- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally
- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must

guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

165.17.24 SQLiteBackupPageCount(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

165.17.25 SQLiteBackupRemaining(Backup as SQLite3BackupMBS) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

165.17.26 SQLiteBackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

165.17.27 SQLiteEnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

165.17.28 SQLiteLastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always

available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

165.17.29 SQLiteLibVersion as String

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version string of the SQLite library.

165.17.30 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 165.17.31 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer 22697

165.17.31 SQLiteLoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 165.17.30 SQLiteLoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 22696

165.17.32 SQLiteMemoryHighwater(reset as boolean = false) as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.

165.17.33 SQLiteMemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.

165.17.34 SQLiteReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey() anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

165.17.35 SQLiteSetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

165.17.36 SQLiteSetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

165.17.37 SQLiteSetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding

for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

165.17.38 SQLiteTableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true

auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

165.17.39 SQLiteThreadsafe as integer

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

165.17.40 SQLSelect(SelectString as string, CommandType as Integer) as RecordSet

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLSelect threaded.
Notes:

Same as SQLSelect, but with additional CommandType parameter.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

165.17.41 SQLSelectMT(SelectString as string, CommandType as Integer = 0) as RecordSet

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQLSelect threaded.
Notes:

Same as SQLSelect, but if you run this on a thread, the plugin gives time to other threads so the rest of your application runs just fine.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

If Scrollable property is true, the recordset will be requested to be scrollable.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

165.17.42 UpdateRecord(TableName as String, Record as Dictionary, Keys as Dictionary)

MBS SQL Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience function to update a record.
Example:

```
dim db as SQLDatabaseMBS // your database connection

dim d as new Dictionary

d.Value("text")="new text"
d.Value("other")="second value"

db.UpdateRecord("test_tbl", d, new dictionary("ID":2))

if db.Error then
MsgBox db.ErrorMessage
end if
```

Notes:

The plugin builds for you SQL statement with prepared statement and runs the update command with given values for records with given key values.
Lasterror is set or exception raised as with SQLExecute.
You can check statement via LastStatement property.

165.17.43 Properties

165.17.44 AutoCommit as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether autocommit is enabled or disabled for the current connection.
Example:

```
Dim db as SQLDatabaseMBS // your database connection
db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes:

If autocommit is on, the database is committed automatically after each SQL command. Otherwise, transaction is committed only after Commit calling.

(Read and Write property)

165.17.45 Client as Integer

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current DBMS client assigned for the connection.
Notes:

Raises OutOfBoundsException exception if value parameter is out of range on setting.
(Read and Write property)

165.17.46 ClientVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the DBMS client API version number.
Notes:

The higher word contains the major client version (the XX value in the XX.YY version number); the lower word contains the minor client version (the YY value in the XX.YY version number).

If an DBMS client was not set calling ClientVersion method will throw an exception.
(Read only property)

165.17.47 Connection as SQLConnectionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The connection for this database used in the background.
Notes:

Note that methods on this connection object can raise exceptions while methods on the SQLDatabaseMBS class sets the error properties.
(Read only property)

165.17.48 isAlive as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the database server connection status for a particular connection object.
Notes:

Returns true if the database server is active and accessible; otherwise false.
This method uses the safe query execution for most supported DBMS-es. The query uses the well known database table or procedure (mysql_ping is used for MySQL). If the query fails the method returns false.
(Read only property)

165.17.49 isConnected as boolean

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the connection state for a particular connection object.
Notes:

Returns true if connected; otherwise false.
(Read only property)

165.17.50 IsolationLevel as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The transaction isolation level.
Notes:

Use the kReadCommitted, kReadUncommitted, kRepeatableRead, kSerializable and kLevelUnknown constants.
(Read and Write property)

165.17.51 LastStatement as String

MBS SQL Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last executed SQL Statement.
Notes: (Read only property)

165.17.52 NativeAPI as Variant

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a set of functions of native DBMS client API.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Returns a SQLAPIMBS object.
Deprecated in version 19.5 in favor of direct methods in SQLDatabaseMBS and SQLConnectionMBS classes.

(Read only property)

165.17.53 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

165.17.54 RaiseException as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to raise exceptions.
Notes:

Default is false which means we set error, ErrorCode and ErrorMessage properties and not raise SQLErrorExceptionMBS exception.
If you set to true, we do raise the exception and you have similar behavior as with SQLConnection class.
We recommend to use exceptions as they are not so easily ignored like an error property being true.
(Read and Write property)

165.17.55 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to make internally created SQLCommand objects scrollable.
Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

165.17.56 ServerVersion as Integer

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version number.
Notes:

The higher word contains the major server version (the XX value in the XX.YY version number); the lower word contains the minor server version (the YY value in the XX.YY version number).
(Read only property)

165.17.57 ServerVersionString as string

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the currently connected DBMS server version string.
Notes:

A server version string may contain some useful information about server brand, configuration and so on. It is a good idea to display this information in all your applications.
(Read only property)

165.17.58 SQLiteEncryptionKey as String

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encryption key to use.
Example:

```
dim db as new SQLDatabaseMBS
db.SQLiteEncryptionKey = "Hello"
```

Notes:

This key is applied to the database after connecting. In case of an error, the plugin raises an exception. An empty key can be used for having no encryption.
Alternatively you can use SQLite3MBS.SetKey yourself.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix. If no prefix is given, we default to AES 128.

To be compatible to Xojo, you can use AES128.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.
(Read and Write property)

165.17.59 Tag as Variant

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag property.
Notes:

You can store here whatever you like.
(Read and Write property)

165.17.60 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option for the connection.
Example:

```
dim c as SQLDatabaseMBS // your database connection

// for Microsoft SQL use OLEDB, so you don't need native SQL drivers installed...
c.Option("UseAPI") = "OLEDB"
c.Option("SQLNCLI.LIBS") = "sqlsrv32.dll" // Library included in Windows Vista and newer

// for SQLite, set flag to open database file read only:
c.Option("SQLiteVFSFlags") = "1"

// turn on auto cache
c.Option("AutoCache") = "true"

// set connection timeout for ODBC:
c.Option("SQL_ATTR_CONNECTION_TIMEOUT") = "10"
```

Notes: (Read and Write computed property)

165.17.61 Events

165.17.62 DidConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called after connection was made.
Notes: After we got connected, you can apply various options on the new connection here.

165.17.63 PostgresNotification(NotificationName as string, PID as Integer, Extras as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

Function: A postgresSQL notification was received.
Notes: Provides notification name, process ID of app and optional extra information.

165.17.64 Trace(traceInfo as Integer, SQL as string, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to trace SQL commands.

165.17.65 WillConnect

MBS SQL Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called before connection is established.
Notes: Last chance to set connection options.

165.17.66 Constants

165.17.67 kANSILevel0 = 0

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 0

165.17.68 kANSILevel1 = 1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 1

165.17.69 kANSILevel2 = 2

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 2

165.17.70 kANSILevel3 = 3

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the ANSI level constants.
Notes: ANSI Level 3

165.17.71 kAutoCommitOff = 0

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the constants for the autocommit property.
Example:

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: Autocommit is off.

165.17.72 kAutoCommitOn = 1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the constants for the autocommit property.
Example:

```
dim db as SQLDatabaseMBS // your database connection

db.AutoCommit = SQLDatabaseMBS.kAutoCommitOn
```

Notes: Autocommit is on.

165.17.73 kAutoCommitUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the constants for the autocommit property.
Notes: Autocommit unknown

165.17.74 kCommandTypeSQLStatement = 1

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Command is an SQL statement.

165.17.75 kCommandTypeSQLStatementRaw = 2

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Command is an SQL statement that mustn't be interpreted by SQLAPI.

165.17.76 kCommandTypeStoredProcedure = 3

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Command is a stored procedure or a function.

165.17.77 kCommandTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 14.1.

Function: One of the constants for the command type.
Notes: Used by default. Library detects command type automatically.

165.17.78 kErrorBindVarNotFound = 7

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Bind variable not found.

165.17.79 kErrorClientInitFails = 6

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Initialization failed for client.

165.17.80 kErrorClientNotSet = 1

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Client not set.

165.17.81 kErrorClientNotSupported = 2

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unsupported client type for this platform.

165.17.82 kErrorClientVersionOld = 5

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Library file is too old.

165.17.83 kErrorFieldNotFound = 8

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Field not found.

165.17.84 kErrorGetLibraryVersionFails = 4

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to query library version.

165.17.85 kErrorLoadLibraryFails = 3

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to load a library. For example path could be wrong or 32/64bit mismatch.

165.17.86 kErrorNoMemory = 0

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Out of memory.

165.17.87 kErrorUnknownColumnType = 11

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown column type.

165.17.88 kErrorUnknownDataType = 9

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown data type.

165.17.89 kErrorUnknownParameterType = 10

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Unknown parameter type.

165.17.90 kErrorWrongConversion = 12

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Failed to convert a value, e.g. string to number.

165.17.91 kErrorWrongDatetime = 13

MBS SQL Plugin, Plugin Version: 16.0.

Function: One of the SQL Plugin error codes.
Notes: Can't convert text to date.

165.17.92 kLevelUnknown = -1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Unknown

165.17.93 kOptionLibraryCubeSQL = "CUBESQL.LIBS"

MBS SQL Plugin, Plugin Version: 19.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Example:

```
dim con as SQLConnectionMBS // your connection
```

```
dim f as FolderItem = GetFolderItem("cubesql.dll")
con.SetFileOption con.kOptionLibraryCubeSQL, f
```

Notes: for CubeSQL.

165.17.94 kOptionLibraryDB2 = "DB2CLI.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for DB2.

165.17.95 kOptionLibraryFirebird = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Firebird.

165.17.96 kOptionLibraryInformix = "INFCLI.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Informix.

165.17.97 kOptionLibraryInterbase = "IBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Interbase.

165.17.98 kOptionLibraryMySQL = "MYSQL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for MySQL. Library extension on Mac is ".dylib", on Linux ".so" and on Windows ".dll". You get this library with the MySQL download on their homepage.

165.17.99 kOptionLibraryODBC = "ODBC.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for ODBC.

165.17.100 kOptionLibraryOracle = "OCI8.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Oracle.

165.17.101 kOptionLibraryPostgreSQL = "LIBPQ.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Postgre SQL.

165.17.102 kOptionLibrarySQLanywhere = "SQLANY.LIBS"

MBS SQL Plugin, Plugin Version: 15.2.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for SQL Anywhere.

165.17.103 kOptionLibrarySQLBase = "SQLBASE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for SQLbase.

165.17.104 kOptionLibrarySQLite = "SQLITE.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for SQLite. Can also be the spatialite or SQLcipher library.

165.17.105 kOptionLibrarySybaseComn = "SYBCOMN.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: OOne of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

165.17.106 kOptionLibrarySybaseCS = "SYBCS.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

165.17.107 kOptionLibrarySybaseCT = "SYBCT.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

165.17.108 kOptionLibrarySybaseIntl = "SYBINTL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

165.17.109 kOptionLibrarySybaseTCL = "SYBTCL.LIBS"

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the option constant to specify the library with the SetFileOption method.
Notes: for Sybase.

165.17.110 kReadCommitted = 1

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Read committed.

165.17.111 kReadUncommitted = 0

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Read uncommitted.

165.17.112 kRepeatableRead = 2

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Repeatable read.

165.17.113 kSerializable = 3

MBS SQL Plugin, Plugin Version: 12.3.

Function: One of the isolation level constants.
Notes: Serializable.

165.17.114 SQLiteInMemory = "Sqlite::memory:"

MBS SQL Plugin, Plugin Version: 19.2.

Function: Connection string for SQLite for a new in-memory database.
Notes: Prefixed with SQLite to use directly.

165.18 class SQLDataConsumerMBS

165.18.1 class SQLDataConsumerMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data consumer.
Notes: If you query a clob/blob value, that value may not fit into memory, so you may prefer to get a callback for data and write it to a file in small chunks.

165.18.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr4

165.18.3 Xojo Developer Magazine

- 14.1, page 30: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

165.18.4 Events

165.18.5 Write(PieceType as Integer, data as string, Length as UInt32, BlobSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called to process data.
Notes:

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
Data is the raw data in a binary string.
Length is the number of bytes and BlobSize the size of data blocks used.

165.18.6 Constants

165.18.7 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The first piece is processed. You may setup everything you need to handle the data.

165.18.8 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The last piece is processed. You can close files/network connections.

165.18.9 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The next piece is processed. Not the first one or the last one, but one between.

165.18.10 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The whole data stream is delivered in one call of the event.

165.19 class SQLDataProviderMBS

165.19.1 class SQLDataProviderMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a data provider.
Notes: Use this to set a blob/clob object with streaming data. For example if you want to add a 1 GB big file to the database without loading it into RAM in one piece, you can use this class to read it in small chunks.

165.19.2 Blog Entries

165.19.3 Xojo Developer Magazine

- 14.1, page 30: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

165.19.4 Events

165.19.5 Read(byref PieceType as Integer, Length as UInt32) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called whenever new data is needed.
Notes:

PieceType is kOnePiece, kFirstPiece, kLastPiece or kNextPiece.
If your stream is on the end, you set this to kLastPiece.
Return the raw data in a string.
Length is the number of bytes.

165.19.6 Constants

165.19.7 kFirstPiece = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The first piece is processed. You may setup everything you need to handle the data.

165.19.8 kLastPiece = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The last piece is processed. You can close files/network connections.

165.19.9 kNextPiece = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The next piece is processed. Not the first one or the last one, but one between.

165.19.10 kOnePiece = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the piece type constants.
Notes: The whole data stream is delivered in one call of the event.

165.20 class SQLDateTimeMBS

165.20.1 class SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL date/time value class.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

Notes:

165.20.3 Methods

165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL Datetime with the given values.
See also:

- 165.20.5 Constructor(other as SQLDateTimeMBS) 22725
- 165.20.6 Constructor(value as Date) 22725
- 165.20.7 Constructor(value as DateTime) 22726
- 165.20.8 Constructor(value as Double) 22726

- 165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 22727
- 165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 22727

165.20.5 Constructor(other as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a copy of the SQL Date Time.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d)

MsgBox e.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 22724
- 165.20.6 Constructor(value as Date) 22725
- 165.20.7 Constructor(value as DateTime) 22726
- 165.20.8 Constructor(value as Double) 22726
- 165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 22727
- 165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 22727

165.20.6 Constructor(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the datetime value with the given date.
See also:

- 165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 22724
- 165.20.5 Constructor(other as SQLDateTimeMBS) 22725

- 165.20.7 Constructor(value as DateTime) 22726
- 165.20.8 Constructor(value as Double) 22726
- 165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 22727
- 165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 22727

165.20.7 Constructor(value as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the datetime value with the given DateTime object.
See also:

- 165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 22724
- 165.20.5 Constructor(other as SQLDateTimeMBS) 22725
- 165.20.6 Constructor(value as Date) 22725
- 165.20.8 Constructor(value as Double) 22726
- 165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 22727
- 165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 22727

165.20.8 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL date time value based on the double value.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)
dim e as new SQLDateTimeMBS(d.DoubleValue+1) // clone with one day more

MsgBox e.StringValue // shows "2008-03-05T23:10:20"
```

See also:

- 165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 22724

- 165.20.5 Constructor(other as SQLDateTimeMBS) 22725
- 165.20.6 Constructor(value as Date) 22725
- 165.20.7 Constructor(value as DateTime) 22726
- 165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 22727
- 165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 22727

165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "")

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL Datetime with the given values.
Example:

```
dim d as new SQLDateTimeMBS(2008, 3, 4, 23, 10, 20)

MsgBox d.StringValue // shows "2008-03-04T23:10:20"
```

See also:

- 165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 22724
- 165.20.5 Constructor(other as SQLDateTimeMBS) 22725
- 165.20.6 Constructor(value as Date) 22725
- 165.20.7 Constructor(value as DateTime) 22726
- 165.20.8 Constructor(value as Double) 22726
- 165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String) 22727

165.20.10 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer, TimeZone as String)

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new SQL Datetime with the given values.
See also:

- 165.20.4 Constructor(Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0) 22724
- 165.20.5 Constructor(other as SQLDateTimeMBS) 22725
- 165.20.6 Constructor(value as Date) 22725
- 165.20.7 Constructor(value as DateTime) 22726
- 165.20.8 Constructor(value as Double) 22726
- 165.20.9 Constructor(Year as Integer, Month as Integer, Day as Integer, Hour as Integer, Minute as Integer, Second as Integer = 0, Fraction as Integer = 0, TimeZone as String = "") 22727

165.20.11 Set(value as Date)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Assigns the datetime value with the given date.
See also:

- 165.20.12 Set(value as DateTime) 22728

165.20.12 Set(value as DateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Assigns the datetime value with the given dateTime object.
See also:

- 165.20.11 Set(value as Date) 22728

165.20.13 Properties

165.20.14 DateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of this datetime object as a date object.
Notes: (Read only property)

165.20.15 DateValue as Date

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the value of this datetime object as a date object.
Notes: (Read only property)

165.20.16 Day as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day this SADateTime object represents (1 – 31).
Notes: (Read only property)

165.20.17 DayOfWeek as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day of the week this SADateTime object represents (Sunday = 1).
Notes: (Read only property)

165.20.18 DayOfYear as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the day of the year this SADateTime object represents (Jan 1 = 1).
Notes: (Read only property)

165.20.19 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The double value of this date/time.
Notes:

Use these operators to get current date/time value using standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number.

(Read only property)

Date and time	Representation
30 December 1899, midnight	0.00
1 January 1900, midnight	2.00
4 January 1900, midnight	5.00
4 January 1900, 6 A.M.	5.25
4 January 1900, noon	5.50
4 January 1900, 9 P.M.	5.875

165.20.20 Fraction as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of the fraction of second (0 to 999,999,999) this SQLDateTime object represents.
Notes:

The value of the fraction field is the number of billionths of a second and ranges from 0 through 999,999,999 (1 less than 1 billion). For example, the value of the fraction field for a half-second is 500,000,000, for a thousandth of a second (one millisecond) is 1,000,000, for a millionth of a second (one microsecond) is 1,000, and for a billionth of a second (one nanosecond) is 1.
(Read only property)

165.20.21 hasDate as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this date & time object contains a date.
Notes: (Read only property)

165.20.22 hasTime as Boolean

MBS SQL Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this date & time object contains a time.
Notes: (Read only property)

165.20.23 Hour as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hour this SADateTime object represents (0 – 23).
Notes: (Read only property)

165.20.24 Minute as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the minute this SADateTime object represents (0 – 59).
Notes: (Read only property)

165.20.25 Month as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the month this SADateTime object represents (1 – 12).
Notes: (Read only property)

165.20.26 Second as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the second this SADateTime object represents (0 – 59).
Notes: (Read only property)

165.20.27 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value for this date/time.
Notes: (Read only property)

165.20.28 TimeZone as String

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time zone.
Notes:

Should be in format ”00:00” and should be supported for Oracle and Postgres.
(Read and Write property)

165.20.29 Year as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the year this SADateTime object represents.
Notes: (Read only property)

165.21 class SQLErrorExceptionMBS

165.21.1 class SQLErrorExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The error exception class to report SQL errors.
Notes:

The SQLDatabaseMBS class sets its error properties on an error. All other SQL classes raise exceptions where you can check the message property.
Subclass of the RuntimeException class.

- 14.1, page 27: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

165.21.4 Properties

165.21.5 ErrorClass as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a class of error.
Notes:

Returns one of the following values:

SA_No_Error	0	No error occurred.
SA_UserGenerated_Error	1	User-generated error.
SA_Library_Error	2	The Library error occurred.
SA_DBMS_API_Error	3	DBMS API error occurred.

A SQLErrorExceptionMBS object handles the next error classes:

- User-generated errors
- Library errors
- DBMS API errors

The Library errors are generated by the Library itself. It can be like detecting some mistake in passing arguments to the function or referencing the parameter with an inappropriate name. To get a Library-defined error text call ErrorMessage method.

The DBMS API errors come to the Library from the DBMS Client or Server. In this case the Library returns an error code and text Client- or Server-defined. To get error code and error text returned by the server call NativeError and ErrorMessage methods.

The User-generated exception is "SQLAPI++ compatible" exception thrown by the user. To throw user exception use throwUserException method.
(Read and Write property)

165.21.6 ErrorMessage as String

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an error text.
Notes:

A error text depends on a class of error.

If error class is Library error the ErrorMessage method returns Library-defined error text. If error class is DBMS API error the ErrorMessage method returns an error text gotten from DBMS Server or Client. If error class is User-defined error the ErrorMessage method returns an error text specified by user (see throwUserException method).

To get the error class call ErrorClass method.
(same as Message property)
(Read and Write property)

165.21.7 ErrorPosition as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets an error position in SQL statement.
Notes:

Returns an integer value representing error position.
Not all DBMS servers allow to get error position. See Server specific notes to get detailed information about returned value.

If a command object's associated SQL statement contains any syntax errors, an exception will be thrown when you try to compile. ErrorPosition method returns the error position within the command string.

Server specific notes

DBMS server	ErrorPosition method returned value
Oracle	ErrorPosition returns parse error offset.
SQL Server	ErrorPosition returns the number of line within SQL statement where error occurred.
Sybase	ErrorPosition returns the number of line within SQL statement where error occurred.
DB2	ErrorPosition returns -1. DB2 does not support this function.
Informix	ErrorPosition returns -1. Informix does not support this function.
InterBase	ErrorPosition returns -1. InterBase does not support this function.
SQLBase	ErrorPosition returns character position of the syntax error within an SQL statement. The first character is position 0.
MySQL	ErrorPosition returns -1. MySQL does not support this function.
PostgreSQL	ErrorPosition returns -1. PostgreSQL does not support this function.
ODBC	ErrorPosition returns -1. ODBC does not support this function.

(Read and Write property)

165.21.8 NativeError as Integer

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets a native code associated with current error.
Notes:

Returns an integer value represents a native code associated with current error.

If error class is DBMS API error the NativeError method returns error code received from DBMS Server or Client. If error class is User-defined error the NativeError method returns an error code specified by user (see throwUserException method). If error class is Library error the NativeError method returns -1.

To get the error class call ErrorClass method.

See server specific documentation to get more information about DBMS API error code.
(same as ErrorNumber property)
(Read and Write property)

165.21.9 SQL as String

MBS SQL Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL string set when this error occurred.
Notes: (Read and Write property)

165.22 class SQLFieldMBS

165.22.1 class SQLFieldMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: This is the class for a SQL field in a record.
Notes:

Be aware that field objects exists only as long as their SQLCommand exists.

see also
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
Subclass of the SQLValueReadMBS class.

165.22.3 Methods

165.22.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value using the given data consumer.
Notes:

BlockSize: Size of piece of data you want to get to the consumer event.

After a command execution all output parameters are updated by their values, including Long and BLob(CLob) parameters. If you want to control piecewise reading of Long or BLob(CLob) data you should do the following:

Before a command execution set kLongOrLobReaderManual reading mode (see LongOrLobReaderMode) for Long or BLob(CLob) parameters you want to process by a data consumer. After that SQLAPI++ will skip reading output Long and BLob(CLob) parameters that you set to be read manually.

After command execution use ReadLongOrLob method for each output parameter defined to be read manually.
Note, that if the command has result set(s) (it is possible in some servers, see Server specific notes) then output parameters are available only after all result sets are completely processed using FetchNext method.
See also:

- 165.22.5 ReadLongOrLob(toFile as FolderItem) 22738
- 165.22.6 ReadLongOrLob(toStream as Writeable) 22738

165.22.5 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 165.22.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 22737
- 165.22.6 ReadLongOrLob(toStream as Writeable) 22738

165.22.6 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim field as SQLFieldMBS = cmd.Field("image")
// read blob content to binarystream
field.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 165.22.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 22737
- 165.22.5 ReadLongOrLob(toFile as FolderItem) 22738

165.22.7 Properties

165.22.8 FieldNativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns native type code of the field.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use NativeType property instead.
(Read only property)

165.22.9 FieldPrecision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns precision of the field value (the total number of allowable digits).
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Precision property instead.
(Read only property)

165.22.10 FieldScale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns scale of the field value (the number of digits to the right of the decimal point).
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Scale property instead.
(Read and Write property)

165.22.11 FieldSize as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data size.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated. Please use Size property instead.
(Read only property)

165.22.12 FieldType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data type.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Value is one of the kDataType* constants.
Deprecated. Please use Type property instead.
(Read and Write property)

165.22.13 isFieldRequired as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Shows if it is possible for the field value to be null.
Notes:

Returns true if the field value can be null; false otherwise.
(Read only property)

165.22.14 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns name of the field.
Notes: (Read only property)

165.22.15 NativeType as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns native type code of the field.
Notes: (Read only property)

165.22.16 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

165.22.17 Pos as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a one-based position of the field in a result set.
Notes: (Read only property)

165.22.18 Precision as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns precision of the field value (the total number of allowable digits).
Notes: (Read only property)

165.22.19 Scale as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns scale of the field value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

165.22.20 Size as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data size.
Notes: (Read only property)

165.22.21 Type as Integer

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns field data type.
Example:

```
dim db as SQLConnectionMBS
dim cmd as new SQLCommandMBS(db, "select * from test")

cmd.Execute

dim f as SQLFieldMBS = cmd.Field("test")

if f.Type = f.kDataTypeLong then
MsgBox "type is long"
end if
```

Notes:

Value is one of the kDataType* constants.
(Read and Write property)

165.22.22 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of a specific field option.
Notes:

See for more details:
https://www.sqlapi.com/ApiDoc/class_s_a_field.html
(Read and Write computed property)

165.23 class SQLGlobalsMBS

165.23.1 class SQLGlobalsMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the global methods of the SQL plugin.

165.23.2 Blog Entries

- Register MBS Xojo Plugins
- MBS Xojo / Real Studio Plugins, version 13.5pr3

165.23.3 Methods

165.23.4 GetEnv(name as string) as string

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries environment variable.
Notes: Returns empty string if variable is undefined.

165.23.5 GetVersion as String

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the SQLAPI library.

165.23.6 GetVersionBuild as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The build number of the SQLAPI library.

165.23.7 GetVersionMajor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The major version number of the SQLAPI library.

165.23.8 GetVersionMinor as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minor version number of the SQLAPI library.

165.23.9 PutEnv(line as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets environment variable.
Notes: Line format should be "key=value" and returns true on success and false on failure.

165.23.10 RaiseException(message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raises an exception to test exception handling in SQL Plugin.
Notes: Raises directly a SQLErrorExceptionMBS with the given message.

165.23.11 RaiseSQLErrorException(UserCode as Integer, message as string)

MBS SQL Plugin, Plugin Version: 13.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Raises an exception to test exception handling in SQL Plugin.
Notes: Raises a SAUserException which the plugin catches and translates to a SQLErrorExceptionMBS in Xojo.

165.23.12 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.

See also:

- 165.23.13 SetCurrentWorkingDirectory(path as String) as boolean 22745

165.23.13 SetCurrentWorkingDirectory(path as String) as boolean

MBS SQL Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current working directory.
Notes: This is often useful to make sure the DLLs in that folder are found.
See also:

- 165.23.12 SetCurrentWorkingDirectory(path as folderitem) as boolean 22744

165.23.14 SetEnv(name as string, value as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an environment variable.
Notes:

Existing variable with same name will be overwritten.
Returns true on success and false on failure.

165.23.15 SetLicenseCode(n as string, enddate as Integer, v1 as Integer, v2 as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registeres the SQL plugin and library.
Notes: Once you ordered a license, you receive details on how to call this method.

165.23.16 Setlocale(category as Integer, locale as string)

MBS SQL Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the locale to use.
Notes:

The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

165.23.17 UnSetEnv(name as string) as boolean

MBS SQL Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes environment variable.
Notes: Returns true on success and false on failure.

165.23.18 Events

165.23.19 Trace(traceInfo as Integer, SQL as string, Connection as SQLConnectionMBS, Command as SQLCommandMBS)

MBS SQL Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to trace SQL commands.

165.23.20 Constants

165.23.21 LocaleAll=0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set the entire locale generically.

165.23.22 LocaleCollate=1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().

165.23.23 LocaleCType=2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: et a locale for the ctype(3) and multibyte(3) functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.

165.23.24 LocaleMessages=6

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for message catalogs, see catopen(3) function.

165.23.25 LocaleMonetary=3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for formatting monetary values; this affects the localeconv() function.

165.23.26 LocaleNumeric=4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().

165.23.27 LocaleTime=5

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the locale category constants for SetLocale.
Notes: Set a locale for formatting dates and times using the strftime() function.

165.24 class SQLIntervalMBS

165.24.1 class SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class in the SQL Plugin for an interval.

165.24.2 Methods

165.24.3 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new zero interval.
See also:

- 165.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 22749
- 165.24.5 Constructor(value as Double) 22749

165.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new interval with the given values.
See also:

- 165.24.3 Constructor 22749
- 165.24.5 Constructor(value as Double) 22749

165.24.5 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new interval with the given time delta.
Example:

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

See also:

- 165.24.3 Constructor 22749
- 165.24.4 Constructor(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0) 22749

165.24.6 Dec(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrements the interval.

165.24.7 Inc(interval as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increments the interval.

165.24.8 SetInterval(days as Integer, hours as Integer, minutes as Integer, seconds as Integer = 0, NanoSeconds as Integer = 0)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the interval values.

