER_MSB2LSB
t.Orientation = ORIENTATION_TOPLEFT
t.ResolutionUnit = RESUNIT_INCH
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = COMPRESSION_LZW

for i as Integer = 0 to t.Height - 1
dim m as MemoryBlock = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
t.Scanline(i) = m

next

t.Close
end if
else
```

```
end if

// cleanup
pic = nil
file.delete
```

Notes:

The size of this image is limited to available hard disc space.
The system will cache this data in memory to avoid writing it to disc. Using picture sizes bigger than physical memory can result into slow processing.

FilePath points to the location where the file is created.
On Windows the FilePath can be nil in which space in the system swapfile is used.
On Mac/Linux with nil FilePath, we use automatically a temp file path.

BlockSize specifies how many bytes of memory should be used in application memory space. A typical value may be 100 mega bytes.

The Valid property is set to true on success.
File is deleted in destructor and folderitem is than invalid.

107.2.47 CopyMask as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the alpha channel into a mask picture.
Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

- 107.2.48 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 18288

107.2.48 CopyMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given area of the alpha channel into a mask picture.
Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).
Works for all pictures with alpha channel.
See also:

- 107.2.47 CopyMask as picture 18287

107.2.49 CopyPicture as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the RGB channels or the gray channel into a picture.
Example:

```
// get some picture
dim logo as Picture = LogoMBS(500)

// create PictureMBS
dim rgb as new PictureMBS(logo)

// Create a gray picture and copy RGB to gray
dim g as new PictureMBS(500, 500, PictureMBS.ImageFormatG)
call g.CopyPixels(rgb)

// Create CMYK and fill cyan channel with grayscale image
dim cmyk as new PictureMBS(500, 500, PictureMBS.ImageFormatCMYK)
call cmyk.MagentaChannel.CopyPixels(g)

// display it
Backdrop = cmyk.CopyPicture
```

Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 107.2.50 CopyPicture(x as Integer, y as Integer, w as Integer, h as Integer) as picture 18289

107.2.50 CopyPicture(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the RGB channels or the gray channel in the given area into a picture.
Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 107.2.49 CopyPicture as picture 18288

107.2.51 CopyPictureWithAlpha as picture

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies picture with alpha.
Notes: Returns a picture with HasAlphaChannel = true.
See also:

- 107.2.52 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture 18289

107.2.52 CopyPictureWithAlpha(x as integer, y as integer, w as integer, h as integer) as picture

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies picture in rectangle with alpha.
Notes: Returns a picture with HasAlphaChannel = true.
See also:

- 107.2.51 CopyPictureWithAlpha as picture 18289

107.2.53 CopyPictureWithMask as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask.
Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 107.2.54 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture 18290

107.2.54 CopyPictureWithMask(x as Integer, y as Integer, w as Integer, h as Integer) as picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the picture with mask in the given area.
Notes:

Be aware that PictureMBS objects can have more pixels than picture objects can store, so this will not always work.
Returns nil on any error (e.g. out of memory).

Works with Gray, RGB and CMYK pictures and supports alpha channel. For CMYK we have some simply conversion to RGB to give you a preview. For a real world application, use Color Conversion like our LCMS plugin.
See also:

- 107.2.53 CopyPictureWithMask as picture 18290

107.2.55 CopyPixels(source as PictureMBS) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies all pixels from the source picture to the current picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
```

```
// create new picture:
// can be any image format: ImageFormatRGB, ImageFormatG, ImageFormatBGR, etc.
dim d as new PictureMBS(l.Width, l.Height, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes:

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to CMYK
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 107.2.56 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 18291
- 107.2.57 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 18292

107.2.56 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
dim d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes:

DestWidth and DestHeight specify how many pixels are copied.
DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel
If an alpha channel exists in both images, it is copied.
See also:

- 107.2.57 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean 18292

107.2.57 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies pixels from the source picture to the current picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
dim d as new PictureMBS(700, 700, PictureMBS.ImageFormatRGB)

if d.CopyPixels(p,100,100,500,500,0,0) then
Backdrop = d.CopyPicture
else
MsgBox "Failed."
end if
```

Notes:

SourceX/SourceY is the position in the source picture.
DestWidth/DestHeight specify how many pixels are copied.

DestX/DestY specify the destination position in the current picture.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
- CMYK to Gray, copies from black channel
- Gray to CMYK, copies to black channel

If an alpha channel exists in both images, it is copied.
See also:

- 107.2.55 CopyPixels(source as PictureMBS) as boolean 18290
- 107.2.56 CopyPixels(source as PictureMBS, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) as boolean 18291

107.2.58 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes:

Returns nil if no factory can create a valid picture.

First the Factory on the current ImageMBS object (self) is asked to create the picture.
Second the global Factory object is asked.
Third the normal PictureMBS constructor is used.
See also:

- 107.2.59 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS 18293

107.2.59 CreatePictureMBS(width as Integer, height as Integer, theImageFormat as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object.
Notes:

Returns nil if no factory can create a valid picture.

First the global factory object is asked to create the picture.
Second the normal PictureMBS constructor is used.
See also:

- 107.2.58 CreatePictureMBS(width as Integer, height as Integer, ImageFormat as Integer) as PictureMBS 18293

107.2.60 CyanChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The cyan channel of a CMYK picture as a new PictureMBS object.
Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.61 DiffuseFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a diffuse filter to the image.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Level must be between 0 and min(width,height).

107.2.62 DitherFilter(dest as PictureMBS, matrix as Integer, levels as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the dither filter to the picture.
Notes:

Use for the matrix parameter one of the Dither* constants.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels is a number between 2 and 256 and specifies how many color levels are in the final picture.

Returns nil on any error.

107.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 18295
- 107.2.65 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 18296
- 107.2.66 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 18297

107.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 18295
- 107.2.65 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 18296
- 107.2.66 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 18297

107.2.65 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 18295

- 107.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 18295
- 107.2.66 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False) 18297

107.2.66 DrawMaskedPictureApplyMaskRGB(pic as picture, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

This method applys the pixel values from the Red, Green and Blue channel of the picture with calculating in the mask of the picture.

This is the calculation:
Pixel.Red = (Pixel.Red * (255-Pixel.Mask) + PicturePixel.Red * PicturePixel.Mask) / 255
Pixel.Green = (Pixel.Green * (255-Pixel.Mask) + PicturePixel.Green * PicturePixel.Mask) / 255
Pixel.Blue = (Pixel.Blue * (255-Pixel.Mask) + PicturePixel.Blue * PicturePixel.Mask) / 255

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.63 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 18295
- 107.2.64 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 18295
- 107.2.65 DrawMaskedPictureApplyMaskRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 18296

107.2.67 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture's mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.68 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 18298

- 107.2.68 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 18298
- 107.2.70 DrawMaskedPictureRGB(pic as picture, InvertMask as boolean=False) 18299

107.2.70 DrawMaskedPictureRGB(pic as picture, InvertMask as boolean=False)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

This method copies the pixel values from the Red, Green and Blue channel of the picture and the pixel value of the picture's mask to the PictureMBS replacing old values.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue
Pixel.Alpha = PicturePixel.Mask

Works only if the PictureMBS has Red, Green, Blue and Alpha channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.67 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, InvertMask as boolean=False) 18297
- 107.2.68 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer, InvertMask as boolean=False) 18298
- 107.2.69 DrawMaskedPictureRGB(pic as picture, DestX as Integer, DestY as Integer, InvertMask as boolean=False) 18299

107.2.71 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes:

If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.72 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 18300

107.2.72 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the blue channel of a picture object into the gray channel of this picture.
Notes:

If you want to copy the blue channel of the picture into the blue channel of the PictureMBS, then first get a PictureMBS object for the blue channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.71 DrawPictureBlueToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 18300

107.2.73 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes:

If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.74 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 18301

107.2.74 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the green channel of a picture object into the gray channel of this picture.
Notes:

If you want to copy the green channel of the picture into the green channel of the PictureMBS, then first get a PictureMBS object for the green channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.73 DrawPictureGreenToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 18301

107.2.75 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes:

If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.76 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 18302

107.2.76 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws the red channel of a picture object into the gray channel of this picture.
Notes:

If you want to copy the red channel of the picture into the red channel of the PictureMBS, then first get a PictureMBS object for the red channel and use this method on this object.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.
See also:

- 107.2.75 DrawPictureRedToGrayChannel(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 18301

107.2.77 DrawPictureRGB(pic as picture)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.
See also:

- 107.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 18302
- 107.2.79 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 18303

107.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer)

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

- 107.2.80 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 18304

107.2.79 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

- 107.2.78 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer) 18302
- 107.2.80 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer) 18304

107.2.80 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer, SourceX as Integer, SourceY as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Draws a picture into this PictureMBS object.
Notes:

Works only if the PictureMBS has Red, Green and Blue channels.
If you want to copy Pixels from a PictureMBS to a PictureMBS, use CopyPixels.

This is the calculation:
Pixel.Red = PicturePixel.Red
Pixel.Green = PicturePixel.Green
Pixel.Blue = PicturePixel.Blue

This method does ignore a mask in the given picture and does not change set the alpha channel.

- 107.2.79 DrawPictureRGB(pic as picture, DestX as Integer, DestY as Integer, DestWidth as Integer, DestHeight as Integer) 18303

107.2.81 EngraveFilter(dest as PictureMBS, level as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies an engrave filter to the image.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Level must be between 0 and min(width,height).

Returns nil on any error.

107.2.82 FillRect(value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRect(200)
window1.Backdrop = p.CopyPicture
```

Notes:

All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.83 FillRect(Value as integer, Alpha as Integer) 18305
- 107.2.84 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 18305
- 107.2.85 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 18306

107.2.83 FillRect(Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes:

All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.82 FillRect(value as Integer) 18304
- 107.2.84 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 18305
- 107.2.85 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 18306

107.2.84 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRect(10, 10, 20, 20, 200)
window1.Backdrop = p.CopyPicture
```

Notes:

All channels are filled with the given value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.82 FillRect(value as Integer) 18304
- 107.2.83 FillRect(Value as integer, Alpha as Integer) 18305
- 107.2.85 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer) 18306

107.2.85 FillRect(x as integer, y as integer, width as integer, height as integer, Value as integer, Alpha as Integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Notes:

All channels are filled with the given value and alpha channel (if exists) with the alpha value.
The range of value is 0 to 255.
Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.82 FillRect(value as Integer) 18304
- 107.2.83 FillRect(Value as integer, Alpha as Integer) 18305
- 107.2.84 FillRect(x as Integer, y as Integer, width as Integer, height as Integer, value as Integer) 18305

107.2.86 FillRectApply(FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Example:

```
dim p as new PictureMBS(300, 300, PictureMBS.ImageFormatRGB)
```

```
p.FillRectRGB & cFF0000

call p.FillRectApply 0, 0, 50, 100, & c00FF00, 0
call p.FillRectApply 50, 0, 50, 100, & c00FF00, 255*1/5
call p.FillRectApply 100, 0, 50, 100, & c00FF00, 255*2/5
call p.FillRectApply 150, 0, 50, 100, & c00FF00, 255*3/5
call p.FillRectApply 200, 0, 50, 100, & c00FF00, 255*4/5
call p.FillRectApply 250, 0, 50, 100, & c00FF00, 255*5/5

Backdrop = p.CopyPicture
```

Notes:

Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 107.2.87 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 18307
- 107.2.88 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 18308
- 107.2.89 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 18308

107.2.87 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes:

Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 107.2.86 FillRectApply(FillColor as color, alpha as Integer) as boolean 18306
- 107.2.88 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 18308

- 107.2.89 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 18308

107.2.88 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes:

Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 107.2.86 FillRectApply(FillColor as color, alpha as Integer) as boolean 18306
- 107.2.87 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 18307
- 107.2.89 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 18308

107.2.89 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color with using alpha.
Notes:

Works with gray and RGB pictures.
The range of value is 0 to 255.
The alpha channel is ignored of the picture.
This function combines the RGB/Gray channels with the new fill color and the alpha value.
See also:

- 107.2.86 FillRectApply(FillColor as color, alpha as Integer) as boolean 18306
- 107.2.87 FillRectApply(red as Integer, green as Integer, blue as Integer, alpha as Integer) as boolean 18307
- 107.2.88 FillRectApply(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) as boolean 18308

107.2.90 FillRectRandom

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
dim p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)

p.FillRectRandom
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.91 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer) 18309

107.2.91 FillRectRandom(x as Integer, y as Integer, width as Integer, height as Integer)

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the pixels with random values.
Example:

```
dim p as new PictureMBS(1000,1000, PictureMBS.imageFormatRGB)
p.FillRectRandom(0,0,100,100)
Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.90 FillRectRandom 18309

107.2.92 FillRectRGB(FillColor as color)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(& cFF0000)
window1.Backdrop = p.CopyPicture
```

Notes: Works only if the picture has RGB channels.
See also:

- 107.2.93 FillRectRGB(FillColor as color, alpha as Integer) 18310
- 107.2.94 FillRectRGB(red as Integer, green as Integer, blue as Integer) 18311
- 107.2.95 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 18312
- 107.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 18312
- 107.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 18313
- 107.2.98 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 18314
- 107.2.99 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 18315

107.2.93 FillRectRGB(FillColor as color, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(& cFF0000, 0)
window1.Backdrop = p.CopyPicture
```

Notes:

Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The range of aloha is 0 to 255.
See also:

- 107.2.92 FillRectRGB(FillColor as color) 18309
- 107.2.94 FillRectRGB(red as Integer, green as Integer, blue as Integer) 18311
- 107.2.95 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 18312

- 107.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 18312
- 107.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 18313
- 107.2.98 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 18314
- 107.2.99 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 18315

107.2.94 FillRectRGB(red as Integer, green as Integer, blue as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes:

Works only if the picture has RGB channels.
The ranges of red, green and blue are 0 to 255.
See also:

- 107.2.92 FillRectRGB(FillColor as color) 18309
- 107.2.93 FillRectRGB(FillColor as color, alpha as Integer) 18310

- 107.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 18312
- 107.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 18313
- 107.2.98 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 18314
- 107.2.99 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 18315

107.2.95 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes:

Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
The ranges of alpha, red, green and blue are 0 to 255.
See also:

- 107.2.92 FillRectRGB(FillColor as color) 18309
- 107.2.93 FillRectRGB(FillColor as color, alpha as Integer) 18310

- 107.2.99 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer) 18315

107.2.99 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer, alpha as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills the given area of the picture with the given color.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.FillRectRGB(10, 10, 20, 20, 255, 0, 0, 0)
window1.Backdrop = p.CopyPicture
```

Notes:

Works only if the picture has RGB channels.
Alpha is ignored if the picture does not have an alpha channel.
See also:

- 107.2.92 FillRectRGB(FillColor as color) 18309
- 107.2.93 FillRectRGB(FillColor as color, alpha as Integer) 18310
- 107.2.94 FillRectRGB(red as Integer, green as Integer, blue as Integer) 18311
- 107.2.95 FillRectRGB(red as Integer, green as Integer, blue as Integer, alpha as Integer) 18312
- 107.2.96 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color) 18312
- 107.2.97 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, FillColor as color, alpha as Integer) 18313
- 107.2.98 FillRectRGB(x as Integer, y as Integer, width as Integer, height as Integer, red as Integer, green as Integer, blue as Integer) 18314

107.2.100 GainFilter(dest as PictureMBS, gain as Double, bias as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the gain filter to the picture.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

107.2.101 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes:

If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
See also:

- 107.2.102 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 18316
- 107.2.103 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 18317
- 107.2.104 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 18317

107.2.102 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes:

If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 107.2.101 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 18316
- 107.2.103 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 18317

- 107.2.104 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 18317

107.2.103 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes:

If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.

Returns nil on any error.
See also:

- 107.2.101 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 18316
- 107.2.102 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 18316
- 107.2.104 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS 18317

107.2.104 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double, alphaGamma as Double) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes the gamma value of the picture.
Notes:

If dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

For grayscale pictures the gray color is calculated from red, green and blue value.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 107.2.101 GammaFilter(dest as PictureMBS, gamma as Double) as PictureMBS 18316
- 107.2.102 GammaFilter(dest as PictureMBS, gamma as Double, alphaGamma as Double) as PictureMBS 18316
- 107.2.103 GammaFilter(dest as PictureMBS, redGamma as Double, greenGamma as Double, blueGamma as Double) as PictureMBS 18317

107.2.105 GrayChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The gray channel as a new PictureMBS object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.GrayChannel
r.fillrect(100) // fill only gray channel
```

Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.106 GreenChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green channel as a new PictureMBS object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.GreenChannel
r.fillrect(100) // fill only green channel
```

Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.107 HMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content horizontally (flip).
Example:

```
// get some picture
```

```
dim l as Picture = LogoMBS(500)
// create new image
dim p as new PictureMBS(l)
// mirror
p.HMirror
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.108 Invert

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.109 Invert(x as Integer, y as Integer, w as Integer, h as Integer) 18320

107.2.109 Invert(x as Integer, y as Integer, w as Integer, h as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the image data in the given area.
Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.108 Invert 18320

107.2.110 MagentaChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The magenta channel of a CMYK picture as a new PictureMBS object.
Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.111 MapInRows(FirstRow as Integer, LastRow as Integer) as boolean

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maps in given row range.
Notes:

This function does nothing if given rows are already mapped in.

Fails if range is invalid, image is invalid or mapping is not possible.
Returns true if not a mapped image.

Will resize memory buffer size to be big enough for those rows.

107.2.112 MirroredView as PictureMBS

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new PictureMBS object which draws into the existing on, but has all rows vertically mirrored.
Notes: So if the new picture draws into the first row, the change will be in the last row of the original picture.

107.2.113 Multiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 107.2.114 Multiply(x as integer, y as integer, width as integer, height as integer) 18321

107.2.114 Multiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies alpha channel of a rectangle of the picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 107.2.113 Multiply 18321

107.2.115 NeonFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a neon filter to the image.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.NeonFilter(nil)
window1.Backdrop = p.CopyPicture
```

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.116 OilFilter(dest as PictureMBS, levels as Integer, range as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a oil filter to the image.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.OilFilter(nil,5,5)
window1.Backdrop = p.CopyPicture
```

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Levels must be between 0 and 256.
Range must be between 0 and min(width,height).

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.117 RawRow(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the data of this row.
Example:

```
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.RawRow(10)
// modify directly
m.FillBytesMBS(10,100,200)
// show in window
window1.Backdrop = p.CopyPicture
```

Notes:

This memoryblock is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this memoryblock can become invalid for the next call to any PictureMBS method!

107.2.118 RawRowPtr(index as Integer) as Ptr

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Ptr pointing to the data of this row.
Notes:

This ptr is pointing to the original data, so any modification is applied to the picture.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.

For pictures using virtual memory, this ptr can become invalid for the next call to any PictureMBS method!

107.2.119 RedChannel as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red channel as a new PictureMBS object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
dim r as PictureMBS = p.RedChannel
r.fillrect(100) // fill only red channel
```

Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.120 RGBChannels as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The RGB channels as a new PictureMBS object.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGBA)
dim r as PictureMBS = p.RGBChannels
r.fillrect(100) // fill only color channels
```

Notes:

Returns nil if the image is not a RGB picture.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the RGB pixels directly without modifying an alpha channel
The resulting PictureMBS object is a RGB picture.

107.2.121 RGBToGray(mode as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Turns picture into grayscale.
Notes:

Only for RGB pictures and picture stays RGB, but all channels have same color.

Returns true on success and false on failure.

Modes:

0	y = 0.33 * R + 0.5 * G + 0.16 * B	Faster version of 3
1	y = 0.375 * R + 0.5 * G + 0.125 * B	Faster version of 3
2	y = 0.2126 * R + 0.7152 * G + 0.0722 * B	Photometric/digital ITU-R
3	y = 0.299 * R + 0.587 * G + 0.114 * B	Digital CCIR601
4	y = 0.300 * R + 0.588 * G + 0.112 * B	Faster version of 3

Mode 2 and 3 uses doubles and mode 0, 4 and 1 use integers so they should be faster.
Still Mode 0 and 1 are just approximation formulas which trade accuracy for perfomance.

e.g. a red pixel (FF0000) will turn to 555555 in Mode 0, 5F5F5F in Mode 1, 363636 in Mode 2 and 4C4C4C in Mode 3 and 4.

107.2.122 Rotate(angle as Double, Red as Integer = 0, Green as Integer = 0, Blue as Integer = 0, Alpha as Integer = 0, Gray as Integer = 0, Cyan as Integer = 0, Magenta as Integer = 0, Yellow as Integer = 0, Black as Integer = 0) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by the given degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate(30, 255, 255, 255, 255, 255)
window1.Backdrop = p.CopyPicture
```

Notes:

With Red, Blue, Green, Alpha and Gray specify the color of the fill color.

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.123 Rotate180

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p.Rotate180
window1.Backdrop = p.CopyPicture
```

Notes:

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does not make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.124 Rotate180(dest as PictureMBS=nil) as PictureMBS 18326

107.2.124 Rotate180(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 180 degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate180
window1.Backdrop = p.CopyPicture
```

Notes:

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.

Same as HMirror and VMirror together.

There are two Rotate180 methods. One makes a copy and one not. This one does make a copy.

Works with Gray, RGB and CMYK pictures and supports alpha channel.
See also:

- 107.2.123 Rotate180 18325

107.2.125 Rotate270(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate270
window1.Backdrop = p.CopyPicture
```

Notes:

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.126 Rotate270slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 270 degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate270slow
window1.Backdrop = p.CopyPicture
```

Notes:

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.127 Rotate90(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate90
```

```
window1.Backdrop = p.CopyPicture
```

Notes:

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.128 Rotate90slow(dest as PictureMBS=nil) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rotates the picture by 90 degree.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
p = p.Rotate90slow
window1.Backdrop = p.CopyPicture
```

Notes:

If dest is nil, the PictureFactoryMBS object (local on self or global) is used to create the new picture.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.129 Scale(source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the given size.
Notes:

The final image is stored in the PictureMBS object you call this method on.
On low memory this function can fail or the image may look bad. (e.g. all black)

The size of the temporary picture must have the size of the destination width and the source height. Use ImageFormatScaling when you create the temp image to give it the correct size. Temp picture may not be mapped.

For scaling with the same size as the picture already has, the scaling is still performed.

Returns true on success and false on any error. (e.g. width=0)

Use the constants for the mod:

ScaleTriangle	triangle
ScaleBox	box, nereast neighbor
ScaleLanczos3	lanczos 3
ScaleLanczos8	lanczos 8
ScaleMitchell	mitchell
ScalePoly3	poly 3
ScaleCubic	cubic

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

107.2.130 ScaleFast(source as PictureMBS, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scales the picture to the new size fast.
Notes:

The final image is stored in the PictureMBS object you call this method on.
Returns true on success and false on failure.

This is a low quality alorithm, but it is fast.

This function is optimized for several image formats:
- Gray to Gray.
- RGB to Gray uses R*0.3+G*0.59+B*0.11.
- RGB to RGB.
- Gray to RGB fill red, green and blue with the same gray value.
If an alpha channel exists in both images, it is copied.

107.2.131 ScaleMT(threads as Integer, source as PictureMBS, temp as PictureMBS, mode as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The multithreaded variant of Scale function.
Notes:

Same as Scale, but with additional multithreading.

Threads parameter specifies how many threads you want to use:
A negative value disables threading, zero will use one thread for each CPU core and a positive number specifies the thread count.

If one of the pictures used has IsMapping = true, the plugin calls Scale() function.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

107.2.132 SolarizeFilter(dest as PictureMBS) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the solarize filter to the picture.
Example:

```
// get some picture
dim l as Picture = LogoMBS(500)
// create new image
dim p as new PictureMBS(l)
// add filter
p = p.SolarizeFilter(nil)
// show in window
window1.Backdrop = p.CopyPicture
```

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.133 StampFilter(dest as PictureMBS, radius as Double, threshold as Double, softness as Double, Black as Color, White as Color) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies the stamp filter to the picture.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.
Works with Gray and RGB pictures and supports alpha channel.

107.2.134 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given array.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

dim gray(256) as Integer

for i as Integer = 0 to 255
gray(i)=255-i // invert
next

// inverts the picture
dim d as PictureMBS = p.TransferFilter(nil,gray)

Backdrop = d.CopyPicture
```

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The array for gray must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.

Returns nil on any error.
See also:

- 107.2.135 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 18332
- 107.2.136 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 18333
- 107.2.137 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 18334

107.2.135 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for gray and alpha must have 256 entries starting with index 0.
For RGB pictures the gray array is used for all three channels.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 107.2.134 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 18331
- 107.2.136 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 18333
- 107.2.137 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 18334

107.2.136 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

dim red(256) as Integer
dim green(256) as Integer
dim blue(256) as Integer

for i as Integer = 0 to 255
red(i)=i
green(i)=i
blue(i)=255-i // invert blue
next

dim d as PictureMBS = p.TransferFilter(nil,red,green,blue)

Backdrop = d.CopyPicture
```

Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green and blue must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.

Returns nil on any error.
See also:

- 107.2.134 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 18331
- 107.2.135 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 18332
- 107.2.137 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS 18334

107.2.137 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer, alpha() as Integer) as PictureMBS

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Transfers a picture to another picture by looking up each pixel value in the given arrays.
Notes:

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

The arrays for red, green, blue and alpha must have 256 entries starting with index 0.
For grayscale pictures the green array is used for the gray channel.
If the picture has no alpha channel, the alpha parameter is ignored.

Returns nil on any error.
See also:

- 107.2.134 TransferFilter(dest as PictureMBS, gray() as Integer) as PictureMBS 18331
- 107.2.135 TransferFilter(dest as PictureMBS, gray() as Integer, alpha() as Integer) as PictureMBS 18332
- 107.2.136 TransferFilter(dest as PictureMBS, red() as Integer, green() as Integer, blue() as Integer) as PictureMBS 18333

107.2.138 Unmultiply

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for whole picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

- 107.2.139 Unmultiply(x as integer, y as integer, width as integer, height as integer) 18334

107.2.139 Unmultiply(x as integer, y as integer, width as integer, height as integer)

MBS Images Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Un-multiplies alpha channel for given rectangle in picture.
Notes: Pictures with alpha channel must be multiplied, while pictures with mask have the alpha unmultiplied and inverse in the mask.
See also:

• 107.2.138 Unmultiply 18334

107.2.140 UnsharpFilter(origpixels as PictureMBS, Amount as Double, Threshold as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the unsharp filter.
Notes:

You may want to run the BoxBlur filter first before using the unsharp filter.

if dest is nil, the picture factory is used to create a new picture.
On success dest or the new picture is returned.
If dest is not nil, it must match the size of the original picture.

Returns nil on any error.

Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.141 VMirror

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the image content vertically.
Example:

```
// get some picture
dim l as Picture = LogoMBS(500)
// create new image
dim p as new PictureMBS(l)
// mirror
p.VMirror
// show in window
window1.Backdrop = p.CopyPicture
```

Notes: Works with Gray, RGB and CMYK pictures and supports alpha channel.

107.2.142 YellowChannel as PictureMBS

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The yellow channel of a CMYK picture as a new PictureMBS object.
Notes:

Returns nil if this channel does not exist.
No copy is made of the actual pixel data. Modifying the channel picture will modify the original picture.
Use this function to access the pixels of the channel directly.
The resulting PictureMBS object is a grayscale picture.

107.2.143 Properties

107.2.144 AlphaOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the alpha channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.AlphaOffset)
```

Notes: (Read and Write property)

107.2.145 BitsPerComponent as Integer

MBS Images Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bits per component.
Notes:

Value is 8 for most pictures except those with format ImageFormatGray16 which use 16.
(Read only property)

107.2.146 BlackOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the black channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.BlackOffset)
```

Notes: (Read only property)

107.2.147 BlueOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the blue channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.BlueOffset)
```

Notes: (Read and Write property)

107.2.148 Channel as String

MBS Images Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the channel.
Example:

```
dim p as new Picture(100,100,32)
dim q as new PictureMBS(p)

dim channels() as string = q.Channels

dim cr as PictureMBS = q.RedChannel
dim cg as PictureMBS = q.GreenChannel
dim cb as PictureMBS = q.BlueChannel
dim c0 as pictureMBS = q.Channel(0)
dim c1 as pictureMBS = q.Channel(1)
dim c2 as pictureMBS = q.Channel(2)

dim crn as string = cg.Channel
dim cgn as string = cg.Channel
dim cbn as string = cg.Channel
dim c0n as string = c0.Channel
dim c1n as string = c1.Channel
dim c2n as string = c2.Channel

Break // check in debugger
```

Notes:

For pictures which represent a channel of a bigger picture.
(Read only property)
See also:

- 107.2.20 Channel(index as Integer) as PictureMBS 18257

107.2.149 ChannelCount as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels in this picture.
Notes:

1 for gray, 2 for gray+alpha, 3 for RGB, 4 for RGB+alpha or CMYK and 5 for CMYK+alpha.
(Read only property)

107.2.150 CyanOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the cyan channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.CyanOffset)
```

Notes: (Read only property)

107.2.151 DebugPicture as Picture

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture content to view in the debugger.
Notes:

If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read only property)

107.2.152 DebugPictureEnabled as Boolean

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether you want to use the DebugPicture property.
Notes:

If DebugPictureEnabled is set to true iny our code you can use the DebugPicture property to watch the picture content in the debugger. For speed reasons the size of the debug picture is limited to 512 by 512 pixels. (that could be increased)
(Read and Write property)

107.2.153 Factory as PictureFactoryMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local factory to be used for pictures created in this picture.
Notes:

If one of the functions in this PictureMBS instance needs a new PictureMBS object, this factory is asked first.
(Read and Write property)

107.2.154 FilePath as String

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file path to temporary file.
Notes:

Only set when we have one, e.g. using mapped memory.
(Read only property)

107.2.155 GrayOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the gray channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAG)
MsgBox str(p.GrayOffset)
```

Notes: (Read and Write property)

107.2.156 GreenOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the green channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.GreenOffset)
```

Notes: (Read and Write property)

107.2.157 HasAlpha as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has an alpha channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasAlpha)
```

Notes: (Read only property)

107.2.158 HasBlack as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasBlack)
```

Notes: (Read only property)

107.2.159 HasBlue as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasBlue)
```

Notes: (Read only property)

107.2.160 HasCyan as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasCyan)
```

Notes: (Read only property)

107.2.161 HasGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a gray channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.HasGray)
```

Notes: (Read only property)

107.2.162 HasGreen as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a green channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasGreen)
```

Notes: (Read only property)

107.2.163 HasMagenta as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasMagenta)
```

Notes: (Read only property)

107.2.164 HasRed as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasRed)
```

Notes: (Read only property)

107.2.165 HasYellow as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture has a blue channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.HasYellow)
```

Notes: (Read only property)

107.2.166 Height as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.Height)
```

Notes: (Read only property)

107.2.167 ImageFormat as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The image format of this picture object.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.ImageFormat)
```

Notes:

See the ImageFormat* constants.
(Read only property)

107.2.168 ImageFormatString as String

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The format of this picture as a string.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox p.ImageFormatString
```

Notes:

Returns for example "RGB" for ImageFormatRGB.
(Read only property)

107.2.169 IsCMYK as Boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a CMYK picture.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.IsCMYK)
```

Notes:

HasCyan, HasMagenta, HasYellow and HasBlack are true if IsRGB is true.
(Read only property)

107.2.170 IsGray as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture is a grayscale picture.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
MsgBox str(p.IsGray)
```

Notes:

HasGray is true if IsGray is true.
(Read only property)

107.2.171 IsMapping as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this picture uses virtual memory.
Notes:

If IsMapping is true you should not use the Memory property or the Clone function.
(Read only property)

107.2.172 IsRGB as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the picture is a RGB picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.IsRGB)
```

Notes:

HasRed, HasBlue and HasGreen are true if IsRGB is true.
(Read only property)

107.2.173 MagentaOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the magenta channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.MagentaOffset)
```

Notes: (Read only property)

107.2.174 MappingBlockSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The block size for a picture using virtual memory.
Notes: (Read and Write property)

107.2.175 MappingFirstRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: First row mapped in memory.
Notes:

Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

107.2.176 MappingLastRow as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last row mapped in memory.
Notes:

Only for mapped images.
Value is -1 if no data is mapped in.
(Read only property)

107.2.177 MappingRows as Integer

MBS Images Plugin, Plugin Version: 17.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of rows for mapping.
Notes:

For a mapped image how many rows fit in the mapping buffer.
(Read only property)

107.2.178 Memory as Memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock without size pointing to the current pixel buffer.
Notes:

Use only if IsMapping is false.
If size is -1, it's a memoryblock referencing the pixel data.
If size is >0, you got the original memoryblock used to allocate the memory.
(Read only property)

107.2.179 MemoryTarget as Memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If this picture stores its pixels in a memoryblock, you can access the memory block using this property.
Notes: (Read only property)

107.2.180 Parent as PictureMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent PictureMBS object.
Notes:

One PictureMBS can reference the pixels of another PictureMBS. The parent is referenced in this property so it is not released.
(Read only property)

107.2.181 PixelSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of a pixel in bytes.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.PixelSize)
```

Notes:

For example:
1 for Gray
2 for Gray with Alpha

3 for RGB
4 for RGB with Alpha
(Read only property)

107.2.182 RedOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the red channel.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.RedOffset)
```

Notes: (Read and Write property)

107.2.183 RowOffset as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal row offset.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
dim q as PictureMBS = p.ClipImage(10,10,80,80)

MsgBox str(q.width)+" x "+str(q.height)+" with row offset: "+str(q.RowOffset)
```

Notes:

Only used with clipping images.
(Read only property)

107.2.184 RowSize as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of one row in bytes.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.RowSize)
```

Notes:

Additional bytes may be needed per row for better alignment of the data.
Also using virtual memory functions requires alignment.
(Read only property)

107.2.185 Target as Picture

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

window1.Backdrop = p.Target
```

Notes:

if this PictureMBS references the pixels of a Xojo picture, this property keeps a reference to this target picture.
(Read only property)

107.2.186 TotalSize as Int64

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total size of this picture in bytes.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)

MsgBox str(p.TotalSize)
```

Notes:

The result is Height*RowSize.
(Read only property)

107.2.187 UnclippedHeight as Integer

MBS Images Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes:

Without clipping, the full height of the image.
(Read only property)

107.2.188 Valid as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this instance is a valid picture.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.Valid)
```

Notes:

Valid is false if the constructor failed to create a picture.
(Read only property)

107.2.189 Width as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Example:

```
dim l as Picture = LogoMBS(500)
dim p as new PictureMBS(l)
MsgBox str(p.Width)
```

Notes: (Read only property)

107.2.190 YellowOffset as Integer

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal offset for pixels in the yellow channel.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
MsgBox str(p.YellowOffset)
```

Notes: (Read only property)

107.2.191 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim p as PictureMBS // your picture

p.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

107.2.192 DataStringInFormat(ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data of this picture as a string.
Notes:

Strings are limit to 2 GB, but the actual limit is certainly smaller.

You can get and set the image data with this method in the native format.
If you set the data, use a string with at least RowSize bytes.
If you query the data, you will get a copy of the data bytes in a string.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.

Version 18.1 or later will raise an out of memory exception for 32-bit applications if the memory needed will exceed 2 GB in memory. Allocating that many memory will be impossible.
(Read and Write computed property)

107.2.193 Row(index as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row.
Example:

```
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.Row(10)
// modify
m.FillBytesMBS(10,100,200)
// copy back
p.row(10)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes:

You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns "" on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

107.2.194 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRofRGB)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRofRGB)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes:

You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependend size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)
See also:

- 107.2.195 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock 18353

107.2.195 RowInFormat(index as Integer, ImageFormat as Integer, InvertAlpha as boolean) as memoryblock

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A memoryblock with the data of this row in the format you request.
Example:

```
// create new image
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
// copy row
dim m as MemoryBlock = p.RowInFormat(10, p.ImageFormatRGB, true)
// modify
m.FillBytesMBS(10,80,200)
// copy back
p.RowInFormat(10, p.ImageFormatRGB, true)=m
// show in window
window1.Backdrop = p.CopyPicture
```

Notes:

You can get and set a row with this method in the given format.
If you set the row, use a memoryblock with at least Width*PixelSize bytes. PixelSize is the format dependend size in bytes for one pixel.
If you query the row, you will get a copy of the row bytes in a new memoryblock.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
If InvertAlpha is true, the alpha values are inverted by using A=255-A.
(Read and Write computed property)
See also:

- 107.2.194 RowInFormat(index as Integer, ImageFormat as Integer) as memoryblock 18352

107.2.196 RowStringInFormat(index as Integer, ImageFormat as Integer) as string

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The row as a string.
Notes:

You can get and set a row with this method in the native format.
If you set the row, use a memoryblock with at least RowSize bytes.
If you query the row, you will get a copy of the row bytes in a string.
Returns nil on any error.
May raise OutOfBoundsException for invalid index.
(Read and Write computed property)

107.2.197 Constants

107.2.198 Dither90Halftone6x6Matrix = 5

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.199 DitherCluster3Matrix = 8

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.200 DitherCluster4Matrix = 9

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.201 DitherCluster8Matrix = 10

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.202 DitherLines4x4Matrix = 4

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.203 DitherMagic2x2Matrix = 1

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.204 DitherMagic4x4Matrix = 2

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.205 DitherOrdered4x4Matrix = 3

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.206 DitherOrdered6x6Matrix = 6

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.207 DitherOrdered8x8Matrix = 7

MBS Images Plugin, Plugin Version: 9.3.

Function: One of the dither modes for the DitherFilter method.

107.2.208 ImageFormat1of3 = 15

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
Targets the first byte with pixelsize=3.

107.2.209 ImageFormat1of4 = 18

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
Targets the first byte with pixelsize=4.

107.2.210 ImageFormat2of3 = 16

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory.
Targets the second byte with pixelsize=3.

107.2.211 ImageFormat2of4 = 19

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the second byte with pixelsize=4.

107.2.212 ImageFormat3of3 = 17

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=3.

107.2.213 ImageFormat3of4 = 20

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the third byte with pixelsize=4.

107.2.214 ImageFormat4of4 = 21

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Notes:

This is the imageformat to use if you target only a gray channel in a RGB picture in memory. Targets the forth byte with pixelsize=4.

107.2.215 ImageFormatABGR = 9

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.

107.2.216 ImageFormatACMYK = 25

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatACMYK)
```

107.2.217 ImageFormatAG = 13

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAG)
```

107.2.218 ImageFormatAKYMC = 30

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAKYMC)
```

107.2.219 ImageFormatAofABGR = 18

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofABGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.220 ImageFormatAofARGB = 18

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofARGB)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.221 ImageFormatAofBGRA = 21

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofBGRA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.222 ImageFormatAofRGBA = 21

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatAofRGBA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.223 ImageFormatARGB = 4

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatARGB)
```

107.2.224 ImageFormatBGR = 6

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBGR)
```

107.2.225 ImageFormatBGRA = 7

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBGRA)
```

107.2.226 ImageFormatBGRX = 8

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBGRX)
```

107.2.227 ImageFormatBofABGR = 19

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofABGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.228 ImageFormatBofARGB = 21

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofARGB)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.229 ImageFormatBofBGR = 15

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofBGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.230 ImageFormatBofBGRA = 18

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofBGRA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.231 ImageFormatBofRGB = 17

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofRGB)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.232 ImageFormatBofRGBA = 20

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatBofRGBA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.233 ImageFormatBuffer = 22

MBS Images Plugin, Plugin Version: 10.3.

Function: The image format for picture objects which are used for data storage.
Notes: This format is for PixelSize = 1 and no channels.

107.2.234 ImageFormatCMYK = 23

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYK)
```

107.2.235 ImageFormatCMYKA = 24

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYKA)
```

107.2.236 ImageFormatCMYKX = 26

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatCMYKX)
```

107.2.237 ImageFormatG = 11

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG)
```

107.2.238 ImageFormatG1 = 11

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG1)
```

Notes: One gray channel.

107.2.239 ImageFormatG2 = 42

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG2)
```

Notes: Two gray channels.

107.2.240 ImageFormatG3 = 43

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG)
```

Notes: Three gray channels.

107.2.241 ImageFormatG4 = 44

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG4)
```

Notes: Four gray channels.

107.2.242 ImageFormatG5 = 45

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG5)
```

Notes: Five gray channels.

107.2.243 ImageFormatG6 = 46

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG6)
```

Notes: Six gray channels.

107.2.244 ImageFormatG7 = 47

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG7)
```

Notes: Seven gray channels.

107.2.245 ImageFormatG8 = 48

MBS Images Plugin, Plugin Version: 20.2.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatG8)
```

Notes: Eight gray channels.

107.2.246 ImageFormatGA = 12

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGA)
```

107.2.247 ImageFormatGofABGR = 20

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofABGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.248 ImageFormatGofARGB = 20

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
// create a grayscale picture with 4 bytes per pixel
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofARGB)

// fill top left pixels white
p.FillRect(0,0,10,10,255)

Backdrop=p.CopyPicture
Title=str(p.PixelSize)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.249 ImageFormatGofBGR = 16

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofBGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.250 ImageFormatGofBGRA = 19

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofBGRA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.251 ImageFormatGofRGB = 16

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofRGB)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.252 ImageFormatGofRGBA = 19

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGofRGBA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.253 ImageFormatGray16 = 41

MBS Images Plugin, Plugin Version: 14.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatGray16)
```

Notes:

Support for 16bit Grayscale pictures is very limited.

With 14.0 plugins, we support for this format:

- constructor to create empty new picture
- Copy pixels from one gray to other gray image
- Invert
- Scale Gray16 to Gray16
- RawRow and Row functions
- Clip
- Channel access
- Clear
- Clone
- Copy picture

Everything else will probably not work or crash.

107.2.254 ImageFormatKYMC = 28

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatKYMC)
```

107.2.255 ImageFormatKYMCA = 29

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatKYMCA)
```

107.2.256 ImageFormatKYMCX = 31

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatKYMCX)
```

107.2.257 ImageFormatRGB = 1

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGB)
```

107.2.258 ImageFormatRGBA = 2

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

107.2.259 ImageFormatRGBX = 3

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRGBX)
```

107.2.260 ImageFormatRofABGR = 21

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofABGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.261 ImageFormatRofARGB = 19

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofARGB)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.262 ImageFormatRofBGR = 17

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofBGR)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.263 ImageFormatRofBGRA = 20

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofBGRA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.264 ImageFormatRofRGB = 15

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofRGB)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.265 ImageFormatRofRGBA = 18

MBS Images Plugin, Plugin Version: 9.1.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatRofRGBA)
```

Notes: This is the imageformat to use if you target only a gray channel in a RGB picture in memory.

107.2.266 ImageFormatScaling1 = 33

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
One Byte per Pixel.

107.2.267 ImageFormatScaling2 = 34

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
2 Bytes per Pixel.

107.2.268 ImageFormatScaling3 = 35

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
3 Bytes per Pixel.

107.2.269 ImageFormatScaling4 = 36

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
4 Bytes per Pixel.

107.2.270 ImageFormatScaling5 = 37

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
5 Bytes per Pixel.

107.2.271 ImageFormatScaling6 = 38

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
6 Bytes per Pixel.

107.2.272 ImageFormatScaling7 = 39

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
7 Bytes per Pixel.

107.2.273 ImageFormatScaling8 = 40

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the scaling image formats.
Notes:

Used for the temporary picture while scaling.
8 Bytes per Pixel.

107.2.274 ImageFormatUnknown = 0

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.

107.2.275 ImageFormatXBGR = 10

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXBGR)
```

107.2.276 ImageFormatXCMYK = 27

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXCMYK)
```

107.2.277 ImageFormatXKYMC = 32

MBS Images Plugin, Plugin Version: 11.0.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXKYMC)
```

107.2.278 ImageFormatXRGB = 5

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the possible image formats.
Example:

```
dim p as new PictureMBS(100,100,PictureMBS.ImageFormatXRGB)
```

107.2.279 ScaleBox = 2

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

107.2.280 ScaleCubic = 7

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

107.2.281 ScaleLanczos3 = 3

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

107.2.282 ScaleLanczos8 = 4

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

107.2.283 ScaleMitchell = 5

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

107.2.284 ScalePoly3 = 6

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

107.2.285 ScaleTriangle = 1

MBS Images Plugin, Plugin Version: 8.7.

Function: One of the scale modes for the Scale function.

Chapter 108

Launch Services

108.1 class LaunchServicesApplicationListMBS

108.1.1 class LaunchServicesApplicationListMBS

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: A class for a list of folderitems.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

108.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.4pr2

108.1.3 Methods

108.1.4 Constructor

MBS MacOSX Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: The private constructor.

108.1.5 Item(index as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

108.1.6 Properties

108.1.7 Count as Integer

MBS MacOSX Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

108.2 class LaunchServicesItemInfoMBS

108.2.1 class LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class to represent several details about an application folderitem.

108.2.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr1

108.2.3 Methods

108.2.4 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

108.2.5 Properties

108.2.6 AppIsScriptable as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the application can be scripted.
Notes: (Read only property)

108.2.7 AppPrefersClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched in the Classic environment.
Notes:

This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

108.2.8 AppPrefersNative as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Item is an application that can run either natively or in the Classic emulation environment, but prefers to be launched natively.
Notes:

This flag is valid only when kLSItemInfoIsNativeApp is set.
(Read only property)

108.2.9 Extension as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The extension for the folderitem.
Notes:

You need to specify the kLSRequestExtension flag to get this information.
(Read only property)

108.2.10 ExtensionIsHidden as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem has a hidden extension.
Notes: (Read only property)

108.2.11 IconFilename as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The optional filename string for the icon of this application.
Notes:

This property is not be used on 64bit Mac targets.
(Read only property)

108.2.12 IsAliasFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Whether the folderitem is an alias file (includes sym links)
Notes: (Read only property)

108.2.13 IsApplication as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a Single-file or packaged application.
Example:

```
dim l as LaunchServicesItemInfoMBS
dim f as FolderItem

f=ApplicationsFolderMBS(0).Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsApplication then
MsgBox "Is an application!"
end if
```

Notes:

This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

108.2.14 IsClassicApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a CFM Classic application.
Notes: (Read only property)

108.2.15 IsContainer as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The fodleritem is a directory (includes packages) or a volume.
Notes: (Read only property)

108.2.16 IsInvisible as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is invisible.
Notes:

Does not include '.' files or '.hidden' entries.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

108.2.17 IsNativeApp as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application is a Carbon or Cocoa native application.
Notes: (Read only property)

108.2.18 IsPackage as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: whether the folderitem is an Application, document, or bundle package.
Example:

```
dim l as LaunchServicesItemInfoMBS
dim f as FolderItem

f=SpecialFolder.Applications.Child("Mail.app")
l=f.LaunchServicesItemInfoMBS(-1)

if l.IsPackage then
MsgBox "Is a package!"
end if
```

Notes:

The item is a packaged directory.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

108.2.19 IsPlainFile as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: None of the other attributes is true.
Notes:

The item is not a directory, volume, or symlink.
This property is filled when kLSRequestBasicFlagsOnly is requested.
(Read only property)

108.2.20 IsSymlink as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is only an UNIX symbolic link.
Notes: (Read only property)

108.2.21 IsVolume as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The folderitem is a volume.
Notes: (Read only property)

108.2.22 KindID as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The kind ID of this folderitem.
Notes:

This property is not be used on 64bit Mac targets.
(Read only property)

108.2.23 MacCreator as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS creator code.
Example:

```
dim f as FolderItem = SpecialFolder.Applications.Child("Firefox.app")

dim l As LaunchServicesItemInfoMBS = f.LaunchServicesItemInfoMBS(& h02)

if l <>nil Then
MsgBox l.MacCreator // shows "MOZB"
end
```

Notes:

You need to specify the kLSRequestTypeCreator flag to get this information.
(Read only property)

108.2.24 MacType as String

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The Mac OS type code.
Notes:

You need to specify the kLSRequestTypeCreator flag to get this information.
(Read only property)

108.3 class LaunchServicesLaunchParameterMBS

108.3.1 class LaunchServicesLaunchParameterMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: A class for parameters which can be used to launch an application.
Example:

```
dim f(0) as FolderItem
dim a as FolderItem
dim p as LaunchServicesLaunchParameterMBS

p=new LaunchServicesLaunchParameterMBS

p.Defaults=true
p.Hide=true
f.Append SpecialFolder.Desktop.Child("picture.tiff")

a=LaunchServicesOpenXMBS(f,p)

MsgBox a.Name
```

108.3.2 Methods

108.3.3 close

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

108.3.4 Properties

108.3.5 Application as FolderItem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The application to use to open documents.
Notes: (Read and Write property)

108.3.6 Defaults as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Default settings should be used.
Notes:

default means: open, async, use Info.plist, start Classic.
(Read and Write property)

108.3.7 DontAddToRecents as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Do not add application or documents to recents menus.
Notes: (Read and Write property)

108.3.8 DontSwitch as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Don't bring new app to the foreground.
Example:

```
dim l as new LaunchServicesLaunchParameterMBS

l.DontSwitch=true

dim files(0) as FolderItem

files(0)=GetFolderItem("/Applications/iTunes.app", FolderItem.PathTypeShell)

call LaunchServicesOpenXMBS(files,l)
```

Notes: (Read and Write property)

108.3.9 Hide as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Send child a "hide" request as soon as it checks in.
Notes: (Read and Write property)

108.3.10 HideOthers as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Hide all other apps when child checks in.
Notes: (Read and Write property)

108.3.11 InClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Force app to launch in Classic environment.
Notes: (Read and Write property)

108.3.12 InhibitBGOnly as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Causes launch to fail if target is background-only.
Notes: (Read and Write property)

108.3.13 LastError as Integer

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: The last error value from the LaunchServicesOpenXMBS function.
Notes:

Values for errors:

(Read and Write property)

108.3.14 NewInstance as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Instantiate app even if it is already running.
Notes: (Read and Write property)

kLSUnknownErr	= -10810	
kLSNotAnApplicationErr	= -10811	
kLSNotInitializedErr	= -10812	
kLSDataUnavailableErr	= -10813	e.g. no kind string
kLSApplicationNotFoundErr	= -10814	e.g. no application claims the file
kLSUnknownTypeErr	= -10815	
kLSDataTooOldErr	= -10816	
kLSDataErr	= -10817	
kLSLaunchInProgressErr	= -10818	e.g. opening an alreay opening application
kLSNotRegisteredErr	= -10819	
kLSAppDoesNotClaimTypeErr	= -10820	
kLSAppDoesNotSupportSchemeWarning	= -10821	not an error, just a warning
kLSServerCommunicationErr	= -10822	cannot set recent items
kLSCannotSetInfoErr	= -10823	you may not set item info for this item

108.3.15 NoParams as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Use Info.plist to determine launch parameters.
Notes: (Read and Write property)

108.3.16 Print as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Print items instead of opening them.
Notes: (Read and Write property)

108.3.17 StartClassic as Boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Start up Classic environment if required for this application.
Notes: (Read and Write property)

108.4 class LaunchServicesStringListMBS

108.4.1 class LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: A class for a list of strings.

108.4.2 Methods

108.4.3 Item(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an item of this list.
Notes: Index goes from 0 to count-1.

108.4.4 Properties

108.4.5 Count as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: The number of items inside this list.
Notes: (Read and Write property)

108.5 Globals

108.5.1 LaunchServicesAllHandlersForURLSchemeMBS(URLScheme as string) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified URL scheme.
Example:

```
dim l as LaunchServicesStringListMBS
dim s(-1) as string
dim i,c as Integer

l=LaunchServicesAllHandlersForURLSchemeMBS("http")
if l<>nil then
c=l.Count-1
for i=0 to c
s.Append l.Item(i)
next

MsgBox Join(s,", ")
end if
```

Notes:

URL handling capability is determined according to the kCFBundleURLTypes listed in an application's Info.plist).
Returns nil if no handlers are available.

Example output from the code above:
org.videolan.vlc, com.RealNetworks.RealPlayer, org.mozilla.firefox, com.apple.safari, de.icab.iCab, com.microsoft.explorer

Requires Mac OS X 10.4 to work correct. Returns always nil on older systems.

108.5.2 LaunchServicesAllRoleHandlersForContentTypeMBS(ContentType as string, role as Integer) as LaunchServicesStringListMBS

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns an array of application bundle identifiers for applications capable of handling the specified content type (UTI) with the specified role(s).

Example:

```
dim l as LaunchServicesStringListMBS
dim s(-1) as string
dim i,c as Integer

const kLSRolesAll=-1

l=LaunchServicesAllRoleHandlersForContentTypeMBS("com.adobe.pdf",kLSRolesAll)
if l<>nil then
c=l.Count-1
for i=0 to c
s.Append l.Item(i)
next

MsgBox Join(s,", ")
end if
```

Notes:

Application content handling capabilities are determined according to the kCFBundleDocumentTypes listed in an application's Info.plist). For any role, specify kLSRolesAll.
Returns nil if no handlers are available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Example output for code above is:
com.adobe.Reader, com.apple.preview, com.adobe.acrobat.reader, com.apple.MDIimporter.PDF

108.5.3 LaunchServicesApplicationForInfoMBS(type as string, creator as string, extension as string, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open items with particular data.
Example:

```
MsgBox LaunchServicesApplicationForInfoMBS("","R*ch","txt",-1).name
MsgBox LaunchServicesApplicationForInfoMBS("TEXT","","",-1).name
MsgBox LaunchServicesApplicationForInfoMBS("","","txt",-1).name
```

Notes:

Consults the binding tables to return the application that would be used to open items with type, creator, and/or extension as provided if they were double-clicked in the Finder. This application will be the default for items like this if one has been set. If no application is known to LaunchServices suitable for opening such items, nil (kLSApplicationNotFoundErr) will be returned. Not all three input parameters can be "" at the same time nor can both output parameters be "" at the same time.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

108.5.4 LaunchServicesApplicationForItemMBS(file as folderitem, role as Integer) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return the application used to open an item.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Dim appfile As FolderItem = LaunchServicesApplicationForItemMBS(file, kLSRolesEditor)

// shows Xojo
MsgBox appfile.NativePath
```

Notes:

Consults the binding tables to return the application that would be used to open the folderitem if it were

double-clicked in the Finder. This application will be the user-specified override if appropriate or the default otherwise. If no application is known to LaunchServices suitable for opening this item, nil (kLSApplicationNotFoundErr) will be returned.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

108.5.5 LaunchServicesCanApplicationAcceptItemMBS(item as folderitem, targetapp as folderitem, role as Integer, flags as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Determine whether an item can accept another item.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Dim a As FolderItem = LaunchServicesOpenMBS(file)

Const kLSRolesNone = 1 // no claim Is made about support For this type/scheme
Const kLSRolesViewer = 2 // claim To be able To view this type/scheme
Const kLSRolesEditor = 4 // claim To be able To edit this type/scheme
Const kLSRolesAll = -1 // claim To Do it all

Dim accept As Boolean = LaunchServicesCanApplicationAcceptItemMBS(file, a, kLSRolesEditor, 0)

MsgBox "accept by Xojo: "+Str(accept)
```

Notes:

Returns whether TargetApp can accept this folderitem as in a drag and drop operation. If role is other than kLSRolesAll then make sure TargetApp claims to fulfill the requested role.

Constants you can use for the role parameter:

Values for the flags:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

kLSAcceptDefault	= 1	
kLSAcceptAllowLoginUI	= 2	show UI to log in if necessary

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

108.5.6 LaunchServicesDefaultHandlerForURLSchemeMBS(URLScheme as string) as string

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Returns the bundle identifier of the default handler for the specified URL scheme.
Example:

```
MsgBox LaunchServicesDefaultHandlerForURLSchemeMBS("http") // shows here: com.apple.safari
```

Notes:

Returns "" if no handler is available.
Requires Mac OS X 10.4 to work correct. Returns always "" on older systems.

108.5.7 LaunchServicesDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer) as string

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Returns the application bundle identifier of the default handler for the specified content type (UTI), in the specified role(s).
Example:

```
const type="com.adobe.pdf"
msgbox LaunchServicesDefaultRoleHandlerForContentTypeMBS(type,-1)
```

Notes:

For any role, specify kLSRolesAll. Returns "" if no handler is available.

Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

108.5.8 LaunchServicesDisplayNameForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the display name for an url handle.
Notes:

Return a copy of the display name for an url handle. Takes into consideration whether this item has a hidden extension or not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

108.5.9 LaunchServicesFindApplicationForInfoMBS(creator as string, bundleID as string, name as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Locate a specific application.
Example:

```
MsgBox LaunchServicesFindApplicationForInfoMBS("prvw","","").Name
MsgBox LaunchServicesFindApplicationForInfoMBS("","com.apple.iTunes","").Name
MsgBox LaunchServicesFindApplicationForInfoMBS("","","Safari.app").Name
```

Notes:

Returns the application with the corresponding input information. The registry of applications is consulted first in order of bundleID, then creator, then name. All comparisons are case insensitive and 'ties' are decided first by version, then by native vs. Classic.

Parameters can be "". The name of the application must be the name with the extension.

108.5.10 LaunchServicesItemInfoForCFURLMBS(cfurlhandle as Integer, WhichInfo as Integer) as LaunchServicesItemInfoMBS

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Return information about an item.
Notes:

Returns as much or as little information as requested about the url. Some information is available in a thread-safe manner, some is not.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

Possible values you can combine for the WhichInfo parameter:

kLSRequestExtension	= & h01	Requests the item's filename extension.
kLSRequestTypeCreator	= & h02	Requests the item's file type and creator signature.
kLSRequestBasicFlagsOnly	= & h04	Requests all item-information flags that are not application-specific: that is, all except IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAppTypeFlags	= & h08	Requests all application-specific item-information flags: that is, IsNativeApp, IsClassicApp, AppPrefersNative, AppPrefersClassic and AppIsScriptable.
kLSRequestAllFlags	= & h10	Requests all item-information flags.
kLSRequestIconAndKind	= & h20	Not used.
kLSRequestExtensionFlagsOnly	= & h40	Requests only the kLSItemInfoExtensionIsHidden item-information flag.
kLSRequestAllInfo	= -1	

108.5.11 LaunchServicesKindStringForCFURLMBS(cfurlhandle as Integer) as string

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Get the kind string for an item.
Notes:

Returns the kind string as used in the Finder and elsewhere for the given folderitem.

Cfurlhandle should be the non 0 value from a CFURL object handle property.

108.5.12 LaunchServicesOpenMBS(item as folderitem) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Open an application, document, or folder.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("Test.xojo_binary_project")
Dim a As FolderItem = LaunchServicesOpenMBS(file)

MsgBox a.NativePath
```

Notes:

Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder. Use the more specific LaunchServicesOpenXMBS for more control over launching.

Returns a folderitem to the application which was launched.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

108.5.13 LaunchServicesOpenXMBS(documents() as folderitem, parameter as LaunchServicesLaunchParameterMBS) as folderitem

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: All.

Function: Opens an application or one or more documents or folders.
Example:

```
// Open a file in Preview (Mac OS X).
Sub OpenWithPreview(f as folderitem)
dim p as FolderItem
dim d(0) as FolderItem
dim r as FolderItem
dim param as LaunchServicesLaunchParameterMBS

// Find preview
p=LaunchServicesFindApplicationForInfoMBS("prvw","com.apple.Preview","Preview.app")

if p<>Nil then
d(0)=f

param=new LaunchServicesLaunchParameterMBS
param.Application=p
```

```
param.Defaults=true // just default settings

r=LaunchServicesOpenXMBS(d, param)
if r<>nil then
Return //Success
end if
end if

// On failure, just launch normally:
f.Launch true
End Sub
```

Notes:

Opens applications, documents, and folders. Applications are opened via an 'oapp' or 'rapp' event. Documents are opened in their user-overridden or default applications as appropriate. Folders are opened in the Finder.

Returns a folderitem to the application which was launched.
Currently this function is not available to RB versions before 3.5.
Note that the documents parameter is an array of folderitem and not just one.

Upgraded in version 19.5 to use CFURL instead of FSRef APIs.

108.5.14 LaunchServicesSetDefaultHandlerForURLSchemeMBS(URLScheme as string, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.1, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified URL scheme.
Example:

```
dim e as Integer
dim old as string

old=LaunchServicesDefaultHandlerForURLSchemeMBS("http")

MsgBox "Before: "+old

e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http","com.microsoft.explorer")

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MsgBox "Between: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")
```

```
e=LaunchServicesSetDefaultHandlerForURLSchemeMBS("http",old)

MsgBox "LaunchServicesSetDefaultHandlerForURLSchemeMBS: "+str(e)

MsgBox "After: "+LaunchServicesDefaultHandlerForURLSchemeMBS("http")
```

Notes:

Returns Mac OS error code with 0 for success.
The handler is specified as an application bundle identifier.
Requires Mac OS X 10.4 to work correct. Returns always -1 on older systems.

108.5.15 LaunchServicesSetDefaultRoleHandlerForContentTypeMBS(ContentType as string, role as Integer, BundleID as string) as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Sets the user's preferred handler for the specified content type (UTI) in the specified role(s).
Example:

```
dim e as Integer

// makes Acrobat the default pdf reader
'e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.adobe.Reader")

// makes preview the default pdf reader
e=LaunchServicesSetDefaultRoleHandlerForContentTypeMBS("com.adobe.pdf",-1,"com.apple.preview")

msgbox str(e)
```

Notes:

For all roles, specify kLSRolesAll. The handler is specified as an application bundle identifier.
Returns a Mac OS error code or -1 if the function is not available.
Requires Mac OS X 10.4.

Constants you can use for the role parameter:

kLSRolesNone	= 1	no claim is made about support for this type/scheme
kLSRolesViewer	= 2	claim to be able to view this type/scheme
kLSRolesEditor	= 4	claim to be able to edit this type/scheme
kLSRolesAll	= -1	claim to do it all

108.6 module UTTypeMBS

108.6.1 module UTTypeMBS

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: The module to wrap all the Apple UTI functions.
Notes:

See this webpage for a list of all the predefined types:

http://developer.apple.com/documentation/Carbon/Conceptual/understanding_utis/utilist/chapter_4_section_1.html

108.6.2 Blog Entries

- MacOSX plugin for iOS
- MBS Xojo Plugins, version 19.0pr6

108.6.3 Methods

108.6.4 ConformsTo(UTI as string, ConformsToUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether a type is a subtype of the second type.
Example:

```
if UTTypeMBS.ConformsTo("public.jpeg","public.image") then
MsgBox "ConformsTo"
else
MsgBox "not ConformsTo"
end if
```

108.6.5 CreateAllIdentifiersForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string()

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates an array of all uniform type identifiers indicated by the specified tag.
Example:

```
MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "txt", ""))
// shows "public.plain-text"

MsgBox join(UTTypeMBS.CreateAllIdentifiersForTag(UTTypeMBS.kUTTagClassFilenameExtension, "xml", ""))
// shows "public.xml com.apple.dashcode.xml"
```

Notes: An overloaded tag (e.g., an extension used by several applications for different file formats) may indicate multiple types. If no declared type identifiers have the specified tag, then a single dynamic type identifier will be created for the tag. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type).

108.6.6 CreatePreferredIdentifierForTag(inTagClass as string, inTag as string, inConformingToUTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Creates a uniform type identifier for the type indicated by the specified tag.
Example:

```
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassFilenameExtension, "jpg", "")
// shows "public.jpeg"
MsgBox UTTypeMBS.CreatePreferredIdentifierForTag(UTTypeMBS.kUTTagClassOSType, "TIFF", "public.image")
// shows "public.tiff"
```

Notes: This is the primary function to use for going from tag (extension/MIMEType/OSType) to uniform type identifier. Optionally, the returned type identifiers must conform to the identified "conforming-to" type argument. This is a hint to the implementation to constrain the search to a particular tree of types. For

example, the client may want to know the type indicated by a particular extension tag. If the client knows that the extension is associated with a directory (rather than a file), the client may specify "public.directory" for the conforming-to argument. This will allow the implementation to ignore all types associated with byte data formats (public.data base type). If more than one type is indicated, preference is given to a public type over a non-public type on the theory that instances of public types are more common, and therefore more likely to be correct. When there a choice must be made between multiple public types or multiple non-public types, the selection rules are undefined. Clients needing finer control should use CreateAllIdentifiersWith-Tag. If no declared type is indicated, a dynamic type identifier is generated which satisfies the parameters.

108.6.7 DeclaringBundleURL(UTI as string) as folderitem

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the folderitem of the bundle containing the type declaration of the identified type.
Example:

```
MsgBox UTTypeMBS.DeclaringBundleURL("public.jpeg").NativePath
```

108.6.8 Description(UTI as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the localized, user-readable type description string.
Example:

```
MsgBox UTTypeMBS.Description("public.jpeg") // "JPEG-Bild" in German
```

108.6.9 Equal(UTI as string, SecondUTI as string) as boolean

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Checks whether two types are equal.
Example:

```
if UTTypeMBS.Equal("public.jpeg","public.jpeg") then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes: Returns true if both UTIs are equal.

108.6.10 kUTExportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTExportedTypeDeclarationsKey // "UTExportedTypeDeclarations"

108.6.11 kUTImportedTypeDeclarationsKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTImportedTypeDeclarationsKey // "UTImportedTypeDeclarations"

108.6.12 kUTTagClassFilenameExtension as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassFilenameExtension // "public.filename-extension"

108.6.13 kUTTagClassMIMEType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassMIMEType // "public.mime-type"

108.6.14 kUTTagClassNSPboardType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassNSPboardType // "com.apple.nspboard-type"

108.6.15 kUTTagClassOSType as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constant strings identify tag classes for use when converting uniform type identifiers to and from equivalent tags.
Example:

MsgBox UTTypeMBS.kUTTagClassOSType // "com.apple.ostype"

108.6.16 kUTTypeAliasFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.17 kUTTypeAliasRecord as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.18 kUTTypeAppleICNS as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.19 kUTTypeAppleProtectedMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.20 kUTTypeApplication as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.21 kUTTypeApplicationBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.22 kUTTypeApplicationFile as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.23 kUTTypeArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.24 kUTTypeAudio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.25 kUTTypeAudiovisualContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.26 kUTTypeBMP as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.27 kUTTypeBundle as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.28 kUTTypeCHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.29 kUTTypeCompositeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.30 kUTTypeConformsToKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeConformsToKey // "UTTypeConformsTo"
```

108.6.31 kUTTypeContact as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.32 kUTTypeContent as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.33 kUTTypeCPlusPlusHeader as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.34 kUTTypeCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.35 kUTTypeCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.36 kUTTypeData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.37 kUTTypeDescriptionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

MsgBox UTTypeMBS.kUTTypeDescriptionKey // "UTTypeDescription"

108.6.38 kUTTypeDirectory as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.39 kUTTypeDiskImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.40 kUTTypeFileURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.41 kUTTypeFlatRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.42 kUTTypeFolder as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.43 kUTTypeFramework as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.44 kUTTypeGIF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.45 kUTTypeHTML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.46 kUTTypeICO as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.47 kUTTypeIconFileKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeIconFileKey // "UTTypeIconFile"
```

108.6.48 kUTTypeIdentifierKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeIdentifierKey // "UTTypeIdentifier"
```

108.6.49 kUTTypeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.50 kUTTypeInkText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.51 kUTTypeItem as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.52 kUTTypeJavaSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.53 kUTTypeJPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.54 kUTTypeJPEG2000 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.55 kUTTypeMessage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.56 kUTTypeMountPoint as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.57 kUTTypeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.avi")
dim u as string = UTTypeMBS.UTI(f)

if UTTypeMBS.ConformsTo(u, UTTypeMBS.kUTTypeMovie) then
MsgBox u+" is movie"
else
MsgBox u+" is not movie."
end if
```

108.6.58 kUTTypeMP3 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.59 kUTTypeMPEG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.60 kUTTypeMPEG4 as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.61 kUTTypeMPEG4Audio as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.62 kUTTypeObjectiveCPlusPlusSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.63 kUTTypeObjectiveCSource as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.64 kUTTypePackage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.65 kUTTypePDF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.66 kUTTypePICT as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.67 kUTTypePlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.68 kUTTypePNG as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.69 kUTTypeQuickTimeImage as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.70 kUTTypeQuickTimeMovie as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.71 kUTTypeReferenceURLKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeReferenceURLKey // "UTTypeReferenceURL"
```

108.6.72 kUTTypeResolvable as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.73 kUTTypeRTF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.74 kUTTypeRTFD as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.75 kUTTypeSourceCode as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.76 kUTTypeSymLink as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.77 kUTTypeTagSpecificationKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeTagSpecificationKey // "UTTypeTagSpecification"
```

108.6.78 kUTTypeText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.79 kUTTypeTIFF as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.80 kUTTypeTXNTextAndMultimediaData as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.81 kUTTypeURL as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.82 kUTTypeUTF16ExternalPlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.83 kUTTypeUTF16PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.84 kUTTypeUTF8PlainText as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.85 kUTTypeVCard as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.86 kUTTypeVersionKey as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the constants for the keys used in type declarations.
Example:

```
MsgBox UTTypeMBS.kUTTypeVersionKey // "UTTypeVersion"
```

108.6.87 kUTTypeVideo as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.88 kUTTypeVolume as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.89 kUTTypeWebArchive as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.90 kUTTypeXML as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: One of the predefined type constants.

108.6.91 PreferredTagWithClass(inUTI as string, inTagClass as string) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Returns the identified type's preferred tag with the specified tag class as a String.
Example:

```
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassMIMEType)
// shows "image/jpeg"
MsgBox UTTypeMBS.PreferredTagWithClass("public.jpeg",UTTypeMBS.kUTTagClassFilenameExtension)
// shows "jpeg"
```

Notes: This is the primary function to use for going from uniform type identifier to tag. If the type declaration included more than one tag with the specified class, the first tag in the declared tag array is the preferred tag.

108.6.92 UTI(file as folderitem) as string

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Queries the UTI for a given file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.xojo_binary_project")
MsgBox UTTypeMBS.UTI(f) // shows com.xojo.project.binary
```

Notes: Returns "" if no UTI is available.

Chapter 109

LCMS2

109.1 class LCMS2BitmapMBS

109.1.1 class LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a bitmap.
Notes:

You can pass bitmap data as raw memoryblock or fill it using a Xojo picture.
In our LCMS 1.x plugin, the bitmap was always 16 bit. This plugin also can also use 8 bit or 32 bit.

109.1.2 Blog Entries

- ICC color profiling
- MBS Xojo / Real Studio Plugins, version 14.2pr8
- MBS Xojo / Real Studio Plugins, version 13.2pr3

109.1.3 Methods

109.1.4 Constructor

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty bitmap object.
See also:

- 109.1.5 Constructor(p as picture, bits as Integer = 8) 18420
- 109.1.6 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 18420
- 109.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer) 18421
- 109.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 18422
- 109.1.9 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 18422

109.1.5 Constructor(p as picture, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert picture to bitmap
dim b as new LCMS2BitmapMBS(pic)
// convert to picture
Backdrop = b.Picture
```

Notes: Bits can be 8, 16 or 32 bit integers.
See also:

- 109.1.4 Constructor 18419
- 109.1.6 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 18420
- 109.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer) 18421
- 109.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 18422
- 109.1.9 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 18422

109.1.6 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8)

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Example:

```
// convert small part of picture to bitmap
dim b as new LCMS2BitmapMBS(pic, 50, 50, 100, 100)
// convert to picture
Backdrop = b.Picture
```

Notes:

Picks only the provided area from the source picture.
Bits can be 8, 16 or 32 bit integers.
See also:

- 109.1.4 Constructor 18419
- 109.1.5 Constructor(p as picture, bits as Integer = 8) 18420
- 109.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer) 18421
- 109.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 18422
- 109.1.9 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 18422

109.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes:

Colorspace Type should be one of the color space signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 109.1.4 Constructor 18419
- 109.1.5 Constructor(p as picture, bits as Integer = 8) 18420
- 109.1.6 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 18420
- 109.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 18422
- 109.1.9 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 18422

109.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes:

Colorspace Type should be one of the colorspace signatures like kcmsSigRgbData.
Raises exception if colorspace is invalid.
See also:

- 109.1.4 Constructor 18419
- 109.1.5 Constructor(p as picture, bits as Integer = 8) 18420
- 109.1.6 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 18420
- 109.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer) 18421
- 109.1.9 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) 18422

109.1.9 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes:

In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
Raises exception if colorspace is invalid.
See also:

- 109.1.4 Constructor 18419
- 109.1.5 Constructor(p as picture, bits as Integer = 8) 18420
- 109.1.6 Constructor(p as picture, left as Integer, top as Integer, width as Integer, height as Integer, bits as Integer = 8) 18420
- 109.1.7 Constructor(width as Integer, height as Integer, colorspace as Integer) 18421
- 109.1.8 Constructor(width as Integer, height as Integer, colorspace as Integer, RowBytes as Integer) 18422

109.1.10 CopyToPicture(pic as picture, x as Integer = 0, y as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies image data into an existing picture.
Example:

```
// convert small part of picture to bitmap
dim b as new LCMS2BitmapMBS(pic)

// create destination picture
dim pic as new Picture(500, 500, 32)

// copy pixels and show
if b.CopyToPicture(pic, 50, 50) then

Backdrop = pic
end if
```

Notes:

This may be more efficient for you if you process a lot of image data as you can avoid creating new picture objects with using Picture method in this class.
May not work for all pictures, especially may fail on Linux.
Returns true on success.

109.1.11 Invert

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the bitmap data.
Notes: Requires correct settings for rowbytes, height and data properties.

109.1.12 Picture(HasAlpha as Boolean = false) as picture

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the picture.
Example:

```
// get some picture
dim logo as Picture = LogoMBS(500)
```

```
// let us convert it to a 16 bit memory block
dim l as new LCMS2BitmapMBS(logo, 16)

// check bit depth
Title = str(l.Bits)

// convert back
dim p as Picture = l.Picture

// and display
Backdrop = p
```

Notes: This method works with 8, 16 and 32 bit integer pictures. Make sure bits property is set.

109.1.13 Properties

109.1.14 Bits as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bits.
Notes:

Can be 8, 16 or 32 and is used for conversion to and from Xojo picture objects.
(Read and Write property)

109.1.15 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color space type.
Notes:

Only used to let Picture function know what format the data is.
Typically kcmsSigRgbData.
(Read and Write property)

109.1.16 Data as MemoryBlock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the actual image data.
Notes:

Data can be stored in 8, 16 or 32 bit Integers or 32bit Floats.
(Read and Write property)

109.1.17 Height as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the Bitmap in Pixels.
Notes: (Read and Write property)

109.1.18 RowBytes as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes per row.
Notes:

Normally: rowbytes=pixelsize*width+padding
Where padding is some extra bytes.
(Read and Write property)

109.1.19 Width as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the Bitmap in Pixels.
Notes: (Read and Write property)

109.2 class LCMS2CIECAM02MBS

109.2.1 class LCMS2CIECAM02MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Class to evaluated viewing conditions.
Notes: Viewing conditions. Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming LCMS2ICCViewingConditionsMBS to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.

109.2.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr5

109.2.3 Methods

109.2.4 Constructor(context as LCMS2ContextMBS, VC as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a CAM02 object based on given viewing conditions.
Notes:

Such object may be used as a color appearance model and evaluated in forward and reverse directions. Viewing conditions is defined by LCMS2ViewingConditionsMBS class. The surround member has to be one of this values: kAVG_SURROUND, kDIM_SURROUND, kDARK_SURROUND or kCUTSHEET_SURROUND. Degree of chromatic adaptation (d), can be specified in 0...1.0 range, or the model can be instructed to calculate it by using D_CALCULATE constant (-1).

Context: user-defined context cargo.
VC: A structure holding viewing conditions.

109.2.5 Forward(value as LCMS2CIEXYZMBS) as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the forward direction: XYZ to JCh
Notes:

value: the input XYZ value.

Returns the output JCh value.

109.2.6 Reverse(value as LCMS2JChMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the CAM02 model in the reverse direction: JCh to XYZ
Notes:

Values: The input JCh value.
Returns the output XYZ value

109.2.7 Properties

109.2.8 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle to the conversion engine.
Notes: (Read and Write property)

109.3 class LCMS2CIELabMBS

109.3.1 class LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a Lab color.

109.3.2 Methods

109.3.3 BFDdeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates BFD delta E metric.

109.3.4 CIE2000DeltaE(Other as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes:

Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

109.3.5 CIE94DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes:

A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.

It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

109.3.6 Clone as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.
Example:

```
dim l as new LCMS2CIELabMBS(0.1, 0.2, 0.3)
dim k as LCMS2CIELabMBS = l.Clone
MsgBox str(k.L)+" "+str(k.a)+" "+str(k.b)
```

109.3.7 CMCdeltaE(Other as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes:

In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

109.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Lab color with the given values.
See also:

- 109.3.9 Constructor(other as LCMS2CIELabMBS)

109.3.9 Constructor(other as LCMS2CIELabMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the color value.
See also:

- 109.3.8 Constructor(L as Double=0.0, a as Double=0.0, b as Double=0.0) 18429

109.3.10 DeltaE(Other as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes:

You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to show errors. After all, we've spent the money on the instruments; shouldn't we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

109.3.11 DesaturateLab(amax as Double, amin as Double, bmax as Double, bmin as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does poor man's gamut mapping.
Notes: See also cmsDesaturateLab in LCMS manual.

109.3.12 XYZ(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

109.3.13 Properties

109.3.14 A as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The a value.
Notes: (Read and Write property)

109.3.15 B as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The b value.
Notes: (Read and Write property)

109.3.16 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

109.3.17 LCh as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to LCh value.
Notes: (Read only property)

109.4 class LCMS2CIELChMBS

109.4.1 class LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class for CIE LCh values.
Example:

```
dim c as new LCMS2CIELChMBS(1,2,3)
MsgBox str(c.L)+" "+str(c.C)+" "+str(c.h)
```

109.4.2 Methods

109.4.3 Clone as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color object.

109.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.
See also:

- 109.4.5 Constructor(other as LCMS2CIELChMBS) 18433

109.4.5 Constructor(other as LCMS2CIELChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 109.4.4 Constructor(L as Double=0.0, C as Double=0.0, h as Double=0.0) 18433

109.4.6 Properties

109.4.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

109.4.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

109.4.9 L as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The L value.
Notes: (Read and Write property)

109.4.10 Lab as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the LCh value to a Lab value.
Example:

```
dim c as new LCMS2CIELChMBS(0.1, 0.2, 0.3)
dim lab as LCMS2CIELabMBS = c.Lab
MsgBox str(lab.L)+" "+str(lab.a)+" "+str(lab.b)
```

Notes: (Read only property)

109.5 class LCMS2CIExyYMBS

109.5.1 class LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE xyY value.
Example:

```
dim c as new LCMS2CIExyYMBS(1,2,3)
MsgBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes: As Xojo is case insensitive, we have to name the big Y as YY.

109.5.2 Methods

109.5.3 Clone as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the color.

109.5.4 Constructor(other as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the object with values from other object.
See also:

- 109.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0) 18435

109.5.5 Constructor(X as Double=0.0, Y as Double=0.0, YY as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new xyY object with the given values.
See also:

- 109.5.4 Constructor(other as LCMS2CIExyYMBS) 18435

109.5.6 TempFromWhitePoint as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the temperature from using this xyY point as the white point.
Example:

```
dim c as new LCMS2CIExyYMBS(1,2,3)
MsgBox str(c.TempFromWhitePoint)
```

109.5.7 Properties

109.5.8 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

109.5.9 XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the xyY value to XYZ.
Example:

```
dim c as new LCMS2CIExyYMBS(1,2,3)
dim n as LCMS2CIEXYZMBS = c.XYZ
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
dim x as LCMS2CIExyYMBS = n.xyY
MsgBox str(x.x)+" "+str(x.y)+" "+str(x.yy)
```

Notes: (Read only property)

109.5.10 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

109.5.11 YY as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Y value.
Notes:

As Xojo is case insensitive, we have to name the big Y as YY.
(Read and Write property)

109.6 class LCMS2CIExyYTripleMBS

109.6.1 class LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a xyY color triple.

109.6.2 Methods

109.6.3 Clone as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the xyY triple.

109.6.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with zero values.
See also:

- 109.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 18438
- 109.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 18439

109.6.5 Constructor(other as LCMS2CIExyYTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with values from other object.
See also:

- 109.6.4 Constructor 18438
- 109.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS) 18439

109.6.6 Constructor(Red as LCMS2CIExyYMBS, Green as LCMS2CIExyYMBS, Blue as LCMS2CIExyYMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a xyY triple with given values.
See also:

- 109.6.4 Constructor 18438
- 109.6.5 Constructor(other as LCMS2CIExyYTripleMBS) 18438

109.6.7 Properties

109.6.8 Blue as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

109.6.9 Green as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

109.6.10 Red as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

109.7 class LCMS2CIEXYZMBS

109.7.1 class LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a CIE XYZ values.
Example:

```
dim n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
MsgBox str(n.x)+" "+str(n.y)+" "+str(n.z)
```

109.7.2 Methods

109.7.3 Constructor(x as Double=0.0, y as Double=0.0, z as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with the given values.

109.7.4 Lab(whitePoint as LCMS2CIEXYZMBS=nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a lab value using the given whitepoint.
Notes: Setting WhitePoint to nil forces D50 as white point.

109.7.5 Properties

109.7.6 x as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value.
Notes: (Read and Write property)

109.7.7 xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the XYZ value to a xyY value.
Example:

```
dim n as new LCMS2CIEXYZMBS(0.1, 0.2, 0.3)
dim l as LCMS2CIExyYMBS = n.xyY
MsgBox str(l.x)+" "+str(l.y)+" "+str(l.yy)
```

Notes: (Read only property)

109.7.8 y as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value.
Notes: (Read and Write property)

109.7.9 z as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The z value.
Notes: (Read and Write property)

109.8 class LCMS2CIEXYZTripleMBS

109.8.1 class LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a XYZ color triple.

109.8.2 Methods

109.8.3 Clone as LCMS2CIEXYZTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the XYZ triple.

109.8.4 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with zero values.
See also:

- 109.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 18442
- 109.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 18443

109.8.5 Constructor(other as LCMS2CIEXYZTripleMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with values from other object.
See also:

- 109.8.4 Constructor 18442
- 109.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS) 18443

109.8.6 Constructor(Red as LCMS2CIEXYZMBS, Green as LCMS2CIEXYZMBS, Blue as LCMS2CIEXYZMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a XYZ triple with given values.
See also:

- 109.8.4 Constructor 18442
- 109.8.5 Constructor(other as LCMS2CIEXYZTripleMBS) 18442

109.8.7 Properties

109.8.8 Blue as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blue color.
Notes: (Read and Write property)

109.8.9 Green as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green color.
Notes: (Read and Write property)

109.8.10 Red as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The red color.
Notes: (Read and Write property)

109.9 class LCMS2ContextMBS

109.9.1 class LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 context.

109.9.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.1pr1

109.9.3 Methods

109.9.4 Clone as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the context object.
Notes: You can assign a new tag to the copy.

109.9.5 Constructor(other as LCMS2ContextMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with a copy of the existing one.
See also:

- 109.9.6 Constructor(tag as Variant = nil) 18444

109.9.6 Constructor(tag as Variant = nil)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new context object with given tag.
See also:

- 109.9.5 Constructor(other as LCMS2ContextMBS) 18444

109.9.7 Properties

109.9.8 Handle as Integer

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal handle value.
Notes: (Read and Write property)

109.9.9 Tag as Variant

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes: (Read and Write property)

109.10 class LCMS2CurveSegmentMBS

109.10.1 class LCMS2CurveSegmentMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a curve segment.
Notes: Segmented curves are formed by several segments.

109.10.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

109.10.3 Methods

109.10.4 Constructor(nGridPoints as Integer = 0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object and allocates sample points.
Notes: Pass number of sample points you want to fill.

109.10.5 Properties

109.10.6 nGridPoints as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of grid points if Type = 0.
Notes: (Read only property)

109.10.7 Type as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of curve segment.
Notes:

Parametric type, Type = 0 means sampled segment.
Negative values are reserved.
(Read and Write property)

109.10.8 x0 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x0 value of the domain.
Notes:

Domain; for x0 <x <= x1
(Read and Write property)

109.10.9 x1 as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x1 value of the domain.
Notes:

Domain; for x0 <x <= x1
(Read and Write property)

109.10.10 Params(index as Integer) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parameters if Type != 0.
Notes:

Index from 0 to 9.
(Read and Write computed property)

109.10.11 SampledPoints(index as Integer) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Array of floats if Type = 0.
Notes:

Index from 0 to nGridPoints-1.
(Read and Write computed property)

109.11 class LCMS2DateMBS

109.11.1 class LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a date.

109.11.2 Properties

109.11.3 Date as Date

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date as a Xojo date object.
Notes: (Read only property)

109.11.4 DateTime as DateTime

MBS Images Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date as a Xojo dateTime object.
Notes: (Read only property)

109.11.5 Day as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day value.
Notes: (Read only property)

109.11.6 Daylight as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether it is daylight saving time.
Notes: (Read only property)

109.11.7 DayOfWeek as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the week.
Notes: (Read only property)

109.11.8 DayOfYear as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The day of the year.
Notes: (Read only property)

109.11.9 Hour as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hour value.
Notes: (Read only property)

109.11.10 Minute as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minute value.
Notes: (Read only property)

109.11.11 Month as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month value.
Notes: (Read only property)

109.11.12 Second as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read only property)

109.11.13 Year as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The year value.
Notes: (Read only property)

109.12 class LCMS2DictionaryEntryMBS

109.12.1 class LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an entry of the dictionary.
Example:

```
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

109.12.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.4
- MBS Real Studio Plugins, version 12.4pr8
- LCMS 2.4

109.12.3 Methods

109.12.4 Constructor

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

109.12.5 NextEntry as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the next element in linked list.

109.12.6 Properties

109.12.7 DisplayName as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display name multi language unicode string.
Notes: (Read only property)

109.12.8 DisplayValue as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The display value multi language unicode string.
Notes: (Read only property)

109.12.9 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

109.12.10 Name as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name string.
Example:

```
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: (Read only property)

109.12.11 Parent as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference to the parent dictionary.
Notes: (Read only property)

109.12.12 Value as String

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value string.
Example:

```
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: (Read only property)

109.13 class LCMS2DictionaryMBS

109.13.1 class LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The LCMS 2 class for a dictionary of values.
Example:

```
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

Notes: This is a simple linked list used to store pairs Name-Value for the dictionary metatag, as described in http://www.color.org/ICCSpecRevision_25-02-10_dictType.pdf

109.13.2 Blog Entries

- MonkeyBread Software Releases the MBS Real Studio plug-ins in version 12.4
- MBS Real Studio Plugins, version 12.4pr8

109.13.3 Methods

109.13.4 AddEntry(Name as String, Value as String, DisplayName as LCMS2MLUMBS, DisplayValue as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data to a dictionary linked list object.
Notes:

No check for duplicity is made. Dictionary and Name parameters a required, rest is optional and nil may be used.

Name, Value: Strings. Value may be empty.
DisplayName, Display Value: Multilocalized Unicode objects. May be nil.
Returns true on success.

109.13.5 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty dictionary linked list object.

109.13.6 EntryList as LCMS2DictionaryEntryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first element in linked list.
Example:

```
// create new dictionary
dim d as new LCMS2DictionaryMBS(nil)
// add a value
call d.AddEntry "Hello", "World", nil, nil
// queries list of entries
dim e as LCMS2DictionaryEntryMBS = d.EntryList
// shows values
MsgBox e.Name+" "+e.Value
```

109.13.7 Properties

109.13.8 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes:

Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

109.13.9 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.14 class LCMS2GamutBoundaryDescriptionMBS

109.14.1 class LCMS2GamutBoundaryDescriptionMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class allows you to create gamut boundary, add points, compute and check points.
Example:

```
dim n1,n2 as Integer
dim h as new LCMS2GamutBoundaryDescriptionMBS

// Fill all Lab gamut as valid

for L as Integer = 0 to 100 step 10
for a as Integer = -128 to 128 step 5
for b as Integer = -128 to 128 step 5

dim lab as new LCMS2CIELabMBS(l, a, b)

if h.AddPoint(lab) then
n1 = n1 + 1
else
break
MsgBox "Point not in boundary!"
end if
next
next
next

// Complete boundaries
call h.Compute

// All points should be inside gamut

for L as Integer = 10 to 90 step 25
for a as Integer = -120 to 120 step 25
for b as Integer = -120 to 120 step 25

dim lab as new LCMS2CIELabMBS(l, a, b)

if h.CheckPoint(lab) then
n2 = n2 + 1
else
break
MsgBox "Point not in boundary!"
end if
next
```

next
next

MsgBox str(n1)+" points added and "+str(n2)+" other points found."

Notes: Please check LittleCMS API and tutorial documentation for more details.

109.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6

109.14.3 Methods

109.14.4 AddPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sample point for computing the gamut boundary descriptor.
Notes:

This function can be called as many times as known points. No memory or other resurces are wasted by adding new points. The gamut boundary descriptor cannot be checked until Compute() is called.

Lab: Lab value.
Returns true on success, false on error.

109.14.5 CheckPoint(Lab as LCMS2CIELabMBS) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whatever a Lab value is inside a given gamut boundary descriptor.
Notes:

Lab: Lab value.
Returns: True if point is inside gamut, false otherwise.

109.14.6 Compute(options as UInt32 = 0) as Boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the gamut boundary descriptor using all know points and interpolating any missing sector(s).
Notes:

Call this function after adding all know points with AddPoint() and before using CheckPoint().
Flags: reserved (unused). Set it to 0.
Returns true on success, false on error

109.14.7 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object.

109.14.8 Properties

109.14.9 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes:

Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

109.14.10 Handle as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

109.15 class LCMS2ICCDataMBS

109.15.1 class LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC data.
Notes: This is used for some tags where no dedicated class is available. This way you can modify the data directly in the memoryblock.

109.15.2 Properties

109.15.3 Data as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock with the data.
Notes: (Read only property)

109.15.4 Flags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes: (Read and Write property)

109.15.5 Size as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the data.
Notes: (Read and Write property)

109.16 class LCMS2ICCMeasurementConditionsMBS

109.16.1 class LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for ICC measurement conditions.

109.16.2 Methods

109.16.3 Constructor(Observer as UInt32 = 0, Backing as LCMS2CIEXYZMBS = nil, Geometry as UInt32 = 0, Flare as Double = 0.0, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

109.16.4 Properties

109.16.5 Backing as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Backing value.
Notes: (Read and Write property)

109.16.6 Flare as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flare value.
Notes:

Range 0..1.0.
(Read and Write property)

109.16.7 Geometry as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The geometry value.
Notes:

0=unknown, 1=45/0, 0/45 2=0d, d/0.
(Read and Write property)

109.16.8 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant type.
Notes: (Read and Write property)

109.16.9 Observer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The observer value.
Notes:

0 = unknown, 1=CIE 1931, 2=CIE 1964
(Read and Write property)

109.17 class LCMS2ICCViewingConditionsMBS

109.17.1 class LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a ICC viewing conditions tag stored in the profile.

109.17.2 Methods

109.17.3 Constructor(IlluminantXYZ as LCMS2CIEXYZMBS = nil, Backing as LCMS2CIEXYZMBS = nil, IlluminantType as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new ICC viewing conditions object.

109.17.4 Properties

109.17.5 IlluminantType as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

109.17.6 IlluminantXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The illuminant.
Notes: (Read and Write property)

109.17.7 SurroundXYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround.
Notes: (Read and Write property)

109.18 class LCMS2IT8MBS

109.18.1 class LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for IT8 handling.
Notes:

ANSI CGATS.17 is THE standard text file format for exchanging color measurement data. This standard text format (the ASCII version is by far the most common) is the format accepted by most color measurement and profiling applications.
It consists of a Preamble section containing originator information, keyword definitions, etc and then one or more data sections, each consisting of header and data subsections. The header subsection is where the BEGIN_DATA_FORMAT and END_DATA_FORMAT delimiters define the actual data types / units contained in the following tables. The data subsection contains the BEGIN_DATA and END_DATA delimiters which contain the actual color information in tabular form.
CGATS.17 text files can contain device (RGB, CMYK, etc), colorimetric (Lab, XYZ, etc), densitometric, spectral, naming and other information so it is a fairly comprehensive storage and exchange format.

109.18.3 Methods

109.18.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty CGATS.17 object.

109.18.5 DefineDblFormat(Formatter as string)

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the format string for float numbers.
Notes: It uses the "C" sprintf convention. The default format string is "% .10g".

109.18.6 EnumDataFormat as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with pointers to the column names in current table.
Notes: Return the column names in table.

109.18.7 EnumProperties as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all properties in current table.
Notes: Returns array of property name string.

109.18.8 EnumPropertyMulti(Prop as string) as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enumerates all the identifiers found in a multi-value property in current table.
Notes:

Prop: A string holding property name
Returns an array with property names.

109.18.9 FindDataFormat(Sample as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the position (column) of a given data sample name in current table.
Notes:

First column is 0 (SAMPLE_ID).
Returns column number if found, -1 if not found

109.18.10 GetData(Patch as string, Sample as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes:

Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell on success, "" on error.

109.18.11 GetDataAsDouble(Patch as string, Sample as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [Patch, Sample] as a double in current table.
Notes:

Patch: The intended patch name (row)
Sample: The intended sample name (column)

Returns the data for the intended cell interpreted as Double on success, 0 on error.

109.18.12 GetDataRowCol(Row as Integer, Col as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a literal string in current table.
Notes:

This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.

Returns the data for the intended cell on success, "" on error.

109.18.13 GetDataRowColAsDouble(Row as Integer, Col as Integer) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a cell [row, col] as a double in current table.
Notes:

This function is fast since it has not to search columns or rows by name.
row, col: The position of the cell.

Returns the data for the intended cell interpreted as Double on success, 0 on error.

109.18.14 GetPatchByName(Patch as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Lookups patch index by name.

109.18.15 GetPatchName(nPatch as Integer) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills buffer with the contents of SAMPLE_ID column for the set given in nPatch.
Notes:

That usually corresponds to patch name. Buffer may be NULL to get the internal memory block used by the CGATS.17 object. If specified, buffer gets a copy of such block. In this case it should have space for at least 1024 characters.

nPatch: set number to retrieve name

Returns the patch name. "" if error.

109.18.16 GetProperty(Prop as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a literal string in current table.
Notes:

Prop: A string holding property name.

Returns the data for the intended property on success, "" on error.

109.18.17 GetPropertyAsDouble(Prop as string) as Double

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a property as a double in current table.
Notes:

Prop: A string holding property name.

Returns the data for the intended property interpreted as Double on success, 0 on error.

109.18.18 GetPropertyMulti(Key as string, SubKey as string) as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries property.

109.18.19 GetSheetType as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the type of the IT8 object.

109.18.20 HeaderIsDictionary(HeaderName as string) as boolean

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a header entry has subkeys, so it has a dictionary with keys and values.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

109.18.21 HeaderList as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of header properties.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

109.18.22 HeadersAsDictionary as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header keys and values as dictionary.
Notes:

This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

109.18.23 HeaderSubDictionary(HeaderName as string) as dictionary

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the dictionary with subkeys for a given header entry.
Notes:

This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.
Returns nil on any error.

109.18.24 HeaderValue(HeaderName as string) as string

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the header value for the given header.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

109.18.25 LoadFromFile(context as LCMS2ContextMBS, file as folderitem) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function allocates a CGATS.17 object and fills it with the contents of file.
Notes:

Used for reading existing CGATS files.

Context: The context value.
File: The CGATS.17 file name to read/parse

Returns a CGATS.17 object on success, nil on error.

109.18.26 LoadFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a memory block.
Notes: Returns nil on failure.

109.18.27 LoadFromString(context as LCMS2ContextMBS, data as string) as LCMS2IT8MBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as LoadFromFile, but the IT8/CGATS.13 stream is read from a string.
Notes: Returns nil on failure.

109.18.28 SaveToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a file.
Notes:

File: Destination file. Existing file will be overwritten if possible.

Returns true on success, false on error

109.18.29 SaveToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

109.18.30 SaveToString as string

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function saves a CGATS.17 object to a contiguous memory block.

109.18.31 SetComment(comment as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function is intended to provide a way automated IT8 creators can embed comments into the file.
Notes:

Comments have no effect, and its only purpose is to document any of the file meaning. On this function the calling order is important; as successive calls to SetComment do embed comments in the same order the

function is being called.

Comment: The comment to inserted

Returns true on success, false on error.

109.18.32 SetData(Patch as string, Sample as string, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a literal string (uncooked string) in current table.
Notes:

Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a literal

Returns true on success, false on error.

109.18.33 SetDataAsDouble(Patch as string, Sample as string, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes:

Patch: The intended patch name (row)
Sample: The intended sample name (column)
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

109.18.34 SetDataFormat(n as Integer, Sample as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets column names in current table.
Notes:

First column is 0 (SAMPLE_ID). Special property NUMBER_OF_FIELDS must be set before calling this function.

n: Column to set name
Sample: Name of data

Returns true on success, false on error.