165.24.9 Properties

165.24.10 Days as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The days in this interval.
Notes: (Read only property)

165.24.11 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of this interval.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.DoubleValue) // shows "1.085463" for 1 day, 2 hours, 3 minutes and 4 seconds
```

Notes: (Read only property)

165.24.12 Fraction as Integer

MBS SQL Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fraction of a second in nano seconds.
Notes:

Range 0..999999999.
(Read only property)

165.24.13 Hours as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hours value.
Notes: (Read only property)

165.24.14 Minutes as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes value.
Notes: (Read only property)

165.24.15 Seconds as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds value.
Notes: (Read only property)

165.24.16 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interval as a string.
Example:

```
dim n as new SQLIntervalMBS(5)

MsgBox n.StringValue // shows "120:00:00" for 120 hours
```

Notes: (Read only property)

165.24.17 TotalDays as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total days value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalDays) // shows "1"
```

Notes: (Read only property)

165.24.18 TotalHours as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total hours value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalHours) // shows "26"
```

Notes: (Read only property)

165.24.19 TotalMinutes as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total minutes value.
Example:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.TotalMinutes) // shows "1563"
```

Notes: (Read only property)

165.24.20 TotalSeconds as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The total seconds value.
Notes:

```
dim n as new SQLIntervalMBS(1,2,3,4)

MsgBox str(n.GetTotalSeconds) // shows "93784"
```

(Read only property)

165.25 class SQLite3BackupMBS

165.25.1 class SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The object for a running backup.
Notes:

The backup object records state information about an ongoing online backup operation. The sqlite3_backup object is created by a call to BackupInit() and is destroyed by a call to BackupFinish().
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

165.25.2 Blog Entries

165.25.3 Xojo Developer Magazine

- 14.1, page 30: The MBS SQL Plugin, An alternative way to connect to databases by Christian Schmitz

165.25.4 Methods

165.25.5 Constructor

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

165.25.6 Properties

165.25.7 Handle as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

165.26 class SQLite3MBS

165.26.1 class SQLite3MBS

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the native SQLite API.
Example:

```
dim con as new SQLConnectionMBS
dim path as string = "/tmp/test.db" // change path for Windows!

con.Connect(path,"","",SQLConnectionMBS.kSQLiteClient)

dim api as SQLAPIMBS = con.NativeAPI
if api isa SQLite3MBS then
dim s as SQLite3MBS = SQLite3MBS(api)
MsgBox s.Version
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

Deprecated in favor of direct methods on SQLConnectionMBS. Please let us know if you need more SQLite specific functions.
Subclass of the SQLAPIMBS class.

165.26.3 Methods

165.26.4 BackupFinish(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes a backup run.
Notes:

When BackupStep has returned kErrorDone, or when the application wishes to abandon the backup operation, the application should destroy the SQLite3BackupMBS by passing it to BackupFinish. The BackupFinish interfaces releases all resources associated with the SQLite3BackupMBS object. If BackupStep has not yet returned kErrorDone, then any active write-transaction on the destination database is rolled back. The SQLite3BackupMBS object is invalid and may not be used following a call to BackupFinish.
The value returned by BackupFinish is kErrorOK if no BackupStep errors occurred, regardless or whether or not BackupStep completed. If an out-of-memory condition or IO error occurred during any prior BackupStep call on the same SQLite3BackupMBS object, then BackupFinish returns the corresponding error code.
A return of kErrorBusy or kErrorLocked from BackupStep is not a permanent error and does not affect the return value of BackupFinish.

165.26.5 BackupInit(Dest as Variant, DestName as String, Source as Variant, SourceName as String) as SQLite3BackupMBS

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a backup.
Notes:

The backup API copies the content of one database into another. It is useful either for creating backups of databases or for copying in-memory databases to or from persistent files.

see also
http://www.sqlite.org/c3ref/backup_finish.html

Exclusive access is required to the destination database for the duration of the operation. However the source database is only read-locked while it is actually being read; it is not locked continuously for the entire backup operation. Thus, the backup may be performed on a live source database without preventing other users from reading or writing to the source database while the backup is underway.

To perform a backup operation:

- BackupInit is called once to initialize the backup,
- BackupStep is called one or more times to transfer the data between the two databases, and finally

- BackupFinish is called to release all resources associated with the backup operation.

There should be exactly one call to BackupFinish for each successful call to BackupInit.

The D and N arguments to BackupInit(D,N,S,M) are the database connection associated with the destination database and the database name, respectively. The database name is "main" for the main database, "temp" for the temporary database, or the name specified after the AS keyword in an ATTACH statement for an attached database. The S and M arguments passed to BackupInit(D,N,S,M) identify the database connection and database name of the source database, respectively. The source and destination database connections (parameters S and D) must be different or else BackupInit(D,N,S,M) will file with an error.
If an error occurs within BackupInit(D,N,S,M), then nil is returned and an error code and error message are store3d in the destination database connection D. The error code and message for the failed call to BackupInit can be retrieved using the ErrCode and ErrMessage functions. A successful call to BackupInit returns a SQLite3BackupMBS object. The SQLite3BackupMBS object may be used with the BackupStep and BackupFinish functions to perform the specified backup operation.

Concurrent Usage of Database Handles
The source database connection may be used by the application for other purposes while a backup operation is underway or being initialized. If SQLite is compiled and configured to support threadsafe database connections, then the source database connection may be used concurrently from within other threads.
However, the application must guarantee that the destination database connection is not passed to any other API (by any thread) after BackupInit is called and before the corresponding call to BackupFinish. SQLite does not currently check to see if the application incorrectly accesses the destination database connection and so no error code is reported, but the operations may malfunction nevertheless. Use of the destination database connection while a backup is in progress might also also cause a mutex deadlock.
If running in shared cache mode, the application must guarantee that the shared cache used by the destination database is not accessed while the backup is running. In practice this means that the application must guarantee that the disk file being backed up to is not accessed by any connection within the process, not just the specific connection that was passed to BackupInit.
The SQLite3BackupMBS object itself is partially threadsafe. Multiple threads may safely make multiple concurrent calls to BackupStep. However, the BackupRemaining and BackupPageCount APIs are not strictly speaking threadsafe. If they are invoked at the same time as another thread is invoking BackupStep it is possible that they return invalid values.

Source and Dest can be SQLConnectionMBS or SQLDatabaseMBS. You need to pass source and dest, even if one is self as we give you the option to decide where to pass the current database connection.

165.26.6 BackupPageCount(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages in total.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to

be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

165.26.7 BackupRemaining(Backup as SQLite3BackupMBS) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of pages remaining.
Notes:

Each call to BackupStep sets two values inside the SQLite3BackupMBS object: the number of pages still to be backed up and the total number of pages in the source databae file. The BackupRemaining and BackupPageCount interfaces retrieve these two values, respectively.
The values returned by these functions are only updated by BackupStep. If the source database is modified during a backup operation, then the values are not updated to account for any extra pages that need to be updated or the size of the source database file changing.

165.26.8 BackupStep(Backup as SQLite3BackupMBS, Pages as Integer) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies up to Pages pages between the source and destination databases specified by SQLite3BackupMBS object.
Notes:

If N is negative, all remaining source pages are copied. If BackupStep(B,N) successfully copies N pages and there are still more pages to be copied, then the function resturns kErrorOK. If BackupStep(B,N) successfully finishes copying all pages from source to destination, then it returns kErrorDone. If an error occurs while running BackupStep(B,N), then an error code is returned. As well as kErrorOK and kErrorDone, a call to BackupStep may return kErrorReadOnly, kErrorNoMem, kErrorBusy, kErrorLocked, or an kErrorIOACCESS | kErrorIOXXX extended error code.
The BackupStep might return kErrorReadOnly if the destination database was opened read-only or if the destination is an in-memory database with a different page size from the source database.
If BackupStep cannot obtain a required file-system lock, then the sqlite3_busy_handler | busy-handler function is invoked (if one is specified). If the busy-handler returns non-zero before the lock is available, then kErrorBusy is returned to the caller. In this case the call to BackupStep can be retried later. If the source database connection is being used to write to the source database when BackupStep is called, then kErrorLocked is returned immediately. Again, in this case the call to BackupStep can be retried later on. (If kErrorIOACCESS | kErrorIOXXX, kErrorNoMem, or kErrorReadOnly is returned, then there is no point in retrying the call to BackupStep. These errors are considered fatal.) The application must accept that the backup operation has failed and pass the backup operation handle to the BackupFinish to release associated

resources.
The first call to BackupStep obtains an exclusive lock on the destination file. The exclusive lock is not released until either BackupFinish is called or the backup operation is complete and BackupStep returns kErrorDone. Every call to BackupStep obtains a shared lock on the source database that lasts for the duration of the BackupStep call. Because the source database is not locked between calls to BackupStep, the source database may be modified mid-way through the backup process. If the source database is modified by an external process or via a database connection other than the one being used by the backup operation, then the backup will be automatically restarted by the next call to BackupStep. If the source database is modified by the using the same database connection as is used by the backup operation, then the backup database is automatically updated at the same time.

165.26.9 EnableLoadExtension(OnOff as boolean)

MBS SQL Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables/disables extension loading for the given connection.

165.26.10 ErrCode as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The ErrCode function returns the numeric result code or extended result code for the most recent failed sqlite3 API call associated with a database connection.
Notes: If a prior API call failed but the most recent API call succeeded, the return value from ErrCode is undefined.

165.26.11 ErrMessage as string

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the most recent error message in english for the given connection.

165.26.12 LastInsertRowID as Int64

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns Last Insert Rowid.
Notes:

Each entry in an SQLite table has a unique 64-bit signed integer key called the ROWID. The rowid is always available as an undeclared column named ROWID, OID, or _ROWID_ as long as those names are not also used by explicitly declared columns. If the table has a column of type INTEGER PRIMARY KEY then

that column is another alias for the rowid.

This routine returns the rowid of the most recent successful INSERT into the database from the database connection in the first argument. If no successful INSERTs have ever occurred on that database connection, zero is returned.

(If an INSERT occurs within a trigger, then the rowid of the inserted row is returned by this routine as long as the trigger is running. But once the trigger terminates, the value returned by this routine reverts to the last value inserted before the trigger fired.)

An INSERT that fails due to a constraint violation is not a successful INSERT and does not change the value returned by this routine. ^Thus INSERT OR FAIL, INSERT OR IGNORE, INSERT OR ROLLBACK, and INSERT OR ABORT make no changes to the return value of this routine when their insertion fails. ^(When INSERT OR REPLACE encounters a constraint violation, it does not fail. The INSERT continues to completion after deleting rows that caused the constraint problem so INSERT OR REPLACE will always change the return value of this interface.)^

For the purposes of this routine, an INSERT is considered to be successful even if it is subsequently rolled back.

This function is accessible to SQL statements via the last_insert_rowid() SQL function.

If a separate thread performs a new INSERT on the same database connection while the LastInsertRowID function is running and thus changes the last insert rowid, then the value returned by LastInsertRowID is unpredictable and might not equal either the old or the new last insert rowid.

165.26.13 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 165.26.14 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer

165.26.14 LoadExtension(path as String, ByRef ErrorMessage as String) as Integer

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an SQLite extension library from the named file.
Notes:

The LoadExtension interface attempts to load an SQLite extension library contained in the file.

Returns kErrorOk on success and kErrorError if something goes wrong.
Extension loading must be enabled using EnableLoadExtension prior to calling this API, otherwise an error will be returned.
See also:

- 165.26.13 LoadExtension(file as FolderItem, ByRef ErrorMessage as String) as Integer 22760

165.26.15 MemoryHighwater(reset as boolean) as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes: Can be reset with reset parameter being true.
See also:

- 165.26.23 MemoryHighwater as Int64 22765

165.26.16 ReKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: You can change the key on a database using the Rekey Function.
Notes:

An empty key decrypts the database.

Rekeying requires that every page of the database file be read, decrypted, reencrypted with the new key, then written out again. Consequently, rekeying can take a long time on a larger database.

Most SEE variants allow you to encrypt an existing database that was created using the public domain version of SQLite. This is not possible when using the authenticating version of the encryption extension in see-aes128-ccm. If you do encrypt a database that was created with the public domain version of SQLite, no nonce will be used and the file will be vulnerable to a chosen-plaintext attach. If you call SetKey() immediately after Open when you are first creating the database, space will be reserved in the database for a nonce and the encryption will be much stronger. If you do not want to encrypt right away, call SetKey()

anyway, with an empty key, and the space for the nonce will be reserved in the database even though no encryption is done initially.

A public domain version of the SQLite library can read and write an encrypted database with an empty key. You only need the encryption extension if the key is non-empty.

Returns a SQLite error code.

165.26.17 SetBusyHandler(MaxAttempts as Integer = 5)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs busy handler for this connection.
Notes:

This routine sets a callback function that might be invoked whenever an attempt is made to open a database table that another thread or process has locked.

The plugin has an busy handler which will wait up to MaxAttemps and yield to other Xojo threads while waiting.
Passing 5 should wait up to 100ms.

There can only be a single busy handler defined for each [database connection] . Setting a new busy handler clears any previously set handler.) Note that calling SetBusyTimeout will also set or clear the busy handler.

The busy callback should not take any actions which modify the database connection that invoked the busy handler. Any such actions result in undefined behavior.

165.26.18 SetBusyTimeout(TimeOutMS as Integer = 20)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This routine sets a busy handler that sleeps for a specified amount of time when a table is locked.
Notes:

The handler will sleep multiple times until at least "ms" milliseconds of sleeping have accumulated. ^After at least "ms" milliseconds of sleeping, the handler returns 0 which causes SQLite query to return SQLite Busy or IO Blocked error.

Calling this routine with an argument less than or equal to zero turns off all busy handlers.

(There can only be a single busy handler for a particular database connection any any given moment. If another busy handler was defined (using SetBusyHandler prior to calling this routine, that other busy handler is cleared.)

165.26.19 SetKey(Key as String) as Integer

MBS SQL Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies encryption to a database connection.
Notes:

Returns a SQLite error code.

The amount of key material actually used by the encryption extension depends on which variant of SEE you are using. With RC4, the first 256 byte of key are used. With the AES128, the first 16 bytes of the key are used. With AES256, the first 32 bytes of key are used.

If you specify a key that is shorter than the maximum key length, then the key material is repeated as many times as necessary to complete the key. If you specify a key that is larger than the maximum key length, then the excess key material is silently ignored.

The key must begin with an ASCII prefix to specify which algorithm to use. The prefix must be one of "rc4:", "aes128:", or "aes256:". The prefix is not used as part of the key sent into the encryption algorithm. So the real key should begin on the first byte after the prefix.

The string provided to the plugin is used with it's current encoding. So be sure you use right text encoding for what you want. e.g. using "Müller" as key in text encoding Windows ANSI will not open a database which used that key in UTF-8 encoding.

The Xojo database encryption in SQLiteDatabase class uses AES-128 OFB.

165.26.20 TableColumnMetaData(DBName as string, TableName as string, ColumnName as string, byref DataType as string, byref CollationSequence as string, byref NotNull as boolean, byref PrimaryKey as boolean, byref AutoIncrement as Boolean) as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extract Metadata About A Column Of A Table
Notes:

Not available in all sqlite libraries!

This routine returns metadata about a specific column of a specific database table accessible using the database connection handle passed as the first function argument.
The column is identified by the second, third and fourth parameters to this function. The second parameter is either the name of the database (i.e. "main", "temp", or an attached database) containing the specified table or NULL. If it is NULL, then all attached databases are searched for the table using the same algorithm used by the database engine to resolve unqualified table references.
The third and fourth parameters to this function are the table and column name of the desired column, respectively. Neither of these parameters may be NULL.
Metadata is returned by writing to the memory locations passed as the 5th and subsequent parameters to this function. Any of these arguments may be NULL, in which case the corresponding element of metadata is omitted.

CollationSequence is assigned the Name of default collation sequence. NotNull is set to true if column has a NOT NULL constraint. PrimaryKey is set to true if column is part of the PRIMARY KEY and AutoIncrement is set to true if column is AUTOINCREMENT.

If the specified table is actually a view, an error code is returned.

If the specified column is "rowid", "oid" or "_rowid_" and an INTEGER PRIMARY KEY column has been explicitly declared, then the output parameters are set for the explicitly declared column. (If there is no explicitly declared INTEGER PRIMARY KEY column, then the output parameters are set as follows:

data type: "INTEGER"
collation sequence: "BINARY"
not null: false
primary key: true
auto increment: false

(This function may load one or more schemas from database files. If an error occurs during this process, or if the requested table or column cannot be found, an error code is returned and an error message left in the database connection (to be retrieved using ErrMessage).)

This API is only available if the library was compiled with the SQLITE_ENABLE_COLUMN_METADATA C-preprocessor symbol defined.

165.26.21 Threadsafe as Integer

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test To See If The Library Is Threadsafe.
Notes:

The threadsafe() function returns zero if and only if SQLite was compiled mutexing code omitted due to the SQLITE_THREADSAFE compile-time option being set to 0.

SQLite can be compiled with or without mutexes. When the SQLITE_THREADSAFE C preprocessor macro is 1 or 2, mutexes are enabled and SQLite is threadsafe. When the SQLITE_THREADSAFE macro is 0, the mutexes are omitted. Without the mutexes, it is not safe to use SQLite concurrently from more than one thread.

Enabling mutexes incurs a measurable performance penalty. So if speed is of utmost importance, it makes sense to disable the mutexes. But for maximum safety, mutexes should be enabled. The default behavior is for mutexes to be enabled.

This interface can be used by an application to make sure that the version of SQLite that it is linking against was compiled with the desired setting of the SQLITE_THREADSAFE macro.

This interface only reports on the compile-time mutex setting of the SQLITE_THREADSAFE flag. If SQLite is compiled with SQLITE_THREADSAFE=1 or =2 then mutexes are enabled by default but can be fully or partially disabled using a call to sqlite3_config() with the verbs SQLITE_CONFIG_SINGLETHREAD, SQLITE_CONFIG_MULTITHREAD, or SQLITE_CONFIG_MUTEX. ^(The return value of the sqlite3_threadsafe() function shows only the compile-time setting of thread safety, not any run-time changes to that setting made by sqlite3_config(). In other words, the return value from sqlite3_threadsafe() is unchanged by calls to sqlite3_config().)^

See the threading mode documentation for additional information.

165.26.22 Properties

165.26.23 MemoryHighwater as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries maximum memory usage so far.
Notes:

Can be reset with reset parameter.
(Read only property)
See also:

- 165.26.15 MemoryHighwater(reset as boolean) as Int64 22761

165.26.24 MemoryUsed as Int64

MBS SQL Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory in use by SQLite.
Notes:

This is memory allocated, but not yet freed.
Value is zero until SQLite3 initialized.
(Read only property)

165.26.25 Version as string

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version string of the SQLite library.
Notes: (Read only property)

165.26.26 VersionNumber as Integer

MBS SQL Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number of the SQLite library.
Notes: (Read only property)

165.26.27 Constants

165.26.28 kErrorAbort = 4

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Callback routine requested an abort.

165.26.29 kErrorAuth = 23

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Authorization denied

165.26.30 kErrorBusy = 5

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: The database file is locked.

165.26.31 kErrorCantopen = 14

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Unable to open the database file.

165.26.32 kErrorConstraint = 19

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Abort due to constraint violation.

165.26.33 kErrorCorrupt = 11

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: The database disk image is malformed.

165.26.34 kErrorDone = 101

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: sqlite3_step() has finished executing.

165.26.35 kErrorEmpty = 16

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Database is empty

165.26.36 kErrorError = 1

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: SQL error or missing database.

165.26.37 kErrorFormat = 24

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Auxiliary database format error.

165.26.38 kErrorFull = 13

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Insertion failed because database is full.

165.26.39 kErrorInternal = 2

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Internal logic error in SQLite

165.26.40 kErrorInterrupt = 9

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Operation terminated by sqlite3_interrupt().

165.26.41 kErrorIoerr = 10

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Some kind of disk I/O error occurred.

165.26.42 kErrorLocked = 6

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: A table in the database is locked.

165.26.43 kErrorMismatch = 20

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Data type mismatch.

165.26.44 kErrorMisuse = 21

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Library used incorrectly.

165.26.45 kErrorNolfs = 22

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Uses OS features not supported on host.

165.26.46 kErrorNoMem = 7

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Out of memory.

165.26.47 kErrorNotaDB = 26

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: File opened that is not a database file.

165.26.48 kErrorNotFound = 12

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: NOT USED. Table or record not found.

165.26.49 kErrorOk = 0

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Successful result

165.26.50 kErrorPerm = 3

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Access permission denied.

165.26.51 kErrorProtocol = 15

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: NOT USED. Database lock protocol error.

165.26.52 kErrorRange = 25

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: 2nd parameter to sqlite3_bind out of range.

165.26.53 kErrorReadonly = 8

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: Attempt to write a readonly database.

165.26.54 kErrorRow = 100

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: sqlite3_step() has another row ready.

165.26.55 kErrorSchema = 17

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: The database schema changed.

165.26.56 kErrorToobig = 18

MBS SQL Plugin, Plugin Version: 12.4.

Function: One of the error codes.
Notes: String or BLOB exceeds size limit.

165.27 class SQLLongBinaryMBS

165.27.1 class SQLLongBinaryMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a long binary object.
Notes:

Basicly this is a SQLStringMBS which is always marked to contain binary data. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

- 165.27.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 22773

165.27.6 Constructor(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new long binary object from a string object.
See also:

- 165.27.4 Constructor 22772
- 165.27.5 Constructor(Data as MemoryBlock) 22772
- 165.27.7 Constructor(Data as string, isText as Boolean = True) 22773
- 165.27.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 22773

165.27.7 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 165.27.4 Constructor 22772
- 165.27.5 Constructor(Data as MemoryBlock) 22772
- 165.27.6 Constructor(data as SQLStringMBS) 22773
- 165.27.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32) 22773

165.27.8 Constructor(dataProvider as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new long binary object from a data provider.
Notes:

The blocksize specifies in which sizes data is requested from the provider.
You must make sure that the data provider and this new blob object life long enough. Because the actual data is requested later when you do the update on the database.

If BlockSize is 0, the default block size is used.

- 165.27.7 Constructor(Data as string, isText as Boolean = True) 22773

165.28 class SQLLongCharMBS

165.28.1 class SQLLongCharMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the long character data type.
Notes:

Basicly this is a SQLStringMBS which is always marked to contain text. You only need this class to use the constructor with dataprovider to stream data to the database.
Subclass of the SQLLongOrLobMBS class.

165.29 class SQLLongOrLobMBS

165.29.1 class SQLLongOrLobMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The super class for Long Binary/Text and BLOB/CLOB classes.
Notes: Subclass of the SQLStringMBS class.

165.30 class SQLNotInitializedExceptionMBS

165.30.1 class SQLNotInitializedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception raised if you call a method on an object which was not properly initialized.
Notes: Subclass of the RuntimeException class.

165.30.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr1

165.31 class SQLNullMBS

165.31.1 class SQLNullMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class used internally for null values.

165.32 class SQLNumericMBS

165.32.1 class SQLNumericMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for numeric values.
Notes:

165.32.4 Methods

165.32.5 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an empty numeric object.
See also:

- 165.32.6 Constructor(value as Double) 22780
- 165.32.7 Constructor(value as string) 22781

165.32.6 Constructor(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric object based on the given double value.
See also:

- 165.32.5 Constructor 22780
- 165.32.7 Constructor(value as string) 22781

165.32.7 Constructor(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric object based on the given string.
See also:

- 165.32.5 Constructor 22780
- 165.32.6 Constructor(value as Double) 22780

165.32.8 NumericWithCurrency(value as Currency) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new numeric value object with given currency value.
Example:

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
```

```
dim d5 as Double = n5.DoubleValue
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

165.32.9 NumericWithDouble(value as Double) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given double value.

165.32.10 NumericWithInt64(value as Int64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given Int64 value.

165.32.11 NumericWithString(value as string) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given string value.
Notes: If string is empty, we return a number with zero as value.

165.32.12 NumericWithUInt64(value as UInt64) as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new number with the given unsigned integer value.

165.32.13 Properties

165.32.14 CurrencyValue as Currency

MBS SQL Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The currency value.
Example:

```
// test code for currency
dim c1 as Currency = 12345678.
dim c2 as Currency = 1234567.8
dim c3 as Currency = 123456.78
dim c4 as Currency = 12345.678
dim c5 as Currency = 1234.5678
dim c6 as Currency = 123.45678

dim n1 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c1)
dim n2 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c2)
dim n3 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c3)
dim n4 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c4)
dim n5 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c5)
dim n6 as SQLNumericMBS = SQLNumericMBS.NumericWithCurrency(c6)

dim s1 as string = n1.StringValue
dim s2 as string = n2.StringValue
dim s3 as string = n3.StringValue
dim s4 as string = n4.StringValue
dim s5 as string = n5.StringValue
dim s6 as string = n6.StringValue

dim d1 as Double = n1.DoubleValue
dim d2 as Double = n2.DoubleValue
dim d3 as Double = n3.DoubleValue
dim d4 as Double = n4.DoubleValue
dim d5 as Double = n5.DoubleValue
```

```
dim d6 as Double = n6.DoubleValue

dim x1 as Currency = n1.CurrencyValue
dim x2 as Currency = n2.CurrencyValue
dim x3 as Currency = n3.CurrencyValue
dim x4 as Currency = n4.CurrencyValue
dim x5 as Currency = n5.CurrencyValue
dim x6 as Currency = n6.CurrencyValue

// check for errors
if x1<>c1 then break
if x2<>c2 then break
if x3<>c3 then break
if x4<>c4 then break
if x5<>c5 then break
if x6<>c6 then break

if x1*10000 <>round(d1 * 10000) then Break
if x2*10000 <>round(d2 * 10000) then Break
if x3*10000 <>round(d3 * 10000) then Break
if x4*10000 <>round(d4 * 10000) then Break
if x5*10000 <>round(d5 * 10000) then Break
if x6*10000 <>round(d6 * 10000) then Break

Break // if no break before, it's okay.
```

Notes: (Read and Write property)

165.32.15 DoubleValue as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The double value for this number.
Notes: (Read and Write property)

165.32.16 Int64Value as Int64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number value as an int64.
Notes: (Read and Write property)

165.32.17 precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum number of digits in base 10.
Notes: (Read only property)

165.32.18 scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of digits to the right of the decimal point.
Notes: (Read only property)

165.32.19 sign as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sign: 1 for positive numbers, 0 for negative numbers.
Notes: (Read only property)

165.32.20 StringValue as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of this number.
Notes: (Read and Write property)

165.32.21 UInt64Value as UInt64

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number value as an uint64.
Notes: (Read and Write property)

165.33 class SQLParamMBS

165.33.1 class SQLParamMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL class for parameters.
Notes:

see also
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
Subclass of the SQLValueMBS class.

- Upcoming Changes for our SQL Plugin

165.33.3 Methods

165.33.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Long or Lob data reading mode.
Notes:

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to

process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
See also:

- 165.33.5 ReadLongOrLob(toFile as FolderItem) 22787
- 165.33.6 ReadLongOrLob(toStream as Writeable) 22787

165.33.5 ReadLongOrLob(toFile as FolderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given file.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim Param as SQLParamMBS = cmd.Param("image")
// read blob content to binarystream
Param.ReadLongOrLob(f)
```

Notes: May raise IOExceptions if things go wrong.
See also:

- 165.33.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 22786
- 165.33.6 ReadLongOrLob(toStream as Writeable) 22787

165.33.6 ReadLongOrLob(toStream as Writeable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts reading of Long or BLob(CLob) value to the given writeable stream.
Example:

```
dim cmd as SQLCommandMBS // your command
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.Create(f, true)
dim param as SQLParamMBS = cmd.param("image")
// read blob content to binarystream
param.ReadLongOrLob(b)
```

Notes: This allows you to read in chunks the data to a stream, e.g. binarystream, textoutputstream or socket.
See also:

- 165.33.4 ReadLongOrLob(toConsumer as SQLDataConsumerMBS, BlockSize as Integer) 22786
- 165.33.5 ReadLongOrLob(toFile as FolderItem) 22787

165.33.7 Properties

165.33.8 DirType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The direction type of parameter (input, output, etc.).
Notes:

Use the kParamDirType* constants.

Usually the Library automatically detects parameter's direction type and implicitly creates an appropriate SAParam object. But not all of DBMS clients/servers provide complete parameters information. In that situation programmer need to describe parameter's direction type explicitly. See Server specific notes for details.

https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write property)

165.33.9 IsInput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an input paramater.
Notes:

Checks ParamType property internally.
(Read only property)

165.33.10 IsOutput as Boolean

MBS SQL Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is an output paramater.
Notes:

Checks ParamType property internally.
(Read only property)

165.33.11 Name as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the parameter.
Notes: (Read only property)

165.33.12 NativeType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native type code of the parameter.
Notes: (Read and Write property)

165.33.13 Options as Dictionary

MBS SQL Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a dictionary with all options.
Notes:

For debugging, it may be useful to inspect options in debugger.
(Read only property)

165.33.14 Precision as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The precision of the parameter value (the total number of allowable digits).
Notes: (Read and Write property)

165.33.15 Scale as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The scale of the parameter value (the number of digits to the right of the decimal point).
Notes: (Read and Write property)

165.33.16 Size as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter's data size.
Notes: (Read and Write property)

165.33.17 Type as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parameter's data type.
Notes:

See the kDataType constants.
(Read and Write property)

165.33.18 Option(name as string) as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string value of a specific parameter option.
Notes:

see also:
https://www.sqlapi.com/ApiDoc/class_s_a_param.html
(Read and Write computed property)

165.33.19 Constants

165.33.20 kParamDirTypeInput=0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Input parameter.

165.33.21 kParamDirTypeInputOutput=1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Input/output parameter.

165.33.22 kParamDirTypeOutput=2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Output parameter.

165.33.23 kParamDirTypeReturn=3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the parameter direction type constants.
Notes: Returning parameter.

165.34 class SQLPositionMBS

165.34.1 class SQLPositionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a position value.

165.34.2 Methods

165.34.3 Constructor(withID as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Position value with an ID.
See also:

- 165.34.4 Constructor(withName as string) 22792

165.34.4 Constructor(withName as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new Position value with a name.
See also:

- 165.34.3 Constructor(withID as Integer) 22792

165.35 class SQLPreparedStatementMBS

165.35.1 class SQLPreparedStatementMBS

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for prepared statements if you work with SQLDatabaseMBS class.
Notes:

If you work with SQLCommandMBS class, you can set parameters there directly.

For the SQL string you number parameters with colon and number. Like this: :1, :2, :3.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- 12.3, page 10: News

Interfaces: PreparedSQLStatement

165.35.4 Methods

165.35.5 Bind(name As String, value as Variant)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the value for one parameter.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes:

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

- 165.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 22797
- 165.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 22798

165.35.6 Bind(name As String, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines one paramater with value and type.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.Bind("fid", 2345, SQLPreparedStatementMBS.kTypeLong)
p.Bind("fvarchar20", "Hello World by name", SQLPreparedStatementMBS.kTypeString)

p.SQLExecute
```

Notes:

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.

- 165.35.7 Bind(Values as Dictionary) 22795
- 165.35.8 Bind(values() as Variant) 22796
- 165.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 22797
- 165.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 22798

165.35.7 Bind(Values as Dictionary)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the parameters based on the keys and values in the dictionary.
Example:

```
dim db as SQLDatabaseMBS // your database
dim pic as Picture // some picture
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get an insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim p as SQLPreparedStatementMBS = db.Prepare(sql)

// put parameter values in a dictionary
dim d as new Dictionary

// by param index
d.Value(0) = "logo.jpg"
// by param name
d.Value("image") = jpegData

// bind values and run it
p.Bind(d)
p.SQLExecute
```

Notes:

The dictionary is saved to fill parameters later.
Keys can be String, Text or numeric types. Text and String are used to pick parameters by name. Numeric values are used to pick parameter by index (zero based).
MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.
Other types are translated as good as possible.

- 165.35.6 Bind(name As String, value as Variant, type as Integer) 22794
- 165.35.8 Bind(values() as Variant) 22796
- 165.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 22797
- 165.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 22798

165.35.8 Bind(values() as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value list with the given values.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

- 165.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 22798

165.35.9 Bind(zeroBasedIndex as Integer, value as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the value for one parameter.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.

- 165.35.8 Bind(values() as Variant) 22796
- 165.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer) 22798

165.35.10 Bind(zeroBasedIndex as Integer, value as Variant, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines one paramater with value and type.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

Version 16.4 and newer allow you to bind BLOB fields using a Memoryblock or a String value.
Older versions only accepted string.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

Raises OutOfBoundsException exception if index parameter is out of range.
See also:

- 165.35.5 Bind(name As String, value as Variant) 22794

- 165.35.9 Bind(zeroBasedIndex as Integer, value as Variant) 22797

165.35.11 BindType(name As String, type as Integer)

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the type of one value.
Example:

```
dim db as SQLDatabaseMBS // your db connection
dim sql as string = "Insert into test_tbl(fid, fvarchar20) values(:fid, :fvarchar20)"
dim v as Variant = db.Prepare(sql)
dim p as SQLPreparedStatementMBS = v

p.BindType("fid", SQLPreparedStatementMBS.kTypeLong)
p.BindType("fvarchar20", SQLPreparedStatementMBS.kTypeString)
p.Bind("fid", 2345)
p.Bind("fvarchar20", "Hello World by name")

p.SQLExecute
```

Notes: With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 165.35.12 BindType(types() as Integer) 22799
- 165.35.13 BindType(zeroBasedIndex as Integer, type as Integer) 22800

165.35.12 BindType(types() as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the types for all values.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 165.35.11 BindType(name As String, type as Integer) 22799
- 165.35.13 BindType(zeroBasedIndex as Integer, type as Integer) 22800

165.35.13 BindType(zeroBasedIndex as Integer, type as Integer)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the type of one value.
Notes:

You can either pass values to the SQLExecute/SQLSelect method or call Bind methods to set values. You have to define for each parameter both the type and the value.

With plugin version 16.4 and newer binding type is optional. In that case the type is determinated from the value type.
See also:

- 165.35.11 BindType(name As String, type as Integer) 22799
- 165.35.12 BindType(types() as Integer) 22799

165.35.14 Clear

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all parameters for reusing the SQL Prepared statement.

165.35.15 Constructor

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless SQLPreparedStatementMBS objects by error. The only way to create an object is to use the prepare method in the database class.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

165.35.16 ExecuteSQL(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

If bindItems is not nil, we bind parameters using it.

This version of the function raises always exceptions, while SQLExecute only if you set RaiseException property to true.

165.35.17 ExecuteSQLMT(ParamArray bindItems As Variant)

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

If bindItems is not nil, we bind parameters using it.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

This version of the function raises always exceptions, while SQLExecuteMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

165.35.18 SelectSQL(ParamArray bindItems As Variant) As RowSet

MBS SQL Plugin, Plugin Version: 19.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes:

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelect only if you set RaiseException property to true.

165.35.19 SelectSQLMT(ParamArray bindItems As Variant) As Rowset

MBS SQL Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Returns the RowSet object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

If bindItems is not nil, we bind parameters using it.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

This version of the function raises always exceptions, while SQLSelectMT only if you set RaiseException property to true.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

165.35.20 SQLExecute(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

165.35.21 SQLExecuteMT(ParamArray bindItems as Variant)

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the SQL command with the given parameters.
Notes:

You can decide whether you pass values here or call Bind methods.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

165.35.22 SQLSelect(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes:

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

165.35.23 SQLSelectMT(ParamArray bindItems as Variant) As RecordSet

MBS SQL Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the query with the given parameters.
Notes:

Returns the recordset object or nil on error.
You can decide whether you pass values here or call Bind methods.

For this method to work, you need to have somewhere a property with SQLDatabaseMBS so Xojo includes our SQLDatabase plugin which provides the RecordSet functionality.

The record set may not have a valid RecordCount or have working movefirst/movelast/moveprev methods unless the underlaying database supports those and Scrollable result sets is enabled/supported.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte

values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

165.35.24 Properties

165.35.25 BoundTypes as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The binded types to inspect in debugger.
Notes:

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind types.

Renamed to BoundTypes in version 19.4. Was BindedTypes, but that was not proper english.
(Read only property)

165.35.26 BoundValues as Dictionary

MBS SQL Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The binded values to inspect in debugger.
Notes:

When queried, the plugin creates a copy of the dictionary for you to inspect in debugger.
Changes to the dictionary do not bind values.

Renamed to BoundValues in version 19.4. Was BindedValues, but that was not proper english.
(Read only property)

165.35.27 Scrollable as Boolean

MBS SQL Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the plugin will ask for a scrollable recordset when doing SQLSelect.
Notes:

Since plugin version 15.0, Scrollable is false by default.
(Read and Write property)

165.35.28 SQL as String

MBS SQL Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL command for this prepared statement.
Notes: (Read and Write property)

165.35.29 Constants

165.35.30 kTypeBlob = 16

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Binary large Object. Pass a string or memoryblock.

165.35.31 kTypeBool = 1

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Boolean

165.35.32 kTypeBytes = 13

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes:

a binary string.
(which is a string without text encoding)

165.35.33 kTypeClob = 17

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Character Large Object

165.35.34 kTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Date and/or Time.

165.35.35 kTypeDouble = 8

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: double float value.

165.35.36 kTypeInt32 = 4

MBS SQL Plugin, Plugin Version: 20.2.

Function: One of the data type constants.
Notes: signed 32 bit integer

165.35.37 kTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the data type constants.
Notes: Signed 64-bit integer.

165.35.38 kTypeInterval = 11

MBS SQL Plugin, Plugin Version: 13.5.

Function: One of the data type constants.
Notes:

An interval.
Please pass SQLIntervalMBS in the variant. If the variant contains anything else, the plugin will pass nil value.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

165.35.39 kTypeLong = 4

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: signed 32 bit integer

165.35.40 kTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Long binary.

165.35.41 kTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: Long string.

165.35.42 kTypeNull = 99

MBS SQL Plugin, Plugin Version: 14.3.

Function: One of the data type constants.
Notes: NULL value

165.35.43 kTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 13.5.

Function: One of the data type constants.
Notes:

A number (Int64 or double).
This can be used for Int64 or Double values. Depending of the type of number in the variant, the plugin will either make an Int64 or a double internally.

When passing variant for value, MemoryBlock and Strings without text encoding are converted to byte values (BLOB). Texts and Strings with encoding are converted to text values. Other types are translated as good as possible. Raises exceptions if you pass anything which is not recognized.

165.35.44 kTypeShort = 2

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: signed 16 bit integer

165.35.45 kTypeString = 12

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: String

165.35.46 kTypeUInt32 = 5

MBS SQL Plugin, Plugin Version: 20.2.

Function: One of the data type constants.
Notes: unsigned 32 bit integer

165.35.47 kTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the data type constants.

Notes: Unsigned 64-bit integer.

165.35.48 kTypeULong = 5

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: unsigned 32 bit integer

165.35.49 kTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: unknown type

165.35.50 kTypeUShort = 3

MBS SQL Plugin, Plugin Version: 11.2.

Function: One of the data type constants.
Notes: unsigned 16 bit integer

165.36 class SQLStringMBS

165.36.1 class SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for strings in this plugin.
Example:

```
dim s as new SQLStringMBS("Hello äöü")

MsgBox "Characters: "+str(s.GetLength)+" Bytes: "+str(s.GetBinaryLength)

dim a as string= s.CopyBinaryData
dim b as string= s.CopyText

MsgBox a // RB shows garbage as it tries to display bytes as UTF8 which does not work
MsgBox b // displays correct
```

Notes:

A string can be text (with text encoding) or bytes (raw binary data).

165.36.2 Blog Entries

- MBS Real Studio Plugins, version 12.4pr9

165.36.3 Methods

165.36.4 Compare(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.

See also:

- 165.36.5 Compare(text as string) as Integer 22812

165.36.5 Compare(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-sensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical, <0 if this string object is less than text, or >0 if this string object is greater than text.
See also:

- 165.36.4 Compare(text as SQLStringMBS) as Integer 22811

165.36.6 CompareNoCase(text as SQLStringMBS) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 165.36.7 CompareNoCase(text as string) as Integer 22812

165.36.7 CompareNoCase(text as string) as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares this string object with another string.
Notes:

Function performs a case-insensitive comparison of the strings, and is not affected by locale.

Returns zero if the strings are identical (ignoring case), <0 if this string object is less than text (ignoring case), or >0 if this string object is greater than text (ignoring case).
See also:

- 165.36.6 CompareNoCase(text as SQLStringMBS) as Integer 22812

165.36.8 Constructor

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty string object.
See also:

- 165.36.9 Constructor(Data as MemoryBlock) 22813
- 165.36.10 Constructor(Data as string, isText as Boolean = True) 22813
- 165.36.11 Constructor(other as SQLStringMBS) 22813

165.36.9 Constructor(Data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data, e.g. for blob.
See also:

- 165.36.8 Constructor 22813
- 165.36.10 Constructor(Data as string, isText as Boolean = True) 22813
- 165.36.11 Constructor(other as SQLStringMBS) 22813

165.36.10 Constructor(Data as string, isText as Boolean = True)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data or text copied from the data string.
Notes: If isText is true, the data is interpreted as text and string encoding conversion may modify it. If isText is false the bytes are copied raw.
See also:

- 165.36.8 Constructor 22813
- 165.36.9 Constructor(Data as MemoryBlock) 22813
- 165.36.11 Constructor(other as SQLStringMBS) 22813

165.36.11 Constructor(other as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string object with data copied from the other string object.
See also:

- 165.36.8 Constructor 22813
- 165.36.9 Constructor(Data as MemoryBlock) 22813
- 165.36.10 Constructor(Data as string, isText as Boolean = True) 22813

165.36.12 CopyBinaryData as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the bytes from the internal buffer ignoring any text encoding.

165.36.13 CopyText as string

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the characters of this string as text.
Notes: Text encoding conversion may happen.

165.36.14 Empty

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces a string to have 0 length.

165.36.15 GetBinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a count of the bytes in the binary data buffer.
Deprecated: This item is deprecated and should no longer be used. You can use BinaryLength instead.
Notes: Deprecated. Please use BinaryLength property.

165.36.16 GetLength as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of characters in a SAString object.
Deprecated: This item is deprecated and should no longer be used. You can use Length instead. **Notes:**

Deprecated. Please use Length property.
For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.

165.36.17 Left(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the left part of a string.

165.36.18 MakeLower

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes all characters in the string to lower case.

165.36.19 MakeUpper

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Changes all characters in the string to upper case.

165.36.20 Mid(first as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the middle part of a string.
Notes: first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
See also:

- 165.36.21 Mid(first as Integer, Count as Integer) as SQLStringMBS 22815

165.36.21 Mid(first as Integer, Count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the middle part of a string.
Notes:

first: The zero-based index of the first character in this string object that is to be included in the extracted substring.
count: The number of characters to extract from this string object. If this parameter is not supplied, then the remainder of the string is extracted.
See also:

- 165.36.20 Mid(first as Integer) as SQLStringMBS 22815

165.36.22 Operator_Convert as string

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert operation for assignment to string.
See also:

- 165.36.23 Operator_Convert(text as string) 22816

165.36.23 Operator_Convert(text as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert operation for assigning text string.
See also:

- 165.36.22 Operator_Convert as string 22816

165.36.24 Right(count as Integer) as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extracts the right part of a string.

165.36.25 TrimLeft

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim leading whitespace characters from the string.

165.36.26 TrimRight

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Trim trailing whitespace characters from the string.

165.36.27 Properties

165.36.28 BinaryLength as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a count of the bytes in the binary data buffer.
Notes: (Read only property)

165.36.29 DebugText as String

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text content for debugging.
Notes:

We show up to 1000 characters here for debugger.
(Read only property)

165.36.30 IsEmpty as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tests whether a String object contains no characters.
Notes:

Returns true if length is zero.
(Read only property)

165.36.31 Length as UInt32

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of characters in a SAString object.
Notes:

For multibyte character sets, GetLength counts each 8-bit character; that is, a lead and trail byte in one multibyte character are counted as two bytes.
(Read only property)

165.37 class SQLUnsupportedExceptionMBS

165.37.1 class SQLUnsupportedExceptionMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an exception to report that the function is not supported on this platform.
Notes:

This one raises only if the plugin is compiled for Mac OS Classic.
Subclass of the RuntimeException class.

165.38 class SQLValueMBS

165.38.1 class SQLValueMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The SQL class for mutable values.
Notes: Subclass of the SQLValueReadMBS class.

165.38.3 Methods

165.38.4 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty value object with the given data type.

165.38.5 setAsBlob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data using a memoryblock.
See also:

- 165.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22820

- 165.38.7 setAsBlob(data as SQLStringMBS) 22820
- 165.38.8 setAsBlob(data as string) 22821
- 165.38.9 setAsBlob(file as folderItem) 22821
- 165.38.10 setAsBlob(stream as Readable) 22822

165.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 165.38.5 setAsBlob(data as MemoryBlock) 22819
- 165.38.7 setAsBlob(data as SQLStringMBS) 22820
- 165.38.8 setAsBlob(data as string) 22821
- 165.38.9 setAsBlob(file as folderItem) 22821
- 165.38.10 setAsBlob(stream as Readable) 22822

165.38.7 setAsBlob(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
See also:

- 165.38.5 setAsBlob(data as MemoryBlock) 22819
- 165.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22820
- 165.38.8 setAsBlob(data as string) 22821
- 165.38.9 setAsBlob(file as folderItem) 22821
- 165.38.10 setAsBlob(stream as Readable) 22822

165.38.8 setAsBlob(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as BLob data (SQLString)
Example:

```
dim c as SQLCommandMBS // your command object
dim JPEGData as string // some data

c.Param("imageData").setAsBlob JPEGData
```

See also:

- 165.38.5 setAsBlob(data as MemoryBlock) 22819
- 165.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22820
- 165.38.7 setAsBlob(data as SQLStringMBS) 22820
- 165.38.9 setAsBlob(file as folderItem) 22821
- 165.38.10 setAsBlob(stream as Readable) 22822

165.38.9 setAsBlob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Example:

```
dim cmd as SQLCommandMBS // your command object

// pass folderitem to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
cmd.Param("image").setAsBlob(f)
```

Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.5 setAsBlob(data as MemoryBlock) 22819
- 165.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22820
- 165.38.7 setAsBlob(data as SQLStringMBS) 22820

- 165.38.8 setAsBlob(data as string) 22821
- 165.38.10 setAsBlob(stream as Readable) 22822

165.38.10 setAsBlob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Example:

```
dim cmd as SQLCommandMBS // your command object

// pass BinaryStream to BLOB field
dim f as FolderItem = SpecialFolder.Desktop.Child("test.jpg")
dim b as BinaryStream = BinaryStream.open(f)
cmd.Param("image").setAsBlob(b)
```

Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.5 setAsBlob(data as MemoryBlock) 22819
- 165.38.6 setAsBlob(data as SQLDataProviderMBS, BlockSize as UInt32) 22820
- 165.38.7 setAsBlob(data as SQLStringMBS) 22820
- 165.38.8 setAsBlob(data as string) 22821
- 165.38.9 setAsBlob(file as folderItem) 22821

165.38.11 setAsBool(value as boolean)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as bool data.

165.38.12 setAsBytes(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as binary data from memoryblock.
See also:

- 165.38.13 setAsBytes(data as string) 22823
- 165.38.14 setAsBytes(value as SQLBytesMBS) 22823
- 165.38.15 setAsBytes(value as SQLStringMBS) 22823

165.38.13 setAsBytes(data as string)

MBS SQL Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value to be bytes with content of given string.
Notes:

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 165.38.12 setAsBytes(data as MemoryBlock) 22822
- 165.38.14 setAsBytes(value as SQLBytesMBS) 22823
- 165.38.15 setAsBytes(value as SQLStringMBS) 22823

165.38.14 setAsBytes(value as SQLBytesMBS)

MBS SQL Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value to be bytes with content of given Bytes object.
Notes:

For BLOB fields or parameters.
Same as the other variant, but avoids creating extra SQLStringMBS object.
See also:

- 165.38.12 setAsBytes(data as MemoryBlock) 22822
- 165.38.13 setAsBytes(data as string) 22823
- 165.38.15 setAsBytes(value as SQLStringMBS) 22823

165.38.15 setAsBytes(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as binary string data (SQLString).
See also:

- 165.38.12 setAsBytes(data as MemoryBlock) 22822

- 165.38.13 setAsBytes(data as string) 22823
- 165.38.14 setAsBytes(value as SQLBytesMBS) 22823

165.38.16 setAsClob(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 165.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22824
- 165.38.18 setAsClob(file as folderItem) 22825
- 165.38.19 setAsClob(stream as Readable) 22825
- 165.38.20 setAsClob(text as SQLStringMBS) 22825
- 165.38.21 setAsClob(text as string) 22826

165.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
Notes:

nWhen you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.
See also:

- 165.38.18 setAsClob(file as folderItem) 22825
- 165.38.19 setAsClob(stream as Readable) 22825
- 165.38.20 setAsClob(text as SQLStringMBS) 22825
- 165.38.21 setAsClob(text as string) 22826

165.38.18 setAsClob(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.16 setAsClob(data as MemoryBlock) 22824
- 165.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22824
- 165.38.19 setAsClob(stream as Readable) 22825
- 165.38.20 setAsClob(text as SQLStringMBS) 22825
- 165.38.21 setAsClob(text as string) 22826

165.38.19 setAsClob(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.16 setAsClob(data as MemoryBlock) 22824
- 165.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22824
- 165.38.18 setAsClob(file as folderItem) 22825
- 165.38.20 setAsClob(text as SQLStringMBS) 22825
- 165.38.21 setAsClob(text as string) 22826

165.38.20 setAsClob(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
See also:

- 165.38.16 setAsClob(data as MemoryBlock) 22824

- 165.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22824
- 165.38.18 setAsClob(file as folderItem) 22825
- 165.38.19 setAsClob(stream as Readable) 22825
- 165.38.21 setAsClob(text as string) 22826

165.38.21 setAsClob(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as CLob data (SQLString)
See also:

- 165.38.16 setAsClob(data as MemoryBlock) 22824
- 165.38.17 setAsClob(data as SQLDataProviderMBS, BlockSize as UInt32) 22824
- 165.38.18 setAsClob(file as folderItem) 22825
- 165.38.19 setAsClob(stream as Readable) 22825
- 165.38.20 setAsClob(text as SQLStringMBS) 22825

165.38.22 setAsDate(value as date)

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets parameter's value with a date.
Example:

```
dim cmd as SQLCommandMBS // your command object
dim d as new date(2012,12,24,16,0,0) // some date
cmd.Param(3).setAsDate(d) // set third parameter
```

Notes: Same as setAsDateTime, but here we take a date object to make it more convenient.

165.38.23 setAsDateTime(value as dateTime)

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value with a dateTime.
Notes: Same as setAsDate, but here we take a dateTime object to make it more convenient.
See also:

• 165.38.24 setAsDateTime(value as SQLDateTimeMBS) 22827

165.38.24 setAsDateTime(value as SQLDateTimeMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as SQLDateTime data.
See also:

• 165.38.23 setAsDateTime(value as dateTime) 22826

165.38.25 setAsDefault

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Forces to use the default parameter's value.
Notes:

Forces DBMS API to use the default parameter value as the input value for an input or input/output parameter in a procedure.

If DBMS API does not support the concept of "default parameter values" in stored procedures, this setting will be ignored.

If you set this flag for the parameter that doesn't have a default value, the effect is DBMS defined (e.g. an error can be returned or NULL can be bound).

To cancel using the default parameter value you should call any other SQLValue::setAs... method to bind a parameter value.

To check whether this flag is set or not use isDefault method.

165.38.26 setAsDouble(value as Double)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Double data.

165.38.27 setAsInt32(value as Int32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int32 data.

165.38.28 setAsInt64(value as Int64)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int64 data.

165.38.29 setAsInteger(value as Integer)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Integer data.
Notes: Int32 or Int64 depending whether app is 32 or 64 bit.

165.38.30 setAsInterval(value as SQLIntervalMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an interval value.

165.38.31 setAsLong(value as Int32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as Int32 data.

165.38.32 setAsLongBinary(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data from memoryblock.
See also:

- 165.38.33 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22829
- 165.38.34 setAsLongBinary(data as SQLStringMBS) 22829
- 165.38.35 setAsLongBinary(data as string) 22829
- 165.38.36 setAsLongBinary(file as folderItem) 22830

- 165.38.37 setAsLongBinary(stream as Readable) 22830

165.38.33 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 165.38.37 setAsLongBinary(stream as Readable) 22830

165.38.34 setAsLongBinary(data as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
See also:

- 165.38.32 setAsLongBinary(data as MemoryBlock) 22828
- 165.38.33 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22829

- 165.38.36 setAsLongBinary(file as folderItem) 22830
- 165.38.37 setAsLongBinary(stream as Readable) 22830

165.38.35 setAsLongBinary(data as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long binary data (SQLString)
See also:

- 165.38.32 setAsLongBinary(data as MemoryBlock) 22828
- 165.38.33 setAsLongBinary(data as SQLDataProviderMBS, BlockSize as UInt32) 22829
- 165.38.34 setAsLongBinary(data as SQLStringMBS) 22829
- 165.38.36 setAsLongBinary(file as folderItem) 22830
- 165.38.37 setAsLongBinary(stream as Readable) 22830

165.38.36 setAsLongBinary(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.32 setAsLongBinary(data as MemoryBlock) 22828

- 165.38.34 setAsLongBinary(data as SQLStringMBS) 22829
- 165.38.35 setAsLongBinary(data as string) 22829
- 165.38.37 setAsLongBinary(stream as Readable) 22830

165.38.37 setAsLongBinary(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.

- 165.38.34 setAsLongBinary(data as SQLStringMBS) 22829
- 165.38.35 setAsLongBinary(data as string) 22829
- 165.38.36 setAsLongBinary(file as folderItem) 22830

165.38.38 setAsLongChar(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 165.38.39 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22831
- 165.38.40 setAsLongChar(file as folderItem) 22831
- 165.38.41 setAsLongChar(stream as Readable) 22832
- 165.38.42 setAsLongChar(text as SQLStringMBS) 22832
- 165.38.43 setAsLongChar(text as string) 22833

165.38.39 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
Notes:

When you call the SQLCommandMBS.Execute method all input parameters are bound with their values, including Long and BLob(CLob) parameters.
That is the time when the data provider Read event runs to get the values in the block size you specify.

The default value for the block size is 0. If you use the default value, SQLAPI++ Library will automatically use the most appropriate size for current DBMS.

- 165.38.40 setAsLongChar(file as folderItem) 22831
- 165.38.41 setAsLongChar(stream as Readable) 22832
- 165.38.42 setAsLongChar(text as SQLStringMBS) 22832
- 165.38.43 setAsLongChar(text as string) 22833

165.38.40 setAsLongChar(file as folderItem)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of file.
Notes:

The file will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.38 setAsLongChar(data as MemoryBlock) 22831
- 165.38.39 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22831
- 165.38.41 setAsLongChar(stream as Readable) 22832
- 165.38.42 setAsLongChar(text as SQLStringMBS) 22832
- 165.38.43 setAsLongChar(text as string) 22833

165.38.41 setAsLongChar(stream as Readable)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets field with content of stream.
Notes:

The stream will be read later when statement is executed.
May not work when using preemptive threads.
See also:

- 165.38.38 setAsLongChar(data as MemoryBlock) 22831

- 165.38.42 setAsLongChar(text as SQLStringMBS) 22832
- 165.38.43 setAsLongChar(text as string) 22833

165.38.42 setAsLongChar(text as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
See also:

- 165.38.38 setAsLongChar(data as MemoryBlock) 22831
- 165.38.39 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22831
- 165.38.40 setAsLongChar(file as folderItem) 22831
- 165.38.41 setAsLongChar(stream as Readable) 22832
- 165.38.43 setAsLongChar(text as string) 22833

165.38.43 setAsLongChar(text as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as long character data (SQLString)
See also:

- 165.38.38 setAsLongChar(data as MemoryBlock) 22831
- 165.38.39 setAsLongChar(data as SQLDataProviderMBS, BlockSize as UInt32) 22831
- 165.38.40 setAsLongChar(file as folderItem) 22831
- 165.38.41 setAsLongChar(stream as Readable) 22832
- 165.38.42 setAsLongChar(text as SQLStringMBS) 22832

165.38.44 setAsNull

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets value to null.

165.38.45 setAsNumeric(value as SQLNumericMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as SQLNumeric data.

165.38.46 setAsShort(value as Int16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as short data.

165.38.47 setAsString(data as MemoryBlock)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Private method.
Notes: This method should make sure you don't accidentally a memoryblock instead of a text.
See also:

- 165.38.48 setAsString(value as SQLStringMBS) 22834

- 165.38.49 setAsString(value as string) 22834

165.38.48 setAsString(value as SQLStringMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as character string data (SQLString)
See also:

- 165.38.47 setAsString(data as MemoryBlock) 22833
- 165.38.49 setAsString(value as string) 22834

165.38.49 setAsString(value as string)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as character string data.
Notes: Same as setAsString, but for your convenience with a Xojo string instead of a SQLStringMBS object.
See also:

- 165.38.47 setAsString(data as MemoryBlock) 22833
- 165.38.48 setAsString(value as SQLStringMBS) 22834

165.38.50 setAsUInt32(value as UInt32)

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as UInt32 data.

165.38.51 setAsULong(value as UInt32)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as unsigned long data.

165.38.52 setAsUnknown

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's type as unknown.

165.38.53 setAsUShort(value as UInt16)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value as unsigned short data.
Notes: Sets value as unsigned short data.

165.38.54 setAsValueRead(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets parameter's value from SQLParam or SQLField objects.
Notes: This method allows using SQLField or SQLParam object received from one SQL statement as a parameter for another SQL statement.

165.38.55 setVariant(value as Variant)

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the value based on a variant.
Example:

```
dim con as SQLConnectionMBS // your connection
dim pic as picture // some picture

// get picture data
dim jpegData as MemoryBlock = pic.GetData(Picture.FormatJPEG, 80)

// get a command for an Insert command
dim sql as string = "Insert into BlobTest(name, image) values (:name, :image)"
dim cmd as new SQLCommandMBS(con, sql)

// set values by variant
cmd.Param("name").setVariant "logo.jpg"
cmd.Param("image").setVariant jpegData

// do the insert
cmd.Execute
```

Notes:

MemoryBlock and Strings without text encoding are converted to byte values (BLOB).
Texts and Strings with encoding are converted to text values.
Raises exceptions if you pass anything which is not recognized.

Other types are translated as good as possible.

With version 19.0 or later, you can pass folderitem to stream blob from file. This may raise exception if file can't be opened.

165.38.56 Properties

165.38.57 isDefault as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the plugin has been forced to use parameter's default value by calling setAsDefault method; false otherwise.
Notes: (Read only property)

165.39 class SQLValueReadMBS

165.39.1 class SQLValueReadMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class used in the SQL Plugin for value objects which can be read.

165.39.3 Methods

165.39.4 asBLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob (SQLString) data.
Notes:

If the value of current object is NULL, asBLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.5 asBLobMemory as MemoryBlock

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob data in a memoryblock.

165.39.6 asBLobString as String

MBS SQL Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as BLob data in a string.

165.39.7 asBytes as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as binary string data (SQLString).
Notes:

If the value of current object is NULL, asBytes method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asBytes method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric) or date-time (kDataTypeDateTime), asBytes method returns a block of data with size sizeof(value's type) as SQLString object.

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.8 asCLob as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as CLob (SQLString) data.
Notes:

If the value of current object is NULL, asCLob method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asCLob method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric(kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.9 asDate as Date

MBS SQL Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the value as date.
Example:

```
dim cmd as SQLCommandMBS // your command object
dim d as date = cmd.Field("mydate").asDate // read date value
```

Notes:

If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.10 asDateTime as SQLDateTimeMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as SQLDateTimeMBS object.
Notes:

If the value of current object is NULL, asDateTime method returns an empty SQLDateTime object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDateTime method returns SQLDateTime object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.11 asDateTimeValue as DateTime

MBS SQL Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as date.
Notes:

If the value of current object is NULL, asDate method returns an empty date object. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is kDataTypeDateTime, asDate method returns date object.

If the value's type of current object is any data type except kDataTypeDateTime, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.12 asInterval as SQLIntervalMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as interval (SQLIntervalMBS).

165.39.13 asLongBinary as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as long binary (SQLString) data.
Notes:

If the value of current object is NULL, asLongBinary method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongBinary method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.14 asLongChar as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as long character (SQLString) data.
Notes:

If the value of current object is NULL, asLongChar method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is string (kDataTypeString), bytes (kDataTypeBytes), long binary (kDataTypeLongBinary), long character (kDataTypeLongChar), BLob (kDataTypeBLob) or CLob (kDataTypeCLob), asLongChar method returns the object's value as SQLString object.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong), double (kDataTypeDouble), numeric (kDataTypeNumeric), date-time (kDataTypeDateTime) or cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.15 asNumeric as SQLNumericMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as SQLNumeric data.
Notes:

If the value of current object is NULL, asNumeric method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is exact numeric value (kDataTypeNumeric), asNumeric method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or long (kDataTypeLong), asNumeric method converts it to SQLNumeric .

If the value's type of current object is string (kDataTypeString), asNumeric method tries to convert it from SQLChar* value. If the conversion is possible and correct, asNumeric converts to SQLNumeric from SQLChar* value. If conversion is incorrect asNumeric method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.

165.39.16 asString as SQLStringMBS

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: returns the value as string (SQLString) data.
Notes:

If the value of current object is NULL, asString method returns an empty string. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asString method returns "true" or "false" string (SQLString object).

If the value's type of current object is short (kDataTypeShort), asString method converts it to decimal string (SQLString object) like function printf("% hd", ...) does.

If the value's type of current object is long (kDataTypeLong), asString method converts it to decimal string (SQLString object) like function printf("% ld", ...) does.

If the value's type of current object is double (kDataTypeDouble), asString method converts it to decimal string (SQLString object) like function printf("% g", ...) does.

If the value's type of current object is numeric (kDataTypeNumeric), asString method converts it to decimal string (SQLString object) without precision loss.

If the value's type of current object is date-time (kDataTypeDateTime), asString method converts it to string (SQLString object) like function asctime(...) does.

If the value's type of current object is string (kDataTypeString, kDataTypeLongChar, kDataTypeCLob), asString method returns the original object's value as SQLString object.

If the value's type of current object is binary (kDataTypeBytes, kDataTypeLongBinary, kDataTypeBLob), asString method converts it to hexadecimal string (SQLString object).

If the value's type of current object is cursor (kDataTypeCursor), the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.

165.39.17 Constructor(DataType as Integer)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty value object for the given data type.
See also:

- 165.39.18 Constructor(value as SQLValueReadMBS) 22843

165.39.18 Constructor(value as SQLValueReadMBS)

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new value object by copying the given one.
See also:

- 165.39.17 Constructor(DataType as Integer) 22843

165.39.19 Properties

165.39.20 asBool as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value of current object as bool data.
Notes:

f the value of current object is NULL, asBool method returns false. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is bool (kDataTypeBool), asBool method returns the original value with no conversion.

If the value's type of current object is short (kDataTypeShort), long (kDataTypeLong) or double (kDataTypeDouble), asBool method converts it to bool data type. Conversion returns false if the value is 0; true otherwise.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

165.39.21 asDouble as Double

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: returns the value as Double data.
Notes:

If the value of current object is NULL, asDouble method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is double (kDataTypeDouble), asDouble method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), long (kDataTypeLong) or numeric (kDataTypeNumeric), asDouble method converts it to double (kDataTypeDouble) data type.

If the value's type of current object is string (kDataTypeString), asDouble method tries to convert it to double value. If the conversion is possible and correct, asDouble returns kDataTypeDouble value. If conversion is incorrect asDouble method throws an exception.

If the value's type of current object is kDataTypeDateTime, asDouble method converts it to standard double representation. Days are represented by whole number increments starting with 30 December 1899, midnight as time zero. Hour values are expressed as the absolute value of the fractional part of the number. See SQLDateTime::operator double() for more detailes.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

165.39.22 asInt32 as Int32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int32 data.
Notes: (Read only property)

165.39.23 asInt64 as Int64

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int64 data.
Notes: (Read only property)

165.39.24 asInteger as Integer

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Integer data.
Notes:

Either Int32 or Int64 depending on whether the application is 32 or 64 bit.

(Read only property)

165.39.25 asLong as Int32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as Int32 data.
Notes:

If the value of current object is NULL, asLong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asLong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asLong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asLong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asLong returns kDataTypeLong value. If conversion is incorrect asLong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

165.39.26 asShort as Int16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as short.
Notes:

If the value of current object is NULL, asShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is short, asShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (SkDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asShort method converts it to short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asShort method tries to convert it to short value. If the conversion is possible and correct, asShort returns the value. If conversion is incorrect asShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

165.39.27 asStringValue as String

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value string.
Notes:

Same as asString but returns a Xojo string.
Please use SQLStringMBS and CopyBinaryData if the string you want to read is a BLOB value, else text encoding will change your data!
For numbers, this may give english decimal separator. For getting localized one, please use AsDoubleValue and use cstr() function.
(Read only property)

165.39.28 asUInt32 as UInt32

MBS SQL Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as UInt32 data.
Notes: (Read only property)

165.39.29 asULong as UInt32

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as an unsigned 32 bit integer value.
Notes:

If the value of current object is NULL, asULong method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is long (kDataTypeLong), asULong method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), short (kDataTypeShort), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asULong method converts it to long data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asULong method tries to convert it to long (kDataTypeLong) value. If the conversion is possible and correct, asULong returns kDataTypeLong value. If conversion is incorrect asULong method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SQLValueRead object.
(Read only property)

165.39.30 asUShort as UInt16

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as unsigned short.
Notes:

If the value of current object is NULL, asUShort method returns 0. Use isNull method to make sure if the value is NULL or not.

If the value's type of current object is unsigned short, asUShort method returns the original value with no conversion.

If the value's type of current object is bool (kDataTypeBool), long (kDataTypeLong), unsigned long (kDataTypeULong), double (kDataTypeDouble) or numeric (kDataTypeNumeric), asUShort method converts it to unsigned short data type. Note, that in this case the returned value can be truncated.

If the value's type of current object is string (kDataTypeString), asUShort method tries to convert it to unsigned short value. If the conversion is possible and correct, asUShort returns the value. If conversion is incorrect asUShort method throws an exception.

If the value's type of current object is any data type except the described above, the result is undefined and debug version asserts.

Use DataType method to get the value's type of SAValueRead object.
(Read only property)

165.39.31 asVariant as Variant

MBS SQL Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the value as a variant.
Notes:

This is a convenience function.
May return nil, date, number or string.
BLOB strings without encoding and text strings as UTF-8.
(Read only property)

165.39.32 DataType as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns SAValueRead object's data type.
Notes:

One of the kDataType constants.
(Read only property)

165.39.33 isNull as boolean

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the value of current object is NULL; otherwise false.
Notes: (Read only property)

165.39.34 LongOrLobReaderMode as Integer

MBS SQL Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Long or Lob data reading mode.
Notes:

SQLAPI++ Library provides two ways to read Long or BLob(CLob) object's value (usually SQLField or SQLParam objects):

1. reading of Long or Lob data at once into an internal buffer (like ordinary string or binary values);
2. piecewise reading of Long or Lob data using user defined callback.

kLongOrLobReaderDefault reading mode used by default.

If you want to control piecewise reading of Long or BLob(CLob) data you should set LongOrLobReaderMode and use kLongOrLobReaderManual reading mode for Long or BLob(CLob) parameters or fields you want to process with your data consumer. After that each fetch will skip reading Long and BLob(CLob) parameters that you set to be read manually. To read field or parameter defined to be read manually you should call ReadLongOrLob method for each of them after the fetch. ReadLongOrLob method will repeatedly call the data consumer Write event.
(Read and Write property)

165.39.35 Constants

165.39.36 kDataTypeBlob = 16

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is BLob data (SQLStringMBS).

165.39.37 kDataTypeBool = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is a boolean.

165.39.38 kDataTypeBytes = 13

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is binary string (SQLStringMBS).

165.39.39 kDataTypeClob = 17

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is CLob data (SQLStringMBS).

165.39.40 kDataTypeCursor = 18

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is Oracle REF CURSOR (SQLCommand).

165.39.41 kDataTypeDateTime = 10

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is SQLDateTime.

165.39.42 kDataTypeDouble = 8

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: This is a normal double variable.

165.39.43 kDataTypeInt64 = 6

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the field type constants
Notes: Signed 64-bit integer.

165.39.44 kDataTypeInterval = 11

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is an interval (SQLIntervalMBS).

165.39.45 kDataTypeLong = 4

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: A 32 bit integer.

165.39.46 kDataTypeLongBinary = 14

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is long binary data (SQLStringMBS).

165.39.47 kDataTypeLongChar = 15

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is long character data (SQLStringMBS).

165.39.48 kDataTypeNumeric = 9

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is SQLNumeric (used internally).

165.39.49 kDataTypeShort = 2

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is a 16 bit signed integer.

165.39.50 kDataTypeSpecificToDBMS = 19

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is server-specific.

165.39.51 kDataTypeString = 12

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is character string (SQLString).

165.39.52 kDataTypeUInt64 = 7

MBS SQL Plugin, Plugin Version: 19.5.

Function: One of the field type constants
Notes: Unsigned 64-bit integer.

165.39.53 kDataTypeULong = 5

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is a 32 bit unsigned integer.

165.39.54 kDataTypeUnknown = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: Data type is unknown.

165.39.55 kDataTypeUShort = 3

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the field type constants
Notes: A 16 bit unsigned integer.

165.39.56 kLongOrLobReaderModeDefault = 0

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the read modes.
Notes: Long or Lob(CLob) data reading mode is default (automatic).

165.39.57 kLongOrLobReaderModeManual = 1

MBS SQL Plugin, Plugin Version: 9.3.

Function: One of the read modes.
Notes: Long or Lob(CLob) data reading mode is manual.

Chapter 166

Statusitem

166.1 class NSStatusBarButtonMBS

166.1.1 class NSStatusBarButtonMBS

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: StatusBarButtons are the visual representation of NSStatusItems, and are primarily displayed on the right side of the menu bar.
Notes:

When a template image is set as the \c image property of the status bar button, it is rendered with the correct menu bar style. This guarantees that the button will look correct in various button states and appearances (such as dark menu bar).

Available on Mac OS X 10.10 and newer.
Subclass of the NSButtonMBS class.

166.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 15.0
- MBS Xojo / Real Studio Plugins, version 15.0pr11

166.1.3 Methods

166.1.4 Available as boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on OS X 10.10.

166.1.5 Properties

166.1.6 appearsDisabled as Boolean

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: Whether icon appears disabled.
Notes:

When true the status bar icon has a disabled/off appearance while still being functional, such as allowing selection and actions. Defaults to false.
(Read and Write property)

166.2 class NSStatusItemMBS

166.2.1 class NSStatusItemMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: A class to handle a NSStatusitem which is a tiny little item in the menubar.
Notes: All methods in this class will catch exceptions from Cocoa and raise a NSExceptionMBS instead. Using the message, name and reason properties you can see what was the reason for this exception. Please report if you find a method which does not handle exceptions correct.

- 5.6, page 31: Third Party Plugins: Statusitems, Getting an icon in the top right of the Mac OS X menubar by Christian Schmitz

166.2.4 Methods

166.2.5 Available as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether Statusitems are available.
Notes: True on MachO platforms.

166.2.6 Close

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

166.2.7 CreateMenu as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new menu.
Notes:

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

- 166.2.8 CreateMenu(length as single) as boolean 22858

166.2.8 CreateMenu(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Creates the StatusItem menu with the given width.
Example:

```
dim e as new NSStatusItemMBS
call e.CreateMenu(24) // best for a 16x16 picture
```

Notes:

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.
See also:

- 166.2.7 CreateMenu as boolean 22858

166.2.9 CreateMenuMiddle(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Same as CreateMenu but tries to place Statusitem on the right side.
Deprecated: This item is deprecated and should no longer be used. You can use CreateMenu instead.
Notes:

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one (left to Apples MenuItems).

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

166.2.10 CreateMenuRight(length as single) as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Same as CreateMenu but tries to place Statusitem on the right side.
Deprecated: This item is deprecated and should no longer be used. You can use CreateMenu instead.
Notes:

Uses private Apple API which may break on future Mac OS X versions. Returns false if Apple changes something in the future and the function we use will not be available. So if this function returns false, you can call CreateMenu to continue. Works on Mac OS X 10.4 to 10.6 and make the new statusitem being the rightmost one.

If you run this code after you used CreateMenuRight, the new menu will be right of all other statusitems:

```
dim sh as new Shell
sh.Execute "killall","SystemUIServer"
```

Constants:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

Other values between 0 and 10000 are used for the length.
Bad values like 20000 will crash the application.

Handle is not 0 after this call was successfull.

If the NSGrayBackground option is set in the system defaults, Mac OS X 10.5 will raise an NSImageCacheException, so please install an exception handle to catch NSExceptionMBS so your application can handle that.

Deprecated.

166.2.11 DrawStatusBarBackground(x as Double, y as Double, width as Double, height as Double, highlight as boolean)

MBS MacCocoa Plugin, Plugin Version: 7.7, Platform: macOS, Targets: Desktop only.

Function: Draws the menu background pattern for a custom status-bar item in regular or highlight pattern.
Notes:

x, y, width and height: A rectangle defining the area of a custom status-bar item.
highlight: true to draw the background pattern in the standard highlight pattern, false to not highlight the pattern.

You can use this method to help a custom status-bar item emulate the behavior of a standard item.

Available in Mac OS X v10.3 and later.

166.2.12 MenuIsVertical as boolean

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the statusitem has a vertical orientation.
Example:

MsgBox str(NSStatusItemMBS.MenuIsVertical)

166.2.13 MenuThickness as Double

MBS MacCocoa Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The thickness of the status bar.
Example:

MsgBox str(NSStatusItemMBS.MenuThickness)

Notes: The status bar returned by systemStatusBar has a thickness of 22 pixels, the thickness of the menu bar.

166.2.14 popUpStatusItemMenu(menu as NSMenuMBS)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Displays a menu under a custom status bar item.
Notes: You can use this method to cause a popup menu to appear under a custom status bar item when the user clicks the item. Note that view must exist (that is, it must not be nil).

166.2.15 SendActionOn(mode as Integer)

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Sets the conditions on which action event is called.
Notes:

mask is set with one or more of the following bit masks described in NSEvent Constants: NSLeftMouseUpMask, NSLeftMouseDownMask, NSLeftMouseDraggedMask, and NSPeriodicMask.

mode is set with one or more of the following bit masks:

```
const NSLeftMouseDownMask      = & h00002
const NSLeftMouseUpMask        = & H00004
const NSLeftMouseDraggedMask   = & h00040
const NSPeriodicMask           = & h10000
```

166.2.16 Properties

166.2.17 alternateImage as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: An alternate image to be displayed when a status bar item is highlighted.
Notes: (Read and Write property)

166.2.18 attributedTitle as NSAttributedStringMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The attributed string that is displayed at the status item's position in the status bar.
Notes:

If an image is also set, the title appears to the right of the image.
(Read and Write property)

166.2.19 Button as Variant

MBS MacCocoa Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop only.

Function: The button that is displayed in the status bar.
Notes:

Value is a NSStatusBarButtonMBS object. Returned as Variant to reduce plugin dependencies.

This is created automatically on the creation of the StatusItem. Behavior customization for the button, such as image, target/action, tooltip, can be set with this property.

Available on Mac OS X 10.10 and newer.
(Read only property)

166.2.20 Enabled as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether this status item is enabled.
Notes: (Read and Write property)

166.2.21 Handle as Integer

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The handle of the NSStatusItem object used internally.
Notes: (Read and Write property)

166.2.22 Height as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The height of the status item.
Notes:

Should be 22 pixels.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

166.2.23 HighlightMode as boolean

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: Whether the receiver is highlighted when clicked.
Notes:

If you use HighlightMode and Menu, you need to first assign the menu and later set HighlightMode to true.
(Read and Write property)

166.2.24 image as NSImageMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The image that is displayed at the statusitem's position in the status bar.
Notes:

nil if an image has not been set.
(Read and Write property)

166.2.25 Left as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The left position of the status item.
Notes:

Valid only after item was drawn the first time.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

166.2.26 Length as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The length of the status item in pixels.
Notes:

Constants for special values:

NSVariableStatusItemLength	-1
NSSquareStatusItemLength	-2

(Read and Write property)

166.2.27 Menu as NSMenuMBS

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The menu attached to this statusitem.
Notes:

Nil if no menu is attached.
(Read and Write property)

166.2.28 Title as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The title of the status item.
Notes: (Read and Write property)

166.2.29 ToolTip as String

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The help tag for a menu item.
Notes: (Read and Write property)

166.2.30 Top as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The top position of the status item.
Notes:

Always 0.
This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

166.2.31 View as NSViewMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: Sets the view to be used for this status menuitem.
Notes:

Using a custom view you can draw whatever you like in the menu item.
You can set it to nil to remove the view.
(Read and Write property)

166.2.32 Width as single

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: Desktop only.

Function: The width of the status item.
Notes:

This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
(Read only property)

166.2.33 Window as NSWindowMBS

MBS MacCocoa Plugin, Plugin Version: 8.2, Platform: macOS, Targets: Desktop only.

Function: The window used for this NSStatusItem.
Notes:

This is a function using undocumented features from the Apple NSStatusItem class, so there is not guarantee that it will work in future versions.
Returns nil on 64 bit target.
(Read only property)

166.2.34 Events

166.2.35 Action

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

Function: The event called when the user clicks on the statusitem.
Notes:

Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is limited. You can't for example do everything like quit an application. For using quit, start a timer which will remove the menu 500ms later and than quit 500ms later.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

166.2.36 DoubleAction

MBS MacCocoa Plugin, Plugin Version: 7.2, Platform: macOS, Targets: .

Function: The event called when the user double clicks on the statusitem.
Notes:

If two Action Events happen very fast, this one is called the second time so you can e.g. react on double clicks.
Mouse position can be calculated based on System.MouseX/System.MouseY relative to Left/Top. Mouse status can be read using System.MouseDown.

This event is coming from the Cocoa event system. What you can do is a bit limited when using GUI functions from Xojo. To avoid some redraw errors, you may want to start a timer and let your Xojo code run a millisecond after the menu code has finished.
Depending on what you do, you can see the menu not redrawing properly (staying highlighted) and crashes if the Xojo code modifies some global Cocoa states.

166.2.37 Screenshots

166.2.38 NSStatusItem.jpg

Function: The NSStatusItem running a menu on the top right of the menubar.

Chapter 167

StoreKit

167.1 class AppReceiptIAPMBS

167.1.1 class AppReceiptIAPMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The class to represent an in-app purchase in the app receipt.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr8
- Validating Receipts of Mac App Store Purchases including In-App Purchases

167.1.3 Methods

167.1.4 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The private constructor.

167.1.5 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the auto renewable subscription is active for the given date.
Notes:

date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 167.1.6 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean 22870

167.1.6 isActiveAutoRenewableSubscriptionForDate(d as DateTime) as boolean

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Returns whether the auto renewable subscription is active for the given date.
Notes:

date: The date in which the auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 167.1.5 isActiveAutoRenewableSubscriptionForDate(d as Date) as boolean 22870

167.1.7 Properties

167.1.8 cancellationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: For a transaction that was canceled by Apple customer support, the date of the cancellation.
Notes: (Read only property)

167.1.9 cancellationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: For a transaction that was canceled by Apple customer support, the date of the cancellation.
Notes: (Read only property)

167.1.10 originalPurchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: For a transaction that restores a previous transaction, the date of the original transaction.
Notes:

This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
(Read only property)

167.1.11 originalPurchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: For a transaction that restores a previous transaction, the date of the original transaction.
Notes:

This value corresponds to the original transaction's transactionDate property.
In an auto-renewable subscription receipt, this indicates the beginning of the subscription period, even if the subscription has been renewed.
(Read only property)

167.1.12 originalTransactionIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: For a transaction that restores a previous transaction, the transaction identifier of the original transaction.
Notes:

Otherwise, identical to the transaction identifier.
This value corresponds to the original transaction's transactionIdentifier property.
All receipts in a chain of renewals for an auto-renewable subscription have the same value for this field.
(Read only property)

167.1.13 productIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The product identifier of the item that was purchased.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes:

This value corresponds to the productIdentifier property of the SKPayment object stored in the transaction's payment property.
(Read only property)

167.1.14 purchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date and time that the item was purchased.
Notes:

This value corresponds to the transaction's transactionDate property.

For a transaction that restores a previous transaction, the purchase date is the date of the restoration. Use originalPurchaseDate to get the date of the original transaction.

In an auto-renewable subscription receipt, this is always the date when the subscription was purchased or renewed, regardles of whether the transaction has been restored.
(Read only property)

167.1.15 purchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date and time that the item was purchased.
Notes: (Read only property)

167.1.16 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The number of items purchased.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show purchases
dim inAppPurchases() as AppReceiptIAPMBS = r.inAppPurchases
for each p as AppReceiptIAPMBS in inAppPurchases
MsgBox str(p.quantity)+"x "+p.productIdentifier+" "+p.purchaseDate.AbbreviatedDate
next
```

Notes:

This value corresponds to the quantity property of the SKPayment object stored in the transaction's payment property.
(Read only property)

167.1.17 subscriptionExpirationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The expiration date for the subscription.
Notes:

Only present for auto-renewable subscription receipts.
(Read only property)

167.1.18 subscriptionExpirationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The expiration date for the subscription.
Notes:

Only present for auto-renewable subscription receipts.
(Read only property)

167.1.19 transactionIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The transaction identifier of the item that was purchased.
Notes:

This value corresponds to the transaction's transactionIdentifier property.
(Read only property)

167.1.20 webOrderLineItemID as Integer

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The primary key for identifying subscription purchases.
Notes: (Read only property)

167.2 class AppReceiptMBS

167.2.1 class AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The class for an app receipt.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr10
- MBS Xojo / Real Studio Plugins, version 14.3pr8
- Validating Receipts of Mac App Store Purchases including In-App Purchases

167.2.3 Methods

167.2.4 bundleReceipt as AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the app receipt contained in the bundle, if any and valid.
Notes:

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the app receipt contained in the bundle, or nil if there is no receipt or if it is invalid.

167.2.5 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The private constructor.

167.2.6 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
Notes:

productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.
If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 167.2.7 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean 22876

167.2.7 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as dateTime) as boolean

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Returns whether the receipt contains an active auto-renewable subscription for the given product identifier and for the given date.
Notes:

productIdentifier: The identifier of the auto-renewable subscription.
date: The date in which the latest auto-renewable subscription should be active. If you are using the current date, you might not want to take it from the device in case the user has changed it.
Returns true if the latest auto-renewable subscription is active for the given date, false otherwise.

Auto-renewable subscription lapses are possible. If you are checking against the current date, you might want to deduct some time as tolerance.

If this method fails Apple recommends to refresh the receipt and try again once.
See also:

- 167.2.6 containsActiveAutoRenewableSubscriptionOfProductIdentifier(productIdentifier as string, d as date) as boolean 22876

167.2.8 containsInAppPurchaseOfProductIdentifier(productIdentifier as string) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns whether there is an in-app purchase in the receipt for the given product.
Notes:

productIdentifier: The identifier of the product.
True if there is an in-app purchase for the given product, false otherwise.

167.2.9 inAppPurchases as AppReceiptIAPMBS()

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Array of in-app purchases contained in the receipt.

167.2.10 receiptForFile(file as folderitem) as AppReceiptMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns the app receipt contained in the given file, if any and valid.
Example:

```
dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes:

Extracts the receipt in ASN1 from the PKCS # 7 container, and then parses the ASN1 data into a AppReceiptMBS instance. If an Apple Root certificate is available, it will also verify that the signature of the receipt is valid.
Returns the receipt contained in the given file, or nil if there is no receipt or if it is invalid.

167.2.11 setAppleRootCertificate(Data as Memoryblock)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Sets the certificate data of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
Notes:

If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
data: The contents of the Apple Root certificate file to use.
See also:

- 167.2.12 setAppleRootCertificate(File as FolderItem) 22878

167.2.12 setAppleRootCertificate(File as FolderItem)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Sets the file of the Apple Root certificate that will be used to verifiy the signature of the bundle receipt.
Notes:

If none is provided, the resource AppleIncRootCertificate.cer will be used. If no certificate is available, no signature verification will be performed.
file: The folderitem of the Apple Root certificate.
See also:

- 167.2.11 setAppleRootCertificate(Data as Memoryblock) 22878

167.2.13 verifyReceiptHash as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Returns wheter the receipt hash corresponds to the device's GUID by calcuting the expected hash using the GUID, bundleIdentifierData and opaqueValue.
Notes: Returns true if the hash contained in the receipt corresponds to the device's GUID, false otherwise.

167.2.14 Properties

167.2.15 appVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The app's version number.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.appVersion
```

Notes:

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist.
(Read only property)

167.2.16 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The bundle identifier.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.bundleIdentifier
```

Notes:

This corresponds to the value of CFBundleIdentifier in the Info.plist file.
(Read only property)

167.2.17 bundleIdentifierData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The bundle identifier as data.
Notes:

The bundle identifier as data, as contained in the receipt. Used to verifiy the receipt's hash.
(Read only property)

167.2.18 creationDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The creation date of the receipt.
Notes: (Read only property)

167.2.19 creationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The creation date of the receipt.
Notes: (Read only property)

167.2.20 expirationDate as Date

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The date that the app receipt expires.
Notes:

Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration.
(Read only property)

167.2.21 expirationDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The date that the app receipt expires.
Notes:

Only for apps purchased through the Volume Purchase Program. If nil, the receipt does not expire. When validating a receipt, compare this date to the current date to determine whether the receipt is expired. Do not try to use this date to calculate any other information, such as the time remaining before expiration.
(Read only property)

167.2.22 opaqueValue as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: An opaque value used as part of the SHA-1 hash.
Notes: (Read only property)

167.2.23 originalAppVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The version of the app that was originally purchased.
Example:

```
// open a receipt
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// show value
MsgBox r.originalAppVersion
```

Notes:

This corresponds to the value of CFBundleVersion (in iOS) or CFBundleShortVersionString (in OS X) in the Info.plist file when the purchase was originally made. In the sandbox environment, the value of this field is always "1.0".
(Read only property)

167.2.24 purchaseDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

167.2.25 purchaseDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the original purchase date.
(Read only property)

167.2.26 receiptHash as Memoryblock

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: A SHA-1 hash, used to validate the receipt.
Notes: (Read only property)

167.2.27 transactionDate as Date

MBS MacCloud Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

167.2.28 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Another date.
Notes:

Digging in a receipt we found this field and assume it is the transaction date.
(Read only property)

167.3 class AppReceiptVerificatorMBS

167.3.1 class AppReceiptVerificatorMBS

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Reference implementation of an app receipt verificator.
Example:

```
dim a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes: If security is a concern you might want to avoid using a verificator whose code is open source.

167.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 18.0

- MBS Xojo / Real Studio Plugins, version 16.0pr7
- MBS Xojo / Real Studio Plugins, version 14.3pr8
- Validating Receipts of Mac App Store Purchases including In-App Purchases

167.3.3 Methods

167.3.4 Constructor

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The constructor.

167.3.5 ExitApp(code as Integer = 173)

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Quits the application directly.
Example:

AppReceiptVerificatorMBS.ExitApp 173

Notes:

This does not call the destructors and CancelClose events. The app is quit right away.
If you use code 173 the Finder will show error message that app needs to be downloaded again from Mac App Store.

167.3.6 GUID as string

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads the GUID of the Mac.
Example:

```
dim g as String = AppReceiptVerificatorMBS.GUID
MsgBox EncodeHex(g)
```

Notes: This is normally build from the MAC ID of the ethernet card.

167.3.7 verifyAppReceipt as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Verifies the app's receipt file.
Example:

```
dim a as new AppReceiptVerificatorMBS

if a.verifyAppReceipt then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes:

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

If you set bundleVersion and/or bundleIdentifier properties, we use those values.
Else we pick them from the info.plist of the app.

167.3.8 verifyReceipt(Receipt as AppReceiptMBS) as boolean

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: Verifies the given receipt file.
Example:

```
dim a as new AppReceiptVerificatorMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("receipt")
dim r as AppReceiptMBS = AppReceiptMBS.receiptForFile(f)

// testing with receipt from current Dash app
a.bundleIdentifier = "com.kapeli.dash"
a.bundleVersion = "2.1.2"

if a.verifyReceipt(r) then
MsgBox "My receipt is valid"
else
MsgBox "My receipt is invalid."
end if
```

Notes:

Verifies the receipt by checking the integrity of the receipt, comparing its bundle identifier and bundle version to the values returned by the corresponding properties and verifying the receipt hash.

Returns true if the receipt is verified, false otherwise.
If validation fails, Apple recommends to refresh the receipt and try again.

167.3.9 Properties

167.3.10 bundleIdentifier as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The value that will be used to validate the bundle identifier included in the app receipt.
Notes:

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle identifier by default.
(Read and Write property)

167.3.11 bundleVersion as String

MBS MacCloud Plugin, Plugin Version: 14.3, Platform: macOS, Targets: All.

Function: The value that will be used to validate the bundle version included in the app receipt.
Notes:

Given that it is possible to modify the app bundle in jailbroken devices, setting this value from a hardcoded string might provide better protection.
Returns the given value, or the app's bundle version by default.
(Read and Write property)

167.3.12 FailReason as String

MBS MacCloud Plugin, Plugin Version: 16.0, Platform: macOS, Targets: All.

Function: The reason for a failure.
Notes:

This is for debugging and to help you to find the reason for why a verification fails.
(Read only property)

167.3.13 MACAddress as MemoryBlock

MBS MacCloud Plugin, Plugin Version: 18.0, Platform: macOS, Targets: All.

Function: The MAC Address to use.
Example:

```
// get the one of this Mac
dim m as MemoryBlock = AppReceiptVerificatorMBS.MACAddress

// now set a fake one
dim x as MemoryBlock = DecodeHex("12347890ABCD")
AppReceiptVerificatorMBS.MACAddress = x

// and display
```

MsgBox EncodeHex(m)+EndOfLine+EncodeHex(AppReceiptVerificatorMBS.MACAddress)

Notes:

Can be queried to automatically get the one we detect.
Or set to use a custom one for testing.
(Read and Write property)

167.4 class SKDownloadMBS

167.4.1 class SKDownloadMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: This storeKit class gives you information about the download status of a content file.
Notes:

Available in Mac OS X 10.8 and newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.4.2 Methods

167.4.3 Constructor

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

167.4.4 contentURLForProductID(productID as string) as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries content URL for a product.

167.4.5 deleteContentForProductID(productID as string)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Deletes the content for that identifier from disk.

167.4.6 Properties

167.4.7 contentIdentifier as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Product identifier entered in iTunesConnect.
Notes: (Read only property)

167.4.8 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Filesize of the asset.
Notes: (Read only property)

167.4.9 contentURL as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Content URL.
Notes: (Read only property)

167.4.10 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Version string of the product.
Notes: (Read only property)

167.4.11 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Last error, can be nil.
Notes: (Read only property)

167.4.12 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

167.4.13 progress as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Download progress.
Notes: (Read only property)

167.4.14 state as Integer

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Download state.
Notes: (Read only property)

167.4.15 timeRemaining as Double

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Estimated number of seconds remaining in the download.
Notes: (Read only property)

167.4.16 Transaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The transaction associated with the downloadable file
Notes:

Available in MacOS 10.11 or newer.
(Read only property)

167.4.17 Constants

167.4.18 kStateActive = 1

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Active

167.4.19 kStateCancelled = 5

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Cancelled

167.4.20 kStateFailed = 4

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Failed

167.4.21 kStateFinished = 3

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Finished

167.4.22 kStatePaused = 2

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Paused

167.4.23 kStateWaiting = 0

MBS MacCloud Plugin, Plugin Version: 12.3.

Function: One of the download state constants.
Notes: Waiting

167.5 class SKMutablePaymentMBS

167.5.1 class SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The mutable class for SKPaymentMBS.
Notes:

The SKMutablePayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of that item the user would like to purchase.

When a mutable payment is added to the payment queue, the payment queue copies the contents into an immutable request before queueing the request. Your application can safely change the contents of the mutable payment object.

Please also check the documentation from Apple for the SKMutablePayment class.
Subclass of the SKPaymentMBS class.

167.5.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr1

167.5.3 Methods

167.5.4 Constructor(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of the given payment.
See also:

- 167.5.5 Constructor(product as SKProductMBS) 22892

167.5.5 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue
```

```
dim payment as new SKMutablePaymentMBS(product)
payment.quantity = 5

MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

See also:

- 167.5.4 Constructor(payment as SKPaymentMBS) 22892

167.5.6 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product with the given quantity.
Example:

```
dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

Notes:

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 167.5.7 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS 22894

167.5.7 paymentWithProduct(product as SKProductMBS, quantity as Integer) as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product with the given quantity.
Example:

```
dim product as SKProductMBS // your product
dim payment as SKMutablePaymentMBS = SKMutablePaymentMBS.paymentWithProduct(product, 5)

MsgBox str(payment.quantity)+" units of "+product.localizedTitle
```

Notes:

product: The product the user wishes to purchase.
quantity: Optional quantity. If you don't pass it, we default to 1.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier.