109.18.35 SetDataRowCol(Row as Integer, Col as Integer, Val as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [row, col] as a literal string in current table.
Notes:

This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a literal string.

Returns true on success, false on error.

109.18.36 SetDataRowColAsDouble(Row as Integer, Col as Integer, Val as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a cell [Patch, Sample] as a double in current table.
Notes:

This function is fast since it has not to search columns or rows by name.

row, col: The position of the cell.
Val: The value to be set, as a cmsFloat64Number

Returns true on success, false on error

109.18.37 SetIndexColumn(Sample as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the index column.

109.18.38 SetPropertyDouble(Prop as string, Value as Double) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a double in current table.
Notes:

Prop: A string holding property name.
Value: The data for the intended property as Double.

Returns true on success, false on error.

109.18.39 SetPropertyHex(Prop as string, Value as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as an hexadecimal constant (appends 0x) in current table.
Notes:

Prop: A string holding property name.
Value: The value to be set (32 bits max)

Returns true on success, false on error.

109.18.40 SetPropertyMulti(Key as string, SubKey as string, Value as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new sub-property to the property Key.
Notes:

Value of buffer is interpreted literally.

Key: A string holding property name.
SubKey: A string holding the sub-property name.
Buffer: A string holding the uncooked value of sub-property.

Returns true on success, false on error.

109.18.41 SetPropertyString(Prop as string, Value as String) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property as a literal string in current table.
Notes:

The string is enclosed in quotes "".
Returns true on success, false on error.

109.18.42 SetPropertyUncooked(Prop as string, Value as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a property with no interpretation in current table.
Notes:

No quotes "" are added. No checking is performed, and it is up to the programmer to make sure the string is valid.
Special prefixes:
0b: Binary
0x : Hexadecimal

Parameters:
cProp: A string holding property name.
Buffer: A string holding the uncooked value to place in the CGATS file.

Returns true on success, false on error.

109.18.43 SetSheetType(type as string) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function sets the type of a CGATS.17 object to the new type.
Notes: Returns true on success, false on error.

109.18.44 SetTable(nTable as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function positions the IT8 object in a given table, identified by its position.
Notes:

Setting nTable to Table Count + 1 does allocate a new empty table.
Returns the current table number on success, -1 on error.

109.18.45 SetTableByLabel(Set as string, Field as string, ExpectedType as string) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets table by label.

109.18.46 TableCount as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the number of tables found in the current CGATS object.
Notes: Returns the number of tables on success, 0 on error.

109.18.47 ValidKeywords as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid keywords.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

109.18.48 ValidSampleIDs as string()

MBS Images Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns list of valid sample IDs.
Notes: This is a helper method in our plugin. May stop working if the internals of LCMS2 change in an update.

109.18.49 Properties

109.18.50 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes:

Error handling uses it, so you can see which part of your application failed.
(Read and Write property)

109.18.51 Handle as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.19 class LCMS2JChMBS

109.19.1 class LCMS2JChMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a JCh value.

109.19.2 Methods

109.19.3 Clone as LCMS2JChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of this object.

109.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new JCh value.
See also:

- 109.19.5 Constructor(other as LCMS2JChMBS) 18476

109.19.5 Constructor(other as LCMS2JChMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes new JCh color object with values from existing object.
See also:

- 109.19.4 Constructor(J as Double=0.0, C as Double=0.0, h as Double=0.0) 18476

109.19.6 Properties

109.19.7 C as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The C value.
Notes: (Read and Write property)

109.19.8 h as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The h value.
Notes: (Read and Write property)

109.19.9 J as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The J value.
Notes: (Read and Write property)

109.20 class LCMS2Mat3MBS

109.20.1 class LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a 3 by 3 matrix.

109.20.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

109.20.3 Methods

109.20.4 Clone as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the matrix.

109.20.5 Constructor

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix.
See also:

- 109.20.6 Constructor(other as LCMS2Mat3MBS) 18478
- 109.20.7 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 18479

109.20.6 Constructor(other as LCMS2Mat3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the given matrix.
See also:

- 109.20.5 Constructor 18478
- 109.20.7 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS) 18479

109.20.7 Constructor(v0 as LCMS2Vec3MBS, v1 as LCMS2Vec3MBS, v2 as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new matrix with the given three vectors.
See also:

- 109.20.5 Constructor 18478
- 109.20.6 Constructor(other as LCMS2Mat3MBS) 18478

109.20.8 Properties

109.20.9 V0 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for first vector.
Notes: (Read and Write property)

109.20.10 V1 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for second vector.
Notes: (Read and Write property)

109.20.11 V2 as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Property for third vector.
Notes: (Read and Write property)

109.20.12 value(index as UInt32) as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the vector by index.
Notes:

Index from 0 to 2.
(Read and Write computed property)

109.21 module LCMS2MBS

109.21.1 module LCMS2MBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The central LCMS module with all the global methods and constants.

109.21.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 20.3pr2
- MBS Xojo Plugins, version 20.3pr1
- ICC color profiling

109.21.3 Methods

109.21.4 AdaptationMatrix(ConeMatrix as LCMS2Mat3MBS, FromIll as LCMS2CIEXYZM ToIll as LCMS2CIEXYZMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates adaptation matrix.
Notes:

Returns the final chromatic adaptation from illuminant FromIll to Illuminant ToIll.
The cone matrix can be specified in ConeMatrix. If nil, Bradford is assumed.

ConeMatrix: the cone matrix.
FromIll: Source illuminant.
ToIll: Destination illuminant.

Returns matrix on success or nil on failure.

109.21.5 AdaptToIlluminant(SourceWhitePt as LCMS2CIEXYZMBS, Illuminant as LCMS2CIEXYZMBS, Value as LCMS2CIEXYZMBS) as LCMS2CIEXYZM

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Chromatic adaptation.
Notes: Adapts a color to a given illuminant. Original color is expected to have a SourceWhitePt white point.

109.21.6 BFDdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes the dE between two Lab values.

109.21.7 BIT15_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Bit15 flag

109.21.8 BuildRGB2XYZtransferMatrix(WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS) as LCMS2Mat3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds RGB to XYZ transfer matrix.
Notes:

Build a White point, primary chromas transfer matrix from RGB to CIE XYZ.
This is just an approximation, I am not handling all the non-linear aspects of the RGB to XYZ process, and assumming that the gamma correction has transitive property in the tranformation chain.

The alghoritm:

- First I build the absolute conversion matrix using primaries in XYZ. This matrix is next inverted
- Then I eval the source white point across this matrix obtaining the coeficients of the transformation
- Then, I apply these coeficients to the original matrix

WhitePoint: The white point.
Primaries: The primaries.
Returns matrix on success or nil on failure.

109.21.9 BYTES_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: bytes per sample

109.21.10 ChannelsOf(ColorSpaceSignature as Integer) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels in a color space signature.
Example:

MsgBox "RGB has "+str(LCMS2MBS.ChannelsOf(LCMS2MBS.kcmsSigRgbData))+" channels"

109.21.11 CHANNELS_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Channels (Samples per pixel)

109.21.12 CIE2000DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, Kl as Double = 1.0, Kc as Double = 1.0, Kh as Double = 1.0) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Delta-E 2000.
Notes:

Delta-E 2000 is the first major revision of the dE94 equation. Unlike dE94, which assumes that L* correctly reflects the perceived differences in lightness, dE2000 varies the weighting of L* depending on where in the lightness range the color falls. dE2000 is still under consideration and does not seem to be widely supported in graphics arts applications.

The weightings KL, KC and KH can be modified to reflect the relative importance of lightness, chroma and hue in different industrial applications

109.21.13 CIE94DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CIE 94 delta e value.
Notes:

A technical committee of the CIE (TC1-29) published an equation in 1995 called CIE94. The equation is similar to CMC but the weighting functions are largely based on RIT/DuPont tolerance data derived from automotive paint experiments where sample surfaces are smooth.
It also has ratios, labeled kL (lightness) and Kc (chroma) and the commercial factor (cf) but these tend to be preset in software and are not often exposed for the user (as it is the case in Little CMS).

109.21.14 CMCdeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS, l as Double, c as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the CMC delta E.
Notes:

In 1984 the CMC (Colour Measurement Committee of the Society of Dyes and Colourists of Great Britain) developed and adopted an equation based on LCH numbers. Intended for the textiles industry, CMC l:c allows the setting of lightness (l) and chroma (c) factors. As the eye is more sensitive to chroma, the default ratio for l:c is 2:1 allowing for 2x the difference in lightness than chroma (numbers). There is also a 'commercial factor' (cf) which allows an overall varying of the size of the tolerance region according to accuracy requirements. A cf=1.0 means that a delta-E CMC value <1.0 is acceptable.
CMC l:c is designed to be used with D65 and the CIE Supplementary Observer. Commonly-used values for l:c are 2:1 for acceptability and 1:1 for the threshold of imperceptibility.

109.21.15 ColorSpaceICCtoLCMS(ICCColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from ICC color space notation to Little CMS color space notation.

109.21.16 ColorSpaceLCMStoICC(LCMSColorSpace as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts from Little CMS color space notation to ICC color space notation.

109.21.17 COLORSPACE_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Pixeltype.

109.21.18 CreateBitmapFromPicture(p as picture, bits as Integer = 8) as LCMS2BitmapMB

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new bitmap based on the pictures.
Notes: Bits can be 8, 16 or 32 bit integers.

109.21.19 D50_xyY as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as xyY color.

109.21.20 D50_XYZ as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns D50 white point as XYZ color.

109.21.21 DeltaE(Lab1 as LCMS2CIELabMBS, Lab2 as LCMS2CIELabMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates delta E.
Notes:

You don't have to spend too long in the color management world before you come across the term Delta-E. As with many things color, it seems simple to understand at first, yet the closer you look, the more elusive it gets. Delta-E (dE) is a single number that represents the 'distance' between two colors. The idea is that a dE of 1.0 is the smallest color difference the human eye can see. So any dE less than 1.0 is imperceptible and it stands to reason that any dE greater than 1.0 is noticeable. Unfortunately it's not that simple. Some color differences greater than 1 are perfectly acceptable, maybe even unnoticeable. Also, the same dE color difference between two yellows and two blues may not look like the same difference to the eye and there are other places where it can fall down. It's perfectly understandable that we would want to have a system to

show errors. After all, we've spent the money on the instruments; shouldn't we get numbers from them? Delta-E numbers can be used for:

- how far off is a print or proof from the original
- how much has a device drifted
- how effective is a particular profile for printing or proofing
- removes subjectivity (as much as possible)

These functions does compute the difference between two Lab colors, using several difference spaces.

The L*a*b* color space was devised in 1976 and, at the same time delta-E 1976 (dE76) came into being. If you can imagine attaching a string to a color point in 3D Lab space, dE76 describes the sphere that is described by all the possible directions you could pull the string. If you hear people speak of just plain 'delta-E' they are probably referring to dE76. It is also known as dE-Lab and dE- ab. One problem with dE76 is that Lab itself is not 'perceptually uniform' as its creators had intended. So different amounts of visual color shift in different color areas of Lab might have the same dE76 number. Conversely, the same amount of color shift might result in different dE76 values. Another issue is that the eye is most sensitive to hue differences, then chroma and finally lightness and dE76 does not take this into account.

109.21.22 DITHER_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: dither flag

109.21.23 DOSWAP_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Do swap? ie, BGR, KYMC

109.21.24 EnableFastFloatExtensions

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables fast float extension for Little CMS 2.10.
Notes: Originally this is GPLv3 licensed, but MBS bought a commercial license for all our plugins, so you

don't need to worry about the license.

109.21.25 EncodedCMMversion as Integer

MBS Images Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries version of LCMS library.
Example:

```
dim e as Integer = LCMS2MBS.EncodedCMMversion
MsgBox str(e \1000)+"."+str((e\10) mod 100)+"."+str(e mod 10)
```

Notes: Returns 2070 for version 2.7.

109.21.26 ENDIAN16_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: swap 16 bps endianess?

109.21.27 EXTRA_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Extra samples

109.21.28 FLAVOR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla).

109.21.29 Float2LabEncoded(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a Lab value.
Notes: Returns array of 3 encoded UInt16 values.

109.21.30 Float2LabEncodedV2(c as LCMS2CIELabMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a Lab value to ICC v2 convention.
Notes: Returns array of 3 encoded UInt16 values.

109.21.31 Float2XYZEncoded(c as LCMS2CIEXYZMBS) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a XYZ value to ICC convention.
Notes: Returns three UInt16 values as Integer array.

109.21.32 FLOAT_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Floating point – With this flag we can differentiate 16 bits as float and as int.

109.21.33 GetAlarmCodes as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the current global codes used to mark out-out-gamut on Proofing transforms.
Notes:

Values are meant to be encoded in 16 bits.
Returns array with 16 integer values.
See also:

- 109.21.34 GetAlarmCodes(context as LCMS2ContextMBS) as Integer() 18488

109.21.34 GetAlarmCodes(context as LCMS2ContextMBS) as Integer()

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the current global codes used to mark out-out-gamut on Proofing transforms.
Notes:

Values are meant to be encoded in 16 bits.
Returns array with 16 integer values.
See also:

- 109.21.33 GetAlarmCodes as Integer() 18488

109.21.35 GetSupportedIntentCodes as UInt32()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with id-numbers for all supported intents.
Example:

```
dim names() as string = LCMS2MBS.GetSupportedIntentDescriptions
dim codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

dim u as Integer = UBound(names)
for i as Integer = 0 to u
MsgBox str(codes(i))+": "+names(i)
next
```

Notes: Little CMS plug-in architecture allows to implement user-defined intents; use this function to get info about such extended functionality.
See also:

- 109.21.36 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32() 18489

109.21.36 GetSupportedIntentCodes(context as LCMS2ContextMBS) as UInt32()

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with id-numbers for all supported intents.
Example:

```
dim names() as string = LCMS2MBS.GetSupportedIntentDescriptions
dim codes() as UInt32 = LCMS2MBS.GetSupportedIntentCodes

dim u as Integer = UBound(names)
for i as Integer = 0 to u
MsgBox str(codes(i))+": "+names(i)
next
```

Notes: Little CMS plug-in architecture allows to implement user-defined intents; use this function to get info about such extended functionality.
See also:

- 109.21.35 GetSupportedIntentCodes as UInt32() 18489

109.21.37 GetSupportedIntentDescriptions as string()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an array with descriptions for all supported intents.
Example:

MsgBox Join(LCMS2MBS.GetSupportedIntentDescriptions, EndOfLine)

Notes: Little CMS plug-in architecture allows to implement user-defined intents; use this function to get info about such extended functionality.

109.21.38 GridPoints(n as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates grid points.
Example:

MsgBox str(LCMS2MBS.GridPoints(2))

109.21.39 kcmsD50X as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X value of D50 XYZ normalized to Y=1.0.

109.21.40 kcmsD50Y as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y value of D50 XYZ normalized to Y=1.0.

109.21.41 kcmsD50Z as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Z value of D50 XYZ normalized to Y=1.0.

109.21.42 kcmsPERCEPTUAL_BLACK_X as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: X of V4 perceptual black.

109.21.43 kcmsPERCEPTUAL_BLACK_Y as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Y of V4 perceptual black.

109.21.44 kcmsPERCEPTUAL_BLACK_Z as Double

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Z of V4 perceptual black.

109.21.45 Lab2LCh(p as LCMS2CIELabMBS) as LCMS2CIELChMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts lab color to LCh value.

109.21.46 Lab2XYZ(p as LCMS2CIELabMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts color to XYZ value.
Notes: Setting WhitePoint to NULL forces D50 as white point.

109.21.47 LabEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Lab value, encoded on ICC v4 convention to a lab value.
Notes:

w0, w1 and w2: Array of 3 UInt16 holding the encoded values.
Returns lab color.

109.21.48 LabEncoded2FloatV2(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Lab value, encoded on ICC v2 convention to a Lab value.
Notes: w0, w1 and w2: 3 UInt16 numbers holding the encoded values.

109.21.49 LCh2Lab(p as LCMS2CIELChMBS) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from LCh to Lab.

109.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
See also:

- 109.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS 18492
- 109.21.52 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS 18493

109.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
See also:

- 109.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS 18492
- 109.21.52 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS 18493

109.21.52 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer, data as memoryblock) as LCMS2BitmapMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a bitmap object with given size and color space.
Notes:

In this variant, you pass the memoryblock with right size.
Passing memoryblock of wrong size can lead into crashs.
See also:

- 109.21.50 NewBitmap(width as Integer,height as Integer, colorspace as Integer) as LCMS2BitmapMBS 18492
- 109.21.51 NewBitmap(width as Integer,height as Integer, colorspace as Integer, RowBytes as Integer) as LCMS2BitmapMBS 18492

109.21.53 OPTIMIZED_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Optimized – previous optimization already returns the final 8-bit value.

109.21.54 PixelFormat(FloatingPoint as boolean, Optimized as boolean, ColorSpace as UInt32, MinIsWhite as boolean, Planar as boolean, EndianSwap as boolean, DoSwap as boolean, ExtraSamples as UInt32, Channels as UInt32, BytesPerSample as UInt32, SwapFirst as boolean) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Utility function to create a pixel format.
Notes:

Format of pixel is defined by one UInt32, using bit fields as follows

A O TTTTT U Y F P X S EEE CCCC BBB

FloatingPoint: With this flag we can differentiate 16 bits as float and as int
Optimized: Previous optimization already returns the final 8-bit value
ColorSpace: Pixeltype
MinIsWhite: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)
Planar: Planar? 0=Chunky, 1=Planar
EndianSwap: swap 16 bps endianess?
DoSwap: Do swap? ie, BGR, KYMC
ExtraSamples: Extra samples
Channels: Channels (Samples per pixel)
BytesPerSample: bytes per sample
SwapFirst: Swap first - changes ABGR to BGRA and KCMY to CMYK

109.21.55 PLANAR_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Planar? 0=Chunky, 1=Planar

109.21.56 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets adaptation state for absolute colorimetric intent, on all but CreateExtendedTransform.
Notes:

Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 109.21.57 SetAdaptationState(d as Double) as Double

109.21.57 SetAdaptationState(d as Double) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets adaptation state for absolute colorimetric intent, on all but CreateExtendedTransform.
Notes:

Little CMS can handle incomplete adaptation states.

d: Degree on adaptation 0=Not adapted, 1=Complete adaptation, in-between=Partial adaptation. Use negative values to return the global state without changing it.

Returns previous global adaptation state.
See also:

- 109.21.56 SetAdaptationState(context as LCMS2ContextMBS, d as Double) as Double 18494

109.21.58 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global codes used to mark out-out-gamut on Proofing transforms.
Notes:

Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 109.21.59 SetAlarmCodes(values() as Integer) 18495

109.21.59 SetAlarmCodes(values() as Integer)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the global codes used to mark out-out-gamut on Proofing transforms.
Notes:

Values are meant to be encoded in 16 bits.
AlarmCodes: Array of 16 codes. All 16 values must be specified, set to zero for unused channels.
See also:

- 109.21.58 SetAlarmCodes(context as LCMS2ContextMBS, values() as Integer) 18495

109.21.60 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows user to set any specific logger.
Notes:

Each time this function is called, the previous logger is replaced. Calling this functin with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.
See also:

- 109.21.61 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS) 18496

109.21.61 SetLogErrorHandler(handler as LCMS2ErrorHandlerMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows user to set any specific logger.
Notes:

Each time this function is called, the previous logger is replaced. Calling this functin with NULL as parameter, does reset the logger to the default Little CMS logger. The default Little CMS logger does nothing.

LCMS2ErrorHandlerMBS is an Interface. You add it to the interface of your window/thread/class. Than you get a method "Error(context as LCMS2ContextMBS, ErrorCode as UInt32, Text as string)" which is called to log error messages. The context parameter is the object you pass for reference in the various context parameters to LCMS2 functions.
See also:

- 109.21.60 SetLogErrorHandler(Context as LCMS2ContextMBS, handler as LCMS2ErrorHandlerMBS) 18496

109.21.62 SWAPFIRST_SH(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts the value so you can bitwise or it with other values to get a pixel format.
Notes: Swap first - changes ABGR to BGRA and KCMY to CMYK

109.21.63 TagInteger(tag as string) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts tag integer to string.
Example:

```
MsgBox hex(LCMS2MBS.TagInteger("devs"))+" "+LCMS2MBS.TagString(& h64657673)
```

109.21.64 TagString(tag as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts tag string to integer.
Example:

```
MsgBox hex(LCMS2MBS.TagInteger("devs"))+" "+LCMS2MBS.TagString(& h64657673)
```

109.21.65 TempFromWhitePoint(TempK as LCMS2CIExyYMBS) as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Correlates a black body temperature in K from given chromaticity.
Example:

```
dim c as new LCMS2CIExyYMBS

c.x = 0.32
c.y = 0.32
c.YY = 1.0

MsgBox str(LCMS2MBS.TempFromWhitePoint(c))
```

Notes: Returns temperature. Or zero on any error.

109.21.66 T_BIT15(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Bit15 flag

109.21.67 T_BYTES(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: bytes per sample

109.21.68 T_CHANNELS(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Channels (Samples per pixel)

109.21.69 T_COLORSPACE(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Pixeltype

109.21.70 T_DITHER(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: dither flag

109.21.71 T_DOSWAP(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Do swap? ie, BGR, KYMC

109.21.72 T_ENDIAN16(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: swap 16 bps endianess?

109.21.73 T_EXTRA(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Extra samples

109.21.74 T_FLAVOR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Flavor 0=MinIsBlack(Chocolate) 1=MinIsWhite(Vanilla)

109.21.75 T_FLOAT(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Floating point – With this flag we can differentiate 16 bits as float and as int

109.21.76 T_OPTIMIZED(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Optimized – previous optimization already returns the final 8-bit value

109.21.77 T_PLANAR(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Planar? 0=Chunky, 1=Planar

109.21.78 T_SWAPFIRST(n as UInt32) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unpacks a value from a bitwise pixel format.
Notes: Swap first - changes ABGR to BGRA and KCMY to CMYK.

109.21.79 Version as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns version number of LCMS2.
Example:

```
MsgBox LCMS2MBS.Version
```

109.21.80 WhitePointFromTemp(TempK as Double) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Correlates a black body chromaticity from given temperature in K.
Example:

```
dim c as LCMS2CIExyYMBS = LCMS2MBS.WhitePointFromTemp(6500)

MsgBox str(c.x)+" "+str(c.y)+" "+str(c.yy)
```

Notes:

Valid range is 4000K-25000K.
TempK: Temperature in oK
Returns white point or nil in case of error.

109.21.81 xyY2XYZ(p as LCMS2CIExyYMBS) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from xyY to XYZ.

109.21.82 XYZ2Lab(p as LCMS2CIEXYZMBS, whitepoint as LCMS2CIEXYZMBS = nil) as LCMS2CIELabMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts XYZ color to Lab.
Notes: Setting WhitePoint to nil forces D50 as white point.

109.21.83 XYZ2xyY(p as LCMS2CIEXYZMBS) as LCMS2CIExyYMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colorimetric space conversion from XYZ to xyY.

109.21.84 XYZEncoded2Float(w0 as UInt16, w1 as UInt16, w2 as UInt16) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a XYZ value, encoded on ICC convention to a LCMS2CIEXYZMBS value.
Notes:

w0,w1 and w2: Array of 3 UInt16 values holding the encoded valkues.
Returns XYZ color on success or nil on failure.

109.21.85 Constants

109.21.86 kAVG_SURROUND = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the surround constants for viewing conditions.

109.21.87 kcmsEmbeddedProfileFalse = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the header flag constants.

109.21.88 kcmsEmbeddedProfileTrue = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the header flag constants.

109.21.89 kcmsERROR_ALREADY_DEFINED = 10

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.90 kcmsERROR_BAD_SIGNATURE = 11

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.91 kcmsERROR_COLORSPACE_CHECK = 9

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.92 kcmsERROR_CORRUPTION_DETECTED = 12

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.93 kcmsERROR_FILE = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.94 kcmsERROR_INTERNAL = 3

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.95 kcmsERROR_NOT_SUITABLE = 13

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.96 kcmsERROR_NULL = 4

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.97 kcmsERROR_RANGE = 2

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.98 kcmsERROR_READ = 5

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.99 kcmsERROR_SEEK = 6

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.100 kcmsERROR_UNDEFINED = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.101 kcmsERROR_UNKNOWN_EXTENSION = 8

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.102 kcmsERROR_WRITE = 7

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the error constants.

109.21.103 kcmsFLAGS_8BITS_DEVICELINK = 8

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Create 8 bits devicelinks

109.21.104 kcmsFLAGS_BLACKPOINTCOMPENSATION = & h00002000

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Black point compensation.

109.21.105 kcmsFLAGS_CLUT_POST_LINEARIZATION = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Create postlinearization tables if possible

109.21.106 kcmsFLAGS_CLUT_PRE_LINEARIZATION = 16

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Create prelinearization tables if possible

109.21.107 kcmsFLAGS_COPY_ALPHA = & h04000000

MBS Images Plugin, Plugin Version: 16.4.

Function: One of the flag constants.
Notes: Whether to copy alpha.

109.21.108 kcmsFLAGS_FORCE_CLUT = 2

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Force CLUT optimization

109.21.109 kcmsFLAGS_GAMUTCHECK = & h00001000

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Out of Gamut alarm

109.21.110 kcmsFLAGS_GUESSDEVICECLASS = 32

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Guess device class (for transform2devicelink)

109.21.111 kcmsFLAGS_HIGHRESPRECALC = & h00000400

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Use more memory to give better accurancy

109.21.112 kcmsFLAGS_KEEP_SEQUENCE = & h00000080

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Keep profile sequence for devicelink creation

109.21.113 kcmsFLAGS_LOWRESPRECALC = & h00000800

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Use less memory to minimize resouces

109.21.114 kcmsFLAGS_NOCACHE = 64

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Inhibit 1-pixel cache

109.21.115 kcmsFLAGS_NODEFAULTRESOURCEDEF = & h01000000

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.

109.21.116 kcmsFLAGS_NONEGATIVES = & h00008000

MBS Images Plugin, Plugin Version: 15.0.

Function: One of the flag constants.
Notes: Prevent negative numbers in floating point transforms

109.21.117 kcmsFLAGS_NOOPTIMIZE = & h00000100

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Inhibit optimizations

109.21.118 kcmsFLAGS_NOWHITEONWHITEFIXUP = 4

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Don't fix scum dot

109.21.119 kcmsFLAGS_NULLTRANSFORM = & h00000200

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Don't transform anyway

109.21.120 kcmsFLAGS_SOFTPROOFING = & h00004000

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Do softproofing

109.21.121 kcmsFREQUENCE_UNITS_LINES_CM = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the screening flag constants.

109.21.122 kcmsFREQUENCE_UNITS_LINES_INCH = 2

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the screening flag constants.

109.21.123 kcmsGlossy = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the device attribute constants.

109.21.124 kcmsILLUMINANT_TYPE_A = 6

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: A

109.21.125 kcmsILLUMINANT_TYPE_D50 = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: D50

109.21.126 kcmsILLUMINANT_TYPE_D55 = 5

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: D55

109.21.127 kcmsILLUMINANT_TYPE_D65 = 2

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: D65

109.21.128 kcmsILLUMINANT_TYPE_D93 = 3

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: D93

109.21.129 kcmsILLUMINANT_TYPE_E = 7

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: E

109.21.130 kcmsILLUMINANT_TYPE_F2 = 4

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: F2

109.21.131 kcmsILLUMINANT_TYPE_F8 = 8

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: F8

109.21.132 kcmsILLUMINANT_TYPE_UNKNOWN = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the illuminant constants.
Notes: Unknown

109.21.133 kcmsMagicNumber = & h61637370

MBS Images Plugin, Plugin Version: 11.3.

Function: Magic number to identify an ICC profile.

109.21.134 kcmsMatte = 2

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the device attribute constants.

109.21.135 kcmsMAXCHANNELS = 16

MBS Images Plugin, Plugin Version: 11.3.

Function: Maximum number of channels in ICC profiles.

109.21.136 kcmsPRINTER_DEFAULT_SCREENS = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the screening flag constants.

109.21.137 kcmsReflective = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the device attribute constants.

109.21.138 kcmsSig10colorData = & h41434C52

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the color space type constants.

109.22 class LCMS2MLUMBS

109.22.1 class LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a multi localized unicode string.
Notes:

MLU funtions are the low-level interface to access the localization features of V4 ICC profiles. Little CMS does offer a high-level interface for easy operation. You may want, however, handle those objects by yourself.

Obtaining localized info from profiles
In versions prior to 4.0, the ICC format defined a required tag 'desc' which stored ASCII, Unicode, and Script Code versions of the profile description for display purposes. However, this structure allowed the profile to be localized for one language only through Unicode or Script Code. Profile vendors had to ship many localized versions to different countries. It also created problems when a document with localized profiles embedded in it was shipped to a system using a different language. With the adoption of V4 spec as basis, Little CMS solves all those issues honoring a new tag type: 'mluc' and multi localized Unicode. There is a full part of the API to deal with this stuff, but if you don't care about the details and all you want is to display the right string, Little CMS provides a simplified interface for that purpose.
Note that ASCII is strictly 7 bits, so you need to use wide chars if you want to preserve the information in the profile. The localization trick is done by using the lenguage and country codes, which you are supposed to supply. Those are two or three ASCII letters. A list of codes may be found here:

Language Code:
http://lcweb.loc.gov/standards/iso639-2/iso639jac.html

Country Codes:
http://www.iso.ch/iso/en/prods-services/iso3166ma/index.html

In practice, "en" for "english" and "US" for "united states" are implemented in most profiles. It is Ok to set a language and a country even if the profile does not implement such specific language and country. Little CMS will search for a proper match.
If you don't care and want just to take the first string in the profile, you can use:

For the language:
kcmsNoLanguage

For the country:
kcmsNoCountry

This will force to get the very first string, without any searching. A note of warning on that: you will get an string, but the language would be any, and probably that is not what you want. It is better to specify

a default for language, and let LittleCMS to choose any other country (or language!) if what you ask for is not available.

109.22.2 Methods

109.22.3 Constructor(context as LCMS2ContextMBS, items as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty multilocalized unicode object.
Example:

```
dim c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )
```

109.22.4 getASCII(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an ASCII (7 bit) entry for the given Language and country.
Example:

```
dim c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MsgBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine
+ "any: "+c.getASCII("", "")
```

Notes:

Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country.

Returns the string.

109.22.5 getTranslation(LanguageCode as string, CountryCode as string, byref ObtainedLanguageCode as string, byref ObtainedCountryCode as string) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Obtains the translation rule for given multilocalized unicode object.
Notes:

Language Code: 3 chars describing the language.
CountryCode: 3 chars describing the country
ObtainedLanguage: 3 chars to get the language translation.
ObtainedCode: 3 chars to get the country translation.

Returns true on success, false on error

109.22.6 getUnicode(LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an unicode (16 bit) entry for the given Language and country.
Notes:

Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country

Returns the string value.

109.22.7 setASCII(LanguageCode as string, CountryCode as string, ASCIIString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills an ASCII (7 bit) entry for the given Language and country.
Example:

```
dim c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MsgBox "en: "+c.getASCII("en", "US") + EndOfLine + "de: "+c.getASCII("de", "DE") + EndOfLine
+ "any: "+c.getASCII("", "")
```

Notes:

Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country
ASCIIString: String to add.

Returns true on success, false on error.

109.22.8 setUnicode(LanguageCode as string, CountryCode as string, UnicodeString as string) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills a UNICODE wide char (16 bit) entry for the given Language and country.
Example:

```
dim c as new LCMS2MLUMBS(nil, 3)
call c.setUnicode("de", "DE", "Kätzchen" )
dim u as string = c.getUnicode("de", "DE")
MsgBox u
```

Notes:

Language Code: 3 chars describing the language
CountryCode: 3 chars describing the country
WideString: String to add.

Returns true on success, false on error.

109.22.9 translationsCodes(index as Integer, byref LanguageCode as string, byref CountryCode as string) as boolean

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries language and country code for the given index.
Example:

```
dim c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )
```

```
dim u as Integer = c.TranslationsCount-1
for i as Integer = 0 to u
dim LanguageCode as string
dim CountryCode as string

if c.translationsCodes(i, LanguageCode, CountryCode) then
MsgBox LanguageCode+" "+CountryCode
end if
next
```

Notes: Index is from 0 to TranslationsCount-1.

109.22.10 Properties

109.22.11 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.22.12 TranslationsCount as Integer

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries number of stored translations.
Example:

```
dim c as new LCMS2MLUMBS(nil, 3)

call c.setASCII("en", "US", "Hello" )
call c.setASCII("de", "DE", "Hallo" )

MsgBox str(c.TranslationsCount)+" translations"
```

Notes: (Read only property)

109.22.13 Constants

109.22.14 kNoCountry = ""

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the possible country constants.
Notes: Any country.

109.22.15 kNoLanguage = ""

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the possible language constants.
Notes: Any language.

109.23 class LCMS2NamedColorListMBS

109.23.1 class LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specialized dictionaries for dealing with named color profiles.

109.23.2 Methods

109.23.3 Append(name as string) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes:

If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 109.23.4 Append(name as string, PCS() as Integer) as Boolean 18602
- 109.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean 18603

109.23.4 Append(name as string, PCS() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes:

If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 109.23.3 Append(name as string) as Boolean 18602
- 109.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean 18603

109.23.5 Append(name as string, PCS() as Integer, Colorant() as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a new spot color to the list.
Notes:

If the number of elements in the list exceeds the initial storage, the list is realloc'ed to accommodate things.

Name: The spot color name without any prefix or suffix specified in Constructor.
PCS: Optionally, Encoded PCS coordinates as three integers.
Colorant: Optionally, Encoded values for device colorant. (up to 16 entries)

Returns true on success and false on failure.
See also:

- 109.23.3 Append(name as string) as Boolean 18602
- 109.23.4 Append(name as string, PCS() as Integer) as Boolean 18602

109.23.6 Colorant(nColor as UInt32) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns encoded colorants of nth color.
Notes: Array has 16 entries, but not all may be in use.

109.23.7 ColorIndex(name as string) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a look-up in the dictionary and returns an index on the given color name.
Notes: Returns index on name, or -1 if the spot color is not found.

109.23.8 Constructor(context as LCMS2ContextMBS, n as UInt32, ColorantCount as UInt32, Prefix as string = ””, Suffix as string = ””)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new named color list.
Notes:

Allocates an empty named color dictionary.

Context: The user-defined context cargo.
N: Initial number of spot colors in the list
Colorant count: Number of channels of device space (i.e, 3 for RGB, 4 for CMYK, etc,)
Prefix, Suffix: fixed strings for all spot color names, e.g., ”coated”, ”system”, ...

On success handle is not zero.

109.23.9 Name(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns name of nth color.

109.23.10 PCS(nColor as UInt32) as Integer()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns encoded PCS of nth color.
Notes: Array has 3 entries.

109.23.11 Prefix(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns prefix of nth color.

109.23.12 Suffix(nColor as UInt32) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns suffix of nth color.

109.23.13 Properties

109.23.14 Count as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of spot colors in a named color list.
Notes:

Returns the number of spot colors on success, 0 on error.
(Read only property)

109.23.15 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.24 class LCMS2PipelineMBS

109.24.1 class LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a pipeline.
Notes: Pipelines are a convenient way to model complex operations on image data. Each pipeline may contain an arbitrary number of stages. Each stage performs a single operation. Pipelines may be optimized to be executed on a certain format (8 bits, for example) and can be saved as LUTs in ICC profiles.

109.24.2 Blog Entries

- MBS Xojo Plugins, version 20.3pr8
- MBS Releases the MBS Real Studio plug-ins in version 12.0

109.24.3 Methods

109.24.4 Append(p as LCMS2PipelineMBS) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Appends pipeline l2 at the end of pipeline l1.
Notes:

Channel count must match.
Returns true on success and false on failure.

109.24.5 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.

- 109.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean

- 109.24.7 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean 18607

109.24.6 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 109.24.5 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean 18606
- 109.24.7 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean 18607

109.24.7 CheckAndRetreiveStages(type1 as Integer, type2 as Integer, type3 as Integer, byref stage1 as LCMS2StageMBS, byref stage2 as LCMS2StageMBS, byref stage3 as LCMS2StageMBS) as Boolean

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks for some specific stages and returns them via byref parameters.
Example:

```
// load a profile
Dim file As FolderItem = SpecialFolder.Desktop.child("test.icc")
Dim profile As LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile( file, False )

// get the pipeline
Dim pipeline As LCMS2PipelineMBS = profile.ReadPipeline( LCMS2MBS.kcmsSigBToA1Tag )

// get curves
Dim CurveIn As LCMS2StageMBS
Dim CLUT As LCMS2StageMBS
Dim CurveOut As LCMS2StageMBS

Dim ok As Boolean = pipeline.CheckAndRetreiveStages(_
```

LCMS2MBS.kcmsSigCurveSetElemType, _
LCMS2MBS.kcmsSigCLutElemType, _
LCMS2MBS.kcmsSigCurveSetElemType, _
CurveIn, CLUT, CurveOut)

Break // check the three entries

Notes: This function is quite useful to analyze the structure of a Pipeline and retrieve the Stage elements that conform the Pipeline. It should be called with the Pipeline, the number of expected elements and then a list of expected types followed with a list of double pointers to Stage elements. If the function founds a match with current pipeline, it fills the parameters and returns true if not, returns false without touching anything.
See also:

- 109.24.5 CheckAndRetreiveStages(type1 as Integer, byref stage1 as LCMS2StageMBS) as Boolean 18606

109.24.8 Constructor(context as LCMS2ContextMBS, InputChannels as UInt32, OutputChannels as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocates an empty pipeline.
Notes:

Final Input and output channels must be specified at creation time.

context: A user-defined context cargo.
InputChannels, OutputChannels: Number of channels on input and output.

109.24.9 Eval16(In as Ptr, Out as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline usin 16-bit numbers, optionally using the optimized path.
Notes:

In: Input values.
Out: Output values.

For in and out you can use memoryblocks with UInt16 values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. An UInt16 value has 2 bytes.

109.24.10 EvalFloat(In as Ptr, Out as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline using floating point numbers.
Notes:

In: Input values.
Out: Output values.

For in and out you can use memoryblocks with single values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

109.24.11 EvalReverseFloat(Target as Ptr, Result as Ptr, Hint as Ptr)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates a pipeline in the reverse direction, using Newton's method.
Notes:

Target: Input values.
Result: Output values.
Hint: Where begin the search.

For target, result and hint you can use memoryblocks with single values.
We use Ptr for maximum performance. Please make sure the memoryblocks have right size. A single value has 4 bytes.

Returns true on success, false on error.

109.24.12 InsertStage(where as Integer, stage as LCMS2StageMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts a stage on either the head or the tail of a given pipeline.
Notes:

where: enumerated constant, either kAtBegin or kAtEnd.
stage: Pointer to a stage object

109.24.13 SetSaveAs8bitsFlag(save8bit as boolean) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an internal flag that marks the pipeline to be saved in 8 bit precision.
Notes:

By default all pipelines are saved on 16 bits precision on AtoB/BToA tags and in floating point precision on DToB/BToD tags.

save8bit: State of the flag, true=Save as 8 bits, false=Save as 16 bits

Returns true on success, false on error

109.24.14 Stages as LCMS2StageMBS()

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an array with all stage objects.

109.24.15 UnlinkStage(where as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes the stage from the pipeline.
Notes:

Returns the removed stage object.
where can be kAtBegin or kAtEnd values.

109.24.16 Properties

109.24.17 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context object.
Notes: (Read and Write property)

109.24.18 FirstStage as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get a the first stage in the pipeline, or nil if pipeline is empty.
Notes:

Intended for iterators.
(Read only property)

109.24.19 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.24.20 InputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of input channels of a given pipeline.
Notes:

Number of channels on success, 0 on error.
(Read only property)

109.24.21 LastStage as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get a the last stage in the pipeline, or nil if pipeline is empty.
Notes:

Intended for iterators.
(Read only property)

109.24.22 OutputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of output channels of a given pipeline.
Notes:

Number of channels on success, 0 on error.
(Read only property)

109.24.23 StageCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of stages of a given pipeline.
Notes: (Read only property)

109.24.24 Constants

109.24.25 kAtBegin = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the constants for UnlinkStage.
Notes: At the beginning.

109.24.26 kAtEnd = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the constants for UnlinkStage.
Notes: At the end.

109.25 class LCMS2ProfileMBS

109.25.1 class LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS2 profile.

109.25.2 Blog Entries

- Colorspaces in MacOS with Xojo
- Tip of day: Load ICC profile on OS X for any image format with CGImageSource
- ICC color profiling
- MBS Xojo / Real Studio Plugins, version 13.4pr3
- MBS Real Studio Plugins, version 12.3pr11
- MBS Real Studio Plugins, version 12.0pr4

109.25.3 Methods

109.25.4 Constructor(context as LCMS2ContextMBS = nil)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty profile.
Notes: On success the handle property is not zero.
See also:

- 109.25.5 Constructor(file as folderitem, write as boolean = false) 18613

109.25.5 Constructor(file as folderitem, write as boolean = false)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates profile by reading in an existing profile or creating a new profile at the given location.
Notes:

file: file location.
write: Whether to create new profile.

On success the handle property is not zero.
See also:

• 109.25.4 Constructor(context as LCMS2ContextMBS = nil) 18613

109.25.6 CreateBCHSWabstractProfile(context as LCMS2ContextMBS, nLUTPoints as UInt32, Bright as double, Contrast as double, Hue as double, Saturation as double, TempSrc as UInt32, TempDest as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an abstract devicelink operating in Lab for Bright/Contrast/Hue/Saturation and white point translation.
Notes:

White points are specified as temperatures degree of Kelvin.

context: optional context object.
nLUTPoints: Resulting colormap resolution
Bright: Bright increment. May be negative
Contrast: Contrast increment. May be negative.
Hue: Hue displacement in degree.
Saturation: Saturation increment. May be negative
TempSrc: Source white point temperature
TempDest: Destination white point temperature.

Returns an ICC profile object on success, nil on error.

109.25.7 CreateGrayProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyY TransferFunction as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a gray profile based on White point and transfer function.
Notes:

It populates followingtags; this conform a standard gray display profile:

1 cmsSigProfileDescriptionTag
2 cmsSigMediaWhitePointTag
3 cmsSigGrayTRCTag

Context: Optional context object.
WhitePoint: The white point of the gray device or space.

TransferFunction: tone curve describing the device or space gamma.

Returns an ICC profile object on success, NULL on error.

109.25.8 CreateInkLimitingDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, Limit as Double) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a devicelink operating in CMYK for ink-limiting.
Notes:

Space: any color space signature. Currently only kcmsSigCmykData is supported.
Limit: Amount of ink limiting in % (0..400%)

Returns new profile or nil on error.

109.25.9 CreateLab2Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYM = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Lab to Lab identity, marking it as v2 ICC profile.
Notes:

Adjustments for accomodating PCS endoing shall be done by Little CMS when using this profile.

Context: The optional context object.
WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

109.25.10 CreateLab4Profile(context as LCMS2ContextMBS = nil, point as LCMS2CIExyYMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a Lab to Lab identity, marking it as v4 ICC profile.
Notes:

Context: The optional context object.

WhitePoint: Lab reference white. nil for D50.

Returns a handle to an ICC profile object on success, nil on error.

109.25.11 CreateLinearizationDeviceLink(context as LCMS2ContextMBS, ColorSpaceSignature as UInt32, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is a devicelink operating in the target colorspace with as many transfer functions ascomponents.
Notes:

Space: The desired color space signature. Like & h52474220 for RGB.
TransferFunction: tone curves describing the device or space linearization.

Please make sure you pass right number of transfer functions matching number of channels of color space.

A handle to an ICC profile object on success, NULL on error.

109.25.12 CreateNULLProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a fake NULL profile.
Notes:

This profile return 1 channel as always 0. Is useful only for gamut checking tricks.
Returns an ICC profile object on success, nil on error.

109.25.13 CreateProfilePlaceholder(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty profile object, to be populated by the programmer.
Notes:

WARNING: The profile without adding any information is not directly useable.

Context: The context object.
Returns an ICC profile object on success, nil on error.

109.25.14 CreateRGBProfile(context as LCMS2ContextMBS, WhitePoint as LCMS2CIExyYMBS, Primaries as LCMS2CIExyYTripleMBS, TransferFunction() as LCMS2ToneCurveMBS) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function creates a RGB profile based on White point, primaries and transfer functions.
Notes:

It populates following tags; this conform a standard RGB Display Profile, and then I add (As per addendum II) chromaticity tag.

1 cmsSigProfileDescriptionTag
2 cmsSigMediaWhitePointTag
3 cmsSigRedColorantTag
4 cmsSigGreenColorantTag
5 cmsSigBlueColorantTag
6 cmsSigRedTRCTag
7 cmsSigGreenTRCTag
8 cmsSigBlueTRCTag
9 Chromatic adaptation Tag
10 cmsSigChromaticityTag

Context: Optional context object.
WhitePoint: The white point of the RGB device or space.
Primaries: The primaries in xyY of the device or space.
TransferFunction: 3 tone curves describing the device or space gamma. (if you pass just one, the plugin uses it for all three channels)

Returns the new ICC profile object or nil on any error.

109.25.15 CreateSRGBProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create an ICC virtual profile for sRGB space.
Notes:

sRGB is a standard RGB color space created cooperatively by HP and Microsoft in 1996 for use on monitors, printers, and the Internet.

sRGB white point is D65.
xyY 0.3127, 0.3291, 1.0

Primaries are ITU-R BT.709-5 (xYY)

R	0.6400, 0.3300, 1.0
G	0.3000, 0.6000, 1.0
B	0.1500, 0.0600, 1.0

31
Predefined virtual profiles sRGB transfer functions are defined by:

If R'sRGB, G'sRGB, B'sRGB <0.04045
R = R'sRGB / 12.92
G = G'sRGB / 12.92
B = B'sRGB / 12.92
elseif R'sRGB, G'sRGB, B'sRGB >= 0.04045
R = ((R'sRGB + 0.055) / 1.055)^2.4
G = ((G'sRGB + 0.055) / 1.055)^2.4
B = ((B'sRGB + 0.055) / 1.055)^2.4
end if

Context: Optional context object.
Returns an ICC profile object on success, nil on error.

109.25.16 CreateXYZProfile(context as LCMS2ContextMBS = nil) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a XYZ to XYZ identity, marking it as v4 ICC profile.
Notes:

WhitePoint used in Absolute colorimetric intent is D50.
Returns the new profile on success or nil on failure.

109.25.17 DetectBlackPoint(Intent as Integer, Flags as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimate the black point.

109.25.18 DetectDestinationBlackPoint(Intent as Integer, Flags as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the black point of a destination profile.
Notes: This algorithm comes from the Adobe paper disclosing its black point compensation method.

109.25.19 DetectTAC as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detects total area coverage.
Notes:

When several colors are printed on top of each other, there is a limit to the amount of ink that can be put on paper. This maximum total dot percentage is referred to as either TIC (Total Ink Coverage) or TAC (Total Area Coverage). This function does estimate total area coverage for a given profile in % . Only works on output profiles. On RGB profiles, 400% is returned. TAC is detected by subsampling Lab color space on 6x74x74 points.

Returns estimated area coverage in % on success, 0 on error.

109.25.20 FormatterForBitmap(BitCount as Integer = 8) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes:

This is a convenience function which prepares you a pixel format for use with LCMS2BitmapMBS class. Formatters are used to describe how bitmap buffers are organized.

109.25.21 FormatterForColorspace(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: Formatters are used to describe how bitmap buffers are organized.

109.25.22 FormatterForPCS(nBytes as UInt32, IsFloat as boolean = false) as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Build a suitable formatter for the colorspace of this profile.
Notes: Formatters are used to describe how bitmap buffers are organized.

109.25.23 GetProfileInfo(Info as Integer, LanguageCode as string, CountryCode as string) as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets several information strings from the profile, dealing with localization.
Notes:

Info: A selector of which info to return. (kInfoCopyright, kInfoDescription, kInfoManufacturer or kInfoModel)
Language Code: first name language code from ISO-639/2.
Country Code: first name region code from ISO-3166.

Returns the string. (empty string on error)

109.25.24 IsCLUT(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whatever a CLUT is present in the profile for the given intent and direction.
Notes:

Intent: The intent code.
UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2.
Returns true CLUT is present for given intent and direction, false otherwise.

109.25.25 IsIntentSupported(Intent as UInt32, UsedDirection as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the requested intent is implemented in the given direction.
Notes:

Little CMS has a fallback strategy that allows to specify any rendering intent when creating the transform, but the intent really being used may be another if the requested intent is not implemented.

UsedDirection: UsedAsInput = 0, UsedAsOutput = 1, UsedAsProof = 2.
Returns true if the intent is implemented, false otherwise.

109.25.26 IsTag(TagSignature as Integer) as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if a tag with signature sig is found on the profile.
Notes:

Useful to check if a profile contains a given tag.
Returns true if the tag is found or false otherwise.

109.25.27 LinkTag(sig as Integer, dest as Integer) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a directory entry on tag sig that points to same location as tag dest.
Notes:

Using this function you can collapse several tag entries to the same block in the profile.

sig: Signature of linking tag.
dest: Signature of linked tag.

Returns ture on success, false on error

109.25.28 MD5computeID as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Computes a MD5 checksum and stores it as Profile ID in the profile header.
Notes: Returns true on success or false on failure.

109.25.29 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a profile from a file or creates a new profile file there.
Notes:

context: Optional context object.
file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

- 109.25.30 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS 18622

109.25.30 OpenProfileFromFile(file as folderitem, write as boolean = false) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a profile from a file or creates a new profile file there.
Notes:

context: Optional context object.
file: The folderitem for the file location.
write: If true, a new profile is created. If false an existing profile is opened.

Returns a new ICC Profile object on success or nil on failure.
See also:

- 109.25.29 OpenProfileFromFile(context as LCMS2ContextMBS, file as folderitem, write as boolean = false) as LCMS2ProfileMBS 18622

109.25.31 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a memory block.
Notes:

Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 109.25.32 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS 18623

109.25.32 OpenProfileFromMemory(data as Memoryblock) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a memory block.
Notes:

Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 109.25.31 OpenProfileFromMemory(context as LCMS2ContextMBS, data as Memoryblock) as LCMS2ProfileMBS 18622

109.25.33 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a string.
Notes:

Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

• 109.25.34 OpenProfileFromString(data as string) as LCMS2ProfileMBS 18624

109.25.34 OpenProfileFromString(data as string) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens an ICC profile which is entirely contained in a string.
Notes:

Context: Optional, the context object.
Data: The profile data.

Useful for accessing embedded profiles. This buffer must hold a full profile image. Memory must be contiguous.
Returns an ICC profile object on success, nil on error.
See also:

- 109.25.33 OpenProfileFromString(context as LCMS2ContextMBS, data as string) as LCMS2ProfileMBS 18623

109.25.35 PostScriptCRD(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A wrapper on cmsGetPostScriptColorResource to simplify CRD generation.
Notes:

context: Optional a user-defined context cargo.
Intent: The intent code, as described in Intents constants.
Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

109.25.36 PostScriptCSA(context as LCMS2ContextMBS, intent as UInt32, flags as UInt32 = 0) as string

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A wrapper on cmsGetPostScriptColorResource to simplify CSA generation.
Notes:

context: Optional a user-defined context cargo.
Intent: The intent code, as described in Intents constants.

Flags: A combination of bit-field kcmsFLAGS* constants.

Returns: The resource as string or an empty string on error.

109.25.37 ReadChromaticAdaptation as LCMS2CIEXYZMBS()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a chromatic adaptation.
Notes: On success returns an array of 3 XYZ values.

109.25.38 ReadChromaticity as LCMS2CIExyYTripleMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads chromaticity tag.
Notes:

For kcmsSigChromaticityTag.
Returns nil on error.

109.25.39 ReadCIEXYZ(tag as Integer) as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as CIE XYZ value.
Notes:

Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhitePointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.
Returns nil on any error.

109.25.40 ReadColorantOrder as Memoryblock

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads colorant order.
Notes:

For kcmsSigColorantOrderTag.
Returns nil on any error.

109.25.41 ReadDate(tag as Integer) as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as date.
Notes:

Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.
Returns nil on any error.

109.25.42 ReadDict(tag as Integer) as LCMS2DictionaryMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as Dictionary value.
Notes:

Works with kcmsSigMetaTag.
Returns nil on any error.

109.25.43 ReadICCData(tag as Integer) as LCMS2ICCDataMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ICC Data.
Notes:

Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.
Returns nil on any error.

109.25.44 ReadICCMeasurementConditions as LCMS2ICCMeasurementConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads IIC measurement conditions.
Notes:

for kcmsSigMeasurementTag.
Returns nil on any error.

109.25.45 ReadICCViewingConditions as LCMS2ICCViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ICCViewingConditions value.
Notes: Works with kcmsSigViewingConditionsTag.

109.25.46 ReadMLU(tag as Integer) as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as MLU.
Notes:

Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.
Returns nil on any error.

109.25.47 ReadNamedColorList(tag as Integer) as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as named color list.
Notes:

Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.
Returns nil on any error.

109.25.48 ReadPipeline(tag as Integer) as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as pipeline.
Notes:

Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag, kcmsSigBToD0Tag, kcmsSigBToD1Tag, kcmsSigBToD2Tag, kcmsSigBToD3Tag, kcmsSigGamutTag, kcmsSigPreview0Tag, kcmsSigPreview1Tag and kcmsSigPreview2Tag.
Returns nil on any error.

109.25.49 ReadRawTag(sig as Integer) as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads raw tag.
Notes:

Similar to ReadTag*, but different in two important aspects. The important point is, this is raw data. No processing is performed, so you can effectively read wrong or broken profiles with this function. Obviously, then you have to interpret all those bytes!

sig: Signature of tag to be read

Returns memoryblock with data or nil on any error.

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn't work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

Returns nil on any error.

109.25.50 ReadScreening as LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as screening.
Notes:

Works with kcmsSigScreeningTag.
Returns nil on any error.

109.25.51 ReadSequence(tag as Integer) as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as sequence.
Notes:

Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.
Returns nil on any error.

109.25.52 ReadSignature(tag as Integer) as UInt32

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a signature tag.
Notes: Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

109.25.53 ReadTag(tag as Integer) as Variant

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a tag.
Notes:

This is a convenience function which gives you the tag in whatever class the plugin thing is suitable.
Check with isa what class you get.
Returns nil on any error.

109.25.54 ReadToneCurve(tag as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads tag as ToneCurve.
Notes: Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRCTag.

109.25.55 ReadUcrBg as LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads UcrBg tag.

109.25.56 SaveProfileToFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a given file.
Notes: Returns true on success and false on failure.

109.25.57 SaveProfileToMemory as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a memoryblock.
Notes: Returns memoryblock on success and nil on failure.

109.25.58 SaveProfileToString as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves the contents of a profile to a string.
Notes: Returns string with profile data on success and "" on failure.

109.25.59 TagLinkedTo(sig as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the tag linked to sig, in the case two tags are sharing same resource, or nil if the tag is not linked to any other tag.
Notes:

sig: Signature of linking tag.

Returns signature of linked tag, or 0 if no tag is linked.

109.25.60 TagSignature(index as Integer) as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the signature of a tag located in n position being n a 0-based index: i.e., first tag is indexed with n=0.
Notes:

index: index to a tag position (0-based)

Returns the tag signature on success, 0 on error.

109.25.61 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromatic adaptation.
Notes: Variant of the function which takes matrix of values.
See also:

- 109.25.62 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean 18631

109.25.62 WriteChromaticAdaptation(values() as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromatic adaptation.
Notes:

Pass array with 3 XYZ colors.
Returns true on success.
See also:

- 109.25.61 WriteChromaticAdaptation(value as LCMS2Mat3MBS) as boolean 18630

109.25.63 WriteChromaticity(o as LCMS2CIExyYTripleMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes chromaticity tag.
Notes:

For kcmsSigChromaticityTag.
Returns true on success and false on error.

109.25.64 WriteCIEXYZ(tag as Integer, o as LCMS2CIEXYZMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes CIE XYZ tag.
Notes: Works with kcmsSigBlueColorantTag, kcmsSigBlueMatrixColumnTag, kcmsSigGreenColorantTag, kcmsSigGreenMatrixColumnTag, kcmsSigLuminanceTag, kcmsSigMediaBlackPointTag, kcmsSigMediaWhite-PointTag, kcmsSigRedColorantTag and kcmsSigRedMatrixColumnTag.

109.25.65 WriteColorantOrder(data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes colorant order.
Notes:

For kcmsSigColorantOrderTag.
Data should be 16 byte long.
Returns true on success or false on failure.

109.25.66 WriteDate(tag as Integer, o as LCMS2DateMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes date tag.
Notes: Works with kcmsSigCalibrationDateTimeTag and kcmsSigDateTimeTag.

109.25.67 WriteDict(tag as Integer, o as LCMS2DictionaryMBS) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes Dictionary tag.
Notes: Works with kcmsSigMetaTag.

109.25.68 WriteICCData(tag as Integer, o as LCMS2ICCDataMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes ICC Data tag.
Notes: Works with kcmsSigDataTag, kcmsSigPs2CRD0Tag, kcmsSigPs2CRD1Tag, kcmsSigPs2CRD2Tag, kcmsSigPs2CRD3Tag, kcmsSigPs2CSATag and kcmsSigPs2RenderingIntentTag.

109.25.69 WriteICCMeasurementConditions(value as LCMS2ICCMeasurement-ConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes IIC measurement conditions.
Notes:

for kcmsSigMeasurementTag.
Writes data and returns true on success or false on failure.

109.25.70 WriteICCViewingConditions(o as LCMS2ICCViewingConditionsMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes ICC Viewing conditions tag.
Notes: Works with kcmsSigViewingConditionsTag.

109.25.71 WriteMLU(tag as Integer, o as LCMS2MLUMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes MLU tag.
Notes: Works with kcmsSigCharTargetTag, kcmsSigCopyrightTag, kcmsSigDeviceMfgDescTag, kcmsSigDeviceModelDescTag, kcmsSigProfileDescriptionTag, kcmsSigScreeningDescTag and kcmsSigViewingCondDescTag.

109.25.72 WriteNamedColorList(tag as Integer, o as LCMS2NamedColorListMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes named color list tag.
Notes: Works with kcmsSigColorantTableTag, kcmsSigColorantTableOutTag, kcmsSigCrdInfoTag and kcmsSigNamedColor2Tag.

109.25.73 WritePipeline(tag as Integer, o as LCMS2PipelineMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes pipeline tag.
Notes: Works with kcmsSigAToB0Tag, kcmsSigAToB1Tag, kcmsSigAToB2Tag, kcmsSigBToA0Tag, kcmsSigBToA1Tag, kcmsSigBToA2Tag, kcmsSigDToB0Tag, kcmsSigDToB1Tag, kcmsSigDToB2Tag, kcmsSigDToB3Tag, kcmsSigBToD0Tag, kcmsSigBToD1Tag, kcmsSigBToD2Tag, kcmsSigBToD3Tag, kcmsSigGamutTag, kcmsSigPreview0Tag, kcmsSigPreview1Tag and kcmsSigPreview2Tag.

109.25.74 WriteRawTag(sig as Integer, data as Memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes raw tag.
Notes:

The RAW version does the same as WriteTag* but without any interpretation of the data. Please note it is fair easy to deal with "cooked" structures, since there are primitives for allocating, deleting and modifying data. For RAW data you are responsible of everything. If you want to deal with a private tag, you may want to write a plug-in instead of messing up with raw data.

sig: Signature of tag to be written
data: memory block holding the data.

Returns true on success, false on error

Those functions allows to read/write directly to the ICC profile any data, without checking anything. As a rule, mixing Raw with cooked doesn't work, so writting a tag as raw and then reading it as cooked without serializing does result into an error. If that is wha you want, you will need to dump the profile to memory or disk and then reopen it.

109.25.75 WriteScreening(o as LCMS2ScreeningMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes screening tag.
Notes: Works with kcmsSigScreeningTag.

109.25.76 WriteSequence(tag as Integer, o as LCMS2SequenceMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes sequence tag.
Notes: Only for kcmsSigProfileSequenceDescTag and kcmsSigProfileSequenceIdTag.

109.25.77 WriteSignature(tag as Integer, o as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a signature tag with the given values.
Notes: Works with kcmsSigColorimetricIntentImageStateTag, kcmsSigPerceptualRenderingIntentGamutTag, kcmsSigSaturationRenderingIntentGamutTag or kcmsSigTechnologyTag.

109.25.78 WriteToneCurve(tag as Integer, o as LCMS2ToneCurveMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes tone curve tag.
Example:

```
// read a profile
dim f as FolderItem = SpecialFolder.Desktop.Child("myprofile.icc")
dim p as LCMS2ProfileMBS = LCMS2ProfileMBS.OpenProfileFromFile(f)

// find gray level tone curve
dim t as LCMS2ToneCurveMBS = p.ReadToneCurve(LCMS2MBS.kcmsSigGrayTRCTag)
if t<>nil then

// let's make a new one with half of old values
dim values(1000) as single

for i as Integer = 0 to 1000
values(i) = t.EvalToneCurveFloat(i/1000.0) * 0.5
next

// build new curve with that values
dim n as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

// write back
if not p.WriteToneCurve(LCMS2MBS.kcmsSigGrayTRCTag, n) then
MsgBox "failed to write tone curve"
end if
end if

// write profile
f = SpecialFolder.Desktop.Child("test.icc")
call p.SaveProfileToFile(f)
```

Notes: Works with kcmsSigBlueTRCTag, kcmsSigGrayTRCTag, kcmsSigGreenTRCTag and kcmsSigRedTRC-Tag.

109.25.79 WriteUcrBg(o as LCMS2UcrBgMBS) as boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes UcrBg tag.

109.25.80 Properties

109.25.81 ChannelCount as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of channels used for the colorspace of this profile.
Example:

```
dim p as LCMS2ProfileMBS = LCMS2ProfileMBS.CreateSRGBProfile
MsgBox str(p.ChannelCount)
```

Notes: (Read only property)

109.25.82 ColorSpaceType as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the color space used by the given profile, using the ICC convention.
Notes: (Read and Write property)

109.25.83 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context for this profile.
Notes:

Error handling uses it, so you can see which part of your application failed.
(Read only property)

109.25.84 DeviceClass as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/sets the device class signature from profile header.
Notes:

Device Classes:

kcmsSigInputClass	& h73636E72	scnr
kcmsSigDisplayClass	& h6D6E7472	mntr
kcmsSigOutputClass	& h70727472	prtr
kcmsSigLinkClass	& h6C696E6B	link
kcmsSigAbstractClass	& h61627374	abst
kcmsSigColorSpaceClass	& h73706163	spac
kcmsSigNamedColorClass	& h6e6d636c	nmcl

(Read and Write property)

109.25.85 File as FolderItem

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file reference.
Notes:

Only set for file based profiles, so you can later know what file you used to create the profile object.
(Read and Write property)

109.25.86 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

109.25.87 HeaderAttributes as UInt64

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set header attribute flags.
Notes:

Flags can be a combination of kcmsReflective,kcmsTransparency,kcmsGlossy or kcmsMatte.
(Read and Write property)

109.25.88 HeaderCreationDateTime as LCMS2DateMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the date and time when profile was created.
Notes:

This is a field stored in profile header.
Returns nil on any error.
(Read only property)

109.25.89 HeaderCreator as UInt32

MBS Images Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the creator signature as described in the header.
Notes: (Read only property)

109.25.90 HeaderFlags as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set header flags of given ICC profile object.
Notes:

The profile flags field does contain flags to indicate various hints for the CMM such as distributed processing and caching options. The least-significant 16 bits are reserved for the ICC. Flags in bit positions 0 and 1 shall be used as indicated below.

Position	Field Length (bits)	Field Contents
0	1	Embedded Profile (kcmsEmbeddedProfileFalse if not embedded, kcmsEmbeddedProfileTrue if embedded in file)
1	1	Profile cannot be used independently from the embedded color data (set to kcmsUseWithEmbeddedDataOnly if true, kcmsUseAnywhere if false)

(Read and Write property)

109.25.91 HeaderManufacturer as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the manufacturer signature as described in the header.
Notes:

This funcionality is widely superseded by the manufaturer tag. Of use only in elder profiles.
(Read and Write property)

109.25.92 HeaderModel as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the model signature as described in the header.
Notes:

This funcionality is widely superseded by
the model tag. Of use only in elder profiles.
(Read and Write property)

109.25.93 HeaderProfileID as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set header profile ID.
Notes:

Profile ID must be a 16 byte long string.
(Read and Write property)

109.25.94 IsMatrixShaper as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whatever a matrix-shaper is present in the profile.
Notes:

Note that a profile may hold matrix-shaper and CLUT as well.
Returns true if the profile holds a matrix-shaper, false otherwise.
(Read only property)

109.25.95 Name as string

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the profile name.
Notes:

This is a convenience function. The plugin builds this name from manufacturer, model and description strings.
(Read only property)

109.25.96 PCS as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the profile connection space used by the given profile, using the ICC convention.
Notes: (Read and Write property)

109.25.97 ProfileICCversion as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/set the profile ICC version in the same format as it is stored in the header.
Notes: (Read and Write property)

109.25.98 ProfileVersion as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the ICC version in profile header.
Notes:

The version given as to this function as a float n.m is properly encoded.
(Read and Write property)

109.25.99 RenderingIntent as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets/Sets the profile header rendering intent.
Notes:

From the ICC spec: "The rendering intent field shall specify the rendering intent which should be used (or, in the case of a Devicelink profile, was used) when this profile is (was) combined with another profile. In a sequence of more than two profiles, it applies to the combination of this profile and the next profile in the sequence and not to the entire sequence. Typically, the user or application will set the rendering intent dynamically at runtime or embedding time. Therefore, this flag may not have any meaning until the profile is used in some context, e.g. in a Devicelink or an embedded source profile."
(Read and Write property)

109.25.100 TagCount as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of tags of a given profile.
Notes:

Returns number of tags on success, -1 on error.
(Read only property)

109.25.101 Constants

109.25.102 kInfoCopyright = 3

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the info selectors for GetProfileInfo.
Notes: The copyright string.

109.25.103 kInfoDescription = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the info selectors for GetProfileInfo.
Notes: The description string.

109.25.104 kInfoManufacturer = 1

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the info selectors for GetProfileInfo.
Notes: The manufacturer string.

109.25.105 kInfoModel = 2

MBS Images Plugin, Plugin Version: 11.3.

Function: One of the info selectors for GetProfileInfo.
Notes: The model string.

109.26 class LCMS2ScreeningChannelMBS

109.26.1 class LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screening information for one channel.

109.26.2 Methods

109.26.3 Clone as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the screening channel object.

109.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
See also:

- 109.26.5 Constructor(other as LCMS2ScreeningChannelMBS) 18642

109.26.5 Constructor(other as LCMS2ScreeningChannelMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 109.26.4 Constructor(Frequency as Double = 0.0, ScreenAngle as Double = 0.0, SpotShape as UInt32 = 0) 18642

109.26.6 Properties

109.26.7 Frequency as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The frequency.
Notes: (Read and Write property)

109.26.8 ScreenAngle as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screen angle.
Notes: (Read and Write property)

109.26.9 SpotShape as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The spot shape.
Notes:

See kcmsSpot* constants.
(Read and Write property)

109.27 class LCMS2ScreeningMBS

109.27.1 class LCMS2ScreeningMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for screening parameters.

109.27.2 Properties

109.27.3 Channels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of channels.
Notes: (Read and Write property)

109.27.4 Flag as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags for screening.
Notes:

See flags kcmsPRINTER_DEFAULT_SCREENS, kcmsFREQUENCE_UNITS_LINES_CM and kcmsFREQUENCE_UNITS_LINES_INCH.
(Read and Write property)

109.27.5 Channel(index as Integer) as LCMS2ScreeningChannelMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The screening information for each channel.
Notes:

Index from 0 to 15.
(Read and Write computed property)

109.28 class LCMS2SequenceDescriptionMBS

109.28.1 class LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a sequence description.

109.28.2 Properties

109.28.3 AttributeFlags as UInt64

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute flags.
Notes: (Read and Write property)

109.28.4 Description as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description.
Notes: (Read only property)

109.28.5 DeviceMfg as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device Mfg.
Notes: (Read and Write property)

109.28.6 DeviceModel as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device model.
Notes: (Read and Write property)

109.28.7 Manufacturer as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The manufacturer name.
Notes: (Read only property)

109.28.8 Model as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The model string.
Notes: (Read only property)

109.28.9 ProfileID as Memoryblock

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The profile ID.
Notes:

16 bytes and typically the result of a MD5.
(Read only property)

109.28.10 Technology as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The technology value.
Notes:

Use one of the following constants: kcmsSigDigitalCamera, kcmsSigFilmScanner, kcmsSigReflectiveScanner, kcmsSigInkJetPrinter, kcmsSigThermalWaxPrinter, kcmsSigElectrophotographicPrinter, kcmsSigElectrostaticPrinter, kcmsSigDyeSublimationPrinter, kcmsSigPhotographicPaperPrinter, kcmsSigFilmWriter, kcmsSigVideoMonitor, kcmsSigVideoCamera, kcmsSigProjectionTelevision, kcmsSigCRTDisplay, kcmsSigPMDisplay, kcmsSigAMDisplay, kcmsSigPhotoCD, kcmsSigPhotoImageSetter, kcmsSigGravure, kcmsSigOffsetLithography, kcmsSigSilkscreen, kcmsSigFlexography, kcmsSigMotionPictureFilmScanner, kcmsSigMotionPictureFilmRecorder, kcmsSigDigitalMotionPictureCamera or kcmsSigDigitalCinemaProjector.
(Read and Write property)

109.29 class LCMS2SequenceMBS

109.29.1 class LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Profile sequence descriptors.
Notes: Profile sequence can be read/written by using cmsReadTag and cmsWriteTag functions.

109.29.2 Methods

109.29.3 Constructor(context as LCMS2ContextMBS, Count as UInt32)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new sequence with the given number of entries.
Example:

```
dim d as new LCMS2SequenceMBS(nil, 5)
MsgBox str(d.Count)
```

Notes: On success the handle property is not zero.

109.29.4 Properties

109.29.5 Count as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of sequence descriptions used in this class.
Notes: (Read only property)

109.29.6 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.29.7 Description(index as Integer) as LCMS2SequenceDescriptionMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sequence descriptions.
Notes:

Index from 0 to count-1.
(Read and Write computed property)

109.30 class LCMS2StageMBS

109.30.1 class LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A pipeline stage.
Notes: Stages are single-step operations that can be chained to create pipelines. Actual stage types does include matrices, tone curves, Look-up interpolation and user-defined. There are functions to create new stage types and a plug-in type to allow stages to be saved in multi profile elements tag types. See the plug-in API for further details.

109.30.3 Methods

109.30.4 CLutFloatValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns CLut floating point values.
Notes: Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = true.

109.30.5 CLutParamsSamples as UInt32()

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sample counts in the CLut parameters.
Notes: Valid on all kinds of tables.

109.30.6 CLutUInt16Values as UInt16()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns CLut integer values.
Notes: Only if stage is from type kcmsSigCLutElemType and CLutHasFloatValues = false.

109.30.7 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Notes:

Each dimension has same resolution.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 109.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 18650
- 109.30.9 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS 18651

109.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Notes:

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter. The recommended way is to set Table to nil and use StageSampleCLut16bit with a event, because this way the implementation is independent of the selected number of grid points.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.

Table: Memoryblock with a table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 109.30.7 CreateStageWithCLut16bit(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18650
- 109.30.9 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS 18651

109.30.9 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a 16 bits multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

dim data() as UInt16

// fill all the data into the table upfront, RGB to CMYK

dim c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
dim r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
dim g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
dim b as Double = Grid0 / 16

// some bad conversion

c = r
m = g
y = b
k = 0

// fill array with values
data.Append 65535 * c
data.Append 65535 * m
```

```
data.Append 65535 * y
data.Append 65535 * k

next
next
next

dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bit(nil, 17, 3, 4, data)
break
```

Notes:

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: Pointer to a user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: array of UInt16, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.

- 109.30.8 CreateStageWithCLut16bit(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 18650

109.30.10 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Notes:

Context: user-defined context cargo.
clutPoints: Memoryblock with array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 109.30.11 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 18653
- 109.30.12 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS 18653

109.30.11 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Notes:

Context: user-defined context cargo.
clutPoints: Memoryblock with array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Memoryblock with table of UInt16, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 109.30.10 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18652
- 109.30.12 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS 18653

109.30.12 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16() as UInt16) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLut16bit, but it allows different granularity on each CLUT dimension.
Example:

```
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
dim ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

dim noData() as UInt16 = nil
dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLut16bitGranular(nil, ChannelGridPoints, 3, 4, noData)

break
```

Notes:

Context: user-defined context cargo.
clutPoints: Array [inputChan] of UInt32 holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Table of UInt16, holding initial values for nodes. If nil/empty the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 109.30.10 CreateStageWithCLut16bitGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18652
- 109.30.11 CreateStageWithCLut16bitGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableUInt16 as Memoryblock) as LCMS2StageMBS 18653

109.30.13 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Notes:

Each dimension has same resolution.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 109.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 18655
- 109.30.15 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS 18656
- 109.30.16 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 18657

109.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Notes:

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter. The recommended way is to set Table to nil and use StageSampleCLutFloat with an event, because this way the implementation is independent of the selected number of grid points.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: Memoryblock with a table of Single (Float32) values, holding initial values for nodes. If nil the CLUT is initialized to zero.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 109.30.13 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18654
- 109.30.15 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS 18656

- 109.30.16 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 18657

109.30.15 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels and 4 output channels
dim noData() as Double = nil
dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, noData)

break
```

Notes:

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of double values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 109.30.16 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS 18657

109.30.16 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a float multidimensional lookup table (CLUT).
Example:

```
// creates CLUT with 17 grid points, 3 input channels RGB and 4 output channels CMYK

dim data() as Single

// fill all the data into the table upfront, RGB to CMYK

dim c,m,y,k as Double

for Grid0 as Integer = 0 to 16 // 17 grid, 1st input
dim r as Double = Grid0 / 16
for Grid1 as Integer = 0 to 16 // 17 grid, 2nd input
dim g as Double = Grid0 / 16
for Grid2 as Integer = 0 to 16 // 17 grid, 3rd input
dim b as Double = Grid0 / 16

// some bad conversion

c = r
m = g
y = b
k = 0

// fill array with values
data.Append c
data.Append m
data.Append y
data.Append k

next
next
next

dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloat(nil, 17, 3, 4, data)

break
```

Notes:

Each dimension has same resolution. The CLUT can be initialized by specifying values in Table parameter.

Context: user-defined context cargo.
GridPoints: the number of nodes (same for each component).
inputChan: Number of input channels.
outputChan: Number of output channels.
values: Array of single (Float32) values, holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 109.30.13 CreateStageWithCLutFloat(Context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18654
- 109.30.14 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 18655
- 109.30.15 CreateStageWithCLutFloat(context as LCMS2ContextMBS, GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32, values() as Double) as LCMS2StageMBS 18656

109.30.17 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Notes:

Context: user-defined context cargo.
clutPoints: Memoryblock with Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.

Returns a pipeline stage on success, nil on error.
See also:

- 109.30.18 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 18659
- 109.30.19 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS 18659

109.30.18 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Notes:

Context: user-defined context cargo.
clutPoints: Memoryblock with Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a pointer to a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if table memoryblock is not empty/nil, but has wrong size.
See also:

- 109.30.17 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18658
- 109.30.19 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS 18659

109.30.19 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle() as Single) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Similar to CreateStageWithCLutFloat, but it allows different granularity on each CLUT dimension.
Example:

```
// create CLUT with 15 grid points for 1st channel, 16 for 2nd channel and 17 for 3rd channel
dim ChannelGridPoints(2) as UInt32
ChannelGridPoints(0) = 15
ChannelGridPoints(1) = 16
ChannelGridPoints(2) = 17

dim noData() as Single = nil
dim CLUT as LCMS2StageMBS = LCMS2StageMBS.CreateStageWithCLutFloatGranular(nil, ChannelGridPoints, 3, 4, noData)
Break
```

Notes:

Context: user-defined context cargo.
clutPoints: Array of UInt32 [inputChan] holding the number of nodes for each component.
inputChan: Number of input channels.
outputChan: Number of output channels.
Table: a table of Singles (Float32), holding initial values for nodes.

Returns a pipeline stage on success, nil on error.
Raises exception if values array is not empty/nil, but has wrong size.
See also:

- 109.30.17 CreateStageWithCLutFloatGranular(Context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32) as LCMS2StageMBS 18658
- 109.30.18 CreateStageWithCLutFloatGranular(context as LCMS2ContextMBS, clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32, TableSingle as Memoryblock) as LCMS2StageMBS 18659

109.30.20 CreateStageWithIdentity(context as LCMS2ContextMBS, Channels as UInt32) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty (identity) stage that does no operation.
Notes:

May be needed in order to save the pipeline as AToB/BToA tags in ICC profiles.

Context: user-defined context cargo.
Channels: Number of channels

Returns a pipeline stage on success, nil on error.

109.30.21 CreateStageWithMatrix(context as LCMS2ContextMBS, Rows as UInt32, Cols as UInt32, Matrix as Memoryblock, Offset as Memoryblock = nil) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains a matrix plus an optional offset.
Notes:

Note that Matrix is specified in double precision, whilst CLUT has only float precision. That is because an ICC profile can encode matrices with far more precision that CLUTS.

Context: user-defined context cargo.
Rows, Cols: Dimensions of matrix
Matrix: Memoryblock with a matrix of [Rows, Cols] (double values, 8 byte per value)
Offset: Memoryblock with a vector of [Cols] , nil if no offset is to be applied.

Returns a pipeline stage on success, nil on error.

109.30.22 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains n channels tone curves, one per channel.
Notes:

Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.
See also:

- 109.30.23 CreateStageWithToneCurves(context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS 18661

109.30.23 CreateStageWithToneCurves(context as LCMS2ContextMBS, Channels() as LCMS2ToneCurveMBS) as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a stage that contains n channels tone curves, one per channel.
Notes:

Setting Curves to nil forces identity (1:1) curves to be used. The stage keeps and owns a private copy of the tone curve objects.

Context: user-defined context cargo.
Curvess: Optionally, an array of tone curves objects, one per channel.

Returns a pipeline stage on success, nil on error.
See also:

- 109.30.22 CreateStageWithToneCurves(context as LCMS2ContextMBS, ChannelCount as Integer) as LCMS2StageMBS 18661

109.30.24 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the number of values needed for a CLUT with given dimensions.
Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bitGranular or CreateStageWithCLutFloatGranular must be.
See also:

- 109.30.25 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32 18662

109.30.25 CubeSize(GridPoints as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32

MBS Images Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the number of values needed for a CLUT with given dimensions.
Notes: This is a helper function, so you can know how big the table for CreateStageWithCLut16bit or CreateStageWithCLutFloat must be.
See also:

- 109.30.24 CubeSize(clutPoints() as UInt32, inputChan as UInt32, outputChan as UInt32 = 1) as UInt32 18662

109.30.26 MatrixOffsets as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with matrix offsets.
Notes: Only if stage is from type kcmsSigMatrixElemType and.

109.30.27 MatrixValues as Double()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with matrix values.
Notes: Only if stage is from type kcmsSigMatrixElemType and.

109.30.28 SampleCLut16bit(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate on all nodes of a given CLUT stage, calling a 16-bit sampler on each node.
Notes:

Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.

Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

109.30.29 SampleCLutFloat(sampler as LCMS2StageSamplerMBS, Flags as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate on all nodes of a given CLUT stage, calling a float sampler on each node.
Notes:

Those functions (SampleCLut16bit and SampleCLutFloat) are provided to populate CLUT stages in a way that is independent of the number of nodes. The programmer has to provide an object with event that will be invoked on each CLUT node. LittleCMS does fill the In parameter with the coordinates that addresses the node. It also fills the Out parameter with CLUT contents on the node, so this can be used also to get CLUT contents after reading it from an ICC profile. In this case, a special flag can be specified to make sure the CLUT is being accessed as read-only and not modified (kSamplerInspect).

Works only with CLut stage objects and returns false if the object is not a Clut.

Sampler: The object to receive events.
Flags: Bit-field flags for different options. Only kSamplerInspect is currently supported.

Returns true on success, false on error.

109.30.30 ToneCurves as LCMS2ToneCurveMBS()

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns array with tone curves.
Notes: Only if stage is from type kcmsSigCurveSetElemType and.

109.30.31 Properties

109.30.32 CLutEntries as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of entries in the CLut.
Notes:

Only if stage is from type kcmsSigCLutElemType.
(Read only property)

109.30.33 CLutHasFloatValues as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this CLut has floating point values.
Notes:

Only if stage is from type kcmsSigCLutElemType.
(Read only property)

109.30.34 CLutParamsInputs as Integer

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of input parameters for in the CLut parameters.
Notes:

Value is <>1 only in 3D interpolation.
(Read only property)

109.30.35 CLutParamsOutputs as Integer

MBS Images Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of output parameters for in the CLut parameters.
Notes:

Value is <>1 only in 3D interpolation.
(Read only property)

109.30.36 Data as Ptr

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw stage data.
Notes: (Read only property)

109.30.37 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.30.38 InputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of input channels of a given stage object.
Notes: (Read only property)

109.30.39 NextItem as LCMS2StageMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns next stage in pipeline list, or nil if end of list.
Notes:

Intended for iterators.
(Read only property)

109.30.40 OutputChannels as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of output channels of a this stage object.
Notes: (Read only property)

109.30.41 Type as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the type of a given stage object.
Notes:

Use this type constants: kcmsSigCurveSetElemType, kcmsSigMatrixElemType, kcmsSigCLutElemType, kcmsSigBAcsElemType, kcmsSigEAcsElemType, kcmsSigXYZ2LabElemType, kcmsSigLab2XYZElemType, kcmsSigNamedColorElemType, kcmsSigLabV2toV4, kcmsSigLabV4toV2, kcmsSigIdentityElemType.
(Read only property)

109.30.42 Constants

109.30.43 kSamplerInspect = & h01000000

MBS Images Plugin, Plugin Version: 12.1.

Function: One of the flags for Sampling.
Notes: Use this flag to prevent changes being written to destination when using SampleCLutFloat or SampleCLut16bit.

109.31 class LCMS2StageSamplerMBS

109.31.1 class LCMS2StageSamplerMBS

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for getting sampler callback.

109.31.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr1

109.31.3 Methods

109.31.4 SliceSpaceFloat(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Slices target space executing a floating point callback of type cmsSAMPLERFLOAT.
Notes:

Parameters:
Inputs: Number of components in target space.
clutPoints: Array [nInputs] holding the division slices for each component.
Calls Floating point sample event to execute on each slice.

Returns true on success, false on error.

109.31.5 SliceSpaceInteger(Inputs as UInt32, values() as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Slices target space executing a 16 bits callback of type cmsSAMPLER16.
Notes:

Parameters:
Inputs: Number of components in target space.
values: Array [nInputs] holding the division slices for each component.

Calls 16 bit Sample event to execute on each slice.

Returns true on success, false on error.

109.31.6 Events

109.31.7 SamplerFloat(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Sampler event called by SampleCLutFloat.
Notes:

In and Out point to 32 bit float values, so please use Single property to access.
InputChannels and OutputChannels are the number of channels.

109.31.8 SamplerInteger(InValues as Ptr, OutValues as Ptr, InputChannels as Integer, OutputChannels as Integer) as boolean

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Sampler event called by SampleCLut16bit.
Notes:

In and Out point to 16 bit unsigned integer values, so please use UInt16 property to access.
InputChannels and OutputChannels are the number of channels.

109.32 class LCMS2ToneCurveMBS

109.32.1 class LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a tone curve or gamma.

109.32.2 Blog Entries

- MBS Releases the MBS Real Studio plug-ins in version 12.0
- MBS Real Studio Plugins, version 12.0pr4

109.32.3 Methods

109.32.4 BuildGamma(context as LCMS2ContextMBS, gamma as Double) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simplified wrapper to BuildParametricToneCurve.
Example:

```
dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox str(t.EstimateGamma)
```

Notes:

Builds a parametric curve of type 1.

Context: user-defined context object.
Gamma: Value of gamma exponent

Returns a newly created tone curve object on success, nil on error.

109.32.5 BuildParametricToneCurve(context as LCMS2ContextMBS, Type as Integer, params() as Double) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a parametric tone curve.
Notes:

Parameters:
context: user-defined context object.
Type: Number of parametric tone curve. (see LCMS2 manual)
Params: Array of tone curve parameters.

Returns a newly created tone curve object on success, nil on error.

109.32.6 BuildSegmentedToneCurve(context as LCMS2ContextMBS, Segments() as LCMS2CurveSegmentMBS) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve from given segment information.
Notes:

context: Puser-defined context object
Segments: Array of segments

Returns a newly created tone curve object on success, nil on error.

109.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve based on a table of floating point values.
Example:

```
dim values(-1) as Single

for i as Integer = 0 to 9
values.Append 0.5 + i*0.02
next

dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildTabulatedToneCurve(nil, values)

dim items(-1) as string
for i as Integer = 0 to 10
dim v as Single = t.EvalToneCurveFloat(i/10.0)
items.Append str(i/10.0)+" ->"+str(v)
next
```

MsgBox Join(items,EndOfLine)

Notes:

Tone curves built with this function are not restricted to 0...1.0 domain.

context: user-defined context object.
values: Array of samples. Domain of samples is 0...1.0

Returns a newly created tone curve object on success, nil on error.
See also:

- 109.32.8 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS 18671

109.32.8 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as UInt16) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Builds a tone curve based on a table of 16-bit values. Tone curves built with this function are restricted to 0...1.0 domain.
Notes:

context: user-defined context object.
values: Array of samples. Domain is 0...65535 (UInt32).

Returns a newly created tone curve object on success, nil on error.
See also:

- 109.32.7 BuildTabulatedToneCurve(context as LCMS2ContextMBS, values() as Single) as LCMS2ToneCurveMBS 18670

109.32.9 EstimatedTable as UInt16()

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tone curves do maintain a shadow low-resolution tabulated representation of the curve. This function returns an array with this table.

109.32.10 EstimatedTableEntries as UInt32

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tone curves do maintain a shadow low-resolution tabulated representation of the curve. This function returns the number of entries such table has.

109.32.11 EstimateGamma(Precision as Double = 0.01) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Estimates the apparent gamma of the tone curve by using least squares fitting to a pure exponential expression in the f() = .
Example:

```
dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox str(t.EstimateGamma)
```

Notes:

Precision: The maximum standard deviation allowed on the residuals, 0.01 is a fair value, set it to a big number to fit any curve, mo matter how good is the fit.

Returns the estimated gamma at given precision, or -1.0 if the fitting has less precision.

109.32.12 EvalToneCurve16(value as UInt16) as UInt16

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the given 16-bit number across the given tone curve.
Notes:

This function is significantly faster than EvalToneCurveFloat, since it uses a pre-computed 16-bit lookup table.
Value: 16 bit Number to evaluate
Returns operation result

109.32.13 EvalToneCurveFloat(value as Single) as Single

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Evaluates the given floating-point number across the given tone curve.

Example:

```
dim t1 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 1.0)
dim t2 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.0)
dim t3 as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 3.0)

dim v1 as Double = t1.EvalToneCurveFloat(0.5)
dim v2 as Double = t2.EvalToneCurveFloat(0.5)
dim v3 as Double = t3.EvalToneCurveFloat(0.5)

MsgBox str(v1)+" "+str(v2)+" "+str(v3)
```

Notes:

Value: floating point number to evaluate
Returns the result.

109.32.14 IsDescending as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if f(0) >f(1) , false otherwise.
Notes: Does not take unbounded parts into account.

109.32.15 IsLinear as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an estimation of cube being an identity (1:1) in the [0..1] domain.
Notes: Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

109.32.16 IsMonotonic as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns an estimation of monotonicity of curve in the [0..1] domain.
Example:

```
dim t as LCMS2ToneCurveMBS = LCMS2ToneCurveMBS.BuildGamma(nil, 2.2)
MsgBox "IsMonotonic: "+str(t.IsMonotonic)
```

Notes: Does not take unbounded parts into account. This is just a coarse approximation, with no mathematical validity.

109.32.17 IsMultisegment as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the tone curve contains more than one segment, false if it has only one segment.

109.32.18 JoinToneCurve(context as LCMS2ContextMBS, X as LCMS2ToneCurveMBS, Y as LCMS2ToneCurveMBS, nPoints as UInt32) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Composites two tone curves in the form −1(()).
Notes:

context: user-defined context object.
X, Y : Tone curve objects.
nPoints: Sample rate for resulting tone curve.

Returns a newly created tone curve object on success, nil on error.

109.32.19 ParametricType as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the parametric type.

109.32.20 Reverse as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a tone curve that is the inverse f-1 of given tone curve.
Notes: Returns a newly created tone curve object on success, nil on error.
See also:

- 109.32.21 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS

109.32.21 Reverse(nResultSamples as Integer) as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a tone curve that is the inverse f-1 of given tone curve.
Notes:

In the case it couldn't be analytically reversed, a tablulated curve of nResultSamples is created.
nResultSamples: Number of samples to use in the case origin tone curve couldn't be analytically reversed
Returns a newly created tone curve object on success, nil on error.
See also:

- 109.32.20 Reverse as LCMS2ToneCurveMBS 18674

109.32.22 Smooth(lambda as Double) as Boolean

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Smoothes tone curve according to the lambda parameter.
Notes:

Lambda: degree of smoothing.
Returns true on success, false on error.

109.32.23 Properties

109.32.24 Handle as Integer

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.33 class LCMS2TransformMBS

109.33.1 class LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a LCMS 2.x transformation.

109.33.3 Methods

109.33.4 ChangeBuffersFormat(InputFormat as UInt32, OutputFormat as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function does change the encoding of buffers in a yet-existing transform.
Notes:

Not all transforms can be changed, cmsChangeBuffersFormat only works on transforms created originally with at least 16 bits of precision. This function is provided for backwards compatibility and should be avoided whenever possible, as it prevents transform optimization.

InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.

Returns true on success and false on failure.

109.33.5 CreateExtendedTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, BPC() as boolean, Intents() as UInt32, AdaptationStates() as Double, GamutProfile as LCMS2ProfileMBS, GamutPCSposition as UInt32, InputFormat as UInt32, OutputFormat as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended form of multiprofile color transform creation, exposing all parameters for each profile in the chain.
Notes:

All other transform cration functions are wrappers to this call.

Parameters:
context: Pointer to a user-defined context cargo.
Profiles: Array of handles to open profile objects.
BPC: Array of black point compensation states
GamutProfile: A profile holding gamut information for gamut check. Only used if cmsFLAGS_GAMUTCHECK specified. Set to nil for no gamut check.
GamutPCSPosition: Position in the chain of Lab/XYZ PCS to check against gamut profile Only used if cmsFLAGS_GAMUTCHECK specified.
InputFormat: Input format.
OutputFormat: Output format.
Intents: An array holding the intent codes.
Flags: Some flags to control it.

Returns a transform object on success, NULL on error.
See also cmsCreateExtendedTransform in the LCMS2 manual.

109.33.6 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a multi profile transformation.
Notes:

User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.

InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 109.33.7 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 18678

109.33.7 CreateMultiprofileTransform(Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a multi profile transformation.
Notes:

User passes in an array of handles to open profiles. The returned color transform do "smelt" all profiles in a single devicelink. Color spaces must be paired with the exception of Lab/XYZ, which can be interchanged.

context: Optional context object.
Profiles: Array of open profile objects.
InputFormat: A bit-field format specifier as described in Formatters section.
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field of kcmsFLAGS_* constants.

Returns a transform object on success, nil on error.
See also:

- 109.33.6 CreateMultiprofileTransform(context as LCMS2ContextMBS, Profiles() as LCMS2ProfileMBS, InputFormat as UInt32, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 18677

109.33.8 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as CreateTransform(), but including soft-proofing.
Notes:

A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

The obtained transform emulates the device described by the "Proofing" profile. Useful to preview final result without rendering to the physical medium. To enable proofing and gamut check you need to include following flags:

cmsFLAGS_GAMUTCHECK: Color out of gamut are flagged to a fixed color defined by the function kcmsSetAlarmCodes
cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

context: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.
See also:

- 109.33.9 CreateProofingTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 18679

109.33.9 CreateProofingTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as CreateTransform(), but including soft-proofing.
Notes:

A proofing transform does emulate the colors that would appear as the image were rendered on a specific device. That is, for example, with a proofing transform I can see how will look a photo of my little daughter if rendered on my HP printer. Since most printer profiles does include some sort of gamut-remapping, it is likely colors will not look as the original. Using a proofing transform, it can be done by using the appropriate function. Note that this is an important feature for final users, it is worth of all color-management stuff if the final media is not cheap.

The obtained transform emulates the device described by the "Proofing" profile. Useful to preview final result without rendering to the physical medium. To enable proofing and gamut check you need to include following flags:

cmsFLAGS_GAMUTCHECK: Color out of gamut are flagged to a fixed color defined by the function kcms-SetAlarmCodes
cmsFLAGS_SOFTPROOFING: does emulate the Proofing device.

context: Optional context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code.
ProofingIntent: The intent code.
Flags: A combination of bit-field constants described in Table 42.

Returns transform object on success, nil on error.
See also:

- 109.33.8 CreateProofingTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Proofing as LCMS2ProfileMBS, Intent as UInt32, ProofingIntent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 18678

109.33.10 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color transform for translating bitmaps.
Notes:

context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.

OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_* constants.

Returns a transform object on success, NULL on error.
See also:

- 109.33.11 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 18681

109.33.11 CreateTransform(InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a color transform for translating bitmaps.
Notes:

context: Optional, the context object.
InputProfile: A profile object capable to work in input direction
InputFormat: A bit-field format specifier as described in Formatters section.
OutputProfile: A profile object capable to work in output direction
OutputFormat: A bit-field format specifier as described in Formatters section.
Intent: The intent code, as described in Intents section.
Flags: A combination of bit-field kcmsFLAGS_* constants.

Returns a transform object on success, NULL on error.
See also:

- 109.33.10 CreateTransform(context as LCMS2ContextMBS, InputProfile as LCMS2ProfileMBS, InputFormat as UInt32, OutputProfile as LCMS2ProfileMBS, OutputFormat as UInt32, Intent as UInt32, Flags as UInt32 = 0) as LCMS2TransformMBS 18680

109.33.12 ToDeviceLink(Version as Double, Flags as UInt32) as LCMS2ProfileMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a device-link profile from a given color transform.
Notes:

This profile can then be used by any other function accepting profile handle. Depending on the specified version number, the implementation of the devicelink may vary. Accepted versions are in range 1.0...4.3

Version: The target devicelink version number.
Flags: A combination of bit-field constants kcmsFLAGS_*.

Returns an ICC profile object on success, nil on error.

109.33.13 Transform(bitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes:

bitmap: the input and output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).
Please make sure input and output color space types of transform match the one in the bitmap.
See also:

- 109.33.14 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean 18682
- 109.33.15 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 18683

109.33.14 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes:

inBitmap: the input bitmap.
outBitmap: the output bitmap.

Returns true on success.
Size of input and output bitmaps must match.
Please make sure RowBytes is either zero for both (block mode) or is correct (row by row mode).

Please make sure input and output color space types of transform match the those in the bitmaps.
See also:

- 109.33.13 Transform(bitmap as LCMS2BitmapMBS) as boolean 18682
- 109.33.15 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 18683

109.33.15 Transform(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes:

InputBuffer: A pointer to the input bitmap.
OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.

Returns true on success.
See also:

- 109.33.13 Transform(bitmap as LCMS2BitmapMBS) as boolean 18682
- 109.33.14 Transform(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS) as boolean 18682

109.33.16 TransformLineStride(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32) as boolean

MBS Images Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes:

Each bitmap may contain several lines, and every may have padding. The distance from one line to the next one is BytesPerLine { In/Out } . In planar formats, each line may hold several planes, each plane may have padding. Padding of lines and planes should be same across all bitmap. I.e. all lines in same bitmap have to be padded in same way. This function may be more efficient that repeated calls to Transform(), especially when customized plug-ins are being used.

Parameters:
InputBuffer: A pointer to the input bitmap

OutputBuffer: A pointer to the output bitmap.
PixelsPerLine: The number of pixels for line, which is same on input and in output.
LineCount: The number of lines, which is same on input and output
BytesPerLine { In,Out } : The distance in bytes from one line to the next one.
BytesPerPlaneIn { In,Out } : The distance in bytes from one plane to the next one inside a line. Only applies in planar formats.

Returns true on success.