Available in Mac OS X v10.7 and later.
See also:

- 167.5.6 paymentWithProduct(product as SKProductMBS) as SKMutablePaymentMBS 22893

167.5.8 Properties

167.5.9 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Application-specific user identifier. Optional.
Notes: (Read and Write property)

167.5.10 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string that identifies a product that can be purchased from within your application.
Notes:

The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

167.5.11 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of items the user wants to purchase.
Notes:

The quantity property must be greater than 0.
Available in Mac OS X v10.7 and later.
(Read and Write property)

167.5.12 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Reserved for future use.
Notes:

The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read and Write property)

167.5.13 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that produces an “ask to buy” flow for this payment in the sandbox.
Notes:

Available on MacOS 10.14 or newer.
(Read and Write property)

167.6 class SKPaymentMBS

167.6.1 class SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a payment in the App Store.
Notes:

The SKPayment class defines a request to the Apple App Store to process payment for additional functionality offered by your application. A payment encapsulates a string that identifies a particular product and the quantity of those items the user would like to purchase.

Please also check the documentation from Apple for the SKPayment class.
Available in Mac OS X v10.7 and later.

167.6.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Real Studio Plugins, version 11.3pr1

167.6.3 Methods

167.6.4 Constructor(product as SKProductMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as new SKPaymentMBS(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

167.6.5 copy as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

167.6.6 mutableCopy as SKMutablePaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a mutable copy of the object.

167.6.7 paymentWithProduct(product as SKProductMBS) as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a new payment for the specified product.
Example:

```
dim product as SKProductMBS // your product
dim queue as SKPaymentQueueMBS // your queue

dim payment as SKPaymentMBS = SKPaymentMBS.paymentWithProduct(product)
MsgBox str(payment.quantity)+" units of "+product.localizedTitle

queue.addPayment payment
```

Notes:

product: The product the user wishes to purchase.

This factory Method in Cocoa Core Competencies uses the productIdentifier property obtained from the product parameter to create and return a new payment with that identifier. The quantity property defaults to 1.

To create a SKPaymentMBS object with a quantity greater than 1, create a SKMutablePaymentMBS object, adjust its quantity property and then add it to the payment queue.

Available in Mac OS X v10.7 and later.

167.6.8 Properties

167.6.9 applicationUsername as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Application-specific user identifier. Optional.
Notes: (Read only property)

167.6.10 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKPayment object.
Notes: (Read and Write property)

167.6.11 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string used to identify a product that can be purchased from within your application. (read-only)
Notes:

The product identifier is a string previously agreed on between your application and the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

167.6.12 quantity as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of items the user wants to purchase. (read-only)
Notes:

Default value is 1.
Available in Mac OS X v10.7 and later.
(Read only property)

167.6.13 requestData as Memoryblock

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Reserved for future use. (read-only)
Notes:

The default value is nil. If requestData is not nil, your payment will be rejected by the Apple App Store.

Available in Mac OS X v10.7 and later.
(Read only property)

167.6.14 simulatesAskToBuyInSandbox as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that produces an "ask to buy" flow for this payment in the sandbox.
Notes:

Available on MacOS 10.14 or newer.
(Read only property)

167.7 class SKPaymentQueueMBS

167.7.1 class SKPaymentQueueMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The SKPaymentQueue class defines a queue of payment transactions to send to the Apple App Store.
Notes:

To use the payment queue, you add one or more payments. When payments are added to the queue, Store Kit connects to the Apple App Store and presents a user interface so that the user can authorize payment. As payments are fulfilled, the payment queue updates transactions and delivers them through events.

Available in Mac OS X v10.7 and later.
Please also check the documentation from Apple for the SKPaymentQueue class.
The plugin installs a transaction observer for you.

167.7.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6
- MBS Xojo Plugins, version 18.1pr3

167.7.3 Methods

167.7.4 addPayment(payment as SKPaymentMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a payment request to the queue.
Notes:

payment: A payment request.

The payment request must have a product identifier registered with the Apple App Store and a quantity greater than 0. If either property is invalid, addPayment throws an exception.

When a payment request is added to the queue, the payment queue processes that request with the Apple App Store and arranges for payment from the user. When that transaction is complete or if a failure occurs, the payment queue sends the SKPaymentTransaction object that encapsulates the request to all transaction observers.

167.7.5 cancelDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancel one download.
Notes: Available in Mac OS X 10.8 and newer.

167.7.6 cancelDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Cancel a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

167.7.7 canMakePayments as boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the user is allowed to make payments.
Example:

```
if SKPaymentQueueMBS.canMakePayments then
MsgBox "can make payments"
else
MsgBox "not available"
end if
```

Notes: A Mac can be restricted from accessing the Apple App Store. For example, parents can restrict their children's ability to purchase additional content. Your application should confirm that the user is allowed to authorize payments before adding a payment to the queue. Your application may also want to alter its behavior or appearance when the user is not allowed to authorize payments.

167.7.8 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new SKPaymentQueueMBS object.
Notes:

Please make a subclass of this class to fill code into the events.
And please only have one instance of this class.

167.7.9 Destructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

167.7.10 finishTransaction(transaction as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Completes a pending transaction.
Notes:

transaction: The transaction to finish.

Your application should call this method from a transaction observer that received a notification from the payment queue. Calling finishTransaction on a transaction removes it from the queue. Your application should call finishTransaction only after it has successfully processed the transaction and unlocked the functionality purchased by the user.

Calling finishTransaction on a transaction that is in the SKPaymentTransactionMBS.StatePurchasing state throws an exception.

167.7.11 pauseDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses one download.
Notes: Available in Mac OS X 10.8 and newer.

167.7.12 pauseDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Pauses a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

167.7.13 restoreCompletedTransactions

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asks the payment queue to restore previously completed purchases.
Notes:

Your application calls this method to restore transactions that were previously finished so that you can process them again. For example, your application would use this to allow a user to unlock previously purchased content onto a new device.

When you create a new product to be sold in your store, you choose whether that product can be restored or not. See the In App Purchase Programming Guide for more information.

The payment queue will deliver a new transaction for each previously completed transaction that can be restored. Each transaction includes a copy of the original transaction.

After the transactions are delivered, the payment queue calls the observer's paymentQueueRestoreCompletedTransactionsFinished event. If an error occurred while restoring transactions, the observer will be notified through its paymentQueue:restoreCompletedTransactionsFailedWithError event.

167.7.14 restoreCompletedTransactionsWithApplicationUsername(username as String)

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Asks the payment queue to restore previously completed purchases, providing an opaque identifier for the user's account.
Notes: username: An opaque identifier for the user's account on your system.

167.7.15 resumeDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes one download.
Notes: Available in Mac OS X 10.8 and newer.

167.7.16 resumeDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Resumes a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

167.7.17 startDownload(download as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Start one download.
Notes: Available in Mac OS X 10.8 and newer.

167.7.18 startDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Starts a few downloads.
Notes: Available in Mac OS X 10.8 and newer.

167.7.19 transactions as SKPaymentTransactionMBS()

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array of pending transactions.
Notes: The value of this property is undefined when there are no observers attached to the payment queue.

167.7.20 Properties

167.7.21 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference.
Notes: (Read and Write property)

167.7.22 Events

167.7.23 paymentQueueRestoreCompletedTransactionsFinished

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the observer that the payment queue has finished sending restored transactions.
Notes: This method is called after all restorable transactions have been processed by the payment queue. Your application is not required to do anything in this method.

167.7.24 removedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells an observer that one or more transactions have been removed from the queue.
Notes:

transactions: An array of the transactions that were removed.

Your application does not typically need to implement this event but might implement it to update its own user interface to reflect that a transaction has been completed.

167.7.25 restoreCompletedTransactionsFailedWithError(Error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells the observer that an error occurred while restoring transactions.

167.7.26 updatedDownloads(downloads() as SKDownloadMBS)

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent when the download state has changed.
Notes: Available in Mac OS X 10.8 and newer.

167.7.27 updatedTransactions(transactions() as SKPaymentTransactionMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Tells an observer that one or more transactions have been updated.
Notes:

transactions: An array of the transactions that were updated.

The application should process each transaction by examining the transaction's transactionState property. If transactionState is SKPaymentTransactionStatePurchased, payment was successfully received for the desired functionality. The application should make the functionality available to the user. If transactionState is SKPaymentTransactionStateFailed, the application can read the transaction's error property to return a meaningful error to the user.

Once a transaction is processed, it should be removed from the payment queue by calling the payment queue's finishTransaction: method, passing the transaction as a parameter.

Important: Once the transaction is finished, Store Kit can not tell you that this item is already purchased. It is important that applications process the transaction completely before calling finishTransaction:.

167.8 class SKPaymentTransactionMBS

167.8.1 class SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The SKPaymentTransactionMBS class defines objects residing in the payment queue.
Notes:

A payment transaction is created whenever a payment is added to the payment queue. Transactions are delivered to your application when the App Store has finished processing the payment. Completed transactions provide a receipt and transaction identifier that your application can use to save a permanent record of the processed payment.

Please also check the documentation from Apple for the SKPaymentTransaction class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.8.2 Methods

167.8.3 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

167.8.4 downloads as SKDownloadMBS()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the downloads for this transaction.
Notes: Available in Mac OS X 10.8 and newer.

167.8.5 Properties

167.8.6 error as NSErrorMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object describing the error that occurred while processing the transaction.
Notes:

The error property is undefined except when transactionState is set to StateFailed. Your application can read the error property to determine why the transaction failed.
(Read only property)

167.8.7 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKPaymentTransaction object.
Notes: (Read and Write property)

167.8.8 originalTransaction as SKPaymentTransactionMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The transaction that was restored by the App Store.
Notes:

The contents of this property are undefined except when transactionState is set to StateRestored. When a transaction is restored, the current transaction holds a new transaction identifier, receipt, and so on. Your application will read this property to retrieve the restored transaction.
(Read only property)

167.8.9 payment as SKPaymentMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The payment for the transaction.
Notes:

Each payment transaction is created in response to a payment that your application added to the payment queue.
(Read only property)

167.8.10 transactionDate as date

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The date the transaction was added to the App Store's payment queue.
Notes:

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.

(Read only property)

167.8.11 transactionDateTime as DateTime

MBS MacCloud Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date the transaction was added to the App Store's payment queue.
Notes:

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored.
(Read only property)

167.8.12 transactionIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string that uniquely identifies a successful payment transaction.
Notes:

The contents of this property are undefined except when transactionState is set to StatePurchased or StateRestored. The transactionIdentifier is a string that uniquely identifies the processed payment. Your application may wish to record this string as part of an audit trail for App Store purchases. See In App Purchase Programming Guide for more information.
(Read only property)

167.8.13 transactionState as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current state of the transaction.
Notes:

see State* constants.
(Read only property)

167.8.14 Constants

167.8.15 StateDeferred = 4

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the tansaction state constants.
Notes: Transaction is neither purchased nor failed, yet.

167.8.16 StateFailed = 2

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: The transaction failed. Check the error property to determine what happened.

167.8.17 StatePurchased = 1

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: The App Store successfully processed payment. Your application should provide the content the user purchased.

167.8.18 StatePurchasing = 0

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: The transaction is being processed by the App Store.

167.8.19 StateRestored = 3

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the tansaction state constants.
Notes: This transaction restores content previously purchased by the user. Read the originalTransaction property to obtain information about the original purchase.

167.9 class SKProductDiscountMBS

167.9.1 class SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The class for product discounts.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.9.2 Methods

167.9.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

167.9.4 Properties

167.9.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

167.9.6 NumberOfPeriods as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of periods this price is valid.
Notes: (Read only property)

167.9.7 PaymentMode as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The payment mode.
Notes: (Read only property)

167.9.8 Price as Double

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price of the product.
Notes: (Read only property)

167.9.9 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price locale.
Notes: (Read only property)

167.9.10 PriceString as String

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The price as formatted string.
Notes: (Read only property)

167.9.11 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The subscription period.
Notes: (Read only property)

167.9.12 Constants

167.9.13 kPaymentModeFreeTrial = 2

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the payment modes.
Notes: Free trial

167.9.14 kPaymentModePayAsYouGo = 0

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the payment modes.
Notes: Pay ss you go

167.9.15 kPaymentModePayUpFront = 1

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the payment modes.
Notes: Pay Upfront

167.10 class SKProductMBS

167.10.1 class SKProductMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The App Store class for a product.
Notes:

SKProductMBS objects are returned as part of an didReceiveResponse event in SKProductsRequestMBS class and are used to provide information about a product previously registered with the Apple App Store.

Please also check the documentation from Apple for the SKProduct class.
Available in Mac OS X v10.7 and later.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.10.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

167.10.3 Methods

167.10.4 Constructor

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

167.10.5 contentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Array with filesizes of the assets.
Notes: Available in Mac OS X 10.8 and newer.

167.10.6 downloadContentLengths as Int64()

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The lengths of the downloadable files available for this product.
Notes:

The array holds Int64 values that is the size of one of the downloadable files (in bytes).

For MacOS 10.14 or newer.
Falls back to downloadLengths for older OS versions.

167.10.7 Properties

167.10.8 contentLength as Int64

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Total filesize of the assets.
Notes:

Available in Mac OS X 10.8 and newer.
(Read only property)

167.10.9 contentVersion as string

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop & iOS.

Function: Version string of the product.
Notes:

Available in Mac OS X 10.8 and newer.
(Read only property)

167.10.10 downloadable as boolean

MBS MacCloud Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this is a download item.
Notes:

Available in Mac OS X 10.8 and newer.
(Read only property)

167.10.11 downloadContentLength as Int64

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop only.

Function: The length of the downloadable files available for this product.
Notes:

For MacOS 10.14 or newer.
Falls back to downloadLength for older OS versions.
(Read only property)

167.10.12 downloadContentVersion as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: A string that identifies which version of the content is available for download.
Notes:

The version string is formatted as a series of integers separated by periods.

For MacOS 10.14 or newer.
Falls back to ContentVersion for older OS versions.
(Read only property)

167.10.13 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKProduct object.
Notes: (Read and Write property)

167.10.14 introductoryPrice as SKProductDiscountMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Introductory Price.
Notes:

Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

167.10.15 localizedDescription as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of the product.
Notes:

The description is localized based on the currentLocale property.
(Read only property)

167.10.16 localizedTitle as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the product.
Notes:

The description is localized based on the currentLocale property.
(Read only property)

167.10.17 price as Double

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The cost of the product in the local currency.
Notes:

Use PriceString to get a localized formatted price.
(Read only property)

167.10.18 priceLocale as NSLocaleMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The locale used to format the price of the product.
Notes: (Read only property)

167.10.19 priceString as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The cost of the product in the local currency.
Notes:

We format the price in the locale currency format.
(Read only property)

167.10.20 productIdentifier as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The string that identifies the product to the Apple App Store.
Notes: (Read only property)

167.10.21 subscriptionGroupIdentifier as String

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: The identifier of the subscription group to which the subscription belongs.
Notes:

All auto-renewable subscriptions must be a part of a group. You create the group identifiers in App Store Connect.
Available on MacOS 10.14 or newer.
(Read only property)

167.10.22 subscriptionPeriod as SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: Subscription period.
Notes:

Available on MacOS 10.13.2 or later.
Value is nil on older systems.
(Read only property)

167.11 class SKProductsRequestMBS

167.11.1 class SKProductsRequestMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: An SKProductsRequestMBS object is used to retrieve localized information about a list of products from the Apple App Store.
Notes:

Your application uses this request to present localized prices and other information to the user without having to maintain that list itself.

To use an SKProductsRequest object, you initialize it with a list of product identifier strings, attach a delegate, and then call the request's start method. When the request completes, you receive the didReceiveResponse event.

Please also check the documentation from Apple for the SKProductsRequest class.
Available in Mac OS X v10.7 and later.

167.11.2 Blog Entries

- MBS Xojo Plugins, version 19.0pr6
- MBS Xojo Plugins, version 17.4pr2

167.11.3 Methods

167.11.4 cancel

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a previously started request.
Notes: When you cancel a request, the events are not called with an error.

167.11.5 Constructor(productIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes the request with the set of product identifiers.
Notes: productIdentifiers: The list of product identifiers for the products you wish to retrieve descriptions of.

167.11.6 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

167.11.7 start

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sends the request to the Apple App Store.
Notes: The results for a request are sent to the events.

167.11.8 Properties

167.11.9 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal reference to the SKProductsRequest object.
Notes: (Read and Write property)

167.11.10 Events

167.11.11 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Called if the request failed to execute.
Notes:

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

167.11.12 didFinish

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Called when the request has completed.
Notes: This method is called after all processing of the request has been completed.

167.11.13 didReceiveResponse(products() as SKProductMBS, invalidProductIdentifiers() as string)

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: Called when the Apple App Store responds to the product request.
Notes:

products: A list of products, one product for each valid product identifier provided in the original request.
invalidProductIdentifiers: An array of product identifier strings that were not recognized by the Apple App Store. This array should typically be empty.

167.12 class SKProductSubscriptionPeriodMBS

167.12.1 class SKProductSubscriptionPeriodMBS

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The class for a subscription period.
Notes:

Available on MacOS 10.13.2.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

167.12.2 Methods

167.12.3 Constructor

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

167.12.4 Properties

167.12.5 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

167.12.6 numberOfUnits as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The number of units.
Notes: (Read only property)

167.12.7 unit as Integer

MBS MacCloud Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop & iOS.

Function: The unit of the period from day to year.
Notes: (Read only property)

167.12.8 Constants

167.12.9 PeriodUnitDay = 0

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Day

167.12.10 PeriodUnitMonth = 2

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Month

167.12.11 PeriodUnitWeek = 1

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Week

167.12.12 PeriodUnitYear = 3

MBS MacCloud Plugin, Plugin Version: 18.1.

Function: One of the period units.
Notes: Year

167.13 class SKReceiptRefreshRequestMBS

167.13.1 class SKReceiptRefreshRequestMBS

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The SKReceiptRefreshRequest class allows an app to refresh its receipt.
Notes:

With this API, the app can request a new receipt if the receipt is invalid or missing. In the sandbox environment, you can request a receipt with any combination of properties to test the state transitions related to Volume Purchase Plan receipts.
Requires Mac OS X 10.9.

167.13.2 Blog Entries

- MBS Xojo / Real Studio plug-ins in version 13.5
- MBS Xojo / Real Studio Plugins, version 13.5pr1

167.13.3 Xojo Developer Magazine

- 12.1, page 9: News

167.13.4 Methods

167.13.5 cancel

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a previously started request.
Notes: When you cancel a request, the events are not called with an error.

167.13.6 Constructor(properties as dictionary = nil)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Initialized a receipt refresh request with optional properties.
Notes:

In the test enviroment, the properties that the new receipt should have. For keys, see SKReceiptProperty* methods.

In the production environment, set this parameter to nil.

167.13.7 Destructor

MBS MacCloud Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

167.13.8 SKReceiptPropertyIsExpired as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt is expired.

167.13.9 SKReceiptPropertyIsRevoked as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt has been revoked.

167.13.10 SKReceiptPropertyIsVolumePurchase as string

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for properties in initialization.
Notes: A key whose value is a Boolean value, indicating whether the receipt is is a Volume Purchase Plan receipt.

167.13.11 start

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: Sends the request to the Apple App Store.
Notes: The results for a request are sent to the events.

167.13.12 TerminateForInvalidReceipt

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Terminates an app if the license to use the app has expired.
Notes: Falls back to exit(173) for MacOS before 10.14.

167.13.13 Properties

167.13.14 Handle as Integer

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

167.13.15 receiptProperties as Dictionary

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop & iOS.

Function: The properties of the receipt. (read-only)
Notes: (Read only property)

167.13.16 Events

167.13.17 didFailWithError(error as NSErrorMBS)

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

Function: Called if the request failed to execute.
Notes:

error: The error that caused the request to fail.

When the request fails, your application should release the request. The requestDidFinish event is not called after this method is called.

167.13.18 didFinish

MBS MacCloud Plugin, Plugin Version: 13.5, Platform: macOS, Targets: .

Function: Called when the request has completed.
Notes: This method is called after all processing of the request has been completed.

167.14 module StoreKitMBS

167.14.1 module StoreKitMBS

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Globals for the StoreKit plugin.
Notes: Be aware that StoreKit requires your app to be signed.

167.14.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr6

167.14.3 Methods

167.14.4 appStoreReceiptURL as string

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries URL for the app store receipt file.

167.14.5 available as Boolean

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: Whether the StoreKit framework is available.
Example:

```
msgbox "StoreKit available: "+str(StoreKitMBS.available)
```

Notes: Should always be true on Mac OS X 10.7 and newer.

167.14.6 requestReview

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Tells StoreKit to ask the user to rate or review your app, if appropriate.
Example:

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
```

```
End If
```

Notes:

Although you should call this method when it makes sense in the user experience flow of your app, the actual display of a rating/review request view is governed by App Store policy. Because this method may or may not present an alert, it's not appropriate to call it in response to a button tap or other user action.

When you call this method while your app is still in development mode, a rating/review request view is always displayed so that you can test the user interface and experience. However, this method has no effect when you call it in an app that you distribute using TestFlight.

When you call this method in your shipping app and a rating/review request view is displayed, the system handles the entire process for you. In addition, you can continue to include a persistent link in the settings or configuration screens of your app that deep-links to your App Store product page. To automatically open a page on which users can write a review in the App Store, append the query parameter action=write-review to your product URL.

Available on MacOS 10.14 or newer.
requestReview method will only work, if StoreReviewAvailable returns true.
Does nothing if called on older OS versions.

167.14.7 SKErrorDomain as string

MBS MacCloud Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop & iOS.

Function: The domain for StoreKit errors.

167.14.8 StoreReviewAvailable as Boolean

MBS MacCloud Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether SKStoreReviewController class is available.
Example:

```
If StoreKitMBS.StoreReviewAvailable Then
StoreKitMBS.requestReview
End If
```

Notes: requestReview method will only work, if StoreReviewAvailable returns true.

167.14.9 Constants

167.14.10 SKErrorClientInvalid = 1

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: client is not allowed to issue the request, etc.

167.14.11 SKErrorPaymentCancelled = 2

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: user cancelled the request, etc.

167.14.12 SKErrorPaymentInvalid = 3

MBS MacCloud Plugin.

Function: One of the StoreKit error codes.
Notes: purchase identifier was invalid, etc.

167.14.13 SKErrorPaymentNotAllowed = 4

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: this machine is not allowed to make the payment

167.14.14 SKErrorUnknown = 0

MBS MacCloud Plugin, Plugin Version: 11.2.

Function: One of the StoreKit error codes.
Notes: unknown error

Chapter 168

String

168.1 Globals

168.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark or uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90)) // shows 6 as ? is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 168.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22932
- 168.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22933
- 168.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22934
- 168.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22935
- 168.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22936

168.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark or uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", "?", 65, 90, 48, 57)) // shows 6 as ? is found
MsgBox str(InStrByteRangeMBS("Hello 123", "?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", "?", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 168.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22933
- 168.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22934
- 168.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22935
- 168.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22936

168.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for question mark, low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", "?", 0, 31, 127, 255, 48, 57 )) // shows 6 as ? is found.
MsgBox str(InStrByteRangeMBS("123", "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, "?", 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", "?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 168.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22934
- 168.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22935
- 168.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22936

168.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for uppercase letters A to Z
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90)) // shows 1 as H is found.

MsgBox str(InStrByteRangeMBS("hello?", 65, 90)) // shows 0 as nothing is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.

- 168.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22933

- 168.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22935
- 168.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22936

168.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for uppercase letters A to Z or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello?", 65, 90, 48, 57)) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS("Hello 123", 65, 90, 48, 57)) // shows 1 as H is found.
MsgBox str(InStrByteRangeMBS("hello 123", 65, 90, 48, 57)) // shows 7 as 1 is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 168.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22933
- 168.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22934

- 168.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22936

168.1.6 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds bytes or byte ranges in a string.
Example:

```
// search for low byte values, high byte values or numbers from 0 to 9
MsgBox str(InStrByteRangeMBS("Hello?", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
MsgBox str(InStrByteRangeMBS("123", 0, 31, 127, 255, 48, 57 )) // shows 1 as 1 is found.
MsgBox str(InStrByteRangeMBS(EndOfLine.Windows, 0, 31, 127, 255, 48, 57 )) // shows 1 as chr(13) is found.
MsgBox str(InStrByteRangeMBS("Hello", 0, 31, 127, 255, 48, 57 )) // shows 0 as nothing is found.
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).

The optional find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

The StartValue/EndValue parameters define ranges of values which you consider to match.

Returns 0 if nothing is found or the position of the found character.
See also:

- 168.1.1 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer) as Integer 22931
- 168.1.2 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22932
- 168.1.3 InStrByteRangeMBS(target as string, find as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer, StartValue3 as Integer, EndValue3 as Integer) as Integer 22933
- 168.1.4 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer) as Integer 22934

- 168.1.5 InStrByteRangeMBS(target as string, StartValue as Integer, EndValue as Integer, StartValue2 as Integer, EndValue2 as Integer) as Integer 22935

168.1.7 InStrBytesMBS(target as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the first position of one of the bytes given in the find string in the target string.
Example:

```
MsgBox str(InStrBytesMBS("Hello", "e")) // shows 2, as e is found
MsgBox str(InStrBytesMBS("Hello", "abcd")) // shows 0, as nothing is found
MsgBox str(InStrBytesMBS("Hello World", "abcd")) // shows 11, as d is found
```

Notes:

You may want to make sure target and find are both in the same 8bit encoding (UTF-8, MacRoman, Windows ANSI, Latin 1, ASCII, etc. but not UTF16/UTF32).
The find string defines the bytes to search. This gives you a way to see whether one of those bytes is inside or to find the first byte matching a certain value.

Returns 0 if nothing is found or the position of the found character.

168.1.8 EncodingNameMBS(extends Text as string) as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the text encoding name for this string.
Example:

```
dim t as string = "Hello World"

MsgBox "InternetName: "+t.Encoding.InternetName
MsgBox "InternetNameMBS: "+t.Encoding.InternetNameMBS
MsgBox "EncodingNameMBS: "+t.EncodingNameMBS
```

168.1.9 RemoveAccentsMBS(text as string, IgnoreCase as boolean = false) as string

MBS Util Plugin, Plugin Version: 12.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes accents from text.
Example:

```
dim s as string = "L'élève préféré"
dim a as string = RemoveAccentsMBS(s)
dim b as string = RemoveAccentsMBS(s, true)
// check values in debugger
```

Notes:

Optionally also ignores case and outputs text in capital letters.
The plugin has a long replacement list of unicode code points to do this.

Useful as a preparation to convert to ASCII text, so all accents are removed before conversion.

168.1.10 SplitCommaSeparatedValuesMBS(text as string, delimiter as string = "", quote as string = "") as string()

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits a string with CSV values.
Example:

```
// 1. read a CSV file:

dim file as FolderItem = SpecialFolder.Desktop.Child("test.csv")
dim t as TextInputStream = TextInputStream.open(file)

// use right encoding for your file!
t.Encoding = encodings.MacRoman

while not t.EOF
dim line as string = t.ReadLine
dim items() as string = SplitCommaSeparatedValuesMBS(line)

// process items array
wend

// 2. compare with split:

dim test as string = "Hello,""World,test"",end"

dim a() as string = split(test, ",")
dim b() as string = SplitCommaSeparatedValuesMBS(test, ",")
```

MsgBox Join(a,EndOfLine)+EndOfLine+EndOfLine+Join(b,EndOfLine)

Notes:

This function is better for CSV data than the Split function as it handles quoted text right.
For 17.5 we rewrote this function. Now auto detects the delimiter (comma or semicolon) if none passed. Default quote character is " if nothing is passed. Please only one character for delimiter.

Version 18.0 can detect tab character, too.