109.33.17 TransformLineStrideMT(inBitmap as Ptr, outBitmap as Ptr, PixelsPerLine as UInt32, LineCount as UInt32, BytesPerLineIn as UInt32, BytesPerLineOut as UInt32, BytesPerPlaneIn as UInt32, BytesPerPlaneOut as UInt32, ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes:

Same as TransformLineStride, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

109.33.18 TransformMT(bitmap as LCMS2BitmapMBS, ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes:

Same as Transform, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we

start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.
See also:

- 109.33.19 TransformMT(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMBS, ThreadCount as Integer = 1) as boolean 18685
- 109.33.20 TransformMT(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 18685

109.33.19 TransformMT(inBitmap as LCMS2BitmapMBS, outBitmap as LCMS2BitmapMB ThreadCount as Integer = 1) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes:

Same as Transform, but with thread support.

ThreadCount: New in MBS Plugin 20.0. If value is zero, we do work on the calling thread. If value is 1, we start a new preemptive thread to do the work and yield on the Xojo thread. If value is >1, we create that many threads and do the split the work to those threads.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

- 109.33.18 TransformMT(bitmap as LCMS2BitmapMBS, ThreadCount as Integer = 1) as boolean 18684
- 109.33.20 TransformMT(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean 18685

109.33.20 TransformMT(InputBuffer as Ptr, OutputBuffer as Ptr, Size as UInt32) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps according of parameters setup when creating the color transform.
Notes:

Same as Transform, but with thread support.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

109.33.21 TransformRGB(c as color) as color

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to convert one RGB color.
Notes: Works for input/output data with Float (4 or 8 byte) or Integer (1, 2 or 4 bytes).

109.33.22 TransformStride(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function translates bitmaps according of parameters setup when creating the color transform.
Notes:

On planar-organized buffers, the parameter stride specifies the separation between planes, which may be different of the number of pixels to transform. The main application of this function is when several threads are transforming pixels from different zones of same planar buffer. Otherwise it is identical to other Transform functions.

InputBuffer: A pointer to the input bitmap.
OutputBuffer: A pointer to the output bitmap.
Size: the number of PIXELS to be transformed.
Stride: Plane separation on planar formats

Returns true on success.

109.33.23 TransformStrideMT(inBitmap as Ptr, outBitmap as Ptr, size as UInt32, Stride as UInt32) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translates bitmaps with complex organization.
Notes:

Same as TransformLineStride, but with thread support.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

109.33.24 Properties

109.33.25 AdaptationState as Double

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The adaptation state.
Notes: (Read only property)

109.33.26 context as LCMS2ContextMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The context object.
Notes: (Read and Write property)

109.33.27 EntryColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The entry colorspace.
Notes: (Read only property)

109.33.28 EntryWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The entry white points.
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.29 ExitColorSpace as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exit colorspace.
Notes: (Read only property)

109.33.30 ExitWhitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exit white points.
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.31 GamutCheck as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A Pipeline holding the gamut check. It goes from the input space to bilevel.
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.32 Handle as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

109.33.33 InputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input Colorant table.
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.34 InputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the input format associated with a given transform.
Notes: (Read only property)

109.33.35 Lut as LCMS2PipelineMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A Pipeline holding the full (optimized) transform.
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.36 NamedColorList as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a named color list from a given color transform.
Notes:

Returns named color list dictionary on success, nil on error.
Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.37 OriginalFlags as UInt32

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original flags used to create transform.
Notes: (Read only property)

109.33.38 OutputColorant as LCMS2NamedColorListMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Output Colorant table (for n chans >CMYK)
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.33.39 OutputFormat as UInt32

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the output format associated with a given transform.
Notes: (Read only property)

109.33.40 RenderingIntent as UInt32

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The intent of this transform. That is usually the last intent in the profilechain, but may differ.
Notes: (Read only property)

109.33.41 Sequence as LCMS2SequenceMBS

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The profiles used to create the transform.
Notes:

Only for information, so plugin may return a copy of the data.
(Read only property)

109.34 class LCMS2UcrBgMBS

109.34.1 class LCMS2UcrBgMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the cmsSigUcrBgType tag.
Notes: This is for Undercolorremoval and black generation.

109.34.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

109.34.3 Methods

109.34.4 Constructor(Ucr as LCMS2ToneCurveMBS = nil, Bg as LCMS2ToneCurveMBS = nil, Desc as LCMS2MLUMBS = nil)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new object with given values.

109.34.5 Properties

109.34.6 Bg as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The black generation value.
Notes: (Read and Write property)

109.34.7 Desc as LCMS2MLUMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The description.
Notes: (Read and Write property)

109.34.8 Ucr as LCMS2ToneCurveMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The undercolor removal setting.
Notes: (Read and Write property)

109.35 class LCMS2Vec3MBS

109.35.1 class LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a three dimension vector.
Example:

```
dim v as new LCMS2Vec3MBS(1,2,3)
MsgBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

109.35.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr4

109.35.3 Methods

109.35.4 Clone as LCMS2Vec3MBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the vector.

109.35.5 Constructor(other as LCMS2Vec3MBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copy constructor.
Example:

```
// make a vector
dim v as new LCMS2Vec3MBS(1,2,3)

// create a copy
dim w as new LCMS2Vec3MBS(v)

// show values
MsgBox str(w.X)+" "+str(w.y)+" "+str(w.z)
```

See also:

• 109.35.6 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0) 18694

109.35.6 Constructor(v1 as Double = 0.0, v2 as Double = 0.0, v3 as Double = 0.0)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to initialize the object with the given values.
Example:

```
dim v as new LCMS2Vec3MBS(1,2,3)
MsgBox str(v.X)+" "+str(v.y)+" "+str(v.z)
```

See also:

• 109.35.5 Constructor(other as LCMS2Vec3MBS) 18693

109.35.7 Properties

109.35.8 X as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first value.
Notes: (Read and Write property)

109.35.9 Y as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second value.
Notes: (Read and Write property)

109.35.10 Z as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The third value.
Notes: (Read and Write property)

109.35.11 value(index as UInt32) as Double

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The values by index.
Notes:

Index from 0 to 2.
(Read and Write computed property)

109.36 class LCMS2ViewingConditionsMBS

109.36.1 class LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Viewing conditions.
Notes: From LCMS documenation: Please note those are CAM model viewing conditions, and not the ICC tag viewing conditions, which I'm naming cmsICCViewingConditions to make differences evident. Unfortunately, the tag cannot deal with surround La, Yb and D value so is basically useless to store CAM02 viewing conditions.

109.36.2 Methods

109.36.3 Clone as LCMS2ViewingConditionsMBS

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the object.

109.36.4 Constructor(other as LCMS2ViewingConditionsMBS)

MBS Images Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes object with values from other object.
See also:

- 109.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0) 18696

109.36.5 Constructor(whitePoint as LCMS2CIEXYZMBS = nil, Yb as Double = 0.0, La as Double = 0.0, surround as Integer = 0, D_value as Double = 0.0)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new viewing conditions object.
See also:

- 109.36.4 Constructor(other as LCMS2ViewingConditionsMBS) 18696

109.36.6 Properties

109.36.7 D_value as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The D value value.
Notes: (Read and Write property)

109.36.8 La as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The La value.
Notes: (Read and Write property)

109.36.9 Surround as Integer

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The surround value.
Notes:

Use this constants:
kAVG_SURROUND = 1
kDIM_SURROUND = 2
kDARK_SURROUND = 3
kCUTSHEET_SURROUND = 4
(Read and Write property)

109.36.10 whitePoint as LCMS2CIEXYZMBS

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The white point.
Notes: (Read and Write property)

109.36.11 Yb as Double

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Yb value.
Notes: (Read and Write property)

Chapter 110

LDAP

110.1 class LDAPMBS

110.1.1 class LDAPMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for LDAP connection.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
dim l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
```

```
const FILTER = "(sn=Jensen)"

dim results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

Notes:

On Windows we use Microsoft's WinLDAP Library.
For Mac OS X and Linux we link to OpenLDAP, so be sure to have the right package installed on Linux.

110.1.3 Xojo Developer Magazine

- 18.3, page 9: News
- 17.5, page 50: Maps (Part 1), Implementing Maps in Xojo desktop apps with the MapKitMBS plug-in by Markus Winter

110.1.4 Methods

110.1.5 Add(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds attributes.
Example:

```
// add like this

dim m1 as new LDAPModMBS
dim m2 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"

m2.Operation = m1.kOperationAdd
m2.Type = "cn"
m2.addValue "xxx"

dim attr() as LDAPModMBS
attr.Append m1
attr.Append m2

l.Add("test", attr)
```

Notes:

The Add function initiates a synchronous add operation that adds an entry to a tree. The parent of the entry being added must already exist or the parent must be empty (equal to the root distinguished name) for an add operation to succeed.

Before calling Add, you must create an entry by specifying its attributes in LDAPModMBS objects. Set the Operator member of each structure to kOperationAdd, and set the Type and Value members as appropriate for your entry.

110.1.6 Bind(Who as String, Cred as String, AuthMethod as Integer, Domain as String = "")

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds to a server with given credentials and authorization method.
Notes:

Synchronously authenticates a client to the LDAP server.

Added domain parameter in plugin version 17.1, Windows only.

110.1.7 Connect(TimeOutSeconds as Double = 1.0)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to server.
Notes: On Mac does nothing.

110.1.8 Constructor

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Targets: All.

Function: Default constructor.
Notes: Creates a new connection without connecting.
See also:

- 110.1.9 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 18702
- 110.1.10 Constructor(URL as string) 18703

110.1.9 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a connection to a LDAP server.
Example:

```
// connect with SSL
dim ldap as LDAPMBS

# if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
# else
ldap = new LDAPMBS("ldaps://192.168.1.123")
# endif
```

Notes:

If open is true, we connect directly to server.
Secure: For Windows Vista and newer. Set to true for a secure connection with SSL. (only for open=false)

For connecting via SSL, please use on Mac OS X the Constructor taking the URL and specify ldaps protocol.
For Windows use this constructor with secure parameter set to true.

Changed with 16.0 to work on Mac with secure = true. For Windows we switch to Open = false if secure is true.
See also:

- 110.1.8 Constructor 18702
- 110.1.10 Constructor(URL as string) 18703

110.1.10 Constructor(URL as string)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a connection to a LDAP server.
Example:

```
// connect with SSL
dim ldap as LDAPMBS

# if TargetWin32 then
ldap = new LDAPMBS("192.168.1.123", 636, false, true)
# else
ldap = new LDAPMBS("ldaps://192.168.1.123")
# endif
```

Notes: Added Windows support in 16.0 plugins.
See also:

- 110.1.8 Constructor 18702
- 110.1.9 Constructor(IP as string, Port as Integer, Open as Boolean = false, Secure as Boolean = false) 18702

110.1.11 Delete(distinguishedName as string)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes an entry.

110.1.12 ErrorString(error as Integer) as string

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries an error message for an error code.

110.1.13 Modify(distinguishedName as string, attrs() as LDAPModMBS)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modifies an entry.
Notes:

Please pass one LDAPModMBS for each attribute to change.

The Modify function initiates a synchronous operation to modify an existing entry. If values are being added to or replaced in the entry, the function creates the attribute, if necessary. If values are being deleted, the function removes the attribute if no values remain. All modifications are performed in the order in which they are listed.

When connecting to an LDAP 2 server, the application must perform a bind operation (by calling one of the Bind or SimpleBind routines) before attempting any other operations.

110.1.14 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames an item.
See also:

- 110.1.15 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean) 18704

110.1.15 Rename(distinguishedName as string, NewRDN as String, NewParent as String, DeleteOldRdn as Boolean)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Renames an item and can move it to other parent.
See also:

- 110.1.14 Rename(distinguishedName as string, NewDistinguishedName as String, DeleteOldRdn as Boolean) 18704

110.1.16 Search(distinguishedName as string, Scope as Integer, Filter as String, Attrs() as String = nil, AttributesOnly as boolean = false, timeout as Double = 1.0, SizeLimit as Integer = 0) as Dictionary()

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Search for something.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
dim l as new LDAPMBS("localhost", 389)

// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

dim results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

Notes: The plugin will return result as array of Dictionaries, one for each item. Dictionary contains attributes with their values. A special entry has key = nil and as value the distinguish name of the item.

110.1.17 SimpleBind(Who as String, Cred as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Simple bind call.
Example:

```
// Get a handle to an LDAP connection and set any session preferences.
dim l as new LDAPMBS("localhost", 389)
```

```
// Use the ProtocolVersion session preference to specify that the client is an LDAPv3 client.
l.ProtocolVersion = 3
if l.Lasterror <>0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

// Bind to the server.
// In this example, the client binds anonymously to the server
// (no DN or credentials are specified).

l.SimpleBind("", "")
if l.Lasterror <>0 then
dim error as string = l.ErrorString(l.Lasterror)
Break
end if

const BASEDN = "dc=example,dc=com"
const SCOPE = l.kScopeSubtree
const FILTER = "(sn=Jensen)"

dim results() as Dictionary = l.Search(BASEDN, SCOPE, FILTER)

for each dic as Dictionary in results
Break // look in debugger
next
```

110.1.18 StartTLS

MBS Network Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a StartTLS request to a server, waits for the reply, and then installs TLS handlers on the session if the request succeeded.
Notes: Lasterror is set.

110.1.19 Properties

110.1.20 CACertFile as FolderItem

MBS Network Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Targets: All.

Function: The path for CACert file.

Notes:

Should be PEM format.
Lasterror is set.
(Read and Write property)

110.1.21 Handle as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

110.1.22 Lasterror as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

110.1.23 NetworkTimeOut as Double

MBS Network Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Targets: All.

Function: The network timeout.
Example:

```
dim l as LDAPMBS
l.NetworkTimeOut = 2.5 // 2.5 seconds
```

Notes:

This is the timeout for the underlaying sockets.
Value is in seconds with resolution to microseconds.
(Read and Write property)

110.1.24 ProtocolVersion as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the protocol version to use.
Notes: (Read and Write property)

110.1.25 Referrals as Integer

MBS Network Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Specifies whether to automatically follow referrals returned by the LDAP server.
Notes: (Read and Write property)

110.1.26 TimeOut as Double

MBS Network Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Targets: All.

Function: The default timeout.
Example:

```
dim l as LDAPMBS
l.TimeOut = 2.5 // 2.5 seconds
```

Notes:

Value is in seconds with resolution to microseconds.
(Read and Write property)

110.1.27 Events

110.1.28 Error(ErrorCode as Integer, ErrorMessage as String, FunctionName as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The error event.
Notes: Called for any function which got an error. Provides for your convenience the error code, message and function name.

110.1.29 Constants

110.1.30 kAuthDigest = & h4086

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.31 kAuthDPA = & h2086

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.32 kAuthExternal = & hA6

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.

110.1.33 kAuthKRBV4 = & hFF

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Mac OS X and Linux.

110.1.34 kAuthKRBV41 = & h81

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Mac OS X and Linux.

110.1.35 kAuthKRBV42 = & h82

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Mac OS X and Linux.

110.1.36 kAuthMSN = & h0886

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.37 kAuthNegotiate = & h4FF

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.38 kAuthNegotiateWin = & h0486

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.39 kAuthNone = 0

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: No auth.

110.1.40 kAuthNTLM = & h1086

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.41 kAuthSASL = & hA3

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Mac OS X and Linux.

110.1.42 kAuthSASLWin = & h83

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.43 kAuthSicily = & h0286

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.44 kAuthSimple = & h80

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Simple authentication.

110.1.45 kAuthSSPI = & h4FF

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the auth mode constants.
Notes: Only for Windows.

110.1.46 kScopeBase = 0

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the scopes constants.

110.1.47 kScopeDefault = -1

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the scopes constants.

110.1.48 kScopeOneLevel = 1

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the scopes constants.

110.1.49 kScopeSubordinate = 3

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the scopes constants.

110.1.50 kScopeSubtree = 2

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the scopes constants.

110.1.51 kVersion1 = 1

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the version constants.

110.1.52 kVersion2 = 2

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the version constants.

110.1.53 kVersion3 = 3

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the version constants.

110.2 class LDAPModMBS

110.2.1 class LDAPModMBS

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to hold values being added/modified.
Example:

```
dim m1 as new LDAPModMBS

m1.Operation = m1.kOperationAdd
m1.Type = "sn"
m1.addValue "yyy"
```

110.2.2 Methods

110.2.3 addValue(value as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a value.
Notes: An item may have one value or several, so the plugin manages an array for you.

110.2.4 clearValues

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all values.

110.2.5 Constructor

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

110.2.6 setValues(values() as String)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the values array to be the one passed.
Notes: Does not make a copy of the array, but references it.

110.2.7 Values as String()

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the array with values.
Notes: Returns not a copy, but the array used to store values.

110.2.8 Properties

110.2.9 Operation as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The operation to perform.
Notes:

Can be kOperationAdd, kOperationDelete or kOperationReplace.
(Read and Write property)

110.2.10 Type as String

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: String that specifies the name of the attribute to modify.
Notes: (Read and Write property)

110.2.11 Value as String

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns first value.
Notes:

Some items only have one value, so this is the value.
(Read only property)

110.2.12 Constants

110.2.13 kOperationAdd = 0

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the operation modes.
Notes: Adds a value to the entry. The supplied values are appended to the existing values in the attribute.

110.2.14 kOperationDelete = 1

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the operation modes.
Notes: Deletes a value in the entry. The supplied values are deleted from the current attribute values.

110.2.15 kOperationReplace = 2

MBS Network Plugin, Plugin Version: 15.0.

Function: One of the operation modes.
Notes: Replaces a value in the entry. The supplied values replace the existing attribute values.

Chapter 111

Licenses

111.1 Licenses

111.1.1 bzip2

Platforms: macOS, Linux, Windows, Targets: .

Function: The bzip2 1.0.5 license
Notes:

This program, "bzip2", the associated library "libbzip2", and all documentation, are copyright (C) 1996-2007 Julian R Seward. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright
notice, this list of conditions and the following disclaimer.

2. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.

3. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

4. The name of the author may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY,
WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Julian Seward, jseward@bzip.org bzip2/libbzip2 version 1.0.5 of 10 December 2007

111.1.2 ChartDirector

Platforms: macOS, Linux, Windows, Targets: .

Function: The ChartDirector 5.0 license
Notes:

Please note: The license for the ChartDirector is included when you purchase the plugin as we pay royalties. So you do not need to buy an additional license from Advanced Software Engineering Limited.

The original license for the C library:

ChartDirector Version 5.0
Copyright (C) 2008 Advanced Software Engineering Limited
All Rights Reserved

********** LICENSE AGREEMENT **********

You should carefully read the following terms and conditions before using the ChartDirector software. Your use of the ChartDirector software indicates your acceptance of this license agreement. Do not use the ChartDirector software if you do not agree with the license agreement.

Disclaimer of Warranty

The ChartDirector software and the accompanying files are distributed and licensed "as is". Advanced Software Engineering Limited disclaims all warranties, either express or implied, including, but not limited to implied warranties of merchantability and fitness for a particular purpose. Should the ChartDirector software prove defective, the licensee assumes the risk of paying the entire cost of all necessary servicing, repair, or correction and any incidental or consequential damages. In no event will Advanced Software Engineering

Limited be liable for any damages whatsoever (including without limitation damages for loss of business profits, business interruption, loss of business information and the like) arising out of the use or the inability to use the ChartDirector software even if Advanced Software Engineering Limited has been advised of the possibility of such damages.

Intellectual Property

The ChartDirector software is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The ChartDirector software is licensed, not sold. Title to the ChartDirector software shall at all times remain with Advanced Software Engineering Limited.

You agree not to modify, decompile, reverse engineer, disassemble or otherwise attempt to derive source code from the ChartDirector software.

Trial Version

The trial version of the ChartDirector software will produce yellow banner messages at the bottom of the chart images generated by it. You agree to not remove, obscure, or alter this message.

Subjected to the conditions in this license agreement:

- You may use the unmodified trial version of the ChartDirector software without charge.

- You may redistribute the unmodified trial version of the ChartDirector software, provided you do not charge for it.

- You may embed the unmodified trial version of the ChartDirector software (or part of it), in a product and distribute the product, provided you do not charge for the product.

If you do not want the yellow banner messages appearing in the charts, or you want to embed the ChartDirector software (or part of it) in a product that is not free, you must purchase a commercial license to use the ChartDirector software from Advanced Software Engineering Limited. Please refer to Advanced Software Engineering's web site at www.advsofteng.com for details.

Credits

The ASP/COM/VB, PHP, Perl, Python, Ruby and C++ editions of ChartDirector contains code from the Independent JPEG Group and the FreeType team. Any software that is derived from these editions of ChartDirector must include the following text in its documentation. This applies to both the trial version as well as to the commercial licensed version of ChartDirector.

- This software is based in part on the work of the Independent JPEG Group

- This software is based in part of the work of the FreeType Team

111.1.3 CUPS

Platforms: macOS, Linux, Windows, Targets: .

Function: The CUPS 1.4.4 license
Notes:

CUPS License Agreement

Copyright 2007-2009 by Apple Inc.
1 Infinite Loop
Cupertino, CA 95014 USA

WWW: http://www.cups.org/

INTRODUCTION

CUPS(tm) is provided under the GNU General Public License ("GPL")
and GNU Library General Public License ("LGPL"), Version 2, with
exceptions for Apple operating systems and the OpenSSL toolkit. A
copy of the exceptions and licenses follow this introduction.

The GNU LGPL applies to the CUPS and CUPS Imaging libraries
located in the "cups" and "filter" subdirectories of the CUPS
source distribution and in the "cups" include directory and
library files in the binary distributions. The GNU GPL applies to
the remainder of the CUPS distribution, including the "pdftops"
filter which is based upon Xpdf.

For those not familiar with the GNU GPL, the license basically
allows you to:

- Use the CUPS software at no charge.
- Distribute verbatim copies of the software in source or
binary form.
- Sell verbatim copies of the software for a media fee, or
sell support for the software.

What this license *does not* allow you to do is make changes or add features to CUPS and then sell a binary distribution without source code. You must provide source for any changes or additions to the software, and all code must be provided under the GPL or LGPL as appropriate. The only exceptions to this are the portions of the CUPS software covered by the Apple operating system license exceptions outlined later in this license agreement.

The GNU LGPL relaxes the "link-to" restriction, allowing you to develop applications that use the CUPS and CUPS Imaging libraries under other licenses and/or conditions as appropriate for your application, driver, or filter.

LICENSE EXCEPTIONS

In addition, as the copyright holder of CUPS, Apple Inc. grants the following special exceptions:

1. Apple Operating System Development License Exception;

a. Software that is developed by any person or entity for an Apple Operating System ("Apple OS-Developed Software"), including but not limited to Apple and third party printer drivers, filters, and backends for an Apple Operating System, that is linked to the CUPS imaging library or based on any sample filters or backends provided with CUPS shall not be considered to be a derivative work or collective work based on the CUPS program and is exempt from the mandatory source code release clauses of the GNU GPL. You may therefore distribute linked combinations of the CUPS imaging library with Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software. You may also use sample filters and backends provided with CUPS to develop Apple OS-Developed Software without releasing the source code of the Apple OS-Developed Software.

b. An Apple Operating System means any operating system software developed and/or marketed by Apple Computer, Inc., including but not limited to all existing releases and versions of Apple's Darwin, Mac OS X, and Mac OS X Server products and all follow-on releases and future versions thereof.

c. This exception is only available for Apple
OS-Developed Software and does not apply to software
that is distributed for use on other operating
systems.

d. All CUPS software that falls under this license
exception have the following text at the top of each
source file:

This file is subject to the Apple OS-Developed
Software exception.

2. OpenSSL Toolkit License Exception;

a. Apple Inc. explicitly allows the compilation and
distribution of the CUPS software with the OpenSSL
Toolkit.

No developer is required to provide these exceptions in a
derived work.

KERBEROS SUPPORT CODE

The Kerberos support code ("KSC") is copyright 2006 by Jelmer
Vernooij and is provided 'as-is', without any express or implied
warranty. In no event will the author or Apple Inc. be held
liable for any damages arising from the use of the KSC.

Sources files containing KSC have the following text at the top
of each source file:

This file contains Kerberos support code, copyright 2006 by
Jelmer Vernooij.

The KSC copyright and license apply only to Kerberos-related
feature code in CUPS. Such code is typically conditionally
compiled based on the present of the HAVE_GSSAPI preprocessor
definition.

Permission is granted to anyone to use the KSC for any purpose,

including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of the KSC must not be misrepresented; you must not claim that you wrote the original software. If you use the KSC in a product, an acknowledgment in the product documentation would be appreciated but is not required.

2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

TRADEMARKS

CUPS and the CUPS logo (the "CUPS Marks") are trademarks of Apple Inc. Apple grants you a non-exclusive and non-transferable right to use the CUPS Marks in any direct port or binary distribution incorporating CUPS software and in any promotional material therefor. You agree that your products will meet the highest levels of quality and integrity for similar goods, not be unlawful, and be developed, manufactured, and distributed in compliance with this license. You will not interfere with Apple's rights in the CUPS Marks, and all use of the CUPS Marks shall inure to the benefit of Apple. This license does not apply to use of the CUPS Marks in a derivative products, which requires prior written permission from Apple Inc.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your

freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in

whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three

years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License

may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY

YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) 19yy <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.

This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items–whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this is what you want to do, use the GNU Library General
Public License instead of this License.

GNU LIBRARY GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1991 Free Software Foundation, Inc.
59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[This is the first released version of the library GPL. It is
numbered 2 because it goes with version 2 of the ordinary GPL.]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change

free software–to make sure the software is free for all its users.

This license, the Library General Public License, applies to some specially designated Free Software Foundation software, and to any other libraries whose authors decide to use it. You can use it for your libraries, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library, or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link a program with the library, you must provide complete object files to the recipients so that they can relink them with the library, after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

Our method of protecting your rights has two steps: (1) copyright the library, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the library.

Also, for each distributor's protection, we want to make certain that everyone understands that there is no warranty for this free library. If the library is modified by someone else and passed on, we want its recipients to know that what they have is not the original version, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that companies distributing free software will individually obtain patent licenses, thus in effect transforming the program into proprietary software. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License, which was designed for utility programs. This license, the GNU Library General Public License, applies to certain designated libraries. This license is quite different from the ordinary one; be sure to read it in full, and don't assume that anything in it is the same as in the ordinary license.

The reason we have a separate public license for some libraries is that they blur the distinction we usually make between modifying or adding to a program and simply using it. Linking a program with a library, without changing the library, is in some sense simply using the library, and is analogous to running a utility program or application program. However, in a textual and legal sense, the linked executable is a combined work, a derivative of the original library, and the ordinary General Public License treats it as such.

Because of this blurred distinction, using the ordinary General Public License for libraries did not effectively promote software sharing, because most developers did not use the libraries. We concluded that weaker conditions might promote sharing better.

However, unrestricted linking of non-free programs would deprive the users of those programs of all benefit from the free status of the libraries themselves. This Library General Public License is intended to permit developers of non-free programs to use free libraries, while preserving your freedom as a user of such programs to change the free libraries that are incorporated in them. (We have not seen how to achieve this as regards changes in header files, but we have achieved it as regards changes in the actual functions of the Library.) The hope is that this will lead to faster development of free libraries.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, while the latter only works together with the library.

Note that it is possible for a library to be covered by the ordinary General Public License rather than by this special one.

GNU LIBRARY GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Library General Public License (also called ”this License”). Each licensee is addressed as ”you”.

A ”library” means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The ”Library”, below, refers to any such software library or work which has been distributed under these terms. A ”work based on the Library” means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term ”modification”.)

”Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library’s complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License.

Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also compile or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood

that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

c) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

d) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Library General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or
modify it under the terms of the GNU Library General Public
License as published by the Free Software Foundation; either
version 2 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
Library General Public License for more details.

You should have received a copy of the GNU Library General Public
License along with this library; if not, write to the Free
Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

111.1.4 CURL

Platforms: macOS, Linux, Windows, Targets: .

Function: The CURL 7.20.0 license
Notes:

CURL links to libssl, libcrypto, libssh2 and other libraries.

COPYRIGHT AND PERMISSION NOTICE

Copyright (c) 1996 - 2009, Daniel Stenberg, <daniel@haxx.se>.

All rights reserved.

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF THIRD PARTY RIGHTS. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Except as contained in this notice, the name of a copyright holder shall not be used in advertising or otherwise to promote the sale, use or other dealings in this Software without prior written authorization of the copyright holder.

111.1.5 expat

Platforms: macOS, Linux, Windows, Targets: .

Function: The expat 2.0.1 license
Notes:

Copyright (c) 1998, 1999, 2000 Thai Open Source Software Center Ltd and Clark Cooper Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Expat maintainers.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

111.1.6 FreeType

Platforms: macOS, Linux, Windows, Targets: .

Function: The FreeType 2.3.9 license
Notes:

The FreeType 2 font engine is copyrighted work and cannot be used legally without a software license. In order to make this project usable to a vast majority of developers, we distribute it under two mutually exclusive open-source licenses.

This means that *you* must choose *one* of the two licenses described below, then obey all its terms and conditions when using FreeType 2 in any of your projects or products.

- The FreeType License, found in the file 'FTL.TXT', which is similar to the original BSD license *with* an advertising clause that forces you to explicitly cite the FreeType project in your product's documentation. All details are in the license file. This license is suited to products which don't use the GNU General Public License.

- The GNU General Public License version 2, found in 'GPL.TXT' (any later version can be used also), for programs which already use the GPL. Note that the FTL is incompatible with the GPL due to its advertisement clause.

The contributed PCF driver comes with a license similar to that of the X Window System. It is compatible to the above two licenses (see file src/pcf/readme).

— end of LICENSE.TXT —

The FreeType Project LICENSE
————————————-

2006-Jan-27

Copyright 1996-2002, 2006 by
David Turner, Robert Wilhelm, and Werner Lemberg

Introduction

==========

The FreeType Project is distributed in several archive packages;
some of them may contain, in addition to the FreeType font engine,
various tools and contributions which rely on, or relate to, the
FreeType Project.

This license applies to all files found in such packages, and
which do not fall under their own explicit license. The license
affects thus the FreeType font engine, the test programs,
documentation and makefiles, at the very least.

This license was inspired by the BSD, Artistic, and IJG
(Independent JPEG Group) licenses, which all encourage inclusion
and use of free software in commercial and freeware products
alike. As a consequence, its main points are that:

o We don't promise that this software works. However, we will be
interested in any kind of bug reports. ('as is' distribution)

o You can use this software for whatever you want, in parts or
full form, without having to pay us. ('royalty-free' usage)

o You may not pretend that you wrote this software. If you use
it, or only parts of it, in a program, you must acknowledge
somewhere in your documentation that you have used the
FreeType code. ('credits')

We specifically permit and encourage the inclusion of this
software, with or without modifications, in commercial products.
We disclaim all warranties covering The FreeType Project and
assume no liability related to The FreeType Project.

Finally, many people asked us for a preferred form for a
credit/disclaimer to use in compliance with this license. We thus
encourage you to use the following text:

"""
Portions of this software are copyright © <year>The FreeType
Project (www.freetype.org). All rights reserved.
"""

Please replace <year>with the value from the FreeType version you actually use.

Legal Terms
==========

0. Definitions

Throughout this license, the terms 'package', 'FreeType Project', and 'FreeType archive' refer to the set of files originally distributed by the authors (David Turner, Robert Wilhelm, and Werner Lemberg) as the 'FreeType Project', be they named as alpha, beta or final release.

'You' refers to the licensee, or person using the project, where 'using' is a generic term including compiling the project's source code as well as linking it to form a 'program' or 'executable'. This program is referred to as 'a program using the FreeType engine'.

This license applies to all files distributed in the original FreeType Project, including all source code, binaries and documentation, unless otherwise stated in the file in its original, unmodified form as distributed in the original archive. If you are unsure whether or not a particular file is covered by this license, you must contact us to verify this.

The FreeType Project is copyright (C) 1996-2000 by David Turner, Robert Wilhelm, and Werner Lemberg. All rights reserved except as specified below.

1. No Warranty

THE FREETYPE PROJECT IS PROVIDED 'AS IS' WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN false EVENT WILL ANY OF THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY DAMAGES CAUSED BY THE USE OR THE INABILITY TO USE, OF THE FREETYPE PROJECT.

2. Redistribution

This license grants a worldwide, royalty-free, perpetual and irrevocable right and license to use, execute, perform, compile, display, copy, create derivative works of, distribute and sublicense the FreeType Project (in both source and object code forms) and derivative works thereof for any purpose; and to authorize others to exercise some or all of the rights granted herein, subject to the following conditions:

o Redistribution of source code must retain this license file ('FTL.TXT') unaltered; any additions, deletions or changes to the original files must be clearly indicated in accompanying documentation. The copyright notices of the unaltered, original files must be preserved in all copies of source files.

o Redistribution in binary form must provide a disclaimer that states that the software is based in part of the work of the FreeType Team, in the distribution documentation. We also encourage you to put an URL to the FreeType web page in your documentation, though this isn't mandatory.

These conditions apply to any software derived from or based on the FreeType Project, not just the unmodified files. If you use our work, you must acknowledge us. However, no fee need be paid to us.

3. Advertising

Neither the FreeType authors and contributors nor you shall use the name of the other for commercial, advertising, or promotional purposes without specific prior written permission.

We suggest, but do not require, that you use one or more of the following phrases to refer to this software in your documentation or advertising materials: 'FreeType Project', 'FreeType Engine', 'FreeType library', or 'FreeType Distribution'.

As you have not signed this license, you are not required to accept it. However, as the FreeType Project is copyrighted

material, only this license, or another one contracted with the authors, grants you the right to use, distribute, and modify it. Therefore, by using, distributing, or modifying the FreeType Project, you indicate that you understand and accept all the terms of this license.

4. Contacts

There are two mailing lists related to FreeType:

o freetype@nongnu.org

Discusses general use and applications of FreeType, as well as future and wanted additions to the library and distribution. If you are looking for support, start in this list if you haven't found anything to help you in the documentation.

o freetype-devel@nongnu.org

Discusses bugs, as well as engine internals, design issues, specific licenses, porting, etc.

Our home page can be found at

http://www.freetype.org

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your

freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in

whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three

years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License

may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY

YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY false WARRANTY; for details type 'show w'.

This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items–whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this is what you want to do, use the GNU Library General
Public License instead of this License.

111.1.7 GraphicsMagick

Platforms: macOS, Linux, Windows, Targets: .

Function: The GraphicsMagick license
Notes:

GraphicsMagick links to Tiff, zlib, LCMS, JPEG, FreeType, XML, iconv and PNG.

.. This text is in reStucturedText format, so it may look a bit odd.
.. See http://docutils.sourceforge.net/rst.html for details.

==========
GraphicsMagick Copyrights and Licenses
==========

This file is part of the GraphicsMagick software distributed by the
GraphicsMagick Group.

[*Please note that the legal community considers 15 or more
total lines of code or text (not necessarily contiguous) to
be significant for the purposes of copyright. Repeated
changes such as renaming a symbol has similar significance
to changing one line of code.*]

The licenses which components of this software fall under are as follows.

1)
In November 2002, the GraphicsMagick Group created GraphicsMagick
from ImageMagick Studio's ImageMagick and applied the "MIT" style
license:

Copyright (C) 2002 - 2010 GraphicsMagick Group

Permission is hereby granted, free of charge, to any person
obtaining a copy of this software and associated documentation files
(the "Software"), to deal in the Software without restriction,
including without limitation the rights to use, copy, modify, merge,
publish, distribute, sublicense, and/or sell copies of the Software,
and to permit persons to whom the Software is furnished to do so,
subject to the following conditions:

The above copyright notice and this permission notice shall be
included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND,
EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF
MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND
NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS
BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN
ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN
CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE
SOFTWARE.

2)
In October 1999, ImageMagick Studio assumed the responsibility for
the development of ImageMagick (forking from the distribution by
E. I. du Pont de Nemours and Company) and applied a new license:

Copyright (C) 2002 ImageMagick Studio, a non-profit organization dedicated

to making software imaging solutions freely available.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (”ImageMagick”), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of ImageMagick.

The software is provided ”as is”, without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall ImageMagick Studio be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the ImageMagick Studio shall not be used in advertising or otherwise to promote the sale, use or other dealings in ImageMagick without prior written authorization from the ImageMagick Studio.

3)
From 1991 to October 1999 (through ImageMagick 4.2.9), ImageMagick was developed and distributed by E. I. du Pont de Nemours and Company:

Copyright 1999 E. I. du Pont de Nemours and Company

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (”ImageMagick”), to deal in ImageMagick without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of ImageMagick, and to permit persons to whom the ImageMagick is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of ImageMagick.

The software is provided "as is", without warranty of any kind, express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall E. I. du Pont de Nemours and Company be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with ImageMagick or the use or other dealings in ImageMagick.

Except as contained in this notice, the name of the E. I. du Pont de Nemours and Company shall not be used in advertising or otherwise to promote the sale, use or other dealings in ImageMagick without prior written authorization from the E. I. du Pont de Nemours and Company.

4)
The GraphicsMagick Base64Decode() and Base64Encode() functions are based on source code obtained from OpenSSH. This source code is distributed under the following license:

Copyright (c) 2000 Markus Friedl. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR \'\'AS IS\'\' AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

5)

Many of the pattern images in coders/logo.c are derived from XFig, which is distributed under the following license:

| FIG : Facility for Interactive Generation of figures
| Copyright (c) 1985-1988 by Supoj Sutanthavibul
| Parts Copyright (c) 1989-2000 by Brian V. Smith
| Parts Copyright (c) 1991 by Paul King

Any party obtaining a copy of these files is granted, free of charge, a full and unrestricted irrevocable, world-wide, paid up, royalty-free, nonexclusive right and license to deal in this software and documentation files (the "Software"), including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons who receive copies from any such party to do so, with the only requirement being that this copyright notice remain intact.

6)
The documentation for the composition operators is copied from the rlecomp manual page, which is authored by Rod Bogart and John W. Peterson. Rlecomp is part of the Utah Raster Toolkit distributed by the University of Michigan and the University of Utah. The copyright for this manual page is as follows:

Copyright (c) 1986, University of Utah

This software is copyrighted as noted below. It may be freely copied, modified, and redistributed, provided that the copyright notice is preserved on all copies.

There is no warranty or other guarantee of fitness for this software, it is provided solely "as is". Bug reports or fixes may be sent to the author, who may or may not act on them as he desires.

You may not include this software in a program or other software product without supplying the source, or without informing the end-user that the source is available for no extra charge.

If you modify this software, you should include a notice giving the name of the person performing the modification, the date of modification, and the reason for such modification.

7)
The source code comprising swab.c is originally derived from libtiff which has the following license:

| Copyright (c) 1988-1997 Sam Leffler
| Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or publicity relating to the software without the specific, prior written permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN false EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

8)
The C++ API known as "Magick++", and which resides in the Magick++ directory, is distributed under the following license:

Copyright 1999 - 2003 Bob Friesenhahn <bfriesen@simple.dallas.tx.us>

Permission is hereby granted, free of charge, to any person obtaining a copy of the source files and associated documentation files ("Magick++"), to deal in Magick++ without restriction, including without limitation of the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of Magick++, and to permit persons to whom the Magick++ is furnished to do so, subject to the following conditions:

This copyright notice shall be included in all copies or substantial portions of Magick++. The copyright to Magick++ is retained by its author and shall not be subsumed or replaced by any other copyright.

The software is provided "as is", without warranty of any kind,

express or implied, including but not limited to the warranties of merchantability, fitness for a particular purpose and noninfringement. In no event shall Bob Friesenhahn be liable for any claim, damages or other liability, whether in an action of contract, tort or otherwise, arising from, out of or in connection with Magick++ or the use or other dealings in Magick++.

9)
The GraphicsMagick HaldClutImagePixels() function in magick/hclut.c is based on source code from the HaldCLUT package by Eskil Steenberg (http://www.quelsolaar.com/technology/clut.html) which is distributed under the following license:

Copyright (c) 2005 Eskil Steenberg. All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

THIS SOFTWARE IS PROVIDED BY THE AUTHOR \'\'AS IS\'\' AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

10)
GraphicsMagick makes use of third-party "delegate" libraries to support certain optional features. These libraries bear their own copyrights and licenses, which may be more or less restrictive than the GraphicsMagick license. For convenience, when GraphicsMagick is bundled with (or compiled with) "delegate" libraries, a copy of the licenses for these libraries is provided in a "licenses" directory.

| Copyright (C) 2002 - 2010 GraphicsMagick Group

111.1.8 HASP

Platforms: macOS, Linux, Windows, Targets: .

Function: The HASP license
Notes:

Aladdin Knowledge Systems Ltd. (c) 1985 - 2005. All rights reserved.

Exact license details are available with the HASP SDKs.

111.1.9 ImageMagick

Platforms: macOS, Linux, Windows, Targets: .

Function: The ImageMagick license
Notes:

The authoratitive ImageMagick license can be found at
http://www.imagemagick.org/script/license.php and ImageMagick notices at
http://www.imagemagick.org/script/notice.php.

Before we get to the text of the license lets just review what the license says in simple terms:

It allows you to:

* freely download and use ImageMagick software, in whole or in part, for personal, company internal, or commercial purposes;
* use ImageMagick software in packages or distributions that you create.

It forbids you to:

* redistribute any piece of ImageMagick-originated software without proper attribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that ImageMagick Studio LLC endorses your distribution;
* use any marks owned by ImageMagick Studio LLC in any way that might state or imply that you created

the ImageMagick software in question.

It requires you to:

* include a copy of the license in any redistribution you may make that includes ImageMagick software;
* provide clear attribution to ImageMagick Studio LLC for any distributions that include ImageMagick software.

It does not require you to:

* include the source of the ImageMagick software itself, or of any modifications you may have made to it, in any redistribution you may assemble that includes it;
* submit changes that you make to the software back to the ImageMagick Studio LLC (though such feedback is encouraged).

A few other clarifications include:
* ImageMagick is freely available without charge;
* you may include ImageMagick on a CD-ROM as long as you comply with the terms of the license;
* you can give modified code away for free or sell it under the terms of the ImageMagick license or distribute the result under a different license, but you need to acknowledge the use of the ImageMagick software;
* the license is compatible with the GPL.

The legally binding and authoritative terms and conditions for use, reproduction, and distribution of ImageMagick follow:

Copyright 1999-2007 ImageMagick Studio LLC, a non-profit organization dedicated to making software imaging solutions freely available.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.
"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.
"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.
"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.
"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

”Object” form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

”Work” shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

”Derivative Works” shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

”Contribution” shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, ”submitted” means any form of electronic, verbal, or written communication intentionally sent to the Licensor by its copyright holder or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as ”Not a Contribution.”

”Contributor” shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

a. You must give any other recipients of the Work or Derivative Works a copy of this License; and

b. You must cause any modified files to carry prominent notices stating that You changed the files; and

c. You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

d. If the Work includes a ”NOTICE” text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from

the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

111.1.10 iMedia Browser

Platforms: macOS, Linux, Windows, Targets: .

Function: The iMedia Browser license
Notes:

iMedia Browser <http://karelia.com/imedia/>
Copyright (c) 2005-2007 by Karelia Software et al.
iMedia Browser is based on code originally developed by Jason Terhorst, further developed for Sandvox by Greg Hulands, Dan Wood, and Terrence Talbot. Contributions have also been made by Matt Gough, Martin Wennerberg and others as indicated in source files.
iMedia Browser is licensed under the following terms:
Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in all or substantial portions of the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the

following conditions:
Redistributions of source code must retain the original terms stated here, including this list of conditions, the disclaimer noted below, and the following copyright notice: Copyright (c) 2005-2007 by Karelia Software et al.
Redistributions in binary form must include, in an end-user-visible manner, e.g., About window, Acknowledgments window, or similar, either a) the original terms stated here, including this list of conditions, the disclaimer noted below, and the aforementioned copyright notice, or b) the aforementioned copyright notice and a link to karelia.com/imedia.
Neither the name of Karelia Software, nor Sandvox, nor the names of contributors to iMedia Browser may be used to endorse or promote products derived from the Software without prior and express written permission from Karelia Software or individual contributors, as appropriate.
Disclaimer: THE SOFTWARE IS PROVIDED BY THE COPYRIGHT OWNER AND CONTRIBUTORS "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES, OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT, OR OTHERWISE, ARISING FROM, OUT OF, OR IN CONNECTION WITH, THE SOFTWARE OR THE USE OF, OR OTHER DEALINGS IN, THE SOFTWARE.

111.1.11 lcms

Platforms: macOS, Linux, Windows, Targets: .

Function: The lcms 1.19 license
Notes:

Little CMS
Copyright (c) 1998-2007 Marti Maria Saguer

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN false EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

111.1.12 libjpeg

Platforms: macOS, Linux, Windows, Targets: .

Function: The libjpeg license
Notes:

In plain English:

1. We don't promise that this software works. (But if you find any bugs, please let us know!)
2. You can use this software for whatever you want. You don't have to pay us.
3. You may not pretend that you wrote this software. If you use it in a program, you must acknowledge somewhere in your documentation that you've used the IJG code.

In legalese:

The authors make false WARRANTY or representation, either express or implied, with respect to this software, its quality, accuracy, merchantability, or fitness for a particular purpose. This software is provided "AS IS", and you, its user, assume the entire risk as to its quality and accuracy.

This software is copyright (C) 1991-2010, Thomas G. Lane, Guido Vollbeding. All Rights Reserved except as specified below.

Permission is hereby granted to use, copy, modify, and distribute this software (or portions thereof) for any purpose, without fee, subject to these conditions:
(1) If any part of the source code for this software is distributed, then this README file must be included, with this copyright and no-warranty notice unaltered; and any additions, deletions, or changes to the original files must be clearly indicated in accompanying documentation.
(2) If only executable code is distributed, then the accompanying documentation must state that "this software is based in part on the work of the Independent JPEG Group".
(3) Permission for use of this software is granted only if the user accepts full responsibility for any undesirable consequences; the authors accept false LIABILITY for damages of any kind.

These conditions apply to any software derived from or based on the IJG code, not just to the unmodified library. If you use our work, you ought to acknowledge us.

Permission is NOT granted for the use of any IJG author's name or company name in advertising or publicity relating to this software or products derived from it. This software may be referred to only as "the Independent JPEG Group's software".

We specifically permit and encourage the use of this software as the basis of commercial products, provided that all warranty or liability claims are assumed by the product vendor.

ansi2knr.c is included in this distribution by permission of L. Peter Deutsch, sole proprietor of its copyright holder, Aladdin Enterprises of Menlo Park, CA. ansi2knr.c is NOT covered by the above copyright and conditions, but instead by the usual distribution terms of the Free Software Foundation; principally, that you must include source code if you redistribute it. (See the file ansi2knr.c for full details.) However, since ansi2knr.c is not needed as part of any program generated from the IJG code, this does not limit you more than the foregoing paragraphs do.

The Unix configuration script "configure" was produced with GNU Autoconf. It is copyright by the Free Software Foundation but is freely distributable. The same holds for its supporting scripts (config.guess, config.sub, ltmain.sh). Another support script, install-sh, is copyright by X Consortium but is also freely distributable.

The IJG distribution formerly included code to read and write GIF files. To avoid entanglement with the Unisys LZW patent, GIF reading support has been removed altogether, and the GIF writer has been simplified to produce "uncompressed GIFs". This technique does not use the LZW algorithm; the resulting GIF files are larger than usual, but are readable by all standard GIF decoders.

We are required to state that
"The Graphics Interchange Format(c) is the Copyright property of CompuServe Incorporated. GIF(sm) is a Service Mark property of CompuServe Incorporated."

111.1.13 libpng

Platforms: macOS, Linux, Windows, Targets: .

Function: The libpng 1.4.3 license.
Notes:

This copy of the libpng notices is provided for your convenience. In case of any discrepancy between this

copy and the notices in the file png.h that is included in the libpng distribution, the latter shall prevail.

COPYRIGHT NOTICE, DISCLAIMER, and LICENSE:

If you modify libpng you may insert additional notices immediately following this sentence.

This code is released under the libpng license.

libpng versions 1.2.6, August 15, 2004, through 1.4.3, June 26, 2010, are Copyright (c) 2004, 2006-2007 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.2.5 with the following individual added to the list of Contributing Authors

Cosmin Truta

libpng versions 1.0.7, July 1, 2000, through 1.2.5 - October 3, 2002, are Copyright (c) 2000-2002 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-1.0.6 with the following individuals added to the list of Contributing Authors

Simon-Pierre Cadieux
Eric S. Raymond
Gilles Vollant

and with the following additions to the disclaimer:

There is no warranty against interference with your enjoyment of the
library or against infringement. There is no warranty that our
efforts or the library will fulfill any of your particular purposes
or needs. This library is provided with all faults, and the entire
risk of satisfactory quality, performance, accuracy, and effort is with
the user.

libpng versions 0.97, January 1998, through 1.0.6, March 20, 2000, are Copyright (c) 1998, 1999 Glenn Randers-Pehrson, and are distributed according to the same disclaimer and license as libpng-0.96, with the following individuals added to the list of Contributing Authors:

Tom Lane
Glenn Randers-Pehrson
Willem van Schaik

libpng versions 0.89, June 1996, through 0.96, May 1997, are Copyright (c) 1996, 1997 Andreas Dilger Distributed according to the same disclaimer and license as libpng-0.88,

with the following individuals added to the list of Contributing Authors:

John Bowler
Kevin Bracey
Sam Bushell
Magnus Holmgren
Greg Roelofs
Tom Tanner

libpng versions 0.5, May 1995, through 0.88, January 1996, are Copyright (c) 1995, 1996 Guy Eric Schalnat, Group 42, Inc.

For the purposes of this copyright and license, "Contributing Authors"
is defined as the following set of individuals:

Andreas Dilger
Dave Martindale
Guy Eric Schalnat
Paul Schmidt
Tim Wegner

The PNG Reference Library is supplied "AS IS". The Contributing Authors and Group 42, Inc. disclaim all warranties, expressed or implied,
including, without limitation, the warranties of merchantability and of fitness for any purpose. The Contributing Authors and Group 42, Inc.
assume no liability for direct, indirect, incidental, special, exemplary,
or consequential damages, which may result from the use of the PNG Reference Library, even if advised of the possibility of such damage.

Permission is hereby granted to use, copy, modify, and distribute this source code, or portions hereof, for any purpose, without fee, subject to the following restrictions:

1. The origin of this source code must not be misrepresented.
2. Altered versions must be plainly marked as such and must not be misrepresented as being the original source.
3. This Copyright notice may not be removed or altered from any source or altered source distribution.

The Contributing Authors and Group 42, Inc. specifically permit, without fee, and encourage the use of this source code as a component to supporting the PNG file format in commercial products. If you use this source code in a product, acknowledgment is not required but would be appreciated.

A "png_get_copyright" function is available, for convenient use in "about"

boxes and the like:

printf(”% s”,png_get_copyright(NULL));

Also, the PNG logo (in PNG format, of course) is supplied in the files ”pngbar.png” and ”pngbar.jpg (88x31) and ”pngnow.png” (98x31).

Libpng is OSI Certified Open Source Software. OSI Certified Open Source is a certification mark of the Open Source Initiative.

Glenn Randers-Pehrson glennrp at users.sourceforge.net June 26, 2010

111.1.14 libssh2

Platforms: macOS, Linux, Windows, Targets: .

Function: The ssh2 1.2.4 license
Notes:

Copyright (c) 2004-2007 Sara Golemon <sarag@libssh2.org>
Copyright (c) 2006-2007 The Written Word, Inc.
Copyright (c) 2009 Daniel Stenberg Copyright (C) 2008, 2009 Simon Josefsson All rights reserved.

Redistribution and use in source and binary forms,
with or without modification, are permitted provided that the following conditions are met:

- Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
- Neither the name of the copyright holder nor the names of any other contributors may be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS ”AS IS” AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN false EVENT SHALL THE COPYRIGHT OWNER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY,

OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

111.1.15 LibTesseract

Platforms: macOS, Linux, Windows, Targets: .

Function: The LibTesseract 2.04 license
Notes:

This package contains the Tesseract Open Source OCR Engine.
Orignally developed at Hewlett Packard Laboratories Bristol and
at Hewlett Packard Co, Greeley Colorado, all the code
in this distribution is now licensed under the Apache License:

- Licensed under the Apache License, Version 2.0 (the "License");
- you may not use this file except in compliance with the License.
- You may obtain a copy of the License at
- http://www.apache.org/licenses/LICENSE-2.0
- Unless required by applicable law or agreed to in writing, software
- distributed under the License is distributed on an "AS IS" BASIS,
- WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
- See the License for the specific language governing permissions and
- limitations under the License.

Other Dependencies and Licenses:
==========
The Aspirin/MIGRAINES system is no longer used.

Tesseract can also make use of the libtiff library. (www.libtiff.org)
Without libtiff, Tesseract can only read uncompressed and G3 compressed
TIFF files.

111.1.16 libtiff

Platforms: macOS, Linux, Windows, Targets: .

Function: The libtiff 3.9.4 license
Notes:

Use and Copyright

Silicon Graphics has seen fit to allow us to give this work away. It is free. There is no support or guarantee of any sort as to its operations, correctness, or whatever. If you do anything useful with all or parts of it you need to honor the copyright notices. I would also be interested in knowing about it and, hopefully, be acknowledged.

The legal way of saying that is:

Copyright (c) 1988-1997 Sam Leffler
Copyright (c) 1991-1997 Silicon Graphics, Inc.

Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that (i) the above copyright notices and this permission notice appear in all copies of the software and related documentation, and (ii) the names of Sam Leffler and Silicon Graphics may not be used in any advertising or publicity relating to the software without the specific, prior written permission of Sam Leffler and Silicon Graphics.

THE SOFTWARE IS PROVIDED "AS-IS" AND WITHOUT WARRANTY OF ANY KIND, EXPRESS, IMPLIED OR OTHERWISE, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

IN false EVENT SHALL SAM LEFFLER OR SILICON GRAPHICS BE LIABLE FOR ANY SPECIAL, INCIDENTAL, INDIRECT OR CONSEQUENTIAL DAMAGES OF ANY KIND, OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER OR NOT ADVISED OF THE POSSIBILITY OF DAMAGE, AND ON ANY THEORY OF LIABILITY, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

111.1.17 libunimotion

Platforms: macOS, Linux, Windows, Targets: .

Function: The libunimotion 0.4.1 license
Notes:

The plugin loads the unimotion library. So the library is LGPL and your commercial app can load it.

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages–typically libraries–of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be

allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

”Source code” for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or

table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6.

Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy

from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

false WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS false WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME

THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN false EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the ”copyright” line and a pointer to where the full notice is found.

<one line to give the library’s name and a brief idea of what it does.>
Copyright (C) <year><name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public

License along with this library; if not, write to the Free Software
Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

111.1.18 libunzip

Platforms: macOS, Linux, Windows, Targets: .

Function: The libunzip 1.01e license
Notes:

unzip.h – IO for uncompress .zip files using zlib
Version 1.01e, February 12th, 2005

Copyright (C) 1998-2005 Gilles Vollant

This unzip package allow extract file from .ZIP file, compatible with PKZip 2.04g
WinZip, InfoZip tools and compatible.

Multi volume ZipFile (span) are not supported.
Encryption compatible with pkzip 2.04g only supported
Old compressions used by old PKZip 1.x are not supported

I WAIT FEEDBACK at mail info@winimage.com
Visit also http://www.winimage.com/zLibDll/unzip.htm for evolution

Condition of use and distribution are the same than zlib :

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this software in a product, an acknowledgment in the product documentation would be appreciated but is not required.
2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.
3. This notice may not be removed or altered from any source distribution.

111.1.24 PCRE

Platforms: macOS, Linux, Windows, Targets: .

Function: The PCRE 8.0.1 license (RegEx)
Notes:

PCRE LICENCE

PCRE is a library of functions to support regular expressions whose syntax and semantics are as close as possible to those of the Perl 5 language.

Release 8 of PCRE is distributed under the terms of the "BSD" licence, as specified below. The documentation for PCRE, supplied in the "doc" directory, is distributed under the same terms as the software itself.

The basic library functions are written in C and are freestanding. Also included in the distribution is a set of C++ wrapper functions.

THE BASIC LIBRARY FUNCTIONS

111.1.28 SecureDongle X

Platforms: macOS, Linux, Windows, Targets: .

Function: The SecureDongle X license
Notes:

Software Developer's Agreement

All Products of SecureMetric Technology Sdn. Bhd. (SecureMetric) including, but not limited to, evaluation copies, diskettes, CD-ROMs, hardware and documentation, and all future orders, are subject to the terms of this Agreement. If developers do not agree with the terms herein, please return the evaluation package to us, postage and insurance prepaid, within seven days of their receipt, and we will reimburse developers the cost of the Product, less freight and reasonable handling charges.

1. Allowable Use - Developers may merge and link the Software with other programs for the sole purpose of protecting those programs in accordance with the usage described in the Developer's Guide. Developers may make archival copies of the Software.

2. Prohibited Use - The Software or hardware or any other part of the Product may not be copied, reengineered, disassembled, decompiled, revised, enhanced or otherwise modified, except as specifically allowed in item 1. Developers may not reverse engineer the Software or any part of the product or attempt to discover the Software's source code. Developers may not use the magnetic or optical media included with the Product for the purposes of transferring or storing data that was not either an original part of the Product, or a SecureMetric provided enhancement or upgrade to the Product.

3. Warranty - SecureMetric warrants that the hardware and Software storage media are substantially free from significant defects of workmanship or materials for a time period of twelve (12) months from the date of delivery of the Product to developers.

4. Breach of Warranty - In the event of breach of this warranty, SecureMetric's sole obligation is to replace or repair, at the discretion of SecureMetric, any Product free of charge. Any replaced Product becomes the property of SecureMetric. Warranty claims must be made in writing to SecureMetric during the warranty

period and within fourteen (14) days after the observation of the defect. All warranty claims must be accompanied by evidence of the defect that is deemed satisfactory by SecureMetric. Any Products that developers return to SecureMetric, or a SecureMetric authorized distributor, must be sent with freight and insurance prepaid.
EXCEPT AS STATED ABOVE, THERE IS false OTHER WARRANTY OR REPRESENTATION OF THE PRODUCT, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

5. Limitation of SecureMetric's Liability - SecureMetric's entire liability to developers or any other party for any cause whatsoever, whether in contract or in tort, including negligence, shall not exceed the price developers paid for the unit of the Product that caused the damages or are the subject of, or indirectly related to the cause of action. In no event shall SecureMetric be liable for any damages caused by developers failure to meet developer's obligations, nor for any loss of data, profit or savings, or any other consequential and incidental damages, even if SecureMetric has been advised of the possibility of damages, or for any claim by developers based on any third-party claim.

6. Termination - This Agreement shall terminate if developers fail to comply with the terms herein. Items 2, 3, 4 and 5 shall survive any termination of this Agreement.

111.1.29 SQLAPI

Platforms: macOS, Linux, Windows, Targets: .

Function: The SQLAPI 3.7.33 license
Notes:

Note: Once you buy a SQL Plugin license, you get automatically a SQLAPI license from use with our plugin. No extra license fee required.

****
SQLAPI++ Library - LICENSE AGREEMENT and WARRANTY
****

You should carefully read the following terms and conditions
before using this software. Your use of this software
indicates your acceptance of this license agreement
and warranty.

LICENSE AGREEMENT:
==========
You have the non-exclusive right to use the Library.
The Company retains all title and ownership of the Library.

EVALUATION:
==========
The SQLAPI++ Library is distributed as shareware. You can use the Library
for evaluation purposes without charge for unlimited period. The evaluation
version has no limits or functional differences from registered version,
but it will display registration messages occasionally.
While in evaluation you MAY NOT distribute your applications written with
trial version of SQLAPI++ library.

REGISTERED VERSIONS:
==========
You have to purchase SQLAPI++ Personal license for every developer,
or one Site license for up to 10 developers in your company
or one Site+ license for unlimited number of developers in your company.
You MAY distribute applications written with SQLAPI++ (including SQLAPI++
run-time) without any additional charge.
You MAY NOT distribute SQLAPI++ source codes (original or modified).

REGISTERED VERSION (Personal license):
One registered copy of SQLAPI++ Library may be used by a single person
who uses it personally on one or more computers.
You may access the registered version of SQLAPI++ Library through a network,
provided that you have obtained individual licenses for the software covering
all developers that will access the software through the network.

REGISTERED VERSION (Site license):
One registered copy of SQLAPI++ may be used by up to 10 developers
WORKING IN ONE COMPANY on one or more computers.

REGISTERED VERSION (Site+ license):
One registered copy of SQLAPI++ may be used by any number of developers
WORKING IN ONE COMPANY on one or more computers.

WARRANTY AND LIMITATION OF LIABILITY
==========
We warrant that you will receive life-time FREE e-mail support, FREE bugs fixing
and FREE new version updates.

Jean-loup Gailly Mark Adler
jloup@gzip.org madler@alumni.caltech.edu

If you use the zlib library in a product, we would appreciate *not* receiving lengthy legal documents to sign. The sources are provided for free but without warranty of any kind. The library has been entirely written by Jean-loup Gailly and Mark Adler; it does not include third-party code.

If you redistribute modified sources, we would appreciate that you include in the file ChangeLog history information documenting your changes. Please read the FAQ for more information on the distribution of modified source versions.

Chapter 112

Linguistic

112.1 class NSLinguisticTaggerMBS

112.1.1 class NSLinguisticTaggerMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Analyze natural language to tag part of speech and lexical class, identify proper names, perform lemmatization, and determine the language and script (orthography) of text.
Example:

```
dim TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
dim TagSchemes() as string = array(TagScheme)
dim t as new NSLinguisticTaggerMBS(TagSchemes)

t.Text = "Hallo Leute"

dim tokenRange as NSRangeMBS
dim sentenceRange as NSRangeMBS
dim tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

MsgBox "Language: "+tag // should be "de" for German
```

Notes:

The NSLinguisticTaggerMBS class provides a uniform interface to a variety of natural language processing functionality with support for many different languages and scripts. You can use NSLinguisticTaggerMBS to segment natural language text into paragraphs, sentences, or words, and tag information about those tokens, such as part of speech, lexical class, lemma, script, and language.
When you create a linguistic tagger, you specify what kind of information you're interested in by passing one or more

NSLinguisticTagScheme values. Set the string property to the natural language text you want to analyze, and the linguistic tagger processes it according to the specified tag schemes. You can then enumerate over the tags in a specified range, using the methods described in Enumerating Linguistic Tags, to get the information requested for a given scheme and unit.

112.1.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3

112.1.3 Methods

112.1.4 availableTagSchemesForLanguage(Language as String) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the tag schemes available for a particular language on the current device.
Notes:

language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the available tag schemes. For possible values, see NSLinguisticTagScheme.

This is a convenience method for calling the availableTagSchemesForUnit, passing NSLinguisticTaggerUnitWord as the linguistic unit.

112.1.5 availableTagSchemesForUnit(unit as Integer, Language as String) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the tag schemes available for a particular unit and language on the current device.
Notes:

unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
language: A BCP-47 tag identifying the language. For example, "en" for English or "zh-Hans" for Chinese written using the Simplified Chinese script.

Returns the supported tag schemes. For possible values, see NSLinguisticTagScheme.

Available in macOS 10.13 and newer.

112.1.6 Constructor(tagSchemes() as String, options as integer = 0)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a linguistic tagger instance using the specified tag schemes and options.
Notes:

tagSchemes: An array of tag schemes. See NSLinguisticTagScheme for the possible values.
options: Reserved for future use. Specify 0 for this parameter.

112.1.7 dominantLanguageForString(text as String) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dominant language for the specified string.
Notes:

string: The string for which the dominant language is determined.

Returns the BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.

This is a convenience method for creating a new linguistic tagger, setting the string property, and getting the dominantLanguage property. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

112.1.8 NSLinguisticTagAdjective as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is an adjective.

112.1.9 NSLinguisticTagAdverb as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is an adverb.

112.1.10 NSLinguisticTagClassifier as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a classifier.

112.1.11 NSLinguisticTagCloseParenthesis as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a close parenthesis.

112.1.12 NSLinguisticTagCloseQuote as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a close quote.

112.1.13 NSLinguisticTagConjunction as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a conjunction.

112.1.14 NSLinguisticTagDash as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a dash.

112.1.15 NSLinguisticTagDeterminer as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a determiner.

112.1.16 NSLinguisticTagIdiom as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is an idiom.

112.1.17 NSLinguisticTagInterjection as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is an interjection.

112.1.18 NSLinguisticTagNoun as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: The token is a noun.

112.1.19 NSLinguisticTagNumber as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a number.

112.1.20 NSLinguisticTagOpenParenthesis as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is an open parenthesis.

112.1.21 NSLinguisticTagOpenQuote as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is an open quote.

112.1.22 NSLinguisticTagOrganizationName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Name Types.
Notes: This token is an organization name.

112.1.23 NSLinguisticTagOther as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the token types.
Notes: The token indicates a non-linguistic item, such as a symbol.

112.1.24 NSLinguisticTagOtherPunctuation as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is punctuation other than a kind described by other lexical classes (sentence terminator, open or close quote, open or close parenthesis, word joiner, and dash).

112.1.25 NSLinguisticTagOtherWhitespace as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is whitespace other than a kind described by other lexical classes (paragraph break).

112.1.26 NSLinguisticTagOtherWord as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a word other than a kind described by other lexical classes (noun, verb, adjective, adverb, pronoun, determiner, particle, preposition, number, conjunction, interjection, classifier, and idiom).

112.1.27 NSLinguisticTagParagraphBreak as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a paragraph break.

112.1.28 NSLinguisticTagParticle as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a particle.

112.1.29 NSLinguisticTagPersonalName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Name Types.
Notes: This token is a personal name.

112.1.30 NSLinguisticTagPlaceName as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the Name Types.
Notes: This token is a place name.

112.1.31 NSLinguisticTagPreposition as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a preposition.

112.1.32 NSLinguisticTagPronoun as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a pronoun.

112.1.33 NSLinguisticTagPunctuation as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the token types.
Notes: The token indicates punctuation.

112.1.34 NSLinguisticTagSchemeLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Supplies a BCP-47 language identifier for a token.
Notes:

For example, the language identifier for English is "en" and the identifier for Chinese written using the Simplified Chinese script is "zh-Hans". The identifier "und" is used if a specific language cannot be determined. The tagger generally attempts to determine the language of text at the level of an entire sentence, paragraph, or document, rather than word by word.

112.1.35 NSLinguisticTagSchemeLemma as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Supplies a stem form of a word token, if known.

112.1.36 NSLinguisticTagSchemeLexicalClass as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Classifies tokens according to class: part of speech for words, type of punctuation, or whitespace.

112.1.37 NSLinguisticTagSchemeNameType as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Classifies tokens according to whether they are part of a named entity.

112.1.38 NSLinguisticTagSchemeNameTypeOrLexicalClass as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Classifies tokens corresponding to names according to NSLinguisticTagSchemeNameType and tokens all other tokens according to NSLinguisticTagSchemeLexicalClass.

112.1.39 NSLinguisticTagSchemeScript as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Supplies an ISO 15924 script identifier for a token.
Notes: For example, the identifier for Latin script is "Latn" and the identifier for Simplified Chinese script is "Hans". The identifier "Zyyy" is used if a specific script cannot be determined.

112.1.40 NSLinguisticTagSchemeTokenType as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Classifies tokens according to their broad type: word, punctuation, or whitespace.
Notes:

To classify tokens by a more specific type, for example, distinguishing words between nouns and verbs, use the
NSLinguisticTagSchemeLexicalClass scheme.

112.1.41 NSLinguisticTagSentenceTerminator as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a sentence terminator.

112.1.42 NSLinguisticTagVerb as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a verb.

112.1.43 NSLinguisticTagWhitespace as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the token types.
Notes: The token indicates white space of any sort.

112.1.44 NSLinguisticTagWord as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the token types.
Notes: The token indicates a word.

112.1.45 NSLinguisticTagWordJoiner as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the lexical classes.
Notes: This token is a word joiner.

112.1.46 orthographyAtIndex(charIndex as integer, byref effectiveRange as NSRangeMBS) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the orthography at the index and also returns the effective range.
Example:

```
dim TagScheme as string = NSLinguisticTaggerMBS.NSLinguisticTagSchemeLanguage
dim TagSchemes() as string = array(TagScheme)
dim t as new NSLinguisticTaggerMBS(TagSchemes)

t.Text = "Hallo Leute"
```

```
dim tokenRange as NSRangeMBS
dim sentenceRange as NSRangeMBS
dim tag as string = t.tagAtIndex(0, TagScheme, tokenRange, sentenceRange)

dim effectiveRange as NSRangeMBS
dim o as NSOrthographyMBS = t.orthographyAtIndex(0, effectiveRange)

MsgBox o.dominantLanguage+" "+o.dominantScript
```

Notes:

charIndex: The character index to begin examination.
effectiveRange: An NSRangeMBS that, upon completion, contains the range of the orthography containing charIndex.

Returns the orthography for the location.

112.1.47 sentenceRangeForRange(range as NSRangeMBS) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the range of a sentence containing the specified range.
Notes:

charRange: The character range.

Returns the range of the sentence.

This is a convenience method for calling tokenRangeAtIndex, passing the NSLinguisticTaggerUnitSentence unit and the first position of the provided range.

112.1.48 setOrthography(orthography as NSOrthographyMBS, range as NSRangeMBS)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the orthography for the specified range.
Notes:

orthography: The orthography.
charRange: The range.

If the orthography of the linguistic tagger is not set, it will determine it automatically from the contents of

the text. You should call this method only if you know the orthography of the text by some other means.

112.1.49 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a tag for a single scheme at the specified character position.
Notes:

charIndex: The position of the initial character.
tagScheme: The tag scheme. See NSLinguisticTagScheme for the possible values.
tokenRange: The token range for output.
sentenceRange: The range of the sentence for output.

Returns the tag for the requested tag scheme, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange, and the range of the enclosing sentence to sentenceRange, if applicable.

This is a convenience method for calling tagAtIndex and passing NSLinguisticTaggerUnitWord as the linguistic unit.

Available in macOS 10.7 and newer.
See also:

- 112.1.50 tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String 18818

112.1.50 tagAtIndex(charIndex as Integer, unit as Integer, Scheme as String, byref tokenRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position.
Notes:

charIndex: The position of the initial character.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
tokenRange: The token range for output.

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.

Available in macOS 10.13 and newer.
See also:

- 112.1.49 tagAtIndex(charIndex as Integer, Scheme as String, byref tokenRange as NSRangeMBS, byref sentenceRange as NSRangeMBS) as String 18818

112.1.51 tagForString(text as string, charIndex as Integer, unit as Integer, Scheme as String, orthography as NSOrthographyMBS, byref tokenRange as NSRangeMBS) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a tag for a single scheme for a given linguistic unit at the specified character position in a string.
Notes:

charIndex: The position of the initial character.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
tokenRange: The token range for output.

Returns the tag for the requested tag scheme and linguistic unit, or nil. If a tag is returned, this function returns by reference the range of the token to tokenRange.

This is a convenience method for initializing a linguistic tagger, setting the string property, and calling the tagForString method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

112.1.52 tagSchemes as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the tag schemes configured for this linguistic tagger.
Notes: For possible values, see NSLinguisticTagScheme.

112.1.53 TagsForString(text as string, range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer, orthography as NSOrthographyMBS) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of linguistic tags and token ranges.
Notes:

range: The range from which to return tags.
unit: The linguistic unit. See NSLinguisticTaggerUnit for possible values.
tagScheme: The tag scheme. See NSLinguisticTagScheme for possible values.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

An array of the values in the requested range (tag and tokenRange set).

When the returned array contains an entry that doesn't have a corresponding tag scheme, that entry is an empty string ("").
This is a convenience method for initializing a linguistic tagger, setting the
string property, and calling the tagsInRange method. If you analyze the same string more than once, you should create a linguistic tagger object instead of calling this method.

Available in macOS 10.13 and newer.

112.1.54 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of linguistic tags and token ranges.
Notes:

range: The range to analyze.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.
options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.7 and newer.
See also:

- 112.1.55 tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS() 18820

112.1.55 tagsInRange(range as NSRangeMBS, unit as Integer, Scheme as String, options as Integer) as NSLinguisticValueMBS()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of linguistic tags and token ranges.
Notes:

range: The range to analyze.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.
tagScheme: The tag scheme. For possible values, see NSLinguisticTagScheme.

options: The linguistic tagger options to use. See NSLinguisticTaggerOptions for possible values.

Available in macOS 10.13 and newer.

Returns all tokens intersecting a given range, supplying tags and ranges. The tagger segments the string into sentences and tokens as necessary, and return those ranges along with a tag for any scheme in its array of tag schemes. For example, if the tag scheme is NSLinguisticTagSchemeLexicalClass, the tags specify the part of speech (for word tokens) or the type of whitespace or punctuation (for whitespace or punctuation tokens). If the tag scheme is NSLinguisticTagSchemeLemma, the tags specify the stem form of the word (if known) for each word token.
See also:

- 112.1.54 tagsInRange(range as NSRangeMBS, Scheme as String, options as Integer) as NSLinguisticValueMBS() 18820

112.1.56 tokenRangeAtIndex(charIndex as Integer, Unit as Integer) as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the range of the linguistic unit containing the specified character index.
Notes:

charIndex: The character index to begin examination.
unit: The linguistic unit. For possible values, see NSLinguisticTaggerUnit.

Returns the range of the substring for the linguistic unit.
Available in macOS 10.13 and newer.

112.1.57 Properties

112.1.58 dominantLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dominant language of the string set for the linguistic tagger.
Notes:

The BCP-47 tag identifying the dominant language of the string, or the tag "und" if a specific language cannot be determined.
Available in macOS 10.13 and newer.
(Read only property)

112.1.59 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

112.1.60 Text as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string being analyzed by the linguistic tagger.
Notes: (Read and Write property)

112.1.61 Constants

112.1.62 NSLinguisticTaggerJoinNames = 16

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the option constants.
Notes: Typically, multiple-word names will be returned as multiple tokens, following the standard tokenization practice of the tagger. If this option is set, then multiple-word names will be joined together and returned as a single token.

112.1.63 NSLinguisticTaggerOmitOther = 8

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the option constants.
Notes: Omit tokens of type NSLinguisticTagOther (non-linguistic items, such as symbols).

112.1.64 NSLinguisticTaggerOmitPunctuation = 2

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the option constants.
Notes: Omit tokens of type NSLinguisticTagPunctuation (all punctuation).

112.1.65 NSLinguisticTaggerOmitWhitespace = 4

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the option constants.
Notes: Omit tokens of type NSLinguisticTagWhitespace (whitespace of all sorts).

112.1.66 NSLinguisticTaggerOmitWords = 1

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the option constants.
Notes: Omit tokens of type NSLinguisticTagWord (items considered to be words).

112.1.67 NSLinguisticTaggerUnitDocument = 3

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the constants for a tagger unit.
Notes: The document in its entirety.

112.1.68 NSLinguisticTaggerUnitParagraph = 2

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the constants for a tagger unit.
Notes: An individual paragraph.

112.1.69 NSLinguisticTaggerUnitSentence = 1

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the constants for a tagger unit.
Notes: An individual sentence.

112.1.70 NSLinguisticTaggerUnitWord = 0

MBS MacCocoa Plugin, Plugin Version: 17.3.

Function: One of the constants for a tagger unit.
Notes: An individual word.

112.2 class NSLinguisticValueMBS

112.2.1 class NSLinguisticValueMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for linguistic tokens.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

112.2.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3

112.2.3 Methods

112.2.4 Constructor

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

112.2.5 Properties

112.2.6 sentenceRange as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The sentence range.
Notes:

Only filled by tagAtIndex when used without unit.
(Read and Write property)

112.2.7 Tag as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The linguistic tag.
Notes: (Read and Write property)

112.2.8 Text as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The text for the token.
Notes: (Read and Write property)

112.2.9 tokenRange as NSRangeMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The token range.
Notes: (Read and Write property)

112.3 class NSOrthographyMBS

112.3.1 class NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: A description of the linguistic content of a piece of text typically used for spelling and grammar checking.
Notes:

An NSOrthography instance describes:

- Which scripts the text contains.
- A dominant language and possibly other languages for each of these scripts.
- A dominant script and language for the text as a whole.

Scripts are uniformly described by standard four-letter tags (Latn, Grek, Cyrl, etc.) with the supertags Jpan and Kore typically used for Japanese and Korean text, Hans and Hant for Chinese text; the tag Zyyy is used if a specific script cannot be identified. See Internationalization and Localization Guide for more information on internationalization.

Languages are uniformly described by BCP-47 tags , preferably in canonical form; the tag und is used if a specific language cannot be determined.

112.3.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr3

112.3.3 Methods

112.3.4 allLanguages as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing all the languages appearing in the values of the language map.
Notes: Available in macOS 10.6 and newer.

112.3.5 allScripts as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing all the scripts appearing as keys in the language map.
Notes: Available in macOS 10.6 and newer.

112.3.6 Constructor(script as string, map as dictionary)

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes:

script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

112.3.7 copy as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Create a copy of the object.

112.3.8 defaultOrthographyForLanguage(language as string) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries default orthography for a language.
Notes: Available in macOS 10.13 and newer.

112.3.9 dominantLanguageForScript(script as string) as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the dominant language for the specified script.
Notes: Available in macOS 10.6 and newer.

112.3.10 languagesForScript(script as string) as String()

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the list of languages for the specified script.
Notes: Available in macOS 10.6 and newer.

112.3.11 orthographyWithDominantScript(script as string, map as dictionary) as NSOrthographyMBS

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates and returns an orthography instance with the specified dominant script and language map.
Notes:

script: The dominant script.
map: A dictionary containing the language map.

Returns an initialized orthography object for the specified script and language map.

112.3.12 Properties

112.3.13 dominantLanguage as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the first language in the list of languages for the dominant script.
Notes:

Available in macOS 10.6 and newer.
(Read only property)

112.3.14 dominantScript as String

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The dominant script for the text.
Notes:

The dominant script should be a script tag, such as Latn, Cyrl, etc.
Available in macOS 10.6 and newer.

(Read only property)

112.3.15 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

112.3.16 languageMap as Dictionary

MBS MacCocoa Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: A dictionary that map script tags to arrays of language tags.
Notes:

The dictionary's keys are script tags (such as Latn, Cyrl, and so forth) and whose values are arrays of language tags (such as en, fr, de, etc.)
(Read only property)

Chapter 113

Linux

113.1 module LinuxIconMBS

113.1.1 module LinuxIconMBS

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The module for linux icons.

113.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr1
- Linux Icon Functions for Xojo

- 17.3, page 43: XDC 2019, Miami Fun and Learning by Marc Zeedar

113.1.4 Methods

113.1.5 FileIcon(file as FolderItem, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries file icon for file.
Example:

```
dim f2 as FolderItem = SpecialFolder.Desktop
Canvas2.Backdrop = LinuxIconMBS.FileIcon(f2, Canvas2.Width)
```

Notes: Returns nil in case of error.

113.1.6 FilePreview(file as FolderItem, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries preview icon for file.
Notes: Returns nil in case of error.

113.1.7 FileThumbnail(file as FolderItem) as FolderItem

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries thumbnail path for a given file.
Example:

```
// make an image file
dim p as picture = logoMBS(500) // from Main plugin
dim f as FolderItem = SpecialFolder.Desktop.Child("MBS.jpg")
p.Save(f, p.SaveAsJPEG, 90)

// show thumbnail
dim ThumbnailFile as FolderItem = LinuxIconMBS.FileThumbnail(f)
if ThumbnailFile <>nil then
Canvas6.Backdrop = Picture.Open(ThumbnailFile)
end if
```

Notes:

Returns nil in case of error.
Otherwise this may be URL for png file with thumbnail.

113.1.8 GenericIconName(MimeType as String) as String

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries generic icon name for mime type.

113.1.9 Icon(MimeType as String, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries icon for mime type.
Example:

Canvas1.Backdrop = LinuxIconMBS.Icon("image/jpeg", Canvas1.Width)

Notes: Returns nil in case of error.

113.1.10 SymbolicIcon(MimeType as String, size as integer = 48) as Picture

MBS Linux Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries symbolic icon for given mime type.
Example:

Canvas3.Backdrop = LinuxIconMBS.SymbolicIcon("image/jpeg", Canvas3.Width)

Notes: Returns nil in case of error.

113.2 class LinuxProcessMBS

113.2.1 class LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for querying linux process details.
Example:

```
// show the path of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.path
```

Notes:

If your app has not enough permission to read info about other app, values may be missing.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

113.2.4 Methods

113.2.5 Constructor

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The private constructor.

113.2.6 PID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The Process ID of the current process (your app).
Example:

```
dim myPID as Integer = LinuxProcessMBS.PID
MsgBox "my process ID is: "+str(myPID)
```

113.2.7 ProcessByPID(ProcessID as Integer) as LinuxProcessMBS

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries the information for a process with given ID.
Example:

```
// show the name of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.name
```

Notes: Returns nil on error.

113.2.8 Processes as LinuxProcessMBS()

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns array with all processes.
Example:

```
// shows all process names in listbox
dim Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
listbox1.addrow p.name
next
```

113.2.9 Properties

113.2.10 CommandLine as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The command line used to create this process.
Example:

```
// show the command line of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.CommandLine
```

Notes: (Read only property)

113.2.11 CurrentWorkingDirectory as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The current working directory.
Example:

```
// show the current working directory of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)

MsgBox myProcess.CurrentWorkingDirectory
```

Notes: (Read only property)

113.2.12 Environment as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The environment variables.
Notes: (Read only property)

113.2.13 Name as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The name of the process.
Example:

```
// shows all process names in listbox
dim Processes() as LinuxProcessMBS = LinuxProcessMBS.Processes

for each p as LinuxProcessMBS in Processes
listbox1.addrow p.name
next
```

Notes: (Read only property)

113.2.14 NumberOfThreads as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of threads used by this process.
Notes: (Read only property)

113.2.15 OpenFiles as Dictionary

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries details about open files.
Example:

```
// show the paths of open files of current process in listbox
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
dim OpenFiles as Dictionary = myProcess.OpenFiles

for each key as Variant in OpenFiles.keys
listbox1.addrow OpenFiles.Value(key).StringValue
next
```

Notes:

This dictionary contains the file descriptor number as key and the path to the file as text.
(Read only property)

113.2.16 ParentProcessID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The parent process ID.
Notes: (Read only property)

113.2.17 Path as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The path for this process.
Example:

```
// show the path of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
MsgBox myProcess.Path
```

Notes: (Read only property)

113.2.18 ProcessID as Integer

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The process ID.
Notes: (Read only property)

113.2.19 StartTime as Date

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The start time of the process.
Example:

```
// show the start time of current process
dim myPID as Integer = LinuxProcessMBS.PID
dim myProcess as LinuxProcessMBS = LinuxProcessMBS.ProcessByPID(myPID)
dim d as date = myProcess.StartTime
```

MsgBox d.LongDate+" "+d.LongTime

Notes: (Read only property)

113.2.20 State as String

MBS Linux Plugin, Plugin Version: 14.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The state of the process.
Notes:

Can be Running, Sleeping, Disk Sleep, Zombie, Trace or Writing pages.
(Read only property)

113.3 class LinuxSuMBS

113.3.1 class LinuxSuMBS

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to run stuff with sudo.
Example:

```
dim s as new LinuxSuMBS

s.Command = "/usr/bin/whoami"
s.User = "root"
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
MsgBox "OK"
else
MsgBox s.LastErrorMessage
end if
```

Notes: Uses the gksu library.

113.3.2 Blog Entries

- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.1
- MBS Xojo / Real Studio Plugins, version 16.1pr1

113.3.3 Methods

113.3.4 AskPassword(prompt as String) as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Asks for the password.
Notes:

Returns password.
Stores error in LastError and LastErrorMessage properties.
See also:

- 113.3.25 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string 18845

113.3.5 Available as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the gksu library was found and loaded.
Notes:

Should return true on linux.
If missing, install the libgksu2-0 library.

113.3.6 ExecuteRun as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command.
Notes:

Returns true on success.
Stores error in LastError and LastErrorMessage properties.

113.3.7 ExecuteSu as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command with su.
Notes:

Returns true on success.
Stores error in LastError and LastErrorMessage properties.

113.3.8 ExecuteSudo as boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Runs the command with sudo.
Example:

```
dim s as new LinuxSuMBS

s.Command = "/usr/bin/whoami"
s.User = "root"
```

```
s.Alert = "Please Root?"
s.Message "Can I install something for you?"

if s.ExecuteSudo then
MsgBox "OK"
else
MsgBox s.LastErrorMessage
end if
```

Notes:

Returns true on success.
Stores error in LastError and LastErrorMessage properties.

113.3.9 Properties

113.3.10 Alert as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The alert message.
Notes: (Read and Write property)

113.3.11 AlwaysAskPassword as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether to always ask for a password.
Notes: (Read and Write property)

113.3.12 Command as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The command will run with the target user.
Notes: (Read and Write property)

113.3.13 Debug as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether debuging information should be printed.
Notes: (Read and Write property)

113.3.14 Description as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The description text.
Notes: (Read and Write property)

113.3.15 ExitCode as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The exit code of the last command run.
Notes: (Read and Write property)

113.3.16 Grab as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Grab?
Notes: (Read and Write property)

113.3.17 Handle as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

113.3.18 KeepEnvironment as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Should the environment be kept as it is?
Notes:

Defaults to true. Notice that setting this to false may cause the X authorization stuff to fail.
(Read and Write property)

113.3.19 LastError as Integer

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

113.3.20 LastErrorMessage as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read and Write property)

113.3.21 LoginShell as Boolean

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The shell in which the command will be run be a login shell?
Notes:

Finds out if the shell created by the underlying su process will be a login shell.
(Read and Write property)

113.3.22 Message as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The message text.
Notes: (Read and Write property)

113.3.23 User as String

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: What user the command will be run as.
Notes:

The default is root, but you can run the command as any user.
(Read and Write property)

113.3.24 Events

113.3.25 AskPassword(prompt as String, byref ErrorCode as Integer, byref ErrorMessage as String) as string

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: .

Function: The event to ask for password.
Notes:

If you prefer your own dialog.
Return password or set error parameters.
See also:

- 113.3.4 AskPassword(prompt as String) as String 18840

113.3.26 PasswordNoNeeded

MBS Linux Plugin, Plugin Version: 16.1, Platform: Linux, Targets: .

Function: No password is needed.

113.3.27 Constants

113.3.28 ErrorCanceled = 11

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: The user cancelled.

113.3.29 ErrorChildFailed = 9

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Child failed.

113.3.30 ErrorExec = 5

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Execution failed.

113.3.31 ErrorFork = 4

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Forking failed.

113.3.32 ErrorHelper = 1

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: The helper tool failed.

113.3.33 ErrorNoCommand = 2

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Missing command.

113.3.34 ErrorNoPassword = 3

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Missing password.

113.3.35 ErrorNotAllowed = 10

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Not allowed.

113.3.36 ErrorPipe = 6

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Pipe failed.

113.3.37 ErrorPiperead = 7

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Pipe read error.

113.3.38 ErrorWrongAutoPass = 12

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Wrong auto Password.

113.3.39 ErrorWrongPass = 8

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: Wrong Password

113.3.40 ErrorXauth = 0

MBS Linux Plugin, Plugin Version: 16.1.

Function: One of the error codes.
Notes: XAuth failed.

Chapter 114

LMFit

114.1 class LMFitControlMBS

114.1.1 class LMFitControlMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Collection of input parameters for fit control.

114.1.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

114.1.3 Methods

114.1.4 MsgFileStderr

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set msgfile to stderr.

114.1.5 MsgFileStdout

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set msgfile to stdout.

114.1.6 Properties

114.1.7 epsilon as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Step used to calculate the Jacobian, should be slightly larger than the relative error in the user-supplied functions.
Notes: (Read and Write property)

114.1.8 ftol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Relative error desired in the sum of squares.
Notes:

Termination occurs when both the actual and predicted relative reductions in the sum of squares are at most ftol.
(Read and Write property)

114.1.9 gtol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Orthogonality desired between fvec and its derivs.
Notes:

Termination occurs when the cosine of the angle between fvec and any column of the Jacobian is at most gtol in absolute value.
(Read and Write property)

114.1.10 msgfile as FolderItem

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Progress messages will be written to this file.
Notes: (Read and Write property)

114.1.11 m_maxpri as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: -1, or max number of residuals to print.
Notes: (Read and Write property)

114.1.12 n_maxpri as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: -1, or max number of parameters to print.
Notes: (Read and Write property)

114.1.13 patience as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used to set the maximum number of function evaluations to patience*(number_of_parameters+1).
Notes: (Read and Write property)

114.1.14 scale_diag as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: If 1, the variables will be rescaled internally.
Notes:

Recommended value is 1.
(Read and Write property)

114.1.15 stepbound as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used in determining the initial step bound.
Notes:

This bound is set to the product of stepbound and the Euclidean norm of diag*x if nonzero, or else to stepbound itself. In most cases stepbound should lie in the interval (0.1,100.0). Generally, the value 100.0 is recommended.
(Read and Write property)

114.1.16 verbosity as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The verbosity flags.
Notes:

OR'ed: 1: print some messages; 2: print Jacobian.
(Read and Write property)

114.1.17 xtol as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Relative error between last two approximations.
Notes:

Termination occurs when the relative error between two consecutive iterates is at most xtol.
(Read and Write property)

114.2 class LMFitMBS

114.2.1 class LMFitMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to run Levenberg-Marquardt least squares fitting algorithm.
Notes: Based on lmfit library from Joachim Wuttke, Forschungszentrum Juelich GmbH (2004-2013).

114.2.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.0
- MBS Xojo Plugins, version 19.6pr1

114.2.3 Methods

114.2.4 LMCurve(NPar as Integer, Par as Ptr, mDat as Integer, t as Ptr, y as Ptr, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs curve algorithm.
Notes:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateCurve event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 114.2.5 LMCurve(NPar as Integer, Par() as double, mDat as Integer, t() as double, y() as double, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 18854

114.2.5 LMCurve(NPar as Integer, Par() as double, mDat as Integer, t() as double, y() as double, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs curve algorithm.
Notes:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateCurve event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 114.2.4 LMCurve(NPar as Integer, Par as Ptr, mDat as Integer, t as Ptr, y as Ptr, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 18853

114.2.6 LMMin(NPar as Integer, Par as Ptr, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs Levenberg-Marquardt minimization.
Notes:

This routine contains the core algorithm of our library.

It minimizes the sum of the squares of m nonlinear functions in n variables by a modified Levenberg-Marquardt algorithm. The function evaluation is done by the user-provided routine 'evaluate'. The Jacobian is then calculated by a forward-difference approximation.

Parameters:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution. This should be memoryblock with double values.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateMin event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 114.2.7 LMMin(NPar as Integer, Par() as double, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 18855

114.2.7 LMMin(NPar as Integer, Par() as double, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil)

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs Levenberg-Marquardt minimization.
Notes:

This routine contains the core algorithm of our library.

It minimizes the sum of the squares of m nonlinear functions in n variables by a modified Levenberg-Marquardt algorithm. The function evaluation is done by the user-provided routine 'evaluate'. The Jacobian is then calculated by a forward-difference approximation.

Parameters:

NPar is the number of variables (INPUT, positive integer).
Par is the solution vector (INPUT/OUTPUT, array of length n). On input it must be set to an estimated solution. On output it yields the final estimate of the solution.
mDat is the number of functions to be minimized (INPUT, positive integer). It must fulfill m>=n.

Calls evaluateMin event to query values.

control contains INPUT variables that control the fit algorithm, as declared and explained in lmstruct.h
status contains OUTPUT variables that inform about the fit result, as declared and explained in lmstruct.h
See also:

- 114.2.6 LMMin(NPar as Integer, Par as Ptr, mDat as Integer, control as LMFitControlMBS, status as LMFitStatusMBS, tag as variant = nil) 18854

114.2.8 Properties

114.2.9 provideArrays as Boolean

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to fill parameter array for evaluateMin event.
Notes:

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.
(Read and Write property)

114.2.10 Events

114.2.11 evaluateCurve(t as double, par as Ptr, nPar as Integer, parameters() as double, tag as variant) as double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Evaluate is a event that calculates the m functions.
Notes:

The parameter par, nPar, parameters and mDat are passed through from the call to LMCurve.

fvec is an array of length m; on OUTPUT, it must contain the m function values for the parameter vector x.

If you return a nonzero value, lmmin will terminate.
Return zero to continue.

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.

114.2.12 evaluateMin(par as Ptr, nPar as Integer, parameters() as double, mDat as Integer, fvec as Ptr, tag as variant) as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Evaluate is a event that calculates the m functions.
Notes:

The parameter par, nPar, parameters and mDat are passed through from the call to LMMin.

fvec is an array of length m; on OUTPUT, it must contain the m function values for the parameter vector x.

If you return a nonzero value, lmmin will terminate.
Return zero to continue.

If provideArrays property is true, we provide values via parameters array, which may be slower than using par pointer.

114.3 class LMFitStatusMBS

114.3.1 class LMFitStatusMBS

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Collection of output parameters for status info.

114.3.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

114.3.3 Properties

114.3.4 fnorm as Double

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Norm of the residue vector fvec.
Notes: (Read and Write property)

114.3.5 nfev as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Actual number of iterations.
Notes: (Read and Write property)

114.3.6 outcome as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Status indicator.
Notes:

Nonnegative values are used as index for the message text.
(Read and Write property)

114.3.7 outcomeInfoMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The info message text.
Notes:

The plugin looks up text based on outcome value.
(Read only property)

114.3.8 outcomeShortMessage as String

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The short message text.
Notes:

The plugin looks up text based on outcome value.
(Read only property)

114.3.9 userbreak as Integer

MBS Tools Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set when function evaluation requests termination.
Notes: (Read and Write property)

Chapter 115

Login Items

115.1 class LoginItemsMBS

115.1.1 class LoginItemsMBS

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: A class to handle login items on Mac OS X.
Notes:

After creating a new object, the constructor may fail sometimes while updateing the list. lasterror is -609 in that case. His happens most likely just after login when the system events process is not yet ready. In that case, let your app wait a few seconds and try again.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

115.1.2 Blog Entries

- Adding Login Items on Mac OS X

115.1.3 Methods

115.1.4 AddFile(file as FolderItem, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the login items.
Notes:

Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

115.1.5 AddURL(url as string, hidden as boolean=false) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Adds an url to the item list.
Notes:

Returns true on success.

For newer Mac OS X versions, please use LSSharedFileListMBS class instead.

115.1.6 DisplayName(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The display name of the item with the given index.
Example:

```
dim l as LoginItemsMBS

l=new LoginItemsMBS
MsgBox l.displayName(0) // shows name of first item
```

Notes: The display name may be localized.

115.1.7 File(index as Integer) as FolderItem

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The file reference of the item with the given index.
Notes: Index is from 0 to count-1.

115.1.8 IsHidden(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether the item with the given index should be hidden after launch.
Notes:

Index is from 0 to count-1.

This value does not work in Mac OS X 10.4, but works in 10.5.

115.1.9 Name(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: The name of the item with the given index.
Example:

```
dim l as LoginItemsMBS

l=new LoginItemsMBS
MsgBox l.Name(0) // shows name of first item
```

Notes: This is the file name. To get the name for display, use displayname.

115.1.10 OldAddLoginItem(file as folderitem,hide as boolean,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Adds a file to the loginitems list.
Example:

```
dim f as folderItem
dim r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldAddLoginItem(f,false,false) then
msgBox f.displayName+" has been added to the login items!"
else
msgBox "Something went wrong."
end if
```

Notes:

This is the old method which edits the preferences file directly.

Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

hide matches the checkbox in the loginitems list.
allusers decides whether to set it for all user or the current one.

This function will add a LoginItem to the list of LoginItems when called. The properties given to the new LoginItem are passed when calling the function. Note that *no* check is made when adding the LoginItem to ensure that the path points to a valid application. Note that the LoginItem Is always added to the *end* of the list of LoginItems.

First Parameter (appfile):
The absolute path of the application to be launched expressed as a Xojo folderitem.

Second Parameter (hide):
A value representing if you want your application to be hidden at login time. True if you want the application to be hidden after it is launched. If you want the application to show up normally use be hidden use false.

Third Parameter (allusers):
A constant which represents which users preferences we want to change. In this case there are two alternatives: False which changes the preferences of the current user. The second alternative is True.
The kAllUsers LoginItems are launched for all users on the system. You must be root or admin to use the kAllUsers option.

Function Returns:
This function returns a boolean value representing if the function was successful.
The function returns true if the LoginItem was successfully added. False if otherwise. No additional error codes are returned.

Other Notes:
This code doesn't work properly if more than one application is attempting to write to the LoginItems preference at once.
Also no check is made to ensure that what you are adding to the LoginItem list isn't a duplicate. If there is a duplicate however only one instance of the application is launched.

115.1.11 OldCountOfLoginItems(allusers as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: This function will return the number of LoginItems for the user requested.
Example:

```
// Add this code for syncronization:

dim cf as CFPreferencesMBS
dim b as Boolean

cf=new CFPreferencesMBS
b=cf.AppSynchronize(cf.kCFPreferencesCurrentApplication)

// Count items

dim r as new LoginItemsMBS
msgbox str(r.OldCountOfLoginItems(false))
```

Notes:

This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

This function returns the number of LoginItems for the user requested as a signed integer.

115.1.12 OldLoginItemPropertyAtIndex(what as Integer, index as Integer, allusers as boolean) as string

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Returns a property from the loginitems list.
Example:

```
dim i as Integer
dim c as Integer
dim l as Integer
dim path,name,hide as string
dim r as new LoginItemsMBS

c=r.OldCountOfLoginItems(false)

MsgBox str(c)+" Login items found for this user."

c=c-1
for i=0 to c
name=r.OldLoginItemPropertyAtIndex(2,i,false)
hide=r.OldLoginItemPropertyAtIndex(3,i,false)
path=r.OldLoginItemPropertyAtIndex(1,i,false)
```

```
list.addrow name
l=list.lastIndex
list.cell(l,1)=hide
list.cell(l,2)=path
list.cell(l,3)=str(i)
next
```

Notes:

This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.
What can be 1 for the absolute path of the LoginItem, 2 for the LoginItem name or 3 for a string with "false" or "true" for the hiding option.

Returns "" on any error.

115.1.13 OldRemoveLoginItem(file as folderitem,allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Removes a file to the loginitems list.
Example:

```
dim f as folderItem
dim r as new LoginItemsMBS

f=app.applicationFileMBS
if r.OldRemoveLoginItem(f,false) then
msgBox f.displayName+" has been added to the login items!"
else
msgBox "Something went wrong."
end if
```

Notes:

This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

The items are compared by path.
Returns true if item was found and the new list is written correctly to disk.
allusers decides whether to set it for all user or the current one.

115.1.14 OldRemoveLoginItemAtIndex(index as Integer, allusers as boolean) as boolean

MBS MacOSX Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Removes an entry from the loginitem list.
Notes:

This is the old method which edits the preferences file directly.
Do not use it unless you really need to. The new functions in this class handle login items using a system service and will be safer for future releases of Mac OS X.

Index is from 0 to count-1.

115.1.15 Remove(index as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the item from the login items list.
Notes:

Index is from 0 to count-1.
The count property is updated.

115.1.16 RemoveFile(file as FolderItem) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the items matching this file reference from the list.
Notes:

Returns true on success.
Count is updated.

115.1.17 RemoveURL(url as string) as boolean

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Removes the item matching the given URL.
Notes: Returns true on success.

115.1.18 Update

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Reloads the list of items.
Notes:

Update is done after each modification method and in the constructor.
You should never need to call this method.

115.1.19 URL(index as Integer) as String

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The URL of the item with the given index.
Notes: Index is from 0 to count-1.

115.1.20 Properties

115.1.21 Count as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Number of items in the list currently.
Notes: (Read and Write property)

115.1.22 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The handle to the NSArray Reference used internally for the item list.
Notes: (Read and Write property)

115.1.23 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The last error code.
Notes:

Value can be 0 for success or -1 for a parameter error in the plugins or some other Mac OS X error code.
(Read and Write property)

115.2 class LSSharedFileListItemMBS

115.2.1 class LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a list item.
Notes: Requires Mac OS X 10.5.

115.2.2 Methods

115.2.3 DisplayName as string

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain item's display name.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.2.4 Icon as Variant

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain item's icon.
Notes: Returns an IconMBS object.

115.2.5 ID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Obtain unique item id.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName+": "+str(x.ID)
next

MsgBox Join(lines, EndOfLine)
end if
```

115.2.6 Resolve(flags as UInt32) as folderitem

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolve item and return its folderitem.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.Resolve(0).NativePath
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUser-

Interaction.