168.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Notes:

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 168.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string 22939
- 168.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 22940

168.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Example:

```
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " äöü "

// checked
```

```
dim s as string = CheckUTF8MBS(t, "")

MsgBox s
```

Notes:

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 168.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string 22939
- 168.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string 22940

168.1.13 CheckUTF8MBS(mem as MemoryBlock, Placeholder as string) as string

MBS Util Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns string as UTF-8 and replacing invalid UTF-8 sequences with placeholder.
Example:

```
// some random bytes
dim t as string = RandomBytesStringMBS(20, false)

// and some text
t = t + " äöü "

// checked in memoryblock
dim m as MemoryBlock = t
dim s as string = CheckUTF8MBS(m, "")

MsgBox s
```

Notes:

This function is more save than simply DefineEncoding as it makes sure the returned text actually is valid UTF-8.
You can replace missing characters with empty text, question mark or any other symbol.

This function is overloaded, so you can directly pass in string, memoryblock or ptr+size.
Checks byte sequence with up to 4 byte long sequences. Does not verify whether code points are valid.
See also:

- 168.1.11 CheckUTF8MBS(data as ptr, size as Integer, Placeholder as string) as string 22939
- 168.1.12 CheckUTF8MBS(data as string, Placeholder as string) as string 22939

168.1.14 ClearStringContentMBS(s as String) as Boolean

MBS Util Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears string content.
Example:

```
// this is a constant string
Dim c As String = "Hello"

// this is an allocated string
Dim a As String = c + "World"

// try to clear both
Call ClearStringContentMBS c
Call ClearStringContentMBS a

MsgBox "const: "+c+" "+Str(Len(c))+EndOfLine+"allocated: "+a+" "+Str(Len(a))
```

Notes:

Overwrites content of string with zeros.
We check if this is a constant string and for those do nothing.
Returns true if we zeroed content, otherwise false.

This function can help to clear memory for passwords stored in strings.

168.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Example:

```
dim a as string = "Hello"
dim b as string = "World"
dim c as string = ConcatBinaryStringsMBS(a,b)
```

```
dim d as string = ConvertEncoding(b, encodings.UTF16)
dim e as string = ConcatBinaryStringsMBS(a,d)

MsgBox "ConcatBinaryStringsMBS"+EndOfLine+EndOfLine+c+EndOfLine+EncodingToHexMBS(c)+EndOfLine+EndOfLine+e+EndOfLine+EncodingToHexMBS(e)
```

Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 168.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 22942
- 168.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 22942
- 168.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string 22943
- 168.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 22943

168.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 168.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string 22941
- 168.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 22942
- 168.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string 22943
- 168.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 22943

168.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 168.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string 22941

- 168.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 22942
- 168.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string 22943
- 168.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 22943

168.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 168.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string 22941
- 168.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 22942
- 168.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 22942
- 168.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string 22943

168.1.19 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string, f as string) as string

MBS Util Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Concats the given strings with binary encoding.
Notes: If RB concats strings the encoding is changed before concating to match the other strings.
See also:

- 168.1.15 ConcatBinaryStringsMBS(a as string, b as string) as string 22941
- 168.1.16 ConcatBinaryStringsMBS(a as string, b as string, c as string) as string 22942
- 168.1.17 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string) as string 22942
- 168.1.18 ConcatBinaryStringsMBS(a as string, b as string, c as string, d as string, e as string) as string 22943

168.1.20 CountOccurancesMBS(s as string, find as string) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Counts the occurances of a string.
Example:

```
dim s as string

s="111110001110101010111"

MsgBox str(CountOccurancesMBS(s,"1")) // 14
MsgBox str(CountOccurancesMBS(s,"0")) // 7
MsgBox str(len(s)) // 21
```

Notes: Returns the number of occurances of a substring in a string.

168.1.21 CreateStringMBS(Length as Integer, Content as String) as string

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a string based on a pattern.
Example:

```
dim c as string = CreateStringMBS(20, "Hello")
dim t as string = CreateStringMBS(10, chrb(255))

Break
```

Notes:

The content string is repeated until size is matched and returned.
The string returned has the same encoding set as the content string.

168.1.22 DecodingFromHTMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with HTML escaped characters.
Example:

```
dim html as string = "<p><B>Gr& uuml;& szlig;e</B></P>"
dim htmltext as string = RemoveHTMLTagsMBS(html)
dim text as string = DecodingFromHTMLMBS(htmltext)

MsgBox text // shows: Grüße
```

Notes:

The source string is converted to a native string if it is not allready in ASCII. Than for every character the functions looks for the unescaped character code and returns a normal unicode string.

e.g. "M& uuml;nchen" ->"München"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file. (using e.g. ConvertEncoding(string, encodings.UTF8))

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Speed optimized in version 2.8 to be a hundret times faster.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

168.1.23 DecodingFromMySQLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string from MySQL.
Example:

MsgBox DecodingFromMySQLMBS("test\\test\% 2.doc")

Notes: Replaces all the escapes in a mysql string like (\0, \t or \\) to their binary replacement.

168.1.24 DecodingFromQuotedPrintableMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with quoted printable encoding.
Example:

msgbox DecodingFromQuotedPrintableMBS("Hi, =A1=92")

Notes:

The decoded string is marked to have an ASCII encoding, but you may need to set the encoding to something like ISO. Than you need a text converter to make something printable from it.

May return "" on low memory conditions.

168.1.25 DecodingFromURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with URL escaped characters.
Example:

```
dim s as string
dim t as string
dim u as string

t="Hello World äöü"

s= EncodingToURLMBS(t,0)

u=DecodingFromURLMBS(s,0)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World äöü
MsgBox t
// Hello% 20World% 20% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World äöü
MsgBox u
```

Notes:

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie% 20geht's% 3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

• 168.1.26 DecodingFromURLMBS(s as string, options as Integer) as string 22947

168.1.26 DecodingFromURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with URL escaped characters.
Example:

```
dim s as string
dim t as string
dim u as string

t="Hello World äöü"

s= EncodingToURLMBS(t,1)

u=DecodingFromURLMBS(s,1)

SetEncodingOfStringMBS u,GetEncodingOfStringMBS(t) // restore encoding

// Hello World äöü
MsgBox t
// Hello+World+% C3% A4% C3% B6% C3% BC
MsgBox s
// Hello World äöü
MsgBox u
```

Notes:

Decodes an URL encoded ASCII string. The string returned is marked as a binary string (without encoding). You need to set the encoding to whatever the original was (ISO-9660 or UTF8 for example).

e.g. "Wie% 20geht's% 3F" ->"Wie geht's?"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Added Linux support in v5.1.
See also:

• 168.1.25 DecodingFromURLMBS(s as string) as string 22946

168.1.27 DecodingFromXMLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with XML escaped characters.
Notes: see DecodingFromHTMLMBS.

168.1.28 DetectUnicodeMarkersMBS(s as string) as Integer

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tries to get the unicode marker from the string.
Example:

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32be=6
const EncodingUTF32le=7

dim text as string = "Hello World" // this text does not have a marker..

msgbox str(DetectUnicodeMarkersMBS(text))
```

Notes: For some UTF16 LittleEndian strings this function may return UTF32.

168.1.29 EncodeEmailSubjectMBS(s as string) as string

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function:

Encodes an email subject.
Text is encoded with UTF-8 Quoted Printable encoding.
If text does not need to be encoded (pure ASCII), we return the input text.
Example:

```
MsgBox EncodeEmailSubjectMBS("Hello World")+EndOfLine+EncodeEmailSubjectMBS("Test äöü")
```

168.1.30 EncodingToHTMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with HTML escaped characters.
Example:

```
dim f as folderItem
dim b as binaryStream

f=getsaveFolderItem("text/html","new.html")
if f<>nil then
b=f.createBinaryFile("text/html")
if b<>nil then
b.write nativeStringMBS(EncodingToHTMLMBS(editfield1.text))
b.close
end if
end if
```

Notes:

The source string is converted to unicode if it is not allready in unicode. Than for every character the functions looks for the escaped character code and returns a HTML encoded string.

e.g. "München" ->"M& uuml;nchen"

This functions uses Xojo unicode strings, so you may need to convert back to a NativeString before saveing the string to a file.

Return characters (chr(10) and chr(13)) are not converted to
codes.

May return "" on low memory conditions.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

Options can be 1 to not encode ASCII values <128, so quotes, <, >and & are not encoded.

168.1.31 EncodingToQuotedPrintableMBS(s as string, LineLen as Integer = 72) as string

MBS Util Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with quoted printable characters.
Example:

```
dim a as string = "Hello äöü!"
dim b as string = EncodingToQuotedPrintableMBS(a)
dim c as string = ConvertEncoding(a, encodings.ISOLatin1)
dim d as string = EncodingToQuotedPrintableMBS(c)
dim e as string = EncodeQuotedPrintable(a)
dim f as string = EncodeQuotedPrintable(c)

MsgBox b+EndOfLine+d+EndOfLine+e+EndOfLine+f
```

Notes:

Line wrap is per default at 72 characters but you can pass some other positive value here.
Quoted printable encoded strings have some ISO encoding as base, you need to pass a valid ISO string to this function to get the correct result.
May return "" on low memory conditions.

168.1.32 EncodingToURLMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with URL escaped characters.
Example:

```
msgbox EncodingToURLMBS("Wie geht's?")
```

Notes:

Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.
See also:

- 168.1.33 EncodingToURLMBS(s as string, options as Integer) as string

168.1.33 EncodingToURLMBS(s as string, options as Integer) as string

MBS Util Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with URL escaped characters.
Example:

```
dim s as string = "20101210 1244 - Sky Cinema +24 - Wen die Geister lieben"

MsgBox EncodingToURLMBS(s)

// gives: 20101210% 201244% 20-% 20Sky% 20Cinema% 20+24% 20-% 20Wen% 20die% 20Geister% 20lieben

MsgBox EncodingToURLMBS(s,1)

// gives: 20101210+1244+-+Sky+Cinema+% 2B24+-+Wen+die+Geister+lieben

MsgBox EncodingToURLMBS(s,2)

// gives: 20101210% 201244% 20-% 20Sky% 20Cinema% 20% 2b24% 20-% 20Wen% 20die% 20Geister% 20lieben
```

Notes:

Encodings a string for an URL. Use with UTF8 or ISO-9660 encoded strings. This function does not work correctly with UTF16 strings.

e.g. "Wie geht's?" ->"Wie% 20geht's% 3F"

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.

Pass 1 for the options parameter to get PHP/Perl compatible output (+ instead of spaces and % 20 for spaces).
Pass 2 for the options parameter to get plus to % 2B and space to % 20. Added in plugin version 10.6.
See also:

- 168.1.32 EncodingToURLMBS(s as string) as string 22950

168.1.34 EncodingToXMLMBS(s as string, options as Integer = 0) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string with XML escaped characters.
Notes: see EncodingToHTMLMBS.

168.1.35 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Notes:

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 168.1.36 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 22952
- 168.1.37 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 22952

168.1.36 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Notes:

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 168.1.35 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string() 22952
- 168.1.37 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string() 22952

168.1.37 GetStringsFromDataMBS(data as String, MinLength as Integer = 0) as string()

MBS Util Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Looks for strings within a data block.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim b as BinaryStream = BinaryStream.Open(f)
dim s as string = b.Read(b.Length)
dim texts() as string = GetStringsFromDataMBS(s, 3)

Break
```

Notes:

Looks over the bytes in the data block to see if there are useful byte sequences which could be text.
Returns an array with all text fragments found.

This function is UTF8 aware and will work well for UTF-8 encoded text fragments.
See also:

- 168.1.35 GetStringsFromDataMBS(data as MemoryBlock, MinLength as Integer = 0) as string() 22952
- 168.1.36 GetStringsFromDataMBS(data as ptr, size as Integer, MinLength as Integer = 0) as string() 22952

168.1.38 GetUnicodeMarkersMBS(kind as Integer) as string

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the unicode marker with the given code.
Example:

```
const EncodingUnknown=0
const EncodingUTF8=1
const EncodingUTF16=2 // native
const EncodingUTF16be=3
const EncodingUTF16le=4
const EncodingUTF32=5 // native
const EncodingUTF32be=6
const EncodingUTF32le=7

msgbox EncodingToHexMBS(GetUnicodeMarkersMBS(EncodingUTF8))
```

Notes: If you concat strings, RB may convert the string to UTF8.

168.1.39 HasPostfixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text has given postfix.
Example:

```
dim t as string = "Hello World"
dim p as string = "Hello"
dim w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

Notes:

Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.

168.1.40 HasPrefixMBS(Text as String, Prefix as String) as boolean

MBS Util Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether text has given prefix.
Example:

```
dim t as string = "Hello World"
dim p as string = "Hello"
dim w as string = "World"

if HasPrefixMBS(t, p) then
// ok
else
break
MsgBox "failed?"
end if

if HasPostfixMBS(t, w) then
// ok
else
break
MsgBox "failed?"
end if

if HasPrefixMBS(t, w) then
break
MsgBox "failed?"
else
// ok
end if

if HasPostfixMBS(t, p) then
break
MsgBox "failed?"
else
// ok
end if

Break
```

Notes:

Returns true if yes, or false if not.
We may convert text to UTF-8 to compare.

168.1.41 HexstringMBS(input as string, hexlen as Integer, linelen as Integer, linestart as string, lineend as string, spacer as string,filler as string) as string

MBS Util Plugin, Plugin Version: 2.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a hexadecimal string.
Example:

```
dim s as string
s=HexstringMBS("Hello World",2,10,"<",">"+endofline,"","0")
```

Notes:

Fails if input="" or hexlen<1 or linelen<1 or on low memory conditions.
If filler is "", filler is set to "0".

Memory requirement is around 5 times the memory for input.
or exactly:
mem=20+linelen*hexlen*(1+len(filler))+2*((linelen*hexlen*len(filler)+len(lineend)+len(linestart))*(len(input)*2/hexlen))

All strings must be in the encoding you want to have.
Can raise OutOfMemoryException on low memory.

168.1.42 IsASCIIStringMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if this string is an ASCII string.
Notes:

False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
True if all bytes are in the valid ASCII range.
See also:

- 168.1.43 IsASCIIStringMBS(s as string, mode as Integer) as boolean 22956

168.1.43 IsASCIIStringMBS(s as string, mode as Integer) as boolean

MBS Util Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if this string is an ASCII string.

Notes:

Does not work for 16bit unicode strings.
But it works fine with UTF8.

Mode values:

0 False if one of the characters of the string has a numeric value of 128 or higher. (->string is not a 7 bit ASCII string)
1 False if one of the characters of the string has a numeric value >128 or <32. (->string may not be printable in ASCII, which may require some kind of Base64 encoding to transfer it.)
2 False if one of the characters of the string has a numeric value below 32. (->string may contain line breaks or other control characters)

Added Linux support in v5.1.
See also:

- 168.1.42 IsASCIIStringMBS(s as string) as boolean 22956

168.1.44 JaroWinklerDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the string distance.
Example:

```
dim s1 as string = "Hello"
dim s2 as string = "Hallo"
dim s3 as string = "Helo"
dim s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)
```

```
break // check values in debugger
```

Notes:

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

see also
http://en.wikipedia.org/wiki/Jaro–Winkler_distance

168.1.45 LevenshteinDistanceMBS(a as string, b as string) as Double

MBS Util Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates the string distance.
Example:

```
dim s1 as string = "Hello"
dim s2 as string = "Hallo"
dim s3 as string = "Helo"
dim s4 as string = "Helllo"

// 0 for equal, the more it goes to 1.0

dim d1 as Double = levenshteinDistanceMBS(s1,s1)
dim d2 as Double = levenshteinDistanceMBS(s1,s2)
dim d3 as Double = levenshteinDistanceMBS(s1,s3)
dim d4 as Double = levenshteinDistanceMBS(s1,s4)

dim d5 as Double = jaroWinklerDistanceMBS(s1,s1)
dim d6 as Double = jaroWinklerDistanceMBS(s1,s2)
dim d7 as Double = jaroWinklerDistanceMBS(s1,s3)
dim d8 as Double = jaroWinklerDistanceMBS(s1,s4)

break // check values in debugger
```

Notes:

Value is normalized, so 0.0 is equal text and 1.0 is totally unequal.

see also
http://en.wikipedia.org/wiki/Levenshtein_distance

168.1.46 NativeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a native string with the given string as content.
Notes:

If the string in the parameter s is allready native it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with native characters.
On Mac OS Classic native means MacRoman encoding, on Mac OS X it's UTF8 and on Windows the ANSI Codepage.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

168.1.47 RandomBytesStringMBS(Length as Integer, ASCII as boolean=false) as string

MBS Util Plugin, Plugin Version: 9.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a string with random content.
Example:

```
dim s as string

s = RandomBytesStringMBS(10, true)

MsgBox s

s = RandomBytesStringMBS(10, false)

MsgBox s
```

Notes:

Length is the number of bytes in the string.
If ASCII is true the string returned in an ASCII string.

168.1.48 RemoveHTMLTagsMBS(AsciiTextWithTags as string) as string

MBS Util Plugin, Plugin Version: 4.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all html tags from the string.
Example:

```
Dim s As String = "<div><P param=""value""">Hello</P></div>"
Dim t As String = RemoveHTMLTagsMBS(s)

MsgBox t // returns "Hello"
```

Notes:

Returns "" on low memory.
Written to be used with UTF8 strings.
Added Linux support in v5.1.

168.1.49 RemoveHTMLTagsWithMBS(AsciiTextWithTags as string, Replacement as string) as string

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes all html tags from the string and replaces them with the replacement string.
Example:

```
msgbox RemoveHTMLTagsWithMBS("<P>Hello</P>"," ") // returns " Hello "
```

Notes:

Returns "" on low memory.
Written to be used with UTF8 strings.

168.1.50 ReplaceLineEndingsMBS(Text as String, NewLine as String, yield as boolean = false) as String

MBS Util Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces line endings.
Example:

```
dim s as string = "Some text"
dim t as string = ReplaceLineEndingsMBS(s, endofline.Unix)
```

Notes:

Whether we got CR, LF, CRLF or even LFCR, we'll replace it with the given replacement text.
If yield is true, we yield to other Xojo threads every 16 MB of input text to keep other threads responsive.

Handles UTF16/UTF32 by converting first to UTF-8.
Other 8 bit encodings (or no encoding set) are passed through.

Returns new text. May raise OutOfMemoryException in case of no memory available.

168.1.51 ReplaceNonPrintableCharactersMBS(s as string, replacevalue as Integer=46) as string

MBS Util Plugin, Plugin Version: 8.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces bytes in the string which are not printable with the given byte value.
Example:

```
MsgBox ReplaceNonPrintableCharactersMBS("Hello World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello äöü World")
MsgBox ReplaceNonPrintableCharactersMBS("Hello äöü World",32)
```

Notes:

All bytes in range 32 to 127 are copied and all others replaces with the given byte value. Default is 46 which is a dot.
Returns always an ASCII string.
On low memory this function returns an empty string.

168.1.52 ScientificStrMBS(d as Double, digits as Integer) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the given value formatted as scientific number with the given number of digits.
Example:

```
dim d as Double = 3.1415926535897

MsgBox ScientificStrMBS(d,6)+EndOfLine+ScientificStrMBS(d,9)
```

168.1.53 SplitMBS(value as String, delimiter as String = " ") as String()

MBS DataTypes Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Splits string.
Example:

```
dim a() as string = SplitMBS("Hello World Test", " ")
dim b() as string = SplitMBS("Grüße", "")
dim c() as string = SplitMBS("Just$ test$ a$ test$ test", "$ test$ ")

break
```

Notes:

Similar to the Split() function, but without the problems we see with Split function. See feedback cases for Split.

If delimiter is "", we return an array with all characters in string.
Else we split given string with delimiter.

168.1.54 SQLReplaceBooleanMBS(SQL as string) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all false/true strings with 0/1 and handles quotes correctly.
Example:

```
MsgBox SQLReplaceBooleanMBS("INSERT INTO criteria VALUES ('1','9999','0001','000001557',false);")
```

Notes:

SQLite used in REALSQLDatabase does not like false and true literals for boolean values. You need to use 0 and 1. So this function helps you converting old queries using false/true.
false and true inside a quoted string are not changed.

168.1.55 StrCompBytesMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two strings.
Example:

```
msgbox str(StrCompBytesMBS("Hello","hello"))
```

Notes:

Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the bytes of both strings independend of the text encoding.

So if a="A" in UTF-8 and b="A" in UTF-16 they will not be equal!

168.1.56 StrCompCharactersMBS(a as string, b as string) as Integer

MBS Util Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compares two strings.
Example:

msgbox str(StrCompCharactersMBS("Hello","hello"))

Notes:

Returns zero if the two strings are identical.
Returns 1 or -1 if the strings are different.
Empty strings are equal.

Compares the characters of both strings. If the text encodings are not equal, they are both converted to UTF-8 before comparing them.

So if a="A" in UTF-8 and b="A" in UTF-16 they will be equal!

168.1.57 StringANDMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary AND on the bytes from the both strings.
Notes:

If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.

Added Linux support in v5.1.

168.1.58 StringIsHTMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a string is html safe.
Example:

```
Function html(t as string) As string
# pragma disablebackgroundtasks
# pragma disableautowaitcursor

if StringIsHTMLreadyMBS(t) then
Return t
else
t=EncodingToHTMLMBS(t)
Return ConvertEncoding(t,encodings.UTF8)
end if
End Function
```

Notes:

String which are not html safe, need to go through EncodingToHTMLMBS.
Using this function saves a lot of time!

Returns true for strings which are html safe.

168.1.59 StringIsXMLreadyMBS(s as string) as boolean

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Test whether a string is xml safe.
Notes:

String which are not html safe, need to go through EncodingToXMLMBS.
Using this function saves a lot of time!

Returns true for strings which are xml safe.

168.1.60 StringORMBS(a as string,b as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary OR on the bytes from the both strings.
Notes:

If a is "" or memory is low, the result is "".
If b is shorter as a the b string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
Added Linux support in v5.1.

168.1.61 StringXOR2MBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary XOR on the bytes from the both strings.
Example:

```
dim s as string = StringXORMBS("Hello", "World")
dim t as string = StringXOR2MBS("Hello", "World")

MsgBox EncodeHex(S)+" "+EncodeHex(t)

dim ss as string = StringXORMBS(s, "World")
dim tt as string = StringXOR2MBS(t, "World")

MsgBox ss+" "+tt
```

Notes:

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.

The difference between StringXORMBS and StringXOR2MBS is that the second version xors also with position of byte in string, so your text looks a little bit more random.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

168.1.62 StringXORMBS(data as string, XorMask as string, MaskOffset as Integer = 0) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies a binary XOR on the bytes from the both strings.
Notes:

If data is "" or memory is low, the result is "".
If XorMask is shorter as data the XorMask string is used several times.
The function is optimized for several cases, e.g. the case where b is only one, two or four bytes long.
Returns a string with binary encoding. Before using this function, make sure both strings have the same encoding.
MaskOffset specifies where in the XorMask string to start. This is useful for partial blocks.

168.1.63 StrMBS(d as Double) as string

MBS Util Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Formats numbers more human readable
Example:

```
// shows: 0.000000012339 1.234560e-8
MsgBox StrMBS(0.00000001234)+" "+str(0.00000001234)

// shows 123456789.0 1.234568e+8
MsgBox StrMBS(123456789.0)+" "+str(123456789.0)
```

Notes: The idea is to have a dynamically changing number of digits. We have no scientific notation and up to 15 digits visible (not counting zeros).

168.1.64 UnicodeStringMBS(s as string) as string

MBS Util Plugin, Plugin Version: 2.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a unicode string with the given string as content.
Notes:

If the string in the parameter s is allready unicode it is returned unchanged and without allocating additional memory. Else the string is copied into a new string with unicode (16bit) characters.
May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

The result of this function is unpredictable on bad input strings.
(e.g. no encoding, or encoding does not match the content of the string)

168.1.65 ConvertUnicodeToCharacterCompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts unicode characters to composed normalization form.
Example:

```
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS("ä")

MsgBox s1+": "+EncodeHex(s1)

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS("ä")

MsgBox s2+": "+EncodeHex(s2)
```

Notes:

This function replaces character represented by decomposed representation with the composed representation.

see also
https://en.wikipedia.org/wiki/Unicode_equivalence

168.1.66 ConvertUnicodeToCharacterDecompositionMBS(text as string) as string

MBS Util Plugin, Plugin Version: 15.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts unicode characters to decomposed normalization form.
Example:

```
dim s1 as string = ConvertUnicodeToCharacterDecompositionMBS("ä")

MsgBox s1+": "+EncodeHex(s1)

dim s2 as string = ConvertUnicodeToCharacterCompositionMBS("ä")

MsgBox s2+": "+EncodeHex(s2)
```

Notes:

This function replaces character represented by one unicode character by the decomposed variant.

see also
https://en.wikipedia.org/wiki/Unicode_equivalence

168.1.67 DecodingFromCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with ISO 8859 encoding.
Notes:

The source string must be really an CP1252 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

168.1.68 DecodingFromHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a Hex string to a binary string.
Example:

```
dim s as String

s=EncodingToHexMBS("Hallo")

MsgBox DecodingFromHexMBS(s)
```

Notes:

May return "" on low memory conditions.
Added Linux support in v5.1.
The string returned has no defined string encoding, so use DefineEncoding on the result if needed.

168.1.69 DecodingFromISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decodes a string with ISO 8859 encoding.
Example:

```
dim s as String

s=EncodingToISO8859MBS("hallo äöü")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

Notes:

The source string must be really an ISO 8859-1 string!
The string returned is Unicode and you may try NativeString to make a string you can display better.

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

168.1.70 EncodingToCP1252MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string encoded with Codepage 1252.
Notes:

The string is converted to Unicode (if it's not allready Unicode) and than encoded to a CP 1252 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

168.1.71 EncodingToHexMBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encodes a binary string to a hex string.
Example:

```
dim s1 as string = "Hello World"
dim s2 as string = EncodingToHexMBS(s1)

dim t1 as string = "Umlauts äöü"
dim t2 as string = EncodingToHexMBS(t1)

dim u as new UUIDMBS
dim u1 as string = u.ValueString
dim u2 as string = EncodingToHexMBS(u1)

break // see variables in debugger
```

Notes:

May return "" on low memory conditions.
Added Linux support in v5.1.

168.1.72 EncodingToISO8859MBS(s as string) as string

MBS Util Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string encoded with ISO 8859-1.
Example:

```
dim s as String

s=EncodingToISO8859MBS("hallo äöü")

MsgBox s

s=DecodingFromISO8859MBS(s)

MsgBox s

s=NativeStringMBS(s)

MsgBox s
```

Notes:

The string is converted to Unicode (if it's not allready Unicode) and than encoded to a ISO 8859-1 string which is returned with encoding set to binary.
(other encodings are available, but currently not in the plugin)

May return "" on low memory conditions.
Strings and encoding work only perfectly for RB 4.5 or newer.
Added Linux support in v5.1.

168.1.73 JoinDataMBS(blocks() as memoryblock) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of memoryblocks in new string.
Example:

```
dim s() as MemoryBlock

// make memoryblock with a space character
dim m as MemoryBlock = "Hello"

s.Append m
s.Append m
s.Append m

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:

Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 168.1.74 JoinDataMBS(strings() as string) as string 22972
- 168.1.75 JoinDataMBS(values() as Variant) as string 22972

168.1.74 JoinDataMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
dim s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:

Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 168.1.73 JoinDataMBS(blocks() as memoryblock) as string 22971
- 168.1.75 JoinDataMBS(values() as Variant) as string 22972

168.1.75 JoinDataMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of variants in new string.
Example:

```
dim s() as Variant

// make memoryblock with a space character
dim m as new MemoryBlock(1)
m.Int8Value(0) = 32

s.Append "Hello"
s.Append m
```

```
s.Append "World"

// now join
dim r as string = JoinDataMBS(s)

// define to be ASCII:
r = DefineEncoding(r, encodings.ASCII)

// and show
MsgBox r
```

Notes:

Variants can be memoryblocks or strings or normal objects which can give stringValue.
Returned string has no encoding defined.
Raises OutOfMemoryException in case of low memory.
See also:

- 168.1.73 JoinDataMBS(blocks() as memoryblock) as string 22971
- 168.1.74 JoinDataMBS(strings() as string) as string 22972

168.1.76 JoinStringMBS(strings() as string) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
dim s() as string

s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r
```

Notes:

Converts all strings if necessary into UTF-8. If you want to join them as they are, please use JoinDataMBS.
Raises OutOfMemoryException in case of low memory.
See also:

- 168.1.77 JoinStringMBS(values() as Variant) as string 22974

168.1.77 JoinStringMBS(values() as Variant) as string

MBS DataTypes Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Joins an array of strings in new string.
Example:

```
dim s() as Variant

s.Append "Hello"
s.Append " "
s.Append "World"

dim r as string = JoinStringMBS(s)

MsgBox r
```

Notes:

Converts all strings if necessary into UTF-8.
Raises OutOfMemoryException in case of low memory.
See also:

- 168.1.76 JoinStringMBS(strings() as string) as string 22973

168.2 class StringHandleMBS

168.2.1 class StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for attaching strings together very fast.
Example:

```
dim s as StringHandleMBS

s=new StringHandleMBS

// Add some text
s.Add "Hello"
s.Add " "
s.Add "World"

// Insert a string
s.Insert " great",6
```

```
// check it
MsgBox s.Copy

// Delete the great from above
s.Delete 6,7

// check
MsgBox s.Copy

// Insert again
s.Insert " great ",6

// check
MsgBox s.Copy

// Now we extract the middle, so it's deleted
MsgBox s.Extract(6,7)

// check again
MsgBox s.copy
```

Notes: The class initalized itself on the first use.

168.2.4 Methods

168.2.5 Add(data as MemoryBlock)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data from memoryblock to the string handle.
See also:

- 168.2.6 Add(data as Ptr, size as Integer) 22976
- 168.2.7 Add(data as string) 22976

168.2.6 Add(data as Ptr, size as Integer)

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds data from ptr to the string handle with given size.
Notes: Using invalid Ptr or size combination can cause a crash.
See also:

- 168.2.5 Add(data as MemoryBlock) 22976
- 168.2.7 Add(data as string) 22976

168.2.7 Add(data as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds the string at the end of the current data.
Notes: Note that all strings added must have the same encoding.
See also:

- 168.2.5 Add(data as MemoryBlock) 22976
- 168.2.6 Add(data as Ptr, size as Integer) 22976

168.2.8 AddByte(value as UInt8)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a byte to the string handle.

168.2.9 AddInteger(value as Int64)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a integer value to the string handle.
Notes: This is like AddString(str(value)).

168.2.10 clone as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new StringHandleMBS object with the same content.

168.2.11 Constructor

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor of this class.
See also:

- 168.2.12 Constructor(initvalue as string) 22977

168.2.12 Constructor(initvalue as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The second constructor of this class which sets the value directly to the given Xojo string.
Example:

```
// An utility function you can define in a module:

Function BinaryReplaceAll(s as string, a as string,b as string) As string
dim h as StringHandleMBS

h=new StringHandleMBS(s)
h.ReplaceAll(a,b)

Return h.Copy
End Function
```

See also:

- 168.2.11 Constructor 22977

168.2.13 Copy as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the content as a Xojo string.
Notes: This string will have the encoding set in the encoding property.

168.2.14 CopyMemory as MemoryBlock

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies content of handle in new memoryblock.

168.2.15 Delete(start as Integer, lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Deletes the bytes within the range.
Notes:

One based like RB's string functions.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.16 Extract(start as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a part of the string.
Notes:

One based and the returned part is removed form the string data.
The start and length parameters use bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.17 FindByte(value as UInt8) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds position of a given value.
Example:

```
Dim s As New StringHandleMBS("Hello")

// 64 = big letters
// +32 = small letters
// + 5 = for 5th letter in alphabet

Dim c As Integer = 64+32+5
Dim p As Integer = s.FindByte(c)

MsgBox "position "+Str(p)+" for letter e"
```

Notes:

Returns one based byte offset.
Result is 0 if not found.

168.2.18 FirstNonWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds first non-whitespace byte in the data starting at given offset.
Example:

```
Dim s As New StringHandleMBS("Hello World")
Dim p As Integer = s.FirstWhiteSpace(1)
Dim x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

Notes:

StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

168.2.19 FirstWhiteSpace(StartByteOffset as Integer = 1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds first whitespace byte in the data starting at given offset.
Example:

```
Dim s As New StringHandleMBS("Hello World")
```

```
Dim p As Integer = s.FirstWhiteSpace(1)
Dim x As Integer = s.FirstNonWhiteSpace(p+1)

MsgBox "position "+Str(p)+" for white space and "+Str(x)+" for following text"
```

Notes:

StartByteOffset is one based.
White space are space, tab and new line characters.
Returns 0 if not found.

168.2.20 Insert(data as string, position as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Inserts the string data at the given byte position.
Notes:

One based.
Note that on Unicode the character position and the byte position are not equal!
(On 16bit Unicode charpos=2*bytepos and on US ASCII charpos=bytepos)

The position parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.21 InStr(OffsetBytes as Integer = 1, target as String, EndOffsetBytes as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for a binary string inside the StringHandle.
Example:

```
// We test if RB returns the same values as the plugin

dim s as String
dim h as StringHandleMBS

s="Christian"
h=new StringHandleMBS

h.Add s
```

```
MsgBox "MBS: "+str(h.InStr("is"))+", RB: "+str(InStr(s,"is"))
MsgBox "MBS: "+str(h.InStr(5,"ia"))+", RB: "+str(InStr(5,s,"ia"))
MsgBox "MBS: "+str(h.InStr("xy"))+", RB: "+str(InStr(s,"xy"))
```

Notes:

The same as InStr but with a second parameter to specify the start of the search inside the string handled.

The srcOfs parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
Casesensitive search!

168.2.22 InStrUTF8(OffsetCharacters as Integer = 1, target as String, EndOffsetCharacters as Integer = -1) as Integer

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Searches for a binary string inside the StringHandle.
Example:

```
Dim sh As New StringHandleMBS
sh.Encoding = sh.encodingUTF8 // so copy gives right encoding

sh.Add "Ä test Hello Word äöü test string."

Dim s As String = sh.Copy

MsgBox "position of text: "+Str(sh.InStr(5,"test"))+"/"+Str(s.InStrB(5,"test"))+"th byte "+_
"or "+Str(sh.InStrUTF8(5,"test"))+"/"+Str(s.InStr(5,"test"))+"th character"
```

Notes:

This function uses UTF8 characters instead of bytes as unit.
Returns positive value if something is found and zero in case nothing is found.
Returns negative value in case of error.
The same as InStrUTF8 but with a second parameter to specify the start of the search inside the string handle.
Casesensitive search!

168.2.23 IsValidASCII(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether given data is valid ASCII text.

168.2.24 IsValidUTF8(data as ptr, TotalByteLength as integer) as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether given data is valid UTF-8 text.

168.2.25 Left(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the first left bytes of the string.
Notes:

May return less strings if the stored string is not long enough.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.26 LeftUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries given number of characters from string from the left side.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// ö is two bytes
MsgBox d.LeftUTF8(8)+" in UTF8 and "+d.Left(8)+" in bytes"
```

168.2.27 Mid(startByte as Integer, lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a part of the string.
Notes:

One based.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.28 MidInteger(startByte As Integer, lengthBytes As Integer = -1) as Int64

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts some bytes read as ASCII text to number.
Example:

```
Dim s As New StringHandleMBS("123456789")

Dim v As Integer = s.MidInteger(3,3)
MsgBox str(v)
```

Notes: startByte is one based.

168.2.29 MidUTF8(startCharacter as integer, lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries characters from UTF-8 string with given characters.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// ö is two bytes
MsgBox d.MidUTF8(7,4)+" in UTF8 and "+d.Mid(7,4)+" in bytes"
```

Notes: startCharacter starts with 1 as in Xojo's mid function.

168.2.30 Replace(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the first string found with content of a with the content of b.
Example:

```
dim s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replace("H","h")
s.Replace("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

Notes:

Note that all strings are compared binary and must have the same encoding.
Basicly this is just a call to instr, one to delete and one to insert.
See also:

- 168.2.31 Replace(startpos as Integer, a as String, b as string) 22984

168.2.31 Replace(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces the first string found with content of a with the content of b.
Notes:

If you don't give a startpos parameter the call uses one and is equal to Replace(a,b).
Startpos is one based like all indexes in this class.
The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 168.2.30 Replace(a as String, b as string) 22984

168.2.32 ReplaceAll(a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all strings with content of a with the content of b.
Example:

```
dim s as StringHandleMBS

s=new StringHandleMBS

s.Add "Hallo Leutle, Hellau"

s.Replaceall("H","h")
s.Replaceall("l","i")

MsgBox s.Copy+" "+str(s.Len)
```

Notes:

Note that all strings are compared binary and must have the same encoding.
Basicly this is just a loop with calls to instr, to delete and to insert.
See also:

- 168.2.33 ReplaceAll(startpos as Integer, a as String, b as string) 22985

168.2.33 ReplaceAll(startpos as Integer, a as String, b as string)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Replaces all strings with content of a with the content of b.
Notes:

If you don't give a startpos parameter the call uses one and is equal to ReplaceAll(a,b).
Startpos is one based like all indexes in this class.

The startpos parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.
See also:

- 168.2.32 ReplaceAll(a as String, b as string) 22985

168.2.34 Reverse as StringHandleMBS

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reverses bytes in string.
Example:

```
Dim s As New StringHandleMBS("Hello")
Dim r As StringHandleMBS = s.Reverse

MsgBox r.Copy
```

Notes: Returns copy of the string with reversed order.

168.2.35 Right(lengthBytes as Integer) as string

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a copy of the first right bytes of the string.
Example:

```
// There was a small bug in the Right and the Mid function for the version 3.1 of this plugin.
// This test failed in 3.1, but works in 3.2:

dim Text as StringhandleMBS
dim Part as String

Text = New StringHandleMBS
Text.Add "." + chr(13) + chr(10)

Part = Text.Copy
' Now Part is ".<CR><LF" which is correct

if lenb(Part)<>3 then
MsgBox "Failed on Copy "+str(lenb(Part))
end if

Part = Text.Right(1)
' Now Part is "<LF>" which is correct

if lenb(Part)<>1 then
MsgBox "Failed on Right(1) "+str(lenb(Part))
end if

Part = Text.Right(2)
' Now Part is "<CR><LF>" which is correct

if lenb(Part)<>2 then
MsgBox "Failed on Right(2) "+str(lenb(Part))
```

```
end if

Part = Text.Right(3)
' Now Part is "" which is wrong!

if lenb(Part)<>3 then
MsgBox "Failed on Right(3) "+str(lenb(Part))
end if
```

Notes:

May return less strings if the stored string is not long enough.
The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.36 RightUTF8(lengthCharacter as integer) as string

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries given number of characters from string from the right side.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

d.Encoding = d.encodingUTF8

// ö is two bytes
MsgBox d.RightUTF8(8)+" in UTF8 and "+d.Right(8)+" in bytes"
```

168.2.37 Truncate(lengthBytes as Integer)

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Truncates the string handle content.
Notes:

Sets the length of the string back to the given value if it's greater.

The length parameter uses bytes not charcters as unit. You can use the Copy method to get a RB string for characterwise editing.

168.2.38 TruncateUTF8(lengthCharacters as integer)

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Truncates data to given number of UTF-8 characters.
Example:

```
Dim s As New StringHandleMBS("äöü")

// limit to 2 characters, here 4 bytes
s.TruncateUTF8 2

MsgBox s.Copy
```

168.2.39 UTF8Length(data as ptr, TotalByteLength as integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries how many UTF-8 characters are in one memory area.
Example:

```
Dim s As String = "Hello äöü"
Dim m As MemoryBlock = s

Dim c As Integer = StringHandleMBS.UTF8Length(m, m.size)

MsgBox str(c)+" characters, "+str(m.size)+" bytes"
```

Notes:

Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

168.2.40 UTF8LengthToBytes(data as ptr, TotalByteLength as integer, Characters as Integer) as Integer

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries how many bytes are needed for UTF-8 characters.
Example:

```
Dim s As String = "Hello äöü"
Dim m As MemoryBlock = s
```

```
Dim c As Integer = StringHandleMBS.UTF8Length(m, m.size)
Dim b As Integer = StringHandleMBS.UTF8LengthToBytes(m, m.size, c)

MsgBox Str(c)+" characters, "+Str(b)+" bytes"
```

Notes:

Please make sure ptr is a valid ptr.
This is the internal function we use ourselves for the UTF-8 related functions.

168.2.41 Properties

168.2.42 BlockLen as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the memory currently used for this class.
Notes:

This value increases by BlockSize if more memory is needed.
(Read only property)

168.2.43 BlockSize as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The size of the blocks to allocate for storing the data.
Notes: (Read and Write property)

168.2.44 Encoding as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The encoding to use for returned strings.
Notes:

Only useful on Xojo 4.5 and newer.

Some example values for encoding:

(Read and Write property)

MacRoman	0	Also for ASCII or binary data used.
WindowsLatin1	& h0500	ANSI codepage 1252
ISOLatin1	& h0201	ISO 8859-1
NextStepLatin	& h0B01	NextStep encoding
Unicode	& h0100	16 bit Unicode
UTF8	& h08000100	8 bit Unicode
Invalid	& hFFFFFFFF	(Binary)
Invalid	& hFFFF	(Binary)

168.2.45 Len as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the len in bytes of the stored string.
Notes: (Read only property)

168.2.46 LenUTF8 as Int64

MBS DataTypes Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries length of text in UTF-8 encoded characters.
Example:

```
Dim s As String = "Hello öäü!"
Dim d As New StringHandleMBS(s)

MsgBox Str(d.Len)+" bytes, "+Str(d.LenUTF8)+" characters"
```

Notes:

Returns incorrect values if string is not UTF-8!
(Read only property)

168.2.47 ReplaceCount as Int64

MBS DataTypes Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: After a call to one of the Replace functions the number of items replaced.
Notes: (Read and Write property)

168.2.48 ValidASCII as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this string handle contains valid ASCII text.
Notes: (Read only property)

168.2.49 ValidUTF8 as Boolean

MBS DataTypes Plugin, Plugin Version: 19.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this string handle contains valid UTF-8 text.
Example:

```
Dim s As New StringHandleMBS

s.Add "Hello World"

Dim validUTF8a As Boolean = s.ValidUTF8

// now make invalid
s.AddByte 222

Dim validUTF8b As Boolean = s.ValidUTF8

Break
```

Notes: (Read only property)

168.2.50 Constants

168.2.51 encodingASCII = & h0600

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: ASCII encoding.

168.2.52 encodingBinary = & hFFFF

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: No encoding.

168.2.53 encodingLatin1 = & h0201

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: ISO Latin 1 encoding.

168.2.54 encodingMacRoman = 0

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: Mac Roman encoding.

168.2.55 encodingUnicode = & h0100

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: Unicode UTF16 encoding.

168.2.56 encodingUTF8 = & h08000100

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: UTF-8 encoding.

168.2.57 encodingWindows = & h0500

MBS DataTypes Plugin, Plugin Version: 19.1.

Function: One of the encoding constants.
Notes: Windows encoding.

168.3 class StyledText

168.3.1 class StyledText

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The built-in class for styled text.

168.3.2 Properties

168.3.3 RTFDataMBS as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set RTF data for this StyledText.
Example:

```
Dim s As New StyledText

s.Text = "Hello World"

s.Bold(0,5) = True
s.size(0,6) = 12
s.size(6,5) = 14

# if TargetDesktop
Dim m As String = s.RTFData
# EndIf

Dim r As String = s.RTFDataMBS

Break
```

Notes:

This is a replacement for the built-in RTFData property.
We tried to make the results exactly like the original.
Speed should be a little bit faster than the official method.
(Read and Write computed property)

168.4 class TextConverterMBS

168.4.1 class TextConverterMBS

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for converting text from one text encoding to other one.
Example:

```
dim s as string = "Hello äöü"
dim c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

dim output as string = c.Output

Break // see in debugger
```

Notes:

Wraps iconv library.

168.4.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.4
- MBS Xojo Plugins, version 20.4pr9
- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.4
- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr3

168.4.3 Xojo Developer Magazine

- 17.5, page 11: News
- 17.3, page 37: Coding in Paradise, Co-Working for Programmers by Glen Newbury

168.4.4 Methods

168.4.5 Canonicalize(name as String) as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Canonicalize an encoding name.
Example:

```
MsgBox TextConverterMBS.Canonicalize("utf-8")
MsgBox TextConverterMBS.Canonicalize("Latin1")
```

Notes: The result is either a canonical encoding name, or name itself.

168.4.6 Constructor

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Currently enables translit and ignore by default.

168.4.7 Convert

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts text.
Example:

```
dim s as string = "Hello äöü"
dim c as new TextConverterMBS

c.Input = s
c.InputEncoding = "UTF-8"
c.OutputEncoding = "WINDOWS-1252"

c.Convert

dim output as string = c.Output

Break // see in debugger
```

Notes:

Input is read from either Input or InputData properties.
ErrorCode and ErrorMessage are set.
Output is set with output data.

168.4.8 EncodingNames(Mode as Integer = 0) as String()

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries names of text encodings.
Example:

MsgBox Join(TextConverterMBS.EncodingNames(1),EndOfLine)

Notes:

Mode 0 returns list of text encoding names.
Mode 1 returns list of text encoding names and alternative names separated by comma.
Mode 2 returns list of text encoding names and alternative names.

e.g. "CP1252,MS-ANSI,WINDOWS-1252" in the list for mode 1.

168.4.9 LoadIconvLibrary(path as String, byref Error as String) as boolean

MBS Tools Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the iconv library.
Notes:

The TextConverterMBS class uses libiconv for text encoding conversion.
If you explicitly need, you can load the library on start of solution.

MBS Plugin may try to load iconv.dll/dylib/so automatically when first iconv function is called.

168.4.10 Properties

168.4.11 ErrorCode as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Last error code from Convert method.
Notes: (Read and Write property)

168.4.12 ErrorMessage as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Text message for error.
Notes: (Read and Write property)

168.4.13 Ignore as Boolean

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to ignore errors.
Notes:

Characters that cannot be represented in the target character set will be silently discarded.
(Read and Write property)

168.4.14 Input as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input text string.
Notes: (Read and Write property)

168.4.15 InputData as MemoryBlock

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input as memoryblock.
Notes: (Read and Write property)

168.4.16 InputEncoding as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of input encoding.
Notes:

e.g. "UTF-8"
(Read and Write property)

168.4.17 InputPosition as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The input position on the end of convert.
Notes:

If errors are not ignored, this shows error position.
(Read and Write property)

168.4.18 LibVersion as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The library version for iconv.
Notes:

Returns major * 256 + minor, e.g. & h10B for 1.11.
(Read only property)

168.4.19 Output as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output text.
Notes:

String may not have an encoding set, if the plugin does not recognize the encoding.
But for e.g. UTF-8, we set the text encoding.
(Read and Write property)

168.4.20 OutputEncoding as String

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of output encoding.
Notes:

e.g. "UTF-8"
(Read and Write property)

168.4.21 OutputLength as Integer

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the output in bytes.
Notes: (Read and Write property)

168.4.22 Translit as Boolean

MBS Tools Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to activate transliteration.
Notes:

This means that when a character cannot be represented in the target character set, it can be approximated through one or several characters that look similar to the original character.
(Read and Write property)

168.5 class TextEncoding

168.5.1 class TextEncoding

Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Built in class from Xojo for text encodings.

168.5.2 Methods

168.5.3 InternetNameMBS as string

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the name of this text encoding.
Notes:

We have this method in MBS Plugin as InternetName function does not work on Linux/Windows.
(See feedback case 30712)

Chapter 169

Sudden Motion Sensor

169.1 module UniMotionMBS

169.1.1 module UniMotionMBS

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: This module handles communication with the UniMotion library.
Notes:

UniMotion - Unified Motion detection for Apple portables.

169.1.2 Blog Entries

- MBS REALbasic plug-ins with 30,000 functions

169.1.3 Methods

169.1.4 DetectSMS as Integer

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the value of SMS hardware present or unknown if no hardware is detected.
Example:

```
dim type as Integer = UniMotionMBS.DetectSMS

if type=0 then
MsgBox "Unknown motion hardware or none found."
quit
end if
```

Notes:

Use the constants powerbook, ibook, highrespb and macbookpro.

Use the value returned from DetectSMS as the type for the other functions.
Don't call readsms(detectsms...) as this will do extra work.
If you can't save the type between calls pass 0 as type to avoid extra work.

169.1.5 LoadLibrary(file as folderitem) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Loads the library from the folderitem.
Example:

```
dim f as FolderItem

f=GetFolderItem("libUniMotion.dylib")
if UniMotionMBS.LoadLibrary(f) then
'ok
MainWindow.Show
else
MsgBox "Failed to load the UniMotion library."
quit
end if
```

Notes: Returns true on success and false on failure.

169.1.6 ReadSMS(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the "calibrated" values (same as raw if no calibration data exists)
Notes: Returns true on success and false on failure.

169.1.7 ReadSMSraw(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the raw, unmodified values.
Notes: Returns true on success and false on failure.

169.1.8 ReadSMSrawBytes(type as Integer) as memoryblock

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the raw data bytes.
Notes:

The raw SMS data (useful for debugging)
Note that endian issues make reading the raw bytes non-trivial.
Returns nil or a memoryblock with the data.

169.1.9 ReadSMSreal(type as Integer, byref x as Double, byref y as Double, byref z as Double) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Reads the real (1.0 = 1G) values (requires calibration data).
Notes:

Note that this is the preferred API as it need not change with new machines.
If no "scale" calibration data exists defaults will be used based on the machine type.

Returns true on success and false on failure.

169.1.10 ReadSMSscaled(type as Integer, byref x as Integer, byref y as Integer, byref z as Integer) as boolean

MBS MacOSX Plugin, Plugin Version: 9.1, Platform: macOS, Targets: All.

Function: Returns the scaled values, like real but easier to handle.
Notes:

This reverses the backwards polarity of x and increases the range of the older machines to match the MacBook [Pro] sensor.

Returns true on success and false on failure.

169.1.11 Constants

169.1.12 highrespb=3

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

169.1.13 ibook=2

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

169.1.14 macbookpro=4

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

169.1.15 powerbook=1

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

169.1.16 unknown=0

MBS MacOSX Plugin, Plugin Version: 9.1.

Function: One of the constants used by DetectSMS.

Chapter 170

System

170.1 Globals

170.1.1 GetHelpTagDelayMBS as Integer

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the delay time for the help tags.
Example:

msgbox str(GetHelpTagDelayMBS)

Deprecated: This item is deprecated and should no longer be used. **Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

170.1.2 GetHelpTagDisplayedMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: whether the help tags are displayed.
Deprecated: This item is deprecated and should no longer be used. **Notes:** This setting is per application and not saved between sessions.

170.1.3 SetHelpTagDelayMBS(value as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Sets the delay time for the help tags.
Example:

```
if GetHelpTagDelayMBS<>5000 then // change to 5 seconds
SetHelpTagDelayMBS 5000
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

A positive value is for milliseconds and a negative value for microseconds.
It looks like the setting of this property is not recognized always.
This setting is also per application and not saved between sessions.

Xojo 2006r3 does set this value whenever a window comes to front, so if you want to set it really, use some code like in the example above in a timer to change it to your need.

170.1.4 SetHelpTagDisplayedMBS(value as boolean)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Sets whether the help tags are displayed.
Deprecated: This item is deprecated and should no longer be used. **Notes:** This setting is per application and not saved between sessions.

170.1.5 GetWindowsColorProfileMBS as folderitem

MBS Win Plugin, Plugin Version: 8.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the main screen on Windows.
Example:

```
dim f as folderitem

f=getwindowsColorProfileMBS

msgBox f.NativePath
```

Notes: Returns nil on any error.

170.1.6 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem

MBS Win Plugin, Plugin Version: 8.6, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the given screen on Windows.
Example:

```
dim f as folderitem

f=GetWindowsDisplayColorProfileMBS(1)

msgBox f.NativePath
```

Notes:

Index is zero based.
Returns nil on any error.
See also:

- 170.1.7 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem 23015

170.1.7 GetWindowsDisplayColorProfileMBS(DisplayName as String) as folderitem

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the color profile for the given screen on Windows.
Notes: Same as GetWindowsDisplayColorProfileMBS, but without index and taking a name.
See also:

- 170.1.6 GetWindowsDisplayColorProfileMBS(DisplayIndex as Integer) as folderitem 23015

170.1.8 CrashNiceMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crashes the application.
Notes: Does a nil object dereference which leads to a crash.

170.1.9 CrashUglyMBS

MBS Util Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Crashes the application.
Notes:

This function should hide the stack list so it should be impossible to know what function crashed.

It may take a second to finish it, but CrashReporter (on Mac OS X) and other tools will not be able to show you which function crashed.

170.1.10 DelayMBS(time as Double)

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stopps the application for the given time.
Example:

```
DelayMBS 1.5 // wait one and a half seconds
```

Notes:

The application should take nearly 0% CPU Power till time has gone.
If you need more options like blocking other RB threads, check the DelayMBS method with mode parameter.

Another example from Kirk Clendinning:

```
Property: lastupdate as Integer

Sub YieldProcessorTime(periodticks as Integer, widthmilliseconds as Integer)
// use the Monkeybread Software delay to yeild time for a screen update
// every period*ticks for a pulse width of width milliseconds

if ticks>lastupdate+periodTicks then
delayMBS widthmilliseconds/1000
lastupdate=ticks
end if

exception err
ExceptionReport(err, "Utils:Methods:YieldProcessorTime")
end sub
```

YieldProcessorTime(15, 20) gives me a delay of 20ms every 250ms. But,
since the delayMBS yields time more efficiently than using a RB thread, this turns out to be a much more effective way to update progress bars etc.

I don't need the delay per se, but since RB still hasn't written a good yield function (that I know of) your delayMSB works instead.

Please use optional mode flags with DelayDontWaitNextEvent when using on thread.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.
See also:

- 170.1.11 DelayMBS(time as Double, mode as Integer) 23017

170.1.11 DelayMBS(time as Double, mode as Integer)

MBS Util Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Stopps the application for the given time.
Example:

```
DelayMBS 1.5, 0 // wait one and a half seconds
```

Notes:

Like DelayMBS with one parameter but additional mode parameter:

combine the following constants:

```
const DelayDontMPYield = 1              // Don't give additional time for other OS threads
const DelayDontRBYield = 2              // Don't give Xojo time for other Xojo threads
const DelayDontThreadYield = 4          // Don't give addition time for other OS threads
const DelayDontQuickTimeYield = 8       // Don't give time for QuickTime Movieplayer
const DelayDontWait = 16                // Don't give CPU time for other OS threads
const DelayDontWaitNextEvent = 32       // Don't give CPU time to handle events on Mac OS X to avoid beachball
                                        cursor
const DelayDontSleep = 64               // Don't give CPU time for other OS threads (Windows)
```

Using DelayDontWaitNextEvent may show the beach ball cursor, but will have the OpenDocument event working as other AppleEvents. Please use DelayDontWaitNextEvent option for running on threads.

Using DelayMBS on Web Applications can cause problems as the server is paused than for all clients, a really bad thing.
See also:

- 170.1.10 DelayMBS(time as Double) 23016

170.1.12 SleepMBS(time as Double)

MBS Util Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sleeps the current thread for the given time in seconds.
Example:

```
dim sock as TCPSocket // some socket
dim done as Boolean // some global property

do

SleepMBS(0.1) // 100 ms
sock.poll

loop until done
```

Notes:

Sleep does not yield CPU time to other functions, so you really sleep the whole process.
Useful for console projects which sleep for a few milliseconds in a loop polling a socket.

If you need to give CPU time to socket, other threads or for quicktime movie playback, please use DelayMBS.

170.1.13 InstallSystemExceptionHandlerMBS(Message as string = "")

MBS Main Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Targets: All.

Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Example:

```
InstallSystemExceptionHandlerMBS "My message"
```

Notes:

If message is empty, the default message is "An unhandled C++ exception occurred. The application will now quit. A common reason for this is simply running out of memory.".

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not

allow the plugin to access the runtime inside the RB framework.

170.1.14 AbortMBS

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The abort function causes abnormal program termination to occur.
Notes:

Any open streams are flushed and closed.
The abort function never returns.

170.1.15 ExitMBS(code as Integer)

MBS Util Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform normal program termination.
Notes:

See "man 3 exit" on the terminal on Mac OS X or Linux for details.
You define your own error codes. Zero is no error by convention.

170.1.16 GlobalIdleTimeMBS as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Queries the current global idle time on a Mac.
Example:

MsgBox Format(GlobalIdleTimeMBS,"0.0")+" seconds idle"

Notes:

The return value is the number of seconds the user did not use mouse or keyboard.
Returns 0 on any error.

170.1.17 MacGlobalIdleTimeMBS as UInt64

MBS MacOSX Plugin, Plugin Version: 10.0, Platform: macOS, Targets: Desktop only.

Function: Queries the current global idle time on a Mac.
Example:

```
MsgBox Format(MacGlobalIdleTimeMBS/1000000000.0,"0.0")+" seconds idle"
```

Notes:

The return value is the number of nanoseconds the user did not use mouse or keyboard.
Returns 0 on any error.

Deprecated in 13.2 plugins in favor of GlobalIdleTimeMBS.

170.1.18 MacMountServerVolumeMBS(URL as string, MountDir as String, User as String, Password as String, byref Disk as FolderItem, flags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: This routine will mount the server specified by url at mountDir (or the default location if mountDir is empty).
Example:

```
dim flags as Integer = 0
dim disk as FolderItem
dim URL as string = "smb://Test.local"
dim user as string = "root"
dim pass as string = "xxx"

dim e as Integer = MacMountServerVolumeMBS(URL, "", user, pass, disk, flags)

if e = 0 then
MsgBox "OK"
else
MsgBox disk.NativePath
end if
```

Notes:

An optional user and password can be passed in for authentication. If no user or password is provided then the underlying file system will handle authentication if required. This routine returns after the mount is complete.

url: The server to mount.

mountDir: The directory to mount the server to (default if empty).
user: String to pass as user for authentication.
password: String to pass as password for authenticated log in.
Disk: The folderItem of the newly mounted volume.
Flags: Options (such as kFSMountServerMarkDoNotDisplay and kFSMountServerMountOnMountDir).

Constant	Value	Description
kFSMountServerMarkDoNotDisplay	1	Specify this option if you do want the volume displayed as a stand

along volume in the UI.

kFSMountServerMountOnMountDir	4	Specify this option if you want the volume mounted on the mountdir passed in instead of in it.
kFSMountServerSuppressConnectionUI	& h40	Specify this option if you want to suppress connection-time UI when mounting the server volume.

Returns Mac OS X error code. Zero for success.

170.1.19 MacUnmountVolumeMBS(volume as folderItem, Force as Boolean, byref dissenter as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 16.1, Platform: macOS, Targets: All.

Function: This routine unmounts the volume specified by FolderItem.
Example:

```
dim u as Integer = VolumeCount-1
for i as Integer = 0 to u
dim v as FolderItem = volume(i)

if v.Name = "TestServer" then
dim dissenter as Integer = 0
dim e as Integer = MacUnmountVolumeMBS(v, false, dissenter)

if e = 0 then
MsgBox "Unmounted"
else
MsgBox "Failed to unmount with error "+str(e)+". The app with PID "+str(dissenter)+" blocks it."
end if
end if
next
```

Notes:

If the volume cannot be unmounted the pid of the process which denied the unmount will be returned in the dissenter parameter. This routine returns after the unmount is complete.

Force: Specify true if you want the volume forcibly unmounted. Force unmounting a volume will very likely result in data loss since the volume will be ejected even if there are open files on it. This option should be reserved for situations such as the backing store for a volume is gone (so the data is lost regardless).

dissenter: pid of the process which denied the unmount if the unmount is denied.

Returns Mac OS X error code. Zero for success.

170.1.20 StartDictationMBS

MBS MacOSX Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: Starts dictation.
Notes: This is for Carbon application. For Cocoa use methods on NSApplicationMBS.