115.2.7 ResolveURL(flags as UInt32) as string

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolve item and return its URL.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.ResolveURL(x.kNoUserInteraction)
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: Pass values like 0, kNoUserInteraction, kDoNotMountVolumes or kDoNotMountVolumes+kNoUser-Interaction.

115.2.8 Properties

115.2.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the item.
Notes: (Read and Write property)

115.2.10 Lasterror as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.

Notes: (Read and Write property)

115.2.11 ItemHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is item hidden in UI?
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName+": "+str(x.ItemHidden)
next

MsgBox Join(lines, EndOfLine)
end if
```

Notes: (Read and Write computed property)

115.2.12 LoginItemHidden as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Should UI hide login item's window?
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName+": "+str(x.LoginItemHidden)
next
```

```
MsgBox Join(lines, EndOfLine)
end if
```

Notes:

Requires Mac OS X 10.6.
(Read and Write computed property)

115.2.13 Constants

115.2.14 kDoNotMountVolumes = 2

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the flags for resolve.
Notes: do not mount volumes during resolution

115.2.15 kNoUserInteraction = 1

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the flags for resolve.
Notes: no user interaction during resolution

115.3 class LSSharedFileListMBS

115.3.1 class LSSharedFileListMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The shared list class.
Notes:

The shared file list API is for sharing and storing list of references to file system objects. The shared file list is a persistent list of objects, where each item has assigned display name, icon, and url as well as other optional properties.
Each list can also have various properties attached.

Requires Mac OS X 10.5.

115.3.2 Blog Entries

- MBS Plugins updated for Xojo 2019r2
- MBS Real Studio Plugins, version 12.4pr8
- Adding Login Items on Mac OS X

115.3.3 Methods

115.3.4 Constructor(type as Integer)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates shared file list reference to be used for changing list and reading its various properties.
Notes: type: A constant indicating list type to create. See the constants in this class.

115.3.5 GetSeedValue as UInt32

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns seed value of the shared list.

115.3.6 InsertFile(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, file as folderitem) as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Insert item into shared list.
Example:

```
// Add iPhoto to launch items

// pick app
dim app as FolderItem = SpecialFolder.Applications.Child("iPhoto.app")

// get list object
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// insert file
dim item as LSSharedFileListItemMBS = l.InsertFile(l.kLSSharedFileListItemBeforeFirst, "Launch iPhoto",
nil, app)

// check error
if l.Lasterror = 0 then
MsgBox "OK"
else
MsgBox "Failed: "+str(l.Lasterror)
end if
```

Notes:

Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

AfterItem: Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

DisplayName: Display name of the new item. Can be NULL.
Icon: IconMBS of the new item. Can be nil.
File: FolderItem of the new item.

115.3.7 InsertURL(AfterItem as LSSharedFileListItemMBS, DisplayName as string, Icon as object, URL as string) as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Insert item into shared list.
Notes:

Inserts item into shared list at specified location. If the item already exists in the list it will be moved and its icon, display name and properties will be updated.

AfterItem: Item after which new item has to be inserted. To insert at the beginning of the list use kLSSharedFileListItemBeforeFirst or to insert at the end of the list use kLSSharedFileListItemLast.

DisplayName: Display name of the new item. Can be "".
Icon: IconMBS object for the icon. Can be nil.
URL: URL of the new item.

115.3.8 kLSSharedFileListItemBeforeFirst as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A virtual item reference for inserting new item at beginning of the list.
Example:

```
dim n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemBeforeFirst
MsgBox str(n.Handle) // a special handle value for this virtual item: 1
```

115.3.9 kLSSharedFileListItemLast as LSSharedFileListItemMBS

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: A virtual item reference for inserting new item at end of the list.
Example:

```
dim n as LSSharedFileListItemMBS = LSSharedFileListMBS.kLSSharedFileListItemLast
MsgBox str(n.Handle) // a special handle value for this virtual item: 2
```

115.3.10 Move(item as LSSharedFileListItemMBS, MoveAfterItem as LSSharedFileListItemMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Moves item at specified location.
Notes:

item: Item to move.
MoveAfterItem: New icon of the new item. Use kLSSharedFileListItemBeforeFirst and kLSSharedFileListItemLast to move at the beginning or the end of the shared list.

115.3.11 Remove(item as LSSharedFileListItemMBS)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove item from shared list.
Example:

```
// Remove iPhoto from launch items

// get list object
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

// get items
dim items(-1) as LSSharedFileListItemMBS = l.Snapshot

// check all items
for each item as LSSharedFileListItemMBS in items
dim file as FolderItem = item.Resolve(LSSharedFileListItemMBS.kNoUserInteraction)

if file<>nil then
if file.Name = "iPhoto.app" then
l.Remove item

if l.Lasterror = 0 then
MsgBox "OK"
else
MsgBox "Error: "+str(l.Lasterror)
end if
Return
end if
end if

next
```

115.3.12 RemoveAllItems

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove all items from shared list.

115.3.13 SetAuthorization(handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Set authorization reference for the shared list.
Notes: Before attempting to perform a privileged operation on the shared list caller must authorize appropriate rights. For example, modifying kGlobalLoginItems list requires "system.global-login-items." right authorized.

115.3.14 Snapshot as LSSharedFileListItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates snapshot array, which is list of all items at the moment this method was called.
See also:

- 115.3.15 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS() 18879

115.3.15 Snapshot(byref seed as UInt32) as LSSharedFileListItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates snapshot array, which is list of all items at the moment this method was called.
Notes: seed: Returned seed value at which snapshot was taken.
See also:

- 115.3.14 Snapshot as LSSharedFileListItemMBS() 18879

115.3.16 Properties

115.3.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the list.
Notes: (Read and Write property)

115.3.18 Lasterror as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

115.3.19 RecentItemsMaxAmount as Integer

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Maximum amount of items in the list.
Notes: (Read and Write computed property)

115.3.20 VolumesComputerVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is Computer item visible in favorite volumes list?
Notes: (Read and Write computed property)

115.3.21 VolumesIDiskVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is iDisk item visible in favorite volumes list.
Notes: (Read and Write computed property)

115.3.22 VolumesNetworkVisible as boolean

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: Desktop, Console & Web.

Function: Is Network item visible in favorite volumes list?
Notes: (Read and Write computed property)

115.3.23 Events

115.3.24 Changed

MBS MacFrameworks Plugin, Plugin Version: 9.8, Platform: macOS, Targets: .

Function: The event called whenever the list is changed by an application.

115.3.25 Constants

115.3.26 kFavoriteItems = 2

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kFavoriteItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.3.27 kFavoriteVolumes = 1

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kFavoriteVolumes)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.3.28 kGlobalLoginItems = 7

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kGlobalLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.3.29 kRecentApplicationItems = 3

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentApplicationItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.3.30 kRecentDocumentItems = 4

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentDocumentItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.3.31 kRecentServerItems = 5

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kRecentServerItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
```

```
end if
```

115.3.32 kSessionLoginItems = 6

MBS MacFrameworks Plugin, Plugin Version: 9.8.

Function: One of the list type constants.
Example:

```
dim l as new LSSharedFileListMBS(LSSharedFileListMBS.kSessionLoginItems)

if l.Handle=0 then
MsgBox "Failed to get list."
else
dim a(-1) as LSSharedFileListItemMBS = l.Snapshot
dim lines(-1) as string

for each x as LSSharedFileListItemMBS in a
lines.append x.DisplayName
next

MsgBox Join(lines, EndOfLine)
end if
```

115.4 module ServiceManagementModuleMBS

115.4.1 module ServiceManagementModuleMBS

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The module with function to add helper to login items.
Notes: This API seems to be sandbox safe and working with Mac App Store.

115.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr6
- MBS Real Studio Plugins, version 12.3pr9
- Adding Login Items on Mac OS X

115.4.3 Methods

115.4.4 AllJobDictionaries(domain as string) as Dictionary()

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the job description dictionaries for all jobs in the given domain.
Notes:

domain: The desired domain (e.g. kSMDomainSystemLaunchd).

Returns a new array containing all job dictionaries, or empty array if an error occurred. Must be released by the caller.
Available in OS X v10.6 and later.

115.4.5 CreateAuthorization as AuthorizationMBS

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Creates an authorization for Job operations.
Notes: Creates an authorization with kSMRightBlessPrivilegedHelper and flags InteractionAllowed, PreAuthorize and ExtendRights.

115.4.6 JobBless(domain as string, executableLabel as string, auth as AuthorizationMBS, byref error as Variant) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Submits the executable for the given label as a launchd job.
Notes:

domain: The job's domain. Only kSMDomainSystemLaunchd is supported.
executableLabel: The label of the privileged executable to install. This label must be one of the keys found in the SMPrivilegedExecutables dictionary in the application's Info.plist.
auth: An authorization reference containing the kSMRightBlessPrivilegedHelper right.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the executable tool, or nil if successful. It is the responsibility of the application to release the error reference.

Returns true if the job was successfully submitted, otherwise false.

JobBless submits the executable for the given label as a launchd job. This function obviates the need for a setuid helper invoked via AuthorizationExecuteWithPrivileges in order to install a launchd plist.

If the job is already installed, success is returned.

In order to use this function the following requirements must be met:

- The calling application and target executable tool must both be signed.
- The calling application's Info.plist must include a "SMPrivilegedExecutables" dictionary of strings. Each string is a textual representation of a code signing requirement used to determine whether the application owns the privileged tool once installed (i.e. in order for subsequent versions to update the installed version).

Each key of SMPrivilegedExecutables is a reverse-DNS label for the helper tool (must be globally unique).

- The helper tool must have an embedded Info.plist containing an "SMAuthorizedClients" array of strings. Each string is a textual representation of a code signing requirement describing a client which is allowed to add and remove the tool.
- The helper tool must have an embedded launchd plist. The only required key in this plist is the Label key. When the launchd plist is extracted and written to disk, the key for ProgramArguments will be set to an array of 1 element pointing to a standard location. You cannot specify your own program arguments, so do not rely on custom command line arguments being passed to your tool. Pass any parameters via IPC.

- The helper tool must reside in the Contents/Library/LaunchServices directory inside the application bundle, and its name must be its launchd job label. So if your launchd job label is "com.apple.Mail.helper", this must be the name of the tool in your application bundle.

Available in OS X v10.6 and later.

115.4.7 JobDictionary(domain as string, jobLabel as string) as Dictionary

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Returns the job description dictionary for the given job label.
Notes:

domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label identifier for the job to copy.

Return a new dictionary describing the job, or nil if the job could not be found.
Available in OS X v10.6 and later.

115.4.8 JobRemove(domain as string, jobLabel as string, auth as AuthorizationMBS, wait as boolean, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Removes the job with the given label from the specified domain.
Notes:

domain: The job's domain (e.g. kSMDomainSystemLaunchd).
jobLabel: The label for the job to remove.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
wait: Pass true to block until the process for the given job has exited.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or nil if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was removed successfully, otherwise false.

JobSubmit removes the job specified by label from the domain. If the job is currently running, it will conditionally block until the running process has exited.
Available in OS X v10.6 and later.

115.4.9 JobSubmit(domain as string, job as Dictionary, auth as AuthorizationMBS, byref error as CFErrorMBS) as boolean

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Submits the given job to the specified domain.
Notes:

domain: The job's domain (e.g. kSMDomainSystemLaunchd).
job: A dictionary describing a job.
auth: An AuthorizationRef containing the kSMRightModifySystemDaemons right if the given domain is kSMDomainSystemLaunchd.
Error: An output reference to a CFErrorMBS describing the specific error encountered while submitting the job dictionary, or NULL if no error occurred. It is the responsibility of the application to release the error reference.

Returns true if the job was submitted successfully, otherwise false.

JobSubmit submits the given job to the specified domain.
Available in OS X v10.6 and later.

115.4.10 kSMDomainSystemLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: System-level launchd domain.

115.4.11 kSMDomainUserLaunchd as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: User-level launchd domain.

115.4.12 kSMInfoKeyAuthorizedClients as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Authorized clients property list key.

115.4.13 kSMInfoKeyPrivilegedExecutables as string

MBS MacCF Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Privileged executables property list key.

115.4.14 LoginItemRunning(identifier as string) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Checks whether a login item is running.
Notes: Actually checks if there is a record for your helper, so if it crashed, this returns still true.

115.4.15 LoginItemSetEnabled(identifier as string, enabled as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Enable a helper application located in the main application bundle's Contents/Library/LoginItems directory.
Notes:

identifier: The bundle identifier of the helper application bundle.
enabled: The Boolean enabled state of the helper application. This value is effective only for the currently logged in user. If true, the helper application will be started immediately (and upon subsequent logins) and kept running. If false, the helper application will no longer be kept running.

Returns true if the requested change has taken effect.

115.4.16 RegisterHelperApp(name as string, Update as boolean = false) as boolean

MBS MacCF Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Registers a helper application in the Launch Services database.
Notes:

The app must exist with given name inside the bundle in Library/LoginItems folder.

Update: A Boolean value specifying whether Launch Services should update existing information registered for the application, if any. If this parameter is false, the application will not be registered if it has already been registered previously and its current modification date has not changed from when it was last registered; if the parameter is true, the application's registered information will be updated even if its modification date

has not changed.

Returns true on success and false on failure.

Chapter 116

Mac

116.1 Globals

116.1.1 CurrentAppearanceThemeMBS as string

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns which theme is used on your computer.
Example:

msgbox "You are using this theme: "+CurrentAppearanceThemeMBS

Notes:

Possible values:
com.apple.theme.appearance.platinum
com.apple.theme.appearance.aqua
com.apple.theme.appearance.aqua.blue
com.apple.theme.appearance.aqua.graphite
Returns "" on any error.
Available in CarbonLib 1.4 and later. Available in Mac OS X 10.1 and later.

On Windows or Linux an empty string is returned.

116.1.2 SetDesktopPictureMBS(file as folderitem) as Integer

MBS Picture Plugin, Plugin Version: 3.3, Platforms: macOS, Windows, Targets: All.

Function: Asks the Finder/Explorer to change the desktop picture.
Notes:

File must be a valid folderitem for an existing file to define a new desktop picture.
Returns a Mac OS or Windows error code or -1 if the function is not available.

You can use file=nil to remove the desktop wallpaper on Windows.

116.2 class SummaryMBS

116.2.1 class SummaryMBS

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: A class using SearchKit on Mac OS X 10.4 and newer to summarize texts.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")

MsgBox s.SentenceSummaryString(1)
```

116.2.2 Blog Entries

- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

116.2.3 Methods

116.2.4 Constructor(text as string)

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Creates a summary object based on a text string.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")

MsgBox s.SentenceSummaryString(1)
```

Notes:

text: The text string that you want to summarize.
On success the handle property is not zero.

The constructor creates a summarization object that pre-analyzes a text string to support fast summarization.
Available in Mac OS X v10.4 and later.

116.2.5 ParagraphAtIndex(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a specified paragraph from the text in a summarization object.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.ParagraphAtIndex(0)
```

Notes:

index: The ordinal number of the paragraph in the original text, with the first paragraph designated by zero (this function uses zero-based indexing).

Return a string containing the specified paragraph, or "" on failure.

Available in Mac OS X v10.4 and later.

116.2.6 ParagraphIndexOfParagraphs as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns the array containing the ordinal number for each paragraph in the original text.

116.2.7 ParagraphIndexOfSentences as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array of indexes to map a sentence index to it's paragraph index.

116.2.8 ParagraphSummaryString(numParagraphs as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a text string consisting of a summary with, at most, the requested number of paragraphs.
Notes:

numParagraphs: The maximum number of paragraphs you want in the summary.
Returns a string containing the requested summary.
Available in Mac OS X v10.4 and later.

116.2.9 RankOrderOfParagraphs as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array with the summarization relevance rank of each paragraph in the original text.

116.2.10 RankOrderOfSentences as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array with the summarization relevance rank of each sentence in the original text.

116.2.11 SentenceAtIndex(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a specified sentence from the text in a summarization object.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox s.SentenceAtIndex(0)
```

Notes:

index: The ordinal number of the sentence in the original text, with the first sentence designated by zero (this function uses zero-based indexing).
Returns a string containing the specified sentence, or NULL on failure.
Available in Mac OS X v10.4 and later.

116.2.12 SentenceIndexOfSentences as Integer()

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns an array of the ordinal number for each sentence in the original text.

116.2.13 SentenceSummaryString(numSentences as Integer) as string

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets a text string consisting of a summary with, at most, the requested number of sentences.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")

MsgBox s.SentenceSummaryString(1)
```

Notes:

numSentences: The maximum number of sentences you want in the summary.
Returns a string containing the requested summary.
Available in Mac OS X v10.4 and later.

116.2.14 Properties

116.2.15 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The internal reference to the SKSummary object.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.handle)
```

Notes: (Read and Write property)

116.2.16 ParagraphCount as Integer

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets the number of paragraphs in a summarization object.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.ParagraphCount)
```

Notes: (Read only property)

116.2.17 SentenceCount as Integer

MBS MacOSX Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Gets the number of sentences in a summarization object.
Example:

```
dim s as new SummaryMBS("Hello World. This is just a test.")
MsgBox str(s.SentenceCount)
```

Notes: (Read only property)

116.3 class TextInputSourceMBS

116.3.1 class TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The class for text input source on Mac OS X.
Notes:

Text input sources fall into three general categories:

- Keyboard input sources, including keyboard layouts, keyboard input methods and input modes
- Palette input sources, including the character palette, keyboard viewer, and private dictionary panels
- Ink input sources

Palette input sources and ink input source are categorized as non-keyboard input sources. However, palette input sources might still involve some keyboard interaction. Keyboard input methods can be mode-enabled (for instance, Kotoeri). Hence, they are potentially the parent of several input modes directly selectable in the user interface (for instance, hiragana, katakana, and romaji). With mode-enabled input methods, the parent input method is not directly selectable. Non-mode-enabled input methods are directly selectable.

Some input sources are provided and installed with OS X. Other input sources can be installed as third party products themselves or as part of the installation of certain applications. International Preferences displays a list of all visible installed input sources. You can use International Preferences to enable or disable most input sources that are intended to be visible in the user interface. Setup Assistant also enables some input sources. A separate user interface provides a way to enable ink input sources.

You can use some of the functions in Text Input Source Services to enable or disable input sources programmatically in your application. One keyboard input source must be enabled. Only one ink input source may be enabled. Multiple instances of other input source types may be enabled.

Some enabled input sources are invisible but programmatically selectable, such as ink. Some are visible but not programmatically selectable, such as mode-savvy parent input methods (these must be visible so that International Preferences can display the parent input method for a group of input modes).

Input modes can only be changed from disabled to enabled if their parent input method is enabled. Input modes can only be selected if they and their parent input method are enabled.

Exactly one keyboard input source is selected at any time: the current keyboard input source. Selecting a new keyboard input source deselects the previous keyboard input source. Multiple palette input sources may be selected. For instance, there may be one or more character palettes and one or more keyboard viewers selected in addition to the selected keyboard input source. Selecting or deselecting a palette (or ink) input

source does not affect any other input source. Input methods that provide associated input palettes may programmatically deselect the palette when the input method is deselected, for example.

Text Input Source Source Services specifies modern, non-Script-Manager-based programming interfaces for operating on text input sources and performs the following functions:

- Finds information about text input sources
- Selects, enables, and disables text input sources
- Receives notifications about relevant changes in text input sources.

Available in OS X v10.5 and later.

https://developer.apple.com/library/mac/# documentation/TextFonts/Reference/TextInputSourcesReference/Reference/reference.html

116.3.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

116.3.3 Methods

116.3.4 BundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The reverse DNS BundleID associated with the input source.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.BundleID

116.3.5 Category as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The category of this input source.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.Category

Notes: Can be kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.

116.3.6 CreateASCIICapableInputSourceList as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates a list of ASCII-capable keyboard input sources.
Notes: This list represents a snapshot of ASCII-capable keyboard input sources enabled when the call was made. Successive calls to CreateASCIICapableInputSourceList may return different results because, for example, in between the calls the user may enable or disable an input source in the International Preferences pane. When a keyboard input source is enabled or disabled, by the user or programmatically, the distributed CF notification kTISNotifyEnabledKeyboardInputSourcesChanged is posted.

116.3.7 CreateInputSourceList(properties as dictionary, includeAllInstalled as boolean) as TextInputSourceMBS()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Creates a list of input sources that match specified properties.
Example:

```
// show keyboard viewer
Dim d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Dim sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If UBound(Sources) >= 0 Then
sources(0).SelectIt
End If
```

Notes:

properties: A dictionary of property keys and corresponding values to filter the input source list. May be nil, in which case no filtering is performed.
includeAllInstalled: Typically, set to false so that only enabled input sources are included; set to true to include all installed input sources that match the filter .

Returns an array for a list of text input source references that match the specified properties.

This list represents a snapshot of input sources that matched the properties specified when you made the call. If you want to include input sources that are installed but not currently enabled, set the includeAllInstalled parameter to true. Typically, you do this to obtain a text input source reference for a newly installed input source. In this case, the properties parameter would include very specific criteria limiting the matching input sources.

Important: Calling this function with the includeAllInstalled parameter set to true can have significant memory impact on the calling application if the properties parameter is nil (match all) or if it specifies criteria that might match many installed input sources. This setting might force caching of data for all matching input sources and result in an allocation of up to 120K.
If you are calling CreateInputSourceList to find a specific input source or sources from among the sources included in the list, first call CreateInputSourceList with includeAllInstalled set to false and check whether the returned array includes the desired input source(s). If this is not the case, call CreateInputSourceList again with the includeAllInstalled parameter set to true.
none

116.3.8 CurrentASCIICapableKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the most recently used ASCII-capable keyboard input source.
Example:

```
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardInputSource

MsgBox t.LocalizedName
```

Notes:

Returns text input source reference for the most recently used ASCII-capable keyboard input source.

If no ASCII-capable keyboard input source has been used yet, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

116.3.9 CurrentASCIICapableKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the most recently used ASCII-capable keyboard layout.

Example:

```
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentASCIICapableKeyboardLayoutInputSource

MsgBox t.LocalizedName
```

Notes:

Returns A text input source reference for the most recently used ASCII-capable keyboard layout.

If no ASCII-capable keyboard input source has been used, the function returns the default ASCII-capable keyboard layout chosen by Setup Assistant.

This function is used by input methods to get the keyboard layout used for key translation if no specific keyboard layout override exists. The CurrentASCIICapableKeyboardInputSource can return input sources that are not keyboard layouts.

116.3.10 CurrentKeyboardInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the currently selected keyboard input source.
Example:

```
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.LocalizedName
```

116.3.11 CurrentKeyboardLayoutInputSource as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the keyboard layout currently in use.
Example:

```
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardLayoutInputSource
MsgBox t.LocalizedName
```

Notes: If the currently selected keyboard input source is a keyboard layout, the text input source reference

refers to that layout. If the currently selected keyboard input source is an input method or mode, the text input source reference refers to the keyboard layout used by that input method or mode.

116.3.12 Deselect

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Deselects the specified input source.
Notes:

inputSource: The input source you want to deselect.

Lasterror is set.

Deselect is for use with palette or ink input sources only. It has no effect on other input sources. When palette input sources are disabled, the palette disappears. Ink input sources are usually deselected and disabled at the same time.

116.3.13 Disable

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Disables the specified input source.
Notes:

Sets lasterror. Lasterror is paramErr (-50) if the input source cannot be disabled. Otherwise, lasterror is noErr (0).

Disable is primarily intended for input methods, or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source unavailable for selection and removes it from the user interface.

116.3.14 Enable

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Enables the specified input source.
Notes:

Lasterror is set. Lasterror is paramErr (-50) if the input source cannot be enabled. Otherwise, it is noErr (0).

Enable is primarily for input methods or for applications that supply their own input sources (for example, applications that provide keyboard layouts or palette input methods, and keyboard input methods that provide their own keyboard layouts and input modes). It makes the specified input source available in the user interface for selection.

For Enable to succeed, the input source must be capable of being enabled (that is, kTISPropertyInputSourceIsEnableCapable is set to true). Furthermore, if the input source is an input mode, its parent must already be enabled for the mode to become enabled.

116.3.15 Icon as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Queries IconMBS object for this input source.
Notes: Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.

116.3.16 IconImageFile as folderitem

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The file containing the image (typically TIFF) to be used as the input source icon.
Notes: If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

116.3.17 IconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The URL to the file containing the image (typically TIFF) to be used as the input source icon.
Notes: If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.

116.3.18 InputMethodKeyboardLayoutOverride as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the currently selected input method's keyboard layout override.
Example:

```
dim t as TextInputSourceMBS
t = TextInputSourceMBS.InputMethodKeyboardLayoutOverride
if t = nil then
MsgBox "Nil"
else
MsgBox t.LocalizedName
end if
```

Notes: If the current keyboard input source is an input method or mode that has a keyboard layout override, a text input source reference for that keyboard layout is returned. Otherwise, the function returns nil.

116.3.19 InputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: A reverse DNS string that identifies a particular usage class for input modes.
Example:

```
MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.InputModeID
```

Notes:

For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.

116.3.20 InputSourceForLanguage(language as string) as TextInputSourceMBS

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns a text input source reference for the input source that should be used to input the specified language.
Notes:

language: A BCP 47 language code (in the same form returned by the Core Foundation function CFLocaleCreateCanonicalLanguageIdentifierFromString function) that represents the language an input source should be returned for.

Returns an enabled input source that can input the specified language. If more than one such input source exists and at least one has been used, the most recently used input source is chosen. If none has been used,

one is chosen based on the intended languages of the input sources. If no enabled input source exists that can input the specified language, the function returns nil.

If a text field is expected to have input in a particular language, an application can call InputSourceFor-Language and then SelectIt to select an input source appropriate for that language. This function is a replacement for the deprecated KeyScript programming interface's capability to select the default input source associated with a particular script code.

116.3.21 IsASCIICapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is intended to be capable of ASCII input.

116.3.22 IsEnableCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source can ever be programmatically enabled using Enable.
Notes:

You can enable most input sources programmatically at any time. IsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the function SetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. IsEnableCapable is set to false for these.
Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. IsEnableCapable is true for these.

116.3.23 IsEnabled as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is currently enabled.
Example:

MsgBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsEnabled)

116.3.24 IsSelectCapable as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source can ever be programmatically selected using Select.
Notes:

This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, IsSelectCapable is set to true.
For input sources that can never be programmatically selected even if they are enabled, IsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.
For input sources that are enabled and can only be programmatically selected under the correct conditions, IsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.
For input sources that can never be enabled or selected, IsSelectCapable is set to false.

116.3.25 IsSelected as boolean

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Whether the input source is currently selected.
Example:

MsgBox str(TextInputSourceMBS.CurrentKeyboardInputSource.IsSelected)

116.3.26 kTISCategoryInkInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: You can install or select 0 or 1 ink input source.

116.3.27 kTISCategoryKeyboardInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: This category includes keyboard layouts, keyboard input methods (both with modes and without), and keyboard input modes. At least one input source in this category is installed. Of all input sources in this category, exactly one is selected; selecting a new one deselects the previous one.

116.3.28 kTISCategoryPaletteInputSource as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the category identifiers.
Notes: This category includes character palettes and keyboard viewers. You can select 0 or more categories.

116.3.29 kTISNotifyEnabledKeyboardInputSourcesChanged as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The name of the CF distributed notification for a change to the set of enabled keyboard input sources.
Notes: Available in OS X v10.5 and later.

116.3.30 kTISNotifySelectedKeyboardInputSourceChanged as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The name of the CF distributed notification for a change to the selected keyboard input source.
Notes: Available in OS X v10.5 and later.

116.3.31 kTISPropertyBundleID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a string for the reverse DNS BundleID associated with the input source.

116.3.32 kTISPropertyIconImageURL as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a CFURLRef indicating the file containing the image (typically TIFF) to be used as the input source icon.
If an image file URL is not available for the specified input source, the value is nil. Note that other image formats (for example, JPEG, PNG) may also be used in the future.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the

CreateInputSourceList function.

116.3.33 kTISPropertyIconRef as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is an IconRef value for the input source icon.
Icon references are the typical icon format for keyboard layouts and input methods. If an icon reference is not available for the specified input source, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

116.3.34 kTISPropertyInputModeID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a CFStringRef for a reverse DNS string that identifies a particular usage class for input modes.
For example, com.apple.inputmethod.Japanese.Katakana identifies a standard Katakana-input usage class that may be associated with input modes from several different input methods.
You can attach this input mode to a TSMDocument using the TSMSetDocumentProperty function with the tag kTSMDocumentInputModePropertyTag, to control the input mode usage class that should be used with that TSM document.

116.3.35 kTISPropertyInputSourceCategory as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a string indicating the category of an input source. Possible values are specified by the following property value constants: kTISCategoryKeyboardInputSource, kTISCategoryPaletteInputSource, and kTISCategoryInkInputSource.

116.3.36 kTISPropertyInputSourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Example:

```
// show keyboard viewer
Dim d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Dim sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If UBound(Sources) >= 0 Then
sources(0).SelectIt
End If
```

Notes:

This property key designates a property value, which is a CFStringRef for the unique reverse DNS name associated with the input source.

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.
- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.
- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboardlayout.name,for instance, com.apple.keyboardlayout.US.

116.3.37 kTISPropertyInputSourceIsASCIICapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source is intended to be capable of ASCII input.

116.3.38 kTISPropertyInputSourceIsEnableCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value which is a boolean indicating whether the input source can ever be programmatically enabled using TISEnableInputSource.
You can enable most input sources programmatically at any time. kTISPropertyInputSourceIsEnableCapable is set to true for these input sources.
Some input sources can never be programmatically enabled. These are mainly input method private keyboard layouts used by the input method via the functionTISSetInputMethodKeyboardLayoutOverride. You cannot directly enable these layouts, nor use them as keyboard layout input sources. kTISPropertyInputSourceIsEnableCapable is set to false for these.
Some input sources can be programmatically enabled only under the correct conditions. These are mainly input modes, which can be changed from disabled to enabled only if their parent input method is enabled. However, they can already be in the enabled state, but not currently selectable if their parent input method is disabled. kTISPropertyInputSourceIsEnableCapable is true for these.

116.3.39 kTISPropertyInputSourceIsEnabled as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a boolean indicating whether the input source is currently enabled.

116.3.40 kTISPropertyInputSourceIsSelectCapable as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a boolean indicating whether the input source can ever be programmatically selected using TISSelectInputSource.
This static property of an input source does not depend on any current state. For input sources that can be programmatically selected if they are enabled, kTISPropertyInputSourceIsSelectCapable is set to true.
For input sources that can never be programmatically selected even if they are enabled, kTISPropertyInputSourceIsSelectCapable is set to false. Such sources are mainly input methods that have modes (parent input methods); only their modes can be selected.
For input sources that are enabled and can only be programmatically selected under the correct conditions, kTISPropertyInputSourceIsSelectCapable is set to true. Such input sources are mainly input modes, which can only be selected if both they and their parent input method are enabled.
For input sources that can never be enabled or selected, kTISPropertyInputSourceIsSelectCapable is set to false.

116.3.41 kTISPropertyInputSourceIsSelected as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes: This property key designates a property value, which is a Boolean indicating whether the input source is currently selected.

116.3.42 kTISPropertyInputSourceLanguages as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a CFArrayRef for an array of CFStringRefs, where each string is the language code for a language that can be input using the input source. You can use this constant with the PropertyValue function, but you may not use it in the filter dictionary passed to the CreateInputSourceList function.
Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

116.3.43 kTISPropertyInputSourceType as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a string indicating the specific type of an input source. Possible values are specified by the following property value constants: kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

116.3.44 kTISPropertyLocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Example:

```
dim t as TextInputSourceMBS
```

```
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

Notes:

This property key designates a property value, which is a string for the input source's localized name as intended for user interface use.
Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

116.3.45 kTISPropertyUnicodeKeyLayoutData as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the property keys.
Notes:

This property key designates a property value, which is a Memoryblock that refers to the 'uchr' keyboard layout data for a keyboard layout input source.
The 'uchr' data is in native-endian order. If the input source is not a keyboard layout, or is a keyboard layout for which only 'KCHR data' is available, the value is nil.
Note: You may not use this key (and its corresponding value) used in the filter dictionary passed to the CreateInputSourceList function.

116.3.46 kTISTypeCharacterPalette as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryPaletteInputSource.

116.3.47 kTISTypeInk as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryInkInputSource. Even though it is the only type in that category, a type is provided so that clients who don't need category information can just check input source type.

116.3.48 kTISTypeKeyboardInputMethodModeEnabled as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

116.3.49 kTISTypeKeyboardInputMethodWithoutModes as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

116.3.50 kTISTypeKeyboardInputMode as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

116.3.51 kTISTypeKeyboardLayout as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryKeyboardInputSource.

116.3.52 kTISTypeKeyboardViewer as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: One of the possible type values.
Notes: This type belongs to the category kTISCategoryPaletteInputSource.

116.3.53 LocalizedName as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The input source's localized name as intended for user interface use.
Example:

```
MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.LocalizedName
```

Notes: Uses the best match (determined by CFBundle) between the localization used by the caller and the available localizations of the input source name. In some cases, this might be an unlocalized name.

116.3.54 PropertyValue(key as string) as Variant

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Gets the value of a specified property for a specified input source.
Example:

```
dim t as TextInputSourceMBS
t = TextInputSourceMBS.CurrentKeyboardInputSource
MsgBox t.PropertyValue(t.kTISPropertyLocalizedName)
```

Notes:

Key: The property key constant specifying the desired property value.

Returns a variant associated with the property key. The value type is specified for each key. Can be a string a boolean, a number, an array or an IconMBS. The function might return nil if the specified property is missing or invalid for the specified input source.

116.3.55 RegisterInputSource(file as folderitem) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.
Notes:

location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify

the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or
textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.
Input method bundles in the new Library/Input Methods/ or
textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).
Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.
Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).
See also:

- 116.3.56 RegisterInputSource(URL as string) as Integer 18915

116.3.56 RegisterInputSource(URL as string) as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Registers any new input sources in a file or bundle so a text input source reference can be obtained immediately for each new input source.
Notes:

location: The location of the input sources in a file or bundle.

Returns a result code. The function returns paramErr (-50) if location is invalid or the input sources in the specified location cannot be registered. Otherwise, it returns noErr (0).

This function enables an installer for an input method bundle or a keyboard layout file or bundle to notify the system to register these new input sources. The system can then locate the specified file or bundle and perform any necessary cache rebuilds so that the installer can immediately call TISCreateInputSourceList with appropriate properties (for example, a bundle ID or input source ID) to get text input source references for one or more of the newly registered input sources.

You can only use this function to register the following:

Keyboard layout files or bundles in the /Library/Keyboard Layouts/ or

textasciitilde /Library/Keyboard Layouts/ directory (available to all users or to the current user, respectively). Such keyboard layouts, once enabled, are selectable.
Input method bundles in the new Library/Input Methods/ or
textasciitilde /Library/Input Methods/ directories (available to all users or to the current user, respectively).
Note: Input method bundles can include private non-selectable keyboard layouts for use with SetInputMethodKeyboardLayoutOverride. These are registered automatically when the input method is registered, and do not need to be separately registered. They are not registered using TISRegisterInputSource.
Security: Any code that calls RegisterInputSource is part of an application or service that has already been validated in some way (for instance, by the user).
See also:

- 116.3.55 RegisterInputSource(file as folderitem) as Integer 18914

116.3.57 SelectIt

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Selects the specified input source.
Example:

```
// show keyboard viewer
Dim d As New Dictionary
d.Value(TextInputSourceMBS.kTISPropertyInputSourceID) = "com.apple.KeyboardViewer"

Dim sources() As TextInputSourceMBS = TextInputSourceMBS.CreateInputSourceList(d, False)
If UBound(Sources) >= 0 Then
sources(0).SelectIt
End If
```

Notes:

Lasterror is set. Lasterror is paramErr (-50) if the input source is not selectable. Otherwise, it is noErr (0).

When the input source is a selectable keyboard, the specified input source becomes the new current keyboard input source, and the previous input source is deselected. When the input source is a palette, that palette is displayed and made available for input. Ink input sources are typically enabled and selected at the same time. When you call SelectInputSource for a palette or ink input source, there is no effect on other input sources. When you call SelectInputSource for an already selected input source, there is, similarly, no effect.

For SelectInputSource to succeed, the input source must be selectable (that is, kTISPropertyInputSourceIsSelectCapable is set to true) and the input source must be enabled (that is, kTISPropertyInputSourceIsEnabled is set to true). Furthermore, if the input source is an input mode, its parent must be enabled for it to be selected.

We named the function SelectIt as Select is a reserved word in Xojo.

116.3.58 SetInputMethodKeyboardLayoutOverride

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Sets the keyboard layout override for an input method or mode.
Notes:

self: The input source for the keyboard layout that should be used until the current input method is deactivated (if it should be something other than the most recently used ASCII-capable keyboard layout).

Lasterorr is set. Value is paramErr (-50) if the current keyboard input source is not an input method or mode or if keyboardLayout does not designate a keyboard layout. Otherwise, it is noErr (0).

When an input method or mode is the selected input source, the most recently used ASCII-capable keyboard layout to translate key events is used. This keyboard layout is also the one that appears in Keyboard Viewer. An input source for this keyboard layout is returned by the function CurrentASCIICapableKeyboardLayoutInputSource. If a different keyboard layout should be used for a particular input method or mode, the activated input method or mode should call SetInputMethodKeyboardLayoutOverride to specify the desired keyboard layout.

For example, when a Kotoeri user selects kana layout for kana input, Kotoeri should call SetInputMethodKeyboardLayoutOverride to set the kana keyboard as the override for the appropriate input modes.

The keyboard layout set in this way is used for the final stage of key translation in the Window Server, the connection, or application-specific key translation.

The override setting is lost when the input method that set it is deactivated.

The keyboard layout used for overriding need not be enabled or explicitly selectable. It can be a non-selectable layout included in an input method bundle and automatically registered.

The default behavior is new with OS X v10.5, and eliminates the necessity that input methods have a user interface for setting the ASCII- capable keyboard for phonetic input based on Latin characters.

116.3.59 SourceID as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The unique reverse DNS name associated with the input source.

Notes:

- For keyboard input methods and for palette or ink input sources, typically, the bundle ID, for instance, com.apple.Kotoeri.
- For keyboard input modes, typically, the bundle ID of the parent input method plus a suffix that uniquely identifies the input mode, for instance, com.apple.Kotoeri.Katakana. It is not the generic input mode name used across input methods, for instance, com.apple.inputmethod.Japanese.Katakana.
- For keyboard layouts, a new identification mechanism typically structured as com.company.keyboardlayout.name,for instance, com.apple.keyboardlayout.US.

116.3.60 SourceLanguages as string()

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The array of string, where each string is the language code for a language that can be input using the input source.
Notes: Languages codes are in the same BCP 47 form returned by the CFLocaleCreateCanonicalLanguageIdentifierFromString function. The first language code in the array is the language the input source is intended for. If no such language exists (for example, for the Unicode Hex Input keyboard layout), the first language code is an empty string.

116.3.61 Type as string

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Returns the type of an input source.
Example:

MsgBox TextInputSourceMBS.CurrentKeyboardInputSource.Type

Notes: Value can be kTISTypeKeyboardLayout, kTISTypeKeyboardInputMethodWithoutModes, kTISTypeKeyboardInputMethodModeEnabled, kTISTypeKeyboardInputMode, kTISTypeCharacterPalette, kTISTypeKeyboardViewer, and kTISTypeInk.

116.3.62 Properties

116.3.63 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

116.3.64 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

116.4 module ValidationMBS

116.4.1 module ValidationMBS

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: This module has helper functions for App Store Validation.
Notes: Please use AppReceiptMBS and AppReceiptVerificatorMBS classes instead.

116.4.2 Blog Entries

- MBS Xojo Plugins, version 19.6pr1

116.4.3 Methods

116.4.4 AppStoreReceipt(file as folderitem) as dictionary

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Reads the app store receipt.
Example:

```
// read a receipt file
dim file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
dim dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show identifier
MsgBox dic.Value(ValidationMBS.kReceiptBundleIdentifer)
```

Notes:

You can use this to get details from your receipt.
Returns nil on any error.
Please pass folderitem to receipt file.

116.4.5 ExitApp(code as Integer = 173)

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Quits the application directly.
Example:

ValidationMBS.ExitApp 173

Notes:

This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

116.4.6 GUID as string

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Reads the GUID of the Mac.
Example:

```
dim g as String = ValidationMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

116.4.7 locateAppStoreReceipt as folderitem

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Locates the App Store Receipt in the application bundle.
Example:

```
dim f as FolderItem = ValidationMBS.locateAppStoreReceipt
MsgBox f.UnixpathMBS
```

Notes: Please check result if folderitem is not nil and exists before processing.

116.4.8 Validate(file as folderitem) as boolean

MBS Encryption Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Validates the receipt.
Example:

```
dim file as FolderItem = ValidationMBS.locateAppStoreReceipt
```

```
if ValidationMBS.Validate(file) = false then
ValidationMBS.ExitApp 173
else
// ok
end if
```

Notes: Returns true if valid and false if not.

116.4.9 Constants

116.4.10 kReceiptBundleIdentifer = "BundleIdentifier"

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the keys for the receipt dictionary.
Example:

```
// read a receipt file
dim file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
dim dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show identifier
MsgBox dic.Value(ValidationMBS.kReceiptBundleIdentifer)
```

Notes: The bundle identifier.

116.4.11 kReceiptBundleIdentiferData = "BundleIdentifierData"

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the keys for the receipt dictionary.
Notes: The bundle identifier data.

116.4.12 kReceiptHash = "Hash"

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the keys for the receipt dictionary.
Notes: The hash for the receipt.

116.4.13 kReceiptOpaqueValue = "OpaqueValue"

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the keys for the receipt dictionary.
Notes: The opaque value used for hashing.

116.4.14 kReceiptVersion = "Version"

MBS Encryption Plugin, Plugin Version: 13.4.

Function: One of the keys for the receipt dictionary.
Example:

```
// read a receipt file
dim file as FolderItem = SpecialFolder.Desktop.Child("receipt")

// query values
dim dic as Dictionary = ValidationMBS.AppStoreReceipt(file)

// show version
MsgBox dic.Value(ValidationMBS.kReceiptVersion)
```

Notes: The version string.

Chapter 117

MapKit

117.1 control MapKitIOSControlMBS

117.1.1 control MapKitIOSControlMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The control for showing a map in Xojo.
Notes: This control is designed for Xojo 2020r2 or newer.

117.1.2 Blog Entries

- Three new controls for iOS in Xojo
- MBS Xojo Plugins, version 20.6pr3

117.1.3 Properties

117.1.4 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The map view used for this control.
Notes:

The plugin creates it automatically when the constructor runs.
(Read only property)

117.1.5 Events

117.1.6 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as integer, oldState as integer)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the drag state of one of its annotation views changed.
Notes:

mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

117.1.7 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes:

mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

117.1.8 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that one or more annotation views were added to the map.
Notes:

mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

117.1.9 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells you that one or more renderer objects were added to the map.
Notes:

mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

117.1.10 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The event to inform you about added overlay views.

117.1.11 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that one of its annotation views was deselected.
Notes:

mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

117.1.12 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the specified view was unable to load the map data.
Notes:

mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

117.1.13 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that an attempt to locate the user's position failed.
Notes:

mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

117.1.14 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes:

mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles

are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

117.1.15 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells you that the map view has finished rendering all visible tiles.
Notes:

fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

117.1.16 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that one of its annotation views was selected.
Notes:

mapView: The map view containing the annotation view.
view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

117.1.17 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the map view stopped tracking the user's location.
Notes:

mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

117.1.18 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the location of the user was updated.
Notes:

mapView: The map view that is tracking the user's location.
userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

117.1.19 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

117.1.20 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

117.1.21 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the region displayed by the map view just changed.
Notes:

mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

117.1.22 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the region displayed by the map view is about to change.
Notes:

mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

117.1.23 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes:

mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

117.1.24 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The event to query an annotation view for the given annotation.

117.1.25 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes:

mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

117.1.26 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells the control that the map view will start tracking the user's position.
Notes:

mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

117.1.27 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

117.2 control MapKitViewControlMBS

117.2.1 control MapKitViewControlMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: The control for showing a map in Xojo.
Notes:

This control is designed for Xojo (it may or may not work in REAL Studio if the Cocoa target is chosen)

As Xojo provides some events for us automatically like for context menu or mouse wheel, it does not mean that those events do work. The webview used in the map view seems to consume them before the plugin gets them.

117.2.2 Blog Entries

- Three new controls for iOS in Xojo

117.2.3 Xojo Developer Magazine

- 18.6, page 69: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

117.2.4 Properties

117.2.5 View as MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop only.

Function: The map view used for this control.
Notes:

The plugin creates it automatically when the constructor runs.
(Read only property)

117.2.6 Events

117.2.7 annotationViewDidChangeDragState(mapView as MKMapViewMBS, annotationView as MKAnnotationViewMBS, newState as Integer, oldState as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the drag state of one of its annotation views changed.
Notes:

mapView: The map view containing the annotation view.
annotationView: The annotation view whose drag state changed.
newState: The new drag state of the annotation view.
oldState: The previous drag state of the annotation view.

The drag state typically changes in response to user interactions with the annotation view. However, the annotation view itself is responsible for changing that state as well.

117.2.8 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a touch gesture.
Notes:

e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

117.2.9 BoundsChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

117.2.10 ClusterAnnotationForMemberAnnotations(mapView as MKMapViewMBS, memberAnnotations() as MKAnnotationMBS) as MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Asks you to provide a cluster annotation object for the specified annotations.
Notes:

mapView: The map view containing the specified annotations.
memberAnnotations: The annotations to be clustered together. The returned MKClusterAnnotation object must include the specific annotations in this parameter.

Return the cluster annotation object.

Use this method to customize the cluster annotations displayed on your map. Normally, MapKit creates cluster annotation objects automatically when one or more annotations with the same cluster identifier are too close together. However, you can implement this method and return a custom cluster annotation object for the specified set of annotations.

117.2.11 didAddAnnotationViews(mapView as MKMapViewMBS, AnnotationViews() as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that one or more annotation views were added to the map.
Notes:

mapView: The map view that added the annotation views.
views: An array of MKAnnotationView objects representing the views that were added.

By the time this method is called, the specified views are already added to the map.

117.2.12 DidAddOverlayRenderers(mapView as MKMapViewMBS, renderers() as MKOverlayRendererMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Tells you that one or more renderer objects were added to the map.
Notes:

mapView: The map view that added the renderer objects.
renderers: The renderer objects that were added.

The map view adds renderer objects when it needs them to draw their contents, which might be prior to those contents appearing onscreen. It calls this method to let you know that the renderer is active and in use. By the time this method is called, the specified renderers have already been added to the map.

117.2.13 didAddOverlayViews(mapView as MKMapViewMBS, overlayViews() as NSViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The event to inform you about added overlay views.

117.2.14 didDeselectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that one of its annotation views was deselected.
Notes:

mapView: The map view containing the annotation view.
view: The annotation view that was deselected.

You can use this method to track changes in the selection state of annotation views.

117.2.15 didFailLoadingMap(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the specified view was unable to load the map data.
Notes:

mapView: The map view that started the load operation.
error: The reason that the map data could not be loaded.

This method might be called in situations where the device does not have access to the network or is unable to load the map data for some reason. It may also be called if a request for additional map tiles comes in while a previous request for tiles is still pending. You can use this message to notify the user that the map data is unavailable.

117.2.16 didFailToLocateUserWithError(mapView as MKMapViewMBS, error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that an attempt to locate the user's position failed.

Notes:

mapView: The map view that is tracking the user's location.
error: An error object containing the reason why location tracking failed.

117.2.17 didFinishLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the specified map view successfully loaded the needed map data.
Notes:

mapView: The map view that started the load operation.

This method is called when the map tiles associated with the current request have been loaded. Map tiles are requested when a new visible area is scrolled into view and tiles are not already available. Map tiles may also be requested for portions of the map that are not currently visible. For example, the map view may load tiles immediately surrounding the currently visible area as needed to handle small pans by the user.

117.2.18 DidFinishRenderingMap(mapView as MKMapViewMBS, fullyRendered as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Tells you that the map view has finished rendering all visible tiles.
Notes:

fullyRendered: This parameter is set to true if the map view was able to render all tiles completely or false if errors prevented all tiles from being rendered.

This method lets you know when the map view finishes rendering all of the currently visible tiles to the best of its ability. This method is called regardless of whether all tiles were rendered successfully. If there were errors loading one or more tiles that prevented map view from rendering them, the fullyRendered parameter is set to false.

117.2.19 didSelectAnnotationView(mapView as MKMapViewMBS, view as MKAnnotationViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that one of its annotation views was selected.
Notes:

mapView: The map view containing the annotation view.
view: The annotation view that was selected.

You can use this method to track changes in the selection state of annotation views.

117.2.20 didStopLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the map view stopped tracking the user's location.
Notes:

mapView: The map view that stopped tracking the user's location.

This method is called when the value of the showsUserLocation property changes to false.

117.2.21 didUpdateUserLocation(mapView as MKMapViewMBS, userLocation as MKUserLocationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the location of the user was updated.
Notes:

mapView: The map view that is tracking the user's location.
userLocation: The location object representing the user's latest location. This property may be nil.

While the showsUserLocation property is set to true, this method is called whenever a new location update is received by the map view. This method is also called if the map view's user tracking mode is set to MKUserTrackingModeFollowWithHeading and the heading changes.

This method is not called if the application is currently running in the background. If you want to receive location updates while running in the background, you must use the Core Location framework.

117.2.22 EnableMenuItems

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event where you can enable menu items.

117.2.23 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Informs the receiver that the user has ended a touch gesture.
Notes:

e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

117.2.24 FrameChanged

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

117.2.25 GotFocus

MBS MacFrameworks Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

117.2.26 LostFocus

MBS MacFrameworks Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

117.2.27 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a pinch gesture.
Notes:

e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.

Return true if you handled this event.

117.2.28 MenuAction(HitItem as MenuItem) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

117.2.29 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

117.2.30 MouseDrag(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

117.2.31 MouseUp(x as Integer, y as Integer)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

117.2.32 pressureChange(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes:

This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

117.2.33 regionDidChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the region displayed by the map view just changed.
Notes:

mapView: The map view whose visible region changed.
animated: If true, the change to the new region was animated.

This method is called whenever the currently displayed map region changes. During scrolling, this method may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

117.2.34 regionWillChangeAnimated(mapView as MKMapViewMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the region displayed by the map view is about to change.
Notes:

mapView: The map view whose visible region is about to change.
animated: If true, the change to the new region will be animated. If NO, the change will be made immediately.

This method is called whenever the currently displayed map region changes. During scrolling, this method

may be called many times to report updates to the map position. Therefore, your implementation of this method should be as lightweight as possible to avoid affecting scrolling performance.

117.2.35 rendererForOverlay(mapView as MKMapViewMBS, overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Asks the control for a renderer object to use when drawing the specified overlay.
Notes:

mapView: The map view that requested the renderer object.
overlay: The overlay object that is about to be displayed.

Return the renderer to use when presenting the specified overlay on the map.

You must implement this method and use it to provide an appropriate renderer object for your overlays. The renderer object is responsible for drawing the contents of your overlay when asked to do so by the map view. Map Kit supports many different types of standard renderer objects and you may also define your own custom renderers.

If you don't implement this event, the MBS Plugin returns a default renderer.

117.2.36 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a rotation gesture.
Notes:

e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

117.2.37 ScaleFactorChanged(NewFactor as Double)

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

117.2.38 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a swipe gesture.
Notes:

e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

117.2.39 viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The event to query an annotation view for the given annotation.

117.2.40 willStartLoadingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the specified map view is about to retrieve some map data.
Notes:

mapView: The map view that began loading the data.

This method is called whenever a new group of map tiles need to be downloaded from the server. This typically occurs whenever you expose portions of the map by panning or zooming the content. You can use this method to mark the time that it takes for the map view to load the data.

117.2.41 willStartLocatingUser(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: .

Function: Tells the control that the map view will start tracking the user's position.
Notes:

mapView: The map view that is tracking the user's location.

This method is called when the value of the showsUserLocation property changes to true.

117.2.42 WillStartRenderingMap(mapView as MKMapViewMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Tells you that the map view is about to start rendering some of its tiles.
Notes: The map view calls this method when one or more tiles are revealed and require rendering.

117.3 class MKAnnotationViewMBS

117.3.1 class MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation of one of your annotation objects.
Notes:

See
https://developer.apple.com/documentation/mapkit/mkannotationview
Subclass of the NSViewMBS class.

117.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.4
- MBS Xojo Plugins, version 20.4pr8
- Mapview with icons in Xojo
- MapKit Framework for Xojo

117.3.3 Xojo Developer Magazine

- 19.1, page 64
- 18.6, page 80: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

117.3.4 Methods

117.3.5 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = """, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new annotation view.
Notes:

annotation: The annotation object to associate with the new view.
reuseIdentifier: If you plan to reuse the annotation view for similar types of annotations, pass a string to identify it. Although you can pass nil if you do not intend to reuse the view, reusing annotation views is

generally recommended.

Returns the initialized annotation view or nil if there was a problem initializing the object.

The reuse identifier provides a way for you to improve performance by recycling annotation views as they are scrolled on and off of the map. As views are no longer needed, they are moved to a reuse queue by the map view. When a new annotation becomes visible, your application can request a view for that annotation by passing the appropriate reuse identifier string to the dequeueReusableAnnotationViewWithIdentifier: method of MKMapView.

Added EnableEvents parameter to enable new prepareForDisplay and prepareForReuse events. But please keep reference in some global array to those objects to keep the events working.

117.3.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.3.7 MKAnnotationCalloutInfoDidChangeNotification as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The notification name for the case callout info changed.

117.3.8 setDragState(State as Integer, animated as Boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the current drag state for the annotation view.
Notes:

newDragState: The new drag state for the annotation view.
animated: If true, the change to the new drag state should be animated; otherwise, it should be made without animations.

Applications targeting iOS 4.2 and later can override this method and use it to implement drag support for custom annotation views. As the system detects user actions that would indicate a drag, it calls this method to update the drag state. In response to these changes, your custom implementation of this method should do the following:

When the drag state changes to MKAnnotationViewDragStateStarting, set the state to MKAnnotationViewDragStateDragging. If you perform an animation to indicate the beginning of a drag, and the animated parameter is true, perform that animation before changing the state.

When the state changes to either MKAnnotationViewDragStateCanceling or MKAnnotationViewDragStateEnding, set the state to MKAnnotationViewDragStateNone. If you perform an animation at the end of a drag, and the animated parameter is true, you should perform that animation before changing the state.

The default implementation of this method sets the value of the dragState property to the value in the newDragState parameter only. Therefore, direct subclasses can simply call the inherited version of this method to change the drag state; otherwise, just change the value in the draggable property directly.

Changing the state to MKAnnotationViewDragStateDragging or MKAnnotationViewDragStateNone is the way to signal to the map view that you are done with any animations you wanted to perform. For example, when a drag operation begins for a pin annotation, the MKPinAnnotationView class executes an animation to lift the pin off the map. Similarly, when the pin is dropped, the class performs a drop animation. Even if you do not perform any animations, you should call the inherited version of this method to update the dragState property.

You must not try to abort a new drag operation by changing the state from MKAnnotationViewDragStateStarting to MKAnnotationViewDragStateNone. If you do not want your annotation view to be draggable, set the draggable property to NO.

117.3.9 setSelected(selected as boolean, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the selection state of the annotation view.
Notes:

selected: Contains the value true if the view should display itself as selected.
animated: Set to true if the change in selection state is animated.

You should not call this method directly. An MKMapView object calls this method in response to user interactions with the annotation.

117.3.10 Properties

117.3.11 annotation as MKAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The annotation object currently associated with the view.
Notes:

You should not change the value of this property directly. This property contains a non-nil value only while the annotation view is visible on the map. If the view is queued and waiting to be reused, the value is nil
(Read and Write property)

117.3.12 CalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to place the callout bubble.
Notes:

This property determines the additional distance by which to move the callout bubble. When this property is set to (0, 0), the anchor point of the callout bubble is placed on the top-center point of the annotation view's frame. Specifying positive offset values moves the callout bubble down and to the right, while specifying negative values moves it up and to the left.
The calloutOffset property is not used in macOS apps. Instead, macOS apps use leftCalloutOffset and rightCalloutOffset.
(Read and Write property)

117.3.13 canShowCallout as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is able to display extra information in a callout bubble.
Notes:

If the value of this property is YES, a standard callout bubble is shown when the user taps a selected annotation view. The callout uses the title and subtitle text from the associated annotation object. If there is no title text, though, the annotation view is treated as if its enabled property is set to NO. The callout also displays any custom callout views stored in the leftCalloutAccessoryView and rightCalloutAccessoryView properties.
If the value of this property is NO, the value of the title and subtitle strings are ignored and the annotation view remains enabled by default. You can still disable the view explicitly using the enabled property.
(Read and Write property)

117.3.14 CenterOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to display the view.

Notes:

By default, the center point of an annotation view is placed at the coordinate point of the associated annotation. You can use this property to reposition the annotation view as needed. This x and y offset values are measured in points. Positive offset values move the annotation view down and to the right, while negative values move it up and to the left.
(Read and Write property)

117.3.15 clusterAnnotationView as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The clustering annotation view currently standing in for this annotation view.
Notes:

When the annotation view is being displayed on the map, the value of this property is nil.
(Read only property)

117.3.16 clusteringIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An identifier that determines whether the annotation view participates in clustering.
Notes:

The default value of this property is empty, which prevents the annotation view from being clustered with other annotation views. Setting the property to a non empty value it to participate in clustering.
Clustering occurs when there is a collision between multiple annotation views with the same identifier on the map surface. The annotation views involved in the collision are removed from the map view and replaced by a clustering annotation view, which displays the title from one of the annotations and provides access to the other annotations.
(Read and Write property)

117.3.17 collisionMode as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The collision mode to use when interpreting the collision frame rectangle.
Notes: (Read and Write property)

117.3.18 detailCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detail accessory view to be used in the standard callout.
Notes: (Read and Write property)

117.3.19 displayPriority as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The display priority of this annotation view.
Notes:

An annotation view whose priority is set to DisplayPriorityRequired is always visible on the map, whereas other priorities may result in the annotation view being hidden.
The default value of this property is DisplayPriorityRequired.
(Read and Write property)

117.3.20 draggable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the annotation view is draggable.
Notes:

Setting this property to true makes an annotation draggable by the user. If true, the associated annotation object must also implement the setCoordinate: method. The default value of this property is false.
Setting this property to true, lets the map view know that the annotation is always draggable. In other words, you cannot conditionalize drag operations by attempting to stop an operation that has already been initiated; doing so can lead to undefined behavior. Once begun, the drag operation should always continue to completion.
(Read and Write property)

117.3.21 dragState as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The current drag state of the annotation view.
Notes:

To support drag operations, you must override the implementation of this property and update the drag state at the following times:
When the drag state changes to MKAnnotationViewDragStateStarting, you should set the state to MKAn-

notationViewDragStateDragging. If you perform an animation to indicate the beginning of a drag, you should perform that animation before changing the state. Changing the state to the new value lets the map know that your animations are done.
When the state changes to either MKAnnotationViewDragStateCanceling or MKAnnotationViewDragStateEnding, set the state to MKAnnotationViewDragStateNone. If you perform an animation at the end of a drag, you should perform that animation before changing the state.

Changing the state to the MKAnnotationViewDragStateDragging or MKAnnotationViewDragStateNone value is the way to signal to the map view that you are done with any animations you wanted to perform. For example, when a drag operation begins for a pin annotation, the MKPinAnnotationView class executes an animation to lift the pin off the map. Similarly, when the pin is dropped, the class performs a drop animation. Even if you do not perform any animations, you should still change the value of this property to reflect the correct state.

You must not try to abort a new drag operation by changing the state from MKAnnotationViewDragStateStarting to MKAnnotationViewDragStateNone. If you do not want your annotation view to be draggable, set the draggable property to NO.
(Read and Write property)

117.3.22 enabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation is enabled.
Notes:

The default value of this property is YES. If the value of this property is NO, the annotation view ignores touch events and cannot be selected. Subclasses may also display the annotation contents differently depending on the value of this property.
(Read and Write property)

117.3.23 highlighted as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is highlighted.
Notes:

You should not set the value of this property directly. The map view sets it in response to touch events entering or exiting the annotation view's bounds.
(Read and Write property)

117.3.24 image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The image to be displayed by the annotation view.
Notes:

Looks like MKPinAnnotationViewMBS likes to ignore it, so you may prefer to use MKAnnotationViewMBS directly.
(Read and Write property)

117.3.25 leftCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The view to display on the left side of the standard callout bubble.
Notes:

The default value of this property is nil. The left callout view is typically used to display information about the annotation or to link to custom information provided by your application.
In an iOS app, if the view you specify is also a descendant of the UIControl class, you can use the map view's delegate to receive notifications when your control is tapped. If it does not descend from UIControl, your view is responsible for handling any touch events within its bounds.
In a macOS app, the callout view's view controller can implement an action method that responds when a user clicks the control in a callout view.
(Read and Write property)

117.3.26 leftCalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The offset in points from the middle-left of the annotation view.
Notes:

This property specifies where the anchor of the callout should be shown when it's oriented off the left side of the annotation view.
(Read and Write property)

117.3.27 reuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The string that identifies that this annotation view is reusable.
Notes:

You specify the reuse identifier when you create the view. You use this type later to retrieve an annotation view that was created previously but which is currently unused because its annotation is not on screen.
If you define distinctly different types of annotations (with distinctly different annotation views to go with them), you can differentiate between the annotation types by specifying different reuse identifiers for each one.
(Read only property)

117.3.28 rightCalloutAccessoryView as NSViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The view to display on the right side of the standard callout bubble.
Notes:

This property is set to nil by default. The right callout view is typically used to link to more detailed information about the annotation. In an iOS app, a common view to specify for this property is a button object whose type is set to UIButtonTypeDetailDisclosure.
In an iOS app, if the view you specify is also a descendant of the UIControl class, you can use the map view's delegate to receive notifications when your control is tapped. If it does not descend from UIControl, your view is responsible for handling any touch events within its bounds.
In a macOS app, the callout view's view controller can implement an action method that responds when a user clicks the control in a callout view.
(Read and Write property)

117.3.29 rightCalloutOffset as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The offset in points from the middle-right of the annotation view.
Notes:

This property specifies where the anchor of the callout should be shown when it's oriented off the right side of the annotation view.
(Read and Write property)

117.3.30 selected as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the annotation view is currently selected.
Notes:

You should not set the value of this property directly. If the property contains true, the annotation view is displaying a callout bubble.

(Read and Write property)

117.3.31 Events

117.3.32 prepareForDisplay

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: .

Function: Notifies the annotation view that it is about to be displayed on the map.
Notes: Use this event to prepare the content of your annotation view.

117.3.33 prepareForReuse

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: .

Function: Called when the view is removed from the reuse queue.
Notes: You can implement this event in your custom annotation views and use it to put the view in a known state before it is returned to your map view delegate.

117.3.34 Constants

117.3.35 CollisionModeCircle = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating how to interpret the collision frame rectangle of an annotation view.

117.3.36 CollisionModeRectangle = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating how to interpret the collision frame rectangle of an annotation view.

117.3.37 DisplayPriorityDefaultHigh = 750

MBS MacFrameworks Plugin.

Function: One of the display priority constants.
Notes: A constant indicating that the item's display priority is high.

117.3.38 DisplayPriorityDefaultLow = 250

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the display priority constants.
Notes: A constant indicating that the item's display priority is low.

117.3.39 DisplayPriorityRequired = 1000

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the display priority constants.
Notes: A constant indicating that the item is required.

117.3.40 DragStateCanceling = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants for drag state.
Notes: Drag was cancelled.

117.3.41 DragStateDragging = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants for drag state.
Notes: Drag is happening.

117.3.42 DragStateEnding = 4

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants for drag state.
Notes: Drag is ending.

117.3.43 DragStateNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants for drag state.
Notes: No dragging.

117.3.44 DragStateStarting = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants for drag state.
Notes: Drag is starting.

117.4 class MKCircleMBS

117.4.1 class MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKCircle class is a concrete overlay object representing a circular area on a map.
Notes:

This class manages the data that defines the area and is typically used in conjunction with an MKCircleView object, which handles the drawing of the circular area on a map.
Subclass of the MKShapeMBS class.

117.4.2 Blog Entries

- MapKit Framework for Xojo

Interfaces: MKOverlayMBS

117.4.3 Methods

117.4.4 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes:

This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.
See also:

- 117.4.15 boundingMapRect as MKMapRectMBS 18960

117.4.5 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes:

true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

117.4.6 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Example:

```
dim mapview as MKMapViewMBS // your map view
dim centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
dim radius as Integer = 300 // 300 meter

dim circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes:

coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 117.4.7 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS 18958

117.4.7 circleWithCenterCoordinate(Latitude as Double, Longitude as Double, radius as Double) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes:

Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 117.4.6 circleWithCenterCoordinate(coord as CLLocationCoordinate2DMBS, radius as Double) as MKCircleMBS 18958

117.4.8 circleWithMapRect(mapRect as MKMapRectMBS) as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new circle object with given rectangle.

117.4.9 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes:

coord: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 117.4.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 18959
- 117.4.11 Constructor(mapRect as MKMapRectMBS) 18960

117.4.10 Constructor(Latitude as Double, Longitude as Double, radius as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKCircle object using the specified coordinate and radius.
Notes:

Latitude and Longitude: The center point of the circle, specified as a latitude and longitude value.
radius: The radius of the circle, measured in meters from the center point.
See also:

- 117.4.9 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 18959
- 117.4.11 Constructor(mapRect as MKMapRectMBS) 18960

117.4.11 Constructor(mapRect as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new circle object with given rectangle.
See also:

- 117.4.9 Constructor(coord as CLLocationCoordinate2DMBS, radius as Double) 18959
- 117.4.10 Constructor(Latitude as Double, Longitude as Double, radius as Double) 18959

117.4.12 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 117.4.16 coordinate as CLLocationCoordinate2DMBS 18961

117.4.13 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

117.4.14 Properties

117.4.15 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes:

This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.
Notes: (Read only property)
See also:

• 117.4.12 coordinate as CLLocationCoordinate2DMBS 18960

117.4.17 radius as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The radius of the circular area, measured in meters.
Notes: (Read only property)

117.5 class MKCircleRendererMBS

117.5.1 class MKCircleRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a circular overlay.
Notes:

This renderer fills and strokes the circular region represented by the overlay object. You can change the color and other drawing attributes of the circle by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.

You create an instance of this class in your map view rendererForOverlay event.
Subclass of the MKOverlayPathRendererMBS class.

- MapKit Framework for Xojo

117.5.3 Methods

117.5.4 Constructor(Circle as MKCircleMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new overlay view using the specified circle overlay object.
Notes: circle: The circle overlay containing the information about the circular area to be drawn. The renderer maintains a strong reference to the object you provide. This parameter must not be nil.

117.5.5 Properties

117.5.6 circle as MKCircleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The circle overlay object that contains the information used to draw the overlay.
Notes: (Read only property)

117.6 class MKClusterAnnotationMBS

117.6.1 class MKClusterAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An annotation that groups two or more distinct annotations into a single entity.
Notes:

A cluster annotation object stands in for the group of annotations. Cluster views promote legibility of the underlying annotations by displaying a single annotation whose title is taken from one annotation and whose subtitle indicates how many additional annotations belong to the group.

MapKit automatically creates cluster annotations when two or more annotation views become grouped too closely together on the map surface. To customize the cluster annotations displayed on your map, implement the clusterAnnotationForMemberAnnotations event in your map's control.

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a region with given center and size.

117.7.7 Properties

117.7.8 center as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the region.
Notes: (Read and Write property)

117.7.9 span as MKCoordinateSpanMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The horizontal and vertical span representing the amount of map to display.
Notes:

The span also defines the current zoom level used by the map view object.
(Read and Write property)

117.8 class MKCoordinateSpanMBS

117.8.1 class MKCoordinateSpanMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A structure that defines the area spanned by a map region.
Notes: You use the delta values in this structure to indicate the desired zoom level of the map, with smaller delta values corresponding to a higher zoom level.

117.8.2 Blog Entries

- MapKit Framework for Xojo

117.8.3 Xojo Developer Magazine

- 18.6, page 74: MapKit Part 7, Implementing Maps in Xojo desktop apps with the MapKitMBS plugin by Markus Winter

117.8.4 Methods

117.8.5 Constructor(latitudeDelta as Double, longitudeDelta as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor to initialize this class.

117.8.6 Properties

117.8.7 latitudeDelta as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of north-to-south distance (measured in degrees) to display on the map.
Notes:

Unlike longitudinal distances, which vary based on the latitude, one degree of latitude is always approximately 111 kilometers (69 miles).
(Read and Write property)

117.8.8 longitudeDelta as Double

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of east-to-west distance (measured in degrees) to display for the map region.
Notes:

The number of kilometers spanned by a longitude range varies based on the current latitude. For example, one degree of longitude spans a distance of approximately 111 kilometers (69 miles) at the equator but shrinks to 0 kilometers at the poles.
(Read and Write property)

117.9 class MKCustomAnnotationMBS

117.9.1 class MKCustomAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a custom MKAnnotationMBS.
Notes:

As MKAnnotationMBS is an interface, you need a Cocoa class to implement coordinate, title and subtitle properties.
So you can subclass this class if you like.

117.10.3 Xojo Developer Magazine

- 17.5, page 54: Maps (Part 1), Implementing Maps in Xojo desktop apps with the MapKitMBS plug-in by Markus Winter

Interfaces: MKOverlayMBS, MKAnnotationMBS

117.10.4 Methods

117.10.5 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes:

This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

117.10.6 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes:

true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

- 117.10.15 canReplaceMapContent as Boolean 18975

117.10.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

117.10.8 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The center point of the circular area, specified as a latitude and longitude.

117.10.9 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

117.10.10 setBoundingMapRect(m as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets boundingMapRect property.

117.10.11 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.10.12 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 117.10.17 subtitle as String 18976

117.10.13 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 117.10.18 title as String 18976

117.10.14 Properties

117.10.15 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: a Boolean indicating whether the overlay content replaces the underlying map content.
Notes:

true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and

render its tiles.
(Read and Write property)

117.11 class MKCustomOverlayRendererMBS

117.11.1 class MKCustomOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The renderer for custom overlays.
Notes:

A special renderer with events for Xojo.
Subclass of the MKOverlayRendererMBS class.

117.11.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr1

117.11.3 Xojo Developer Magazine

- 17.5, page 54: Maps (Part 1), Implementing Maps in Xojo desktop apps with the MapKitMBS plug-in by Markus Winter

117.11.4 Methods

117.11.5 Constructor(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: The overlay can be any overlay, not just a MKCustomOverlayMBS one.

117.11.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.11.7 Events

117.11.8 canDrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: .

Function: Event to return a Boolean value indicating whether the overlay view is ready to draw its content.
Example:

```
Function canDrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double) Handles canDrawMapRect as Boolean
Return True
End Function
```

Notes:

mapRect: The map rectangle that needs to be updated.
zoomScale: The current scale factor applied to the map.

Return yes if this overlay renderer is ready to draw its contents on the map or false if it is not.

Overlay renderers can override this method in situations where they may depend on the availability of other information to draw their contents. For example, a renderer showing traffic information might want to delay drawing until it has all of the traffic data it needs. In such a case, it can return NO from this method to indicate that it is not ready. An overlay renderer might also return false if it does not draw content in the specified rectangle.

If you return false from this method, your application is responsible for calling the setNeedsDisplayInMapRect method when the overlay renderer subsequently becomes ready to draw its contents.

The default implementation of this method returns YES.

As callback may come on a thread, MBS Xojo Plugin invokes event on the main thread. For best performance, please make sure your code does not take long time to execute.

117.11.9 DrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: .

Function: The event to draw the overlay's contents at the specified location on the map.

Example:

```
Sub DrawMapRect(mapRect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS) Handles DrawMapRect
// change coordinate system to show just our area
Dim rect As CGRectMBS = Self.RectForMapRect(overlay.boundingMapRect)
context.ScaleCTM(1.0, -1.0)
context.TranslateCTM(0.0, -rect.size.height)

// and fill it all in red
context.SetRGBFillColor 1,0,0,0.3
context.FillRect rect

context.Flush
End Sub
```

Notes:

mapRect: The map rectangle that needs to be updated. Your drawing code should avoid drawing outside of this rectangle.
zoomScale: The current zoom factor applied to the map content. You can use this value for configuring the stroke width of lines or other attributes that might be affected by the scale of the map's contents.
context: The graphics context to use for drawing the overlay's contents.

The default implementation of this method does nothing. Subclasses are expected to implement this event and use it to draw the overlay's contents.

When determining where to draw content, make your initial calculations relative to the map itself. In other words, compute the position and size of any overlay content using map points and map rectangles, convert those values to regular CGPoint and CGRect types using the methods of this class, and then pass the converted points to any drawing primitives.
It is recommended that you use Core Graphics to draw any content for your overlays.

To improve drawing performance, the map view may divide your overlay into multiple tiles and render each one on a separate thread.

As callback may come on a thread, MBS Xojo Plugin invokes event on the main thread. For best performance, please make sure your code does not take long time to execute.

117.12 class MKDirectionsMBS

117.12.1 class MKDirectionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object that computes directions and travel-time information based on the route information you provide.
Notes:

You use an MKDirections object to ask the Apple servers to provide walking or driving directions for a route, which you specify using an MKDirectionsRequestMBS object. After making a request, MapKit delivers the results asynchronously to the completion handler that you provide. You can also get the estimated travel time for the route.

Each MKDirectionsMBS object handles a single request for directions, although you can cancel and restart that request as needed. You can create multiple instances of this class and process different route requests at the same time, but you should make requests only when you plan to present the corresponding route information to the user. Apps may receive a MKErrorLoadingThrottled error if too many requests have been made from the current device in too short a time period.

117.12.2 Blog Entries

- MapKit Framework for Xojo

117.12.3 Methods

117.12.4 calculateDirections(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Begins calculating the requested route information asynchronously.
Notes:

Calls calculateDirectionsCompleted event later.

This method initiates the request for directions and calls your calculateDirectionsCompleted event with the results. The implementation of your event handler should check for errors and then incorporate the response data as appropriate.

If you call this method while a previous request is in process, this method calls your event with an error. You can determine if a request is in process by checking the value of the calculating property. You can also cancel a request as needed.

117.12.5 calculateETA(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Begins calculating the requested travel-time information asynchronously.
Notes:

This method initiates a request for a travel-time estimate and calls your calculateETAWithCompleted event handler block with the results. Travel-time estimates take much less time to generate than directions, so use this method in situations where you want a time estimate only. The implementation of your handler should check for errors and then incorporate the response data as appropriate.

If you call this method while a previous request is in process, this method calls your event handler with an error. You can determine if a request is in process by checking the value of the calculating property. You can also cancel a request as needed.

117.12.6 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a pending request.
Notes: After canceling a request, you can call the calculateDirections method again (if you want) to restart the request process.

117.12.7 Constructor(request as MKDirectionsRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a directions object using the specified request.
Notes:

request: The request object containing the start and end points of the route. This parameter must not be nil.

After initializing your directions object, you must call the calculateDirections or calculateETA method to perform the request.

117.12.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.12.9 Properties

117.12.10 Calculating as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether a request is currently in process.
Notes: (Read only property)

117.12.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.12.12 Request as MKDirectionsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The request used to create this object.
Notes: (Read only property)

117.12.13 Events

117.12.14 calculateDirectionsCompleted(response as MKDirectionsResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The event called when calculateDirections method finished.
Notes:

This event takes three parameters:

- The response parameter contains the route information for the request. If an error occurred or no route could be determined, this parameter is nil.
- The error parameter contains information about any errors that occurred. If no errors occurred, this parameter is nil.
- The tag passed to the method.

The implementation of your block should check for a value in the error parameter and, if that parameter is nil, incorporate the route information provided in the response parameter.

117.12.15 calculateETAWithCompleted(response as MKETAResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Event called by calculateETA when method is done.

117.13 class MKDirectionsRequestMBS

117.13.1 class MKDirectionsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start and end points of a route, along with the planned mode of transportation.
Notes:

You use an MKDirectionsRequestMBS object when requesting or providing directions. If your app provides directions, use this class to decode the URL sent to you by Maps. If you need to request directions from Apple, pass an instance of this class to an MKDirections object. For example, an app that provides subway directions might request walking directions to and from relevant subway stations.

For apps that provide directions, you receive direction-related URLs in your app delegate's application:openURL:sourceApplication:annotation: method. Upon receiving a URL, call the isDirectionsRequestURL method of this class to determine if the URL is related to routing directions. If it is, create an instance of this class using the provided URL and extract the map items associated with the start and end points.

To provide routing directions, your app must include special keys in its Info.plist file and be able to handle URLs sent to it by the Maps app. These keys indicate a special URL type that your app must be prepared to handle. For information about how to implement this support, see Location and Maps Programming Guide.

117.13.3 Methods

117.13.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The construtor.
See also:

- 117.13.5 Constructor(URL as string) 18984

117.13.5 Constructor(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a directions request object using the specified URL.
Notes: You should use the isDirectionsRequestURL method to verify that the specified URL is of the correct

format before calling this method to initialize the object.
See also:

- 117.13.4 Constructor 18984

117.13.6 isDirectionsRequestURL(URL as string) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the specified URL contains a directions request.
Notes: True if the URL contains a directions request that your app should display to the user or false if it does not.

117.13.7 Properties

117.13.8 arrivalDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The arrival date for the trip.
Notes:

Specifying an arrival date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

117.13.9 arrivalDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The arrival date for the trip.
Notes:

Specifying an arrival date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

117.13.10 departureDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The departure date for the trip.
Notes:

Specifying a departure date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

117.13.11 departureDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The departure date for the trip.
Notes:

Specifying a departure date provides the server with extra information that it can use to optimize the returned routes. For example, for a trip that takes place during commute hours, the server might consider alternatives to routes that are typically congested at that time.
The use of this property is optional.
(Read and Write property)

117.13.12 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point for routing directions.
Notes: (Read and Write property)

117.13.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.13.14 requestsAlternateRoutes as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether your app wants multiple routes when they are available.
Notes:

When this property is set to false, the server returns a single route between the start and end points. When this property is YES, the server may return additional routes for the user to follow. The server returns additional routes only if they are available and represent a reasonable path that the user might take.
The default value of this property is false.
(Read and Write property)

117.13.15 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The starting point for routing directions.
Notes: (Read and Write property)

117.13.16 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of conveyance to which the directions should apply.
Notes:

You can use this property to specify whether you want directions suited to a particular type of transportation. For example, you can use this to specify that you want walking directions or driving directions.
The default value of this property is TransportTypeAny.
(Read and Write property)

117.13.17 Constants

117.13.18 TransportTypeAny = & h0FFFFFFF

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for any transportation option.

117.13.19 TransportTypeAutomobile = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for use while driving.

117.13.20 TransportTypeTransit = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for public transportation.

117.13.21 TransportTypeWalking = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for a pedestrian.

117.14 class MKDirectionsResponseMBS

117.14.1 class MKDirectionsResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The route information returned by Apple servers in response to one of your requests for directions.
Notes:

You do not create instances of this class directly. Instead, you initiate a request for directions by calling the calculateDirection method of an MKDirectionsMBS object. The calculateDirectionCompleted event handler receives an MKDirectionsResponseMBS object with the results.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.14.2 Blog Entries

- MapKit Framework for Xojo

117.14.3 Methods

117.14.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.14.5 routes as MKRouteMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of route objects representing the directions between the start and end points.
Notes:

The array contains one or more MKRouteMBS objects, each of which represents a possible set of directions for the user to follow. If you did not request alternate routes in the original directions request, this array contains at most one object.
Each route object contains geometry information that you can use to display that route on your app's map view. Routes may also contain additional information that is relevant to that particular route, such as the expected travel time and any trip advisory notices.

117.14.6 Properties

117.14.7 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point of the route.
Notes:

The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

117.14.8 firstRoute as MKRouteMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The first route.
Notes:

Mainly for debugging, so you can see the routes in debugger.
(Read only property)

117.14.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.14.10 routeCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Number of routes.
Notes: (Read only property)

117.14.11 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start point of the route.
Notes:

The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

117.14.12 Constants

117.14.13 TransportTypeAny = & h0FFFFFFF

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for any transportation option.

117.14.14 TransportTypeAutomobile = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for use while driving.

117.14.15 TransportTypeTransit = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for public transportation.

117.14.16 TransportTypeWalking = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for a pedestrian.

117.15 class MKDistanceFormatterMBS

117.15.1 class MKDistanceFormatterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object that converts between a geographic distance and a string-based expression of that distance.
Example:

```
dim f as new MKDistanceFormatterMBS

f.Units = f.UnitsMetric
f.UnitStyle = f.UnitStyleFull

MsgBox f.stringFromDistance(1234.56)
```

Notes: You use a distance formatter when you need to display distances to the user or when you want to parse user-specified text to obtain a numerical value for a distance. When formatting strings containing distances, a distance formatter object takes into account the user's locale and language settings. You can also specify a custom locale or custom units for any distances that you format.

117.15.2 Blog Entries

- MapKit Framework for Xojo

117.15.3 Methods

117.15.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

117.15.5 distanceFromString(distance as String) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the distance value parsed from the specified string.
Notes:

distance: A formatted string that specifies a distance.

Returns the distance value represented by the string or -1.0 if the string does not contain a recognized distance value.

This method searches the provided string for a number that could represent a distance. Distances must be specified as purely numerical values. Do not specify distances as fractions such as "1/4 mile".

117.15.6 formatter as MKDistanceFormatterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The singelton instance for easy use.
Example:

```
// shows e.g. 1,2km
// depending on the locale
MsgBox MKDistanceFormatterMBS.formatter.stringFromDistance(1234)
```

Notes: The plugin keeps an object, so you get the same one everytime and you can reuse it often.

117.15.7 stringFromDistance(distance as Double) as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a string representation of the specified distance.
Notes:

distance: The distance value that you want to convert to a string.

Returns a user-readable string that describes the distance based on the formatter settings.

117.15.8 Properties

117.15.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.15.10 Locale as NSLocaleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The locale to use when formatting strings.
Notes:

If you do not specify an explicit locale, the formatter uses the user's current locale information.
(Read and Write property)

117.15.11 Units as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The measuring system (imperial or metric) to use for units.
Notes:

You can use this property to explicitly set the measuring system for units. The default value of this property is UnitsDefault, which bases the measuring system on the user's locale.
(Read and Write property)

117.15.12 UnitStyle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The preferred style for units.
Notes:

Units can be abbreviated or fully spelled out. The default value of this property is UnitStyleDefault, which bases the style on the user's locale and language settings.
(Read and Write property)

117.15.13 Constants

117.15.14 UnitsDefault = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that reflect the type of units to use in the string.
Notes: The format uses the locale information to determine which units to use. Some locales mix metric and imperial units so do not assume this means one or the other.

117.15.15 UnitsImperial = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that reflect the type of units to use in the string.
Notes: The format uses imperial units.

117.15.16 UnitsImperialWithYards = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that reflect the type of units to use in the string.
Notes: The format uses imperial units that include measurements in yards.

117.15.17 UnitsMetric = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that reflect the type of units to use in the string.
Notes: The format uses metric units.

117.15.18 UnitStyleAbbreviated = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that indicate the format style to use for strings.
Notes: Use abbreviated units. For example, use the abbreviation km instead of kilometer.

117.15.19 UnitStyleDefault = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that indicate the format style to use for strings.
Notes: The decision to abbreviate is based on the current locale and user language settings.

117.15.20 UnitStyleFull = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that indicate the format style to use for strings.
Notes: Spell out units in full. For example, use kilometer instead of the abbreviation km.

117.16 class MKETAResponseMBS

117.16.1 class MKETAResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The travel-time information returned by Apple servers.
Notes:

You do not create instances of this class directly. Instead, you initiate a request for the travel time by calling the calculateETA method of an MKDirectionsMBS object. The completion event handler receives an MKETAResponseMBS object with the results.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.16.2 Blog Entries

- MapKit Framework for Xojo

117.16.3 Methods

117.16.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.16.5 Properties

117.16.6 destination as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The end point of the route.
Notes:

The item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

117.16.7 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel distance, in meters.
Notes:

This property contains the overall distance traversed by the route.
(Read only property)

117.16.8 expectedArrivalDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The expected arrival time.
Notes:

The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, the date in this property is computed by starting at your departure date and adding the expected travel time. If you specified an arrival time but not a departure date, this property is set to your arrival time. If you did not specify an arrival date or departure date, this property is set to the date computed by adding the travel time to the current time.
(Read only property)

117.16.9 expectedArrivalDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The expected arrival time.
Notes:

The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, the date in this property is computed by starting at your departure date and adding the expected travel time. If you specified an arrival time but not a departure date, this property is set to your arrival time. If you did not specify an arrival date or departure date, this property is set to the date computed by adding the travel time to the current time.
(Read only property)

117.16.10 expectedDepartureDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The expected departure time.
Notes:

The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, that date is copied to this property. If you specified an arrival date but not a departure date, the departure date is computed by subtracting the expected travel time from your arrival date. If you did not specify an arrival date or departure date, this

property is set to the current time.
(Read only property)

117.16.11 expectedDepartureDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The expected departure time.
Notes:

The value of this property is dependent on whether you specified a departure date or arrival date in your MKDirectionsRequestMBS object. If you specified a departure date, that date is copied to this property. If you specified an arrival date but not a departure date, the departure date is computed by subtracting the expected travel time from your arrival date. If you did not specify an arrival date or departure date, this property is set to the current time.
(Read only property)

117.16.12 expectedTravelTime as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel time in seconds.
Notes:

The expected travel time reflects the time it takes to traverse the route, taking expected traffic into account. The actual amount of time may vary based on changes in traffic and other travel conditions.
(Read only property)

117.16.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.16.14 source as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The start point of the route.
Notes:

This item in this property may contain additional details that were not included in the original item used to create the MKDirectionsRequestMBS object.
(Read only property)

117.16.15 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of conveyance used to determine the travel time.
Notes:

You specify the desired transportation type in your MKDirectionsRequestMBS object. If you specified TransportTypeAny, this property contains the transportation type used to generate the estimated information.
(Read only property)

117.16.16 Constants

117.16.17 TransportTypeAny = & h0FFFFFFF

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for any transportation option.

117.16.18 TransportTypeAutomobile = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for use while driving.

117.16.19 TransportTypeTransit = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for public transportation.

117.16.20 TransportTypeWalking = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for a pedestrian.

117.17 class MKGeodesicPolylineMBS

117.17.1 class MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A line-based shape that follows the contours of the Earth to create the shortest path between the specified points.
Notes:

A geodesic polyline contains a set of points that are connected end-to-end in the order that you provide them. The first and last points are not automatically connected to each other. When displayed on a two-dimensional map view, the line segment between any two points may appear curved.
Subclass of the MKPolylineMBS class.

117.17.2 Blog Entries

- MapKit Framework for Xojo

117.17.3 Methods

117.17.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 117.17.5 Constructor(coords() as CLLocationCoordinate2DMBS) 19002
- 117.17.6 Constructor(points() as MKMapPointMBS) 19003

117.17.5 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified coordinates.
Notes:

coords: The array of coordinates that define the path.

Returns a new geodesic polyline object.
See also:

- 117.17.4 Constructor 19002

- 117.17.6 Constructor(points() as MKMapPointMBS) 19003

117.17.6 Constructor(points() as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified map points.
Notes:

points: The array of map points that define the path.

Returns a new geodesic polyline object.
See also:

- 117.17.4 Constructor 19002
- 117.17.5 Constructor(coords() as CLLocationCoordinate2DMBS) 19002

117.17.7 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified coordinates.
Notes:

coords: The array of coordinates that define the path.

Returns a new geodesic polyline object.

117.17.8 polylineWithPoints(points() as MKMapPointMBS) as MKGeodesicPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a geodesic polyline using the specified map points.
Notes:

points: The array of map points that define the path.

Returns a new geodesic polyline object.

117.18 class MKLocalSearchCompleterMBS

117.18.1 class MKLocalSearchCompleterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object for generating a list of completion strings based on a partial search string that you provide.
Notes:

You use an MKLocalSearchCompleter object to retrieve auto-complete suggestions for your own map-based search controls. As the user types text, you feed the current text string into the search completer object, which delivers possible string completions that match locations or points of interest.

You create and configure MKLocalSearchCompleterMBS objects yourself. You should subclass this class to fill the event handler. You should also specify a search region to restrict results to a designated area.

Update the value of the completer's queryFragment property to begin a search query. You can update this property in real time as the user types new characters into a text field because the completer object waits a short amount of time for the query string to stabilize. When modifications to the query strong stop, the completer initiates a new search and returns the results to your delegate as an array of MKLocalSearchCompletionMBS objects.

117.18.2 Blog Entries

- MapKit Framework for Xojo

117.18.3 Xojo Developer Magazine

- 17.6, page 36: Xojo in Cologne, A Report from the MBS Conference in Germany by Dana Brown

117.18.4 Methods

117.18.5 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an in-progress search operation.
Notes: If a search operation is currently in progress, this method attempts to cancels it. If cancellation is successful, the search completer does not notify its delegate. If no search operation is in progress, this method does nothing.

117.18.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

117.18.7 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.18.8 results as MKLocalSearchCompletionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The most recently received search completions.
Notes: This property is nil initially. After a successful query, the property is set to the array of MKLocalSearchCompletionMBS objects returned by that query. Each new successful query replaces the previous value of this property.

117.18.9 Properties

117.18.10 filterType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The filter options for the search results.
Notes:

Use this property to determine whether you want completions that represent points-of-interest or whether completions might yield additional relevant query strings.
(Read and Write property)

117.18.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.18.12 QueryFragment as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The search string for which you want completions.
Notes:

Assigning a string to this property initiates a search based on that string. The completer object waits a short amount of time before initiating new searches. This delay gives you enough time to update the search string based on typed input from the user. For example, if you are using a text field to manage the input from the user, you could use the TextChange event to update the value of this property.
(Read and Write property)

117.18.13 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The region that defines the geographic scope of the search.
Notes:

Use this property to limit search results to the specified geographic area. The default value of this property is a region that spans the entire world.
(Read and Write property)

117.18.14 Searching as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether a search operation is in progress.
Notes: (Read only property)

117.18.15 Events

117.18.16 DidFailWithError(error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Called when the specified search completer is unable to generate a list of search results.
Notes:

completer: The search completer object reporting the error.
error: The error object containing the reason for the failure.

Use this object to process any errors that occurred while generating search results. Even when an error occurs, the search completer starts a new search if it already has a new search string. Depending on the error, you might do nothing or let the user know that you were unable to obtain a list of search completions.

117.18.17 DidUpdateResults

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Called when the specified search completer updates its array of search completions.
Notes: After receiving results from a query, the search completer updates its results property with the new MKLocalSearchCompletionMBS objects and calls this method. Use this method to update your app's interface based on the new search results. For example, you might update a table that you use to display search results to the user.

117.18.18 Constants

117.18.19 FilterTypeLocationsAndQueries = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the types of search completions to return.
Notes: Points of interest and query suggestions. Specify this value when you want both map-based points of interest and common query terms used to find locations. For example, the search string "cof" yields a completion for "coffee".

117.18.20 FilterTypeLocationsOnly = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the types of search completions to return.
Notes: Points of interest only. Specify this value when you want the search string to yield completions that correspond to a specific point-of-interest on the map.

117.19 class MKLocalSearchCompletionMBS

117.19.1 class MKLocalSearchCompletionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A fully formed string that completes a partial string.
Notes:

You do not create instances of this class directly. Instead, you use an MKLocalSearchCompleterMBS to initiate a search based on a set of partial search strings. That object stores any matches in its results property. Retrieve any MKLocalSearchCompletionMBS objects from that property and display the search terms in your interface or use one to initiate a search for content based on that search term.

When displaying text completions for a partial search term in your user interface, you might want to use a bold version of a font or add some other highlighting to the portion of the completion string that caused it to match the partial search term. To help you add this styling, the completion object includes highlight ranges for the title and subtitle strings.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.19.4 Methods

117.19.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructors.

117.19.6 subtitleHighlightRanges as NSRangeMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The ranges of characters to highlight in the subtitle string.
Notes:

This property contains an array of NSRangeMBS objects, each defining a range of characters in the subtitle string. Use this property to identify the ranges of characters in the subtitle string that you should highlight. Highlighting the matching text of a search completion is optional, but does provide helpful information to the user and is recommended.

Zerobased ranges.

117.19.7 titleHighlightRanges as NSRangeMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The ranges of characters to highlight in the title string.
Notes:

This property contains an array of NSRangeNBS objects, each defining a range of characters in the title string. Use this property to identify the ranges of characters in the title string that you should highlight. Highlighting the matching text of a search completion is optional, but does provide helpful information to the user and is recommended.

Range is zero based.

117.19.8 Properties

117.19.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.19.10 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle (if any) associated with the point-of-interest.
Notes:

The string in this property may be empty.
(Read only property)

117.19.11 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title string associated with the point-of-interest.
Notes:

This string is guaranteed not to be empty.
(Read only property)

117.20 class MKLocalSearchMBS

117.20.1 class MKLocalSearchMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A utility object for initiating map-based searches and processing the results.
Notes: Use an MKLocalSearchMBS object to execute a single search request. You might use this class to search for addresses or points of interest on the map. Upon completion of the request, the object delivers the results to the SearchFinished event handler that you provide.

117.20.2 Blog Entries

- MapKit Framework for Xojo

117.20.3 Xojo Developer Magazine

- 17.6, page 34: Xojo in Cologne, A Report from the MBS Conference in Germany by Dana Brown

117.20.4 Methods

117.20.5 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an in-progress search operation.
Notes: If no search operation is in progress, this method does nothing.

117.20.6 Constructor(request as MKLocalSearchRequestMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a search object configured with the specified parameters.
Notes:

request: The search request information. This parameter must not be nil.

This method stores a copy of the object in the request parameter. So any changes you make to your request object after calling this method are ignored.

117.20.7 Start(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Starts the search and delivers the results to the specified completion handler.
Notes:

Triggers SearchFinished event later.

You use this method to initiate a map-based search operation. The search runs until the results are delivered, at which point the specified completion handler is called.
You should call this method only once to start the search operation. Calling this method while the search is running does not stop the original search operation from finishing. However, for each subsequent call, the search object executes your completion handler and passes an error object to it.
The provided completion handler is always executed on your app's main thread. The local search object keeps a reference to the completion handler block until the results (or an error) are delivered, at which point it relinquishes that reference.

117.20.8 Properties

117.20.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.20.10 Searching as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the search is currently in progress.
Notes:

The value of this property is set to true when a search is initiated and remains in that state until the search results (or an appropriate error) are delivered, at which time the property is set to false.
(Read only property)

117.20.11 Events

117.20.12 SearchFinished(response as MKLocalSearchResponseMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The event handler that processes the results. This parameter must not be nil.
Notes: Called by Start asynchronously.

117.21 class MKLocalSearchRequestMBS

117.21.1 class MKLocalSearchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The parameters to use when searching for points of interest on the map.
Notes: You create an MKLocalSearchRequest object when you want to search for map locations based on a natural language string. For example, if your interface allows the user to type in addresses, you would place the typed text in this object and pass it to an MKLocalSearch object to begin the search process. When specifying your search strings, include a map region to narrow the search results to the specified geographical area.

117.21.3 Xojo Developer Magazine

- 18.3, page 77: Xojo Maps, Part 4, Finding and Displaying Addresses with the MapKitMBS plugin by Markus Winter

117.21.4 Methods

117.21.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 117.21.6 Constructor(completion as MKLocalSearchCompletionMBS) 19014

117.21.6 Constructor(completion as MKLocalSearchCompletionMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a search request based on the specified search completion data.
Notes:

completion: A search completion object obtained from an MKLocalSearchCompleterMBS object. The search request uses the provided object to set the value of the naturalLanguageQuery property.

Use this method when initializing your object from MKLocalSearchCompleterMBS objects. You do not need to use this method if you intend to provide the search string and region information yourself.
See also:

- 117.21.5 Constructor 19014

117.21.7 Copy as MKLocalSearchRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request.

117.21.8 Properties

117.21.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.21.10 naturalLanguageQuery as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A string containing the desired search item.
Notes:

You specify this parameter as a string describing the map-based item you want to look for. The text is equivalent to what the user would type in a search field in the Maps app. For example, the text might contain all or part of an address or it might contain the name of a point of interest.
(Read and Write property)

117.21.11 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A map region that provides a hint as to where to search.
Notes:

You can use this parameter to narrow the list of search results to those inside or close to the specified region. Specifying a region does not guarantee that the results will all be inside the region. It is merely a hint to the search engine.

(Read and Write property)

117.22 class MKLocalSearchResponseMBS

117.22.1 class MKLocalSearchResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The results from a map-based search.
Notes:

You do not create instances of this class directly. After initiating a map search using an MKLocalSearchMBS object, MapKit passes an instance of this class to your event handler.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.22.2 Blog Entries

- MapKit Framework for Xojo

117.22.3 Xojo Developer Magazine

- 18.3, page 35: Virus Modeling, Simulating the spread of COVID-19 with Xojo by Marc Zeedar

117.22.4 Methods

117.22.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.22.6 mapItems as MKMapItemMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of map items representing the search results.
Notes: This property contains an array of MKMapItemMBS objects, each of which represents a returned search result. You can use these objects to retrieve information about the search result, such as the name of the point of interest, the address, the geographic location, and so on.

117.22.7 Properties

117.22.8 boundingRegion as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map region that encloses the returned search results.
Notes:

The returned region is the smallest bounding box that encloses all of the map items. If there is only one search result, the size of the region may be (0, 0).
(Read only property)

117.22.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.23 class MKMapCameraMBS

117.23.1 class MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A virtual camera for defining the appearance of the map.
Notes:

A camera object defines a virtual viewpoint above the map surface and affects how the map is presented to the user. You use a camera object to specify the location of the camera on the map, the compass heading indicating the camera's viewing direction, the pitch of the camera relative to the map perpendicular, and the camera's altitude above the map. These factors create a map view with a three dimensional perspective. After creating an instance of this class, configure it with the desired attributes and assign it to your map view. When you assign a camera to your map view, the map centers the map using the value in your camera object's centerCoordinate property, updating the map's own region information in the process. The map also takes the camera's the pitch and altitude into account when calculating the visible region, ensuring that the region always encompasses the visible content on the map.

117.23.2 Blog Entries

- MapKit Framework for Xojo

117.23.3 Methods

117.23.4 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object for you to configure.
Notes: You must change the values of the returned camera object before using it.

117.23.5 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified distance, pitch, and heading information.
Notes:

centerCoordinate: The coordinate point on which the map should be centered.
distance: The line-of-sight distance from the camera to the center coordinate of the map.
pitch: The viewing angle of the camera, measured in degrees. A value of 0 results in a camera pointed

straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees.
heading: The heading of the camera (measured in degrees) relative to true north. The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.

Returns a new camera object initialized with the specified information.
The altitude of the camera is obtained by multiplying distance by the cosine of the pitch value.
See also:

- 117.23.6 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) as MKMapCameraMBS 19020

117.23.6 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified viewing angle information.
Notes:

centerCoordinate: The coordinate point on which the map should be centered.
eyeCoordinate: The coordinate point at which to place the camera. If the value for this parameter is equal to the value in the centerCoordinate parameter, the map is displayed as if the camera is looking straight down. If this point is offset from the centerCoordinate value, the map is displayed with an appropriate heading and pitch angle.
eyeAltitude: The altitude (in meters) above the ground at which to place the camera.

Returns a new camera object initialized with the specified information.

This method calculates the required pitch and heading angles to accommodate the specified eye position and altitude.
See also:

- 117.23.5 cameraLookingAtCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) as MKMapCameraMBS 19019

117.23.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object for you to configure.
Notes: You must change the values of the returned camera object before using it.
See also:

- 117.23.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 19021
- 117.23.9 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 19021

117.23.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified distance, pitch, and heading information.
Notes:

centerCoordinate: The coordinate point on which the map should be centered.
distance: The line-of-sight distance from the camera to the center coordinate of the map.
pitch: The viewing angle of the camera, measured in degrees. A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees.
heading: The heading of the camera (measured in degrees) relative to true north. The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.

Returns a new camera object initialized with the specified information.
The altitude of the camera is obtained by multiplying distance by the cosine of the pitch value.
See also:

- 117.23.7 Constructor 19020
- 117.23.9 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double) 19021

117.23.9 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, eyeCoordinate as CLLocationCoordinate2DMBS, eyeAltitude as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new camera object using the specified viewing angle information.
Notes:

centerCoordinate: The coordinate point on which the map should be centered.
eyeCoordinate: The coordinate point at which to place the camera. If the value for this parameter is equal to the value in the centerCoordinate parameter, the map is displayed as if the camera is looking straight down. If this point is offset from the centerCoordinate value, the map is displayed with an appropriate heading and pitch angle.
eyeAltitude: The altitude (in meters) above the ground at which to place the camera.

Returns a new camera object initialized with the specified information.

This method calculates the required pitch and heading angles to accommodate the specified eye position and altitude.
See also:

- 117.23.7 Constructor 19020
- 117.23.8 Constructor(centerCoordinate as CLLocationCoordinate2DMBS, distance as double, pitch as double, heading as double) 19021

117.23.10 copy as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the camera object.

117.23.11 Properties

117.23.12 altitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The altitude above the ground, measured in meters.
Notes:

The value you specify for this property must not be less than 0.
Changing this property may also change the maximum pitch that is allowed for the map. If the current pitch value exceeds the new maximum, the pitch property is clamped to the new maximum.
(Read and Write property)

117.23.13 centerCoordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map coordinate at the center of the map view.
Notes:

This point represents the coordinate on which the map should be centered. When the camera pitch is 0, this property also corresponds to the geographic position of the camera. Changing the pitch to a nonzero value moves the camera but does not affect this property.
(Read and Write property)

117.23.14 heading as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The heading of the camera (measured in degrees) relative to true north.
Notes:

The value 0 means that the top edge of the map view corresponds to true north. The value 90 means the top of the map is pointing due east. The value 180 means the top of the map points due south, and so on.
(Read and Write property)

117.23.15 pitch as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The viewing angle of the camera, measured in degrees.
Notes:

A value of 0 results in a camera pointed straight down at the map. Angles greater than 0 result in a camera that is pitched toward the horizon by the specified number of degrees. If the map type is MapTypeSatellite or MapTypeHybrid, the pitch value is clamped to 0.
The value in this property may be clamped to a maximum value to maintain map readability. There is no fixed maximum value, though, because the actual maximum value is dependent on the current altitude of the camera.
(Read and Write property)

117.24 class MKMapItemMBS

117.24.1 class MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A point of interest on the map.
Notes:

A map item includes a geographic location and any interesting data that might apply to that location, such as the address at that location and the name of a business at that address. You can also create a special MKMapItem object representing the user's current location.

Use this class to do the following:

- Share map-related data with the Maps app.
- Handle requests for directions that originate from the Maps app.

To display information in Maps, create an MKMapItem object with the information you want to display and call the openMapsWithItems method. Maps displays that location on the map and shows the information you provide.
If you implement a routing app, Maps provides you with two MKMapItem objects representing the start and end points. Use the information in those two objects to plot the route and generate directions.

117.24.4 Methods

117.24.5 Constructor(PlaceMark as MKPlacemarkMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a map item object using the specified placemark object.
Notes:

placemark: The placemark object corresponding to the desired map location. This parameter must not be nil.

Use this method to create a map item for an existing placemark. Do not use it to create a map item representing the user's current location. To do that, use the mapItemForCurrentLocation method instead.

117.24.6 mapItemForCurrentLocation as MKMapItemMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns a singleton map item object representing the device's current location.
Notes: For privacy reasons, and because the user's location can change, the map item returned by this method does not contain any coordinate data. When you need the actual location of the user, you must use the Core Location framework to retrieve it.

117.24.7 MKLaunchOptionsCameraKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The virtual camera to use for viewing the map.
Notes: The value of this key is an MKMapCameraMBS object that describes a virtual camera that can specify a 3D perspective for the map. If you do not specify this key, Maps uses its current settings to define the appearance of the map.

117.24.8 MKLaunchOptionsDirectionsModeDefault as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Directions that match the user's preferred transportation type.

117.24.9 MKLaunchOptionsDirectionsModeDriving as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Driving directions between the specified start and end points.

117.24.10 MKLaunchOptionsDirectionsModeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The mode of transportation.
Notes: The value of this key is an NSString corresponding to one of the values described in Directions Mode Values. You specify this key to tell the Maps app which mode of transport to use when generating directions.

117.24.11 MKLaunchOptionsDirectionsModeTransit as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Public transit directions between the specified start and end points.

117.24.12 MKLaunchOptionsDirectionsModeWalking as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Walking directions between the specified start and end points.

117.24.13 MKLaunchOptionsMapCenterKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate value on which to center the map.
Notes: The value of this key is an NSValue object that contains an encoded CLLocationCoordinate2D structure.

117.24.14 MKLaunchOptionsMapSpanKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of the map to display.
Notes: The value of this key is an NSValue object that contains an encoded MKCoordinateSpan structure.

117.24.15 MKLaunchOptionsMapTypeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The type of map (standard, satellite, or hybrid) to display.
Notes: The value of this key is an NSNumber object whose value is an integer corresponding to an MKMapType value.

117.24.16 MKLaunchOptionsShowsTrafficKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether to display traffic information.
Notes: The value of this key is a Boolean value. If you do not specify this key, Maps uses its current settings to determine whether or not to display traffic.

117.24.17 openInMaps(LaunchOptions as Dictionary) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Open the Maps app and display this map item.
Notes:

launchOptions: Additional information that the Maps app can use to configure the map display. For example, you can use the launch options to specify the visible map region and the map type. For a list of keys you can put into this dictionary, see Launch Options Dictionary Keys.

This parameter may be nil.

Returns true if this map item was successfully opened by the Maps app, or false if there was an error.

You use this method to pass the current map item to the Maps app. If your map item contains descriptive information about the location (such as a name or URL), the Maps app displays that information at the specified coordinate.
If you specify the MKLaunchOptionsDirectionsModeKey option in the launchOptions dictionary, the Maps app interprets that as an attempt to map from the user's current location to the location specified by this map item.
If you do not include the MKLaunchOptionsMapCenterKey and MKLaunchOptionsMapSpanKey keys in your launchOptions dictionary, Maps constructs a region around the current item. It uses that region to set the visible portion of the map.

117.24.18 openMapsWithItems(items() as MKMapItemMBS, launchOptions as Dictionary) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Open the Maps app and display the specified map items.
Notes:

mapItems: An array containing one or more MKMapItemMBS objects representing the items you want to display on the map.
launchOptions: Additional information that the Maps app can use to configure the map display. For example, you can use the launch options to specify the visible map region, a 3D perspective, and the map type. For a list of keys you can put into this dictionary, see Launch Options Dictionary Keys.

You may specify nil for this parameter.

Returns true if the map items were successfully opened by the Maps app, or false if there was an error.

You use this method to pass one or more map items to the Maps app. For example, you might use this method to ask the Maps app to display location-based search results generated by your app. Maps displays pins at each location you specify and uses the contents of each map item object to display additional information.
If you specify the MKLaunchOptionsDirectionsModeKey option in the launchOptions dictionary, the mapItems array must have no more than two items in it. If the array contains one item, the Maps app generates directions from the user's current location to the location specified by the map item. If the array contains two items, the Maps app generates directions from the location of the first item to the location of the second item in the array.
If you do not include the MKLaunchOptionsMapCenterKey and MKLaunchOptionsMapSpanKey keys in your launchOptions dictionary, Maps constructs a region that encompasses the provided items. It uses this region to set the visible portion of the map.

117.24.19 Properties

117.24.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.24.21 isCurrentLocation as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map item represents the user's current location.
Notes:

If the value of this property is true, the map item represents the user's current location. If true, the value

in the placemark property is set to nil.
(Read only property)

117.24.22 Name as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The descriptive name associated with the map item.
Notes:

Use this property to specify the name associated with the location. For example, if there is a business at the specified location, you would use this property to specify the name of the business.
If this map item represents the user's current location, the value in property is set to a localized version of "Current Location".
(Read and Write property)

117.24.23 phoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The phone number associated with a business at the specified location.
Notes:

If there is a relevant phone number associated with the location, such as a phone number for a business at the location, use this property to specify that value.
(Read and Write property)

117.24.24 placemark as MKPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The placemark object containing the location information.
Notes:

If you created the map item using the mapItemForCurrentLocation method, the value of this property is nil and the isCurrentLocation property is set to true.
(Read only property)

117.24.25 timeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The time zone of the specified location.
Notes:

When you search for map items, MapKit populates this field with the time zone information as a convenience. You may also set the time zone for any map items you create.
(Read and Write property)

117.24.26 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL associated with the specified location.
Notes:

If there is a relevant URL associated with the location, such as a URL for a business at the location, use this property to specify that value.
(Read and Write property)

117.25 class MKMapPointMBS

117.25.1 class MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a point on the map.
Example:

```
// take some coordinates
dim c1 as new CLLocationCoordinate2DMBS(52.518611, 13.408333) // Berlin
dim c2 as new CLLocationCoordinate2DMBS(48.137222, 11.575556) // Munich

// convert to points on map
dim p1 as MKMapPointMBS = MKMapPointMBS.Point(c1)
dim p2 as MKMapPointMBS = MKMapPointMBS.Point(c2)

// show
MsgBox p1.StringValue+EndOfLine+p2.StringValue

// create locations
dim l1 as new CLLocationMBS(c1.latitude, c1.longitude)
dim l2 as new CLLocationMBS(c2.latitude, c2.longitude)

// show
MsgBox l1.Description+EndOfLine+l2.Description

// now get distance on two ways
dim d1 as Double = MKMapPointMBS.MetersBetweenMapPoints(p1,p2)
dim d2 as Double = l1.distanceFromLocation(l2)

// and format to show
dim s1 as string = MKDistanceFormatterMBS.formatter.stringFromDistance(d1)
dim s2 as string = MKDistanceFormatterMBS.formatter.stringFromDistance(d2)

MsgBox "Distance: "+s1+" vs. "+s2
// not the same due to rounding!
```

117.25.2 Blog Entries

- MapKit Framework for Xojo

117.25.3 Methods

117.25.4 Constructor(other as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 117.25.5 Constructor(x as double = 0, y as double = 0) 19032

117.25.5 Constructor(x as double = 0, y as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map constructor.
See also:

- 117.25.4 Constructor(other as MKMapPointMBS) 19032

117.25.6 Coordinate(point as MKMapPointMBS) as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Converts point in map to coordinate.

117.25.7 Equal(other as MKMapPointMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two point objects.
Notes: Returns true if both are equal.

117.25.8 MapPointsPerMeterAtLatitude(Latitude as Double) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of map points that represent one meter at the given latitude.
Notes: The number of map points per meter increases as the latitude approaches the poles.

117.25.9 MetersBetweenMapPoints(point1 as MKMapPointMBS, point2 as MKMapPointMBS) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of meters between two map points.
Notes: This distance reflects the actual distance between the two points on the surface of the globe, taking into account the curvature of the Earth.

117.25.10 MetersPerMapPointAtLatitude(Latitude as Double) as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the distance spanned by one map point at the specified latitude.
Example:

```
MsgBox str(MKMapPointMBS.MetersPerMapPointAtLatitude(50.0))
```

Notes:

latitude: The latitude for which to return the value.

Returns the distance (in meters) spanned by a single map point.

The distance between map points decreases as the latitude approaches the poles. This relationship parallels the relationship between longitudinal coordinates at different latitudes.

117.25.11 Point(coordinate as CLLocationCoordinate2DMBS) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Converts coordinate in point in map.
See also:

- 117.25.12 Point(x as double = 0, y as double = 0) as MKMapPointMBS 19033

117.25.12 Point(x as double = 0, y as double = 0) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new point with given values.
See also:

• 117.25.11 Point(coordinate as CLLocationCoordinate2DMBS) as MKMapPointMBS 19033

117.25.13 Properties

117.25.14 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats point as text for display in debugger.
Example:

```
dim p as new MKMapPointMBS(12, 34)

MsgBox p.StringValue
```

Notes: (Read only property)

117.25.15 X as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The X coordinate.
Notes: (Read and Write property)

117.25.16 Y as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The Y coordinate.
Notes: (Read and Write property)

117.26 class MKMapRectMBS

117.26.1 class MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a map rectangle.

117.26.2 Blog Entries

- MapKit Framework for Xojo

117.26.3 Methods

117.26.4 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: Copies values from point and size to build new rectangle.
See also:

- 117.26.5 Constructor(other as MKMapRectMBS) 19035
- 117.26.6 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0) 19035

117.26.5 Constructor(other as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 117.26.4 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS) 19035
- 117.26.6 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0) 19035

117.26.6 Constructor(x as double = 0, y as double = 0, w as double = 0, h as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 117.26.4 Constructor(origin as MKMapPointMBS, size as MKMapSizeMBS) 19035
- 117.26.5 Constructor(other as MKMapRectMBS) 19035

117.26.7 Contains(other as MKMapPointMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if point is included in rectangle area.
See also:

- 117.26.8 Contains(other as MKMapRectMBS) as Boolean 19036

117.26.8 Contains(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if given rectangle is included in rectangle area.
See also:

- 117.26.7 Contains(other as MKMapPointMBS) as Boolean 19036

117.26.9 Divide(byref slice as MKMapRectMBS, byref remainder as MKMapRectMBS, amount as double, edge as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Divides rectangle in slice and remainder.

117.26.10 Equal(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two rectangle objects.
Notes: Returns true if both are equal.

117.26.11 Inset(dx as Double, dy as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Insets rectangle by given delta and returns new rectangle.

117.26.12 Intersection(other as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns intersection of two map rectangles.

117.26.13 Intersects(other as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether the given rectangle intersects with the current one.

117.26.14 Null as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries a null rectangle.

117.26.15 Offset(dx as Double, dy as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Offsets map rectangle by given offset.

117.26.16 Rect(x as double = 0, y as double = 0, width as double = 0, heigth as double = 0) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new rectangle with given values.

117.26.17 Region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creation region covering the map rectangle.

117.26.18 Remainder as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: For map rects that span the 180th meridian, this returns the portion of the rect that lies outside of the world rect wrapped around to the other side of the world.
Notes: The portion of the rect that lies inside the world rect can be determined with rect.Intersection(MKMapRectMBS.World).

117.26.19 Union(other as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns union of both rectangles.

117.26.20 World as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The world rectangle.
Notes: The rect that contains every map point in the world.

117.26.21 Properties

117.26.22 Height as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the rectangle.
Notes: (Read and Write property)

117.26.23 isEmpty as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if rectangle is empty.
Notes: (Read only property)

117.26.24 isNull as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns true if rectangle is null rectangle.
Notes: (Read only property)

117.26.25 MaxX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Maximum X value of rectangle.
Notes: (Read only property)

117.26.26 MaxY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum X value of the rectangle.
Notes: (Read only property)

117.26.27 MidX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The middle x value of this rectangle.
Notes: (Read only property)

117.26.28 MidY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Middle Y value of rectangle.
Notes: (Read only property)

117.26.29 MinX as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum X value of rectangle.
Notes: (Read only property)

117.26.30 MinY as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Minimum Y value of rectangle.
Notes: (Read only property)

117.26.31 Origin as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The origin point of the rectangle.
Notes:

Returns new point object with given values.
(Read and Write property)

117.26.32 Size as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size of the rectangle.
Notes:

Returns new size object with given values.
(Read and Write property)

117.26.33 Spans180thMeridian as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this map rectangle spans the 180th meridian.
Notes: (Read only property)

117.26.34 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats rect as text for display in debugger.
Example:

```
dim r as new MKMapRectMBS(1,2,3,4)

MsgBox r.StringValue
```

Notes: (Read only property)

117.26.35 Width as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the rectangle.
Notes: (Read and Write property)

117.26.36 X as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The X origin coordinate.
Notes: (Read and Write property)

117.26.37 Y as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The Y origin coordinate.
Notes: (Read and Write property)

117.27 class MKMapSizeMBS

117.27.1 class MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a size in maps.

117.27.2 Blog Entries

- MapKit Framework for Xojo

117.27.3 Methods

117.27.4 Constructor(other as MKMapSizeMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 117.27.5 Constructor(width as double = 0, height as double = 0) 19042

117.27.5 Constructor(width as double = 0, height as double = 0)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 117.27.4 Constructor(other as MKMapSizeMBS) 19042

117.27.6 Equal(other as MKMapSizeMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Compares two size objects.
Notes: Returns true if both are equal.

117.27.7 Size(Width as double = 0, Height as double = 0) as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates new size object with given values.

117.27.8 World as MKMapSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size that contains every map point in the world.

117.27.9 Properties

117.27.10 Height as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The height of the size.
Notes: (Read and Write property)

117.27.11 StringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Formats size as text for display in debugger.
Notes: (Read only property)

117.27.12 Width as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The width of the size.
Notes: (Read and Write property)

117.28 class MKMapSnapshotMBS

117.28.1 class MKMapSnapshotMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class to take map snapshots.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.28.2 Blog Entries

- MapKit Framework for Xojo

117.28.3 Methods

117.28.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.28.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.28.6 pointForCoordinate(coordinate as CLLocationCoordinate2DMBS) as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Translates a point in the coordinate to the point in the image.

117.28.7 Properties

117.28.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.28.9 Image as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The image created.
Notes:

Please use methods in NSImageMBS class to get PNG or JPEG data.
Or use methods to copy a xojo picture.
(Read only property)

117.28.10 Options as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The options used to create object.
Notes: (Read and Write property)

117.28.11 Tag as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The tag passed to creating the snapshot.
Notes:

e.g. a ID for a database record.
(Read and Write property)

117.29 class MKMapSnapshotOptionsMBS

117.29.1 class MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class for snapshot options.

117.29.2 Blog Entries

- MapKit Framework for Xojo

117.29.3 Methods

117.29.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

117.29.5 Copy as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the options.

117.29.6 Properties

117.29.7 appearance as NSAppearanceMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: The appearance to use for rendering.
Notes:

For MacOS 10.14 or newer.
(Read and Write property)

117.29.8 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The camera to use.
Notes: (Read and Write property)

117.29.9 mapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The rectangle in the map to query.
Notes: (Read and Write property)

117.29.10 mapType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The map type to use.
Notes: (Read and Write property)

117.29.11 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The region to use.
Notes: (Read and Write property)

117.29.12 showsBuildings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to show buildings.
Notes:

Affects MKMapTypeStandard.
(Read and Write property)

117.29.13 showsPointsOfInterest as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to show points of interest.
Notes:

Affects MKMapTypeStandard and MKMapTypeHybrid.
(Read and Write property)

117.29.14 size as NSSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size of the image to create.
Notes:

Defaults to 256x256 if nil.
(Read and Write property)

117.30 class MKMapSnapshotterMBS

117.30.1 class MKMapSnapshotterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The class to take snapshots for maps.

117.30.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MapKit Framework for Xojo

117.30.3 Methods

117.30.4 Cancel

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels the snapshot.

117.30.5 Constructor(options as MKMapSnapshotOptionsMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes: We keep reference to options in options property.

117.30.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.30.7 Start(tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Starts the asynchronous snapshot process.
Notes:

The tag value is passed to the snapshot for later reference.
Triggers SnapshotCompleted event later.
Sets Error and Snapshot properties on this object.

117.30.8 Properties

117.30.9 Error as NSErrorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The last error.
Notes: (Read and Write property)

117.30.10 Loading as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this is still loading.
Notes: (Read only property)

117.30.11 Options as MKMapSnapshotOptionsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The options used to create object.
Notes: (Read and Write property)

117.30.12 Snapshot as MKMapSnapshotMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The last snapshot.
Notes: (Read and Write property)

117.30.13 Events

117.30.14 SnapshotCompleted(snapshot as MKMapSnapshotMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The event to be called when snapshot is done.

117.31 class MKMapViewMBS

117.31.1 class MKMapViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: An MKMapView object provides an embeddable map interface, similar to the one provided by the Maps application.
Notes:

You use this class as-is to display map information and to manipulate the map contents from your application. You can center the map on a given coordinate, specify the size of the area you want to display, and annotate the map with custom information.

In the IDE we show a generic map image as preview as the control itself doesn't perform well inside the Xojo IDE.
Subclass of the NSViewMBS class.

- 18.5, page 87: Maps (Part 6), A deep dive into Annotations by Markus Winter

117.31.4 Methods

117.31.5 addAnnotation(annotation as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the specified annotation to the map view.
Example:

```
dim mapview as MKMapViewMBS // your map view

// new pin
dim pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

117.31.6 addAnnotations(annotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of annotation objects to the map view.

117.31.7 addOverlay(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a single overlay object to the map.
Example:

```
dim mapview as MKMapViewMBS // your map view
dim centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate
dim radius as Integer = 300 // 300 meter

dim circle as MKCircleMBS = MKCircleMBS.circleWithCenterCoordinate(centerCoordinate, radius)
mapview.addOverlay circle
```

Notes:

overlay: The overlay object to add. This object must conform to the MKOverlayMBS interface.

The specified object is added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay event.

To remove an overlay from a map, use the removeOverlay method.
See also:

- 117.31.8 addOverlay(overlay as MKOverlayMBS, level as integer) 19054

117.31.8 addOverlay(overlay as MKOverlayMBS, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds the overlay object to the map at the specified level.
Notes:

overlay: The overlay object to add. This object must conform to the MKOverlayMBS interface.
level: The map level at which to place the overlay. For a list of possible values for this parameter, see level constants.

Positioning an overlay at a specific level places that overlay's visual representation in front of or behind other map content such as map labels and point-of-interest icons.
This method adds the specified overlay to the end of the list of overlay objects at the given level. Adding an overlay also causes the map view to begin monitoring the area they represent. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view calls your rendererForOverlay event to get the renderer object to use when drawing the overlay.
To remove an overlay from a map, use the removeOverlay: method.
See also:

- 117.31.7 addOverlay(overlay as MKOverlayMBS) 19053

117.31.9 addOverlays(overlays() as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of overlay objects to the map.
Notes:

overlays: An array of objects, each of which must conform to the MKOverlayMBS interface.

The specified objects are added to the group of overlay objects in the MKOverlayLevelAboveLabels level. Adding an overlay causes the map view to begin monitoring the area represented by that overlay. As soon as the bounding rectangle of the overlay intersects the visible portion of the map, the map view tries to

draw the overlay. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view adds a corresponding overlay view to the map. The overlay view is provided by the mapViewViewForOverlay method of the map view's delegate object.

To remove multiple overlays from a map, use the removeOverlays method.
See also:

- 117.31.10 addOverlays(overlays() as MKOverlayMBS, level as integer) 19055

117.31.10 addOverlays(overlays() as MKOverlayMBS, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an array of overlay objects to the map at the specified level.
Notes:

overlays: The array of overlay objects to add. Each object in the array must conform to the MKOverlayMBS interface.
level: The map level at which to place the overlays. For a list of possible values for this parameter, see MKOverlayLevel.

Positioning an overlay at a specific level places that overlay's visual representation in front of or behind other map content such as map labels and point-of-interest icons.

This method adds the specified overlays to the end of the list of overlay objects at the given level. Adding the overlays also causes the map view to begin monitoring the area they represent. As soon as the bounding rectangle of an overlay intersects the visible portion of the map, the map view calls your rendererForOverlay event to get the renderer object to use when drawing that overlay.

To remove multiple overlays from a map, use the removeOverlays method.
See also:

- 117.31.9 addOverlays(overlays() as MKOverlayMBS) 19054

117.31.11 annotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The complete list of annotations associated with the receiver.
Notes: If no annotations are associated with the map view, the value of this property is empty.

117.31.12 annotationsInMapRect(mapRect as MKMapRectMBS) as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the annotation objects located in the specified map rectangle.
Notes:

mapRect: The portion of the map that you want to search for annotations.

Returns the array of annotation objects located in mapRect.

This method offers a fast way to retrieve the annotation objects in a particular portion of the map. This method is much faster than doing a linear search of the objects in the annotations property yourself.

117.31.13 annotationViews as MKAnnotationViewMBS()

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Queries internal list of MapView to get list of all annotation views.

117.31.14 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true for Mac 64-bit targets.

117.31.15 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new box view with size 100/100 and position 0/0
Example:

```
dim x as new MKMapViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 117.31.16 Constructor(Handle as Integer)

- 117.31.17 Constructor(left as Double, top as Double, width as Double, height as Double) 19057

117.31.16 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given NSView handle.
Example:

```
dim t as new MKMapViewMBS(0, 0, 100, 100)
dim v as new MKMapViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a MKMapView and the plugin retains this handle.
See also:

- 117.31.15 Constructor 19056
- 117.31.17 Constructor(left as Double, top as Double, width as Double, height as Double) 19057

117.31.17 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new control with the given size and position.
Example:

```
dim left,top,width,height as Integer
// define rectangle
dim x as new MKMapViewMBS(left, top, width, height)
```

Notes: On success the handle property is not zero.
See also:

- 117.31.15 Constructor 19056
- 117.31.16 Constructor(Handle as Integer) 19057

117.31.18 convertCoordinateToPointToView(coordinate as CLLocationCoordinate2DMBS, view as NSViewMBS) as NSPointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a map coordinate to a point in the specified view.
Notes:

coordinate: The map coordinate for which you want to find the corresponding point.
view: The view in whose coordinate system you want to locate the specified map coordinate. If this parameter is nil, the returned point is specified in the window's coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the point (in the appropriate view or window coordinate system) corresponding to the specified latitude and longitude value.

117.31.19 convertPointToCoordinateFromView(point as NSPointMBS, view as NSViewMBS) as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a point in the specified view's coordinate system to a map coordinate.
Notes:

point: The point you want to convert.
view: The view that serves as the reference coordinate system for the point parameter.

Returns the map coordinate at the specified point.

117.31.20 convertRectToRegionFromView(rect as NSRectMBS, view as NSViewMBS) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a rectangle in the specified view's coordinate system to a map region.
Example:

```
// convert mouse position in x/y to select annotation on the given mouse point
Dim xView As MKMapViewMBS = MapViewControl.View
Dim rect As New NSRectMBS(x,y,1,1)
Dim region As MKCoordinateRegionMBS = xView.convertRectToRegionFromView(rect,xView)
Dim center As CLLocationCoordinate2DMBS = region.center
Dim circle As New MKCircleMBS(center,32)
Dim mapRect As MKMapRectMBS = circle.boundingMapRect()
Dim xAnnos() As MKAnnotationMBS = xView.annotationsInMapRect(mapRect)

If xAnnos.LastRowIndex <>-1 Then
Dim xThisAnno As MKAnnotationMBS = xAnnos(0)
If xThisAnno IsA MKPointAnnotationMBS Then
```

```
me.View.selectAnnotation(xThisAnno,False)
Return True
End If
End If
```

Notes:

rect: The rectangle you want to convert.
view: The view that serves as the reference coordinate system for the rect parameter.

Returns the map region corresponding to the specified view rectangle.

117.31.21 convertRegionToRectToView(region as MKCoordinateRegionMBS, view as NSViewMBS) as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Converts a map region to a rectangle in the specified view.
Notes:

region: The map region for which you want to find the corresponding view rectangle.
view: The view in whose coordinate system you want to locate the specified map region. If this parameter is nil, the returned rectangle is specified in the window's coordinate system. If view is not nil, it must belong to the same window as the map view.

Returns the rectangle corresponding to the specified map region.

117.31.22 dequeueReusableAnnotationViewWithIdentifier(identifier as string) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a reusable annotation view located by its identifier.
Notes:

identifier: A string identifying the annotation view to be reused. This string is the same one you specify when initializing the annotation view using the Constructor method.

Returns an annotation view with the specified identifier, or nil if no such object exists in the reuse queue.

For performance reasons, you should generally reuse MKAnnotationView objects in your map views. As

annotation views move offscreen, the map view moves them to an internally managed reuse queue. As new annotations move onscreen, and your code is prompted to provide a corresponding annotation view, you should always attempt to dequeue an existing view before creating a new one. Dequeueing saves time and memory during performance-critical operations such as scrolling.

117.31.23 deselectAnnotation(annotation as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Deselects the specified annotation and hides its callout view.
Notes:

annotation: The annotation object to deselect.
animated: If true, the callout view is animated offscreen.

117.31.24 Destructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

117.31.25 exchangeOverlay(index1 as Integer, index2 as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Exchanges the positions of the two overlay objects.
Notes:

index1: The index of an overlay in the MKOverlayLevelAboveLabels map level.
index2: The index of another overlay in the MKOverlayLevelAboveLabels map level.

If you need to exchange overlays in other map levels, use the exchangeOverlay method.
See also:

- 117.31.26 exchangeOverlay(Overlay1 as MKOverlayMBS, Overlay2 as MKOverlayMBS) 19060

117.31.26 exchangeOverlay(Overlay1 as MKOverlayMBS, Overlay2 as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Exchanges the positions of the two overlay objects.
Notes: If the overlays are in the same map level, they exchange positions within that level's array of overlay objects. If they are in different map levels, the two objects also swap levels. Swapping the position of the overlays affects their visibility in the map view.
See also:

- 117.31.25 exchangeOverlay(index1 as Integer, index2 as Integer) 19060

117.31.27 insertOverlayAboveOverlay(overlay as MKOverlayMBS, aboveOverlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts one overlay object on top of another.
Notes:

overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay's contents being displayed above that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

117.31.28 insertOverlayAtIndex(overlay as MKOverlayMBS, index as Integer)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts an overlay object into the list associated with the map.
Notes:

overlay: The overlay object to insert.
index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.

This method inserts the overlay into the MKOverlayLevelAboveLabels level.
See also:

- 117.31.29 insertOverlayAtIndex(overlay as MKOverlayMBS, index as integer, level as integer) 19061

117.31.29 insertOverlayAtIndex(overlay as MKOverlayMBS, index as integer, level as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts an overlay object into the level at the specified index.
Notes:

overlay: The overlay object to insert.
index: The index at which to insert the overlay object. If this value is greater than the number of objects in the overlays property, this method appends the object to the end of the array.
level: The map level at which to place the overlay. For a list of possible values for this parameter, see level constants.

Inserting an overlay at a specific level places that overlay's visual representation in front of or behind other map content such as map labels and point-of-interest icons.
See also:

- 117.31.28 insertOverlayAtIndex(overlay as MKOverlayMBS, index as Integer) 19061

117.31.30 insertOverlayBelowOverlay(overlay as MKOverlayMBS, belowOverlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts one overlay object below another.
Notes:

overlay: The overlay object to insert.
sibling: An existing object in the overlays array. This object must exist in the array and must not be nil.

This method inserts the overlay into the MKOverlayLevelAboveLabels level and positions it relative to the specified sibling. When displayed, this leads to the overlay's contents being displayed beneath that of its sibling. If sibling is not in the same map level, this method appends the overlay to the end of the list of overlays at the indicated level.

117.31.31 mapRectThatFits(mapRect as MKMapRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified map rectangle to ensure that it fits in the map view's frame.
Notes:

mapRect: The initial map rectangle whose width and height you want to adjust.

Returns a map rectangle that is still centered on the same point of the map but whose width and height are adjusted to fit in the map view's frame.

You can use this method to normalize map rectangle values before displaying the corresponding area. This method returns a new map rectangle that both contains the specified rectangle and fits neatly inside the map view's frame.
See also:

- 117.31.32 mapRectThatFits(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double) as MKMapRectMBS 19063

117.31.32 mapRectThatFits(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified map rectangle, incorporating the specified inset values.
Notes: A map rectangle that is still centered on the same point of the map but whose width and height are adjusted to fit in the map view's frame minus the inset values.
See also:

- 117.31.31 mapRectThatFits(mapRect as MKMapRectMBS) as MKMapRectMBS 19062

117.31.33 MKErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for Map Kit.

117.31.34 MKMapViewDefaultAnnotationViewReuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The default reuse identifier for your map's annotation views.
Notes: Use this constant to register a default annotation view. This default annotation view is used when your map view's delegate does not implement the viewForAnnotation event or when that method returns nil.

117.31.35 MKMapViewDefaultClusterAnnotationViewReuseIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The default reuse identifier for the annotation view representing a cluster of annotations.
Notes: Use this constant to register a default annotation view to use for clusters of annotations. This cluster annotation view is used when your map view's delegate does not implement the viewForAnnotation

event or when that method returns nil.

117.31.36 overlays as MKOverlayMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay objects currently associated with the map view.
Notes:

This property contains the union of all overlays at the different levels of the map. The objects in this array must adopt the MKOverlayMBS interface. If no overlays are associated with the map view, the value of this property is an empty array.

The order of the objects in this array does not necessary reflect their visual order on the map.

117.31.37 overlaysInLevel(level as Integer) as MKOverlayMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay objects in the specified level of the map.
Notes:

level: The map level whose overlays you want. For a list of possible values for this parameter.

Returns an array of objects conforming to the MKOverlayMBS interfaces that display in the specified map level. If there are no overlays at the specified level, this method returns an empty array.

You can use this method to get all of the overlays assigned to a specific map level, which might be a subset of the complete set of overlay objects. For overlapping overlay objects, the order of objects in the array represents their visual order when displayed on the map, with objects in the beginning of the array located behind those at later indexes.

117.31.38 regionThatFits(region as MKCoordinateRegionMBS) as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adjusts the aspect ratio of the specified region to ensure that it fits in the map view's frame.
Notes:

region: The initial region whose span you want to adjust.

Returns a region that is still centered on the same point of the map but whose span values are adjusted to fit in the map view's frame.

You can use this method to normalize the region values before displaying them in the map. This method returns a new region that both contains the specified region and fits neatly inside the map view's frame.

117.31.39 removeAnnotation(annotation as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified annotation object from the map view.
Notes:

annotation: The annotation object to remove. This object must conform to the MKAnnotationMBS interface.

If the annotation is currently associated with an annotation view, and that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing an annotation object disassociates it from the map view entirely, preventing it from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete a given annotation.

117.31.40 removeAnnotations(annotations() as MKAnnotationMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes an array of annotation objects from the map view.
Notes:

annotations: The array of annotations to remove. Objects in the array must conform to the MKAnnotationMBS interface.

If any annotation object in the array has an associated annotation view, and if that view has a reuse identifier, this method removes the annotation view and queues it internally for later reuse. You can retrieve queued annotation views (and associate them with new annotations) using the dequeueReusableAnnotationViewWithIdentifier method.

Removing annotation objects disassociates them from the map view entirely, preventing them from being displayed on the map. Thus, you would typically call this method only when you want to hide or delete the

specified annotations.

117.31.41 removeOverlay(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes a single overlay object from the map.
Notes:

overlay: The overlay object to remove.

This method removes the overlay regardless of the level that it is in. Removing an overlay also removes its corresponding renderer, if one is in use. If the specified overlay is not currently associated with the map view, this method does nothing.

117.31.42 removeOverlays(overlays() as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Removes one or more overlay objects from the map.
Notes:

overlays: An array of objects, each of which conforms to the MKOverlayMBS interface.

This method removes the specified overlays regardless of which level each one is in. Removing an overlay also removes its corresponding renderer, if one is in use. If a given overlay object is not associated with the map view, it is ignored.

117.31.43 rendererForOverlay(overlay as MKOverlayMBS) as MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the renderer object used to draw the contents of the specified overlay object.
Notes:

overlay: The overlay object whose renderer you want.

Returns the renderer object in use for the specified overlay or nil if the overlay is not onscreen.

This method returns the renderer object that your control provided in its xrendererForOverlay event.

117.31.44 selectAnnotation(annotation as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Selects the specified annotation and displays a callout view for it.
Notes:

annotation: The annotation object to select.
animated: If true, the callout view is animated into position.

If the specified annotation is not onscreen, and therefore does not have an associated annotation view, this method has no effect.

117.31.45 selectedAnnotations as MKAnnotationMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The annotations that are currently selected.
Notes: Assigning a new array to this property selects only the first annotation in the array.

117.31.46 setCamera(camera as MKMapCameraMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the camera used for determining the map's viewing parameters and optionally animates the change.
Notes:

camera: The camera object containing the viewing angle information. This parameter must not be nil.
animated: Specify true if you want the change in viewing angle to be animated or false if you want the map to reflect the changes without animations.

117.31.47 setCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, zoomLevel as double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: hanges the center coordinate of the map with zoom and optionally animates the change.
Notes:

Zoomlevel is in range 1 to 20.

Latitude and Longitude in coordinate: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.
See also:

- 117.31.48 setCenterCoordinate(coordinate as CLLocationCoordinate2DMBS, Animated as boolean = true) 19068

117.31.48 setCenterCoordinate(coordinate as CLLocationCoordinate2DMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the center coordinate of the map and optionally animates the change.
Notes:

Latitude and Longitude in coordinate: The new center coordinate for the map.
animated: Specify true if you want the map view to scroll to the new location or false if you want the map to display the new location immediately.

Changing the center coordinate centers the map on the new coordinate without changing the current zoom level. It also updates the value in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.
See also:

- 117.31.47 setCenterCoordinate(centerCoordinate as CLLocationCoordinate2DMBS, zoomLevel as double, animated as boolean) 19067

117.31.49 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible region and optionally animates the change.
Notes: Same as SetRegion with MKCoordinateRegionMBS but reuses current coordinate span.
See also:

- 117.31.50 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false) 19069

117.31.50 setRegion(region as MKCoordinateRegionMBS, animated as boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible region and optionally animates the change.
Example:

```
dim mapview as MKMapViewMBS // your mapview

// get current region
dim r as MKCoordinateRegionMBS = mapview.region

// make new span with double deltas
dim s as new MKCoordinateSpanMBS(r.span.latitudeDelta*2, r.span.longitudeDelta*2)

// make new region
dim n as new MKCoordinateRegionMBS(r.center, s)

// and zoom there
mapview.setRegion n, true
```

Notes:

region: The new region to display in the map view.
animated: Specify true if you want the map view to animate the transition to the new region or false if you want the map to center on the specified region immediately.

Changing just the center coordinate of the region can still cause the span values to change implicitly. The span values might change because that the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the setCenterCoordinate instead.

When setting a new region, the map may adjust the value in the region parameter so that it fits the visible area of the map precisely. This adjustment is normal and is done to ensure that the value in the region property always reflects the visible portion of the map. However, it does mean that if you get the value of that property right after calling this method, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)
See also:

- 117.31.49 setRegion(c as CLLocationCoordinate2DMBS, animated as boolean = false) 19068

117.31.51 setVisibleMapRect(coordinate as MKMapRectMBS, Animated as boolean = true)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible portion of the map and optionally animates the change.
Notes:

mapRect: The map rectangle to make visible in the map view.
animate: Specify true if you want the map view to animate the transition to the new map rectangle or false if you want the map to center on the specified rectangle immediately.
See also:

- 117.31.52 setVisibleMapRect(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePadding-Top as Double, edgePaddingRight as Double, edgePaddingBottom as Double, animated as boolean) 19070

117.31.52 setVisibleMapRect(mapRect as MKMapRectMBS, edgePaddingLeft as Double, edgePaddingTop as Double, edgePaddingRight as Double, edgePaddingBottom as Double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Changes the currently visible portion of the map, allowing you to specify additional space around the edges.
Notes:

MapRect: The map rectangle to make visible in the map view.
edgePaddingLeft, edgePaddingTop, edgePaddingRight and edgePaddingBottom: The amount of additional space (measured in screen points) to make visible around the specified rectangle.
animate: Specify true if you want the map view to animate the transition to the new map rectangle or false if you want the map to center on the specified rectangle immediately.
See also:

- 117.31.51 setVisibleMapRect(coordinate as MKMapRectMBS, Animated as boolean = true) 19070

117.31.53 setZoomLevel(zoomLevel as double, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Sets zoom level.
Notes: Zoomlevel is in range 1 to 20.

117.31.54 showAddress(address as string)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience method to run an address geocoding and shows position on map.
Example:

```
dim mapview as MKMapViewMBS // your map view
mapView.showAddress "Markt 15, Andernach, Deutschland"
```

Notes: Uses CLGeocoderMBS geocodeAddressString method to asynchronously find the place and show it on the map.

117.31.55 showAnnotations(annotations() as MKAnnotationMBS, animated as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the visible region so that the map displays the specified annotations.
Notes:

annotations: The annotations that you want to be visible in the map.
animated: true if you want the map region change to be animated, or NO if you want the map to display the new region immediately without animations.

Calling this method updates the value in the region property and potentially other properties to reflect the new map region.

117.31.56 viewForAnnotation(annotation as MKAnnotationMBS) as MKAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the annotation view associated with the specified annotation object, if any.
Example:

```
Function viewForAnnotation(mapView as MKMapViewMBS, annotation as MKAnnotationMBS) Handles
viewForAnnotation as MKAnnotationViewMBS
// return nil for default annotation view

// new annotation view
Dim v As New MKAnnotationViewMBS(annotation)

// get a picture and use it as decoration
```

```
Dim pic As Picture = LogoMBS(100)
Dim img As New NSImageMBS(pic)
img.setSize(pic.Width/2, pic.Height/2) // half size gives 2x resolution, if the picture isn't retina aware

// set image and return
v.image = img

Return v
End Function
```

Notes:

annotation: The annotation object whose view you want.

Returns the annotation view or nil if the view has not yet been created. This method may also return nil if the annotation is not in the visible map region and therefore does not have an associated annotation view.

117.31.57 Properties

117.31.58 annotationVisibleRect as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visible rectangle where annotation views are currently being displayed.
Notes: (Read only property)

117.31.59 camera as MKMapCameraMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The camera used for determining the appearance of the map.
Notes:

A camera object defines a point above the map's surface from which to view the map. Applying a camera to a map can have the effect of giving the map a 3D-like appearance. You can use a camera to rotate the map so that it is oriented to match the user's heading or to apply a pitch angle to tilt the plane of the map. (You can check the map's pitchEnabled property to determine whether the map can be pitched.)

Assigning a new camera to this property updates the map immediately and without animating the change. If you want to animate changes in camera position, use the setCamera method instead.

You must not set this property to nil. To restore the map to a flat appearance, apply a camera with a pitch

angle of 0, which yields a camera looking straight down onto the map surface.
(Read and Write property)

117.31.60 centerCoordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The map coordinate at the center of the map view.
Example:

```
dim mapview as MKMapViewMBS // your map view
dim centerCoordinate as CLLocationCoordinate2DMBS = mapview.centerCoordinate

// show center
MsgBox str(centerCoordinate.latitude)+" "+str(centerCoordinate.longitude)
```

Notes:

Changing the value in this property centers the map on the new coordinate without changing the current zoom level. It also updates the values in the region property to reflect the new center coordinate and the new span values needed to maintain the current zoom level.

Changing the value of this property updates the map view immediately. If you want to animate the change, use the setCenterCoordinate method instead.
(Read and Write property)

117.31.61 mapType as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The type of data displayed by the map view.
Example:

```
dim mapview as MKMapViewMBS // your map view
mapView.mapType = mapView.MKMapTypeHybrid
```

Notes:

Changing the value in this property may cause the receiver to begin loading new map content. For example, changing from MKMapTypeStandard to MKMapTypeSatellite might cause it to begin loading the satellite imagery needed for the map. If new data is needed, however, it is loaded asynchronously and appropriate messages are sent to the receiver's delegate indicating the status of the operation.

(Read and Write property)

117.31.62 PitchEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map camera's pitch information is used.
Notes:

When this property is set to true and a valid camera is associated with the map, the camera's pitch angle is used to tilt the plane of the map. When this property is set to NO, the camera's pitch angle is ignored and the map is always displayed as if the user is looking straight down onto it.
In an app, always check the value of this property to determine whether a map can support 3D.
(Read and Write property)

117.31.63 region as MKCoordinateRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The area currently displayed by the map view.
Notes:

The region encompasses both the latitude and longitude point on which the map is centered and the span of coordinates to display. The span values provide an implicit zoom value for the map. The larger the displayed area, the lower the amount of zoom. Similarly, the smaller the displayed area, the greater the amount of zoom.

Changing only the center coordinate of the region can still cause the span to change implicitly. The span might change because the distances represented by a span change at different latitudes and longitudes and the map view may need to adjust the span to account for the new location. If you want to change the center coordinate without changing the zoom level, use the centerCoordinate instead.

Changing the value of this property updates the map view immediately. When setting this property, the map may adjust the new region value so that it fits the visible area of the map precisely. This is normal and is done to ensure that the value in this property always reflects the visible portion of the map. However, it does mean that if you get the value of this property right after setting it, the returned value may not match the value you set. (You can use the regionThatFits method to determine the region that will actually be set by the map.)

If you want to animate the change in region, use the setRegion method instead.
(Read and Write property)

117.31.64 RotateEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map camera's heading information is used.
Notes:

When this property is set to true and a valid camera is associated with the map, the camera's heading angle is used to rotate the plane of the map around its center point. When this property is set to false, the camera's heading angle is ignored and the map is always oriented so that true north is situated at the top of the map view.
(Read and Write property)

117.31.65 scrollEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user may scroll around the map.
Notes:

This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the map location programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

117.31.66 showsBuildings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays extruded building information.
Notes:

When this property is set to YES and the camera has a pitch angle greater than zero, the map extrudes buildings so that they extend above the map plane, creating a 3D effect. The mapType property must be set to MapTypeStandard for extruded buildings to be displayed. The default value of this property is true.
(Read and Write property)

117.31.67 ShowsCompass as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays a compass control.
Notes:

Use this property to show or hide a control that lets users change the heading orientation of the map.
(Read and Write property)

117.31.68 showsPointsOfInterest as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map displays point-of-interest information.
Notes:

When this property is set to true, the map displays icons and labels for restaurants, schools, and other relevant points of interest. The mapType property must be set to MapTypeStandard or MapTypeHybrid for points of interest to be displayed. The default value of this property is true.
(Read and Write property)

117.31.69 showsScale as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean indicating whether the map shows scale information.
Notes:

The default value of this property is false.
(Read and Write property)

117.31.70 showsTraffic as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map displays traffic information.
Notes:

The mapType property must be set to MapTypeStandard or MapTypeHybrid for traffic information to be shown. The default value of this property is false.
(Read and Write property)

117.31.71 showsUserLocation as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the map should try to display the user's location.
Notes:

This property does not indicate whether the user's position is actually visible on the map, only whether the map view should try to display it. Setting this property to true causes the map view to use the Core Location framework to find the current location and try to display it on the map. As long as this property is true, the map view continues to track the user's location and update it periodically. The default value of this property is false.

Showing the user's location does not guarantee that the location is visible on the map. The user might have scrolled the map to a different point, causing the current location to be offscreen. To determine whether the user's current location is currently displayed on the map, use the userLocationVisible property.
(Read and Write property)

117.31.72 showsZoomControls as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean indicating whether the map displays zoom controls.
Notes:

In macOS, use this property to show or hide the controls that let users change the zoom level of the map.
(Read and Write property)

117.31.73 userLocation as MKUserLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The annotation object representing the user's current location.
Notes: (Read only property)

117.31.74 userLocationVisible as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the device's current location is visible in the map view.
Notes:

This property tells you whether the icon used to represent the user's current location is visible in the map view. When determining whether the current location is visible, this property factors in the horizontal accuracy of the location data. Specifically, if the rectangle represented by the user's current location plus or minus minus the horizontal accuracy of that location intersects the map's visible rectangle, this property contains the value true. If that location rectangle does not intersect the map's visible rectangle, this property contains the value false.

If the user's location cannot be determined, this property contains the value false.
(Read only property)

117.31.75 visibleMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The area currently displayed by the map view.
Notes:

This property represents the same basic information as the region property but specified as a map rectangle instead of a region.
Changing the value of this property updates the map view immediately. If you want to animate the change, use the setVisibleMapRect method instead.
(Read and Write property)

117.31.76 zoomEnabled as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the user may use pinch gestures to zoom in and out of the map.
Notes:

This property controls only user interactions with the map. If you set the value of this property to NO, you may still change the zoom level programmatically by changing the value in the region property.

The default value of this property is true.
(Read and Write property)

117.31.77 zoomLevel as Double

MBS MacFrameworks Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Queries current zoom level.
Example:

```
dim m as MKMapViewMBS // your map view

// zoom in one level
m.zoomLevel = m.zoomLevel + 1
```

Notes:

A value between 1 and 20.
(Read and Write property)

117.31.78 Constants

117.31.79 ErrorDirectionsNotFound = 4

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the error constants for the Map Kit framework.
Notes: The specified directions could not be found.

117.31.80 ErrorLoadingThrottled = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the error constants for the Map Kit framework.
Notes:

The data was not loaded because data throttling is in effect.
This error can occur if an app makes frequent requests for data over a short period of time.

117.31.81 ErrorPlacemarkNotFound = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the error constants for the Map Kit framework.
Notes: The specified placemark could not be found.

117.31.82 ErrorServerFailure = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the error constants for the Map Kit framework.
Notes: The map server was unable to return the desired information.

117.31.83 ErrorUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the error constants for the Map Kit framework.
Notes: An unknown error occurred.

117.31.84 FeatureVisibilityAdaptive = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the visibility of different map features.
Notes: For features in the normal state, title text is displayed and subtitle text is hidden. When a feature is selected, the title and subtitle text are hidden when the feature requires a callout.

117.31.85 FeatureVisibilityHidden = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the visibility of different map features.
Notes: Always hidden.

117.31.86 FeatureVisibilityVisible = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the visibility of different map features.
Notes: Always visible.

117.31.87 MapTypeHybrid = 2

MBS MacFrameworks Plugin, Plugin Version: 14.1.

Function: One of the map types.
Notes: Displays a satellite image of the area with road and road name information layered on top.

117.31.88 MapTypeHybridFlyover = 4

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the map type constants.
Notes: A hybrid satellite image with flyover data where available.

117.31.89 MapTypeMutedStandard = 5

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the map type constants.
Notes: A street map where your data is emphasized over the underlying map details.

117.31.90 MapTypeSatellite = 1

MBS MacFrameworks Plugin, Plugin Version: 14.1.

Function: One of the map types.
Notes: Displays satellite imagery of the area.

117.31.91 MapTypeSatelliteFlyover = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the map type constants.
Notes: A satellite image of the area with flyover data where available.

117.31.92 MapTypeStandard = 0

MBS MacFrameworks Plugin, Plugin Version: 14.1.

Function: One of the map types.
Notes: Displays a street map that shows the position of all roads and some road names.

117.31.93 OverlayLevelAboveLabels = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the position of overlays relative to other content.
Notes: Above labels

117.31.94 OverlayLevelAboveRoads = 0

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants indicating the position of overlays relative to other content.
Notes: Above roads

117.32 class MKMarkerAnnotationViewMBS

117.32.1 class MKMarkerAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An annotation view that displays a balloon-shaped marker at the designated location.
Notes:

Return an instance of this class from the viewForAnnotation event of your map view delegate when you want to display the same types of markers used in the Maps app.
The default displayPriority for an instance of this class is FeatureDisplayPriorityDefaultLow.

Available on macOS 11.0
Subclass of the MKAnnotationViewMBS class.

- 18.6, page 10: News

117.32.4 Methods

117.32.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this class is available.
Notes: Returns true on macOS 11.0 and newer.

117.32.6 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = "", EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

117.32.7 Properties

117.32.8 animatesWhenAdded as Boolean

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean that indicates whether the marker animates into position onscreen.
Notes:

The default value of this property is false.
(Read and Write property)

117.32.9 glyphImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An image to display in the marker balloon.
Notes:

Use this property or the glyphText property to specify the marker balloon content. If you specify both an image and text, MapKit displays the text.
MapKit displays the glyph image when the marker is in the normal state. Create glyph images as template images so that MapKit can apply the glyph tint color to the image. Normally, you set the size of this image to 20 by 20 points on iOS and 40 by 40 points on tvOS. However, if you don't provide a separate selected image in the selectedGlyphImage property, make the size of this image 40 by 40 points on iOS and 60 by 40 points on tvOS instead. MapKit scales images that are larger or smaller than those sizes.
(Read and Write property)

117.32.10 glyphText as String

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The text to display in the marker balloon.
Notes:

Use this property or the glyphText property to specify the marker balloon content. If you specify both an image and text, MapKit displays the text.
MapKit limits the amount of space available for displaying your glyph text. Specify no more than two or three characters for any strings you assign to this property.
(Read and Write property)

117.32.11 glyphTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The color to apply to the glyph text or image.
Notes:

The default value of this property is nil, which applies the standard tint color for the current map style.
(Read and Write property)

117.32.12 markerTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color of the marker balloon.
Notes:

The default value of this property is nil, which applies the standard color that's appropriate for the current map style.
(Read and Write property)

117.32.13 selectedGlyphImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: An image to display when the user selects the marker.
Notes:

MapKit displays the glyph image when the marker is in the selected state. If you specify an image for this property, you should also specify an image in the glyphImage property.
Create glyph images as template images so that MapKit can apply the glyph tint color to the image. Set the size of this image to 40 by 40 points on iOS and 60 by 40 points on tvOS. MapKit scales images that are larger or smaller than those sizes.
(Read and Write property)

117.32.14 subtitleVisibility as Integer

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The visibility of the subtitle text rendered beneath the marker balloon.
Notes:

MapKit shows the text when the user selects a marker.
(Read and Write property)

117.32.15 titleVisibility as Integer

MBS MacFrameworks Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The visibility of the title text rendered beneath the marker balloon.
Notes: (Read and Write property)

117.32.16 Constants

117.32.17 FeatureVisibilityAdaptive = 0

MBS MacFrameworks Plugin, Plugin Version: 20.4.

Function: One of the feature visibility constants.
Notes: A constant indicating that the feature adapts to the current map state.

117.32.18 FeatureVisibilityHidden = 1

MBS MacFrameworks Plugin, Plugin Version: 20.4.

Function: One of the feature visibility constants.
Notes: A constant indicating that the feature is always hidden.

117.32.19 FeatureVisibilityVisible = 2

MBS MacFrameworks Plugin, Plugin Version: 20.4.

Function: One of the feature visibility constants.
Notes: A constant indicating that the feature is always visible.

117.33 class MKMultiPointMBS

117.33.1 class MKMultiPointMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKMultiPoint class is an abstract superclass used to define shapes composed of multiple points.
Notes:

You should not create instances of this class directly. Instead, you should create instances of the MKPolyline or MKPolygon classes. However, you can use the method and properties of this class to access information about the specific points associated with the line or polygon.
Subclass of the MKShapeMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.33.2 Blog Entries

- MapKit Framework for Xojo

117.33.3 Methods

117.33.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.33.5 Coordinates as MKMapPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries list of coordinates for all the points.

117.33.6 points as MKMapPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries array with points.

117.33.7 Properties

117.33.8 pointCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Queries number of points for this multi point object.
Notes: (Read only property)

117.34 class MKOverlayPathRendererMBS

117.34.1 class MKOverlayPathRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a path-based overlay.
Notes:

Use this renderer when your overlay's shape is defined by a CGPath object. By default, this renderer fills and strokes the path using its current attributes.
You can use this class as-is or subclass to define additional drawing behaviors. If you subclass, you should override the createPath method and use that method to build the appropriate path object. To change the path, invalidate it and recreate the path using whatever new data your subclass has obtained.
Subclass of the MKOverlayRendererMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.34.2 Blog Entries

- MapKit Framework for Xojo

117.34.3 Methods

117.34.4 applyFillProperties(context as CGContextMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Applies the receiver's current fill-related drawing properties to the specified graphics context.
Notes:

context: The graphics context used to draw the view's contents.
zoomScale: The current zoom scale used for drawing.

This is a convenience method for applying all of the drawing properties used when filling a path. This method applies the current fill color to the specified graphics context.

117.34.5 applyStrokeProperties(context as CGContextMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Applies the receiver's current stroke-related drawing properties to the specified graphics context.
Notes:

context: The graphics context used to draw the view's contents.
zoomScale: The current zoom scale used for drawing.

This is a convenience method for applying all of the drawing properties used when stroking a path. This method applies the stroke color, line width, line join, line cap, miter limit, line dash phase, and line dash attributes to the specified graphics context. This method applies the scale factor in the zoomScale parameter to the line width and line dash pattern automatically so that lines scale appropriately.
This method does not save the current graphics state before applying the new attributes. If you want to preserve the existing state, you must save it yourself and restore it later when you finish drawing.

117.34.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.34.7 createPath

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates the path for the overlay.
Notes: The default implementation of this method does nothing. Subclasses should override it and use it to create the CGPathRef data type to be used for drawing. After creating the path, your implementation should assign it to the path property.

117.34.8 fillPath(path as CGPathMBS, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Fills the area enclosed by the specified path.
Notes:

path: The path to fill.
context: The graphics context in which to draw the path.

You must set the current fill color before calling this method. Typically you do this by calling the applyFillProperties method prior to drawing. If the fillColor property is currently nil, this method does nothing.

117.34.9 GetLineDashPattern as Integer()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of numbers specifying the dash pattern to use for the path.
Notes:

The array contains one or more numbers that indicate the lengths (measured in points) of the line segments and gaps in the pattern. The values in the array alternate, starting with the first line segment length, followed by the first gap length, followed by the second line segment length, and so on.
This property is set to nil by default, which indicates no line dash pattern.

117.34.10 invalidatePath

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Updates the path associated with the overlay renderer.
Notes: Call this method when a change in the path information would require you to recreate the overlay's path. This method sets the path property to nil and tells the overlay renderer to redisplay its contents.

117.34.11 SetLineDashPattern(values() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets an array of numbers specifying the dash pattern to use for the path.
Notes:

The array contains one or more numbers that indicate the lengths (measured in points) of the line segments and gaps in the pattern. The values in the array alternate, starting with the first line segment length, followed by the first gap length, followed by the second line segment length, and so on.
This property is set to nil by default, which indicates no line dash pattern.

117.34.12 strokePath(path as CGPathMBS, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Draws a line along the specified path.
Notes:

path: The path to draw.
context: The graphics context in which to draw the path.

You must set the current stroke color before calling this method. Typically you do this by calling the applyStrokePropertiesToContext method prior to drawing. If the strokeColor property is currently nil, this

method does nothing.

117.34.13 Properties

117.34.14 fillColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The fill color to use for the path.
Notes: (Read and Write property)

117.34.15 lineCap as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The line cap style to apply to the open ends of the path.
Notes:

The line cap style is applied to the start and end points of any open subpaths. This property does not affect closed subpaths. The default line cap style is kCGLineCapRound.
(Read and Write property)

117.34.16 lineDashPhase as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The offset (in points) at which to start drawing the dash pattern.
Notes:

Use this property to start drawing a dashed line partway through a segment or gap. For example, a phase value of 6 for the patter 5-2-3-2 would cause drawing to begin in the middle of the first gap.
The default value of this property is 0.
(Read and Write property)

117.34.17 lineJoin as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The line join style to apply to corners of the path.
Notes:

The default line join style is kCGLineJoinRound.

(Read and Write property)

117.34.18 lineWidth as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The stroke width to use for the path.
Notes:

The default value of this property is 0.
(Read and Write property)

117.34.19 miterLimit as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The limiting value that helps avoid spikes at junctions between connected line segments.
Notes:

The miter limit helps you avoid spikes in paths that use the kCGLineJoinMiter join style. If the ratio of the miter length—that is, the diagonal length of the miter join—to the line thickness exceeds the miter limit, the joint is converted to a bevel join. The default miter limit is 10, which results in the conversion of miters whose angle at the joint is less than 11 degrees.
(Read and Write property)

117.34.20 Path as CGPathMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The path representing the overlay's shape.
Notes:

Getting the value of this property causes the path to be created (using the createPath method) if it does not already exist. You can assign a path object to this property explicitly. When assigning a new path object to this property, the overlay renderer stores a strong reference to the path you provide.
(Read and Write property)

117.34.21 strokeColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The stroke color to use for the path.

Notes: (Read and Write property)

117.35 class MKOverlayRendererMBS

117.35.1 class MKOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The shared infrastructure used to draw overlays on the map surface.
Notes:

An overlay renderer draws the visual representation of an overlay object—that is, an object that conforms to the MKOverlayMBS interface. This class defines the drawing infrastructure used by the map view. Subclasses are expected to override the drawMapRect method to draw the contents of the overlay.
The Map Kit framework provides several concrete instances of overlay renderers. Specifically, it provides renderers for each of the concrete overlay objects. You can use one of these existing renderers or define your own subclasses if you want to draw the overlay contents differently.

117.35.2 Blog Entries

- MapKit Framework for Xojo

117.35.3 Methods

117.35.4 canDrawMapRect(Rect as MKMapRectMBS, zoomScale as Double) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether the overlay view is ready to draw its content.
Notes:

mapRect: The map rectangle that needs to be updated.
zoomScale: The current scale factor applied to the map.

Returns true if this overlay renderer is ready to draw its contents on the map or false if it is not.

Overlay renderers can override this method in situations where they may depend on the availability of other information to draw their contents. For example, a renderer showing traffic information might want to delay drawing until it has all of the traffic data it needs. In such a case, it can return NO from this method to indicate that it is not ready. An overlay renderer might also return NO if it does not draw content in the specified rectangle.

If you return NO from this method, your application is responsible for calling the setNeedsDisplayInMapRect method when the overlay renderer subsequently becomes ready to draw its contents.

The default implementation of this method returns true.

117.35.5 Constructor(overlay as MKOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns the overlay renderer and associates it with the specified overlay object.
Notes:

overlay: The overlay object to use when drawing the overlay content on the map. This object provides the data needed to draw the overlay's shape. The overlay renderer stores a strong reference to this object.
Return Value

Initially, the overlay renderer assumes that the overlay is fully opaque and that it has a content scale factor of 1.0. You can change these values as needed using the alpha and contentScaleFactor properties.

117.35.6 drawMapRect(Rect as MKMapRectMBS, zoomScale as Double, context as CGContextMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Draws the overlay's contents at the specified location on the map.
Notes:

mapRect: The map rectangle that needs to be updated. Your drawing code should avoid drawing outside of this rectangle.
zoomScale: The current zoom factor applied to the map content. You can use this value for configuring the stroke width of lines or other attributes that might be affected by the scale of the map's contents.
context: The graphics context to use for drawing the overlay's contents.

The default implementation of this method does nothing. Subclasses are expected to override this method and use it to draw the overlay's contents.

When determining where to draw content, make your initial calculations relative to the map itself. In other words, compute the position and size of any overlay content using map points and map rectangles, convert those values to regular CGPoint and CGRect types using the methods of this class, and then pass the converted points to any drawing primitives.
It is recommended that you use Core Graphics to draw any content for your overlays.

To improve drawing performance, the map view may divide your overlay into multiple tiles and render each one on a separate thread. Your implementation of this method must therefore be capable of safely running from multiple threads simultaneously. In addition, you should avoid drawing the entire contents of the overlay each time this method is called. Instead, always take the mapRect parameter into consideration and

avoid drawing content outside that rectangle.

117.35.7 mapPointForPoint(point as CGPointMBS) as MKMapPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the point on the map that corresponds to the specified point in the overlay renderer's drawing area.
Notes:

point: The point in the overlay's drawing area that you want to convert.
Returns the point on the two-dimensional map projection corresponding to the specified point.

117.35.8 mapRectForRect(Rect as CGRectMBS) as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the rectangle on the map that corresponds to the specified rectangle in the overlay renderer's drawing area.
Notes:

rect: The rectangle in the overlay's drawing area that you want to convert.

Returns the rectangle on the two-dimensional map projection corresponding to the specified rectangle.

117.35.9 pointForMapPoint(mapRect as MKMapPointMBS) as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the point in the overlay renderer's drawing area corresponding to the specified point on the map.
Notes:

mapPoint: A point on the two-dimensional map projection. If you have a coordinate value (latitude and longitude), you can use the MKMapPointForCoordinate function to convert that coordinate to a map point.

Returns the point in the overlay's drawing area that corresponds to the map point.

117.35.10 RectForMapRect(mapRect as MKMapRectMBS) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the rectangle in the overlay renderer's drawing area corresponding to the specified rectangle on the map.
Notes:

mapRect: A rectangle on the two-dimensional map projection.

Returns the rectangle in the overlay's drawing area that corresponds to the map rectangle.

117.35.11 RoadWidthAtZoomScale(zoomScale as double) as double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the width (in screen points) of roads on a map at the specified zoom level.
Notes:

zoomScale: The scale factor currently applied to the map view.

Returns the width of roads, measured in screen points. You can use the returned value to set the width of lines in drawing code that traces the path of a road.

117.35.12 setNeedsDisplay

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the entire contents of the overlay for all zoom scales.
Notes: This method causes the entire contents of the overlay to be redrawn during the next update cycle. This method invalidates the overlay regardless of the current zoom scale associated with the map.

117.35.13 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the specified portion of the overlay at all zoom scales.
Notes:

mapRect: The portion of the overlay to update. Specify this value using a map coordinates.

Marking a rectangle as invalid causes that portion of the overlay to be redrawn during the next update cycle. This method invalidates the overlay regardless of the current zoom scale associated with the map.
See also:

- 117.35.14 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS, zoomScale as double)

117.35.14 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS, zoomScale as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Invalidates the specified portion of the overlay but only at the specified zoom scale.
Notes:

mapRect: The portion of the overlay to update. Specify this value using a map coordinates.
zoomScale: The zoom scale for which you want to invalidate the overlay.

Marking a rectangle as invalid causes that portion of the overlay to be redrawn during the next update cycle. This method invalidates the overlay only at the specified zoom scale.
See also:

- 117.35.13 setNeedsDisplayInMapRect(mapRect as MKMapRectMBS) 19098

117.35.15 Properties

117.35.16 alpha as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The amount of transparency to apply to the overlay.
Notes:

The value in this property can be in the range 0.0 to 1.0, where 0.0 represents total transparency and 1.0 represents total opacity. The default value of this property is 1.0.
(Read and Write property)

117.35.17 contentScaleFactor as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor used to draw the overlay's content.
Notes:

The scale factor determines how content is mapped from the logical coordinate space (measured in points) to the device coordinate space (measured in pixels). This value is typically either 1.0 or 2.0. Higher scale factors indicate that each point is represented by more than one pixel on the screen. For example, if the scale factor is 2.0 and the drawing rectangle size is 50 x 50 points, the size of the underlying area is 100 x 100 pixels.
When drawing the content for your overlays, you can use this value to determine how best to render your content.
(Read only property)

117.35.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.35.19 overlay as MKOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overlay object containing the data for drawing.
Notes:

The overlay object contains the coordinate at which to draw the overlay and other information that your app provides.
(Read only property)

117.36 class MKPinAnnotationViewMBS

117.36.1 class MKPinAnnotationViewMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPinAnnotationView class provides a concrete annotation view that displays a pin icon like the ones found in the Maps application.
Notes:

Using this class, you can configure the type of pin to drop and whether you want the pin to be animated into place.
Subclass of the MKAnnotationViewMBS class.

117.36.4 Methods

117.36.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 117.36.6 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = ””, EnableEvents as Boolean = false) 19101

117.36.6 Constructor(annotation as MKAnnotationMBS, reuseIdentifier as string = ””, EnableEvents as Boolean = false)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 117.36.5 Constructor 19101

117.36.7 greenPinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for green pins.
Notes: The system uses green pins to indicate starting points on the map.

117.36.8 purplePinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for purple pins.
Notes: The system uses purple pins to indicate user-specified points on the map.

117.36.9 redPinColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the standard color for red pins.
Notes: The system uses red pins to indicate destination points on the map.

117.36.10 Properties

117.36.11 animatesDrop as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to animate the dropping of the pin.
Notes: (Read and Write property)

117.36.12 pinColor as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the pin head.
Notes:

The Maps application uses different pin colors for different types of map annotations. Your own map annotation should use the available pin colors in the same way.
Deprecated in favor of pinTintColor.
(Read and Write property)

117.36.13 pinTintColor as NSColorMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The color of the pin head.
Notes:

Use this property to specify custom a custom color for your pin. You can also specify one of the standard pin colors.
(Read and Write property)

117.36.14 Constants

117.36.15 ColorBlue = 2

MBS MacFrameworks Plugin, Plugin Version: 14.1.

Function: One of the color constants.
Notes: The head of the pin is blue. Purple pins indicate user-specified points on the map.

117.36.16 ColorGreen = 1

MBS MacFrameworks Plugin, Plugin Version: 14.1.

Function: One of the color constants.
Notes: The head of the pin is green. Green pins indicate starting points on the map.

117.36.17 ColorRed = 0

MBS MacFrameworks Plugin, Plugin Version: 14.1.

Function: One of the color constants.
Notes: The head of the pin is red. Red pins indicate destination points on the map.

117.37 class MKPlacemarkMBS

117.37.1 class MKPlacemarkMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A MKPlacemark object stores placemark data for a given latitude and longitude.
Notes:

Placemark data includes information such as the country, state, city, and street address associated with the specified coordinate. Placemark objects are typically generated by a MKReverseGeocoderMBS object, although you can also create them explicitly yourself.

A placemark is also an annotation and conforms to the MKAnnotationMBS interface, whose properties and methods include the placemark coordinate and other information. Because they are annotations, you can add them directly to the map view.
Subclass of the CLPlacemarkMBS class.

Interfaces: MKAnnotationMBS

117.37.4 Methods

117.37.5 Constructor(coordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate only.
See also:

- 117.37.6 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 19105
- 117.37.7 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 19105

117.37.6 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary)

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate and Address Book dictionary.
Notes: You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.
See also:

- 117.37.5 Constructor(coordinate as CLLocationCoordinate2DMBS) 19104
- 117.37.7 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant) 19105

117.37.7 Constructor(coordinate as CLLocationCoordinate2DMBS, postalAddress as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a placemark object using the specified coordinate and CNPostalAddressMBS object.
Notes: You can create placemark objects manually for entities for which you already have address information, such as contacts in the Address Book. Creating a placemark object explicitly avoids the need to query the reverse geocoder object for the same information.
See also:

- 117.37.5 Constructor(coordinate as CLLocationCoordinate2DMBS) 19104
- 117.37.6 Constructor(coordinate as CLLocationCoordinate2DMBS, addressDictionary as dictionary) 19105

117.37.8 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.37.9 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.37.10 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.

117.37.11 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.37.12 Properties

117.37.13 countryCode as String

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The abbreviated country name.
Notes:

This string is the standard abbreviation used to refer to the country. For example, if the placemark location was Apple's headquarters, the value for this property would be the string "US".
(Read only property)

117.38 class MKPointAnnotationMBS

117.38.1 class MKPointAnnotationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPointAnnotation class defines a concrete annotation object located at a specified point.
Example:

```
dim mapview as MKMapViewMBS // your map view

// new pin
dim pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

Notes:

You can use this class, rather than define your own, in situations where all you want to do is associate a point on the map with a title.
Subclass of the MKShapeMBS class.

117.38.4 Methods

117.38.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Example:

```
dim mapview as MKMapViewMBS // your map view

// new pin
dim pin as new MKPointAnnotationMBS

pin.coordinate = mapView.centerCoordinate
pin.title = "Hello"

// show on map
mapView.addAnnotation pin
```

117.38.6 Properties

117.38.7 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate point of the annotation, specified as a latitude and longitude.
Notes: (Read and Write property)

117.39 class MKPolygonMBS

117.39.1 class MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPolygon class represents a shape consisting of one or more points that define a closed polygon.
Notes:

The points are connected end-to-end in the order they are provided. The first and last points are connected to each other to create the closed shape.

When creating a polygon, you can mask out portions of the polygon by specifying one or more interior polygons. For the polygons you specify, this class uses the even-odd fill rule to determine the final occupied area. When applied to overlapping polygons, this rule can cause specific regions to be masked out (and thereby removed) from the total occupied area. For more information about how fill rules are applied to paths, see "Paths" in Quartz 2D Programming Guide.
Subclass of the MKMultiPointMBS class.

117.39.2 Blog Entries

- MapKit Framework for Xojo

Interfaces: MKOverlayMBS

117.39.3 Methods

117.39.4 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes:

This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

117.39.5 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes:

true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

117.39.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 117.39.7 Constructor(coords() as CLLocationCoordinate2DMBS) 19110
- 117.39.8 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) 19111
- 117.39.9 Constructor(points() as MKMapPointMBS) 19111
- 117.39.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 19112

117.39.7 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes:

coords: The array of coordinates defining the shape.
Returns a new polygon object.
See also:

- 117.39.6 Constructor 19110

- 117.39.8 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) 19111
- 117.39.9 Constructor(points() as MKMapPointMBS) 19111
- 117.39.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 19112

117.39.8 Constructor(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes:

points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver's polygon.
See also:

- 117.39.6 Constructor 19110
- 117.39.7 Constructor(coords() as CLLocationCoordinate2DMBS) 19110

- 117.39.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 19112

117.39.9 Constructor(points() as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
See also:

- 117.39.6 Constructor 19110
- 117.39.7 Constructor(coords() as CLLocationCoordinate2DMBS) 19110

- 117.39.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) 19112

117.39.10 Constructor(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes:

points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver's polygon.
See also:

- 117.39.6 Constructor 19110
- 117.39.7 Constructor(coords() as CLLocationCoordinate2DMBS) 19110

- 117.39.9 Constructor(points() as MKMapPointMBS) 19111

117.39.11 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.39.12 interiorPolygons as MKPolygonMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The array of polygons nested inside the receiver.
Notes: When a polygon is rendered on screen, the area occupied by any interior polygons is masked out and not considered part of the polygon.

117.39.13 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

117.39.14 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates.
Notes:

coords: The array of coordinates defining the shape.
Returns a new polygon object.
See also:

- 117.39.15 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS 19113

117.39.15 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of coordinates and interior polygons.
Notes:

coords: The array of coordinates defining the shape.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver's polygon.

Returns a new polygon object.
See also:

- 117.39.14 polygonWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolygonMBS 19113

117.39.16 polygonWithPoints(points() as MKMapPointMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.
See also:

- 117.39.17 polygonWithPoints(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS 19114

117.39.17 polygonWithPoints(points() as MKMapPointMBS, InteriorPolygons() as MKPolygonMBS) as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolygon object from the specified set of map points and interior polygons.
Notes:

points: The array of map points defining the shape. The data in this array is copied to the new object.
interiorPolygons: An array of MKPolygon objects that define one or more cutout regions for the receiver's polygon.
See also:

- 117.39.16 polygonWithPoints(points() as MKMapPointMBS) as MKPolygonMBS 19113

117.40 class MKPolygonRendererMBS

117.40.1 class MKPolygonRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for a polygon overlay.
Notes:

This renderer fills and strokes the polygon represented by first filling the shape and then stroking its outline. You can change the color and other drawing attributes of the polygon by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.
Subclass of the MKOverlayPathRendererMBS class.

117.40.2 Blog Entries

- MapKit Framework for Xojo

117.40.3 Methods

117.40.4 Constructor(polygon as MKPolygonMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new renderer that handles drawing for the specified polygon overlay object.
Notes: polygon: The polygon overlay containing information about the area to be drawn. This object must have at least three points defining the polygon to draw. This parameter must not be nil.

117.40.5 Properties

117.40.6 polygon as MKPolygonMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The polygon object that contains the information used to draw the overlay's contents.
Notes: (Read only property)

117.41 class MKPolylineMBS

117.41.1 class MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKPolyline class represents a shape consisting of one or more points that define connecting line segments.
Notes:

The points are connected end-to-end in the order they are provided. The first and last points are not connected to each other.
Subclass of the MKMultiPointMBS class.

117.41.2 Blog Entries

- MapKit Framework for Xojo

Interfaces: MKOverlayMBS

117.41.3 Methods

117.41.4 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes:

This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

117.41.5 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes:

true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.

117.41.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.
See also:

- 117.41.7 Constructor(coords() as CLLocationCoordinate2DMBS) 19117
- 117.41.8 Constructor(points() as MKMapPointMBS) 19117

117.41.7 Constructor(coords() as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of coordinates.
Notes:

coords: The array of coordinates defining the shape. The data in this array is copied to the new object.
Returns a new polyline object.
See also:

- 117.41.6 Constructor 19117
- 117.41.8 Constructor(points() as MKMapPointMBS) 19117

117.41.8 Constructor(points() as MKMapPointMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new

object.
See also:

- 117.41.6 Constructor 19117
- 117.41.7 Constructor(coords() as CLLocationCoordinate2DMBS) 19117

117.41.9 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.41.10 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

117.41.11 polylineWithCoordinates(coords() as CLLocationCoordinate2DMBS) as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of coordinates.
Notes:

coords: The array of coordinates defining the shape. The data in this array is copied to the new object.
Returns a new polyline object.

117.41.12 polylineWithPoints(points() as MKMapPointMBS) as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates and returns an MKPolyline object from the specified set of map points.
Notes: points: The array of map points defining the shape. The data in this array is copied to the new object.

117.42 class MKPolylineRendererMBS

117.42.1 class MKPolylineRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The visual representation for any polyline overlay object.
Notes:

This renderer strokes the line only; it does not fill it. You can change the color and other drawing attributes of the polyline by modifying the properties inherited from the parent class. You typically use this class as is and do not subclass it.
Subclass of the MKOverlayPathRendererMBS class.

117.42.2 Blog Entries

- MapKit Framework for Xojo

117.42.3 Methods

117.42.4 Constructor(polyline as MKPolylineMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a new overlay view using the specified polyline overlay object
Notes: polyline: The polyline overlay containing information about the area to be drawn. This object must have at least two points defining the line segment to draw. This parameter must not be nil.

117.42.5 Properties

117.42.6 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The polyline overlay object that contains the information used to draw the overlay.
Notes: (Read only property)

117.43 class MKRouteMBS

117.43.1 class MKRouteMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A single route between a requested start and end point.
Notes:

An MKRouteMBS object defines the geometry for the route—that is, it contains line segments associated with specific map coordinates. A route object may also include other information, such as the name of the route, its distance, and the expected travel time.

You do not create instances of this class directly. When you use an MKDirectionsMBS object to request directions from Apple, the returned MKDirectionsResponseMBS object contains the possible routes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.43.2 Blog Entries

- MapKit Framework for Xojo

117.43.3 Methods

117.43.4 advisoryNotices as String()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: An array of advisory notice strings for the route.
Notes: This property contains an array of strings. Each string is localized according to the user's language preferences. The strings contain additional information that is important for the user to know about the route. For example, a string might note that a portion of the route is closed during the winter or after big storms.

117.43.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.43.6 steps as MKRouteStepMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The array of steps that comprise the overall route.
Notes: The array contains one or more MKRouteStep objects representing distinct portions of the route. Each step corresponds to a single direction that must be followed along the route.

117.43.7 Properties

117.43.8 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The route distance in meters.
Notes:

This property reflects the distance that the user covers while traversing the path of the route. It is not a direct distance between the start and end points of the route.
(Read only property)

117.43.9 expectedTravelTime as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The expected travel time in seconds.
Notes:

This expected travel time reflects the time it takes to traverse the route under ideal conditions. The actual amount of time may vary based on conditions.
(Read only property)

117.43.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.43.11 name as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The name assigned to the route.
Notes:

The string in this property is localized according to the user's language preferences. You can display this string to the user from your app's user interface so that the user can distinguish one route from another. The string itself describes the route using one of the route's significant features. For example, a route that uses a major highway for a significant portion of the route might use that highway for its name.
(Read only property)

117.43.12 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detailed route geometry.
Notes:

The polyline object in this property reflects the complete path of the route, including all of its steps. You can use the polyline object as an overlay in a map view.
(Read only property)

117.43.13 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The overall route transport type.
Notes:

This property reflects the primary transport type used for the route. Individual steps of the route might use different transport types.
(Read only property)

117.43.14 Constants

117.43.15 TransportTypeAny = & h0FFFFFFF

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for any transportation option.

117.43.16 TransportTypeAutomobile = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for use while driving.

117.43.17 TransportTypeTransit = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for public transportation.

117.43.18 TransportTypeWalking = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for a pedestrian.

117.44 class MKRouteStepMBS

117.44.1 class MKRouteStepMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: One portion of an overall route.
Notes:

Each MKRouteStepMBS object corresponds to a single instruction that would need to be followed by the user when navigating between two points. For example, a step might involve following a single road until a turn is required.

You do not create instances of this class directly. An MKRouteMBS object contains the MKRouteStepMBS objects associated with a route. For more information about requesting directions, see MKDirectionsMBS. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.44.2 Blog Entries

- MapKit Framework for Xojo

117.44.3 Methods

117.44.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.44.5 Properties

117.44.6 distance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The step distance in meters.
Notes:

This property reflects the distance that the user covers while traversing the path of the step. It is not a direct distance between the start and end points of the step.
(Read only property)

117.44.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.44.8 instructions as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The written instructions for following the path represented by this step.
Notes:

The string in this property is localized according to the user's language preferences. You can present this string to the user from your app's interface.
(Read only property)

117.44.9 notice as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Additional notices that apply to the step.
Notes:

Notices may include legal information or warning notices that apply to the step. For example, if the step crosses railroad tracks, it might contain a notice that warns the user not to cross the tracks when the lights are flashing.
(Read only property)

117.44.10 polyline as MKPolylineMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The detailed step geometry.
Notes:

The polyline object in this property contains the geometry for this step. You can use the polyline object as an overlay in a map view.
(Read only property)

117.44.11 transportType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The transport type of the step.
Notes:

This property reflects the transport type employed by the step and may differ from the transport type of the overall route.
(Read only property)

117.44.12 Constants

117.44.13 TransportTypeAny = & h0FFFFFFF

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for any transportation option.

117.44.14 TransportTypeAutomobile = 1

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for use while driving.

117.44.15 TransportTypeTransit = 3

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for public transportation.

117.44.16 TransportTypeWalking = 2

MBS MacFrameworks Plugin, Plugin Version: 19.0.

Function: One of the constants that specify the type of conveyance to be used.
Notes: Directions suitable for a pedestrian.

117.45 class MKShapeMBS

117.45.1 class MKShapeMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKShape class is an abstract class that defines the basic properties for all shape-based annotation objects.
Notes:

This class must be subclassed and cannot be used as is. Subclasses are responsible for defining the geometry of the shape and providing an appropriate value for the coordinate property inherited from the MKAnnotationMBS interface.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

117.45.2 Blog Entries

- MapKit Framework for Xojo

Interfaces: MKAnnotationMBS

117.45.3 Methods

117.45.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.45.5 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.45.6 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.45.7 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 117.45.11 subtitle as String 19128

117.45.8 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 117.45.12 title as String 19129

117.45.9 Properties

117.45.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Internal object reference.
Notes: (Read and Write property)

117.45.11 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes:

Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 117.45.7 SubTitle as String 19128

117.45.12 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes:

Part of the MKAnnotationMBS interface.
(Read and Write property)
See also:

- 117.45.8 Title as String 19128

117.46 class MKTileOverlayMBS

117.46.1 class MKTileOverlayMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: MKTileOverlay represents a data source for raster image tiles in the spherical mercator projection (EPSG:3857).

117.46.2 Blog Entries

- MapKit Framework for Xojo

Interfaces: MKOverlayMBS, MKAnnotationMBS

117.46.3 Methods

117.46.4 boundingMapRect as MKMapRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The projected rectangle that encompasses the overlay.
Notes:

This property contains the smallest rectangle that completely encompasses the overlay. Implementers of this interface must set this area when implementing their overlay class, and after setting it, you must not change it. The rectangle should be specified using projected coordinates—that is, coordinates obtained by projecting the globe onto a two-dimensional surface.

Part of the MKOverlayMBS interface.

117.46.5 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean indicating whether the overlay content replaces the underlying map content.
Notes:

true if the map view can skip the loading and drawing of the underlying map tiles or false if the map tiles should still be drawn.

The map view uses the return value of this method as a hint to determine whether it should load and render its tiles. If your overlay covers its designated region entirely with opaque content, and effectively replaces

the content of underlying map tiles, implement this method and return true. Doing so alleviates the need for the map to render its tiles.
If you do not implement this method, or if you return false from it, the map view continues to load and render its tiles.

Part of MKOverlayMBS interface.
See also:

- 117.46.15 canReplaceMapContent as Boolean 19133

117.46.6 Constructor(URL as string)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a tile overlay object using the specified tile-access template.
Notes:

URLTemplate: A string that can be used to build a URL to access your tile images. The string you specify can point to a local file or to an image on a remote server. To facilitate retrieving multiple tiles using the string, use the placeholder values { x } , { y } , { z } , and { scale } as stand-ins for the x and y tile indexes, the zoom level, and the resolution of the tile image. If this parameter is nil, you must provide custom implementations for the tile-loading methods of this class.

Returns an initialized tile overlay object.

The default tile overlay object uses the template string you specify to request tiles. This template string should incorporate the { x } , { y } , { z } , and { scale } placeholder strings to facilitate the creation of a URL for requesting the appropriate tile. For example, if you have a server that vends tiles when you provide a URL of the form http://myserver/tile?x=0& y=0& z=0& scale=1.0, you would specify a template string of http://myserver/tile?x= { x } & y= { y } & z= { z } & scale= { scale } . The tile overlay object substitutes actual index values in for your template's placeholders before requesting the actual tile.

117.46.7 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 117.46.16 coordinate as CLLocationCoordinate2DMBS 19134

117.46.8 intersectsMapRect(mapRect as MKMapRectMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether this overlay intersects with the given map rectangle.
Notes: Part of the MKOverlayMBS interface.

117.46.9 loadTileAtPath(Path as MKTileOverlayPathMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Loads the specified tile asynchronously.
Notes:

Path: The path structure that identifies the specific tile you want. This structure incorporates the tile's X-Y coordinate at a given zoom level and scale factor.

The default implementation of this method uses the URLForTilePath method to retrieve the URL for the specified tile and then loads that tile into memory asynchronously using an NSURLConnectionMBS object. The specified tile may be located either on the local file system or on a remote server. Subclasses may override this method and implement their own custom tile-loading behavior.

When a tile overlay renderer (that is, an instance of MKTileOverlayRendererMBS) needs to display tiles, it uses this method to request the data for each tile.

117.46.10 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.46.11 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.
See also:

- 117.46.22 subtitle as String 19135

117.46.12 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.
See also:

- 117.46.24 title as String 19136

117.46.13 URLForTilePath(Path as MKTileOverlayPathMBS) as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the URL to use to access the specified tile.
Notes:

path: The path structure that identifies the specific tile you want. This structure incorporates the tile's X-Y coordinate at a given zoom level and scale factor.

Returns the URL to use to retrieve the tile.

The default implementation of this method uses the template string you provided at initialization time to build a URL to the specified tile image. Subclasses can override this method and use a different scheme to provide URLs for tiles. Tiles can be located either on a local file system or on a remote server.

117.46.14 Properties

117.46.15 canReplaceMapContent as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the tile content is fully opaque.
Notes:

If the tile content you provide can cover the entire drawing area with opaque content, set this property to true. Doing so serves as a hint to the map view that it does not need to draw any additional content underneath your tiles. Set this property to false if your tiles contain any transparency.
The default value for this property is false.
(Read and Write property)
See also:

- 117.46.5 canReplaceMapContent as Boolean 19130

117.46.16 coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes:

Part of the MKAnnotationMBS interface.
(Read only property)
See also:

- 117.46.7 Coordinate as CLLocationCoordinate2DMBS 19131

117.46.17 geometryFlipped as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates the orientation of tile indexes along the y axis.
Notes:

When set to NO, tile indexes start in the upper-left corner of the map and proceed down and to the right. Thus, the tile at (0, 0) is in the upper-left corner of the map, the tile at (1, 0) is to its immediate right and the tile at (0, 1) is immediately below it. Setting this property to true causes the map to start indexes at the lower-left corner of the map and proceed up and to the right.
The default value of this property is false.
(Read and Write property)

117.46.18 latitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The latitude of the coordinates.
Notes: (Read only property)

117.46.19 longitude as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The longitude of the coordinates.
Notes: (Read only property)

117.46.20 maximumZ as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum zoom level supported by the tiles of this overlay object.
Notes:

If you use different overlay objects to represent different tiles at different zoom levels, use this property to specify the maximum zoom level supported by this overlay's tiles. At zoom level 0, tiles cover the entire world map; at zoom level 1, tiles cover 1/4 of the world; at zoom level 2, tiles cover 1/16 of the world, and so on. The map never tries to load tiles for a zoom level greater than the value specified by this property.
The default value of this property is 21. Setting the value of this property to a number greater than the default does not guarantee the use of those extra zoom levels.
(Read and Write property)

117.46.21 minimumZ as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum zoom level supported by the tiles of this overlay object.
Notes:

If you use different overlay objects to represent different tiles at different zoom levels, use this property to specify the minimum zoom level supported by this overlay's tiles. At zoom level 0, tiles cover the entire world map; at zoom level 1, tiles cover 1/4 of the world; at zoom level 2, tiles cover 1/16 of the world, and so on. The map never tries to load tiles for a zoom level less than the value specified by this property.

The default value of this property is 0.
(Read and Write property)

117.46.22 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes:

Part of the MKOverlayMBS interface.
(Read only property)
See also:

- 117.46.11 SubTitle as String 19132

117.46.23 TileSize as CGSizeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The size (in pixels) of your tile images.
Notes:

On Retina displays, the images are rendered pixel for pixel and are not scaled. This means that if the tile size is 256 x 256 pixels and the scale factor is 2.0, the image would be rendered as if it were 128 x 128 points in size. This behavior causes the tile to appear smaller but preserves the original image data.
The default tile size is set to 256 x 256 pixels.
(Read and Write property)

117.46.24 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes:

Part of the MKAnnotationMBS interface.
(Read only property)
See also:

- 117.46.12 Title as String 19133

117.46.25 URLTemplate as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The template for generating tile image URLs.
Notes:

You specify this string at initialization time.
(Read only property)

117.46.26 Events

117.46.27 TileLoaded(path as MKTileOverlayPathMBS, tileData as MemoryBlock, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: Called by loadTileAtPath when loading finished.
Notes:

The tileData parameter contains the raw data loaded from the corresponding image file. You can use this data to initialize an image object. If an error occurred, this parameter is nil.

The error parameter contains an error object if there was a problem loading the tile image. If no errors occurred, this parameter is nil.

117.47 class MKTileOverlayPathMBS

117.47.1 class MKTileOverlayPathMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Use this class to specify the index values for a single tile.

117.47.2 Blog Entries

- MapKit Framework for Xojo

117.47.3 Methods

117.47.4 Constructor(other as MKTileOverlayPathMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The copy constructor.
See also:

- 117.47.5 Constructor(x as Integer, y as Integer, z as Integer, ContentScaleFactor as double) 19138

117.47.5 Constructor(x as Integer, y as Integer, z as Integer, ContentScaleFactor as double)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 117.47.4 Constructor(other as MKTileOverlayPathMBS) 19138

117.47.6 Properties

117.47.7 ContentScaleFactor as Double

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The screen scale factor for which the tile is intended.
Notes: (Read and Write property)

117.47.8 X as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the tile along the x axis of the map.
Notes: (Read and Write property)

117.47.9 Y as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The index of the tile along the y axis of the map.
Notes: (Read and Write property)

117.47.10 Z as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The zoom level number for the tile.
Notes: (Read and Write property)

117.48 class MKTileOverlayRendererMBS

117.48.1 class MKTileOverlayRendererMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The renderer for a tile overlay that handles the drawing of bitmap images on the map surface.
Notes:

You create instances of this class when tile overlays become visible on the map view. A renderer works closely with its associated tile overlay object to coordinate the loading and drawing of tiles at appropriate times.
For information about how to specify the tiles to display on the map, see MKTileOverlayMBS.
Subclass of the MKOverlayRendererMBS class.

117.48.2 Blog Entries

- MapKit Framework for Xojo

117.48.3 Methods

117.48.4 Constructor(TileOverlay as MKTileOverlayMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes and returns a tile renderer with the specified overlay object.
Notes: overlay: The tile overlay object whose contents you want to draw.

117.48.5 reloadData

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Forces tiles to be reloaded and displayed.
Notes: Use this method to remove the overlay's existing tile images and reload them from the original source. This method automatically causes the renderer to redraw the new tiles as soon as they are loaded into memory.

117.49 class MKUserLocationMBS

117.49.1 class MKUserLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The MKUserLocation class defines a specific type of annotation that identifies the user's current location.
Notes:

You do not create instances of this class directly. Instead, you retrieve an existing MKUserLocation object from the userLocation property of the map view displayed in your application.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

Interfaces: MKAnnotationMBS

117.49.4 Methods

117.49.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

117.49.6 Coordinate as CLLocationCoordinate2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The coordinate of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.49.7 SetCoordinate(newCoordinate as CLLocationCoordinate2DMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: Set the coordinate of the annotation.
Notes:

Part of the MKAnnotationMBS interface.
Do not use.

117.49.8 SubTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The subtitle of the item.
Notes: Part of the MKOverlayMBS interface.

117.49.9 Title as String

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the annotation.
Notes: Part of the MKAnnotationMBS interface.

117.49.10 Properties

117.49.11 heading as CLHeadingMBS

MBS MacFrameworks Plugin, Plugin Version: 19.0, Platform: macOS, Targets: Desktop & iOS.

Function: The heading for the user location.
Notes:

Returns nil if not in MKUserTrackingModeFollowWithHeading is used.
(Read only property)

117.49.12 location as CLLocationMBS

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: The current location of the device.
Notes:

This property contains nil if the map view is not currently showing the user location or if the user's location has not yet been determined.
(Read only property)

117.49.13 updating as Boolean

MBS MacFrameworks Plugin, Plugin Version: 14.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the user's location is currently being updated.
Notes: (Read only property)

Chapter 118

MarkDown

118.1 class MarkdownDocumentMBS

118.1.1 class MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class ot process markdown text.

118.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1

118.1.3 Methods

118.1.4 Compile(flags as Integer = 35799040) as boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compiles the markdown code.

118.1.5 Constructor(data as string, flags as Integer = 35799040)

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new document with the content of the file.
Notes:

Text should have EndOfLine.Unix as newline character.
Text must be in UTF-8 encoding to work best.
See also:

- 118.1.6 Constructor(file as folderitem, flags as Integer = 35799040) 19146

118.1.6 Constructor(file as folderitem, flags as Integer = 35799040)

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new document with the content of the file.
Notes:

Text should have EndOfLine.Unix as newline character.
Text must be in UTF-8 encoding to work best.
See also:

- 118.1.5 Constructor(data as string, flags as Integer = 35799040) 19145

118.1.7 CSS as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates CSS for the html code.

118.1.8 Document as string

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates HTML document.
Notes: Creates HTML if needed.

118.1.9 Footnotes as MarkdownFootnoteMBS()

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of foot notes.

118.1.10 GenerateCSS(File as folderitem) as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a css file.
Notes: Returns number of bytes written. Or -1 on any error.

118.1.11 GenerateHTML(File as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generates a html file.
Notes: Returns true on success and false on failure.

118.1.12 Properties

118.1.13 Author as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The author line.
Notes:

Can be nil if not used.
(Read only property)

118.1.14 Code as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Intermediate code generated by compile.
Notes: (Read only property)

118.1.15 Compiled as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether document is compiled already.
Notes: (Read only property)

118.1.16 Date as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The date line.
Notes:

Can be nil if not used.
(Read only property)

118.1.17 ExtraFootnotePrefix as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The extra footnote prefix.
Notes: (Read and Write property)

118.1.18 Handle as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read only property)

118.1.19 HasHTML as Boolean

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether html is available.
Notes:

Set to true when html is generated.
(Read only property)

118.1.20 Title as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title line.
Notes:

Can be nil if not used.
(Read only property)

118.1.21 URLBase as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The URL base.
Notes: (Read and Write property)

118.1.22 Constants

118.1.23 kAutoLink = & h4000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: make http://foo.com link even without <>s

118.1.24 kCDATA = & h80

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: generate code for xml ! [CDATA [...]]

118.1.25 kExtraFootnote = & h200000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Enable markdown extra-style footnotes.

118.1.26 kInputMask = & h00030000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.

118.1.27 kIsLabel = & h08000000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.

118.1.28 kNoAlphaList = & h80000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Forbid alphabetic lists.

118.1.29 kNoDivQuote = & h40000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Forbid >% class% blocks.

118.1.30 kNoDList = & h100000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Forbid definition lists.

118.1.31 kNoExt = & h40

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Don't allow pseudo-protocols.

118.1.32 kNoHeader = & h10000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Don't process header blocks.

118.1.33 kNoHTML = 8

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Don't allow raw html through AT ALL

118.1.34 kNoImage = 2

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Don't do image processing, block <img>.

118.1.35 kNoLinks = 1

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Don't do link processing, block <a>tags.

118.1.36 kNoPants = 4

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: don't run smartypants.

118.1.37 kNoRelaxed = & h200

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: emphasis happens /everywhere/

118.1.38 kNoStrikethrough = & h800

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Forbid strikethrough.

118.1.39 kNoSuperscript = & h100

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: no A^B

118.1.40 kNoTables = & h400

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Disallow tables.

118.1.41 kSafeLink = & h8000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Paranoid check for link protocol.

118.1.42 kStrict = & h10

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Disable SUPERSCRIPT, RELAXED_EMPHASIS.

118.1.43 kTabStop = & h20000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Expand tabs to 4 spaces.

118.1.44 kTagText = & h20

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: process text inside an html tag; no * , no <bold>, no html or [ ] expansion

118.1.45 kTOC = & h1000

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.
Notes: Do table-of-contents processing.

118.1.46 kUserFlags = & h0FFFFFFF

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag values.

118.2 class MarkdownFootnoteMBS

118.2.1 class MarkdownFootnoteMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a foot note.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

118.2.2 Methods

118.2.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

118.2.4 Properties

118.2.5 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

118.2.6 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags.
Notes:

Can be zero or a combination of kFlagExtraBookmark and kFlagReferenced.
(Read only property)

118.2.7 Height as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dimensions for image link.
Notes: (Read only property)

118.2.8 Link as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: What this footnote points to.
Notes: (Read only property)

118.2.9 RefNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference number.
Notes: (Read only property)

118.2.10 Tag as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag for the reference link.
Notes: (Read only property)

118.2.11 Title as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The title of the footnode.
Notes: (Read only property)

118.2.12 Width as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The dimensions for image link.
Notes: (Read only property)

118.2.13 Constants

118.2.14 kFlagExtraBookmark = 1

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the footnode flags.

118.2.15 kFlagReferenced = 2

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the footnode flags.
Notes: Set if this footnote is referenced.

118.3 class MarkdownLineMBS

118.3.1 class MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a line in the markdown text.
Notes:

Each input line is read into a Line, which contains the line, the offset of the first non-space character [this assumes that all tabs will be expanded to spaces!] , and a pointer to the next line.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

118.3.2 Methods

118.3.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

118.3.4 Properties

118.3.5 Count as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The kind of this line.
Notes:

See kKind* constants.
(Read only property)

118.3.6 DLE as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The leading indent on the line.
Notes: (Read only property)

118.3.7 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

118.3.8 Flags as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Special attributes for this line.
Notes:

Can be combination of kFlag* constants.
(Read only property)

118.3.9 Kind as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The line type.
Notes:

See kKind* constants.
(Read only property)

118.3.10 NextLine as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next line.
Notes: (Read only property)

118.3.11 Text as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text of the line.
Notes: (Read only property)

118.3.12 Constants

118.3.13 kFlagChecked = 2

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag constants.
Notes: The line was already processed.

118.3.14 kFlagPipeChar = 1

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the flag constants.
Notes: line contains a |

118.3.15 kKindCode = 1

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the kind values.
Notes: Code

118.3.16 kKindDash = 3

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the kind values.
Notes: Dash line

118.3.17 kKindEqual = 5

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the kind values.
Notes: Equal line

118.3.18 kKindHR = 2

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the kind values.
Notes: HR line

118.3.19 kKindText = 0

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the kind values.
Notes: Text line

118.3.20 kKindTilde = 4

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the kind values.
Notes: Tilde line

118.4 class MarkdownParagraphMBS

118.4.1 class MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class ofr a paragraph.
Notes:

A paragraph is a collection of Lines, with links to the next paragraph and (if it's a QUOTE, UL, or OL) to the reparsed contents of this paragraph.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

118.4.2 Methods

118.4.3 Constructor

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

118.4.4 Properties

118.4.5 Align as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The paragraph alignment.
Notes:

Can be kAlignPara, kAlignImplicit or kAlignCenter.
(Read only property)

118.4.6 Document as MarkdownDocumentMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The back reference to the markdown document.
Notes: (Read only property)

118.4.7 Down as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Recompiled contents of this paragraph.
Notes: (Read only property)

118.4.8 hNumber as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The header level for HDR.
Notes: (Read only property)

118.4.9 Ident as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: ID tag for quote.
Notes: (Read only property)

118.4.10 Lang as String

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: lang attribute for CODE
Notes: (Read only property)

118.4.11 NextParagraph as MarkdownParagraphMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next paragraph.
Notes: (Read only property)

118.4.12 Text as MarkdownLineMBS

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: All the text in this paragraph.
Notes: (Read only property)

118.4.13 Typ as Integer

MBS Tools Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of paragraph.
Notes:

See kType* constants.
(Read only property)

118.4.14 Constants

118.4.15 kAlignCenter = 2

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the alignment constants.
Notes: Center

118.4.16 kAlignImplicit = 0

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the alignment constants.
Notes: Implicit alignment

118.4.17 kAlignPara = 1

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the alignment constants.
Notes: Paragraph

118.4.18 kTypeAL = 9

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: AL

118.4.19 kTypeCode = 1

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Code

118.4.20 kTypeDL = 6

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: DL

118.4.21 kTypeHDR = 11

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: HDR

118.4.22 kTypeHR = 12

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: HR

118.4.23 kTypeHTML = 4

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: HTML

118.4.24 kTypeListItem = 10

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: ListItem

118.4.25 kTypeMarkup = 3

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Markup

118.4.26 kTypeOL = 8

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: OL

118.4.27 kTypeQuote = 2

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Quote

118.4.28 kTypeSource = 14

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Source

118.4.29 kTypeStyle = 5

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Style

118.4.30 kTypeTable = 13

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Table

118.4.31 kTypeUL = 7

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: UL

118.4.32 kTypeWhitespace = 0

MBS Tools Plugin, Plugin Version: 15.1.

Function: One of the type codes.
Notes: Whitespace

Chapter 119

Math

119.1 class BigNumberErrorExceptionMBS

119.1.1 class BigNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception class for big number math.
Example:

```
dim b as new BigNumberMBS(5)
dim c as BigNumberMBS = BigNumberMBS.Zero

// raises exception due to division by zero
dim x as BigNumberMBS = b/c
```

Notes:

Raised when operations fail due to division by zero, invalid numbers or overflow/underflow.
Subclass of the RuntimeException class.

119.1.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr8
- Big numbers for Xojo

119.1.3 Xojo Developer Magazine

- 17.6, page 65: Xojo in Cologne, A Report from the MBS Conference in Germany by Dana Brown

119.2 class BigNumberMBS

119.2.1 class BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a big number.
Notes:

This is floating point number with 320 bits, precise for over 100 digits before the dot.
So if you want to store currency or other values where rounding should not happen, better store values multiplied, e.g. in cents.

Compared to normal double values, you have 5 times the bits.
And we check for math errors and raise exceptions if something goes wrong.

See LargeNumberMBS for a 4128 bit integer number, about 1200 digits in length.

119.2.4 Methods

119.2.5 Abs as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries absolute value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(-123)
dim z as BigNumberMBS = o.Abs

MsgBox z.StringValue
```

Notes: Removes sign.

119.2.6 Add(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
dim x as new BigNumberMBS(2)
dim d as new BigNumberMBS(3)
dim p as BigNumberMBS = x.Add(d)

MsgBox p.StringValue // shows 5
```

119.2.7 BitAnd(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise AND operation.
Example:

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(16)
dim r as BigNumberMBS = x.BitAnd(y)

MsgBox r.StringValue
```

119.2.8 BitOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise or operation.
Example:

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(16)
dim r as BigNumberMBS = x.BitOr(y)

MsgBox r.StringValue
```

119.2.9 BitXOr(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates bitwise xor operation.
Example:

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(16)
dim r as BigNumberMBS = x.BitXOr(y)

MsgBox r.StringValue
```

119.2.10 Constructor

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with zero value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS
MsgBox o.StringValue
```

- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.11 Constructor(other as BigNumberMBS)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with other value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
dim c as BigNumberMBS = new BigNumberMBS(o)

MsgBox c.StringValue
```

- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.12 Constructor(value as Currency)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number object with a currency object.
Example:

```
dim v as Currency = 123.456
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 119.2.17 Constructor(value as String) 19176
- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.13 Constructor(value as Double)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with double value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)#
```

- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.14 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit integer.
Example:

```
dim v as Int32 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.15 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 64-bit integer.
Example:

```
dim v as Int64 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.16 Constructor(value as Single)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with a 32-bit floating point number.
Example:

```
dim v as Single = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 119.2.13 Constructor(value as Double) 19173
- 119.2.14 Constructor(value as Int32) 19174
- 119.2.15 Constructor(value as Int64) 19174

- 119.2.17 Constructor(value as String) 19176
- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.17 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initialize the number with string value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS("123.456")
MsgBox o.StringValue
```

- 119.2.13 Constructor(value as Double) 19173
- 119.2.14 Constructor(value as Int32) 19174
- 119.2.15 Constructor(value as Int64) 19174
- 119.2.16 Constructor(value as Single) 19175
- 119.2.18 Constructor(value as UInt32) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.18 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
dim v as UInt32 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

- 119.2.16 Constructor(value as Single) 19175
- 119.2.17 Constructor(value as String) 19176
- 119.2.19 Constructor(value as UInt64) 19177

119.2.19 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with an unsigned 32-bit integer.
Example:

```
dim v as UInt64 = 123
dim b as new BigNumberMBS(v)
MsgBox b.StringValue
```

See also:

- 119.2.10 Constructor 19171

- 119.2.12 Constructor(value as Currency) 19173
- 119.2.13 Constructor(value as Double) 19173
- 119.2.14 Constructor(value as Int32) 19174
- 119.2.15 Constructor(value as Int64) 19174
- 119.2.16 Constructor(value as Single) 19175
- 119.2.17 Constructor(value as String) 19176
- 119.2.18 Constructor(value as UInt32) 19176

119.2.20 Divide(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides the number.
Example:

```
dim x as new BigNumberMBS(8)
dim d as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Divide(d)

MsgBox p.StringValue // shows 4
```

119.2.21 E as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.e
MsgBox b.StringValue
```

119.2.22 Equals(other as BigNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if two numbers are the same.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(123)
dim z as BigNumberMBS = new BigNumberMBS(123)

if o.Equals(z) then
MsgBox "equal"
else
Break // error
end if
```

Notes: Returns true if equal.

119.2.23 Exp(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates e^value.
Example:

```
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = BigNumberMBS.Exp(x)

MsgBox p.StringValue // shows e^2 = 7.38
```

119.2.24 Floor as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes any fraction part.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.3)
dim s as BigNumberMBS = o.Floor

MsgBox s.StringValue

dim a as BigNumberMBS = new BigNumberMBS(-2.3)
dim b as BigNumberMBS = a.Floor

MsgBox b.StringValue
```

119.2.25 Frac as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the fraction part.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)
dim s as BigNumberMBS = o.Frac

MsgBox s.StringValue

dim a as BigNumberMBS = new BigNumberMBS(-2.5)
dim b as BigNumberMBS = a.Frac
```

```
MsgBox b.StringValue
```

119.2.26 GetStringValue(Base as Integer = 10, scientific as boolean = false, scientificFrom as Integer = 15, round as Integer = -1, TrimZeros as Boolean = true, comma as String = ".") as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string value.
Example:

```
dim o as new BigNumberMBS(1234)

// show as hex
MsgBox o.GetStringValue(16)

// show as number with comma and 3 digits
dim z as new BigNumberMBS(12.345)
MsgBox z.GetStringValue(10, false, 15, 3, true, ",")
```

Notes:

Base: The base of the number system. Normally 10, but also 16 for hex is common.
scientific: Whether to use scientific notation.
scientificFrom: How many digits we show.
Round: Whether to round to n digits.
TrimZeros: Whether to trim unneeded zeros.
comma: The character to use as decimal dot.

119.2.27 HalfPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi/2.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.HalfPi
MsgBox b.StringValue
```

119.2.28 Ln(value as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates natural logarithm.
Example:

```
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = BigNumberMBS.Ln(x)

MsgBox p.StringValue // shows ln(2) = 0.69
```

119.2.29 Ln10 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(10).
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Ln10
MsgBox b.StringValue
```

119.2.30 Ln2 as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value ln(2).
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Ln2
MsgBox b.StringValue
```

119.2.31 Log(value as BigNumberMBS, base as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates logarithm in a given base.
Example:

```
dim x as new BigNumberMBS(100)
dim d as new BigNumberMBS(10)
```

```
dim p as BigNumberMBS = BigNumberMBS.Log(x, d)

MsgBox p.StringValue // shows ln(100)/ln(10) = 2
```

119.2.32 Max as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with maximum value.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue
```

119.2.33 Min as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with minimum value.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Min
MsgBox b.StringValue
```

119.2.34 Modulate(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates a number.
Example:

```
dim x as new BigNumberMBS(17)
dim y as new BigNumberMBS(3)
dim r as BigNumberMBS = x.Modulate(y)

MsgBox r.StringValue
```

Notes: Similar to mod keyword in Xojo.

119.2.35 Modulate2 as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulates by 2.
Example:

```
dim x as new BigNumberMBS(8)
dim y as new BigNumberMBS(9)

MsgBox str(x.Modulate2)+" "+str(y.Modulate2)
```

Notes: Returns 0 or 1.

119.2.36 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies two numbers.
Example:

```
dim x as new BigNumberMBS(8)
dim d as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Multiply(d)

MsgBox p.StringValue // shows 16
```

See also:

- 119.2.37 Multiply(value as Integer) as BigNumberMBS 19183
- 119.2.38 Multiply(value as UInt32) as BigNumberMBS 19184

119.2.37 Multiply(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an integer.
Example:

```
dim x as new BigNumberMBS(2)
dim p as BigNumberMBS = x.Multiply(3)
```

```
MsgBox p.StringValue // shows 6
```

See also:

- 119.2.36 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 19183
- 119.2.38 Multiply(value as UInt32) as BigNumberMBS 19184

119.2.38 Multiply(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by an unsigned integer.
Example:

```
dim x as new BigNumberMBS(17)
dim r as BigNumberMBS = x.Multiply(3)

MsgBox r.StringValue
```

See also:

- 119.2.36 Multiply(other as BigNumberMBS, round as boolean = true) as BigNumberMBS 19183
- 119.2.37 Multiply(value as Integer) as BigNumberMBS 19183

119.2.39 Nan as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value NaN.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Nan
MsgBox b.StringValue
```

119.2.40 Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the number.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(123)
dim z as BigNumberMBS = o.Negate

MsgBox z.StringValue
```

119.2.41 NumberWithCurrency(value as Currency) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a currency value.
Example:

```
dim v as Currency = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithCurrency(v)

MsgBox b.StringValue
```

119.2.42 NumberWithDouble(value as Double) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a 64-bit floating number.
Example:

```
dim v as Double = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithDouble(v)

MsgBox b.StringValue
```

119.2.43 NumberWithInt32(value as Int32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 32-bit integer.
Example:

```
dim v as Int32 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInt32(v)

MsgBox b.StringValue
```

119.2.44 NumberWithInt64(value as Int64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with a signed 64-bit integer.
Example:

```
dim v as Int64 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInt64(v)

MsgBox b.StringValue
```

119.2.45 NumberWithInteger(value as Integer) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an integer.
Example:

```
dim v as Integer = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithInteger(v)

MsgBox b.StringValue
```

119.2.46 NumberWithSingle(value as single) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an 32-bit floating point number.
Example:

```
dim v as Single = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithSingle(v)

MsgBox b.StringValue
```

119.2.47 NumberWithString(value as String) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with value from string.
Example:

```
dim v as String = "123"
dim b as BigNumberMBS = BigNumberMBS.NumberWithString(v)

MsgBox b.StringValue
```

119.2.48 NumberWithUInt32(value as UInt32) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 32-bit integer.
Example:

```
dim v as UInt32 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInt32(v)

MsgBox b.StringValue
```

119.2.49 NumberWithUInt64(value as UInt64) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned 64-bit integer.
Example:

```
dim v as UInt64 = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInt64(v)

MsgBox b.StringValue
```

119.2.50 NumberWithUInteger(value as UInteger) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with an unsigned integer.

Example:

```
dim v as UInteger = 123
dim b as BigNumberMBS = BigNumberMBS.NumberWithUInteger(v)

MsgBox b.StringValue
```

119.2.51 NumberWithVariant(value as Variant) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number based on a variant.
Example:

```
dim v as Variant = 123.456
dim b as BigNumberMBS = BigNumberMBS.NumberWithVariant(v)

MsgBox b.StringValue
```

Notes: Internally redirects to other NumberWith functions based on the value type.

119.2.52 One as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value one.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.One
MsgBox b.StringValue
```

119.2.53 Operator_Add(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)
```

```
// add
dim c as BigNumberMBS = a + b

MsgBox c.StringValue
```

119.2.54 Operator_AddRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a number.
Example:

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// add
dim c as BigNumberMBS = a + b

MsgBox c.StringValue
```

119.2.55 Operator_Compare(other as BigNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two numbers.
Example:

```
dim a as new BigNumberMBS(1.2)
dim b as new BigNumberMBS(1.2)
dim c as new BigNumberMBS(1.3)

if a = b then
// ok
else
break
end if

if a <c then
// ok
else
Break
end if
```

```
if c >b then
// ok
else
break
end if
```

119.2.56 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts big number to string automatically.
Example:

```
dim b as new BigNumberMBS
dim n as Double = 5

// convert from double to big number automatically
b = n

// convert to string automatically
MsgBox b
```

See also:

- 119.2.57 Operator_Convert(value as String) 19190

119.2.57 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a string to a big number.
Example:

```
dim b as new BigNumberMBS
dim n as string = "5"

// convert from string to big number automatically
b = n

// convert to double automatically
dim d as Double = b
MsgBox str(d)
```

See also:

- 119.2.56 Operator_Convert as String 19190

119.2.58 Operator_Divide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.
Example:

```
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a / b

MsgBox r.StringValue
```

119.2.59 Operator_DivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides two numbers.

119.2.60 Operator_IntegerDivide(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Example:

```
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a \b

MsgBox r.StringValue
```

Notes: Same as normal divide, but removes fraction part.

119.2.61 Operator_IntegerDivideRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an integer divide.
Notes: Same as normal divide, but removes fraction part.

119.2.62 Operator_Modulo(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.
Example:

```
dim a as new BigNumberMBS(9.3)
dim b as new BigNumberMBS(3.0)

dim r as BigNumberMBS = a mod b

MsgBox r.StringValue
```

119.2.63 Operator_ModuloRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the modulo of two numbers.

119.2.64 Operator_Multiply(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.
Example:

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// just multiply
dim c as BigNumberMBS = a * b

MsgBox c.StringValue
```

119.2.65 Operator_MultiplyRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply two numbers.

119.2.66 Operator_Negate as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates a number.
Example:

```
dim a as new BigNumberMBS(3)

// negate
dim c as BigNumberMBS = -a

MsgBox c.StringValue
```

119.2.67 Operator_Power(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.
Example:

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// pow
dim c as BigNumberMBS = a ^b

MsgBox c.StringValue
```

119.2.68 Operator_PowerRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates power of two numbers.

119.2.69 Operator_Subtract(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.
Example:

```
dim a as new BigNumberMBS(3)
dim b as new BigNumberMBS(4)

// subtract
dim c as BigNumberMBS = a - b

MsgBox c.StringValue
```

119.2.70 Operator_SubtractRight(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts one number from other.

119.2.71 Pi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value pi.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Pi
MsgBox b.StringValue
```

119.2.72 Pow(other as BigNumberMBS) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the power of the number.
Example:

```
dim x as new BigNumberMBS(2)
dim o as new BigNumberMBS(5)
dim p as BigNumberMBS = x.Pow(o)

MsgBox p.StringValue // shows 32
```

119.2.73 Round as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Rounds the number.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.3)
dim s as BigNumberMBS = o.Round

MsgBox s.StringValue

dim a as BigNumberMBS = new BigNumberMBS(-2.3)
dim b as BigNumberMBS = a.Round

MsgBox b.StringValue
```

119.2.74 SetStringValue(Text As String, Base as Integer, byref AfterText as String, Byref ValueRead as boolean)

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses number from string.
Example:

```
// set to 1.2 and show
dim o as new BigNumberMBS

dim after as string
dim ValueRead as Boolean

o.SetStringValue "1.2 hello", 10, after, ValueRead

MsgBox "value: "+o.StringValue+EndOfLine+"after: "+after
Break
```

Notes:

Returns also the text after the given text following the number.
Also sets ValueRead if a value was read.

119.2.75 Sqrt as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the square root.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(256)
dim s as BigNumberMBS = o.Sqrt

MsgBox s.StringValue
```

119.2.76 Subtract(other as BigNumberMBS, round as boolean = true) as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts a number.
Example:

```
dim x as new BigNumberMBS(2)
dim d as new BigNumberMBS(3)
dim p as BigNumberMBS = x.Subtract(d)

MsgBox p.StringValue // shows -1
```

119.2.77 TwoPi as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value 2 * PI.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.TwoPi
MsgBox b.StringValue
```

119.2.78 Zero as BigNumberMBS

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a number with value zero.
Example:

```
dim b as BigNumberMBS = BigNumberMBS.Zero
MsgBox b.StringValue
```

119.2.79 Properties

119.2.80 CurrencyValue as Currency

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sets/Queries currency value.
Example:

```
dim u as Currency = 1234.5678
dim b as new BigNumberMBS(u)
MsgBox str(b.CurrencyValue)
```

Notes: (Read and Write property)

119.2.81 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Get or Set the double value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.DoubleValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

119.2.82 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Get/Set value as Int64.
Example:

```
dim u as Int64 = & h7FFFFFFFFFFFFFFF // maximum Int64
dim b as new BigNumberMBS(u)
MsgBox str(b.Int64Value)

dim one as new BigNumberMBS(1)
b = b + one

// raises exception due to overflow
MsgBox str(b.Int64Value)
```

Notes: (Read and Write property)

119.2.83 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Get or Set the integer value.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(2.5)

MsgBox str(o.IntegerValue)+" = "+str(o.StringValue)
```

Notes: (Read and Write property)

119.2.84 IsInteger as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this number is an integer.
Example:

```
dim o as BigNumberMBS = new BigNumberMBS(1)
dim z as BigNumberMBS = new BigNumberMBS(1.5)

if o.IsInteger then
```

```
MsgBox o.StringValue+" is integer"
else
break // error
end if

if z.IsInteger then
break // error
else
MsgBox z.StringValue+" is not integer"
end if
```

Notes:

If true, there are no digits after the dot.
(Read only property)

119.2.85 IsNan as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this is an invalid number.
Example:

```
dim o as BigNumberMBS = BigNumberMBS.zero
dim z as BigNumberMBS = BigNumberMBS.Nan

if z.IsNan then
MsgBox z.StringValue+" is NaN"
else
break // error
end if

if o.IsNan then
break // error
else
MsgBox o.StringValue+" is not NaN"
end if
```

Notes: (Read only property)

119.2.86 IsNegative as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this value is negative.
Example:

```
dim o as BigNumberMBS = BigNumberMBS.one
dim z as BigNumberMBS = BigNumberMBS.one.Negate

if z.IsNegative then
MsgBox z.StringValue+" is negative"
else
break // error
end if

if o.IsNegative then
break // error
else
MsgBox o.StringValue+" is not negative"
end if
```

Notes: (Read only property)

119.2.87 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Checks if value is zero.
Example:

```
dim o as BigNumberMBS = BigNumberMBS.one
dim z as BigNumberMBS = BigNumberMBS.zero

if z.IsZero then
MsgBox z.StringValue+" is zero"
else
break // error
end if

if o.IsZero then
break // error
else
MsgBox o.StringValue+" is not zero"
end if
```

Notes: (Read only property)

119.2.88 StringValue as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Get or set string value of text.
Example:

```
// set to 1.2 and show
dim o as new BigNumberMBS("1.2")
MsgBox o.StringValue

// set to 2.3
o.StringValue = "2.3"
MsgBox o.StringValue
```

Notes: (Read and Write property)
See also:

- 119.2.91 StringValue(Base as Integer) as String 19202

119.2.89 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Get/Set value as UInt64.
Example:

```
dim u as UInt64 = 12345678901234567890
dim b as new BigNumberMBS(u)
MsgBox str(b.UInt64Value)
```

Notes: (Read and Write property)

119.2.90 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries/Sets value with variant.
Notes:

Floating point values are given as Double.
Integer types as Int32, Int64 or UInt64.
If value exceeds the ranges of those data types, we fall back to string.

When setting, the value is converted to a big number similiar to NumberWithVariant.
(Read and Write property)

119.2.91 StringValue(Base as Integer) as String

MBS DataTypes Plugin, Plugin Version: 16.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set string value with a given base.
Example:

```
dim o as new BigNumberMBS(1234)

// show as hex
MsgBox o.StringValue(16)
```

Notes: (Read and Write computed property)
See also:

- 119.2.88 StringValue as String 19201

119.3 Globals

119.3.1 IsValidCreditCardNumberMBS(Number as String) as boolean

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Verifies a credit card number.
Example:

```
MsgBox "test 49927398716 gives "+str(IsValidCreditCardNumberMBS("49927398716"))+EndOfLine+_
"test 49927398717 gives "+str(IsValidCreditCardNumberMBS("49927398717"))
```

Notes:

This function implements the Luhn algorithm. This is a simple checksum formula used to validate a variety of identification numbers, such as credit card numbers, IMEI numbers, National Provider Identifier numbers in US and Canadian Social Insurance Numbers.
Returns true on success or false on failure.

If this function returns false, you can be sure the number is not valid. But if the function returns true, you may want to check the number online with some database.

119.3.2 CompareNumbersMBS(v1 as Variant, v2 as Variant) as Integer

MBS DataTypes Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares numbers.
Example:

```
Dim u As UInt64 = 12345678901234567890
Dim i As Int64 = -1

If u >i Then
Break // 12345678901234567890 >-1
Else
Break // xojo says it's smaller!
End If

If CompareNumbersMBS(u,i) >0 Then
Break // Plugin does it right
Else
Break
End If
```

Notes:

The goal: compare numbers better than Xojo.
Especially UInt64/Int64 edge cases.

We treat nil as 0 value and ptr as UInt64.
If first argument is string, we just compare both as string. If first argument is numeric and second argument is string, we convert second one to number.

119.3.3 ACosHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the inverse hyperbolic cosine of the real argument x.
Example:

MsgBox str(ACosHMBS(5))

Notes:

acosh(1) returns +0.
acosh(x) returns a NAN for x <1.
acosh(+infinity) returns +infinity.

119.3.4 ACosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc cosine of x in the range [0, pi] .
Example:

MsgBox str(ACosMBS(5))

Notes:

acos(1) returns +0.
acos(x) returns a NAN for | x | >1.

119.3.5 ArithmeticShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an arithmetic Shift of value and cares for the sign (+ or -).
Example:

msgbox str(ArithmeticShiftMBS(5,3))

// displays 40 which is 5*(2^3) = 5 * 8

Notes: Always using 32bit.

119.3.6 ASinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2] .
Example:

MsgBox str(ASinHMBS(5))

Notes:

asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

119.3.7 ASinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc sine of x in the range [-pi/2, +pi/2] .
Example:

MsgBox str(ASinMBS(5))

Notes:

asin(+-0) returns +-0.
asin(x) returns a NAN for | x | >1.

119.3.8 ATan2MBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the principal value of the arc tangent of y/x, using the signs of both arguments to determine the quadrant of the return value.
Example:

MsgBox str(ATan2MBS(3,4))

Notes:

atan2(+-0, -0) returns +-pi.
atan2(+-0, +0) returns +-0.
atan2(+-0, x) returns +-pi for x <0.
atan2(+-0, x) returns +-0 for x >0.
atan2(y, +-0) returns -pi/2 for y >0.
atan2(+-y, -infinity) returns +-pi for finite y >0.
atan2(+-y, +infinity) returns +-0 for finite y >0.
atan2(+-infinity, +x) returns +-pi/2 for finite x.
atan2(+-infinity, -infinity) returns +-3*pi/4.
atan2(+-infinity, +infinity) returns +-pi/4.

119.3.9 ATanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the inverse hyperbolic tangent of the real argument x.
Example:

MsgBox str(ATanHMBS(5))

Notes:

atanh(+-0) returns +-0.
atanh(+-1) returns +-infinity.
atanh(x) returns a NaN for | x | >1.

119.3.10 ATanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The atan() function computes the principal value of the arc tangent of x in the range [-pi/2, +pi/2] .
Example:

MsgBox str(ATanMBS(5))

Notes:

atan(+-0) returns +-0.
atan(+-infinity) returns +-pi/2.

119.3.11 BitClearMBS(value as UInt64, mask as UInt64) as UInt64

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the bits in the mask from the value.
Example:

```
MsgBox bin(BitClearMBS(& b1111,& b0110)) // 1001
```

Notes: Does not work for 64 bit integers.

119.3.12 BitCountMBS(value as UInt64) as Integer

MBS Util Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the number of bits set.
Example:

```
MsgBox str(BitCountMBS(& b101)) // 2
MsgBox str(BitCountMBS(& b10101)) // 5
MsgBox str(BitCountMBS(& b11111111111100001111)) // 16
MsgBox str(BitCountMBS(& hFFFFFFFF)) // 32
```

Notes: Does not work for 64 bit integers.

119.3.13 BitExclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Does an bitwiseAnd using the value and bitwisenot of 2^bitNumber.
Or: Switches off the bit bitNumber inside value.
Example:

```
msgBox str(BitExclMBS(80,4))
' displays 64 which is 80 without 16 = 2^4+2^5 without 2^4
```

Notes: Always using 64-bit.

119.3.14 BitInclMBS(value as UInt64, bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Does an bitwiseOr using the value and 2^bitNumber
Or: Switches on the bit bitNumber inside value.
Example:

```
msgBox str(BitInclMBS(64,4))
' displays 80 which is 64 + 16 = 64 + 2^4
```

Notes: Always using 64-bit.

119.3.15 BitIsSetMBS(value as UInt64, bitNumber as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a certain bit is set inside the value
Example:

```
dim bool as boolean

bool=BitIsSetMBS(80,4)
' true, because 2^4=16 is included in 80=2^4+2^6
```

Notes: Always using 64-bit.

119.3.16 BitValMBS(bitNumber as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns 2^bitNumber

Example:

```
msgBox str(BitValMBS(5))
' displays 32
```

Notes: Always using 64-bit.

119.3.17 BitwiseDiffMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns all bits of val1 which are not in val2.
Example:

```
msgBox str(BitwiseDiffMBS(65,80))
' displays 1, because 65=2^0+2^5 includes 1=2^0, which is not part of 80=2^4+2^5.
```

Notes: Always using 32bit.

119.3.18 BitwiseNAndMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: negates both values and does bitwiseAnd on them.
Example:

```
msgBox str(bitwiseNandMBS(65,80))
' displays -82
```

Notes: Always using 32bit.

119.3.19 BitwiseNOrMBS(x as UInt64, y as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: negates both values and does bitwiseor on them.
Example:

```
msgBox str(bitwisenorMBS(65,80))
' displays -65
```

Notes: Always using 32bit.

119.3.20 BitwiseNotMBS(value as UInt64) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an bitwise negation of value.
Example:

```
msgBox str(BitwiseNotMBS(5))
' displays -6
```

Notes: Always using 32bit.

119.3.21 BitwiseRotateMBS(value as UInt64, count as Integer, offset as Integer, width as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an bitwise rotation of value.
Example:

```
msgBox str(BitwiseRotateMBS(5,2,0,32))
' displays 20
```

Notes: Always using 32bit.

119.3.22 ConvertFromFloat16MBS(Number as UInt16) as Single

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a 16bit floating point number to a 32bit floating point number.
Example:

```
dim h1 as UInt16 = ConvertToFloat16MBS(1.0)
dim f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0
```

```
dim h2 as UInt16 = ConvertToFloat16MBS(-1.0)
dim f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

dim h3 as UInt16 = ConvertToFloat16MBS(1000.0)
dim f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0

dim h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
dim f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0

dim inf as single = 65504.0
dim h5 as UInt16 = ConvertToFloat16MBS(inf)
dim f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

dim nan as single = sqrt(-1)
dim h6 as UInt16 = ConvertToFloat16MBS(nan)
dim f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

119.3.23 ConvertToFloat16MBS(Number as Single) as UInt16

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a 32bit floating point number to a 16bit floating point number.
Example:

```
dim h1 as UInt16 = ConvertToFloat16MBS(1.0)
dim f1 as single = ConvertFromFloat16MBS(h1) // should be 1.0

dim h2 as UInt16 = ConvertToFloat16MBS(-1.0)
dim f2 as single = ConvertFromFloat16MBS(h2) // should be -1.0

dim h3 as UInt16 = ConvertToFloat16MBS(1000.0)
dim f3 as single = ConvertFromFloat16MBS(h3) // should be 1000.0

dim h4 as UInt16 = ConvertToFloat16MBS(-1000.0)
dim f4 as single = ConvertFromFloat16MBS(h4) // should be -1000.0
```

```
dim inf as single = 65504.0
dim h5 as UInt16 = ConvertToFloat16MBS(inf)
dim f5 as single = ConvertFromFloat16MBS(h5) // should be 65504

dim nan as single = sqrt(-1)
dim h6 as UInt16 = ConvertToFloat16MBS(nan)
dim f6 as single = ConvertFromFloat16MBS(h6) // should be NAN

Break // check in debugger
```

Notes: This looses precision as 16bit fit less bits than 32 bit.

119.3.24 CosHMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic cosine of x.
Example:

```
MsgBox str(CosHMBS(5))
```

Notes:

cosh(+-0) returns 1.
cosh(+-infinity) returns +infinity.

119.3.25 CosMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the cosine of x (measured in radians).
Example:

```
MsgBox str(CosMBS(5))
```

Notes:

cos(+-0) returns 1.

cos(+-infinity) returns a NaN.

119.3.26 CurrencyAddMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds two currency values.
Notes: This function uses 64bit integer math to avoid rounding issues.

119.3.27 CurrencyDivMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides currency value by integer.
Notes:

Rest is ignored.
This function uses 64bit integer math to avoid rounding issues.

119.3.28 CurrencyMulMBS(value1 as Currency, value2 as Integer) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies currency value with integer.
Example:

```
dim c1 as Currency = 1234567890.1234

// in xojo
dim c3 as Currency = c1 * 12345

// with plugin
dim c4 as Currency = CurrencyMulMBS(c1, 12345)

// verify by 64bit math
dim c5 as Int64 = 12345678901234
dim c6 as int64 = c5 * 12345

// and plugin is correct
MsgBox str(c3)+" "+str(c4)+" "+str(c6)
```

Notes: This function uses 64bit integer math to avoid rounding issues.

119.3.29 CurrencySubMBS(value1 as Currency, value2 as Currency) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts value2 from value1.
Notes: This function uses 64bit integer math to avoid rounding issues.

119.3.30 CurrencyValueMBS(value as string) as Currency

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses string into currency value.
Notes: Replacement for val() which works better with large numbers and raises exceptions on errors.

119.3.31 DoubleToExtendedStrMBS(x as Double) as string

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns the double as an 80bit Float stored inside a ten byte string.
Example:

```
dim s as string
dim d as Double

d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

Notes: Returns "" if there is not enough memory to create the string.

119.3.32 Exp2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes 2^x, the base-2 exponential of x.
Example:

```
MsgBox str(Exp2MBS(5))
```

Notes:

exp2(+-0) return 1.
exp2(-infinity) return +0.
exp2(+infinity) return +infinity.

119.3.33 ExpMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes e^x, the base-e exponential of x.
Example:

```
MsgBox str(ExpMBS(5))
```

Notes:

exp(+-0) return 1.
exp(-infinity) return +0.
exp(+infinity) return +infinity.

119.3.34 ExtendedStrToDoubleMBS(v as string) as Double

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Returns the 80bit Float as a double.
Example:

```
dim s as string
dim d as Double

d=5
s=DoubleToExtendedStrMBS(d)
msgBox s
d=extendedStrToDoubleMBS(s)
msgBox str(d)
```

Notes:

Returns NAN (255) if the string is not valid. e.g. "".
Returns always NAN on Windows.

119.3.35 FacMBS(x as Integer) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates (value!).
Example:

```
Sub Open()
// Fill a listbox with Fac values:
dim x as Integer
dim y as Double

for x=1 to 100
listBox1.addrow format(x,"0")
y=FacMBS(x)
if y=0 then
exit
else
listBox1.cell(listBox1.lastIndex,1)=format(y,"0")
end if
next
End Sub
```

Notes:

msgBox str(facMBS(5))
' displays 120 which is 1*2*3*4*5

119.3.36 FloorMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the largest integral value less than or equal to x.
Example:

```
MsgBox str(FloorMBS(5.45))
```

Notes:

floor(+-0) returns +-0.
floor(+-infinity) returns +-infinity.

119.3.37 FRExpMBS(inputx as Double, byref expValue as Integer) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Breaks floating-point number into normalized fraction and power of 2.
Example:

```
dim x as Double = 123.456

dim y as Integer
dim r as Double = FRExpMBS(x, y)

MsgBox str(X)+": "+str(y)+" "+str(r)
```

Notes:

This functions break the floating-point number value into a normalized fraction and an integral power of 2. They store the integer in the int object pointed to by exp.

The functions return a number x such that x has a magnitude in the interval [1/2, 1) or 0, and value = x*(2^exp).

frexp(+-0, exp) returns +-0, and stores 0 in the object pointed to by exp.

frexp(+-infinity, exp) returns +-infinity, and stores an unspecified value in the object pointed to by exp.

frexp(Nan, exp) returns a Nan, and stores an unspecified value in the object pointed to by exp.

119.3.38 HiWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the high word part of the integer.
Example:

```
MsgBox hex(HiWordMBS(& H12345678)) // shows 1234
```

Notes: equal to bitwiseshiftright(i,16)

119.3.39 HypotMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the sqrt(x*x+y*y) without undue overflow or underflow.
Example:

```
MsgBox str(HypotMBS(3,4)) // shows 5
```

Notes:

hypot(x, y) , hypot(y, x) , and hypot(x, -y) are equivalent.
hypot(x, +-0) is equivalent to fabs(x).
hypot(+-infinity, y) returns +infinity even if y is a NaN.

119.3.40 IsFiniteMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the parameter is finite.
Example:

```
dim x as Double

x=1/0
if not isfiniteMBS(x) then
msgbox "the result is Infinite."
end if
```

119.3.41 IsInfMBS(x as Double) as boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the double passed in is an infinity value.
Example:

```
dim e as Double = 0.0000000000000000000000000000000000000000000000001
dim d as Double = 1.0/e/e/e/e/e/e/e

MsgBox str(d)+" is inf: "+str(IsInfMBS(d))
```

119.3.42 IsNANMBS(x as Double) as boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the parameter is not a number.
Example:

```
dim x as Double
x=sqrt(-1)
if isnanMBS(x) then
msgbox "the square root of -1 is not correct."
end if
```

119.3.43 Log10MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base 10.
Example:

```
MsgBox str(Log10MBS(5))
```

Notes:

log10(1) return +0.
log10(x) return a NaN for x <0.
log10(+infinity) return +infinity.

119.3.44 Log2MBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base 2.
Example:

```
MsgBox str(Log2MBS(5))
```

Notes:

log2(1) return +0.
log2(x) return a NaN for x <0.
log2(+infinity) return +infinity.

119.3.45 LogicalShiftMBS(value as UInt64, count as Integer) as UInt64

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Does an logical Shift of value and doesn't take care for the sign (+ or -).
Example:

```
msgbox str(LogicalShiftMBS(5,3))
```

Notes: Always using 32bit.

119.3.46 LogMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the value of the logarithm of argument x to base e.
Example:

```
MsgBox str(LogMBS(5))
```

Notes:

log(1) return +0.
log(x) return a NaN for x <0.
log(+infinity) return +infinity.

119.3.47 LoWordMBS(i as Integer) as Integer

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the low word part of the integer.
Example:

```
MsgBox hex(LoWordMBS(& H12345678)) // shows 5678
```

Notes: equal to bitwiseand(i,& HFFFF)

119.3.48 PowMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes x raised to the power y.
Example:

MsgBox str(PowMBS(5,5))

Notes:

pow(+-0, y) returns +-infinity for y an odd integer <0.
pow(+-0, y) returns +infinity for y <0 and not an odd integer.
pow(+-0, y) returns +-0 for y an odd integer >0.
pow(+-0, y) returns +0 for y >0 and not an odd integer.
pow(-1, +-infinity) returns 1.
pow(1, y) returns 1 for any y, even a NaN.
pow(x, +-0) returns 1 for any x, even a NaN.
pow(x, y) returns a NaN for finite x <0 and finite non-integer y.
pow(x, -infinity) returns +infinity for | x | <1.
pow(x, -infinity) returns +0 for | x | >1.
pow(x, +infinity) returns +0 for | x | <1.
pow(x, +infinity) returns +infinity for | x | >1.
pow(-infinity, y) returns -0 for y an odd integer <0.
pow(-infinity, y) returns +0 for y <0 and not an odd integer.
pow(-infinity, y) returns -infinity for y an odd integer >0.
pow(-infinity, y) returns +infinity for y >0 and not an odd integer.
pow(+infinity, y) returns +0 for y <0.
pow(+infinity, y) returns +infinity for y >0.

Range errors may occur.

119.3.49 RoundMBS(x as Double, decimals as Integer = 0) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function returns the integral value nearest to x rounding half-way cases away from zero, regardless of the current rounding direction.
Example:

MsgBox str(RoundMBS(5.5))

```
dim lines(-1) as string

for i as Integer = -5 to 5
lines.Append str(i)+": "+Format(RoundMBS(123456789.123456789, i), "0.0000000")
next

MsgBox join(lines,EndOfLine)
```

Notes:

round(+-0) returns +-0.
round(+-infinity) returns +-infinity.

119.3.50 SinHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic sine of x.
Example:

```
MsgBox str(SinHMBS(5.5))
```

Notes:

sinh(+-0) returns +-0.
sinh(+-infinity) returns +-infinity.

119.3.51 SinMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the sine of x (measured in radians).
Example:

```
MsgBox str(SinMBS(5.5))
```

Notes:

sin(+-0) returns +-0.
sin(+-infinity) returns a NaN.

119.3.52 SqrtMBS(x as Double, y as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function compute the yth root of x.
Example:

```
dim r,x,y as Double

r=SqrtMBS(x,y)
// r^y=x
```

Notes:

sqrt(-0) returns -0.
sqrt(x,y) returns a NaN if the root can't be calculated.

119.3.53 TanHMBS(x as Double) as Double

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the hyperbolic tangent of x.
Example:

```
MsgBox str(TanHMBS(5.5))
```

Notes:

tanh(+-0) returns +-0.
tanh(+-infinity) returns +-1.

119.3.54 TanMBS(x as Double) as Double

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function computes the tangent of x (measured in radians).
Example:

```
MsgBox str(TanMBS(5.5))
```

Notes:

tan(+-0) returns +-0.
tan(+-infinity) returns a NaN.

119.3.55 DoubleToInt64MBS(value as Double) as Int64

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a double value to Int64.

119.3.56 DoubleToUInt64MBS(value as Double) as UInt64

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a double value to UInt64 correctly.
Example:

```
// set d to a very high UInt64 value
dim d as Double = pow(256.0,8.0) - 10000

// RB will convert to Int64 here! so number is cut to 9... instead of 18...
dim u1 as UInt64 = d

// plugin does it right
dim u2 as UInt64 = DoubleToUInt64MBS(d)

MsgBox str(u1)+" "+str(u2)
```

Notes: Xojo converts UInt64 to Double with an intermediate Int64 which breaks big numbers. This function does it correctly.

119.3.57 Int64ToDoubleMBS(value as Int64) as Double

MBS Util Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts an Int64 to Double.

119.3.58 UInt64ToDoubleMBS(value as UInt64) as Double

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts an UInt64 to Double.
Example:

```
dim d as Double = 18446744073709541376
MsgBox str(d) // fails

dim e as Double = UInt64ToDoubleMBS(18446744073709541376)
MsgBox str(e) // works
```

Notes: Xojo likes to use Int64 internally when doing math with UInt64, so we added this method to fix it.

119.4 class LargeNumberErrorExceptionMBS

119.4.1 class LargeNumberErrorExceptionMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception class used to report with problems in LargeNumberMBS class.
Notes: Subclass of the RuntimeException class.

119.4.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr5

119.5 class LargeNumberMBS

119.5.1 class LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An 4128 bit integer number.
Example:

```
Dim n1 As Int64 = 10000000000
Dim n2 As Int64 = 10000000000
Dim n3 As Int64 = n1 * n2 // overflow, so wrong result

Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(n1)
Dim l2 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(n2)
Dim l3 As LargeNumberMBS = l1 * l2

Dim s4 As String = l3.StringValue // this is correct

Break
```

Notes:

Can be useful to calculate with more than Int64.
This class works with up to 1224 digits.

See BigNumberMBS for a 320 bit floating point number.

119.5.4 Methods

119.5.5 Add(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number.
See also:

- 119.5.6 Add(other as LargeNumberMBS) as LargeNumberMBS 19227

119.5.6 Add(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number and returns result.
See also:

- 119.5.5 Add(other as LargeNumberMBS) 19227

119.5.7 AddMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Addition with modulo.
Example:

```
Dim v As New LargeNumberMBS(100)
Dim o As New LargeNumberMBS(200)
Dim n As New LargeNumberMBS(& hFF)

Dim r As LargeNumberMBS = v.AddMod(o, n)

MsgBox r.StringValue // shows 45 = (100+200) mod 255
```

119.5.8 CheckBit(bit as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether a bit is set.
Notes: Returns true if bit is set.

119.5.9 Clone as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the number.

119.5.10 Constructor

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with value zero.
Example:

```
Dim l1 As New LargeNumberMBS
MsgBox l1.StringValue
```

See also:

- 119.5.11 Constructor(other as LargeNumberMBS) 19228
- 119.5.12 Constructor(value as Int32) 19229
- 119.5.13 Constructor(value as Int64) 19229
- 119.5.14 Constructor(value as String) 19230
- 119.5.15 Constructor(value as UInt32) 19230
- 119.5.16 Constructor(value as UInt64) 19230

119.5.11 Constructor(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the number.
Example:

```
Dim l1 As New LargeNumberMBS(123456789)
Dim l2 As New LargeNumberMBS(l1)

MsgBox l2.StringValue
```

See also:

- 119.5.10 Constructor 19228
- 119.5.12 Constructor(value as Int32) 19229
- 119.5.13 Constructor(value as Int64) 19229
- 119.5.14 Constructor(value as String) 19230
- 119.5.15 Constructor(value as UInt32) 19230
- 119.5.16 Constructor(value as UInt64) 19230

119.5.12 Constructor(value as Int32)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an 32-bit integer.
See also:

- 119.5.10 Constructor 19228
- 119.5.11 Constructor(other as LargeNumberMBS) 19228
- 119.5.13 Constructor(value as Int64) 19229
- 119.5.14 Constructor(value as String) 19230
- 119.5.15 Constructor(value as UInt32) 19230
- 119.5.16 Constructor(value as UInt64) 19230

119.5.13 Constructor(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an 64-bit integer.
See also:

- 119.5.10 Constructor 19228
- 119.5.11 Constructor(other as LargeNumberMBS) 19228
- 119.5.12 Constructor(value as Int32) 19229
- 119.5.14 Constructor(value as String) 19230
- 119.5.15 Constructor(value as UInt32) 19230
- 119.5.16 Constructor(value as UInt64) 19230

119.5.14 Constructor(value as String)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number based on a string.
See also:

- 119.5.10 Constructor 19228
- 119.5.11 Constructor(other as LargeNumberMBS) 19228
- 119.5.12 Constructor(value as Int32) 19229
- 119.5.13 Constructor(value as Int64) 19229
- 119.5.15 Constructor(value as UInt32) 19230
- 119.5.16 Constructor(value as UInt64) 19230

119.5.15 Constructor(value as UInt32)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an unsigned 32-bit integer.
See also:

- 119.5.10 Constructor 19228
- 119.5.11 Constructor(other as LargeNumberMBS) 19228
- 119.5.12 Constructor(value as Int32) 19229
- 119.5.13 Constructor(value as Int64) 19229
- 119.5.14 Constructor(value as String) 19230
- 119.5.16 Constructor(value as UInt64) 19230

119.5.16 Constructor(value as UInt64)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new instance with an unsigned 64-bit integer.
See also:

- 119.5.10 Constructor 19228
- 119.5.11 Constructor(other as LargeNumberMBS) 19228
- 119.5.12 Constructor(value as Int32) 19229

- 119.5.13 Constructor(value as Int64) 19229
- 119.5.14 Constructor(value as String) 19230
- 119.5.15 Constructor(value as UInt32) 19230

119.5.17 Decrement(value as UInt32 = 1)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrement number with an integer.
Example:

```
Dim o As New LargeNumberMBS(5)
MsgBox o.StringValue
o.Increment
MsgBox o.StringValue
o.Decrement
MsgBox o.StringValue
```

Notes: This is faster than building a new LargeNumberMBS, just to subtract some small number.

119.5.18 Divide(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value with by value.
See also:

- 119.5.19 Divide(other as LargeNumberMBS) as LargeNumberMBS 19231
- 119.5.20 Divide(value as UInt32) as LargeNumberMBS 19232

119.5.19 Divide(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value with by value.
See also:

- 119.5.18 Divide(other as LargeNumberMBS) 19231
- 119.5.20 Divide(value as UInt32) as LargeNumberMBS 19232

119.5.20 Divide(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divide by given integer and return result.
Example:

```
Dim o As New LargeNumberMBS(63)
Dim r1 As LargeNumberMBS = o.Divide(8)
Dim r2 As UInt32 = o.Modulo(8)

MsgBox r1.StringValue+" "+str(r2) // shows 7 and 7
```

Notes: For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 119.5.18 Divide(other as LargeNumberMBS) 19231
- 119.5.19 Divide(other as LargeNumberMBS) as LargeNumberMBS 19231

119.5.21 DivMod(other as LargeNumberMBS, byref DivResult as LargeNumberMBS, byref ModResult as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs divide and modulo together.
Example:

```
Dim d As New LargeNumberMBS(100)
Dim n As New LargeNumberMBS(13)

Dim x As LargeNumberMBS
Dim y As LargeNumberMBS

d.DivMod n, x, y

MsgBox d.StringValue + " = " + x.StringValue + " * " + n.StringValue + " + " + y.StringValue
```

Notes: Puts result into both byref parameters.

119.5.22 Equals(other as LargeNumberMBS) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares if two numbers are equal.
Notes: Returns true if equal.

119.5.23 ExpMod(e as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates an exponent.
Example:

```
Dim o As New LargeNumberMBS(2)
Dim e As New LargeNumberMBS(11)
Dim m As New LargeNumberMBS(255)
Dim r As LargeNumberMBS = o.ExpMod(e,m)

MsgBox r.StringValue // shows 8 = 2^11 mod 255
```

Notes: Returns x^e mod n where x is the current number, e a parameter and n the modulo parameter.

119.5.24 FindGCD(v as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds greatest common divisor for two positive numbers.

119.5.25 Increment(value as UInt32 = 1)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increment number with an integer.
Example:

```
Dim o As New LargeNumberMBS(5)
MsgBox o.StringValue
o.Increment
MsgBox o.StringValue
o.Decrement
MsgBox o.StringValue
```

Notes: This is faster than building a new LargeNumberMBS, just to add some small number.

119.5.26 IsPrime(iter as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if number is a prime number.
Example:

```
Dim lines() As String

For i As Integer = 61 To 69 Step 2
Dim a As New LargeNumberMBS(i)
lines.Append a.StringValue+": "+Str(a.IsPrime(5))
Next

MsgBox Join(lines, EndOfLine)
```

Notes:

Returns 1 if prime and 0 if not.
Returns -1 in case of error.

Iter is the factor between 1 and 680 about how deep to iterate. The bigger the this factor, the more exact the check is.

119.5.27 LeftShift(bits as integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts value to left by given number of bits.
Notes: Bits must be <= 32.

119.5.28 MaxInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as Int32.

119.5.29 MaxInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as Int64.

119.5.30 MaxUInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as UInt32.

119.5.31 MaxUInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Maximum value which can be represented as UInt64.

119.5.32 MinInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as Int32.

119.5.33 MinInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as Int64.

119.5.34 MinUInt32 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as UInt32.

119.5.35 MinUInt64 as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Minimum value which can be represented as UInt64.

119.5.36 ModInverse(Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This function calculates modular multiplicative inverse of an given integer a modulo m.
Example:

```
Dim l As New LargeNumberMBS(3)
Dim n As New LargeNumberMBS(26)

Dim r As LargeNumberMBS = l.ModInverse(n)

MsgBox r.StringValue
```

119.5.37 Modulo(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Notes: Divides value and returns the rest.
See also:

- 119.5.38 Modulo(other as LargeNumberMBS) as LargeNumberMBS 19236
- 119.5.39 Modulo(value as UInt32) as UInt32 19237

119.5.38 Modulo(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Notes: Divides value and returns the rest.
See also:

- 119.5.37 Modulo(other as LargeNumberMBS) 19236
- 119.5.39 Modulo(value as UInt32) as UInt32 19237

119.5.39 Modulo(value as UInt32) as UInt32

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divide by given integer and return remainder.
Example:

```
Dim o As New LargeNumberMBS(63)
Dim r1 As LargeNumberMBS = o.Divide(8)
Dim r2 As UInt32 = o.Modulo(8)

MsgBox r1.StringValue+" "+str(r2) // shows 7 and 7
```

Notes: For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 119.5.37 Modulo(other as LargeNumberMBS) 19236
- 119.5.38 Modulo(other as LargeNumberMBS) as LargeNumberMBS 19236

119.5.40 MulMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply with modulo.
Example:

```
Dim o As New LargeNumberMBS(50)
Dim f As New LargeNumberMBS(80)
Dim m As New LargeNumberMBS(255)
Dim r As LargeNumberMBS = o.MulMod(f, m)

MsgBox r.StringValue // shows 175 = (50 * 80) mod 255
```

119.5.41 Multiply(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies value with other value.
See also:

- 119.5.42 Multiply(value as UInt32) as LargeNumberMBS 19238

119.5.42 Multiply(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply by given integer and return result.
Example:

```
Dim o As New LargeNumberMBS(5)
Dim r As LargeNumberMBS = o.Multiply(8)

MsgBox r.StringValue // shows 40
```

Notes: For small numbers this is more efficient than creating new LargeNumberMBS to store value.
See also:

- 119.5.41 Multiply(other as LargeNumberMBS) 19237

119.5.43 Negate as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the value.
Notes: Returns new value with different sign.

119.5.44 NumberWithInt32(value as Int32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given Int32 value.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt32(123456789)
MsgBox l1.StringValue
```

119.5.45 NumberWithInt64(value as Int64) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given Int64 value.
Example:

```
Dim d1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(0)
Dim d2 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(123)
```

```
Dim d3 As LargeNumberMBS = LargeNumberMBS.NumberWithInt64(123456789012345)

MsgBox d1.StringValue+EndOfLine+d1.HexString+EndOfLine+_
d2.StringValue+EndOfLine+d2.HexString+EndOfLine+_
d3.StringValue+EndOfLine+d3.HexString
```

119.5.46 NumberWithInteger(value as Integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given integer value.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(123456789)
MsgBox l1.StringValue
```

119.5.47 NumberWithString(value as String) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given string.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithString("123456789")
MsgBox l1.StringValue
```

119.5.48 NumberWithUInt32(value as UInt32) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given UInt32 value.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInt32(123456789)
MsgBox l1.StringValue
```

119.5.49 NumberWithUInt64(value as UInt64) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given UInt64 value.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInt64(123456789)
MsgBox l1.StringValue
```

119.5.50 NumberWithUInteger(value as UInteger) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given unsigned integer value.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithUInteger(123456789)
MsgBox l1.StringValue
```

119.5.51 NumberWithVariant(value as variant) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a number with the given variant value.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithVariant(123456789)
MsgBox l1.StringValue
```

Notes: Variant can be integer or string.

119.5.52 Operator_Add(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number and returns result.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)
```

```
Dim r As LargeNumberMBS = l+o
Dim s As LargeNumberMBS = o+l

MsgBox r.StringValue+" "+s.StringValue
```

119.5.53 Operator_AddRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds other number and returns result.

119.5.54 Operator_And(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs bitwise AND operator on the values.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(16+4)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4+2)

Dim ra As LargeNumberMBS = l And o
Dim ro As LargeNumberMBS = l Or o

MsgBox ra.StringValue +" "+ro.StringValue
```

Notes: Returns new value.

119.5.55 Operator_Compare(other as LargeNumberMBS) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two values.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

If l >o Then
MsgBox "l is bigger"
```

```
Else
MsgBox "o is bigger"
end if
```

Notes: Returns -1, 1 or 0.

119.5.56 Operator_Convert as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the number to string.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(23)
MsgBox l
```

See also:

- 119.5.57 Operator_Convert(value as String) 19242

119.5.57 Operator_Convert(value as String)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts string to large number.
Example:

```
Dim l As LargeNumberMBS = "123"
MsgBox l
```

See also:

- 119.5.56 Operator_Convert as String 19242

119.5.58 Operator_Divide(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value by other value.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(21)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(3)
Dim r As LargeNumberMBS = l / o

MsgBox r.stringValue
```

119.5.59 Operator_DivideRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Divides value by other value.
Example:

```
Dim o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_DivideRight is called
Dim r As LargeNumberMBS = "10" / o

MsgBox r.StringValue
```

119.5.60 Operator_Modulo(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(23)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(3)
Dim r As LargeNumberMBS = l Mod o

MsgBox r.stringValue
```

Notes: Divides value and returns the rest.

119.5.61 Operator_ModuloRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Modulo value.
Notes: Divides value and returns the rest.

119.5.62 Operator_Multiply(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies value with other value.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(5)
Dim r As LargeNumberMBS = o*l

MsgBox r.stringValue
```

119.5.63 Operator_MultiplyRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies value with other value.
Example:

```
Dim o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_MultiplyRight is called
Dim r As LargeNumberMBS = "10" * o

MsgBox r.StringValue
```

119.5.64 Operator_Negate as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Negates the value.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim r As LargeNumberMBS = -l

MsgBox r.StringValue
```

119.5.65 Operator_Or(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs bitwise OR operator on the values.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(16+4)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(4+2)

Dim ra As LargeNumberMBS = l And o
Dim ro As LargeNumberMBS = l Or o

MsgBox ra.StringValue +" "+ro.StringValue
```

Notes: Returns new value.

119.5.66 Operator_Subtract(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number and returns result.
Example:

```
Dim l As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(20)
Dim o As LargeNumberMBS = LargeNumberMBS.NumberWithInteger(10)

Dim r As LargeNumberMBS = l-o
Dim s As LargeNumberMBS = o-l

MsgBox r.StringValue+" "+s.StringValue
```

119.5.67 Operator_SubtractRight(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number and returns result.
Example:

```
Dim o As New LargeNumberMBS(5)

// "10" is auto converted to LargeNumberMBS and Operator_SubtractRight is called
Dim r As LargeNumberMBS = "10" - o

MsgBox r.StringValue
```

119.5.68 Prime(byte as Integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new big prime number.
Example:

```
Dim lines() As String
For i As Integer = 1 To 10

Dim r As LargeNumberMBS = LargeNumberMBS.Prime(i)
lines.Append r.StringValue

Next
MsgBox Join(lines,EndOfLine)
```

Notes: Byte defines how big the prime number becomes. Range 1 to 680.

119.5.69 RightShift(bits as integer) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shifts value to right by given number of bits.
Notes: Bits must be <= 32.

119.5.70 SetZero

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets number to zero.
Example:

```
Dim l1 As LargeNumberMBS = LargeNumberMBS.NumberWithInt32(12345)
MsgBox l1.StringValue
```

```
// set to zero
l1.SetZero
MsgBox l1.StringValue
```

119.5.71 SqrMod(Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiply with itself and modulo.
Example:

```
Dim o As New LargeNumberMBS(90)
Dim m As New LargeNumberMBS(255)
Dim r As LargeNumberMBS = o.SqrMod(m)

MsgBox r.StringValue // shows 195 = (90 * 90) mod 255
```

119.5.72 sqrt as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates square root of value.
Notes: Get nearly square root of a. The answer will be a >= ret^2.

119.5.73 Square as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates square of current value.
Notes: Return x^2.

119.5.74 SubMod(v as LargeNumberMBS, Modulo as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtraction with modulo.
Example:

```
Dim v As New LargeNumberMBS(100)
Dim o As New LargeNumberMBS(200)
Dim n As New LargeNumberMBS(& hFF)

Dim r As LargeNumberMBS = v.SubMod(o, n)

MsgBox r.StringValue // shows 155 = (100-200) mod 255

// -100 is too small, so 255 is added to bring to range.
```

119.5.75 Subtract(other as LargeNumberMBS)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number.
See also:

- 119.5.76 Subtract(other as LargeNumberMBS) as LargeNumberMBS 19248

119.5.76 Subtract(other as LargeNumberMBS) as LargeNumberMBS

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Subtracts other number and returns result.
See also:

- 119.5.75 Subtract(other as LargeNumberMBS) 19248

119.5.77 Properties

119.5.78 BitSize as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries bit size of the number.
Notes:

Up to 4128 bits.
(Read only property)

119.5.79 Bytes as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Provides raw bytes of number in memory.
Example:

```
Dim o As New LargeNumberMBS(& h12345678)
Dim m As MemoryBlock = o.Bytes

Break
```

Notes:

Without sign as number is always positive.
(Read only property)

119.5.80 ByteSize as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries byte size of the number.
Notes:

Up to 516 bytes.
(Read only property)

119.5.81 DoubleValue as Double

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as double.
Notes:

Result is not correct if value is not in range of a double.
(Read only property)

119.5.82 HexString as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as hex string.
Notes: (Read only property)

119.5.83 Int64Value as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as Int64.
Notes:

Result is not correct if value is not in range of a double.
(Read and Write property)

119.5.84 IntegerValue as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as integer.
Notes:

Result is not correct if value is not in range of a double.
(Read and Write property)

119.5.85 IsDouble as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this value fits in double range.
Notes: (Read only property)

119.5.86 IsInt32 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this value fits in Int32 range.
Notes: (Read only property)

119.5.87 IsInt64 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this value fits in Int64 range.
Notes: (Read only property)

119.5.88 IsNegate as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether value is negative.
Notes: (Read and Write property)

119.5.89 IsUInt32 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this value fits in UInt32 range.
Notes: (Read only property)

119.5.90 IsUInt64 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether this value fits in UInt64 range.
Notes: (Read only property)

119.5.91 IsZero as Boolean

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether value is zero.
Notes: (Read only property)

119.5.92 StringValue as String

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as string.
Notes:

Result is not correct if value is not in range of a double.
(Read and Write property)

119.5.93 UInt64Value as UInt64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as UInt64.
Notes:

Result is not correct if value is not in range of a double.
(Read and Write property)

119.5.94 UIntegerValue as UInteger

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as unsigned integer.
Notes:

Result is not correct if value is not in range of a double.
(Read and Write property)

119.5.95 VariantValue as Variant

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries value as variant.
Notes:

Result is can be string, integer or double.
(Read and Write property)

119.6 class SplineMBS

119.6.1 class SplineMBS

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class calculates a 2D cubic spline.
Notes: The curve goes smooth through all points.

119.6.2 Blog Entries

- MBS Xojo / Real Studio plug-ins in version 15.4
- MBS Xojo / Real Studio Plugins, version 15.4pr4
- MBS Xojo / Real Studio Plugins, version 15.3pr3

119.6.3 Methods

119.6.4 a(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constant part of the coefficient.

119.6.5 b(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 1st order coefficient.

119.6.6 c(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 2nd order coefficient.

119.6.7 calc(x as Double) as Double

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the Y value on the spline for a given X value.

119.6.8 Constructor(X() as Double, Y() as Double)

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes:

Raises an exception for invalid arrays passed, e.g. different size.
Calculates the spline curve coefficients and sets count property.

119.6.9 d(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The 3rd order coefficient.

119.6.10 x(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x value for this coefficent.

119.6.11 y(index as Integer) as Double

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y value for this coefficent.

119.6.12 Properties

119.6.13 count as Integer

MBS Util Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of coefficients.
Notes: (Read and Write property)

119.7 module SunTimesMBS

119.7.1 module SunTimesMBS

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A helper module to calculate sunset/sunrise times.
Example:

```
// may be an hour off due to daylight saving time

dim d as new date

dim jd as Double = SunTimesMBS.CalcJulianDate(d.day, d.Month, d.Year)

// Koblenz, Germany
const latitude = 50.356667
const longitude = 7.593889

// Miami, FL
'const latitude = 25.787778
'const longitude = -80.224167

dim sr as Double = SunTimesMBS.CalcSunriseUTC(jd, latitude, longitude)
dim ss as Double = SunTimesMBS.CalcSunsetUTC (jd, latitude, longitude)

d.gmtoffset = 0
d.hour = 0
d.minute = 0
d.second = 0

dim base as Double = d.totalseconds
d.totalseconds = sr*60 + base

MsgBox "Sunrise: "+d.longdate+" "+d.longtime

d.totalseconds = ss*60 + base

MsgBox "Sunset: "+d.longdate+" "+d.longtime
```

Notes: The example code above works well, but seems not to take into account the daylight saving time.

119.7.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr3

119.7.3 Methods

119.7.4 CalcJulianDate(day as Integer, month as Integer, year as Integer) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a julian date from given date values.

119.7.5 CalcSunriseUTC(JD as Double, latitude as Double, longitude as Double) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates sunrise time.
Notes:

Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

119.7.6 CalcSunsetUTC(JD as Double, latitude as Double, longitude as Double) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates sunset time.
Notes:

Returns time on date in minutes.
Use CalcJulianDate to calculate the JD parameter.

Chapter 120

Media Keys

120.1 class MediaKeysMBS

120.1.1 class MediaKeysMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Catch some special keys with this class.
Example:

```
dim m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

// set which keys to watch for
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock

// and start
m.startWatchingMediaKeys
```

Notes:

First written to catch play, fast and rewind keys from Apple keyboards.
Later extended to also catch other keys.
Still not all keys are available on all keyboards.

Please have only instance of this class running your application.

120.1.2 Blog Entries

- MBS Real Studio Plugins, version 11.2pr12
- MBS Real Studio Plugins, version 11.2pr11
- MBS Real Studio Plugins, version 11.2pr9
- MBS Real Studio Plugins, version 11.2pr9

120.1.3 Methods

120.1.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Initializes the key watcher.

120.1.5 startWatchingMediaKeys

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Starts watching for keys.
Example:

```
dim m as MediaKeysMBS // global property!

// app initialization
m = new MediaKeysMBS

m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
m.startWatchingMediaKeys
```

120.1.6 stopWatchingMediaKeys

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Stops watching for keys.
Example:

```
dim m as MediaKeysMBS // global property

// when closing media window
m.stopWatchingMediaKeys
```

Notes: The destructor calls this for cleanup.

120.1.7 Properties

120.1.8 Keys(keyCode as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Which keys should be intercepted and handled by your application.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
```

Notes: (Read and Write computed property)

120.1.9 Events

120.1.10 receivedMediaKeyEvent(e as NSEventMBS, keyCode as Integer, keyFlags as Integer, keyState as Integer, keyRepeat as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: The event called when the user uses one of the special keys we listen for.
Notes:

If you don't get the event, did you make sure all conditions are right?

- Requires Mac OS X 10.5
- Keys(x) set to kModeEventAndBlock or kModeEventAndPass for the keys you need?
- startWatchingMediaKeys called?
- your object is still alive in your application?

120.1.11 Constants

120.1.12 kMediaKeyBrightnessDown = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyBrightnessDown) = MediaKeysMBS.kModeEventAndBlock
```

120.1.13 kMediaKeyBrightnessUp = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyBrightnessUp) = MediaKeysMBS.kModeEventAndBlock
```

120.1.14 kMediaKeyCapsLock = 4

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyCapsLock) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Caps Lock

120.1.15 kMediaKeyContrastDown = 12

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyContrastDown) = MediaKeysMBS.kModeEventAndBlock
```

120.1.16 kMediaKeyContrastUp = 11

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyContrastUp) = MediaKeysMBS.kModeEventAndBlock
```

120.1.17 kMediaKeyDownArrow = 9

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyDownArrow) = MediaKeysMBS.kModeEventAndBlock
```

120.1.18 kMediaKeyEject = 14

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.

Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyEject) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Eject key

120.1.19 kMediaKeyFast = 19

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyFast) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Fast key. On by default.

120.1.20 kMediaKeyHelp = 5

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyHelp) = MediaKeysMBS.kModeEventAndBlock
```

120.1.21 kMediaKeyIlluminationDown = 22

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.

Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationDown) = MediaKeysMBS.kModeEventAndBlock
```

120.1.22 kMediaKeyIlluminationToggle = 23

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationToggle) = MediaKeysMBS.kModeEventAndBlock
```

120.1.23 kMediaKeyIlluminationUp = 21

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyIlluminationUp) = MediaKeysMBS.kModeEventAndBlock
```

120.1.24 kMediaKeyLaunchPanel = 13

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyLaunchPanel) = MediaKeysMBS.kModeEventAndBlock
```

120.1.25 kMediaKeyMute = 7

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyMute) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Sound Mute

120.1.26 kMediaKeyNext = 17

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyNext) = MediaKeysMBS.kModeEventAndBlock
```

120.1.27 kMediaKeyNumLock = 10

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyNumLock) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Num Lock key

120.1.28 kMediaKeyPlay = 16

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPlay) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Play key. On by default.

120.1.29 kMediaKeyPower = 6

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPower) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Power Key

120.1.30 kMediaKeyPrevious = 18

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyPrevious) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Previous key

120.1.31 kMediaKeyRewind = 20

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyRewind) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Rewind Key. On by default.

120.1.32 kMediaKeySoundDown = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeySoundDown) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Sound down

120.1.33 kMediaKeySoundUp = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object
```

```
// watch for this key
m.Keys(MediaKeysMBS.kMediaKeySoundUp) = MediaKeysMBS.kModeEventAndBlock
```

Notes: Sound up

120.1.34 kMediaKeyUpArrow = 8

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyUpArrow) = MediaKeysMBS.kModeEventAndBlock
```

120.1.35 kMediaKeyVideoMirror = 15

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the key constants.
Example:

```
dim m as new MediaKeysMBS // your MediaKeys object

// watch for this key
m.Keys(MediaKeysMBS.kMediaKeyVideoMirror) = MediaKeysMBS.kModeEventAndBlock
```

120.1.36 kModeBlock = 1

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the mode constants.
Notes: Block the event.

120.1.37 kModeEventAndBlock = 2

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the mode constants.
Notes: Call the receivedMediaKeyEvent event and block the event.

120.1.38 kModeEventAndPass = 3

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the mode constants.
Notes: Call the receivedMediaKeyEvent event and pass the event to other applications.

120.1.39 kModePass = 0

MBS MacFrameworks Plugin, Plugin Version: 11.2.

Function: One of the mode constants.
Notes: Pass event to other applications.

Chapter 121

MediaLibrary

121.1 class MLMediaGroupMBS

121.1.1 class MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The MLMediaGroup class provides groupings for media objects from a single source of media, such as iTunes or Aperture.
Notes:

The media objects—individual files containing a piece of media such as a photo, song, or movie—are referenced by one or more groups within each media source. These groupings serve as filters, providing hierarchical structure to the collection of objects in each source.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.

A media group has an array of attributes which can change at any point. For example, a media group may have certain attributes that describe its objects, but these attributes appear only after the objects for that group have been loaded. When any media group attribute changes, observers are notified via KVO notification. For information about handling attributes that change, see Cocoa Bindings Programming Topics.

Every media group has a unique identifier as well as a type identifier. In certain cases, multiple groups within a source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.

All MLMediaGroup properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

121.1.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

121.1.3 Methods

121.1.4 childGroups as MLMediaGroupMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A list of child groups contained in the media group.

121.1.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The private constructor.

121.1.6 mediaObjects as MLMediaObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A list of media objects in the media group.
Notes: This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. A KVO notification will be sent via the main thread when data arrives.

121.1.7 MLApertureAllPhotosTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents all photos in Aperture.

121.1.8 MLApertureAllProjectsTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents all projects in Aperture.

121.1.9 MLApertureFacebookAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Facebook album that is visible in Aperture.

121.1.10 MLApertureFacebookGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Facebook user account in Aperture. A Facebook user account contains one or more Facebook albums.

121.1.11 MLApertureFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Faces album in Aperture. Individual Faces albums are nested in the main Faces album.

121.1.12 MLApertureFlaggedTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the album of flagged media in Aperture.

121.1.13 MLApertureFlickrAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Flickr album that is visible in Aperture.

121.1.14 MLApertureFlickrGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Flickr user account in Aperture. A Flickr user account contains one or more Flickr albums.

121.1.15 MLApertureFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a folder in Aperture.

121.1.16 MLApertureLastImportAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the last import album in Aperture.

121.1.17 MLApertureLastNMonthsAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the recent content album in Aperture, known as the Last N Months album. The value for N is usually 12 (settable in Aperture >Preferences >General).

121.1.18 MLApertureLastViewedEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the last viewed event in Aperture.

121.1.19 MLApertureLightTableTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a light table in Aperture.

121.1.20 MLAperturePhotoStreamAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a photo stream in Aperture.

121.1.21 MLAperturePlacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents the Places album in Aperture.

121.1.22 MLAperturePlacesCityAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a city in Aperture. A city album is nested in a province or state album.

121.1.23 MLAperturePlacesCountryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a country in Aperture. A country album is nested in the main Places album.

121.1.24 MLAperturePlacesPointOfInterestAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a point-of-interest in Aperture. A point of interest album is nested in a city album.

121.1.25 MLAperturePlacesProvinceAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a Places album for a province or state in Aperture. A province or state album is nested in a country album.

121.1.26 MLApertureProjectAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a project in Aperture.

121.1.27 MLApertureProjectFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a folder within a project in Aperture.

121.1.28 MLApertureRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The root media group for Aperture.

121.1.29 MLApertureSlideShowTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: The media group that represents a slideshow in Aperture.

121.1.30 MLApertureSmugMugAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a SmugMug album that is visible in Aperture.

121.1.31 MLApertureSmugMugGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a SmugMug user account in Aperture. A SmugMug user account contains one or more SmugMug albums.

121.1.32 MLApertureUserAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a user-created album in Aperture.

121.1.33 MLApertureUserSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Aperture media source.
Notes: A media group that represents a user-created smart album in Aperture.

121.1.34 MLFinalCutEventCalendarGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents a collection of events from a specific time period in Final Cut Pro.

121.1.35 MLFinalCutEventGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents an event in Final Cut Pro.

121.1.36 MLFinalCutEventLibraryGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: The media group that represents the event library in Final Cut Pro. The event library contains all event calendar groups.

121.1.37 MLFinalCutFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents a folder in Final Cut Pro.

121.1.38 MLFinalCutProjectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: A media group that represents a project in Final Cut Pro.

121.1.39 MLFinalCutRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Final Cut Pro media source.
Notes: The root media group for Final Cut Pro.

121.1.40 MLFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in folder-based media sources.
Notes: A media group that represents a folder in folder-based media.

121.1.41 MLFolderRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in folder-based media sources.
Notes: The root media group for folder-based media.

121.1.42 MLGarageBandFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the GarageBand media source.
Notes: A media group that represents a folder in GarageBand.

121.1.43 MLGarageBandRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the GarageBand media source.
Notes: The root media group for GarageBand.

121.1.44 MLiMovieEventCalendarGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents a collection of events from a specific time period in iMovie.

121.1.45 MLiMovieEventGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents an event in iMovie.

121.1.46 MLiMovieEventLibraryGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: The media group that represents the event library in iMovie. The event library contains all event calendar groups.

121.1.47 MLiMovieFolderGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents a folder in iMovie.

121.1.48 MLiMovieProjectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: A media group that represents a project in iMovie.

121.1.49 MLiMovieRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iMovie media source.
Notes: The root media group for iMovie.

121.1.50 MLiPhotoAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents an album in iPhoto.

121.1.51 MLiPhotoEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents an event in iPhoto.

121.1.52 MLiPhotoEventsFolderTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Events album in iPhoto.

121.1.53 MLiPhotoFacebookAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Facebook album that is visible in iPhoto.

121.1.54 MLiPhotoFacebookGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Facebook user account in iPhoto. A Facebook user account contains one or more Facebook albums.

121.1.55 MLiPhotoFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Faces album in iPhoto. Individual Faces albums are nested in the main Faces album.

121.1.56 MLiPhotoFlaggedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the album of flagged media in iPhoto.

121.1.57 MLiPhotoFlickrAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Flickr album that is visible in iPhoto.

121.1.58 MLiPhotoFlickrGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Flickr user account in iPhoto. A Flickr user account contains one or more Flickr albums.

121.1.59 MLiPhotoFolderAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a folder in iPhoto.

121.1.60 MLiPhotoLastImportAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Last Import album in iPhoto.

121.1.61 MLiPhotoLastNMonthsAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the recent content album in iPhoto, known as the Last N Months album. The value for N is usually 12 (settable in iPhoto >Preferences >General).

121.1.62 MLiPhotoLastViewedEventAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the last viewed event in iPhoto.

121.1.63 MLiPhotoLibraryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Photos album in iPhoto.

121.1.64 MLiPhotoPhotoStreamAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a photo stream in iPhoto.

121.1.65 MLiPhotoPlacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The media group that represents the Places album in iPhoto.

121.1.66 MLiPhotoPlacesCityAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a city in iPhoto. A city album is nested in a province or state album.

121.1.67 MLiPhotoPlacesCountryAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a country in iPhoto. A country album is nested in the main Places album.

121.1.68 MLiPhotoPlacesPointOfInterestAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a point-of-interest in iPhoto. A point of interest album is nested in a city album.

121.1.69 MLiPhotoPlacesProvinceAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a Places album for a province or state in iPhoto. A province or state album is nested in a country album.

121.1.70 MLiPhotoRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: The root media group for iPhoto.

121.1.71 MLiPhotoSlideShowAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a slideshow album in iPhoto.

121.1.72 MLiPhotoSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a smart album in iPhoto.

121.1.73 MLiPhotoSubscribedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iPhoto media source.
Notes: A media group that represents a subscribed album in iPhoto.

121.1.74 MLiTunesAudioBooksPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Audio Books playlist in iTunes.

121.1.75 MLiTunesFolderPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a folder in iTunes.

121.1.76 MLiTunesGeniusPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a genius playlist in iTunes.

121.1.77 MLiTunesiTunesUPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the iTunes U playlist in iTunes.

121.1.78 MLiTunesMoviesPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Movies playlist in iTunes.

121.1.79 MLiTunesMusicPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Music playlist in iTunes.

121.1.80 MLiTunesMusicVideosPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Logic media source.
Notes: Musicvideos playlist

121.1.81 MLiTunesPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a user-created playlist in iTunes.

121.1.82 MLiTunesPodcastPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Podcast playlist in iTunes.

121.1.83 MLiTunesPurchasedPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the Purchased playlist in iTunes.

121.1.84 MLiTunesRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The root media group for iTunes.

121.1.85 MLiTunesSavedGeniusPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a saved genius playlist in iTunes.

121.1.86 MLiTunesSmartPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: A media group that represents a smart playlist in iTunes.

121.1.87 MLiTunesTVShowsPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the iTunes media source.
Notes: The media group that represents the TV Shows playlist in iTunes.

121.1.88 MLiTunesVideoPlaylistTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Logic media source.
Notes: Video Playlist

121.1.89 MLLogicBouncesGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Logic media source.
Notes: The media group that represents all bounces in Logic.

121.1.90 MLLogicProjectsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Logic media source.
Notes: The media group that represents all projects in Logic.

121.1.91 MLLogicProjectTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Logic media source.
Notes: A media group that represents a project in Logic. Projects may be nested.

121.1.92 MLLogicRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Logic media source.
Notes: The root media group for Logic.

121.1.93 MLPhotosAlbumsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.94 MLPhotosAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.
Notes: A media group that represents an album in Photos.

121.1.95 MLPhotosAllCollectionsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.96 MLPhotosAllMomentsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.97 MLPhotosAllPhotosAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.98 MLPhotosAllYearsGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.99 MLPhotosAnimatedGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.100 MLPhotosBurstGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.101 MLPhotosCollectionGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.102 MLPhotosDepthEffectGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.103 MLPhotosFacesAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.104 MLPhotosFavoritesGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.105 MLPhotosFolderTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.106 MLPhotosFrontCameraGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.107 MLPhotosLastImportGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.108 MLPhotosLivePhotosGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.109 MLPhotosLongExposureGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.110 MLPhotosMomentGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.111 MLPhotosMyPhotoStreamTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.112 MLPhotosPanoramasGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.113 MLPhotosPublishedAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.114 MLPhotosRootGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.
Notes: The root media group for Photos.

121.1.115 MLPhotosScreenshotGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.116 MLPhotosSharedGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.117 MLPhotosSharedPhotoStreamTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.118 MLPhotosSloMoGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.119 MLPhotosSmartAlbumTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.
Notes: A media group that represents a smart album in Photos.

121.1.120 MLPhotosTimelapseGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.121 MLPhotosVideosGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.122 MLPhotosYearGroupTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for media group types in the Photos media source.

121.1.123 Properties

121.1.124 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Internet object reference.
Notes: (Read and Write property)

121.1.125 IconImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The media group's icon.
Notes: (Read only property)

121.1.126 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: An identifier for the media group.
Notes:

Each group's identifier is unique within a media source.
(Read only property)

121.1.127 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A pointer to the media library instance that loaded the media group's source.
Notes: (Read only property)

121.1.128 MediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: An identifier for the source that loaded the media group.
Notes: (Read only property)

121.1.129 ModificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when the media group was last altered.
Notes: (Read only property)

121.1.130 ModificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time when the media group was last altered.
Notes: (Read only property)

121.1.131 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The name of the media group.
Notes:

This string is human-readable. It is either user created (such as the name of an iTunes playlist) or already localized.
(Read only property)

121.1.132 Parent as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The media group's parent group.
Notes: (Read only property)

121.1.133 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A dictionary of attributes describing the media group.
Notes:

These attributes are usually defined by the source app, such as iTunes. For example, an iTunes playlist is represented as a group. iTunes attaches attributes such as "Playlist Persistent ID" to the group in its attributes. The attribute names vary based on the media source. Attributes common to all sources are called out as separate properties.
(Read only property)

121.1.134 TypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: An identifier for the media group's type.
Notes:

Multiple groups within a media source can have the same type identifier. For descriptions of group type identifiers, see MediaLibrary Constants.
(Read only property)

121.1.135 URL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the media group.
Notes:

Some groups do not have a URL, in which case this returns nil. For example, a group that represents a filesystem folder on disk has a URL, but a group that represents a named face in iPhoto does not.
(Read only property)

121.2 class MLMediaLibraryMBS

121.2.1 class MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The MLMediaLibrary class provides an interface for accessing a collection of media objects from various sources.
Notes:

It serves as the initial access point of the Media Library framework.

The media library structure is defined by MLMediaSource, MLMediaGroup, and MLMediaObject classes. At the highest level, all content within a media library instance is categorized by media source. Conceptually, a media source represents a single app, such as iTunes or Aperture. Each source contains a hierarchy of media groups that originates from a root group. These groups consist of media objects—individual files containing a piece of media such as a photo, song, or movie. Only one copy of each object exists within a media library instance, but an object can be referenced by multiple groups from a single source. The structure of the group hierarchy is specific to each media source.

A media library is initialized using the Constructor. The options argument to this method serves as a filter. By specifying which folders or sources to include or exclude during load, you can view a particular subset of groups and objects from your collection. All objects provided are thread-safe. For descriptions of possible load options, see Load Options Keys.
The typical and most efficient use case is to create and use one instance of MLMediaLibrary for the lifetime of an app. When the underlying media files and metadata on the user's system change, the corresponding data model objects (media groups and media objects) are automatically updated and KVO notifications are sent to notify the calling code of any changes. Multiple instances of MLMediaLibrary can be created and used, but their sources, groups, and objects will be independent of those provided by other instances of MLMediaLibrary.

121.2.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

121.2.3 Methods

121.2.4 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Whether this class available.
Notes: Returns true on Mac OS 10.7 or newer in 64-bit app.

121.2.5 Constructor(options as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Initializes the media library based on the specified load options.
Notes:

options: A dictionary of load options.

Returns a new media library.

For descriptions of possible load options, see Load Options Keys.

121.2.6 MLMediaLoadAppFoldersKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes: Specifies one or more relative paths inside the caller's app bundle in which to search for media files. The value for this key is an array of strings (relative paths inside the caller's app bundle).

121.2.7 MLMediaLoadAppleLoops as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for well-known media folders used to specify the value for MLMediaLoadFoldersKey.
Notes: Identifies the folder containing audio loops from Apple.

121.2.8 MLMediaLoadExcludeSourcesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes: Defines which media sources to exclude when loading. This option is processed after MLMediaLoadIncludeSourcesKey. The value for this key is an array of strings (media source identifiers). For a list of valid media source identifiers, see Media Source Identifiers.

121.2.9 MLMediaLoadFoldersKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes: Specifies the well-known folders that should be searched for media files. If this key is not present, none of the well-known folders will be provided. The value for this key is an array of strings (identifiers that correspond to well-known folder locations). For a list of well-known folder identifiers, see MLMediaLoadMoviesFolder and MLMediaLoadAppleLoops.

121.2.10 MLMediaLoadIncludeSourcesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes: Defines which media sources to include when loading. If not present, load all available media sources. This option is processed after MLMediaLoadSourceTypesKey. If MLMediaLoadIncludeSourcesKey is present but MLMediaLoadSourceTypesKey is not, then only those sources specified here will be loaded. This is useful for loading a single media source. When both keys are present, this is useful for adding one or more media sources that normally would not appear for the requested library type. The value for this key is an array of strings (media source identifiers). For a list of valid media source identifiers, see Media Source Identifiers.

121.2.11 MLMediaLoadMoviesFolder as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the identifiers for well-known media folders used to specify the value for MLMediaLoadFoldersKey.
Notes: Identifies the user's Movies folder.

121.2.12 MLMediaLoadSourceTypesKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the option keys.
Notes: Defines which sources to load based on library type. If not present, this will load all sources. The value for this key is a media source type.

121.2.13 Properties

121.2.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Internet object reference.
Notes: (Read and Write property)

121.2.15 mediaSources as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Returns a dictionary of media sources by identifier.
Notes:

Returns nil the first time, beginning an asynchronous load of the media sources. A KVO notification is sent when all media sources have been loaded. If there are no objects in a media source, the source does not appear in this dictionary.
(Read only property)

121.3 class MLMediaObjectMBS

121.3.1 class MLMediaObjectMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The MLMediaObject class describes a single media file, such as a photo, song, or movie.
Notes:

Each media object contains basic metadata including a name, media type, URL, and so on. Additional information about each object is stored in its list of attributes. For a list of possible object attribute keys, see Media Object Attribute Keys.

A media object belongs to a single media source but can be referenced by several groups within that source. In other words, an object can appear in multiple places in the group hierarchy under a single media source. In iTunes, a movie that was purchased through the iTunes Store is referenced by both the Purchased playlist and the Movies playlist. If a user adds the movie to his own playlist, the group respresenting that playlist will also reference the movie. All three groups reference the same media object.

All MLMediaObject properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

121.3.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

121.3.3 Methods

121.3.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The private constructor.

121.3.5 MLMediaObjectAlbumKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's album. The value for this key is a string.

121.3.6 MLMediaObjectArtistKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's artist. The value for this key is a string.

121.3.7 MLMediaObjectBitRateKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's bit rate, in kilobits per second. The value for this key is a number.

121.3.8 MLMediaObjectChannelCountKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's channel count. The value for this key is a number.

121.3.9 MLMediaObjectCommentsKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the contents of the comments field associated with the media object. The value for this key is a string.

121.3.10 MLMediaObjectDurationKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's duration, in seconds. The value for this key is a number.

121.3.11 MLMediaObjectGenreKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's genre. The value for this key is a string.

121.3.12 MLMediaObjectKeywordsKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the keywords associated with the media object. The value for this key is an array of strings.

121.3.13 MLMediaObjectKindKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Used by iTunes only. Specifies the media object's file format (shown in the "Kind" column in iTunes). The value for this key is a string.

121.3.14 MLMediaObjectProtectedKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies whether the media object is protected by DRM (Digital Rights Management). The value for this key is a boolean value.

121.3.15 MLMediaObjectResolutionStringKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's resolution. The value for this key is a string with size.

121.3.16 MLMediaObjectSampleRateKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's sample rate, in samples per second (Hz). The value for this key is a

number.

121.3.17 MLMediaObjectTrackNumberKey as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: One of the property keys for a media object.
Notes: Specifies the media object's track number. The value for this key is a number.

121.3.18 Properties

121.3.19 ArtworkImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Album artwork associated with the media object.
Notes:

Applies to iTunes media only. Returns nil if not applicable or not available.
(Read only property)

121.3.20 ContentType as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The UTI associated with the media object.
Notes: (Read only property)

121.3.21 File as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the media object.
Notes:

For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

121.3.22 FileSize as UInt64

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The size, in bytes, of the media object.
Notes: (Read only property)

121.3.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Internet object reference.
Notes: (Read and Write property)

121.3.24 Identifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: An identifier for the media object.
Notes:

Each object's identifier is unique within a media source.
(Read only property)

121.3.25 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A pointer to the media library instance that loaded the media object's source.
Notes: (Read only property)

121.3.26 MediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: An identifier for the source that loaded the media object.
Notes:

For a list of possible media source identifiers, see MLMediaLibraryMBS.
(Read only property)

121.3.27 MediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The media object's type of media (image, audio, or movie).
Notes:

For a list of possible media types, see kType* constants.
(Read only property)

121.3.28 ModificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time when the media object was last altered.
Notes: (Read only property)

121.3.29 ModificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time when the media object was last altered.
Notes: (Read only property)

121.3.30 Name as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The name of the media object.
Notes: (Read only property)

121.3.31 OriginalFile as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the original media object, if URL is not the original (master).
Notes:

For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

121.3.32 OriginalURL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the original media object, if URL is not the original (master).
Notes:

This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

121.3.33 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A dictionary of attributes describing the media object.
Notes:

For a list of possible object attribute keys, see Media Object Attribute Keys.
(Read only property)

121.3.34 ThumbnailFile as FolderItem

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the media object's thumbnail image.
Notes:

For your convenience, the plugin provides here a folderitem for the URL.
(Read only property)

121.3.35 ThumbnailURL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the media object's thumbnail image.
Notes:

This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

121.3.36 URL as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The location of the media object.
Notes:

This property is provided as a security-scoped URL. In order to gain access to the file that this URL refers to, the caller must call startAccessingSecurityScopedResource before and stopAccessingSecurityScopedResource after using the URL to access the file. For more information about security-scoped URLs, see NSURL.
(Read only property)

121.3.37 Constants

121.3.38 kTypeAudio = 1

MBS Mac64bit Plugin, Plugin Version: 18.2.

Function: One of the types.
Notes: Audio

121.3.39 kTypeImage = 2

MBS Mac64bit Plugin, Plugin Version: 18.2.

Function: One of the types.
Notes: Image

121.3.40 kTypeMovie = 4

MBS Mac64bit Plugin, Plugin Version: 18.2.

Function: One of the types.
Notes: Movie

121.4 class MLMediaSourceMBS

121.4.1 class MLMediaSourceMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The MLMediaSource class identifies a specific provider of media.
Notes:

Conceptually, a media source respresents a single app, such as iTunes or Aperture. Each media source contains multiple groups of media objects—individual files containing a piece of media such as a photo, song, or movie.

The structure of the group hierarchy is specific to each media source, but all sources have certain commonalities. For example, every source has a single root media group, which contains all groups and objects within that source. It is the highest-level parent group in the hierarchy and each of its descendant groups contains its own subgroups and their objects. All groups have a reference to their parent within the hierarchy. A group with no descendants contains only its own objects. If a media group does not contain any objects, it is not visible in the hierarchy.
Every media source has a unique media source identifier within a single media library instance. For a list of possible media source identifiers, see Media Source Identifiers.
All MLMediaSourceMBS properties are read-only, so this information can be accessed but not altered.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

121.4.2 Blog Entries

- MBS Xojo Plugins, version 18.2pr1

121.4.3 Methods

121.4.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The private constructor.

121.4.5 mediaGroupForIdentifier(mediaGroupIdentifier as string) as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Returns the media group with the specified identifier.
Notes:

mediaGroupIdentifier: The media group identifier to search for in the source.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

121.4.6 mediaGroupsForIdentifiers(mediaGroupIdentifiers() as string) as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Returns the media groups with the specified identifiers.
Notes:

mediaGroupIdentifiers: An array of media group identifiers to search for in the source.

Returns a dictionary of media groups matching the specified identifiers.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

121.4.7 mediaObjectForIdentifier(mediaObjectIdentifier as string) as MLMediaObjectMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Returns the media object with the specified identifier.
Notes:

mediaObjectIdentifier: The media object identifier to search for in the media source.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

121.4.8 mediaObjectsForIdentifiers(mediaObjectIdentifiers() as string) as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Returns the media objects with the specified identifiers.
Notes:

mediaObjectIdentifiers: An array of media object identifiers to search for in the source.

Returns a dictionary of media objects matching the specified identifiers.

The media source must have finished loading before this method returns valid data. Specifically, the root media group must be available before the lookup methods will succeed. Otherwise, the return value is undefined.

121.4.9 MLMediaSourceApertureIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from Aperture.

121.4.10 MLMediaSourceAppDefinedFoldersIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from app defined folder.

121.4.11 MLMediaSourceCustomFoldersIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from a custom folder.

121.4.12 MLMediaSourceFinalCutIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from Final Cut Pro.

121.4.13 MLMediaSourceGarageBandIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from GarageBand.

121.4.14 MLMediaSourceiMovieIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from iMovie.

121.4.15 MLMediaSourceiPhotoIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from iPhoto.

121.4.16 MLMediaSourceiTunesIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from iTunes.

121.4.17 MLMediaSourceLogicIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from Logic.

121.4.18 MLMediaSourceMoviesFolderIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from movies folder.

121.4.19 MLMediaSourcePhotoBoothIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from Photo Booth.

121.4.20 MLMediaSourcePhotosIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The identifier for the media source providing content from photos folder.

121.4.21 Properties

121.4.22 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: Internet object reference.
Notes: (Read and Write property)

121.4.23 MediaLibrary as MLMediaLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A pointer to the media library instance that loaded this media source.
Notes: (Read only property)

121.4.24 mediaSourceIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A unique identifier for the media source.
Notes:

For a list of possible media source identifiers, see shared methods.
(Read only property)

121.4.25 Properties as Dictionary

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: A list of attributes describing the media source.
Notes: (Read only property)

121.4.26 rootMediaGroup as MLMediaGroupMBS

MBS Mac64bit Plugin, Plugin Version: 18.2, Platform: macOS, Targets: All.

Function: The base media group in the media source that contains all other groups within the source as descendant elements.
Notes:

This accessor property is nonblocking. If there is no data yet, it returns nil and automatically triggers an internal asynchronous request. When data arrives, a KVO notification is sent via the main thread.
(Read only property)

121.4.27 Constants

121.4.28 kSourceTypeAudio = 1

MBS Mac64bit Plugin, Plugin Version: 18.2.

Function: One of the source types.
Notes: Audio

121.4.29 kSourceTypeImage = 2

MBS Mac64bit Plugin, Plugin Version: 18.2.

Function: One of the source types.
Notes: Images

121.4.30 kSourceTypeMovie = 4

MBS Mac64bit Plugin, Plugin Version: 18.2.

Function: One of the source types.
Notes: Movies

121.5 class NSMediaLibraryBrowserControllerMBS

121.5.1 class NSMediaLibraryBrowserControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: An instance of an NSMediaLibraryBrowserController configures and displays a Media Library Browser Panel.
Notes:

A User can drag and drop media files from the Media Library Browser into views in their application.
Requires Mac OS X 10.9.

121.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr1

121.5.3 Methods

121.5.4 available as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.9 and false on other platforms.

121.5.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new object for the shared library browser.

121.5.6 orderFront

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Orders window to front.

121.5.7 orderOut

MBS MacFrameworks Plugin, Plugin Version: 17.1, Platform: macOS, Targets: Desktop only.

Function: Orders window out.
Notes: Hides window.

121.5.8 sharedMediaLibraryBrowserController as NSMediaLibraryBrowserControllerMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Returns a new object for the shared library browser.

121.5.9 togglePanel

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Toggles the panel to hide/show.

121.5.10 Properties

121.5.11 Frame as NSRectMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The bounds of the panel.
Notes: (Read and Write property)

121.5.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

121.5.13 mediaLibraries as Integer

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Which media library to show: audio, video or image.
Notes: (Read and Write property)

121.5.14 Visible as Boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The visible state of the browser panel.
Notes: (Read and Write property)

121.5.15 Constants

121.5.16 NSMediaLibraryAudio = 1

MBS MacFrameworks Plugin, Plugin Version: 13.5.

Function: One of the media library type constants.
Notes: Audio

121.5.17 NSMediaLibraryImage = 2

MBS MacFrameworks Plugin, Plugin Version: 13.5.

Function: One of the media library type constants.
Notes: Image

121.5.18 NSMediaLibraryMovie = 4

MBS MacFrameworks Plugin, Plugin Version: 13.5.

Function: One of the media library type constants.
Notes: Movie

Chapter 122

MemoryBlock

122.1 Globals

122.1.1 NewMemoryBlockWithBytesMBS(Data as Ptr, size as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new memoryblock with a copy of the given data.

122.1.2 NewMemoryBlockFromPtrMBS(ptr as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock for a given address in memory.

122.1.3 Memoryblock2ptrMBS(mem as memoryblock) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the memory adress of the memoryblock

122.1.4 ptr2MemoryblockMBS(Value as Integer) as memoryblock

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a memoryblock with the bytes at position mem in memory.

122.2 class Memoryblock

122.2.1 class Memoryblock

Platforms: macOS, Linux, Windows, Targets: All.

Function: Extends Xojo's Memoryblock class.

122.2.2 Methods

122.2.3 AddressMBS(offset as Int64 = 0) as UInt64

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the adress of the byte at offset inside the memoryblock.

122.2.4 AddressPtrMBS(offset as Int64 = 0) as Ptr

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the adress of the byte at offset inside the memoryblock.

122.2.5 AndBitsMBS(Second as memoryblock, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a And on the bits in the memoryblock.
Example:

```
dim m1 as MemoryBlock = NewMemoryBlock(20)
dim m2 as MemoryBlock = NewMemoryBlock(20)
dim m3 as MemoryBlock = NewMemoryBlock(20)

m1.Int32Value(0)=& b10000001
m2.Int32Value(0)=& b10000000

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

```
call m1.AndBitsMBS(m2,m3)

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

Notes:

Dest is first and second memoryblock combine with a bitwiseand.
And first and second memoryblock are filled with the difference between them.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.
See also:

- 122.2.6 AndBitsMBS(Second as memoryblock, Mask as Integer, Dest as memoryblock=nil) as memoryblock 19319

122.2.6 AndBitsMBS(Second as memoryblock, Mask as Integer, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Performs a And on the bits in the memoryblock.
Example:

```
dim m1 as MemoryBlock = NewMemoryBlock(20)
dim m2 as MemoryBlock = NewMemoryBlock(20)
dim m3 as MemoryBlock = NewMemoryBlock(20)

m1.Int32Value(0)=& b11110001
m2.Int32Value(0)=& b11110000

const mask = & b11001111

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))

call m1.AndBitsMBS(m2,mask,m3)

MsgBox bin(m1.Int32Value(0))+EndOfLine+bin(m2.Int32Value(0))+EndOfLine+bin(m3.Int32Value(0))
```

Notes:

The mask is always 8 bit. Use the & b notation to specify it.
Dest is first and second memoryblock combine with a bitwiseand.
And first and second memoryblock are filled with the difference between them. Only bits set int he given mask are used.

If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.
See also:

- 122.2.5 AndBitsMBS(Second as memoryblock, Dest as memoryblock=nil) as memoryblock 19318

122.2.7 AppendMBS(other as memoryblock) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new memoryblock with the bytes of the two given memoryblocks.
Notes:

This function will not work if the memoryblock has an unknown size.
If one memoryblock is nil than you get a copy of the other memoryblock.

122.2.8 BytesEqualMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer) as Boolean

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if equal byte data.
Example:

```
dim m1 as MemoryBlock = NewMemoryBlock(100)
dim m2 as MemoryBlock = NewMemoryBlock(100)

// try with 2 different strings
m1.CString(0)="Hello"
m2.CString(0)="Hallo"

if m1.BytesEqualMBS(0, 100, m2, 0) then
MsgBox "equal"
else
MsgBox "not equal"
end if

// try with 2 equal strings
```

```
m1.CString(0)="Hello"
m2.CString(0)="Hello"

if m1.BytesEqualMBS(0, 100, m2, 0) then
MsgBox "equal"
else
MsgBox "not equal"
end if
```

Notes:

Fixed in 10.1 to return true on equal bytes and false on non equal bytes. Older plugin versions returned the wrong value.

Does not check the bounds of the memoryblock, so it can crash with wrong parameters.
Returns false if one of the memoryblocks is nil.

122.2.9 BytesZeroMBS(srcOfs as Integer, numBytes as Integer) as Boolean

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if all bytes in the memoryblock in the given range are zero.
Example:

```
dim m as MemoryBlock = NewMemoryBlock(100)

if m.BytesZeroMBS(0,100) then
MsgBox "all zero"
else
MsgBox "error"
end if

m.Byte(50)=1

if m.BytesZeroMBS(0,100) then
MsgBox "error"
else
MsgBox "okay"
end if
```

Notes:

Returns false on any error.
Bounds are not checked with the memoryblock, so be careful.

122.2.10 ClearBitMBS(Bit as UInt64)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the given bit in the MemoryBlock.
Example:

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)
Dim v1 As Boolean = m.IsBitSetMBS(123)
m.ClearBitMBS(123)
Dim v2 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes:

Sets value of the bit to zero.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

122.2.11 ConvertRGB12BitTo8BitMBS(Width as Integer)

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts a memoryblock with 12 bit RGB data into 8 bit RGB data.
Notes:

Width is number of pixels.

Please make sure the memoryblock is 9 bytes bigger than input to avoid errors.
Plugin converts each 9 bytes (72 bits) with 2 RGB triple. So first 12 bits are red, next 12 bits green and last 12 bits blue.
Plugin removes last 4 bits.

122.2.12 CopyBytesFromMacHandleMBS(srcHandle as Integer, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Copies bytes from Mac Handle into your memoryblock.
Notes: Same as CopyBytesFromMacPtr, only that the memory address is a so-called Handle (see documentation about the MacOS memory Manager), which is double-referenced.

122.2.13 CopyBytesFromMacPtrMBS(srcPtr as Ptr, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given amount of bytes from the given address in the Mac's memory address space into the memoryBlock.
Notes: Make sure that the destination block is large enough to hold the copied bytes (if not, your application or even the whole system can crash).

122.2.14 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the specified amount of bytes into a second memoryBlock.
Example:

```
dim m as MemoryBlock
dim n as MemoryBlock

m=NewMemoryBlock(100)
n=NewMemoryBlock(100)

m.Long(0)=12345

m.CopyBytesMBS(0,4,n,0)

MsgBox str(n.long(0))
```

Notes: You must make sure that the destination block is large enough to hold the copied bytes (if not, your application or even the whole system can crash).
See also:

- 122.2.15 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destOfs as Integer) 19324

122.2.15 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destOfs as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the specified amount of bytes inside the memoryBlock.
Notes: You must make sure that the copied bytes fit inside the block (if they don't, your application or even the whole system can crash).
See also:

- 122.2.14 CopyBytesMBS(srcOfs as Integer, numBytes as Integer, destBlk as memoryBlock, destOfs as Integer) 19323

122.2.16 CopyBytesToMacHandleMBS(srcOfs as Integer, numBytes as Integer, destHandle as Integer)

MBS Util Plugin, Platform: macOS, Targets: All.

Function: Copies byte data from the memoryblock into the memory the handle is pointing to.
Notes: Same as CopyBytesToMacPtr, only that the memory address is a so-called Handle (see documentation about the MacOS memory Manager), which is double-referenced.

122.2.17 CopyBytesToMacPtrMBS(srcOfs as Integer, numBytes as Integer, destPtr as Ptr)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the given amount of bytes from the memoryBlock to the given address in the Mac's memory address space.
Notes: Be careful where you copy the data to - you can easily crash your computer if you write to the wrong address space.

122.2.18 CopyByteToUShortMBS(dest as memoryblock, SourceOffset as Integer, DestinationOffset as Integer, ByteCount as Integer, divisor as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies bytes in a memoryblock to another memoryblock converting the 8bit values to 16bit values.
Notes:

Common values for divisor are 256 and 257.
No bound checking. Crashes with invalid values. Optimized for special divisor values.

122.2.19 CopyNthBitsMBS(source as memoryblock, SourceOffsetBits as Integer, DestinationOffsetBits as Integer, BitCount as Integer, StepCount as Integer, NumberOfSteps as Integer) as boolean

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies every nth bits in the source memoryblock to the current memoryblock.
Notes:

BitCount = the number of bits to copy from each step.
StepCount = the number of bits to not copy.
NumberOfSteps = the number of rounds to do.
There is no bound checking. The function will crash with invalid parameters!

122.2.20 CopyNthBytesMBS(source as memoryblock, SourceOffsetBytes as Integer, DestinationOffsetBytes as Integer, ByteCount as Integer, StepCount as Integer, NumberOfSteps as Integer) as boolean

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies every nth bytes in the source memoryblock to the current memoryblock.
Example:

```
dim s,d as memoryBlock

s=NewmemoryBlock(100)
d=NewmemoryBlock(100)

s.CString(0)="Hello World!"

call d.CopyNthBytesMBS(s,0,0,2,4,3)

MsgBox d.CString(0) // "Heo rl"
```

Notes:

ByteCount = the number of bytes to copy from each step.
StepCount = the number of bytes to move for each step forward in source.
NumberOfSteps = the number of steps to do.
There is no bound checking. The function will crash with invalid parameters!

122.2.21 CopyUShortToByteMBS(dest as memoryblock, SourceOffset as Integer, DestinationOffset as Integer, ByteCount as Integer, divisor as Integer)

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies shorts in a memoryblock to another memoryblock converting the 16bit values to 8bit values.
Notes:

Common values for divisor are 256 and 257.
No bound checking. Crashes with invalid values. Optimized for special divisor values.

122.2.22 CRC_32ContMBS(offset as Integer, numBytes as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.

122.2.23 CRC_32MBS(offset as Integer, numBytes as Integer) as UInt32

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 32bit Checksum about the provided block of data.

122.2.24 CRC_CCITTContMBS(offset as Integer, numBytes as Integer, prevCRC as UInt32) as UInt32

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided string.

122.2.25 CRC_CCITTMBS(offset as Integer, numBytes as Integer) as UInt32

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16bit Checksum about the provided block of data.
Notes:

See the text "About-CRC" for details about this Checksum things.
This function is also available for strings.

See the CRC_32 for more details on Checksums.

122.2.26 CRC_DillonMBS(bitWidth as Integer, offset as Integer, numBytes as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates a 16 to 64bit Checksum about the provided block of data.
Notes:

This function is also available for strings.

See the CRC_32 for more details on Checksums.

122.2.27 EndianS16_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_BtoLMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.28 EndianS16_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_BtoNMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.29 EndianS16_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_LtoBMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.30 EndianS16_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_LtoNMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.31 EndianS16_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_NtoBMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.32 EndianS16_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS16_NtoLMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.33 EndianS32_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_BtoLMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.34 EndianS32_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_BtoNMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.35 EndianS32_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_LtoBMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.36 EndianS32_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_LtoNMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.37 EndianS32_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_NtoBMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.38 EndianS32_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianS32_NtoLMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.39 EndianSwap16MBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Swaps several 16 bit integers inside a memoryblock.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianSwap16MBS(0,mem.size/2)
```

122.2.40 EndianSwap32MBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Swaps several 32 bit integers inside a memoryblock.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianSwap32MBS(0,mem.size/4)
```

122.2.41 EndianU16_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_BtoLMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:

S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.42 EndianU16_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_BtoNMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.43 EndianU16_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_LtoBMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.44 EndianU16_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_LtoNMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.45 EndianU16_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
```

```
mem.EndianU16_NtoBMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.46 EndianU16_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU16_NtoLMBS(0,mem.size/2)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.47 EndianU32_BtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_BtoLMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.48 EndianU32_BtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_BtoNMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.49 EndianU32_LtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_LtoBMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.50 EndianU32_LtoNMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_LtoNMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.51 EndianU32_NtoBMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_NtoBMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.52 EndianU32_NtoLMBS(offset as Integer,count as Integer)

MBS Util Plugin, Platforms: macOS, Windows, Targets: All.

Function: Converts between BigEndian, LowEndian and Native byte encoding.
Example:

```
dim mem as memoryblock // your memoryblock
mem.EndianU32_NtoLMBS(0,mem.size/4)
```

Notes:

e.g.:
EndianS32_BtoNMBS(offset as Integer,count as Integer)
EndianU16_LtoBMBS(offset as Integer,count as Integer)

Details:
S for signed or U for unsigned.
16 for short and 32 for integer.
B for BigEndian (Mac), L for LowEndian (x86) and N for the native form of the current platform.

Note that count is not the size of the block, but the count of the integers to change.

122.2.53 ExpandBitsMBS(dest as memoryblock, SourceByteCount as Integer, LowValue as Integer = 0, HighValue as Integer = 255) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Expands bits into bytes.
Example:

```
dim m1 as new MemoryBlock(200)
dim m2 as new MemoryBlock(1600)

for i as Integer = 0 to 127
m1.Int8Value(i) = i
next

dim n as Integer = 128
dim b as Boolean = m1.ExpandBitsMBS(m2, n)

break // see result in debugger
```

Notes:

Takes a bit from the source memoryblock and writes a byte for it to destination. Uses LowValue (default 0) if the bit is not set and HighValue (Default 255) if the bit is set.
Works only on x86 CPUs (no PPC).
Reads source memoryblock in 32 bit blocks and writes the destination in 32 byte blocks.

122.2.54 ExtractBitsMBS(Mask as Integer, Dest as memoryblock=nil) as memoryblock

MBS Util Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies bits from a memoryblock to another.
Example:

```
dim mask as Integer = & b01010101
dim m as MemoryBlock = "Hello World"

dim r as MemoryBlock = m.ExtractBitsMBS(mask)

MsgBox r.StringValue(0,r.size) // shows "@EDDE UEPDD"
```

Notes:

The mask is always 8 bit. Use the & b notation to specify it.
If dest is nil, a new memoryblock is created. You can speed up processing with reusing the same memoryblock in iterations. If you pass a memoryblock, the plugin does not check the size of the memoryblock.

Returns nil on any error. For example if source is a memoryblock without a known size.

122.2.55 FillBytesMBS(offset as Integer, count as Integer, value as Integer)

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Fills memory with a specific byte value.
Notes: Caution: No bounds checking.

122.2.56 FindByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the position of the first byte which has the given value.
Example:

```
dim m as MemoryBlock = NewMemoryBlock(100)
dim n as Integer

n = m.FindByteMBS(0, 100, 0)

MsgBox str(n) // shows 0 as the byte at offset 0 is zero
```

```
m.Byte(0)=1

n = m.FindByteMBS(0, 100, 0)

MsgBox str(n) // shows 1 as the byte at offset 1 is zero

m.FillBytesMBS(0,100,5)

n = m.FindByteMBS(0, 100, 6)

MsgBox str(n) // shows -1 as there is no byte with value 6
```

Notes: Returns -1 if the byte is not found.

122.2.57 FindBytesMBS(srcOfs as Integer, maxBytes as Integer, target as memoryBlock, targOfs as Integer, targLen as Integer) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds some bytes from the target memoryblock inside the current memoryblock.

122.2.58 FindNotByteMBS(srcOfs as Integer, numBytes as Integer, byteValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the position of the first byte which has no the given value.
Example:

```
dim m as MemoryBlock = NewMemoryBlock(100)
dim n as Integer

n = m.FindNotByteMBS(0, 100, 0)

MsgBox str(n) // -1 as no value is not zero

m.Byte(30)=1

n = m.FindNotByteMBS(0, 100, 0)

MsgBox str(n) // shows 30 as the byte at offset 30 is not zero
```

```
m.Byte(0)=255

n = m.FindNotByteMBS(0, 100, 255)

MsgBox str(n) // shows 1 as the byte at offset 1 is not 255
```

Notes: Returns -1 if the no byte was found which has not the given value.

122.2.59 FindStringMBS(srcOfs as Integer, maxBytes as Integer, target as String) as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds a string inside a memoryblock.

122.2.60 GetBitMBS(Bit as UInt64) as Integer

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value of the given bit in the MemoryBlock.
Example:

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)
Dim v1 As Integer = m.GetBitMBS(123)
Break // see debugger
```

Notes:

Returns 1 if bit is set or 0 if not.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

122.2.61 GetStringMBS(offset as Integer, numBytes as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string from the memoryblock.

Notes: With newer RB versions you may better use StringValue.

122.2.62 InvertBytesMBS(offset as Integer, count as Integer)

MBS Util Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inverts the given number of bytes in a memoryblock.
Example:

```
dim m as memoryblock
m=newmemoryblock(100)
' do something
m.InvertBytesMBS(0,100) // invert all bytes
```

Notes: Does work faster if count is a multiply of 4.

122.2.63 IsBitSetMBS(Bit as UInt64) as Boolean

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries value of the given bit in the MemoryBlock.
Example:

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes:

Returns true if bit is set or false if not.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.

122.2.64 LeftMBS(length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the first given number of bytes.
Notes:

If length is greater than the size of the memoryblock then then length is set to size.
Returns nil if length<=0 or on low memory.
This function will not work if the memoryblock has an unknown size.

122.2.65 MaxMBS(firstMem as Ptr, secondMem as Ptr, BitSize as Integer = 8, Signed as Boolean = false, offsetByte as Integer = 0, lengthBytes as Integer = 0) as boolean

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates max values of values in memory.
Example:

```
dim m1 as new MemoryBlock(12)
dim m2 as new MemoryBlock(12)
dim mr1 as new MemoryBlock(12)
dim mr2 as new MemoryBlock(12)

for i as Integer = 0 to 11
m1.UInt8Value(i) = i
m2.UInt8Value(11-i) = i
next

if mr1.minMBS(m1, m2) then
if mr2.maxMBS(m1, m2) then

MsgBox EncodeHex(m1)+" first"+EndOfLine+_
EncodeHex(m2)+" second"+EndOfLine+_
EncodeHex(mr1)+" min"+EndOfLine+_
EncodeHex(mr2)+" max"

end if
end if
```

Notes:

firstMem and secondMem can be ptr or memoryblock with some values. Can be same as destination (the memoryblock the method is called at)
BitSize defines integer bit depth 8, 16, 32 or 64. Signed defines if to expect signed or unsigned integers.
offsetByte defines offset in destination memoryblock. lengthBytes is length of memory. If zero, we use size of destination memoryblock.
Passing bad parameters can easily lead to crash. Return true on success and false on failure and raises

exceptions for invalid parameters.

122.2.66 MidMBS(offset as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the bytes of the given memoryblock from the given offset on.
Notes:

Offset is 0 based.
Returns nil if offset<0 or on low memory.
This function will not work if the memoryblock has an unknown size.
See also:

- 122.2.67 MidMBS(offset as Integer, length as Integer) as memoryblock 19347

122.2.67 MidMBS(offset as Integer, length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the given bytes from the middle of the memoryblock.
Notes:

Offset is 0 based.
Returns nil if offset<0 or on low memory.
If length is too long then length is set to a lower value.
This function will not work if the memoryblock has an unknown size.
See also:

- 122.2.66 MidMBS(offset as Integer) as memoryblock 19347

122.2.68 MinMBS(firstMem as Ptr, secondMem as Ptr, BitSize as Integer = 8, Signed as Boolean = false, offsetByte as Integer = 0, lengthBytes as Integer = 0) as boolean

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates min values of values in memory.
Example:

```
dim m1 as new MemoryBlock(24)
dim m2 as new MemoryBlock(24)
dim mr1 as new MemoryBlock(24)
dim mr2 as new MemoryBlock(24)
```

```
for i as Integer = 0 to 11
m1.UInt16Value(2*i) = i
m2.UInt16Value(2*(11-i)) = i
next

if mr1.minMBS(m1, m2, 16, false, 0, 24) then
if mr2.maxMBS(m1, m2, 16, false, 0, 24) then

MsgBox EncodeHex(m1)+" first"+EndOfLine+_
EncodeHex(m2)+" second"+EndOfLine+_
EncodeHex(mr1)+" min"+EndOfLine+_
EncodeHex(mr2)+" max"

end if
end if
```

Notes:

firstMem and secondMem can be ptr or memoryblock with some values. Can be same as destination (the memoryblock the method is called at)
BitSize defines integer bit depth 8, 16, 32 or 64. Signed defines if to expect signed or unsigned integers.
offsetByte defines offset in destination memoryblock. lengthBytes is length of memory. If zero, we use size of destination memoryblock.
Passing bad parameters can easily lead to crash. Return true on success and false on failure and raises exceptions for invalid parameters.

122.2.69 MirrorBitsInBytesMBS(offsetByte as Integer, lengthByte as Integer)

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors bits in each byte.
Example:

```
dim m as new MemoryBlock(12)

m.CString(0)="HelloHello"

m.MirrorBitsInBytesMBS(0,5)

MsgBox EncodingToHexMBS(m.StringValue(5,5))+" ->"+EncodingToHexMBS(m.StringValue(0,5))
```

Notes:

offsetByte: where to start in the memoryblock

lengthByte: number of bytes to swap

Mirror means in this case, that if you a byte with bits 11001100, after the mirror, you have 00110011. So bit 0 and 7 exchange values. Same for 1 and 6, 2 and 5, 3 and 4.

122.2.70 MirrorBitsMBS(offsetBit as Integer, lengthBit as Integer)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the bits in a memoryblock.
Notes:

e.g. "111100001" in the memoryblock would give "100001111"
This function is certainly not the fastest one, but faster than anything you can get written in Xojo.
And make sure the bounds are matched, because on memory access outside the valid ranges, the function will crash.
0 offsetBit <mem.size*8 and 0 lengthBit mem.size*8 - offsetBit

122.2.71 MirrorBytesMBS(offsetByte as Integer = 0, lengthByte as Integer = -1)

MBS Util Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the bytes in the given range.
Notes:

e.g. "abcdefgh" in the memoryblock would give "hgfedcba"
This function is certainly not the fastest one, but faster than anything you can get written in Xojo.
And make sure the bounds are matched, because on memory access outside the valid ranges, the function will crash.
0 offsetByte <mem.size and 0 lengthByte mem.size - offsetByte

If lengthByte is -1, we query memoryblock for size. If size is unknown or negative, the function does nothing.

122.2.72 MultiplyUInt16MBS(Factor as Double, offsetByte as Integer = 0, lengthBytes as Integer = 0, MultiplyOnlyOver as Integer = -1)

MBS Util Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplied UInt16 values in the memoryblock.
Example:

```
dim myMemOut3 as new MemoryBlock(500)
```

myMemOut3.MultiplyUInt16MBS(0.9)

Notes:

Values bigger than 65535 are set to 65535.
lengthBytes is in bytes, so 2 times the number of values.
Factor must be >= 0.0.
Offset is the offset in bytes from the beginning of the memoryblock to start. Wrong offsets (e.g. negative) can lead to crashes. lengthBytes is optional, if not specified or zero uses the length of memoryblock.

Added MultiplyOnlyOver parameter in version 18.4. If negative, we multiply all values. If positive, we multiply only values >the given value.

122.2.73 MultiplyUInt8MBS(Factor as Double, offsetByte as Integer = 0, lengthBytes as Integer = 0, MultiplyOnlyOver as Integer = -1)

MBS Util Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Multiplies UInt8 values in the memoryblock.
Example:

dim myMemOut3 as new MemoryBlock(500)
myMemOut3.MultiplyUInt8MBS(0.9)

Notes:

Values bigger than 255 are set to 255.
lengthBytes is in bytes, so 2 times the number of values.
Factor must be >= 0.0.
Offset is the offset in bytes from the beginning of the memoryblock to start. Wrong offsets (e.g. negative) can lead to crashes. lengthBytes is optional, if not specified or zero uses the length of memoryblock.

Added MultiplyOnlyOver parameter in version 18.4. If negative, we multiply all values. If positive, we multiply only values >the given value.

122.2.74 RightMBS(length as Integer) as memoryblock

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a memoryblock with the given number of bytes from the right side of the memoryblock.
Example:

```
dim mem,m as MemoryBlock
mem=m.RightMBS(5)
```

Notes:

If length is more than the memoryblock's size, than length is set to size.
Returns nil if length<=0 or on low memory.
This function will not work if the memoryblock has an unknown size.

122.2.75 SetBitMBS(Bit as UInt64)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value of the given bit in the MemoryBlock.
Example:

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes:

Sets bit to 1.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 122.2.76 SetBitMBS(Bit as UInt64, Value as Boolean) 19351
- 122.2.77 SetBitMBS(Bit as UInt64, Value as Integer) 19352

122.2.76 SetBitMBS(Bit as UInt64, Value as Boolean)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value of the given bit in the MemoryBlock.
Example:

```
Dim m As New MemoryBlock(100)
```

```
m.SetBitMBS(123, true)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes:

Pass true to set bit or false to clear bit.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 122.2.75 SetBitMBS(Bit as UInt64) 19351
- 122.2.77 SetBitMBS(Bit as UInt64, Value as Integer) 19352

122.2.77 SetBitMBS(Bit as UInt64, Value as Integer)

MBS Util Plugin, Plugin Version: 21.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value of the given bit in the MemoryBlock.
Example:

```
Dim m As New MemoryBlock(100)

m.SetBitMBS(123, 1)

Dim v1 As Boolean = m.IsBitSetMBS(123)
Break // see debugger
```

Notes:

Pass 1 to set bit or 0 to clear bit.

Raises exception is MemoryBlock is nil.
If MemoryBlock has a known size and Bit is out of range, we raise an OutOfBoundsException.
See also:

- 122.2.75 SetBitMBS(Bit as UInt64) 19351
- 122.2.76 SetBitMBS(Bit as UInt64, Value as Boolean) 19351

122.2.78 SetStringMBS(str as String, offset as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets a string inside the memoryblock.
Notes: With newer RB versions you may better use StringValue.

122.2.79 SwapBytes16MBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swaps words inside the given bounds inside the memoryblock.
Example:

```
dim numbytes as Integer // number of bytes in MemoryBlock
dim m as MemoryBlock // your memoryblock
dim i as Integer

for i=0 to numbytes step 2
m.UShort(i)=EndianSwap16MBS(m.UShort(i))
next
```

122.2.80 SwapBytes32MBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swaps longs inside the given bounds inside the memoryblock.
Example:

```
// Test SwapBytes32MBS and SwapBytes16MBS:

const h11223344=& h11223344
const h22114411=& h22114433 // 16bit swap
const h44332211=& h44332211 // 32bit swap

dim m as memoryBlock
dim ok as Integer

m=NewmemoryBlock(20)
m.Long(00)=h11223344
m.Long(04)=h11223344
m.Long(08)=h11223344
m.Long(12)=h11223344
m.Long(16)=h11223344
```

```
m.SwapBytes16MBS(4,4)
m.SwapBytes32MBS(12,4)

if m.Long(00)=h11223344 then
ok=ok+1
else
MsgBox "00: "+hex(m.Long(00))
end if

if m.Long(04)=h22114411 then
ok=ok+1
else
MsgBox "04: "+hex(m.Long(04))
end if

if m.Long(08)=h11223344 then
ok=ok+1
else
MsgBox "08: "+hex(m.Long(08))
end if

if m.Long(12)=h44332211 then
ok=ok+1
else
MsgBox "12: "+hex(m.Long(12))
end if

if m.Long(16)=h11223344 then
ok=ok+1
else
MsgBox "16: "+hex(m.Long(16))
end if

if ok=5 then
MsgBox "OK"
else
MsgBox "Fail"
end if
```

Notes:

It should do something like this:

```
dim m as memoryBlock

for i=0 to numbytes step 2
```

m.long(i)=EndianSwap32MBS(m.long(i))
next

122.2.81 SwapBytesMBS(offset as Integer, numBytes as Integer)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Swaps bytes inside the given bounds inside the memoryblock.
Notes: Reverses the order of the bytes at the given offset and length in the memoryBlock. This is helpful to change representation of values from Little Endian (used in Windows) to Big Endian (used in Mac OS) and vice versa. Thanks to Franco Vaccari for the code of this routine.

122.2.82 Properties

122.2.83 OSTypeMBS(offset as Integer) as String

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read/Write an OSType.
Notes:

Interprets 4 bytes starting at the given offset as a OSType value.
(Read and Write computed property)

122.3 class MemoryBlockMBS

122.3.1 class MemoryBlockMBS

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class to hold a memoryblock.
Example:

```
dim m as new MemoryBlockMBS

if m.Create(2000) then

// copy struing into memory
m.Memory.StringValue(0,5)="Hello"

// and read again
MsgBox m.Memory.StringValue(0,5)

end if
```

Notes:

Xojo's memoryblocks have two bad things:
- they are limited to 1 GB on Mac OS X and Mac OS Classic
- they take a lot of time to create them
- they take a lot of real memory

Xojo allocates the memory and fills it with zeros.

The plugin in contrast uses zero filled pages to create the memoryblock which nearly take no time to create them and it does only need virtual memory until the memory is really used which saved swapping space.

122.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr2
- MemoryblockMBS benchmark
- MBS REALbasic plug-ins version 9.4

122.3.3 Methods

122.3.4 Close

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

122.3.5 Constructor

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: This constructor does nothing, so you can call Create yourself.
See also:

- 122.3.6 Constructor(Mem as MemoryBlock) 19357
- 122.3.7 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 19358
- 122.3.8 Constructor(Size as Int64) 19358
- 122.3.9 Constructor(Str as String) 19359
- 122.3.10 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 19359

122.3.6 Constructor(Mem as MemoryBlock)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with content of memoryblock.
Example:

```
dim s as string = "Hello World"
dim m as MemoryBlock = s

dim x as new MemoryBlockMBS(m)

MsgBox str(x.Size)
```

Notes: Raises exception is size is invalid or no memory is available.
See also:

- 122.3.5 Constructor 19357

- 122.3.7 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 19358
- 122.3.8 Constructor(Size as Int64) 19358
- 122.3.9 Constructor(Str as String) 19359
- 122.3.10 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 19359

122.3.7 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with given size and copies content of memoryblock.
Example:

```
dim s as string = "Hello World"
dim m as MemoryBlock = s

dim x as new MemoryBlockMBS(m, 9)

MsgBox str(x.Size)
```

Notes: Raises exception is size is invalid or no memory is available.
See also:

- 122.3.5 Constructor 19357
- 122.3.6 Constructor(Mem as MemoryBlock) 19357
- 122.3.8 Constructor(Size as Int64) 19358
- 122.3.9 Constructor(Str as String) 19359
- 122.3.10 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 19359

122.3.8 Constructor(Size as Int64)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with given size.
Notes: Raises exception is size is invalid or no memory is available.
See also:

- 122.3.5 Constructor 19357
- 122.3.6 Constructor(Mem as MemoryBlock) 19357
- 122.3.7 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 19358

- 122.3.9 Constructor(Str as String) 19359
- 122.3.10 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 19359

122.3.9 Constructor(Str as String)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with content of string.
Example:

```
dim s as string = "Hello World"
dim x as new MemoryBlockMBS(s)

MsgBox str(x.Size)
```

Notes:

Text encoding is ignored and bytes copied as they are.
Raises exception is size is invalid or no memory is available.
See also:

- 122.3.5 Constructor 19357
- 122.3.6 Constructor(Mem as MemoryBlock) 19357
- 122.3.7 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 19358
- 122.3.8 Constructor(Size as Int64) 19358
- 122.3.10 Constructor(Str as String, Size as Int64, Offset as Int64 = 0) 19359

122.3.10 Constructor(Str as String, Size as Int64, Offset as Int64 = 0)

MBS Util Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new MemoryBlockMBS with given size and copies content of string.
Example:

```
dim s as string = "Hello World"
dim x as new MemoryBlockMBS(s, 9)

MsgBox str(x.Size)
```

Notes:

Text encoding is ignored and bytes copied as they are.
Raises exception is size is invalid or no memory is available.
See also:

- 122.3.5 Constructor 19357
- 122.3.6 Constructor(Mem as MemoryBlock) 19357
- 122.3.7 Constructor(Mem as MemoryBlock, Size as Int64, Offset as Int64 = 0) 19358
- 122.3.8 Constructor(Size as Int64) 19358
- 122.3.9 Constructor(Str as String) 19359

122.3.11 Create(size as Int64) as boolean

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new memoryblock.
Example:

```
dim m as MemoryBlockMBS
dim n as MemoryBlock
dim t as Integer

const size=2200000000

// RB: up to 1 GigaByte
// Plugin: up to 2 GigaByte - 1 Byte

m=New MemoryBlockMBS

t=ticks
if m.Create(size) then
n=m.Memory

MsgBox str(ticks-t)

end if

t=ticks
n=NewMemoryBlock(size)
if n<>nil then
MsgBox str(ticks-t)
end if
```

Notes:

Returns true on success and false on failure.
Size can be any positive value up to & h7FFFFFFF (=2^31-1).

Size became 64bit to avoid integer overflows.

122.3.12 Resize(Size as Int64) as boolean

MBS Util Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tries to resize the memorybock to the new size.
Example:

```
dim m as new MemoryBlockMBS

if m.Create(1000) then
MsgBox str(m.Size)

if m.Resize(2000) then
MsgBox str(m.Size)
end if
end if
```

Notes:

Returns true on success.
If false is returned, the memoryblockMBS is not touched.

If the new size is smaller, data is lost as the memoryblock is cut.
If the new size is bigger, the memoryblock is resized. Or if that does not work, a new memoryblock is created and data is copied. New bytes will be zero.

122.3.13 Properties

122.3.14 Address as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address of the memory.
Notes:

This value became 64bit to avoid integer overflows.
(Read only property)

122.3.15 Memory as Memoryblock

MBS Util Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The memoryblock to access this memory.
Notes:

Keep a reference to the MemoryBlockMBS object as long as you use this memoryblock object.
(Read only property)

122.3.16 Size as Int64

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of this memoryblock.
Notes:

This value became 64bit to avoid integer overflows.
(Read only property)

122.4 class MemoryStorageMBS

122.4.1 class MemoryStorageMBS

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to store stuff in memory outside of the app memory.
Notes:

The memory is stored using mapped memory in the system address space outside of the 32bit app memory of your app.

Normally a 32-bit app can only use 2 to 4 GB of memory. Using blocks of memory outside this address space, you can easily keep 10 GB of data in memory.

Be aware that a some point creating more storages may fail due to out of memory.
The system may decide to swap memory to disk if you run out of physical memory.

Please have your app check free space on boot disk regularly and avoid running out of disk space for swap!

- MBS Xojo Plugins, version 18.1pr3
- MBS Xojo Plugins, version 18.1pr2
- MBS Releases the MBS Xojo / Real Studio plug-ins in version 16.4

122.4.3 Methods

122.4.4 Constructor(Size as Int64 = 0)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: If size >0, we allocate the memory for this size right away.

122.4.5 Destructor

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

122.4.6 MemoryValue(Offset as Int64, Assigns s as MemoryBlock)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets part of memory storage as string.
Notes:

Offset and Size are checked for range and an OutOfBoundsException can be raised.
Please use constructor before to create memory storage with given size.
See also:

- 122.4.11 MemoryValue as MemoryBlock 19365
- 122.4.7 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock 19364

122.4.7 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part of memory storage as memory block.
Notes: Offset and Size are checked for range and an OutOfBoundsException can be raised.
See also:

- 122.4.11 MemoryValue as MemoryBlock 19365
- 122.4.6 MemoryValue(Offset as Int64, Assigns s as MemoryBlock) 19364

122.4.8 StringValue(Offset as Int64, Assigns s as String)

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part of memory storage as string.
Notes:

Offset and Size are checked for range and an OutOfBoundsException can be raised.
Please use constructor before to create memory storage with given size.
See also:

- 122.4.14 StringValue as String 19365
- 122.4.9 StringValue(Offset as Int64, Size as Int64) as String 19364

122.4.9 StringValue(Offset as Int64, Size as Int64) as String

MBS Util Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries part of memory storage as string.
Notes: Offset and Size are checked for range and an OutOfBoundsException can be raised.
See also:

- 122.4.14 StringValue as String 19365
- 122.4.8 StringValue(Offset as Int64, Assigns s as String) 19364

122.4.10 Properties

122.4.11 MemoryValue as MemoryBlock

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this memory storage as a memoryblock.
Notes: (Read and Write property)
See also:

- 122.4.6 MemoryValue(Offset as Int64, Assigns s as MemoryBlock) 19364
- 122.4.7 MemoryValue(Offset as Int64, Size as Int64) as MemoryBlock 19364

122.4.12 Size as Integer

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the data in bytes.
Notes: (Read and Write property)

122.4.13 SizeAllocated as Integer

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of memory allocated.
Notes: (Read and Write property)

122.4.14 StringValue as String

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The content of this memory storage as a string.
Notes: (Read and Write property)
See also:

- 122.4.8 StringValue(Offset as Int64, Assigns s as String) 19364
- 122.4.9 StringValue(Offset as Int64, Size as Int64) as String 19364

Chapter 123

Menu

123.1 Globals

123.1.1 MenuBarHeightMBS as Integer

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the height of the menubar in pixels.
Example:

msgbox "The menubar is "+str(MenuBarHeightMBS)+" pixels height."

Notes:

Requires the appearance manager.

Without plugin, you can use this:

declare function GetThemeMenuBarHeight lib "Carbon" (p as ptr) as Integer

dim l as Integer
dim p as memoryBlock
p=newmemoryBlock(10)

error=GetThemeMenuBarHeight(p) // 0 if okay.
menuheight=p.short(0) // in pixels. 22 on Mac OS X.

Added Cocoa support in plugin version 10.0.

Chapter 124

Midi

124.1 class AVMIDIPlayerMBS

124.1.1 class AVMIDIPlayerMBS

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The AVMIDIPlayer class is a player for music file formats such as MIDI and iMelody.
Notes: Requires Mac OS X 10.10.

124.1.2 Blog Entries

- MBS Xojo / Real Studio plug-ins version 16.2
- MBS Xojo / Real Studio Plugins, version 16.2pr1

124.1.3 Methods

124.1.4 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Initializes a newly allocated MIDI player with the contents of the String, using the specified sound bank.
Notes:

Data: The data to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.

Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 124.1.5 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 19370
- 124.1.6 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 19370

124.1.5 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Initializes a newly allocated MIDI player with the contents of the String, using the specified sound bank.
Notes:

Data: The data to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.
Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 124.1.4 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 19369
- 124.1.6 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 19370

124.1.6 Constructor(File as FolderItem, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS)

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Initializes a newly allocated MIDI player with the contents of the file, using the specified sound bank.
Notes:

File: The file to play.
SoundBankFile: The folderitem of the sound bank. The sound bank must be a SoundFont2 or DLS bank.

Error: Returns, by-reference, a description of the error, if an error occurs.

For OS X the bank folderitem can be set to nil to use the default sound bank. However, iOS must always refer to a valid bank file.
See also:

- 124.1.4 Constructor(Data as MemoryBlock, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 19369
- 124.1.5 Constructor(Data as String, SoundBankFile as FolderItem = nil, byref error as NSErrorMBS) 19370

124.1.7 Destructor

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The destructor.

124.1.8 play

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Plays the sequence.
Notes: If prepareToPlay has not been invoked, play may be delayed while the events are prerolled.

124.1.9 prepareToPlay

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Prepares to play the sequence by prerolling all events.
Notes: This happens automatically on play if it has not already been called, but may produce a delay in startup.

124.1.10 stop

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Stops playing the sequence.

124.1.11 Properties

124.1.12 CurrentPosition as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The current playback position, in seconds.
Notes:

You can set the currentPosition of the player while the player is playing, in which case playback will resume at the new time.

Note: No range checking on the currentPosition value is done when you set it to a new value. It is your responsibility to ensure the position is valid relative to the duration.
(Read and Write property)

124.1.13 Duration as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The length of the currently loaded file, in seconds.
Notes: (Read only property)

124.1.14 Handle as Integer

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

124.1.15 Playing as Boolean

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: Whether the sequence is playing.
Notes:

The player may have reached the end of all the events in any of its tracks, but it will return true until it is stopped.
(Read only property)

124.1.16 Rate as Double

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: All.

Function: The playback rate of the player.
Notes:

The default value is 1.0, normal playback rate.
(Read and Write property)

124.1.17 Events

124.1.18 Completed

MBS AVFoundation Plugin, Plugin Version: 16.2, Platform: macOS, Targets: .

Function: Called when a MIDI playback request is completed.

124.2 class MidiClientMBS

124.2.1 class MidiClientMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for the global MIDI stuff on Mac OS X.
Notes:

Only make one instance of this class in your application.

From Apple's documentation:

History:

Apple's MIDI Manager (ca. 1990) had a simple model of the world. There were application and driver clients, which had MIDI in/out ports, which could be interconnected in arbitrary ways. This model failed to provide a way for applications to make reasonable assumptions about how to make bi-directional connections to a MIDI device. MIDI Manager also had limitations on the number of ports per client, and became very unwieldy with the advent of large studios and multi-port MIDI interfaces such as the MIDI Time Piece and Studio 5.

Opcode's OMS (1991) addressed some of the shortcomings of MIDI Manager. There was the concept of a studio setup document, where drivers detected their devices, and the user could define the characteristics of additional devices connected to the MIDI ports. Applications could view the studio both as a collection of MIDI source and destination "nodes", but also as a collection of devices. OMS collected information about, and made available to its clients, useful characteristics of the devices in the studio, such as their system-exclusive IDs, MIDI channels on which they were listening, which were controllers (as opposed to simple tone generators), etc.

API Overview:
This design expands slightly on OMS's device/node hierarchy, inspired by the USB MIDI spec.

Drivers own and control devices, e.g. USB interfaces, PCI cards, etc. A device is defined as a physical object that would be represented by a single icon if there were a graphical view of the studio.

Devices may have multiple logically distinct sub-components, e.g. a MIDI synthesizer and a pair of MIDI ports, both addressable via a USB port. These are called Entities.

Entities have any number of Endpoints, sources and destinations of 16-channel MIDI streams. By grouping a device's endpoints into entities, the system has enough information for an application to make reasonable assumptions about how to communicate in a bi-directional manner with each entity, as is necessary in MIDI librarian applications.

Third-party services like FreeMIDI or OMS can collect and report interesting properties of a device by attaching those properties to the devices' entities – CoreMIDI provides a central database, but no user interfaces.. It's worth noting that some device characteristics are dynamic (e.g. MIDI receive channel and system-exclusive ID's), or a matter of user preference (choice of icon, whether the device should appear in lists of possible controllers), while other properties are static and could be looked up in a database, using the device's manufacturer and model names as a key.

Persistent configurations / Device Information:
There are a number of reasons why CoreMIDI has a persistent state.

Endpoints must have persistent ID's. When a user assigns events in a sequencing application to an endpoint, the application needs a way to retain a permanent reference to the selected endpoint. A brute-force method of generating a persistent ID would be to combine the driver name, device name, entity name, and endpoint type and index into a string, but this is not very friendly to clients even if the system provides services to generate and decode these strings.

Consider a USB MIDI interface driver, in the case where there are two instances of one model of interface present. The driver needs a way to permanently distinguish, to the system and its clients, between the two interfaces. Which is # 1 and which is # 2? If # 1 gets unplugged, # 2 should not automatically become # 1; the user's documents may be referring to devices which were attached to # 2.

The system needs a persistent concept of which driver's device is attached to a serial port.

Some drivers will need to store configuration information about the devices they control. For example, the driver for a standard MIDI interface on a serial port needs to remember which external clocking speed to use (this is a simple, slightly obscure, but hardly unique example). The Alesis QS7 is capable of communicating at a variety of speeds, so its driver needs to remember the correct speed.

These needs for persistent configuration information provide a rationale for having something akin to OMS's studio setup document, a saved configuration for the system. Mobile users who work in multiple environments could select between multiple saved configurations in a Location Manager-compatible manner.

Given services with which to store driver configuration information, we then have built the groundwork for a client studio setup editor application.
Such an application can define external MIDI devices (not to be confused with the driver-owned cards/ interfaces/etc whose presence in the configuration is determined by the driver).

Moreover, since a driver knows exactly what device it is communicating with, it is capable of supplying information to the system about the characteristics of the device, such as its system-exclusive ID, whether it is General MIDI or DLS-compatible, etc.

Implementation overview:
The client API is implemented as the CoreMIDI framework, which uses IPC to communicate with a server process, MIDIServer.

The server process loads, and manages all communication with, MIDI drivers. Most of its implementation is in the CoreMIDIServer framework, which drivers may import in order to access the API.

"Drivers" are not I/O Kit drivers. They are dynamic libraries, using CFPlugin.

But unlike OMS, the system is able to begin functioning immediately, using only the MIDI devices/endpoints detected by the drivers, without forcing the user to go through a somewhat lengthy and confusing intial configuration process. Definition of external MIDI devices can be a completely optional step, only made possible when a client application requests that they be added to the configuration.

Many MIDI drivers can simply be user-side I/O Kit clients (probably for serial, USB, Firewire).

PCI card drivers will need their MIDI drivers to communicate with a separate kernel extension.

If you have an old file named EmagicUSBMIDIDriver.plugin in your /Library/Audio/MIDI Drivers folder, please remove it. It makes trouble with our Midi classes.
Subclass of the MidiObjectMBS class.

124.2.2 Blog Entries

- MBS Real Studio Plugins, version 11.3fc

124.2.3 Methods

124.2.4 Available as boolean

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: True if the MIDI stuff was successfull loaded.

124.2.5 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.2.6 CreateDestination(name as CFStringMBS, TargetEndpointObject as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Create a virtual destination in a client.
Notes:

Clients may use this to create virtual destinations.
Lasterror is set.
You must pass a valid new MidiEndpointMBS for TargetEndpointObject. Best is if you make a subclass from MidiEndpointMBS and fill the event. You can add there additional methods and properties. CreateDestination will than fill the handle property on success.

124.2.7 CreateInputPort(name as CFStringMBS, targetportobject as MidiPortMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Create an input port through which the client may receive incoming MIDI messages from any MIDI source.
Example:

```
dim mc as MidiClientMBS
dim mp as MidiPortMBS

mc=new MidiClientMBS
mc.Init NewCFStringMBS("Testapp")

mp=new MidiPortMBS
mc.CreateInputPort NewCFStringMBS("Testport"), mp

if mp.Handle=0 then
MsgBox "There was an error: "+str(mc.Lasterror)
else
MsgBox "ok"
end if
```

Notes:

After creating a port, use MIDIPortConnectSource to establish an input connection from any number of sources to your port.

Lasterror is set.

As you can subclass the MidiPortMBS class you must pass to this function a valid MidiPortMBS object so it can be filled.

124.2.8 CreateOutputPort(name as CFStringMBS, targetportobject as MidiPortMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Create an output port through which the client may send outgoing MIDI messages to any MIDI destination.
Example:

```
dim mc as MidiClientMBS
dim mp as MidiPortMBS

mc=new MidiClientMBS
mc.Init NewCFStringMBS("Testapp")

mp=new MidiPortMBS
mc.CreateOutputPort NewCFStringMBS("Testport"), mp

if mp.Handle=0 then
MsgBox "There was an error: "+str(mc.Lasterror)
else
MsgBox "ok"
end if
```

Notes:

Output ports provide a mechanism for MIDI merging. The system assumes that each output port will be responsible for sending only a single MIDI stream to each destination, although a single port may address all of the destinations in the system.

Lasterror is set.

As you can subclass the MidiPortMBS class you must pass to this function a valid MidiPortMBS object so it can be filled.

124.2.9 CreateSource(name as CFStringMBS) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new virtual Midi source.
Example:

```
dim m as MidiClientMBS
dim e as MidiEndpointMBS
```

```
m=new MidiClientMBS

// Initialize
m.Init NewCFStringMBS("Hallo")

// Create device:
e=m.CreateSource(NewCFStringMBS("Hallo"))

// if error is 0 and handle is not 0, it's okay
MsgBox "error: "+str(m.Lasterror)+", handle: "+str(e.Handle)
```

Notes:

Lasterror is set.
Returns nil on any error.

Clients may use this to create virtual sources.

After creating a virtual source, use Received to transmit MIDI messages from your virtual source to any clients connected to the virtual source.

124.2.10 FindObjectByUniqueID(id as Integer) as MidiObjectMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Locate a device, typedefal device, entity, or endpoint by its uniqueID.
Notes:

New for CoreMIDI 1.3.
You may cast the returned object to MidiEndpointMBS, MidiEntityMBS or MidiDeviceMBS. RB's "isa" command may help you.
Returns nil on any error. Lasterror is set.

124.2.11 GetDestination(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the destinations in the system.
Notes:

The index goes from 0 to NumberOfDestinations-1.
Lasterror is set.
Returns nil on any error.

124.2.12 GetDevice(index as Integer) as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the devices in the system.
Notes:

To enumerate the entities in the system, you can walk through the devices, then walk through the devices' entities.

Note: If a client iterates through the devices and entities in the system, it will not ever visit any virtual sources and destinations created by other clients. Also, a device iteration will return devices which are "offline" (were present in the past but are not currently present), while iterations through the system's sources and destinations will not include the endpoints of offline devices.

Thus clients should usually prefer NumberOfSources, GetSource, NumberOfDestinations and GetDestination to iterating through devices and entities to locate endpoints.

Lasterror is set.
Returns nil on any error.

124.2.13 GetExternalDevice(index as Integer) as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the external devices in the system.
Notes:

The index goes from 0 to NumberOfDevices-1.
Lasterror is set.
Returns nil on any error.

124.2.14 GetSource(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of the sources in the system.
Notes:

The index goes from 0 to NumberOfSources-1.
Lasterror is set.

Returns nil on any error.

124.2.15 Init(name as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Creates a new Client object with the given client name.
Notes: Lasterror is set.

124.2.16 NumberOfDestinations as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of destinations in the system.
Example:

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfDestinations

MsgBox "NumberOfDestinations: "+str(n)
```

Notes:

Returns 0 on any error.
Lasterror is set.

124.2.17 NumberOfDevices as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of devices in the system.
Example:

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfDevices

MsgBox "NumberOfDevices: "+str(n)
```

Notes:

Returns 0 on any error.

Lasterror is set.

124.2.18 NumberOfExternalDevices as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of typedefal MIDI devices in the system.
Example:

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfExternalDevices

MsgBox "NumberOfExternalDevices: "+str(n)
```

Notes:

External MIDI devices are MIDI devices connected to endpoints via a standard MIDI cable. Their presence is completely optional, only when a UI somewhere adds them.

New for CoreMIDI 1.1.

Returns 0 on any error.
Lasterror is set.

124.2.19 NumberOfSources as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of sources in the system.
Example:

```
dim m as new MidiClientMBS
dim n as Integer = m.NumberOfSources

MsgBox "NumberOfSources: "+str(n)
```

Notes:

Returns 0 on any error.
Lasterror is set.

124.2.20 Restart as Integer

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: Stops and restarts MIDI I/O.
Notes:

This is useful for forcing CoreMIDI to ask its drivers to rescan for hardware.
Returns the Mac OS X error code.

124.2.21 Send(port as MidiPortMBS, endpoint as MidiEndpointMBS, packets as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Sends midi data using the port to the given endpoint.
Example:

```
// Not 100% if this example works:
dim client as MIDIClientMBS
dim outport as MIDIPortMBS
dim dest as MIDIEndpointMBS
dim pack as MIDIPacketMBS
dim list as MIDIPacketListMBS
dim packs(-1) as MIDIPacketMBS

client = new MidiClientMBS

if client <>nil then
client.Init newcfstringmbs("CoreMIDI")
outport = new MIDIPortMBS
client.CreateOutputPort(NewCFStringMBS("outport"), outport)
dest = client.getDestination(0)
outport.connectSource dest

pack = new MIDIPacketMBS
list = new MIDIPacketListMBS
pack.timeStamp = nil
pack.datastring = chrb(& h90)+chrb(& h5A)+chrb(& h7C)
packs.append pack
if not list.FillList(packs) then
msgBox "bad"
end

client.Send(outport, dest, list)
end
```

Notes:

Events with future timestamps are scheduled for future delivery. The system performs any needed MIDI merging.

Lasterror is set.

124.2.22 Events

124.2.23 ObjectAdded(parent as MidiObjectMBS, child as MidiObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

Function: Called when an object is added to a MidiObject.

124.2.24 ObjectRemoved(parent as MidiObjectMBS, child as MidiObjectMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

Function: Called when an object is removed from a MidiObject.

124.2.25 PropertyChanged(target as MidiObjectMBS, theProperty as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

Function: Called when a property was changed.

124.2.26 SerialPortOwnerChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

Function: A persistent MIDI Thru connection was created or destroyed.
Notes: New for CoreMIDI 1.3.

124.2.27 SetupChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

Function: Some aspect of the current MIDISetup has changed.
Notes: You should ignore this message if you handle the other messages.

124.2.28 ThruConnectionsChanged

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: .

Function: A persistent MIDI Thru connection was created or destroyed.
Notes: New for CoreMIDI 1.3.

124.2.29 Constants

124.2.30 kMIDIIDNotUnique = -10843

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Attempt to set a non-unique kMIDIPropertyUniqueID on an object.

124.2.31 kMIDIInvalidClient = -10830

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: An invalid MIDIClientRef was passed.

124.2.32 kMIDIInvalidPort = -10831

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: An invalid MIDIPortRef was passed.

124.2.33 kMIDIInvalidUniqueID = 0

MBS MacCF Plugin, Plugin Version: 9.6.

Function: A constant for an invalid unique ID.

124.2.34 kMIDIMessageSendErr = -10838

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Communication with MIDIServer failed.

124.2.35 kMIDIMsgIOError = 7

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: A driver I/O error occurred.

124.2.36 kMIDIMsgObjectAdded = 2

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: A device, entity or endpoint was added.

124.2.37 kMIDIMsgObjectRemoved = 3

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: A device, entity or endpoint was removed.

124.2.38 kMIDIMsgPropertyChanged = 4

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: An object's property was changed.

124.2.39 kMIDIMsgSerialPortOwnerChanged = 6

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: A persistent MIDI Thru connection was created or destroyed. No data. New for CoreMIDI 1.3.

124.2.40 kMIDIMsgSetupChanged = 1

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: Some aspect of the current MIDISetup has changed. No data. Should ignore this message if messages 2-6 are handled.

124.2.41 kMIDIMsgThruConnectionsChanged = 5

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI Notification.
Notes: A persistent MIDI Thru connection was created or destroyed. No data. New for CoreMIDI 1.3.

124.2.42 kMIDINoConnection = -10833

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Attempt to close a non-existant connection.

124.2.43 kMIDINoCurrentSetup = -10837

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Internal error; there is no current MIDI setup object.

124.2.44 kMIDIObjectNotFound = -10842

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: The requested object does not exist.

124.2.45 kMIDIServerStartErr = -10839

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Unable to start MIDIServer.

124.2.46 kMIDISetupFormatErr = -10840

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Unable to read the saved state.

124.2.47 kMIDIUnknownEndpoint = -10834

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: An invalid MIDIEndpointRef was passed.

124.2.48 kMIDIUnknownProperty = -10835

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Attempt to query a property not set on the object.

124.2.49 kMIDIWrongEndpointType = -10832

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: A source endpoint was passed to a function expecting a destination, or vice versa.

124.2.50 kMIDIWrongPropertyType = -10836

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: Attempt to set a property with a value not of the correct type.

124.2.51 kMIDIWrongThread = -10841

MBS MacCF Plugin, Plugin Version: 9.6.

Function: One of the type constants for a MIDI error.
Notes: A driver is calling a non-I/O function in the server from a thread other than the server's main thread.

124.3 class MidiDeviceMBS

124.3.1 class MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for a MIDI device.
Notes:

A MIDI device, which either attaches directly to the computer and is controlled by a MIDI driver, or which is "external," meaning that it is connected to a driver-controlled device via a standard MIDI cable.
Subclass of the MidiObjectMBS class.

124.3.2 Methods

124.3.3 GetEntity(index as Integer) as MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of a given device's entities.
Notes:

The index goes from 0 to NumberOfEntities-1.
Lasterror is set.
Returns nil on any error.

124.3.4 NumberOfEntities as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Returns the number of entilities for this device.
Notes:

Returns nil on any error.
Lasterror is set.

124.4 class MidiEndpointMBS

124.4.1 class MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the CoreMidi classes.
Notes:

Entities have any number of MIDIEndpointRef's, sources and destinations of 16-channel MIDI streams.
Subclass of the MidiObjectMBS class.

124.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

124.4.3 Methods

124.4.4 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes:

Frees the endpoint handle.
There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.4.5 Entity as MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns an endpoint's entity.
Notes:

Returns nil on any error.
Lasterror is set.
New for CoreMIDI 1.3.

124.4.6 FlushOutput

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Unschedule previously-sent packets.
Notes:

Clients may use MIDIFlushOutput to cancel the sending of packets that were previously scheduled for future delivery.
New for CoreMIDI 1.1.
Lasterror is set.

124.4.7 Received(packets as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Distribute MIDI from a source to the client input ports which are connected to that source.
Notes:

Drivers should call this function when receiving MIDI from a source.
Clients which have created virtual sources, using MIDICreateSource, should call this function when the source is generating MIDI.
Lasterror is set.

124.4.8 Events

124.4.9 Read(endpoint as MidiEndpointMBS, list as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 4.1, Platform: macOS, Targets: .

Function: Called when data arrives at an endpoint.
Notes:

If more than 256 bytes of data is received, it may be splitted and send in several events.

For some devices a Note Off is just a Note On with a zero velocity.

124.5 class MidiEntityMBS

124.5.1 class MidiEntityMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the CoreMidi classes.
Notes:

Devices may have multiple logically distinct sub-components, e.g. a MIDI synthesizer and a pair of MIDI ports, both addressable via a USB port.

By grouping a device's endpoints into entities, the system has enough information for an application to make reasonable assumptions about how to communicate in a bi-directional manner with each entity, as is desirable in MIDI librarian applications.

These sub-components are MIDIEntityRef's.
Subclass of the MidiObjectMBS class.

124.5.2 Methods

124.5.3 Device as MidiDeviceMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns an entity's device.
Notes:

Returns nil on any error.
Lasterror is set.
New for CoreMIDI 1.3.

124.5.4 GetDestination(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of a given entity's destinations.
Notes:

Lasterror is set.
Returns nil on any error.

124.5.5 GetSource(index as Integer) as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return one of a given entity's sources.
Notes:

Lasterror is set.
Returns nil on any error.

124.5.6 NumberOfDestinations as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return the number of destinations in a given entity.
Notes:

Lasterror is set.
Returns 0 on any error.

124.5.7 NumberOfSources as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Return the number of sources in a given entity.
Notes:

Lasterror is set.
Returns 0 on any error.

124.6 class MidiObjectMBS

124.6.1 class MidiObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for a Mac OS X CoreMidi object.

124.6.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr2
- MBS Real Studio Plugins, version 12.5pr2

124.6.3 Methods

124.6.4 kMIDIPropertyAdvanceScheduleTimeMuSec as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, integer
Set by the owning driver; should not be touched by other clients.
If it is >0, then it is a recommendation of how many microseconds in advance clients should schedule output. Clients should treat this value as a minimum. For devices with a >0 advance schedule time, drivers will receive outgoing messages to the device at the time they are sent by the client, via MIDISend, and the driver is responsible for scheduling events to be played at the right times according to their timestamps.
As of CoreMIDI 1.3, this property may also be set on virtual destinations (but only the creator of the destination should do so).
When a client sends to a virtual destination with an advance schedule time of 0, the virtual destination receives its messages at their scheduled delivery time. If a virtual destination has a non-zero advance schedule time, it receives timestamped messages as soon as they are sent, and must do its own scheduling of the events.

124.6.5 kMIDIPropertyCanRoute as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.6 kMIDIPropertyConnectionUniqueID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, integer or CFDataRef

UniqueID of an external device/entity/endpoint attached to this one (strongly recommended that it be an endpoint). This is for the use of a setup editor UI; not currently used internally. A driver-owned entity or endpoint has this property to refer to an external MIDI device that is connected to it.

The property is non-existant or 0 if there is no connection.

New for CoreMIDI 1.1.

Beginning with CoreMIDI 1.3, this property may be a CFDataRef containing an array of big-endian SInt32's, to allow specifying that a driver object connects to multiple external objects (via MIDI thru-ing or splitting).

This property may also exist for external devices/entities/endpoints, in which case it signifies a MIDI Thru connection to another external device/entity/endpoint (again, strongly recommended that it be an edpoint).

124.6.7 kMIDIPropertyDeviceID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.
device/entity property, integer
The entity's system-exclusive ID, in user-visible form
Drivers may set this property on their devices or entities.
Setup editors may allow the user to set this property on external devices.

124.6.8 kMIDIPropertyDisplayName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

device/entity/endpoint property, string.

Provides the Apple-recommended user-visible name for an endpoint, by combining the device and endpoint names.

For objects other than endpoints, the display name is the same as the name.

New for CoreMIDI 1.5.

124.6.9 kMIDIPropertyDriverDeviceEditorApp as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

device property, string, contains the full path to an application which knows how to configure this driver-owned devices. Drivers may set this property on their owned devices. Applications must not write to it.

New for CoreMIDI 1.4.

124.6.10 kMIDIPropertyDriverOwner as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, string

Name of the driver that owns a device.
Set by the owning driver, on the device; should not be touched by other clients. Property is inherited from the device by its entities and endpoints.

New for CoreMIDI 1.1.

124.6.11 kMIDIPropertyDriverVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, integer, returns the driver version API of the owning driver (only for driver-owned devices). Drivers need not set this property; applications should not write to it.

New for CoreMIDI 1.3.

124.6.12 kMIDIPropertyFactoryPatchNameFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, CFData containing AliasHandle

An alias to the device's current factory patch name file.

Added in CoreMIDI 1.1. DEPRECATED as of CoreMIDI 1.3.
Use kMIDIPropertyNameConfiguration instead.

124.6.13 kMIDIPropertyImage as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device property, CFStringRef which is a full POSIX path to a device or external device's icon, stored in any standard graphic file format such as JPEG, GIF, PNG and TIFF are all acceptable. (See CFURL for functions to convert between POSIX paths and other ways of specifying files.) The image's maximum size should be 128x128.

Drivers should set the icon on the devices they add.
A studio setup editor should allow the user to choose icons for external devices.

New for CoreMIDI 1.3.

124.6.14 kMIDIPropertyIsBroadcast as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.
entity/endpoint property, integer
1 if the endpoint broadcasts messages to all of the other endpoints in the device, 0 if not. Set by the owning driver; should not be touched by other clients.
New for CoreMIDI 1.3.

124.6.15 kMIDIPropertyIsDrumMachine as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.16 kMIDIPropertyIsEffectUnit as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.17 kMIDIPropertyIsEmbeddedEntity as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

entity/endpoint property, integer
0 if there are external MIDI connectors, 1 if not.
New for CoreMIDI 1.1.

124.6.18 kMIDIPropertyIsMixer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.19 kMIDIPropertyIsSampler as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.20 kMIDIPropertyManufacturer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Example:

```
dim m as MidiClientMBS
dim i, n as Integer
dim e as MIDIEndpointMBS
dim d as MIDIDeviceMBS
dim s as CFStringMBS

m = new MidiClientMBS
m.Init NewCFStringMBS("Test")
d = m.GetDevice(0)

s = d.StringProperty(d.kMIDIPropertyManufacturer)

MsgBox s.str
```

Notes:

Only available after you called the Init Method.

device/endpoint property, string
Drivers should set this property on their devices.
Setup editors may allow the user to set this property on external devices.
Creators of virtual endpoints may set this property on their endpoints.

124.6.21 kMIDIPropertyMaxReceiveChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0-16

124.6.22 kMIDIPropertyMaxSysExSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.
device/entity/endpoint property, integer
Set by the owning driver; should not be touched by other clients.
maximum bytes/second of sysex messages sent to it
(default is 3125, as with MIDI 1.0)

124.6.23 kMIDIPropertyMaxTransmitChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0-16

124.6.24 kMIDIPropertyModel as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/endpoint property, string
Drivers should set this property on their devices.
Setup editors may allow the user to set this property on external devices.
Creators of virtual endpoints may set this property on their endpoints.

124.6.25 kMIDIPropertyName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Example:

```
// init midi
dim m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
dim name as CFStringMBS = NewCFStringMBS("TestSource")
dim source as MidiEndpointMBS = m.CreateSource(name)

// query name property
dim s as CFStringMBS = source.StringProperty(source.kMIDIPropertyName)
MsgBox "Name: "+s.str
```

Notes:

Only available after you called the Init Method.

device/entity/endpoint property, string
Devices, entities, and endpoints may all have names. The recommended way to display an endpoint's name is to ask for the endpoint name, and display only that name if it is unique. If it is non-unique, prepend the device name.
A setup editor may allow the user to set the names of both driver-owned and external devices.

124.6.26 kMIDIPropertyNameConfiguration as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, CFDictionary

This specifies the device's current patch, note and control name values using the MIDINameDocument XML format. This specification requires the use of higher-level, OS-specific constructs outside of the specification, to fully define the current names for a device.

The MIDINameConfiguration property is implementated as a CFDictionary:

key "master" maps to a CFDataRef containing an AliasHandle referring to the device's master name document.

key "banks" maps to a CFDictionaryRef. This dictionary's keys are CFStringRef names of patchBank elements in the master document, and its values are each a CFDictionaryRef: key "file" maps to a CFDataRef containing an AliasHandle to a document containing patches that override those in the master document, and key "patchNameList" maps to a CFStringRef which is the name of the patchNameList element in the overriding document.

key "currentModes" maps to a 16-element CFArrayRef, each element of which is a CFStringRef of the name of the current mode for each of the 16 MIDI channels.

Clients setting this property must take particular care to preserve dictionary values other than the ones they are interested in changing, and to properly structure the dictionary.

New for CoreMIDI 1.3.

124.6.27 kMIDIPropertyOffline as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, integer

1 = device is offline (is temporarily absent), 0 = present
Set by the owning driver, on the device; should not be touched by other clients. Property is inherited from the device by its entities and endpoints.

New for CoreMIDI 1.1.

124.6.28 kMIDIPropertyPanDisruptsStereo as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.29 kMIDIPropertyPrivate as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, integer

1 = endpoint is private, hidden from other clients.
May be set on a device or entity, but they will still appear in the API; only affects whether the owned endpoints are hidden.

New for CoreMIDI 1.3.

124.6.30 kMIDIPropertyReceiveChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.
endpoint property, integer
The value is a bitmap of channels on which the object receives, (1«0)=ch 1...(1«15)=ch 16.
Drivers may set this property on their entities or endpoints.
Setup editors may allow the user to set this property on external endpoints.
Virtual destination may set this property on their endpoints.

124.6.31 kMIDIPropertyReceivesBankSelectLSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.32 kMIDIPropertyReceivesBankSelectMSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.33 kMIDIPropertyReceivesClock as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.34 kMIDIPropertyReceivesMTC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.35 kMIDIPropertyReceivesNotes as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.36 kMIDIPropertyReceivesProgramChanges as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.37 kMIDIPropertySingleRealtimeEntity as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device property, integer

Some MIDI interfaces cannot route MIDI realtime messages to individual outputs; they are broadcast. On such devices the inverse is usually also true – incoming realtime messages cannot be identified as originating from any particular source.

When this property is set on a driver device, it signifies the 0-based index of the entity on which incoming realtime messages from the device will appear to have originated from.

New for CoreMIDI 1.3.

124.6.38 kMIDIPropertySupportsGeneralMIDI as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.39 kMIDIPropertySupportsMMC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.40 kMIDIPropertySupportsShowControl as CFStringMBS

MBS MacCF Plugin, Plugin Version: 9.6, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

device/entity property, integer (0/1). Indicates whether the device implements the MIDI.
New for CoreMIDI 1.5.

124.6.41 kMIDIPropertyTransmitChannels as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.
endpoint property, integer
The value is a bitmap of channels on which the object transmits, (1«0)=ch 1...(1«15)=ch 16
New for CoreMIDI 1.3.

124.6.42 kMIDIPropertyTransmitsBankSelectLSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.43 kMIDIPropertyTransmitsBankSelectMSB as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.44 kMIDIPropertyTransmitsClock as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.45 kMIDIPropertyTransmitsMTC as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.46 kMIDIPropertyTransmitsNotes as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.47 kMIDIPropertyTransmitsProgramChanges as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

New for CoreMIDI 1.3. This is set on devices/entities, and is ab integer properties, 0/1

124.6.48 kMIDIPropertyUniqueID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Example:

```
// init midi
dim m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
dim name as CFStringMBS = NewCFStringMBS("TestSource")
dim source as MidiEndpointMBS = m.CreateSource(name)

// query name property
dim s as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(s)
```

Notes:

Only available after you called the Init Method.
devices, entities, endpoints all have unique ID's, integer
The system assigns unique ID's to all objects. Creators of virtual endpoints may set this property on their endpoints, though doing so may fail if the chosen ID is not unique.

124.6.49 kMIDIPropertyUserPatchNameFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: One of the properties for MIDI on Mac OS X.
Notes:

Only available after you called the Init Method.

device/entity/endpoint property, CFData containing AliasHandle

An alias to the device's current user patch name file.

Added in CoreMIDI 1.1. DEPRECATED as of CoreMIDI 1.3.
Use kMIDIPropertyNameConfiguration instead.

124.6.50 Properties(deep as boolean) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Get all of an object's properties.
Notes:

Deep parameter: true if the object's child objects are to be included (e.g. a device's entities, or an entity's endpoints).
Properties which an object inherits from its owning object (if any) are not included.

New for CoreMIDI 1.1.

Returns nil on any error.
Lasterror is set.

124.6.51 RemoveProperty(name as CFStringMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Remove an object's property.
Notes: Lasterror is set.

124.6.52 Properties

124.6.53 DisplayName as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Provides the Apple-recommended user-visible name for an endpoint, by combining the device and endpoint names.
Notes:

For objects other than endpoints, the display name is the same as the name.
(Read only property)

124.6.54 Handle as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The handle of this object.
Notes: (Read and Write property)

124.6.55 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The last error code reported.
Notes:

0 if the function was successfull.
-1 if the function is not available or the RB parameters were bad. (e.g. nil)
else a Mac OS error code.

Some Midi specific error codes:

(Read and Write property)

kMIDIInvalidClient	-10830	
kMIDIInvalidPort	-10831	
kMIDIWrongEndpointType	-10832	want source, got destination, or vice versa
kMIDINoConnection	-10833	attempt to close a non-existant connection
kMIDIUnknownEndpoint	-10834	
kMIDIUnknownProperty	-10835	
kMIDIWrongPropertyType	-10836	
kMIDINoCurrentSetup	-10837	there is no current setup, or it contains no devices
kMIDIMessageSendErr	-10838	communication with server failed
kMIDIServerStartErr	-10839	couldn't start the server
kMIDISetupFormatErr	-10840	unparseable saved state
kMIDIWrongThread	-10841	driver is calling non I/O function in server from a thread other than server's main one:
kMIDIObjectNotFound	-10842	
kMIDIIDNotUnique	-10843	

124.6.56 Manufacturer as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: Drivers should set this property on their devices.
Notes:

Setup editors may allow the user to set this property on external devices.
(Read only property)

124.6.57 Model as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The model name.
Notes: (Read only property)

124.6.58 Name as String

MBS MacCF Plugin, Plugin Version: 17.4, Platform: macOS, Targets: All.

Function: The item's name.
Notes:

Devices, entities, and endpoints may all have names. The recommended way to display an endpoint's name is to ask for the endpoint name, and display only that name if it is unique. If it is non-unique, prepend the device name.

A setup editor may allow the user to set the names of both driver-owned and external devices.

(Read only property)

124.6.59 BinaryProperty(name as CFStringMBS) as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Set or Get an object's data-type property.
Notes:

Lasterror is set.
Returns nil on any error.
(Read and Write computed property)

124.6.60 IntegerProperty(name as CFStringMBS) as Integer

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Set or Get an object's integer-type property.
Example:

```
// init midi
dim m as new MidiClientMBS
m.Init NewCFStringMBS("TestApp")

// create a source
dim name as CFStringMBS = NewCFStringMBS("TestSource")
dim source as MidiEndpointMBS = m.CreateSource(name)

// query name property
dim s as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(s)

// set it
source.IntegerProperty(source.kMIDIPropertyUniqueID) = 1234

// query again
dim t as Integer = source.IntegerProperty(source.kMIDIPropertyUniqueID)
MsgBox "UniqueID: "+str(t)
```

Notes:

Returns 0 on any error.
Lasterror is set.
(Read and Write computed property)

124.6.61 ObjectProperty(name as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Get or Set an object's dictionary-type property.
Notes:

Lasterror is set.
New for CoreMIDI 1.3.
Renamed from Property to ObjectProperty in v4.3 for Xojo 6 compatibility.
(Read and Write computed property)

124.6.62 StringProperty(name as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Get or Set an object's string-type property.
Example:

```
dim m as MidiClientMBS
dim i, n as Integer
dim e as MIDIEndpointMBS
dim d as MIDIDeviceMBS
dim s as CFStringMBS

m = new MidiClientMBS
m.Init NewCFStringMBS("Test")
d = m.GetDevice(0)

s = d.StringProperty(d.kMIDIPropertyManufacturer)

MsgBox s.str
```

Notes:

Lasterror is set.
(Read and Write computed property)

124.7 class MidiPacketListMBS

124.7.1 class MidiPacketListMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class to hold a list of MidiPackets.

124.7.2 Methods

124.7.3 FillList(packets() as MidiPacketMBS) as boolean

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Fills the list with the given Xojo array of MidiPackets.

124.7.4 Item(index as Integer) as MidiPacketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Returns the item with the given index.

124.7.5 Properties

124.7.6 Count as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of items in the list.
Notes: (Read and Write property)

124.8 class MidiPacketMBS

124.8.1 class MidiPacketMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a midi packet.

124.8.2 Blog Entries

- MBS Plugins 10.3 Release Notes

124.8.3 Methods

124.8.4 AbsoluteToNanoseconds(value as UInt64) as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Converts an absolute time value to a nanoseconds time value.
Example:

```
dim x as UInt64 = MidiPacketMBS.CurrentTime

dim y as UInt64 = x + MidiPacketMBS.NanosecondsToAbsolute(5)

MsgBox str(x)+" + 5 ns = "+str(Y)
```

124.8.5 CurrentTime as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Returns the current time of the computer as an absolute time value.
Example:

```
dim u as uint64 = MidiPacketMBS.CurrentTime
dim n as uint64 = MidiPacketMBS.AbsoluteToNanoseconds(u)
dim x as Double = n / 1000000000.0

MsgBox str(u)+" "+str(n)+" "+str(x)

dim d as new date
d.Minute = 0
d.Hour = 0
```

```
d.Second = 0
d.TotalSeconds = d.TotalSeconds + x

MsgBox d.ShortTime // how long the mac is running.
```

Notes: While some Macs do have host clock time being in nanoseconds, this is not guaranteed. So use the function AbsoluteToNanoseconds to convert to nanoseconds.

124.8.6 NanosecondsToAbsolute(value as UInt64) as UInt64

MBS MacCF Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: Converts a nanoseconds value to an absolute time.
Example:

```
dim x as UInt64 = MidiPacketMBS.CurrentTime

dim y as UInt64 = MidiPacketMBS.NanosecondsToAbsolute(x)

dim seconds as uint64 = y / 1000000000
dim hours as uint64 = seconds / 3600
seconds = seconds - hours*3600
dim minutes as uint64 = seconds / 60
seconds = seconds - minutes*60

// shows how long the Mac is running:
MsgBox str(hours)+" hours, "+str(minutes)+" minutes, "+str(seconds)+" seconds"
```

124.8.7 Properties

124.8.8 DataMemory as MemoryBlock

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The data of the packet as a memoryblock.
Notes:

Setting this value will automatically fill the DataString property, so both are in sync.
(Read and Write property)

124.8.9 DataString as String

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The data of the packet as a string.
Notes:

Setting this value will automatically fill the DataMemory property, so both are in sync.

This will not work:
DataString="90 5A 7C"

But this is better:
DataString=chrb(& h90)+chrb(& h5A)+chrb(& h7C)

or with the DataMemory property:
m=newmemoryblock(3)
m.byte(0)=& h90
m.byte(1)=& h5A
m.byte(2)=& h7C
DataMemory=m
(Read and Write property)

124.8.10 TimeStamp as MemoryBlock

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The timestamp of the packet.
Example:

```
dim pack as MIDIPacketMBS
dim m as memoryblock

m=newmemoryblock(8)
m.Long(0) = 2345678 // some time value
m.Long(4) = 3456789
pack = new MIDIPacketMBS
pack.TimeStamp = m
```

Notes:

A host clock time (64 bit value) representing the time of an event, as returned by MidiPacketMBS.CurrentTime.

As a convenience, you can use zero to use the current time.
And using nil for the memoryblock represents a value of zero (=now).
(Read and Write property)

124.8.11 TimeStampValue as UInt64

MBS MacCF Plugin, Plugin Version: 7.0, Platform: macOS, Targets: All.

Function: The timestamp of the packet.
Notes:

A host clock time (64 bit value) representing the time of an event, as returned by MidiPacketMBS.CurrentTime.

As a convenience, you can use zero to use the current time.
(Read and Write property)

124.9 class MidiPlaybackMBS

124.9.1 class MidiPlaybackMBS

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: A class to do Midi playback on Mac OS X.
Notes:

With sandbox, you need the com.apple.security.temporary-exception.audio-unit-host entitlement as of September 2013.
see
https://developer.apple.com/library/mac/qa/qa1483/_index.html

124.9.2 Blog Entries

- MacOSX plugin for iOS
- MBS Plugins updated for Xojo 2019r2
- MBS Xojo / Real Studio Plugins, version 13.4pr4
- Sandbox and playing Midi
- MBS Real Studio Plugins, version 11.2pr2
- MBS REALbasic plug-ins version 9.4

124.9.3 Methods

124.9.4 Callback as Integer

MBS MacOSX Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Needed for the MidiPortMBS class to know which function to call
Example:

```
dim p as MidiPlaybackMBS
dim m as MidiPortMBS
// do something useful
m.SetCallback p.Callback, p
```

Notes:

Return the address of the callback method used to process Midi data.
The method is to be used together with the SetCallback method in the MidiPortMBS class.

124.9.5 Constructor(UsesInternalReverb as boolean=false, AutoStart as boolean=true)

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Initializes the midi playback.
Notes:

After calling the constructor the Inited flag is true on success.
If AutoStart is false the midi playback is not started.

124.9.6 CPULoad as single

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The CPU load of the graph.
Notes:

Returns a short-term running average of the current CPU load of the graph.

124.9.7 InstrumentCount as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The number of instruments.

124.9.8 InstrumentID(index as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The ID of the instrument with the given index.

124.9.9 InstrumentName(index as Integer) as string

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The name of the instrument with the given index.
Example:

```
// show list of all names
dim m as new MidiPlaybackMBS

dim u as Integer = m.InstrumentCount-1
for i as Integer = 0 to u
```

```
Listbox1.AddRow m.InstrumentName(i)
next
```

Notes: Index from 0 to InstrumentCount-1.

124.9.10 IsRunning as boolean

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

Function: Whether the midi playback is running.
Notes: Lasterror is set.

124.9.11 LoadSoundBankFile(file as folderitem)

MBS MacOSX Plugin, Plugin Version: 8.5, Platform: macOS, Targets: All.

Function: Loads a sound bank file.
Example:

```
Sub LoadSoundFont (SoundFontName as string)

dim j as Integer
dim f as folderitem
dim e as string

//GET SOUNDFONT
f = Volume(0).Child("Library").Child("Audio").Child("Sounds").Child("Banks").Child(SoundFontName)

if f <>Nil then
//INSTALL SOUNDFONT
me.LoadSoundBankFile(f)
Window1.PopupMenu1.DeleteAllRows
for j = 0 to 127
if me.InstrumentName(j) <>"" then
Window1.PopupMenu1.addrow me.InstrumentName(j)
end if
next
Window1.PopupMenu1.ListIndex = 0
else
e = "Could not locate the SoundFont: "+ SoundFontName
e = e + " Please make sure the file is a valid soundfont file"
e = e + " and is located in the folder YourHardDrive/Library/Audio/Sounds/Banks"
e = e + " and has the extension .sf2"
```

```
MsgBox e
end if

End Sub
```

Notes:

This function can load files with .sf2 extension placed in the location: Library/Audio/Sounds/Banks.

Lasterror is set.

To avoid crashes on Mac OS X 10.5, the midi playback is stopped before loading is done and restarted if necessary after loading completed.

As a side effect stopping the midi playback may reset volume, reverb and tuning.

124.9.12 MaxCPULoad as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The Maximum CPU load of the graph
Notes: Returns the max CPU load of the graph since this call was last made or the graph was last started.

124.9.13 SendMidiEvent(Status as Integer, Data1 as Integer, Data2 as Integer, OffsetSampleFrame as Integer)

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Sends midi data for playback.

124.9.14 Start

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

Function: Starts the midi playback.
Notes: Lasterror is set.

124.9.15 Stop

MBS MacOSX Plugin, Plugin Version: 9.4, Platform: macOS, Targets: All.

Function: Stops the midi playback.
Notes:

Lasterror is set.

As a side effect stopping the midi playback may reset volume, reverb and tuning.

124.9.16 Properties

124.9.17 FilterNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the filter graph node.
Notes: (Read only property)

124.9.18 GraphHandle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The handle for the AUGraph.
Notes: (Read only property)

124.9.19 Inited as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Whether the constructor was successful.
Notes:

This property is false if the constructor failed to initialize.
(Read only property)

124.9.20 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read only property)

124.9.21 OutputNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the output graph node.
Notes: (Read only property)

124.9.22 SynthNodeHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the synth graph node.
Notes: (Read only property)

124.9.23 SynthUnitHandle as Integer

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: The internal reference for the synth audio unit.
Notes: (Read only property)

124.9.24 InstrumentIDOnChannel(Channel as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.4, Platform: macOS, Targets: All.

Function: Which instrument is playing on which channel.
Notes: (Read and Write computed property)

124.9.25 ReverbVolume as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The reverb volume.
Notes:

The value range is -120 to 40 dB.
(Read and Write computed property)

124.9.26 StreamFromDisk as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: Whether we are streaming from disk.
Notes:

Currently setting this value can crash the application.
(Read and Write computed property)

124.9.27 Tuning as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The tuning setting.
Notes:

Value is in cents from -1200 to 1200.
(Read and Write computed property)

124.9.28 UsesInternalReverb as boolean

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: One of the audio unit properties.
Example:

```
dim m as new MidiPlaybackMBS

MsgBox "UsesInternalRever: "+str(m.UsesInternalReverb)
m.UsesInternalReverb=true
MsgBox "UsesInternalRever: "+str(m.UsesInternalReverb)
```

Notes:

Lasterror is set.
(Read and Write computed property)

124.9.29 Volume as single

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: All.

Function: The volume.
Notes:

The value is in dB from -120 to 40.
(Read and Write computed property)

124.10 class MidiPortMBS

124.10.1 class MidiPortMBS

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: A class for a MIDI port.
Notes:

A MIDIPortMBS, which may be an input port or output port, is an object through which a client may communicate with any number of MIDI sources or destinations.
Subclass of the MidiObjectMBS class.

124.10.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr1

124.10.3 Methods

124.10.4 close

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.10.5 ConnectSource(source as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Establish a connection from a source to a client's input port.
Notes: Lasterror is set.

124.10.6 DisconnectSource(source as MidiEndpointMBS)

MBS MacCF Plugin, Plugin Version: 3.1, Platform: macOS, Targets: All.

Function: Close a previously-established source-to-input port connection.
Notes: Lasterror is set.

124.10.7 SetCallback(callback as Integer, reference as object)

MBS MacCF Plugin, Plugin Version: 6.0, Platform: macOS, Targets: All.

Function: Connects the MidiPort to send data to given MidiPlayback reference.
Example:

```
dim p as MidiPlaybackMBS
dim m as MidiPortMBS
// do something useful
m.SetCallback p.Callback, p
```

Notes:

The method is to be used together with the Callback function in the MidiPlaybackMBS class.
Read event is still being called if needed.

You can call again with 0 as callback to clear it.

124.10.8 Events

124.10.9 Read(endpoint as MidiEndpointMBS, list as MidiPacketListMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: .

Function: Called when data arrives at this port.
Notes:

If more than 256 bytes of data is received, it may be splitted and send in several events.

For some devices a Note Off is just a Note On with a zero velocity.

124.11 class MIDISysexSendRequestMBS

124.11.1 class MIDISysexSendRequestMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: An asynchronous request to send a single system-exclusive MIDI event to a MIDI destination.

124.11.2 Methods

124.11.3 close

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.11.4 Send

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Send a single system-exclusive event, asynchronously.
Notes: Keep a reference to this object until the call Completes.

124.11.5 Properties

124.11.6 BytesToSend as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: Initially set when sending starts to the number of bytes to be sent.
Notes:

MIDISendSysex will decrement this counter as bytes are sent.
(Read and Write property)

124.11.7 Data as Memoryblock

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The memoryblock with the data you want to send.
Notes: (Read and Write property)

124.11.8 Destination as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The endpoint to which the event is to be sent.
Notes: (Read and Write property)

124.11.9 IsComplete as boolean

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The client may set this to true at any time to abort transmission.
Notes:

The implementation sets this to true when all bytes have been sent.
Renamed from Complete to IsComplete in v4.3 for Xojo 6 compatibility.
(Read and Write property)

124.11.10 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

0 for success.
(Read and Write property)

124.11.11 Length as Integer

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: All.

Function: The length of the memoryblock.
Notes:

If 0, the memoryblock.size property is taken, but not all memoryblocks know their size.
(Read and Write property)

124.11.12 Events

124.11.13 Complete

MBS MacCF Plugin, Plugin Version: 3.4, Platform: macOS, Targets: .

Function: An event to notify the client of the completion of a call to MIDISendSysex.

124.12 class MidiThruConnectionControlTransformMBS

124.12.1 class MidiThruConnectionControlTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a control transformation midi connection.
Notes:

Note: must order control transforms appropriately – first, filter out and remap. Further transforms can follow, and will apply to the remapped control number (if any).
N.B. All transformations are done using 14-bit control values, so, when doing an add/min/max transform on a 7-bit value, the parameter must be a 14-bit value, e.g. to add n, param must be n «7.

124.12.2 Properties

124.12.3 ControlNumber as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The control number.
Notes: (Read and Write property)

124.12.4 ControlType as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The control type.
Notes:

implementation note: some code tests bits of these values

constants:

kMIDIControlType_7Bit	0	control numbers may be 0-127
kMIDIControlType_14Bit	1	control numbers may be 0-31
kMIDIControlType_7BitRPN	2	control numbers may be 0-16383
kMIDIControlType_14BitRPN	3	
kMIDIControlType_7BitNRPN	4	
kMIDIControlType_14BitNRPN	5	

(Read and Write property)

124.12.5 Parameter as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The parameter for the transformation.
Notes: (Read and Write property)

124.12.6 RemappedControlType as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The Remapped Control Type.
Notes:

Only used when transform is kMIDITransform_MapControl
(Read and Write property)

124.12.7 Transform as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The transformation code to apply.
Notes:

Some constants:

kMIDITransform_None	0	no param
kMIDITransform_FilterOut	1	filter out event type, no param
kMIDITransform_MapControl	2	param is remapped control number
kMIDITransform_Add	8	param is value to add
kMIDITransform_Scale	9	param is amount to scale by: fixed point bbbb.bbbb bbbb bbbb
kMIDITransform_MinValue	10	
kMIDITransform_MaxValue	11	
kMIDITransform_MapValue	12	param is index of map in connection's map array

(Read and Write property)

124.13 class MidiThruConnectionEndpointMBS

124.13.1 class MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for an endpoint specifications.
Notes:

When filling one of these out, clients can leave uniqueID 0 if the endpoint exists.
When when one is provided back to the client, the endpoint may be null if it doesn't exist, but the uniqueID will always be non-zero.

124.13.2 Methods

124.13.3 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.13.4 Properties

124.13.5 Endpoint as MidiEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The endpoint to use for a connection.
Notes: (Read and Write property)

124.13.6 UniqueID as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: An unique ID for an endpoint.
Notes: (Read and Write property)

124.14 class MidiThruConnectionMBS

124.14.1 class MidiThruConnectionMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A class for a midi connection.
Notes:

This class defines functions to create MIDI play-through connections between the MIDI sources and destinations. These connections may be persistent or transitory, owned by a client.

By using connections instead of doing MIDI Thru operations themselves, the overhead of moving MIDI messages between the server and the client for thru-ing is reduced.

The aim of these functions is to permit as flexible a set of transformations as possible while keeping the API and data structures relatively simple.

124.14.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr4
- MBS Xojo Plugins, version 19.3pr5

124.14.3 Methods

124.14.4 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.14.5 Create(PersistentOwnerID as CFStringMBS, params as MidiThruConnectionParamsMBS)

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Creates a new connection.
Notes:

If inPersistentOwnerID is nil, then the connection is marked as owned by the client and will be automatically disposed with the client.

If it is non-nil, then it should be a unique identifier, e.g. "com.mycompany.MyCoolProgram".

124.14.6 Properties

124.14.7 Handle as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The handle for the Connection.
Notes: (Read and Write property)

124.14.8 Lasterror as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The last error code reported.
Notes: (Read and Write property)

124.14.9 Parameter as MidiThruConnectionParamsMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The parameters for the connection.
Notes:

Lasterror is set.
(Read and Write computed property)

124.15 class MidiThruConnectionParamsMBS

124.15.1 class MidiThruConnectionParamsMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The class for the parameters of a midi connection.

124.15.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.1
- MBS Xojo Plugins, version 20.1pr4

124.15.3 Methods

124.15.4 close

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.15.5 Properties

124.15.6 ChannelPressure as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

124.15.7 ControlTransformsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of control transformations used.
Notes:

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the ControlTransform array.

(Read and Write property)

124.15.8 DestinationsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of destinations.
Notes:

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the destination array.
(Read and Write property)

124.15.9 FilterOutAllControls as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

124.15.10 FilterOutBeatClock as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

124.15.11 FilterOutMTC as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

124.15.12 FilterOutSysEx as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

124.15.13 FilterOutTuneRequest as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: Unknown.
Notes: (Read and Write property)

124.15.14 HighNote as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The high note value.
Notes:

Ignored if mapping.
If highNote <lowNote, then 0..highNote and lowNote..127 are passed.
(Read and Write property)

124.15.15 HighVelocity as Integer

MBS MacCF Plugin, Plugin Version: 20.1, Platform: macOS, Targets: All.

Function: Higher velocity limit.
Notes:

Note events with a velocity greater than this, if it is not 0, are filtered out.
(Read and Write property)

124.15.16 KeyPressure as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

124.15.17 LowNote as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The low note value.
Notes:

Ignored if mapping.
If highNote <lowNote, then 0..highNote and lowNote..127 are passed.
(Read and Write property)

124.15.18 LowVelocity as Integer

MBS MacCF Plugin, Plugin Version: 20.1, Platform: macOS, Targets: All.

Function: Lower velocity limit.
Notes:

Note events with a velocity less than this value are filtered out.
(Read and Write property)

124.15.19 MapsCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of mappings used.
Notes:

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the Map array.
(Read and Write property)

124.15.20 NoteNumber as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

124.15.21 PitchBend as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

124.15.22 ProgramChange as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

124.15.23 SourcesCount as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The number of sources used.
Notes:

If you create a MidiThruConnectionParamsMBS object than this number is counted from the entries in the Source array.
(Read and Write property)

124.15.24 Velocity as MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: One of the transformations.
Notes: (Read and Write property)

124.15.25 ChannelMap(index as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array with the value mappings.
Notes:

Map each of the source 16 MIDI channels to channel 0-15 (1-16) or 0xFF to filter out.
(Read and Write computed property)

124.15.26 ControlTransform(index as Integer) as MidiThruConnectionControlTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array of control transformations.
Notes: (Read and Write computed property)

124.15.27 Destination(index as Integer) as MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array of destination endpoints.
Notes: (Read and Write computed property)

124.15.28 Map(index as Integer) as MidiThruConnectionValueMapMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The list of mappings for this midi connection.
Notes:

Index is from 0 to 15.
(if you need more, send me an email and I upper the limit.)
(Read and Write computed property)

124.15.29 Source(index as Integer) as MidiThruConnectionEndpointMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The array of source endpoints.
Notes: (Read and Write computed property)

124.16 class MidiThruConnectionTransformMBS

124.16.1 class MidiThruConnectionTransformMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The class for a Midi connection transformation.

124.16.2 Properties

124.16.3 Parameter as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The parameter of the transformation.
Notes: (Read and Write property)

124.16.4 Transform as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The transformation code.
Notes:

Some constants:

kMIDITransform_None	0	no param
kMIDITransform_FilterOut	1	filter out event type, no param
kMIDITransform_MapControl	2	param is remapped control number
kMIDITransform_Add	8	param is value to add
kMIDITransform_Scale	9	param is amount to scale by: fixed point bbbb.bbbb bbbb bbbb
kMIDITransform_MinValue	10	
kMIDITransform_MaxValue	11	
kMIDITransform_MapValue	12	param is index of map in connection's map array

(Read and Write property)

124.17 class MidiThruConnectionValueMapMBS

124.17.1 class MidiThruConnectionValueMapMBS

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: A value map for a Midi connection.
Notes: This is an array to map Midi values from 0 to 127 to new values from 0 to 127.

124.17.2 Properties

124.17.3 Value(index as Integer) as Integer

MBS MacCF Plugin, Plugin Version: 3.3, Platform: macOS, Targets: All.

Function: The value Map.
Notes:

Index is from 0 to 127.
Use only values from 0 to 127.
(Read and Write computed property)

124.18 class PortMidiDeviceInfoMBS

124.18.1 class PortMidiDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for device information.

124.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr5

124.18.3 Properties

124.18.4 HasInput as Boolean

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if input is available.
Notes: (Read only property)

124.18.5 HasOutput as Boolean

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: True if output is available.
Notes: (Read only property)

124.18.6 InterfaceName as String

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Underlying MIDI API.
Notes:

e.g. MMSystem, DirectX or CoreMidi.
(Read only property)

124.18.7 Name as String

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The device name.
Notes:

e.g. USB MidiSport 1x1
(Read only property)

124.19 class PortMidiEventMBS

124.19.1 class PortMidiEventMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a piece of midi data.
Notes:

See this website for a list of Midi status codes:
https://www.midi.org/specifications-old/item/table-2-expanded-messages-list-status-bytes

124.19.2 Blog Entries

- MBS Xojo Plugins, version 17.1pr3
- MBS REALbasic Plugins, version 11.0pr14

124.19.3 Methods

124.19.4 Set(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value to the given data.

124.19.5 SetRaw(data0 as Integer, data1 as Integer, data2 as Integer, data3 as Integer)

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the raw data by setting all 4 bytes together.

124.19.6 Properties

124.19.7 CurrentEvent as PortMidiEventMBS

MBS Audio Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current event played.
Notes:

You can use this to show current note playing.
(Read only property)

124.19.8 Data1 as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first data value in the midi event.
Notes: (Read and Write property)

124.19.9 Data2 as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second data value in the midi event.
Notes: (Read and Write property)

124.19.10 RawData0 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first byte of the raw data in this event.
Notes:

Same as Status property.
(Read and Write property)

124.19.11 RawData1 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second byte of the raw data in this event.
Notes:

Same as Data1 property.
(Read and Write property)

124.19.12 RawData2 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The third byte of the raw data in this event.
Notes:

Same as Data2 property.
(Read and Write property)

124.19.13 RawData3 as Integer

MBS Audio Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The forth byte of the raw data in this event.
Notes: (Read and Write property)

124.19.14 RawMessage as Integer

MBS Audio Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw content of the event as a integer.
Notes:

Take care about platform differences like the byte order.
(Read and Write property)

124.19.15 Status as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The status value.
Notes: (Read and Write property)

124.19.16 When as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time value of this midi data.
Notes:

Should be milliseconds.
(Read and Write property)

124.20 class PortMidiMBS

124.20.1 class PortMidiMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PortMidi library wrapped for use in Xojo.
Notes:

Error codes:

```
const pmNoError              = 0
const pmHostError            = -10000
const pmInvalidDeviceId      = -9999
const pmInsufficientMemory   = -9998
const pmBufferTooSmall       = -9997
const pmBufferOverflow       = -9996
const pmBadPtr               = -9995
const pmBadData              = -9994
const pmInternalError        = -9993
const pmBufferMaxSize        = -9992
```

Requires libasound.so.2 on Linux to be installed.

124.20.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.3pr4

124.20.3 Methods

124.20.4 CountDevices as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the devices.
Example:

```
dim pa as new PortMidiMBS

Dim u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
dim d as PortMidiDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+", "+D.InterfaceName
next
```

Notes: Returns 0 on any error.

124.20.5 DefaultInputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the default device ID or pmNoDevice (-1) if there are no devices.
Notes:

On the PC, the user can specify a default device by setting an environment variable. For example, to use device # 1.

set PM_RECOMMENDED_OUTPUT_DEVICE=1

The user should first determine the available device ID by using the supplied application "testin" or "testout".

In general, the registry is a better place for this kind of info, and with USB devices that can come and go, using integers is not very reliable for device identification. Under Windows, if PM_RECOMMENDED_OUTPUT_DEVICE (or PM_RECOMMENDED_INPUT_DEVICE) is *NOT* found in the environment, then the default device is obtained by looking for a string in the registry under: HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Input_Device and HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Output_Device for a string. The number of the first device with a substring that matches the string exactly is returned. For example, if the string in the registry is "USB", and device 1 is named "In USB MidiSport 1x1", then that will be the default input because it contains the string "USB".

In addition to the name, PmDeviceInfo has the member "interf", which is the interface name. (The "interface" is the underlying software system or API used by PortMidi to access devices. Examples are MMSystem, DirectX (not implemented), ALSA, OSS (not implemented), etc.) At present, the only Win32 interface is "MMSystem", the only Linux interface is "ALSA", and the only Max OS X interface is "CoreMIDI".

To specify both the interface and the device name in the registry, separate the two with a comma and a space, e.g.:
MMSystem, In USB MidiSport 1x1
In this case, the string before the comma must be a substring of the "interf" string, and the string after the space must be a substring of the "name" name string in order to match the device.

Note: in the current release, the default is simply the first device (the input or output device with the lowest PmDeviceID).

124.20.6 DefaultOutputDeviceID as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the default device ID or pmNoDevice (-1) if there are no devices.
Notes:

On the PC, the user can specify a default device by setting an environment variable. For example, to use device # 1.

set PM_RECOMMENDED_OUTPUT_DEVICE=1

The user should first determine the available device ID by using the supplied application "testin" or "testout".

In general, the registry is a better place for this kind of info, and with USB devices that can come and go, using integers is not very reliable for device identification. Under Windows, if PM_RECOMMENDED_OUTPUT_DEVICE (or PM_RECOMMENDED_INPUT_DEVICE) is *NOT* found in the environment, then the default device is obtained by looking for a string in the registry under: HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Input_Device and HKEY_LOCAL_MACHINE/SOFTWARE/PortMidi/Recommended_Output_Device for a string. The number of the first device with a substring that matches the string exactly is returned. For example, if the string in the registry is "USB", and device 1 is named "In USB MidiSport 1x1", then that will be the default input because it contains the string "USB".

In addition to the name, PmDeviceInfo has the member "interf", which is the interface name. (The "interface" is the underlying software system or API used by PortMidi to access devices. Examples are MMSystem, DirectX (not implemented), ALSA, OSS (not implemented), etc.) At present, the only Win32 interface is "MMSystem", the only Linux interface is "ALSA", and the only Max OS X interface is "CoreMIDI".

To specify both the interface and the device name in the registry, separate the two with a comma and a space, e.g.:
MMSystem, In USB MidiSport 1x1
In this case, the string before the comma must be a substring of the "interf" string, and the string after the space must be a substring of the "name" name string in order to match the device.

Note: in the current release, the default is simply the first device (the input or output device with the lowest PmDeviceID).

124.20.7 DeviceInfo(DeviceID as Integer) as PortMidiDeviceInfoMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns information about a certain device.
Example:

```
dim pa as new PortMidiMBS
```

```
Dim u as Integer = pa.CountDevices-1
for i as Integer = 0 to u
dim d as PortMidiDeviceInfoMBS = pa.DeviceInfo(i)
MsgBox d.Name+", "+D.InterfaceName
next
```

Notes: Returns nil on any error.

124.20.8 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error text for the given error code.
Notes: Returns "" on any error.

124.20.9 Initialize as Integer

MBS Audio Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the PortMidi functions.
Notes:

You call this manually to trigger initialization now.
Or you just let the plugin do it automatically when you call one of the portmidi functions.
Returns the error code. (0 = okay)

124.20.10 ReInitialize as Integer

MBS Audio Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shuts down PortMidi and initializes it again.
Notes:

As PortMidi does not recognize the attachment of new MIdi devices, you can only reinitialize.

Returns a PortMidi error code.

124.20.11 Constants

124.20.12 pmBadData = -9994

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.
Notes: illegal midi data, e.g. missing EOX

124.20.13 pmBadPtr = -9995

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.14 pmBufferMaxSize = -9992

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.
Notes: buffer is already as large as it can be.

124.20.15 pmBufferOverflow = -9996

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.16 pmBufferTooSmall = -9997

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.17 pmHostError = -10000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.18 pmInsufficientMemory = -9998

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.19 pmInternalError = -9993

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.20 pmInvalidDeviceId = -9999

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.
Notes: out of range or output device when input is requested or input device when output is requested or device is already opened.

124.20.21 pmNoDevice = -1

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.20.22 pmNoError = 0

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi errors.

124.21 class PortMidiStreamMBS

124.21.1 class PortMidiStreamMBS

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Xojo class to represent a PortMidi stream.
Notes: A single PortMidiStream is a descriptor for an open MIDI device.

124.21.3 Xojo Developer Magazine

- 15.2, page 10: News

124.21.4 Methods

124.21.5 Abort as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminates outgoing messages immediately.
Notes:

The caller should immediately close the output port; this call may result in transmission of a partial midi message. There is no abort for Midi input because the user can simply ignore messages in the buffer and close an input device at any time.
Returns an error code.

124.21.6 Close

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

124.21.7 currentTimeStamp as Integer

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current time stamp.

124.21.8 ErrorText(ErrorNumber as Integer) as string

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error message for this error number.

124.21.9 HostError as string

MBS Audio Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries host error string.
Example:

```
dim s as new PortMidiStreamMBS
// do something that causes an error
MsgBox "HostError: "+s.HostError
```

Notes: Clears error.

124.21.10 OpenInput(DeviceID as Integer, Buffersize as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a device for reading.
Notes:

DeviceID is the id of the device used for input.

For input, the buffersize specifies the number of input events to be buffered waiting to be read using Pm_Read().
(In some cases – see below – PortMidi does not buffer output at all and merely passes data to a lower-level API, in which case buffersize is ignored.)

return value:
Upon success OpenInput returns PmNoError.

If a call to OpenInput fails a nonzero error code is returned (see PMError above) and the value of port is invalid.

124.21.11 OpenOutput(DeviceID as Integer, Buffersize as Integer, Latency as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a device for writing.
Notes:

DeviceID is the id of the device used for input.

For output, buffersize specifies the number of output events to be buffered waiting for output.
(In some cases – see below – PortMidi does not buffer output at all and merely passes data to a lower-level API, in which case buffersize is ignored.)

Latency is the delay in milliseconds applied to timestamps to determine when the output should actually occur. (If latency is <0, 0 is assumed.)
If latency is zero, timestamps are ignored and all output is delivered immediately. If latency is greater than zero, output is delayed until the message timestamp plus the latency. (NOTE: time is measured relative to the time source indicated by time_proc. Timestamps are absolute, not relative delays or offsets.) In some cases, PortMidi can obtain better timing than your application by passing timestamps along to the device driver or hardware. Latency may also help you to synchronize midi data to audio data by matching midi latency to the audio buffer latency.
Due to the may timers work on Windows, the latency is limited there.

return value:
Upon success OpenInput returns PmNoError.
If a call to OpenInput fails a nonzero error code is returned (see PMError above) and the value of port is invalid.

124.21.12 Poll as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether input is available,
Notes: Returns 1 on success and 0 on failure.

124.21.13 Read(byref data as PortMidiEventMBS) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads midi data.
Notes:

Returns the number of read items.
(0 for error and 1 for success)

Read retrieves midi data into a buffer, and returns the number of events read. Result is a non-negative number unless an error occurs, in which case a PmError value will be returned.

Buffer Overflow

The problem: if an input overflow occurs, data will be lost, ultimately because there is no flow control all the way back to the data source. When data is lost, the receiver should be notified and some sort of graceful recovery should take place, e.g. you shouldn't resume receiving in the middle of a long sysex message.

With a lock-free fifo, which is pretty much what we're stuck with to enable portability to the Mac, it's tricky for the producer and consumer to synchronously reset the buffer and resume normal operation.

Solution: the buffer managed by PortMidi will be flushed when an overflow occurs. The consumer (Read()) gets an error message (pmBufferOverflow) and ordinary processing resumes as soon as a new message arrives. The remainder of a partial sysex message is not considered to be a "new message" and will be flushed as well.

124.21.14 SetChannelMask(mask as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Filters incoming messages based on channel.
Example:

```
dim s as PortMidiStreamMBS // your midi stream

call s.SetChannelMask(1+4) // Channel 1 and 3.
```

Notes:

The mask is a 16-bit bitfield corresponding to appropriate channels
All channels are allowed by default.
Returns an error code.

124.21.15 SetFilter(filters as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: SetFilter() sets filters on an open input stream to drop selected input types.
Notes:

By default, only active sensing messages are filtered.
To prohibit, say, active sensing and sysex messages, call SetFilter(FilterActive + FilterSysEx);

Filtering is useful when midi routing or midi thru functionality is being provided by the user application.
For example, you may want to exclude timing messages (clock, MTC, start/stop/continue), while allowing note-related messages to pass.
Or you may be using a sequencer or drum-machine for MIDI clock information but want to exclude any notes it may play.

Returns an error code.

124.21.16 Write(data as PortMidiEventMBS) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes midi data from a buffer.
Notes:

This may contain:
- short messages or
- sysex messages that are converted into a sequence of PortMidiStreamMBS objects, e.g. sending data from a file or forwarding them from midi input.

Use WriteSysEx() to write a sysex message stored as a contiguous array of bytes.

Sysex data may contain embedded real-time messages.
Returns an error code.

124.21.17 WriteShort(When as Integer, message as Integer) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a timestamped non-system-exclusive midi message.
Notes: Messages are delivered in order as received, and timestamps must be non-decreasing. (But timestamps are ignored if the stream was opened with latency = 0.)

124.21.18 WriteSysEx(When as Integer, message as memoryblock, offset as Integer) as Integer

MBS Audio Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a timestamped system-exclusive midi message.
Notes:

The data is taken from the memoryblock at the given offset.
The message must be 0 terminated.

This message must be valid and contain the special start value and a EOX value on the end.
See also:

- 124.21.19 WriteSysEx(When as Integer, message as string) as Integer 19463

124.21.19 WriteSysEx(When as Integer, message as string) as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a timestamped system-exclusive midi message.
Notes: This message must be valid and contain the special start value and a EOX value on the end.
See also:

- 124.21.18 WriteSysEx(When as Integer, message as memoryblock, offset as Integer) as Integer 19463

124.21.20 Properties

124.21.21 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The channel mask used.
Notes:

Use SetChannelMask to change it.
(Read only property)

124.21.22 DeviceID as Integer

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The device ID.
Notes:

The ID of the device the stream is connected to.
(Read only property)

124.21.23 DeviceName as String

MBS Audio Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The device name.
Notes:

The name of the device the stream is connected to.
(Read only property)

124.21.24 Filters as Integer

MBS Audio Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The filters setting.
Notes:

Use SetFilters to change it.
(Read only property)

124.21.25 Constants

124.21.26 FilterActive = & h4000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter active sensing messages (& hFE)

124.21.27 FilterAftertouch = & h6000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter both channel and poly aftertouch

124.21.28 FilterChannelAftertouch = & h20000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter channel aftertouch (most midi controllers use this) (& hD0-& hDF)

124.21.29 FilterClock = & h1D00

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter clock messages (CLOCK & hF8, START & hFA, STOP & hFC, and CONTINUE & hFB)

124.21.30 FilterControl = & h8000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: Control Changes (CC's) (& hB0-& hBF)

124.21.31 FilterFD = & h2000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter undefined FD messages

124.21.32 FilterMTC = 2

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: MIDI Time Code (& hF1)

124.21.33 FilterNote = & h3000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter note-on and note-off (& h90-& h9F and & h80-& h8F

124.21.34 FilterPitchBend = & h40000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: Pitch Bender (& hE0-& hEF)

124.21.35 FilterPlay = & h400

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter play messages (start & hFA, stop & hFC, continue & hFB)

124.21.36 FilterPolyAftertouch = & h4000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: per-note aftertouch (& hA0-& hAF)

124.21.37 FilterProgram = & h10000000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: Program changes (& hC0-& hCF)

124.21.38 FilterRealTime = & hFF01

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter all real-time messages

124.21.39 FilterReset = & h8000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter reset messages (& hFF)

124.21.40 FilterSongPosition = 4

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: Song Position (& hF2)

124.21.41 FilterSongSelect = 8

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: Song Select (& hF3)

124.21.42 FilterSysEx = 1

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter system exclusive messages (& hF0)

124.21.43 FilterSystemCommon = & h4E

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: All System Common messages (mtc, song position, song select, tune request)

124.21.44 FilterTick = & h200

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter tick messages (& hF9)

124.21.45 FilterTune = & h40

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: Tuning request (& hF6)

124.21.46 FilterUndefined = & h2000

MBS Audio Plugin, Plugin Version: 9.4.

Function: One of the PortMidi filter constants.
Notes: filter undefined real-time messages

124.22 class WindowsMidiInputInfoMBS

124.22.1 class WindowsMidiInputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class for information about a certain Midi Device.

124.22.2 Properties

124.22.3 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Version number of the device driver for the MIDI input device.
Notes:

The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

124.22.4 Flags as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Some flags.
Notes:

Currently unused in Windows XP.
(Read only property)

124.22.5 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Manufacturer identifier of the device driver for the MIDI input device.
Notes: (Read only property)

124.22.6 Name as String

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product name.
Notes:

Currently an ANSI string.
(Read only property)

124.22.7 ProductID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product identifier of the MIDI input device.
Notes: (Read only property)

124.23 class WindowsMidiInputMBS

124.23.1 class WindowsMidiInputMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class to represent an open Midi Input device in Xojo.
Notes: Subclass of the WindowsMidiMBS class.

124.23.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr2
- MBS Real Studio Plugins, version 13.1pr9

124.23.3 Methods

124.23.4 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Closes the device.
Notes:

First stops recording, second resets midi output device and third Closes the device with waiting till device is done.
Handle is set to 0 and lasterror is set.

124.23.5 Idle

MBS Audio Plugin, Plugin Version: 9.7, Platform: Windows, Targets: All.

Function: Processes events.
Notes:

Midi events are buffered in data structures. This method dispatches them to the Xojo event handlers.
Call this method as often as you need events to fire. For example every 100ms in a timer.

same as WindowsMidiMBS.Idle

124.23.6 InputErrorText(errorcode as Integer) as string

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Translates an error number into a human readable text.
Notes:

Returns "" on unknown errros.
String returned has Windows ANSI text encoding.

124.23.7 Open(DeviceID as Integer, BufferSize as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens a Midi device.
Notes:

DeviceID is from 0 to NumberOfMidiInputDevices-1.
Buffersize is the maximum size to allocate for each SysEx receive buffer.
Minimum is 256 bytes. Windows does not handle SysEx messages bigger than 64K.
Lasterror is set.
On success the handle property is non zero.

124.23.8 Reset

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Resets the device.
Notes: Lasterror is set.

124.23.9 Start

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Starts listening for events.
Notes:

Lasterror is set.
Please do not call from Open event as that's too early.

124.23.10 Stop

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Stops recording.
Notes:

Lasterror is set.
You should not need this and just call close or let the object die.

124.23.11 Events

124.23.12 DeviceClose

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: An event called whenever the output device is closed.
Notes: Called when you call close.

124.23.13 DeviceData(timestamp as Integer, status as Integer, data1 as Integer, data2 as Integer, RawData as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: A simple Midi message has been received.
Notes:

Process this event fast to avoid loosing events.
Status, Data1 and Data2 are all 8 bit values.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

124.23.14 DeviceError(timestamp as Integer, status as Integer, data1 as Integer, data2 as Integer, RawData as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: A bad Midi message has been received.
Notes:

Process this event fast to avoid loosing events.
Status, Data1 and Data2 are all 8 bit values.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

124.23.15 DeviceLongData(timestamp as Integer, data as string, dataMemory as memoryblock)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: SysEx data was received.
Notes:

If data is "" no free buffer was available to store the data.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

124.23.16 DeviceLongError(timestamp as Integer, data as string, dataMemory as memoryblock)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: Bad SysEx data was received.
Notes:

If data is "" no free buffer was available to store the data.
The time stamp is specified in milliseconds, beginning at zero when the Start function was called.

124.23.17 DeviceOpen

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: An event called whenever the output device is opened.
Notes:

Called when you call open.
Please do not call Start from Open event as that's too early.

124.24 class WindowsMidiMBS

124.24.1 class WindowsMidiMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Windows Midi base class.
Example:

```
dim midi as WindowsMidiMBS // your midi object

Sub Open()
dim i as WindowsMidiInputInfoMBS
dim o as WindowsMidiOutputInfoMBS
dim c,n as Integer

midi=new WindowsMidiMBS

c=midi.NumberOfMidiInputDevices-1

for n=0 to c
i=midi.InputDevice(n)

listbox1.AddRow str(n+1)
listbox1.Cell(listbox1.LastIndex,1)=i.Name
listbox1.Cell(listbox1.LastIndex,2)=hex(i.DriverVersion)

next

c=midi.NumberOfMidiOutputDevices-1

for n=0 to c
o=midi.OutputDevice(n)

listbox2.AddRow str(n+1)
listbox2.Cell(listbox2.LastIndex,1)=o.Name
listbox2.Cell(listbox2.LastIndex,2)=hex(o.DriverVersion)

next

End Sub
```

124.24.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr9

124.24.3 Methods

124.24.4 Connect(output as WindowsMidiOutputMBS)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Connect function connects a MIDI input device to a MIDI thru or output device, or connects a MIDI thru device to a MIDI output device.
Notes:

self must be a MIDI input device or a MIDI thru device.
output must be the MIDI output or thru device.

After calling this function, the MIDI input device receives event data in an DeviceData event whenever a message with the same event data is sent to the output device driver.

A thru driver is a special form of MIDI output driver. The system will allow only one MIDI output device to be connected to a MIDI input device, but multiple MIDI output devices can be connected to a MIDI thru device. Whenever the given MIDI input device receives event data in an DeviceData event, a message with the same event data is sent to the given output device driver (or through the thru driver to the output drivers).

Lasterror is set.

124.24.5 DataLost as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Number of data blocks lost.
Notes:

The buffers in the plugins have a certain size.
In case midi events are coming fast in and the Idle method is not called often enough events are lost.
In that case increase the frequency of calling Idle or request the buffer size to be increased in the next plugin version.

124.24.6 Disconnect(output as WindowsMidiOutputMBS)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Disconnect function disconnects a MIDI input device from a MIDI thru or output device, or disconnects a MIDI thru device from a MIDI output device.
Notes:

self must be a MIDI input device or a MIDI thru device.

output must be the MIDI output device to be disconnected.

MIDI input, output, and thru devices can be connected by using the Connect function. Thereafter, whenever the MIDI input device receives event data in an DeviceData event, a message with the same event data is sent to the output device driver (or through the thru driver to the output drivers).

Lasterror is set.

124.24.7 EventsLost as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Number of events lost.
Notes:

The buffers in the plugins have a certain size.
In case midi events are coming fast in and the Idle method is not called often enough events are lost.
In that case increase the frequency of calling Idle or request the buffer size to be increased in the next plugin version.

124.24.8 Idle

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Processes events.
Notes:

Midi events are buffered in data structures. This method dispatches them to the Xojo event handlers.
Call this method as often as you need events to fire. For example every 100ms in a timer.

124.24.9 InputDevice(index as Integer) as WindowsMidiInputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The InputDevice function queries a specified MIDI input device to determine its capabilities.
Example:

```
dim midi as WindowsMidiMBS // your midi object
dim n,c as Integer
dim i as WindowsMidiInputInfoMBS

c=midi.NumberOfMidiInputDevices-1
```

```
for n=0 to c
i=midi.InputDevice(n)

listbox1.AddRow str(n+1)
listbox1.Cell(listbox1.LastIndex,1)=i.Name
listbox1.Cell(listbox1.LastIndex,2)=hex(i.DriverVersion)

next
```

Notes: Index is from 0 to NumberOfMidiInputDevices-1.

124.24.10 NumberOfMidiInputDevices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Returns the number of MIDI input devices present in the system.
Example:

```
dim midi as new WindowsMidiMBS
MsgBox str(midi.NumberOfMidiInputDevices)
```

Notes: A return value of zero means that there are no devices.

124.24.11 NumberOfMidiOutputDevices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Returns the number of MIDI output devices present in the system.
Example:

```
dim midi as new WindowsMidiMBS
MsgBox str(midi.NumberOfMidiOutputDevices)
```

Notes: A return value of zero means that there are no devices.

124.24.12 OutputDevice(index as Integer) as WindowsMidiOutputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The OutputDevice function queries a specified MIDI output device to determine its capabilities.
Example:

```
dim midi as WindowsMidiMBS // your midi object
dim c,n as Integer
dim o as WindowsMidiOutputInfoMBS

c=midi.NumberOfMidiOutputDevices-1

for n=0 to c
o=midi.OutputDevice(n)

listbox2.AddRow str(n+1)
listbox2.Cell(listbox2.LastIndex,1)=o.Name
listbox2.Cell(listbox2.LastIndex,2)=hex(o.DriverVersion)

next
```

Notes: Index is from 0 to NumberOfMidiOutputDevices-1.

124.24.13 Properties

124.24.14 Handle as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The handle for this Midi input or output port.
Notes:

Depending on which Xojo class this is, value is a HMIDI, HMIDIIN or HMIDIOUT handle.
(Read only property)

124.24.15 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The last error code reported.
Notes:

0 is no error and -1 is parameter error from the plugin.
(Read only property)

124.25 class WindowsMidiOutputInfoMBS

124.25.1 class WindowsMidiOutputInfoMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class for information about a certain Midi Device.

124.25.2 Properties

124.25.3 ChannelMask as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Channels that an internal synthesizer device responds to, where the least significant bit refers to channel 0 and the most significant bit to channel 15.
Notes:

Port devices that transmit on all channels set this member to & hFFFF.
(Read only property)

124.25.4 DriverVersion as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Version number of the device driver for the MIDI input device.
Notes:

The high-order byte is the major version number, and the low-order byte is the minor version number.
(Read only property)

124.25.5 Flags as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Optional functionality supported by the device.
Notes:

It can be one or more of the following:

If a device supports volume changes, the MIDICAPS_VOLUME flag will be set for the dwSupport member. If a device supports separate volume changes on the left and right channels, both the MIDICAPS_VOLUME and the MIDICAPS_LRVOLUME flags will be set for this member.

MIDICAPS_CACHE	= 4	Supports patch caching.
MIDICAPS_LRVOLUME	= 2	Supports separate left and right volume control.
MIDICAPS_STREAM	= 8	Provides direct support for the midiStreamOut function.
MIDICAPS_VOLUME	= 1	Supports volume control.

(Read only property)

124.25.6 ManufacturerID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Manufacturer identifier of the device driver for the MIDI input device.
Notes: (Read only property)

124.25.7 Name as String

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product name.
Notes:

Currently an ANSI string.
(Read only property)

124.25.8 Notes as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Maximum number of simultaneous notes that can be played by an internal synthesizer device.
Notes:

If the device is a port, this member is not meaningful and is set to 0.
(Read only property)

124.25.9 ProductID as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Product identifier of the MIDI input device.
Notes: (Read only property)

124.25.10 Technology as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Type of the MIDI output device.
Notes:

This value can be one of the following:

```
MOD_MIDIPORT     = 1   // output port
MOD_SYNTH        = 2   // generic internal synth
MOD_SQSYNTH      = 3   // square wave internal synth
MOD_FMSYNTH      = 4   // FM internal synth
MOD_MAPPER       = 5   // MIDI mapper
MOD_WAVETABLE    = 6   // hardware wavetable synth
MOD_SWSYNTH      = 7   // software synth
```

(Read only property)

124.25.11 Voices as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Number of voices supported by an internal synthesizer device.
Notes:

If the device is a port, this member is not meaningful and is set to 0.
(Read only property)

124.25.12 Volume as Boolean

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Whether volume control is available.
Notes:

True if yes and False if no.
(Read only property)

124.25.13 VolumeStereo as Boolean

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Whether the device can control volume on two independend channels.
Notes:

True if stereo, False if mono.
(Read only property)

124.26 class WindowsMidiOutputMBS

124.26.1 class WindowsMidiOutputMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class to represent a Midi Output device.
Notes: Subclass of the WindowsMidiMBS class.

124.26.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr2

124.26.3 Methods

124.26.4 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Closes the output device.
Notes:

Closes the device with waiting till device is done.
Handle is set to 0 and lasterror is set.

124.26.5 Open(DeviceID as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens the midi device with the given index.
Notes:

DeviceID is from 0 to NumberOfMidiOutputDevices-1.
Lasterror is set.

124.26.6 OpenDefault

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens the Midi mapper which opens the device the user selected as the default midi device.
Notes:

If only one midi output device is available this one is opened.
On success the handle property is not zero.
Lasterror is set.

124.26.7 OutputErrorText(errorcode as Integer) as string

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Translates an error number into a human readable text.
Notes:

Returns "" on unknown errros.
String returned has Windows ANSI text encoding.

124.26.8 Reset

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Resets the output device.
Notes: Lasterror is set.

124.26.9 SendData(data as memoryblock)

MBS Audio Plugin, Plugin Version: 12.5, Platform: Windows, Targets: All.

Function: Sends sysex data.
Notes:

Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
See also:

- 124.26.10 SendData(data as memoryblock, size as Integer) 19485
- 124.26.11 SendData(data as string) 19486

124.26.10 SendData(data as memoryblock, size as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends sysex data.
Example:

```
dim m as MemoryBlock
dim o as WindowsMidiOutputMBS // your midi output

m=NewMemoryBlock(8)

m.Byte(0)=& hF0
m.Byte(1)=& h7F
m.Byte(2)=& h7F
m.Byte(3)=& h04
m.Byte(4)=& h01
m.Byte(5)=& h7F
m.Byte(6)=& h7F
m.Byte(7)=& hF7

o.SendData m
```

Notes:

Lasterror is set.
size is the size of the memoryblock to use. A wrong value will crash the application.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
See also:

- 124.26.9 SendData(data as memoryblock) 19485
- 124.26.11 SendData(data as string) 19486

124.26.11 SendData(data as string)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends sysex data.
Notes:

Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798474(v=vs.85).aspx
The plugin prepares MIDIHDR structure and uses your data there.
See also:

- 124.26.9 SendData(data as memoryblock) 19485
- 124.26.10 SendData(data as memoryblock, size as Integer) 19485

124.26.12 SendMessage(message as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
dim o as WindowsMidiOutputMBS // your windows midi output
// & h90 = Note down
// & h43 = the note number
// & h40 = the velocity
o.SendMessage & h404390
```

Notes:

The message is stored in one 32bit integer.
lowest 8 bit is status, second 8 bit is data1, third 8 bit is data2 and highest 8 bit is left 0.

Between sending note on and off messages, you need to leave time for actual playback.
Lasterror is set.

See also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798481(v=vs.85).aspx
See also:

- 124.26.13 SendMessage(status as Integer, data1 as Integer, data2 as Integer) 19487

124.26.13 SendMessage(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
dim o as WindowsMidiOutputMBS // your windows midi output
// & h90 = Note down
// & h3C = the note number
// & h40 = the velocity
o.SendMessage & h90, & h3C, & h40
```

Notes:

Lasterror is set.
Between sending note on and off messages, you need to leave time for actual playback.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/dd798481(v=vs.85).aspx
See also:

- 124.26.12 SendMessage(message as Integer) 19487

124.26.14 Properties

124.26.15 Volume as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The volume to be used for this device.
Example:

```
dim m as WindowsMidiOutputMBS // your midi output

m.Volume=0 // all silent
m.Volume=& hFFFF0000 // right only
m.Volume=& h0000FFFF // left only or max volume for mono device
m.Volume=& h7FFF7FFF // half volume for both channels
```

Notes:

Not all devices can set the volume.
Lasterror is set.

The low-order word contains the left-channel volume setting, and the high-order word contains the right-channel setting. A value of & hFFFF represents full volume, and a value of & h0000 is silence.

If a device does not support both left and right volume control, the low-order word of dwVolume specifies the mono volume level, and the high-order word is ignored.
(Read and Write computed property)

124.26.16 Events

124.26.17 DeviceClose

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: An event called when the device is closed.
Notes: Should be called when you call close or the object dies.

124.26.18 DeviceDataSent

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: An event called whenever SysEx data was sent.

124.26.19 DeviceOpen

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: An event called whenever the device was opened successfully.

124.26.20 DevicePositionCallback

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: .

Function: Called when a MEVT_F_CALLBACK Midi event is about to be executed.
Notes: A way to track progress in playback.

124.27 class WindowsMidiStreamMBS

124.27.1 class WindowsMidiStreamMBS

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: A class for a Windows Midi Stream.

124.27.2 Methods

124.27.3 Close

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Closes the Midi stream.

124.27.4 Open(DeviceID as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Opens a MIDI stream for output.
Notes:

By default, the device is opened in paused mode.
Lasterror is set.
DeviceID: The device is opened on behalf of the stream and closed again when the stream is closed.

124.27.5 Pause

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Pauses playback of a specified MIDI stream.
Notes: Lasterror is set.

124.27.6 PositionBytes as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in bytes.
Notes: Lasterror is set.

124.27.7 PositionMS as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function:

Position of the stream in milliseconds.

Notes: Lasterror is set.

124.27.8 PositionSamples as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in samples.
Notes: Lasterror is set.

124.27.9 PositionTicks as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Position of the stream in ticks.
Notes: Lasterror is set.

124.27.10 Restart

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Restart function restarts a paused MIDI stream.
Notes: Lasterror is set.

124.27.11 SendMessage(message as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
dim o as WindowsMidiStreamMBS // your midi stream

// & h90 = Note down
// & h43 = the note number
```

```
// & h40 = the velocity
o.SendMessage & h404390
```

Notes:

The message is stored in one 32bit integer.
lowest 8 bit is status, second 8 bit is data1, third 8 bit is data2 and highest 8 bit is left 0.

Between sending note on and off messages, you need to leave time for actual playback.
Lasterror is set.
See also:

- 124.27.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer) 19492

124.27.12 SendMessage(status as Integer, data1 as Integer, data2 as Integer)

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Sends a short midi message immediately.
Example:

```
dim o as WindowsMidiStreamMBS // your midi stream

// & h90 = Note down
// & h3C = the note number
// & h40 = the velocity
o.SendMessage & h90, & h3C, & h40
```

Notes:

Lasterror is set.
Between sending note on and off messages, you need to leave time for actual playback.
See also:

- 124.27.11 SendMessage(message as Integer) 19491

124.27.13 Stop

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The Stop function turns off all notes on all MIDI channels for the specified MIDI output device.
Notes: Lasterror is set.

124.27.14 Properties

124.27.15 Handle as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The handle for the midi stream.
Notes:

Type is HMIDISTRM.
(Read only property)

124.27.16 Lasterror as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The last error code reported by one of the class functions.
Notes: (Read only property)

124.27.17 Tempo as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Tempo of the stream, in microseconds per quarter note.
Notes:

The tempo is honored only if the time division for the stream is specified in quarter note format.
Lasterror is set.
(Read and Write computed property)

124.27.18 TimeDiv as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: Time division for this stream, in the format specified in the Standard MIDI Files 1.0 specification.
Notes:

The low 16 bits of this integer value contain the time division.
Lasterror is set.
(Read and Write computed property)

124.27.19 Volume as Integer

MBS Audio Plugin, Plugin Version: 6.1, Platform: Windows, Targets: All.

Function: The volume to be used for this stream.
Example:

```
dim m as WindowsMidiStreamMBS // your midi stream

m.Volume=0 // all silent
m.Volume=& hFFFF0000 // right only
m.Volume=& h0000FFFF // left only or max volume for mono device
m.Volume=& h7FFF7FFF // half volume for both channels
```

Notes:

Not all devices can set the volume.
Lasterror is set.

The low-order word contains the left-channel volume setting, and the high-order word contains the right-channel setting. A value of & hFFFF represents full volume, and a value of & h0000 is silence.

If a device does not support both left and right volume control, the low-order word of dwVolume specifies the mono volume level, and the high-order word is ignored.
Lasterror is set.
(Read and Write computed property)

Chapter 125

Navigation

125.1 class NSOpenPanelMBS

125.1.1 class NSOpenPanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The class for the Cocoa Open Panel.
Notes: Subclass of the NSSavePanelMBS class.

125.1.2 Blog Entries

- Customized File Open and Save Dialogs for Windows
- MBS Xojo Plugins, version 18.1pr4
- New for Mac OS X 10.10 in MBS Xojo Plugins
- MBS Xojo / Real Studio Plugins, version 14.3pr2

125.1.3 Methods

125.1.4 beginForDirectory(path as folderitem, name as string, filetypes() as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Presents a modeless Open panel.
Notes:

path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in absoluteDirectoryPath that is selected when the Open panel is presented to the user. When nil, no file is initially selected.

fileTypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in path selectable by the user.

This method will later called the savePanelDidEnd event.

125.1.5 beginSheetForDirectory(path as folderitem, name as string, filetypes() as string, targetWindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Presents a sheet Open panel on a given window.
Notes:

path:
Directory whose files the panel displays. When nil, the directory is the same directory used in the previous invocation of the panel; this is probably the best choice for most situations.

name:
Specifies a particular file in path that is selected when the Open panel is presented to the user. When "", no file is initially selected.

filetypes:
Array of file extensions and/or HFS file types. Specifies the files the panel allows the user to select. An empty array makes all files in absoluteDirectoryPath selectable by the user.

targetWindow:
Window to open the sheet on.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.

125.1.6 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The constructor which initializes the panel with default values.

125.1.7 Files as FolderItem()

MBS MacCocoa Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

Function: Queries all folderitems.
See also:

- 125.1.8 Files(index as UInt32) as folderitem 19497

125.1.8 Files(index as UInt32) as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The array of files.
Notes: Index is zero based.
See also:

- 125.1.7 Files as FolderItem() 19497

125.1.9 runModalForDirectory(path as folderitem, name as string, filetypes as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A convenience version of the runModalForDirectory function which passes one filetype instead of an array of file types.
Notes: See NSCancelButton and NSOkButton constants for return values.
See also:

- 125.1.10 runModalForDirectory(path as folderitem, name as string, filetypes() as string) as Integer 19497

125.1.10 runModalForDirectory(path as folderitem, name as string, filetypes() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Runs the panel as a modal dialog with the given filetypes.
Notes:

path is the directory to use as a start point. Pass nil to use the last directory which has been used.

filetypes:
The filetypes you want to allow.

See NSCancelButton and NSOkButton constants for return values.
See also:

- 125.1.9 runModalForDirectory(path as folderitem, name as string, filetypes as string) as Integer 19497

125.1.11 runModalForTypes(filetypes as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A convenience version of the runModalForTypes function which passes one filetype instead of an array of file types.
Example:

```
Dim dlg As New NSOpenPanelMBS
Dim iResult as Integer = dlg.runModalForTypes("jpg")
```

Notes: See NSCancelButton and NSOkButton constants for return values.
See also:

- 125.1.12 runModalForTypes(filetypes() as string) as Integer 19498

125.1.12 runModalForTypes(filetypes() as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Runs the panel as a modal dialog with the given filetypes.
Example:

```
Dim dlg As New NSOpenPanelMBS
dim types() as string = array("jpg", "tif")
Dim iResult as Integer = dlg.runModalForTypes(types)
```

Notes: See NSCancelButton and NSOkButton constants for return values.
See also:

- 125.1.11 runModalForTypes(filetypes as string) as Integer 19498

125.1.13 URL(index as UInt32) as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The array of file URLs.
Notes: Index is zero based.

125.1.14 URLs as String()

MBS MacCocoa Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

Function: Queries all URLs.

125.1.15 Properties

125.1.16 allowsMultipleSelection as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the panel's browser allows the user to open multiple files (and directories) at a time.
Notes: (Read and Write property)

125.1.17 canChooseDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the user can select directories in the pane's browser.
Notes:

When a directory is selected, the OK button is enabled only if flag is true.
(Read and Write property)

125.1.18 canChooseFiles as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the panel allows the user to choose files to open.
Notes: (Read and Write property)

125.1.19 canDownloadUbiquitousContents as Boolean

MBS MacCocoa Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Controls how the receiver responds to ubiquitous documents that aren't yet fully downloaded locally.
Notes:

If true, then the receiver will disallow opening non-local ubiquitous files. Also, if the user attempts to select a non-local file, the receiver will trigger or reprioritize downloading for that file so that it can be opened as soon as possible. If false, then the receiver will allow the user to select and open non-local files, giving your application responsibility for downloading and reporting progress. The default value is true, except for applications linked against the 10.9 SDK or earlier that have adopted iCloud by specifying a ubiquitous container identifier entitlement.

To provide the ideal user experience, you should set this property to NO and download the file's contents (with NSFileCoordinator) and show downloading progress (with NSProgress or NSMetadataQuery) in the context of your application, instead of relying on the open panel to do it.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

125.1.20 canResolveUbiquitousConflicts as Boolean

MBS MacCocoa Plugin, Plugin Version: 14.4, Platform: macOS, Targets: Desktop only.

Function: Controls how the receiver responds to ubiquitous documents with conflicting versions.
Notes:

If true, then when the user attempts to open one or more documents with conflicts, the receiver will first display conflict resolution UI, requiring the user to resolve those conflicts before the documents can be opened. If false, then the receiver does nothing in response to conflicts, allowing your application to handle them. The default value is true, except for applications linked against the 10.9 SDK or earlier that have adopted iCloud by specifying a ubiquitous container identifier entitlement.

To provide the ideal user experience, you should set this property to NO and do conflict detection and resolution (using NSURLUbiquitousItemHasUnresolvedConflictsKey and NSFileVersion) in the context of your application, instead of relying on the open panel to do it.

Available in Mac OS X 10.10 and newer.
(Read and Write property)

125.1.21 FilesCount as UInt32

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The number of selected files.
Notes: (Read only property)

125.1.22 resolvesAliases as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver resolves aliases.
Notes:

If true, the effect is that dropping an alias on the panel or asking for filenames returns the resolved aliases. The default is true.
(Read and Write property)

125.2 class NSSavePanelMBS

125.2.1 class NSSavePanelMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The class for a Cocoa Save Panel.
Notes: Subclass of the NSPanelMBS class.

- 18.3, page 52: Happy Birthday MonkeyBread Software, What is new in the MBS Xojo Plugins by Stefanie Juchmes

125.2.4 Methods

125.2.5 allowedFileTypes as string()

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns an array of the allowed file types.
Notes:

If the user specifies a file whose type is in the array of allowed types, the user is not presented with another dialog (see allowsOtherFileTypes for details about this dialog) when trying to save. Examples of common file types are "rtf", "tiff", and "ps". File type strings encoding HFS file types are not valid values for this

attribute. A nil return value, which is the default, indicates that the user can save to any ASCII file.

Available in Mac OS X v10.3 and later.

125.2.6 beginSheetForDirectory(path as folderitem, name as string, targetWindow as window)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Presents a Save panel as a sheet with the directory specified by path and optionally, the file specified by name selected.
Notes:

If targetWindow is nil, the panel will be a modal dialog.

This method will later called the savePanelDidEnd event.

Seems like on Mac OS X 10.4 the usage of sheets will raise NSExceptions for missing methods in the NSCarbonWindowFrame class.

125.2.7 Cancel

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: You can cancel the dialog using this method.

125.2.8 Constructor

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The constructor which initializes the panel with default values.

125.2.9 File as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The file currently shown in the panel.
Notes: May be nil.

125.2.10 FileTypeForHFSType(hfstype as string) as string

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Returns a string encoding a file type code.
Example:

```
dim n as new NSSavePanelMBS

MsgBox n.FileTypeForHFSType("TEXT") // shows 'TEXT'
```

Notes: When using Mac Type codes, you need to use this function to convert them in a string the file manager understands.

125.2.11 HideNSNavNodePopUpButton

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Hides the nagivation popup menu.
Notes: This is a function using undocumented features from the Apple NSSavePanel class, so there is not guarantee that it will work in future versions.

125.2.12 Ok

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: You can click ok in the dialog using this method.

125.2.13 runModal as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Displays the panel and begins its event loop with the current working (or last selected) directory as the default starting point.
Notes: Returns NSOKButton or NSCancelButton or -1 on any error.

125.2.14 runModalForDirectory(path as folderitem, name as string) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Initializes the panel to the directory specified by path and, optionally, the file specified by filename, then displays it and begins its modal event loop; path and filename can be empty strings.
Notes:

If path is nil, the previous directory the Save panel was in is used.
See NSCancelButton and NSOkButton constants for return values.

125.2.15 setAllowedFileTypes(filetype as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A convenience method for setAllowedFileTypes with only one file type.
See also:

- 125.2.16 setAllowedFileTypes(filetypes() as string) 19505

125.2.16 setAllowedFileTypes(filetypes() as string)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Specifies the allowed file types.
Notes: A file type is an extension to be appended to any selected files that don't already have that extension; "nib" and "rtf" are examples. The items in types should not include the period that begins the extension. File type strings encoding HFS file types are not valid values. Pass an empty array, to allow any file type, which is the default.
See also:

- 125.2.15 setAllowedFileTypes(filetype as string) 19505

125.2.17 validateVisibleColumns

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Validates and possibly reloads the browser columns visible in the receiver by invoking the delegate method shouldShowFilename.
Notes: You might use this method if you want the browser to only allow selection of files with certain extensions based on the selection made in an accessory-view pop-up list. When the user changes the selection, you would invoke this method to revalidate the visible columns.

125.2.18 Properties

125.2.19 accessoryView as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The custom accessory view for the current application.
Notes:

You can place any Cocoa control on that panel.
(Read and Write property)

125.2.20 allowsOtherFileTypes as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the receiver allows the user to save files with an extension that's not in the list of allowed types.
Notes:

If the user tries to save a filename with a recognized extension that's not in the list of allowed types they are presented with a dialog. If this property is true, then the dialog presents the option of using the extension the user specified.

The default setting is false.
(Read and Write property)

125.2.21 canCreateDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver allows the user to create directories.
Notes: (Read and Write property)

125.2.22 canSelectHiddenExtension as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the receiver allows the user to hide or show extensions.
Notes: (Read and Write property)

125.2.23 Directory as folderitem

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The path of the directory currently shown in the panel.
Notes:

May be nil on any error.
(Read and Write property)

125.2.24 directoryURL as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The directory shown in the panel as a URL.
Notes:

Available in Mac OS X v10.6 and later.
(Read and Write property)

125.2.25 isExpanded as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the panel is expanded.
Notes: (Read only property)

125.2.26 isExtensionHidden as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: Whether the extension-hiding checkbox is visible and checked.
Notes:

True to show the checkbox and false to hide.
(Read and Write property)

125.2.27 Message as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The message displayed in the panel.
Notes:

The default message text is an empty string.
(Read and Write property)

125.2.28 NameFieldLabel as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The string displayed in front of the filename text field.
Notes:

By default the label is "Save As:".
(Read and Write property)

125.2.29 nameFieldStringValue as string

MBS MacCocoa Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The user-editable filename currently shown in the name field.
Notes:

Available in Mac OS X v10.6 and later.
(Read and Write property)

125.2.30 Prompt as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The prompt of the default button.
Notes:

This prompt appears on all SavePanel objects (or all OpenPanel objects if the panel of this message is an NSOpenPanel instance) in your application. By default the text in the default button is "Open" for an Open panel and "Save" for a Save panel.

It is intended that short words or phrases, such as "Open", "Save", "Set", or "Choose", be used on the button. The button is not resized to accommodate long prompts.

Since this method previously affected a title field, any colon at the end of prompt is removed.
(Read and Write property)

125.2.31 requiredFileType as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The required file type (if any).
Notes:

A file specified in the Save panel is saved with the designated filename and this file type as an extension. Examples of common file types are "rtf", "tiff", and "ps". File type strings encoding HFS file types are not valid values for this attribute. An "" return value indicates that the user can save to any ASCII file.

This method is equivalent to calling allowedFileTypes and returning the first element of the list of allowed types, or "" if there are none.
(Read and Write property)

125.2.32 showsHiddenFiles as boolean

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Whether to show or hide the invisible files.
Notes:

This is a function using undocumented features from the Apple NSSavePanel class, so there is not guarantee that it will work in future versions.
(Read and Write property)

125.2.33 Title as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: The title of the panel.
Notes: (Read and Write property)

125.2.34 treatsFilePackagesAsDirectories as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that indicates whether the panel displays file packages to the user as directories.
Notes: (Read and Write property)

125.2.35 Events

125.2.36 compareFilename(name1 as string, name2 as string, caseSensitive as boolean) as Integer

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: Controls the ordering of files presented by the NSSavePanel.
Notes:

If this event has no code, the default behavior is used.

The caseSensitive argument, if true, indicates that the ordering is to be case-sensitive.

Don't reorder filenames in the Save panel without good reason, because it may confuse the user to have files in one Save panel or Open panel ordered differently than those in other such panels or in the Finder. The default behavior of Save and Open panels is to order files as they appear in the Finder. Note also that by implementing this method you will reduce the operating performance of the panel.

Constants:
const NSOrderedAscending=-1 // The left operand is smaller than the right operand.
const NSOrderedSame=0 // The two operands are equal.
const NSOrderedDescending=1 // The left operand is greater than the right operand.

125.2.37 directoryDidChange(path as string, folder as folderitem)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: Sent when the user has changed the selected directory in the panel.
Notes: If this event has no code, the default behavior is used.

125.2.38 isValidFilename(path as string, item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: Gives the delegate the opportunity to validate selected items.
Notes:

If this event has no code, the default behavior is used.

The NSSavePanel object sender sends this event just before the end of a modal session for each filename displayed or selected (including filenames in multiple selections). The event determines whether it wants the file identified by filename; it returns true if the filename is valid, or false if the save panel should stay in its

modal loop and wait for the user to type in or select a different filename or names. If the event refuses a filename in a multiple selection, none of the filenames in the selection is accepted.

125.2.39 panelSelectionDidChange

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: The event called whenever the selection changed in the dialog.
Notes: If this event has no code, the default behavior is used.

125.2.40 savePanelDidEnd(ReturnCode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: The save panel finished in sheet mode.
Notes: Returncode is NSOKButton or NSCancelButton.

125.2.41 shouldShowFilename(path as string, item as folderitem) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: Gives the delegate the opportunity to filter items that it doesn't want the user to choose.
Notes:

If this event has no code, the default behavior is used.

The NSSavePanel sends this event for each file or directory (filename) it is about to load in the browser. The delegate returns true if filename should be selectable, and false if the save panel should disable the file or directory.

125.2.42 userEnteredFilename(filename as string, confirmed as boolean) as string

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: Sent when the user confirms a filename choice by hitting OK or Return in the NSSavePanel.
Notes:

You can either leave the filename alone, return a new filename, or return "" to cancel the save (and leave the Save panel as is). This method is sent before any required extension is appended to the filename and before the Save panel asks the user whether to replace an existing file.

Note that in the future, this method may be called multiple times in the sessions as the user types. In those cases, okFlag will be false until the user confirms the choice, in which case okFlag will become true. If the delegate does extensive validation or puts up alerts, it should do so only when okFlag is true.

If this event has no code, the default behavior is used.

125.2.43 willExpand(expanding as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.8, Platform: macOS, Targets: .

Function: Sent when the NSSavePanel is about to expand or collapse because the user clicked the disclosure triangle that displays or hides the file browser.
Notes: If this event has no code, the default behavior is used.

125.2.44 Constants

125.2.45 NSCancelButton = 0

MBS MacCocoa Plugin, Plugin Version: 7.8.

Function: One of the result codes you may need with this class.

125.2.46 NSOKButton = 1

MBS MacCocoa Plugin, Plugin Version: 7.8.

Function: One of the result codes you may need with this class.

125.3 class OpenDialogFileTypeMBS

125.3.1 class OpenDialogFileTypeMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for a file type for the OpenDialog class.
Notes: For Cocoa, only the type field is used and can be an UTI or file extension.

125.3.2 Methods

125.3.3 Close

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

125.3.4 Properties

125.3.5 Extension as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The extension for this filetype.
Notes:

Currently this value is only used on Windows.
Value e.g. "*.TXT" or "*.TXT;*.BMP".

Use a value like "*.TXT" or to match multiple types, list multiple extensions separated by semicolons like this: "*.TXT;*.BMP".

With version 8.2, we use extensions also for MacOS.
(Read and Write property)

125.3.6 Name as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The name of this file type.
Notes:

Currently this value is only used on Windows.
(Read and Write property)

125.3.7 Type as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The Mac OS type code for this file type.
Notes:

Currently this value is only used on Mac OS.
And check the documenation on the Navigation Manager if you use it as you will need a KIND Resource for this.

For Cocoa, only the type field is used and can be an UTI or file extension.
(Read and Write property)

125.4 class OpenDialogItemMBS

125.4.1 class OpenDialogItemMBS

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The class for an item selected via open dialog.
Notes: Currently only used for Windows.

125.4.2 Blog Entries

- New in the MBS Xojo Plugins 20.0
- MBS Xojo Plugins, version 20.0r7

125.4.3 Methods

125.4.4 ReadData as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Reads the data.
Notes: We try to get a stream for the data from Windows and then read all available data.

125.4.5 Properties

125.4.6 Handle as Integer

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The internal object handle.
Notes:

Points to an IShellItem object.
(Read and Write property)

125.4.7 Name as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The display name of the file.
Notes: (Read and Write property)

125.4.8 Path as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The file path of the file.
Notes:

Not available for virtual files.
(Read and Write property)

125.4.9 URL as String

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The URL of the file.
Notes:

Not available for virtual files.
(Read and Write property)

125.5 class OpenDialogMBS

125.5.1 class OpenDialogMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: A class for a multiple selection open dialog.
Example:

```
dim o as OpenDialogMBS
dim i,c as Integer
dim f as FolderItem

o=new OpenDialogMBS
o.ShowHiddenFiles=true
o.PromptText="Select one or more files:"
o.MultipleSelection=true
o.ActionButtonLabel="Open files"
o.CancelButtonLabel="no, thanks."
o.WindowTitle="This is a window title."
o.ClientName="Client Name?"
o.ShowDialog

c=o.FileCount
if c>0 then
for i=0 to c-1
f=o.Files(i)

Listbox1.AddRow f.NativePath
next

else
// MsgBox "no file was selected."
quit
end if
```

Notes: OpenDialogMBS does not yet use NSOpenPanel yet. So for Cocoa applications you can use NSOpenPanelMBS class directly. For the Mac App Store, you must use NSOpenPanelMBS and avoid OpenDialogMBS.

125.5.4 Methods

125.5.5 AddType(t as OpenDialogFileTypeMBS)

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Adds a file type to the list.

125.5.6 ClearTypes

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Clears the file type list.

125.5.7 CountTypes as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Returns the number of file types in the file type list.

125.5.8 Files as FolderItem()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries an array with all files picked.
See also:

- 125.5.9 Files(index as Integer) as folderitem 19519

125.5.9 Files(index as Integer) as folderitem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The array with the selected files.
Notes: Index goes from 0 to filecount-1.
See also:

- 125.5.8 Files as FolderItem() 19519

125.5.10 GetCustomImageHeight as Integer

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Returns the heigh of the custom picture in pixels.
Example:

```
dim o as new OpenDialogMBS
msgbox "GetCustomImageHeight: "+str(o.GetCustomImageHeight) // could show 72 as value.
```

Notes:

The height depends on the size of the Windows system font, so it's variable and this function calculates the size for you.

Returns 0 on any error.

125.5.11 GetType(index as Integer) as OpenDialogFileTypeMBS

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Returns the file type with the given index.
Notes: Returns nil on any error.

125.5.12 Items as OpenDialogItemMBS()

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Queries items picked.
Notes: Currently only provided for Windows to get name, path, URL or data for items, which may not always have a file path.

125.5.13 RefreshCustomImage

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Call this method after you set the custompicture property to update the window.
Notes: The control is asked to redraw and will use the CustomPicture property for the picture content. Space around is colored with window background color.

125.5.14 ShowDialog

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Shows the dialog.
Example:

```
dim o as new OpenDialogMBS
o.ShowDialog
```

Notes: Check the FileCount property to see whether something was selected.

125.5.15 Properties

125.5.16 accessoryView as Variant

MBS Util Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Customizes the panel for the application by adding a custom view to the panel.
Notes:

Only for Cocoa target. Must be a NSViewMBS or subclass.

The custom object that is added appears just above the OK and Cancel buttons at the bottom of the panel. The open panel automatically resizes itself to accommodate the view. You can invoke this method repeatedly

to change the accessory view as needed. If view is nil, the panel removes the current accessory view.
(Read and Write property)

125.5.17 ActionButtonLabel as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The label of the action button.
Example:

```
dim o as new OpenDialogMBS

o.ActionButtonLabel = "Hello"
o.ShowDialog
```

Notes:

Used only on Mac OS.
For RB 4.5 and earlier you need to make sure the encoding is set correctly.
Can be set to "" to use the default value.
(Read and Write property)

125.5.18 AllowFolderSelection as Boolean

MBS Util Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop only.

Function: Whether folders can be selected.
Example:

```
dim o as OpenDialogMBS
dim i,c as Integer
dim f as FolderItem

o=new OpenDialogMBS
o.ShowHiddenFiles=true
o.PromptText="Select one or more files/folders:"
o.MultipleSelection=true
o.ActionButtonLabel="Open files/folders"
o.CancelButtonLabel="no, thanks."
o.WindowTitle="This is a window title."
o.ClientName="Client Name?"
o.AllowFolderSelection=true
o.ShowDialog
```

```
c=o.FileCount
if c>0 then
for i=0 to c-1
f=o.Files(i)

Listbox1.AddRow f.NativePath
next
end if
```

Notes:

Default is false.
Setting this to true on Windows or Linux has no effect there.
(Read and Write property)

125.5.19 CancelButtonLabel as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The text for the cancel button.
Example:

```
dim o as new OpenDialogMBS

o.CancelButtonLabel = "Hello"
o.ShowDialog
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Used only on Mac OS Carbon.
Can be set to "" to use the default value.

Deprecated as no longer needed for Windows, Linux or MacOS Cocoa.
(Read and Write property)

125.5.20 ClientName as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The name of the client.
Example:

```
dim o as new OpenDialogMBS
o.ClientName = "Hello"
o.ShowDialog
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Used only on Mac OS Carbon.
Can be set to "" to use the default value.

Deprecated as no longer needed for Windows, Linux or MacOS Cocoa.
(Read and Write property)

125.5.21 Creator as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The creator code of your application.
Notes:

This property is only used Mac OS if you specify one or more file types.
(Read and Write property)

125.5.22 CustomPicture as Picture

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: The custom picture content.
Notes:

You need to call RefreshCustomImage to refresh the picture visible to the user.
(Read and Write property)

125.5.23 File as FolderItem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The first file selected.
Example:

```
dim o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog
```

MsgBox o.File.displaypathmbs

Notes:

file = files(0)
Just for the cases where you only need the first file.
(Read only property)

125.5.24 FileCount as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The number of files selected.
Example:

```
dim o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog

MsgBox str(o.FileCount)
```

Notes: (Read only property)

125.5.25 InitialDirectory as FolderItem

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: The initial directory.
Example:

```
dim o as new OpenDialogMBS
o.InitialDirectory = SpecialFolder.Desktop
o.ShowDialog
```

Notes:

Set to nil to get the last directory used.
(Read and Write property)

125.5.26 Lasterror as Integer

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The last error code reported.
Notes: (Read and Write property)

125.5.27 Left as Integer

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The horizontal position of the dialog.
Notes:

-1 is for the default position.
Used only on the Mac side.
(Read and Write property)

125.5.28 MultipleSelection as Boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether you want to allow multiple file selection.
Example:

```
dim o as new OpenDialogMBS
o.MultipleSelection = true
o.ShowDialog
```

Notes: (Read and Write property)

125.5.29 ParentWindow as Window

MBS Util Plugin, Plugin Version: 6.3, Platforms: Linux, Windows, Targets: Desktop only.

Function: The parent window of the dialog.
Example:

```
dim o as new OpenDialogMBS
o.ParentWindow = window1
o.ShowDialog
```

Notes:

Only implemented for Windows and Linux.
(Read and Write property)

125.5.30 PromptText as String

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The prompt text.
Example:

```
dim o as new OpenDialogMBS

o.PromptText = "Hello"
o.ShowDialog
```

Notes:

For RB 4.5 and earlier you need to make sure the encoding is set correctly.
Can be set to "" to use the default value.
(Read and Write property)

125.5.31 ResolveAliases as Boolean

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether aliases should be resolved.
Example:

```
dim o as new OpenDialogMBS
o.ResolveAliases = false
o.ShowDialog
```

Notes:

This property is only used on Mac OS X.
Default is true.

Flag seems to be broken on Mac OS X 10.7.
(Read and Write property)

125.5.32 ShowHiddenFiles as Boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Whether hidden files should be shown.
Example:

```
dim o as new OpenDialogMBS
o.ShowHiddenFiles = true
o.ShowDialog
```

Notes:

Default is false.
(Read and Write property)

125.5.33 Top as Integer

MBS Util Plugin, Plugin Version: 4.2, Platform: macOS, Targets: Desktop only.

Function: The vertical position of the dialog.
Notes:

-1 is for the default position.
Used only on the Mac side.
(Read and Write property)

125.5.34 TreatFilePackagesAsDirectories as Boolean

MBS Util Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop only.

Function: Sets the panel's behavior for displaying file packages (for example, MyApp.app) to the user.
Notes:

If true, the panel will display file packages as directories; if false, it will not.
(Read and Write property)

125.5.35 UseCustomPicture as Integer

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop only.

Function: Whether to add a custom picture control.
Notes:

Specify the size of the area you want. As the size is relative to the font size of the system font on windows, the results can be interesting. For example a value of 50 gives here a 72 pixel height area. Value can be from 1 to 100. Or zero to disable.

This method was added for a client who needed to show a small preview of a project file in the open dialog on Windows.
For Mac OS X you can use the NSSavePanelMBS/NSOpenPanelMBS with an accessory view.
(Read and Write property)

125.5.36 WindowTitle as String

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The window title to use.
Example:

```
dim o as new OpenDialogMBS

o.WindowTitle = "Hello World"
o.ShowDialog
```

Notes:

Can be set to "" to use the default value.
Not shown on MacOS.
(Read and Write property)

125.5.37 Events

125.5.38 FilterItem(file as folderitem, filterMode as Integer) as boolean

MBS Util Plugin, Plugin Version: 4.2, Platforms: macOS, Windows, Targets: .

Function: An event where you can filter the file list.
Notes:

Return true to disable the file.
The result of the event is ignored by Windows. But on Mac OS it works.
So use the event on Mac and the filetype objects on Windows.

125.5.39 SelectionChanged(file as folderitem)

MBS Util Plugin, Plugin Version: 11.0, Platform: Windows, Targets: .

Function: Called when the selection changes in the window.
Notes: This is currently only implemented for Windows and gives you only one file name.

125.6 class WinFileDialogExceptionMBS

125.6.1 class WinFileDialogExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The class for an error exception in our WinFileDialog classes.
Notes: Subclass of the RuntimeException class.

125.6.2 Blog Entries

- MBS Xojo Plugins, version 20.1pr3
- Customized File Open and Save Dialogs for Windows

125.7 class WinFileDialogMBS

125.7.1 class WinFileDialogMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The class for a file dialog.
Notes:

All methods may raise WinFileDialogExceptionMBS in case of errors.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

125.7.4 Methods

125.7.5 AddCheckButton(ControlID as Integer, label as String, Checked as boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds a check button (check box) to the dialog.
Notes:

ControlID: The ID of the check button to add.
Label: the button text.
Checked: A boolean indicating the current state of the check button. True if checked; false otherwise.

The default state for this control is enabled and visible.

125.7.6 AddComboBox(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds a combo box to the dialog.
Notes:

ControlID: The ID of the combo box to add.

The default state for this control is enabled and visible.

125.7.7 AddControlItem(ControlID as Integer, ItemID as Integer, Label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds an item to a container control in the dialog.
Notes:

ControlID: The ID of the container control to which the item is to be added.
ItemID: The ID of the item.
Label: The item's text, which can be either a label or, in the case of a drop-down list, the item itself.

The default state for this item is enabled and visible. Items in control groups cannot be changed after they have been created, with the exception of their enabled and visible states.
Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.

125.7.8 AddEditBox(ControlID as Integer, Text as String = "")

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds an edit box control to the dialog.
Notes:

ControlID: The ID of the edit box to add.
Text: The default text displayed in the edit box.

The default state for this control is enabled and visible.
To add a label next to the edit box, place it in a visual group with StartVisualGroup.

125.7.9 AddMenu(ControlID as Integer, Label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds a menu to the dialog.
Notes:

ControlID: The ID of the menu to add.
Label: The menu name.

The default state for this control is enabled and visible.
To add items to this control, use AddControlItem.

125.7.10 AddPlace(Item as WinShellItemMBS, top as boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds a folder to the list of places available for the user to open or save items.
Notes:

Item: the folder to be made available to the user. This can only be a folder.
Top: Specifies where the folder is placed within the list. Pass true for top or false for bottom.

125.7.11 AddPushButton(ControlID as Integer, Label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds a button to the dialog.
Notes:

ControlID: The ID of the button to add.
Label: the button text

The default state for this control is enabled and visible..

125.7.12 AddRadioButtonList(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds an option button (also known as radio button) group to the dialog.
Notes:

ControlID: The ID of the option button group to add.
The default state for this control is enabled and visible.

125.7.13 AddSeparator(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds a separator to the dialog, allowing a visual separation of controls.
Notes:

ControlID: The control ID of the separator.

The default state for this control is enabled and visible.

125.7.14 AddText(ControlID as Integer, Text as String = "")

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Adds text content to the dialog.
Notes:

ControlID: The ID of the text to add.
Text: The text to show.

The default state for this control is enabled and visible.

125.7.15 ClearClientData

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Instructs the dialog to clear all persisted state information.
Notes: Persisted information can be associated with an application or a GUID. If a GUID was set by using SetClientGuid, that GUID is used to clear persisted information.

125.7.16 Close(cancel as boolean = false)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Closes the dialog.
Notes:

Pass or false/true for cancel parameter to have that being returned by Show method.

An application can call this method from an event while the dialog is open. The dialog will close and the Show method will return with the result given by cancel parameter.

If this method is called, there is no result available for the Result or Results methods, and they will fail if called.

125.7.17 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

125.7.18 EnableOpenDropDown(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Enables a drop-down list on the Open or Save button in the dialog.
Notes:

ControlID: The ID of the drop-down list.

The Open or Save button label takes on the text of the first item in the drop-down. This overrides any label set by OkButtonLabel.
Use AddControlItem to add items to the drop-down.

125.7.19 EndVisualGroup

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Stops the addition of elements to a visual group in the dialog.

125.7.20 RemoveAllControlItems(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Removes all items from a container control in the dialog.
Notes:

ControlID: The ID of the container control from which to remove the items.

Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.

125.7.21 RemoveControlItem(ControlID as Integer, ItemID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Removes an item from a container control in the dialog.
Notes:

ControlID: The ID of the container control from which the item is to be removed.
ItemId: The ID of the item.

Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.

125.7.22 SetFileTypes(FileTypes() as WinFileTypeMBS)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The file types that the dialog can open or save.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
Dim FileTypes() As WinFileTypeMBS

FileTypes.Append New WinFileTypeMBS("JPEG image", "*.jpg")
FileTypes.Append New WinFileTypeMBS("PNG image", "*.png")
FileTypes.Append New WinFileTypeMBS("Tiff image", "*.tif;*.tiff")

d.SetFileTypes FileTypes
```

Notes:

When using the Open dialog, the file types declared there are used to filter the view. When using the Save dialog, these values determine which file name extension is appended to the file name.
This method must be called before the dialog is shown and can only be called once for each dialog instance.
File types cannot be modified once the Common Item dialog box is displayed.

125.7.23 Show as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Launches the modal window.
Notes: Returns true on success or false on failure.
See also:

- 125.7.24 Show(parent as window) as Boolean 19537

125.7.24 Show(parent as window) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Launches the modal window.
Notes:

parent: The handle of the owner window. This value can be nil.
Returns true on success or false on failure.
See also:

- 125.7.23 Show as Boolean 19536

125.7.25 StartVisualGroup(ControlID as Integer, label as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Declares a visual group in the dialog. Subsequent calls to any "add" method add those elements to this group.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog

d.StartVisualGroup 1, "Metadata"
d.AddText 2, "Author:"
d.AddEditBox 3, CustomValue.Text
d.AddText 4, "Subject:"
d.AddEditBox 5, "Hello World"
d.EndVisualGroup
```

Notes:

ControlID: The ID of the visual group.
Label: text that appears next to the visual group.

Controls will continue to be added to this visual group until you call EndVisualGroup.
A visual group can be hidden and disabled like any other control, except that doing so affects all of the controls within it. Individual members of the visual group can also be hidden and disabled singly.

125.7.26 Properties

125.7.27 ClientGuid as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The client GUID.
Notes:

A dialog's state can include factors such as the last visited folder and the position and size of the dialog. Typically, this state is persisted based on the name of the executable file. By specifying a GUID, an application can have different persisted states for different versions of the dialog within the same application (for example, an import dialog and an open dialog).

SetClientGuid should be called immediately after creation of the dialog object.

Enables a calling application to associate a GUID with a dialog's persisted state.
(Read and Write property)

125.7.28 CurrentSelection as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The user's current selection in the dialog.
Notes:

The item currently selected in the dialog. This item can be a file or folder selected in the view window, or something that the user has entered into the dialog's edit box. The latter case may require a parsing operation (cancelable by the user) that blocks the current thread.

If not result exists, the plugin returns nil and raises no failed exceptions.
(Read only property)

125.7.29 DefaultExtension as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The default extension to be added to file names.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.DefaultExtension = "jpg"
```

Notes:

The extension text. This string should not include a leading period. For example, "jpg" is correct, while ".jpg" is not.

If this method is called before showing the dialog, the dialog will update the default extension automatically when the user chooses a new file type (see SetFileTypes).
(Read and Write property)

125.7.30 DefaultFolder as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The folder used as a default if there is not a recently used folder value available.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.DefaultFolder = New WinShellItemMBS(SpecialFolder.Desktop)
```

Notes: (Read and Write property)

125.7.31 FileName as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The text currently entered in the dialog's File name edit box.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.FileName = "New Document"
```

Notes:

The text in the File name edit box does not necessarily reflect the item the user chose. To get the item the user chose, use Result property.

If not result exists, the plugin returns "" and raises no failed exceptions.
(Read and Write property)

125.7.32 FileNameLabel as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The text of the label next to the file name edit box.
Notes: (Read and Write property)

125.7.33 FileTypeIndex as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The currently selected file type.
Notes:

The index of the selected file type in the file type array passed to SetFileTypes.

This is a one-based index rather than zero-based.
FileTypeIndex can be called either while the dialog is open or after it has closed.
(Read and Write property)

125.7.34 Folder as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: A folder that is always selected when the dialog is opened, regardless of previous user action.
Notes:

Gets either the folder currently selected in the dialog, or, if the dialog is not currently displayed, the folder that is to be selected when the dialog is opened.

This folder overrides any "most recently used" folder. If this method is called while the dialog is displayed, it causes the dialog to navigate to the specified folder.
In general, we do not recommended the use of this method. If you call SetFolder before you display the dialog box, the most recent location that the user saved to or opened from is not shown. Unless there is a very specific reason for this behavior, it is not a good or expected user experience and should therefore be avoided. In almost all instances, SetDefaultFolder is the better method.

As of Windows 7, if the path of the folder specified through psi is the default path of a known folder, the known folder's current path is used in the dialog. That path might not be the same as the path specified in psi; for instance, if the known folder has been redirected. If the known folder is a library (virtual folders Documents, Music, Pictures, and Videos), the library's path is used in the dialog. If the specified library is hidden (as they are by default as of Windows 8.1), the library's default save location is used in the dialog, such as the Microsoft OneDrive Documents folder for the Documents library. Because of these mappings, the folder location used in the dialog might not be exactly as you specified when you called this method.

(Read and Write property)

125.7.35 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

125.7.36 OkButtonLabel as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The text of the Open or Save button.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OkButtonLabel = "Export"
```

Notes: (Read and Write property)

125.7.37 OptionAllNonStorageItems as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Enables the user to choose any item in the Shell namespace, not just those with SFGAO_STREAM or SFAGO_FILESYSTEM attributes. #
Notes:

This flag cannot be combined with OptionForceFileSystem.
(Read and Write property)

125.7.38 OptionAllowMultiSelect as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Enables the user to select multiple items in the open dialog.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionAllowMultiSelect = true
```

Notes:

Note that when this flag is set, the WinFileOpenDialogMBS class must be used to retrieve those items.
(Read and Write property)

125.7.39 OptionCreatePrompt as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Prompt for creation if the item returned in the save dialog does not exist.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionCreatePrompt = true
```

Notes:

Note that this does not actually create the item.
(Read and Write property)

125.7.40 OptionDefaultNoMiniMode as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Indicates to the Save As dialog box that it should open in expanded mode.
Notes:

Expanded mode is the mode that is set and unset by clicking the button in the lower-left corner of the Save As dialog box that switches between Browse Folders and Hide Folders when clicked. This value is not supported as of Windows 7.
(Read and Write property)

125.7.41 OptionDontAaddToRecent as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Do not add the item being opened or saved to the recent documents list.
Notes: (Read and Write property)

125.7.42 OptionFileMustExist as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The item returned must exist.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionFileMustExist = true
```

Notes:

This is a default value for the Open dialog.
(Read and Write property)

125.7.43 OptionForceFileSystem as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Ensures that returned items are file system items.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionForceFileSystem = true
```

Notes:

Note that this does not apply to items returned by CurrentSelection.
(Read and Write property)

125.7.44 OptionForcePreviewPaneOn as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Indicates to the Open dialog box that the preview pane should always be displayed.
Notes: (Read and Write property)

125.7.45 OptionForceShowHidden as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Include hidden and system items.
Notes: (Read and Write property)

125.7.46 OptionHideMRUPlaces as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Hide the list of places from which the user has recently opened or saved items. This value is not supported as of Windows 7.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionHideMRUPlaces = true
```

Notes: (Read and Write property)

125.7.47 OptionHidePinnedPlaces as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Hide items shown by default in the view's navigation pane.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionHidePinnedPlaces = true
```

Notes:

This flag is often used in conjunction with the AddPlace method, to hide standard locations and replace them with custom locations.

Windows 7 and later. Hide all of the standard namespace locations (such as Favorites, Libraries, Computer, and Network) shown in the navigation pane.

Windows Vista. Hide the contents of the Favorite Links tree in the navigation pane. Note that the category itself is still displayed, but shown as empty.
(Read and Write property)

125.7.48 OptionNoChangeDir as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Don't change the current working directory.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionNoChangeDir = true
```

Notes: (Read and Write property)

125.7.49 OptionNoDereferenceLinks as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Shortcuts should not be treated as their target items.
Notes:

This allows an application to open a .lnk file rather than what that file is a shortcut to.
(Read and Write property)

125.7.50 OptionNoReadOnlyReturn as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Do not return read-only items.
Notes:

This is a default value for the Save dialog.
(Read and Write property)

125.7.51 OptionNoTestFileCreate as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Do not test whether creation of the item as specified in the Save dialog will be successful.
Notes:

If this flag is not set, the calling application must handle errors, such as denial of access, discovered when the item is created.
(Read and Write property)

125.7.52 OptionNoValidate as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Do not check for situations that would prevent an application from opening the selected file, such as sharing violations or access denied errors.
Notes: (Read and Write property)

125.7.53 OptionOKButtonNeedsInteraction as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: OKButton needs interaction?
Notes: (Read and Write property)

125.7.54 OptionOverwritePrompt as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: When saving a file, prompt before overwriting an existing file of the same name.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionOverwritePrompt = true
```

Notes:

This is a default value for the Save dialog.
(Read and Write property)

125.7.55 OptionPathMustExist as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The item returned must be in an existing folder.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.OptionPathMustExist = true
```

Notes:

This is a default value.
(Read and Write property)

125.7.56 OptionPickFolders as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Present an Open dialog that offers a choice of folders rather than files.
Notes: (Read and Write property)

125.7.57 Options as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The current flags that are set to control dialog behavior.
Notes:

See kOptions* constants.

Generally, you should read the property, modify it to include or exclude options by setting the appropriate flags and assign it again.
(Read and Write property)

125.7.58 OptionShareaware as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: In the case of a sharing violation when an application is opening a file, call the application back through ShareViolation event for guidance.
Notes:

This flag is overridden by kOptionsNoValidate.
(Read and Write property)

125.7.59 OptionStrictFileTypes as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: In the Save dialog, only allow the user to choose a file that has one of the file name extensions specified through SetFileTypes.
Notes: (Read and Write property)

125.7.60 OptionSupportsStreamableItems as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Indicates that the caller is opening a file as a stream (BHID_Stream), so there is no need to download that file.
Notes: (Read and Write property)

125.7.61 ProminentControlID as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Places a control in the dialog so that it stands out compared to other added controls.
Notes:

Setting this property causes the control to be placed near the Open or Save button instead of being grouped with the rest of the custom controls.
Only check buttons (check boxes), push buttons, combo boxes, and menus—or a visual group that contains only a single item of one of those types—can be made prominent.
Only one control can be marked in this way. If a dialog has only one added control, that control is marked as prominent by default.
(Read and Write property)

125.7.62 Result as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The choice that the user made in the dialog.
Notes:

Result can be called after the dialog has closed or during the handling of an OnFileOk event. Calling this method at any other time will fail. If multiple items were chosen, this method will fail. In the case of multiple items, call Results method.
Show must return a success code for a result to be available to Result.

If not result exists, the plugin returns nil and raises no failed exceptions.
(Read only property)

125.7.63 Title as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The title of the dialog.

Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
d.title = "Export database"
```

Notes: (Read and Write property)

125.7.64 WindowHandle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Queries window handle.
Notes:

Value is a HWND and may be used in declares.
(Read only property)

125.7.65 CheckButtonState(ControlID as Integer) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The current state of a check button (check box) in the dialog.
Notes:

ControlID: The ID of the check box.

True means checked; false, unchecked.
(Read and Write computed property)

125.7.66 ControlItemState(ControlID as Integer, ItemID as Integer) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The current state of an item in a container control found in the dialog.
Notes:

ControlID: The ID of the container control.
ItemID: The ID of the item.

See kControlState* flags.
(Read and Write computed property)

125.7.67 ControlItemText(ControlID as Integer, ItemID as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The text of a control item.
Notes:

For example, the text that accompanies a radio button or an item in a menu.

ControlID: The ID of the container control.
ItemID: The ID of the item.

The default state of a control item is enabled and visible. Items in control groups cannot be changed after they have been created, with the exception of their enabled and visible states.
Container controls include option button groups, combo boxes, drop-down lists on the Open or Save button, and menus.
(Read and Write computed property)

125.7.68 ControlLabel(ControlID as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The text associated with a control, such as button text or an edit box label.
Notes:

ControlID: The ID of the control whose text is to be changed.

Control labels can be changed at any time, including when the dialog is visible.
(Read and Write computed property)

125.7.69 ControlState(ControlID as Integer) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Gets the current visibility and enabled states of a given control.
Notes:

ControlID: The ID of the control in question.

See kControlState* flags.
(Read and Write computed property)

125.7.70 EditBoxText(ControlID as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The current text in an edit box control.
Notes:

ControlID: The ID of the edit box.
(Read and Write computed property)

125.7.71 SelectedControlItem(ControlID as Integer) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Item index from specified container controls in the dialog.
Notes:

ControlID: The ID of the container control.

Value is the ID of the item that the user selected in the control.

To determine the user's final choice, this method can be called on option button groups, combo boxes, and drop-down lists on the Open or Save button after the dialog has closed. This method cannot be called on menus.
For option button groups and combo boxes, this method can also be called while the dialog is showing, to determine the current choice.

When you query, the plugin does not raise error for failure, but returns 0.
(Read and Write computed property)

125.7.72 Events

125.7.73 ButtonClicked(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when the user clicks a command button.
Notes: ControlID: The ID of the button that the user clicked.

125.7.74 CheckButtonToggled(ControlID as Integer, Checked as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when the user changes the state of a check button (check box).
Notes:

ControlID: The ID of the button that the user clicked.
Checked: A boolean indicating the current state of the check button. true if checked; false otherwise.

125.7.75 ControlActivating(ControlID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when an Open button drop-down list customized through EnableOpenDropDown or a Tools menu is about to display its contents.
Notes:

ControlID: The ID of the list or menu about to display.

In response to this notification, an application can update the contents of the menu or list about to be displayed, based on the current state of the dialog.

125.7.76 FileOk as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called just before the dialog is about to return with a result.
Notes:

Implementations should return true to accept the current result in the dialog or false to refuse it. In the case of false, the dialog should remain open.

When this method is called, the Result and Results methods can be called.
The application can use this callback method to perform additional validation before the dialog closes, or to prevent the dialog from closing. If the application prevents the dialog from closing, it should display a UI to indicate a cause.

An application can also use this method to perform all of its work surrounding the opening or saving of files.

125.7.77 FileTypeChanged

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when the dialog is opened to notify the application of the initial chosen filetype.
Notes: This method is called when the dialog is opened to notify the application of the initially chosen

filetype. If the application has code in this event that responds to type changes, it can respond to the type. For example, it could hide certain controls. The application controls the initial file type and could do its own checks, so this method is provided as a convenience.

125.7.78 FolderChanged

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when the user navigates to a new folder.

125.7.79 FolderChanging(Folder as WinShellItemMBS) as boolean

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called before FolderChanged.
Notes:

This allows the implementer to stop navigation to a particular location.

Folder: the folder to which the dialog is about to navigate.

Return true to accept or false to decline.

The calling application can set Folder during this callback to redirect navigation to an alternate folder. The actual navigation does not occur until FolderChanging has returned.

If the calling application simply prevents navigation to a particular folder, UI should be displayed with an explanation of the restriction. To obtain a parent HWND for the UI, use WindowHandle property.

Warning: If you implement this, add "return true" to allow folders to change.

125.7.80 ItemSelected(ControlID as Integer, ItemID as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when an item is selected in a combo box, when a user clicks an option button (also known as a radio button), or an item is chosen from the Tools menu.
Notes:

ControlID: The ID of the control in which the user made a selection.
ItemID: The ID of the selection.

This notification is not sent when the user chooses an item from the drop-down menu attached to the Open button, because the action taken in that case is always the same: close the dialog as if the user had simply clicked the Open button. For that situation, the application can call SelectedControlItem to obtain the item the user chose from that menu.

125.7.81 Overwrite(item as WinShellItemMBS) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called from the save dialog when the user chooses to overwrite a file.
Notes:

item: the item that will be overwritten.

Return one of the kResponse* constants.

125.7.82 SelectionChange

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Called when the user changes the selection in the dialog's view.

125.7.83 ShareViolation(item as WinShellItemMBS) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: .

Function: Enables an application to respond to sharing violations that arise from Open or Save operations.
Notes:

item: the item that has the sharing violation.
Return one of the kShareViolation* constants.

The kOptionsShareaware flag must be set through Options before this method is called.
A sharing violation could possibly arise when the application attempts to open a file, because the file could have been locked between the time that the dialog tested it and the application opened it.

125.7.84 Constants

125.7.85 kControlStateEnabled = 1

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the control states.
Notes: The control is active.

125.7.86 kControlStateEnableVisible = 3

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the control states.
Notes: The control is visible and enabled.

125.7.87 kControlStateInactive = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the control states.
Notes: The control is inactive and cannot be accessed by the user.

125.7.88 kControlStateVisible = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the control states.
Notes: The control is visible. The absence of this value indicates that the control is hidden.

125.7.89 kOptionsAllNonStorageItems = & h80

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Enables the user to choose any item in the Shell namespace, not just those with SFGAO_STREAM or SFAGO_FILESYSTEM attributes. This flag cannot be combined with kOptionsForceFileSystem.

125.7.90 kOptionsAllowMultiSelect = & h200

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Enables the user to select multiple items in the open dialog. Note that when this flag is set, the WinFileOpenDialogMBS class must be used to retrieve those items.

125.7.91 kOptionsCreatePrompt = & h2000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Prompt for creation if the item returned in the save dialog does not exist. Note that this does not actually create the item.

125.7.92 kOptionsDefaultNoMiniMode = & h20000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Indicates to the Save As dialog box that it should open in expanded mode. Expanded mode is the mode that is set and unset by clicking the button in the lower-left corner of the Save As dialog box that switches between Browse Folders and Hide Folders when clicked. This value is not supported as of Windows 7.

125.7.93 kOptionsDontAaddToRecent = & h2000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Do not add the item being opened or saved to the recent documents list.

125.7.94 kOptionsFileMustExist = & h1000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: The item returned must exist. This is a default value for the Open dialog.

125.7.95 kOptionsForceFileSystem = & h40

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Ensures that returned items are file system items. Note that this does not apply to items returned by CurrentSelection.

125.7.96 kOptionsForcePreviewPaneOn = & h40000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Indicates to the Open dialog box that the preview pane should always be displayed.

125.7.97 kOptionsForceShowHidden = & h10000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Include hidden and system items.

125.7.98 kOptionsHideMRUPlaces = & h20000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Hide the list of places from which the user has recently opened or saved items. This value is not supported as of Windows 7.

125.7.99 kOptionsHidePinnedPlaces = & h40000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes:

Hide items shown by default in the view's navigation pane. This flag is often used in conjunction with the AddPlace method, to hide standard locations and replace them with custom locations.

Windows 7 and later. Hide all of the standard namespace locations (such as Favorites, Libraries, Computer,

and Network) shown in the navigation pane.

Windows Vista. Hide the contents of the Favorite Links tree in the navigation pane. Note that the category itself is still displayed, but shown as empty.

125.7.100 kOptionsNoChangeDir = 8

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Don't change the current working directory.

125.7.101 kOptionsNoDereferenceLinks = & h100000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Shortcuts should not be treated as their target items. This allows an application to open a .lnk file rather than what that file is a shortcut to.

125.7.102 kOptionsNoReadOnlyReturn = & h8000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Do not return read-only items. This is a default value for the Save dialog.

125.7.103 kOptionsNoTestFileCreate = & h10000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Do not test whether creation of the item as specified in the Save dialog will be successful. If this flag is not set, the calling application must handle errors, such as denial of access, discovered when the item is created.

125.7.104 kOptionsNoValidate = & h100

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Do not check for situations that would prevent an application from opening the selected file, such as sharing violations or access denied errors.

125.7.105 kOptionsOKButtonNeedsInteraction = & h200000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: OKButton needs interaction?

125.7.106 kOptionsOverwritePrompt = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: When saving a file, prompt before overwriting an existing file of the same name. This is a default value for the Save dialog.

125.7.107 kOptionsPathMustExist = & h800

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: The item returned must be in an existing folder. This is a default value.

125.7.108 kOptionsPickFolders = & h20

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Present an Open dialog that offers a choice of folders rather than files.

125.7.109 kOptionsShareaware = & h4000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: In the case of a sharing violation when an application is opening a file, call the application back through ShareViolation event for guidance. This flag is overridden by kOptionsNoValidate.

125.7.110 kOptionsStrictFileTypes = 4

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: In the Save dialog, only allow the user to choose a file that has one of the file name extensions specified through SetFileTypes.

125.7.111 kOptionsSupportsStreamableItems = & h80000000

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the option flags.
Notes: Indicates that the caller is opening a file as a stream (BHID_Stream), so there is no need to download that file.

125.7.112 kOverwriteAccept = 1

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the overwrite responses.
Notes: The application has determined that the file should be returned from the dialog.

125.7.113 kOverwriteDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the overwrite responses.
Notes: The application has not handled the event. The dialog displays a UI asking the user whether the file should be overwritten and returned from the dialog.

125.7.114 kOverwriteRefuse = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the overwrite responses.
Notes: The application has determined that the file should not be returned from the dialog.

125.7.115 kShareViolationAccept = 1

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the share violation response constants.
Notes: The application has determined that the file should be returned from the dialog.

125.7.116 kShareViolationDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the share violation response constants.
Notes: The application has not handled the event. The dialog displays a UI that indicates that the file is in use and a different file must be chosen.

125.7.117 kShareViolationRefuse = 2

MBS WinFrameworks Plugin, Plugin Version: 20.1.

Function: One of the share violation response constants.
Notes: The application has determined that the file should not be returned from the dialog.

125.8 class WinFileDialogObserverMBS

125.8.1 class WinFileDialogObserverMBS

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop only.

Function: Intercepts save and open dialogs on Windows to provide events to customize.
Notes:

You can only have one instance of this class at a time.
First time you create an object, we initialize the necessary feature.

See also NSSavePanelObserverMBS class for Windows.

125.8.4 Properties

125.8.5 Enabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: Desktop only.

Function: Whether the feature is enabled.
Notes:

If value is false, no events will be called.
(Read and Write property)

125.8.6 Events

125.8.7 DidShowDialog(dialog as WinFileDialogMBS, Result as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: .

Function: Event called after dialog showed.
Notes: You can read results from whatever modification you made.

125.8.8 WillShowDialog(dialog as WinFileDialogMBS)

MBS WinFrameworks Plugin, Plugin Version: 20.4, Platform: Windows, Targets: .

Function: Event called before dialog shows.
Notes: You can do customization just before the dialog shows.

125.9 class WinFileOpenDialogMBS

125.9.1 class WinFileOpenDialogMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Extends the WinFileDialogMBS interface by adding methods specific to the open dialog.
Notes:

Requires Windows Vista or newer.
All methods may raise WinFileDialogExceptionMBS in case of errors.
Subclass of the WinFileDialogMBS class.

125.9.3 Methods

125.9.4 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

125.9.5 Results as WinShellItemArrayMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Gets the user's choices in a dialog that allows multiple selection.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
Dim items As WinShellItemArrayMBS = d.Results

Dim c As Integer = items.Count
For i As Integer = 0 To c-1
Dim item As WinShellItemMBS = items.Item(i)

Listbox1.AddRow item.NativePath
Next
```

Notes:

This method can be used whether the selection consists of a single item or multiple items.

Result property can be called after the dialog has closed or during the handling of an OnFileOk event. Calling this method at any other time will fail.
Show must return a success code for a result to be available to Result/Results.

125.9.6 SelectedItems as WinShellItemArrayMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Gets the currently selected items in the dialog. These items may be items selected in the view, or text selected in the file name edit box.
Notes: This method can be used for single item or multiple item selections. If the user has entered new text in the file name field, this can be a time-consuming operation. When the application calls this method, the application parses the text in the filename field. For example, if this is a network share, the operation could take some time. However, this operation will not block the UI, since the user should able to stop the operation, which will result in SelectedItems raising an exception).

125.10 class WinFileSaveDialogMBS

125.10.1 class WinFileSaveDialogMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Extends the WinFileDialogMBS class by adding methods specific to the save dialog, which include those that provide support for the collection of metadata to be persisted with the file.
Notes:

All methods may raise WinFileDialogExceptionMBS in case of errors.
Subclass of the WinFileDialogMBS class.

Function: The constructor.

125.10.5 Properties

125.10.6 SaveAsItem as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The item to be used as the initial entry in a Save As dialog.
Notes:

he name of the item is displayed in the file name edit box, and the containing folder is opened in the view. This would generally be used when the application is saving an item that already exists. For new items, use FileName property.
(Read and Write property)

125.11 class WinFileTypeMBS

125.11.1 class WinFileTypeMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The class for a file type.
Example:

```
Dim d As WinFileOpenDialogMBS // your dialog
Dim FileTypes() As WinFileTypeMBS

FileTypes.Append New WinFileTypeMBS("JPEG image", "*.jpg")
FileTypes.Append New WinFileTypeMBS("PNG image", "*.png")
FileTypes.Append New WinFileTypeMBS("Tiff image", "*.tif;*.tiff")

d.SetFileTypes FileTypes
```

125.11.3 Methods

125.11.4 Constructor(Name as string, Spec as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

125.11.5 Properties

125.11.6 Name as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The name of the entry.
Notes: (Read and Write property)

125.11.7 Spec as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The file type specification.
Notes:

e.g. "*.jpg;*.jpeg", "*.bmp" or "*.*".
(Read and Write property)

125.12 class WinShellItemArrayMBS

125.12.1 class WinShellItemArrayMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The class for an array of shell items.
Notes:

All methods may raise WinFileDialogExceptionMBS in case of errors.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

125.12.3 Methods

125.12.4 Constructor

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

125.12.5 Item(index as Integer) as WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Gets the item at the given index in the IShellItemArray.

125.12.6 Properties

125.12.7 Count as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Gets the number of items in the given IShellItem array.
Notes: (Read only property)

125.12.8 Handle as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

125.13 class WinShellItemMBS

125.13.1 class WinShellItemMBS

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: The class for a Shell item.
Notes: All methods may raise WinFileDialogExceptionMBS in case of errors.

125.13.3 Methods

125.13.4 Compare(other as WinShellItemMBS, Mode as Integer = 0) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Compares two shell items.
Notes:

Default mode is to compare display names.
Returns 0 if equal or non-null value if not.

125.13.5 Constructor(item as folderItem)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Creates new shell item based on a folderitem.
See also:

- 125.13.6 Constructor(path as String) 19571

125.13.6 Constructor(path as String)

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Creates new shell item based on a path.
See also:

- 125.13.5 Constructor(item as folderItem) 19571

125.13.7 Operator_Compare(other as WinShellItemMBS) as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Compares two shell items.
Notes:

Returns 0 if equal or non-null value if not.
Compares display name.
This method is called by Xojo when you use = operator on items to compare.

125.13.8 ReadData as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Utility function to read data from item.
Notes:

A shell item may not point necessarily to a real file.
This method can read it even if it is not a real file, but still can be opened as IStream.

125.13.9 Thumbnail(preferredSize as Integer) as Picture

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Queries thumbnail for item.
Notes:

preferredSize is the size you'd like to have. Resulting image can be smaller or bigger.
Returns nil on any error.
If user disabled thumbnails for explorer, the shell also provides none for us, just icons.
Requires Windows Vista or newer.

125.13.10 Properties

125.13.11 DisplayName as String

MBS WinFrameworks Plugin, Plugin Version: 20.1, Platform: Windows, Targets: Desktop only.

Function: Gets the display name of the shell item.
Notes:

Returns the display name relative to the parent folder. In UI this name is generally ideal for display to the user.

If no path is available, the plugin does not raise exception, but returns "".
(Read only property)

125.13.12 Handle as Integer