170.1.21 ArrayDoubleMBS(paramArray values as Double) as Double()

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an array with given values.
Example:

```
// works
Dim a() As Double = ArrayDoubleMBS(1, 2, 3)

// failes
Dim b() As Double = Array(1,2,3)
```

Notes:

With picking the right array function (ArrayDoubleMBS, ArrayStringMBS, ArrayInt64MBS, ArrayVariantMBS or ArrayIntegerMBS), you define what type of array you like. The Array function determinates the type based on value types, so it often isn't what we want.

Pass as many parameters as needed, just like Array() function.

170.1.22 ArrayInt64MBS(paramArray values as Int64) as Int64()

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an array with given values.
Example:

```
// works
Dim a() As Int64 = ArrayInt64MBS(1, 2, 3.0)

// failes
Dim b() As Int64 = Array(1,2,3.0)
```

Notes:

With picking the right array function (ArrayDoubleMBS, ArrayStringMBS, ArrayInt64MBS, ArrayVariantMBS or ArrayIntegerMBS), you define what type of array you like. The Array function determinates the type based on value types, so it often isn't what we want.

Pass as many parameters as needed, just like Array() function.

170.1.23 ArrayIntegerMBS(paramArray values as Integer) as Integer()

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an array with given values.
Example:

```
// works
Dim a() As Integer = ArrayIntegerMBS(1, 2, 3.0)

// failes
Dim b() As Integer = Array(1,2,3.0)
```

Notes:

With picking the right array function (ArrayDoubleMBS, ArrayStringMBS, ArrayInt64MBS, ArrayVariantMBS or ArrayIntegerMBS), you define what type of array you like. The Array function determinates the type based on value types, so it often isn't what we want.

Pass as many parameters as needed, just like Array() function.

170.1.24 ArrayIsAMBS(v as Variant, ClassName as string) as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if variant contains an array of the given class type.
Example:

```
dim w() as MouseCursor
w.Append System.Cursors.ArrowEastWest
w.Append System.Cursors.ArrowNorthSouth

dim v as Variant = w

if ArrayIsAMBS(w, "MouseCursor") then
MsgBox "OK"
end if
```

Notes:

If the variant contains an array of some class, variant or object and has at least one value, the plugin checks this first value for being of type of the same class. Like an ISA check.
This helps to solve feedback case 12213.
Returns false if variant has no array, if variant is nil, if array is not an array of objects or if first object is nil.

170.1.25 ArrayStringMBS(paramArray values as String) as String()

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an array with given values.
Example:

```
Dim a() As String = ArrayStringMBS("Hello", "World")
```

Notes:

With picking the right array function (ArrayDoubleMBS, ArrayStringMBS, ArrayInt64MBS, ArrayVariantMBS or ArrayIntegerMBS), you define what type of array you like. The Array function determinates the type based on value types, so it often isn't what we want.

Pass as many parameters as needed, just like Array() function.

170.1.26 ArrayVariantMBS(paramArray values as Variant) as Variant()

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates an array with given values.
Example:

```
Dim a() As Variant = ArrayVariantMBS(1, 2, 3.0, True, False)
```

Notes:

With picking the right array function (ArrayDoubleMBS, ArrayStringMBS, ArrayInt64MBS, ArrayVariantMBS or ArrayIntegerMBS), you define what type of array you like. The Array function determinates the type based on value types, so it often isn't what we want.

Pass as many parameters as needed, just like Array() function.

170.1.27 BacktraceMBS(MaxFrames as Integer = 0, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Queries the stack trace of the current function.
Example:

```
MsgBox Join(BacktraceMBS, EndOfLine)
```

Notes:

MaxFrames: How many steps to show at maximum. Default is 128 currently.
skip: How many entries to skip. Default is 2 to not show this function.
Requires Mac OS X 10.5 or Linux.
Skip is 2 to hide this plugin function in the list.

170.1.28 GetArrayAllocatedSizeMBS(v as variant) as integer

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries allocated array size in bytes.
Example:

```
Dim a() As Integer // 8 byte per integer in 64-bit
```

```
System.DebugLog "allocated: "+Str(GetArrayAllocatedSizeMBS(a))

Redim a(9) // changes to 80 bytes

System.DebugLog "allocated: "+Str(GetArrayAllocatedSizeMBS(a))

Redim a(19) // changes to 160 bytes

System.DebugLog "allocated: "+Str(GetArrayAllocatedSizeMBS(a))

a.Append 123

System.DebugLog "allocated: "+Str(GetArrayAllocatedSizeMBS(a))
// shows 288, adds space for 16 more values
```

Notes:

This function uses internal knowledge of the array layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

170.1.29 GetArrayDataPointerMBS(v as variant) as Ptr

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries base pointer for the array data.
Notes:

The pointer changes when append/insert/redim allocates new memory block.

This function uses internal knowledge of the array layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

170.1.30 GetAutoMemoryAddressMBS(o as auto) as integer

MBS Util Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory address of auto object.
Example:

```
Dim t As Auto = "Hello World"
Dim o As Auto = "Hello "
```

```
o = o + "World"

Dim s As Auto = t

Dim ta As Integer = GetAutoMemoryAddressMBS(t)
Dim oa As Integer = GetAutoMemoryAddressMBS(o)
Dim sa As Integer = GetAutoMemoryAddressMBS(s)

// s and t show same address, but o is different
MsgBox Hex(ta)+EndOfLine+Hex(oa)+EndOfLine+Hex(sa)

// and s and t show address in const segment in the app, while o is dynamically allocated and has an heap address
```

Notes: Allows you to compare if two variables refer same object.

170.1.31 GetDelegateParametersMBS(del as variant) as String

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries parameter signature of a delegate.
Example:

```
Dim aDelegate As ADelegate
aDelegate = AddressOf someFunction

Dim p As String = GetDelegateParametersMBS(aDelegate)
MsgBox p
```

Notes:

This function uses internal knowledge of the delegate layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

170.1.32 GetDelegateTargetMBS(del as variant) as Variant

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries target object of a delegate.
Example:

```
Dim aDelegate As ADelegate
```

```
aDelegate = AddressOf someFunction

Dim target As Variant = GetDelegateTargetMBS(aDelegate)
MsgBox "target: "+Introspection.GetType(target).fullname
```

Notes:

This function uses internal knowledge of the delegate layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

See also Feedback case:
http://feedback.xojo.com/case/23305

170.1.33 GetDelegateWeakMBS(del as variant) as Boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries weak flag of a delegate.
Example:

```
Dim aDelegate As ADelegate
aDelegate = AddressOf someFunction

Dim weak As Boolean = GetDelegateWeakMBS(aDelegate)
MsgBox "weak: "+Str(weak)
```

Notes:

This function uses internal knowledge of the delegate layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

170.1.34 GetObjectMemoryAddressMBS(o as object) as integer

MBS Util Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory address of object.
Example:

```
Dim a As Integer = GetObjectMemoryAddressMBS(app)
```

```
// show address
MsgBox Hex(a)
```

Notes: Allows you to compare if two variables refer same object.

170.1.35 GetObjectReferenceCountMBS(o as object) as integer

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries object reference count.
Example:

```
Dim o As Object = window1

System.DebugLog "Reference count: "+Str(GetObjectReferenceCountMBS(o))

dim k as Object = o

System.DebugLog "Reference count: "+Str(GetObjectReferenceCountMBS(o))

dim v as Variant = o

System.DebugLog "Reference count: "+Str(GetObjectReferenceCountMBS(o))

v = Nil
k = nil

System.DebugLog "Reference count: "+Str(GetObjectReferenceCountMBS(o))
```

Notes:

This function uses internal knowledge of the object layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

170.1.36 GetStringMemoryAddressMBS(s as string) as integer

MBS Util Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory address of string.
Example:

```
Dim t As String = "Hello World"
```

```
Dim o As String = "Hello "

o = o + "World"

Dim s As String = t

Dim ta As Integer = GetStringMemoryAddressMBS(t)
Dim oa As Integer = GetStringMemoryAddressMBS(o)
Dim sa As Integer = GetStringMemoryAddressMBS(s)

// s and t show same address, but o is different
MsgBox Hex(ta)+EndOfLine+Hex(oa)+EndOfLine+Hex(sa)

// and s and t show address in const segment in the app, while o is dynamically allocated and has an heap address
```

Notes: Allows you to compare if two variables refer same string.

170.1.37 GetStringReferenceCountMBS(s as string) as integer

MBS Util Plugin, Plugin Version: 20.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries string reference count.
Example:

```
Dim a As String = "World"
Dim s As String = "Hello "+a // use + to make new string

System.DebugLog "Reference count: "+Str(GetStringReferenceCountMBS(s))

Dim k As String = s

System.DebugLog "Reference count: "+Str(GetStringReferenceCountMBS(s))

Dim v As Variant = s

System.DebugLog "Reference count: "+Str(GetStringReferenceCountMBS(s))

v = ""
k = ""

System.DebugLog "Reference count: "+Str(GetStringReferenceCountMBS(s))
```

Notes:

This function uses internal knowledge of the string layout in memory.
So this will break in case a future Xojo version changes the layout.
Please use only carefully for debugging.

170.1.38 GetTextMemoryAddressMBS(s as text) as integer

MBS Util Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries memory address of text object.
Example:

```
Dim t As Text = "Hello World"
Dim n As Integer = GetTextMemoryAddressMBS(t)
MsgBox Hex(n)
```

Notes: Allows you to compare if two variables refer same text.

170.1.39 GetVariantArrayMBS(VariantContainingArray as Variant) as Variant()

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a variant containing array for an array and returns it as an array of variant.
Example:

```
dim test() as Dictionary
test.Append new Dictionary

// this fails
Dim vv As Variant = test
Dim t() As Variant = vv

// this works!
dim v() as Variant = GetVariantArrayMBS(test)
dim dic as Dictionary = v(0)
Break
```

Notes:

Works with all arrays of objects (any type).
Raises exception if the array can't be converted or the variant contains no array.

170.1.40 GetVariantArrayUboundMBS(v as Variant) as Integer

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries array ubound for an array inside a variant.
Notes:

If you have an array in the variant, you'd normally assign it to an array to query values from array.
This function queries ubound directly.
Returns -3 if variant is nil and -2 if variant contains not an object array.
Updated in 13.5 plugins to raise exception is array is nil.

170.1.41 GetVariantArrayValueMBS(v as Variant, index as Integer) as Variant

MBS Util Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a variant from an array inside a variant.
Example:

```
// some part of app builds an array
dim a() as pair
a.Append 1:"Hello"
a.Append 2:"World"

// passes it as Variant somewhere else

dim v as Variant = a

// and later you may want to get values back without knowing the array type

// this raises TypeMismatchException
'dim o() as Object = v

// so use plugin to get objects:
dim v1 as Variant = GetVariantArrayValueMBS(v, 0)
dim v2 as Variant = GetVariantArrayValueMBS(v, 1)

// now you can check type and cast to the object type
dim p1 as pair = v1
dim p2 as pair = v2

MsgBox p1.Right+" "+p2.Right
```

Notes:

This function is to allow getting objects from an array inside a variant without known the class used to declare array.
Returns nil on any error.

Updated in 13.5 plugins to raise exception is array is nil.

Also updated in v13.5 to work with object, variant, string, date, integer, double, single, boolean, Int64 arrays. Other array types will raise exception.

170.1.42 GetVariantAsDictionaryArrayMBS(v as variant) as Dictionary()

MBS Util Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Casts a variant to a dictionary array.
Example:

```
Dim d As New Dictionary
Dim v() As Variant
v.Append d
v.Append Nil

dim va as Variant = v
'Dim dic() As Dictionary = va // type mismatch exception
Dim dic() As Dictionary = GetVariantAsDictionaryArrayMBS(va) // works
```

Break

Notes:

Raises exception if variant does not have an object/variant array.
If it contains a non-dictionary object, we raise an exception.

170.1.43 GetVariantTypeMBS(va as variant) as Integer

MBS Util Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries variant type.
Example:

```
Dim i As Int32 = 5
Dim u As UInt32 = 5
```

```
Dim vi As Variant = i
Dim vu As Variant = u
Dim ti As Integer = vi.Type // 2
Dim tu As Integer = vu.Type // 2
Dim mi As Integer = GetVariantTypeMBS(vi) // 2
Dim mu As Integer = GetVariantTypeMBS(vu) // 102

Break // check in debugger
```

Notes:

Same as variant.type or VarType() function, but returns 102 for UInt32 and 103 for UInt64.
This way plugin functions internally can distinguish between variants with unsigned vs. signed data types.

170.1.44 MillisecondsMBS as Double

MBS Util Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current milliseconds time.
Notes: Like Microseconds in Xojo, but queries system functions for milliseconds counter.

170.1.45 ObjectIsAMBS(o as object, ClassName as string) as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a given object is of a given class.
Example:

```
// you must know exact name of class

dim v as Variant = window1

if ObjectIsAMBS(v, "window1.window1") then
MsgBox "OK"
end if

v = System.Cursors.MagnifyLarger

if ObjectIsAMBS(v, "MouseCursor") then
MsgBox "OK"
end if
```

Notes:

Like ISA operator, but with class name as string.
Returns false if o is nil.

170.1.46 SetVariantArrayValueMBS(v as Variant, index as Integer, value as Variant)

MBS Util Plugin, Plugin Version: 16.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an object from an array of objects inside a variant.
Example:

```
// some part of app builds an array
dim a() as pair

// passes it as Variant somewhere else

dim v as Variant = a

// and later you may want to put values in array without knowing object type for array

// this raises TypeMismatchException
'dim o() as Object = v

// so use plugin

SetVariantArrayValueMBS(v, 0, 1:"Hello")
SetVariantArrayValueMBS(v, 1, 2:"World")

MsgBox a(0).Right+" "+a(1).Right
```

Notes:

This function is to allow setting objects in an array inside a variant without known the class used to declare array.
Also updated to work with object, variant, string, date, integer, double, single, boolean, Int64 arrays. Other array types will raise exception.
Be sure to only put objects of right class in the array! Else you risk crashes.

If index is 1 bigger than ubound, we append an element.

170.1.47 ExitWindowsMBS(mode as Integer) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shutdown a Windows PC.
Example:

```
dim b as boolean
b=ExitWindowsMBS(0)
```

Notes:

Mode constants:

LOGOFF	0	Shuts down all processes running in the security context of the process that called the ExitWindows function. Then it logs the user off.
SHUTDOWN	1	Shuts down the system to a point at which it is safe to turn off the power. All file buffers have been flushed to disk, and all running processes have stopped.
REBOOT	2	Shuts down the system and then restarts the system.
FORCE	4	Forces processes to terminate. When this flag is set, the system does not send the WM_QUERYENDSESSION and WM_ENDSESSION messages. This can cause the applications to lose data. Therefore, you should only use this flag in an emergency.
POWEROFF	8	Shuts down the system and turns off the power. The system must support the power-off feature.
FORCEIFHUNG	16	(Windows 2000) Forces processes to terminate if they do not respond to the WM_QUERYENDSESSION or WM_ENDSESSION message. This flag is ignored if FORCE is used.

Returns true if successfull.

The ExitWindows function returns as soon as it has initiated the shutdown. The shutdown or logoff then proceeds asynchronously.

During a shutdown or log-off operation, applications that are shut down are allowed a specific amount of time to respond to the shutdown request. If the time expires, the system displays a dialog box that allows the user to forcibly shut down the application, to retry the shutdown, or to cancel the shutdown request. If the FORCE value is specified, the system always forces applications to close and does not display the dialog box. If the FORCEIFHUNG value is specified, the system forces hung applications to close and does not display the dialog box.

Windows NT: To shut down or restart the system, the calling process must use the AdjustTokenPrivileges function to enable the SE_SHUTDOWN_NAME privilege.

170.1.48 GetDoubleClickIntervalMBS as Integer

MBS Util Plugin, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the time in ticks which makes two clicks to one double click.
Example:

```
sub MouseUp(X as Integer, Y as Integer)
dim currentClickTicks as Integer
currentClickTicks = ticks

if (currentClickTicks - lastClickTicks) <= GetDoubleClickIntervalMBS then
if abs(x - lastClickX) <= 5 and abs (y - lastClickY) <= 5 then
DoubleClick //Fire new Doubleclick event
return
end
end

lastClickTicks = currentClickTicks
lastClickX = x
lastClickY = y
MouseUp
End sub
```

Notes: Time returned in ticks. One tick is 1/60 of a second.

170.1.49 GetMaximumOpenFileCountMacOSXMBS as Integer

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

Function: The number of simultan open files
Example:

```
msgbox str(GetMaximumOpenFileCountMacOSXMBS)
```

Notes:

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.
Returns -2 if the function is not available and -1 if the current number of open files is unknown.

170.1.50 GetSystemUIModeMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Returns the current Mac OS X System UI Mode for your application.
Notes:

Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

170.1.51 GetSystemUIModeOptionsMBS as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Returns the current Mac OS X System UI Mode options for your application.
Notes:

Returns -1 on any error.
See SetSystemUIModeMBS for more details.
Please use presentationOptions in NSApplicationMBS for Cocoa applications.

170.1.52 MacCountryCodeMBS as string

MBS MacClassic Plugin, Plugin Version: 3.1, Platform: macOS, Targets: Desktop only.

Function: Returns the country code for
Example:

```
msgbox MacCountryCodeMBS // Shows DE in Germany.
```

Notes:

On any error returns "".
Requires Mac OS 8.6 or newer (or Mac OS X).
Fix in Plugin version 4.0 to no longer return random strings, but now you must accept that this function may fail on Mac if it has nothing to report. (unkown reason)

170.1.53 OpenMacOSXPreferencesPaneMBS(name as string) as Integer

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Opens a named preference pane on Mac OS X.

Example:

```
dim e as Integer
e=OpenMacOSXPreferencesPaneMBS("Network")
```

Notes:

Returns a Mac OS X error code. For example -43 if file not found, -1 if function is not available or 0 if successfull.

Possible values for Mac OS X:
UniversalAccessPref
StartupDisk
Speech
Sound
Network
MyAccount
Mouse
LoginItems
Localization
Keyboard
Internet
Ink
General
EnergySaver
DigiHubDiscs
DesktopPictures
Dock
ColorSync
QuickTime
Classic
Bluetooth
ARDPref
DateAndTime
Accounts
Displays
SoftwareUpdate
SharingPref
ScreenSaver

See content of /System/Library/PreferencePanes/ folder.

In MacOS 10.10 or newer, better use URL schemes:
https://www.mbsplugins.de/archive/2020-04-05/MacOS_System_Preference_Links

170.1.54 RunningOnCarbonXMBS as boolean

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if we are running Carbon on Mac OS X.
Example:

```
if RunningOnCarbonXMBS then
' do Stuff for Mac OS X only
end if
```

Notes: Does always return false on Windows and Mac OS Classic.

170.1.55 SetMaximumOpenFileCountMacOSXMBS(Value as Integer)

MBS MacCF Plugin, Platforms: macOS, Linux, Targets: All.

Function: The number of simultan open files
Example:

```
SetMaximumOpenFileCountMacOSXMBS 500
```

Notes:

On Mac OS X per default a process can have 256 files open at the same time.
This function allows you to increase the number of open files. It seems that you can't have more than 10240 files open on Mac OS X.

170.1.56 SetSystemUIModeMBS(mode as Integer, Options as Integer)

MBS MacOSX Plugin, Plugin Version: 2.8, Platform: macOS, Targets: Desktop only.

Function: Sets the current System UI mode for your application.
Notes:

Details from Apple's documentation:

Sets the presentation mode for system-provided user interface elements.

The presentation mode of an application determines which system-provided user interface elements are visible on thes screen. When the frontmost application changes its presentation mode, a kEventAppSystemUIModeChanged Carbon event is sent to all applications that have registered for the event. This event is also sent

when an application is activated; it contains the newly active application's presentation mode.

Note that the system UI mode is a per-process state. Switching from a process that is suppressing system UI to another processthat is not will cause system UI elements to become visible automatically. Switching back to the first process will suppress system UI elements again.

The modes available:

kUIModeNormal	0	In this mode, all standard system UI elements are visible.
kUIModeContentSuppressed	1	In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. However, these elements may automatically show themselves in response to mouse movements or other user activity; specifically, the Dock will still show itself automatically when the mouse moves into the Dock's auto-show region.
kUIModeContentHidden	2	In this mode, system UI elements which cover the "content area" of the screen (the area other than the menubar) are hidden. Unlike kUIModeContentSuppressed, most UI elements will not automatically show themselves in this mode.
kUIModeAllHidden	3	In this mode, all system UI elements, including the menubar, are hidden. Most system UI elements will not automatically show themselves in this mode. The application may request that the menubar automatically show itself while in this mode by passing the kUIOptionAutoShowMenuBar flag to SetSystemUIMode.

The options which you can combine:

kUIOptionAutoShowMenuBar	1	Requests that the menubar automatically show itself when the user moves the mouse into the screen area that would ordinarily be occupied by the menubar. Only valid with kUIModeAllHidden.
kUIOptionAnimateMenuBar	2	Requests that the menubar animate on or offscreen, if the UIMode is also being changed such that the menubar will change visibility. Unlike other UI options, this option is not stored and only affects the behavior of this call to SetSystemUIMode. Valid for all modes. Available in Mac OS X 10.7 and later.
kUIOptionDisableAppleMenu	4	Disables all items in the Apple menu. Valid for all modes.
kUIOptionDisableProcessSwitch	8	The active application may not be changed while this process is active. Currently disables the Command-Tab and Command-Shift-Tab key sequences to switch the active process, and the global window rotation key sequence selected by the user in the Keyboard preference pane. SetFrontProcess may still be used to explicitly switch the active process. Only valid with modes other than kUIModeNormal.
kUIOptionDisableForceQuit	16	The Force Quit window may not be displayed while this process is active. Currently disables the Command-Option-Escape key sequence to open the Force Quit window and the Force Quit menu item in the Apple menu. Only valid with modes other than kUIModeNormal.
kUIOptionDisableSessionTerminate	32	The current login session may not be terminated while this process is active. Currently disables the Power key and the Restart, Shut Down, and Log Out menu items in the Apple menu. Only valid with modes other than kUIModeNormal.

Please use presentationOptions in NSApplicationMBS for Cocoa applications.

170.1.57 ShowCharacterPaletteMBS

MBS MacOSX Plugin, Plugin Version: 4.1, Platform: macOS, Targets: Desktop only.

Function: Shows the character palette.
Example:

ShowCharacterPaletteMBS

Notes:

Works on Mac OS X 10.3 and newer.
We have no way to close this window.

170.1.58 SystemControlByNameMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Example:

```
dim m1 as MemoryBlock = SystemControlByNameMBS("hw.physicalcpu")
dim m2 as MemoryBlock = SystemControlByNameMBS("hw.logicalcpu")

MsgBox "physicalcpu: "+str(m1.Long(0))+EndOfLine+"logicalcpu: "+str(m2.Long(0))
```

Notes:

The name is given as an ASCII string.
Returns nil on any error.
See also:

- 170.1.59 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock 23042

170.1.59 SystemControlByNameMBS(name as string, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlByNameMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Notes:

The name is given as an ASCII string.
Returns nil on any error.
See also:

- 170.1.58 SystemControlByNameMBS(name as string) as memoryblock 23042

170.1.60 SystemControlMBS(name as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Example:

```
Function IsRosetta() As boolean
Const CTL_HW = 6
Const HW_MODEL = 2

dim mib,m as MemoryBlock

mib=newMemoryBlock(8)
mib.Long(0) = CTL_HW
mib.Long(4) = HW_MODEL

m=SystemControlMBS(mib)
if m<>nil then
if m.CString(0)="PowerMac" then
Return true
end if
end if
End Function
```

Notes:

name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
Returns nil on any error.
See also:

- 170.1.61 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock 23044

170.1.61 SystemControlMBS(name as memoryblock, input as memoryblock) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: The SystemControlMBS function retrieves system information and allows processes with appropriate privileges to set system information.
Notes:

Returns nil on any error.
name is a MIB which can be constructed or queried with SystemControlNameToMIBMBS.
See also:

- 170.1.60 SystemControlMBS(name as memoryblock) as memoryblock 23043

170.1.62 SystemControlNameToMIBMBS(name as string) as memoryblock

MBS MacCF Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Targets: All.

Function: Searches the given MIB for the given name.
Notes:

Name is an ASCII string.
Returns nil on any error.

170.1.63 WindowsSystemMetricsMBS(what as Integer) as Integer

MBS Win Plugin, Plugin Version: 3.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WindowsSystemMetrics function retrieves various system metrics (widths and heights of display elements) and system configuration settings.
Example:

```
const SM_CYSMICON = 50

MsgBox str(WindowsSystemMetricsMBS(SM_CYSMICON))
```

Notes:

All dimensions retrieved by GetSystemMetrics are in pixels.
If the function fails, the return value is zero.

Values for the what parameter:

The SM_ARRANGE setting specifies how the system arranges minimized windows, and consists of a starting position and a direction. The starting position can be one of the following values:

The direction in which to arrange can be one of the following values:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/ms724385(v=vs.85).aspx

170.1.64 IsWindows95MBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether operation system is Windows 95/98/ME.
Example:

```
if IsWindows95MBS then
MsgBox "Windows 95/98/ME"
else
MsgBox "no Windows 95/98/ME"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Returns true or false on Windows and alway false on other platforms.

170.1.65 IsWindowsAdminUserMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checkes whether the current user is an Admin User on Windows.
Example:

```
if IsWindowsAdminUserMBS then
MsgBox "Is admin user."
else
MsgBox "no admin user."
end if
```

Notes: Returns true or false on Windows and alway false on other platforms.

170.1.66 IsWindowsNTMBS as boolean

MBS Win Plugin, Plugin Version: 5.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Checks whether operation system is Windows NT/2000/XP.
Example:

```
if IsWindowsNTMBS then
MsgBox "Windows NT/2000/XP"
else
MsgBox "no Windows NT/2000/XP"
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:** Returns true or false on Windows and alway false on other platforms.

170.1.67 WindowsGetProcessIntegrityLevelMBS as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function gets the integrity level of the current process.
Example:

```
msgbox str(WindowsGetProcessIntegrityLevelMBS)
```

Notes:

Integrity level is only available on Windows Vista and newer operating systems, thus GetProcessIntegrityLevel throws a C++ exception if it is called on systems prior to Windows Vista.

Returns the integrity level of the current process. It is usually one of these values:

170.1.68 WindowsIsApplicationRunAsAdminMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function checks whether the current process is run as administrator.
Example:

```
msgbox str(WindowsIsApplicationRunAsAdminMBS)
```

Notes:

In other words, it dictates whether the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated.

Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group and it is elevated. Returns false if the token does not.

170.1.69 WindowsIsProcessElevatedMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function gets the elevation information of the current process.
Example:

msgbox str(WindowsIsProcessElevatedMBS)

Notes:

It dictates whether the process is elevated or not. Token elevation is only available on Windows Vista and newer operating systems, thus IsProcessElevated returns always false if it is called on systems prior to Windows Vista. It is not appropriate to use this function to determine whether a process is run as administartor.

Returns true if the process is elevated. Returns false if it is not.

170.1.70 WindowsIsUserInAdminGroupMBS as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The function checks whether the primary access token of the process belongs to user account that is a member of the local Administrators group, even if it currently is not elevated.
Example:

msgbox str(WindowsIsUserInAdminGroupMBS)

Notes: Returns true if the primary access token of the process belongs to user account that is a member of the local Administrators group. Returns false if the token does not.

170.2 module BuildConstantsMBS

170.2.1 module BuildConstantsMBS

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with build constants for you.
Example:

MsgBox BuildConstantsMBS.DateTime

170.2.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr8
- Build Time Constants

170.2.3 Constants

170.2.4 Date = "17. 1.2021"

MBS Main Plugin, Plugin Version: 11.0.

Function: The constant for the date.
Example:

MsgBox BuildConstantsMBS.Date

Notes:

Format is dd.mm.yyyy like 24.12.2010.
This is the date when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

170.2.5 DateTime = "Sun Jan 17 14:53:02 2021"

MBS Main Plugin, Plugin Version: 11.0.

Function: The constant for the date and time.
Example:

MsgBox BuildConstantsMBS.DateTime

Notes: This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

170.2.6 Day = 17

MBS Main Plugin, Plugin Version: 11.0.

Function: The day.

170.2.7 Hour = 14

MBS Main Plugin, Plugin Version: 11.0.

Function: The hour.

170.2.8 Minute = 53

MBS Main Plugin, Plugin Version: 11.0.

Function: The minute.

170.2.9 Month = 1

MBS Main Plugin, Plugin Version: 11.0.

Function: The month.

170.2.10 Second = 2

MBS Main Plugin, Plugin Version: 11.0.

Function: The second.

170.2.11 Time = "14:53: 2"

MBS Main Plugin, Plugin Version: 11.0.

Function: The constant for the time.
Example:

MsgBox BuildConstantsMBS.Time

Notes:

Format is like hh:mm:ss like 11:22:33.
This is the time when the plugin was loaded to the Xojo IDE. You can use this constant to know in your application when it was built. Not exactly, but within a few hours exact.

170.2.12 Year = 2021

MBS Main Plugin, Plugin Version: 11.0.

Function: The year.

SM_ARRANGE	56	Flags specifying how the system arranged minimized windows. For more information about minimized windows, see the following Remarks section.
SM_CLEANBOOT	67	Value that specifies how the system was started: 0 Normal boot; 1 Fail-safe boot; 2 Fail-safe with network boot; Fail-safe boot (also called SafeBoot) bypasses the user's startup files.
SM_CMETRICS	83	(Windows 2000 or newer)
SM_CMONITORS	80	Number of display monitors on the desktop. (Windows 2000 or newer)
SM_CMOUSEBUTTONS	43	Number of buttons on mouse, or zero if no mouse is installed.
SM_CXBORDER	5	Width, in pixels, of a window border.
SM_CXCURSOR	13	Width, in pixels, of a cursor. The system cannot create cursors of other sizes.
SM_CXDLGFRAME	7	Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXFIXEDFRAME)
SM_CXDOUBLECLK	36	Width, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)
SM_CXDRAG	68	Width, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.
SM_CXEDGE	45	Width, in pixels, of a 3-D border.
SM_CXFRAME	32	Thickness, in pixels, of the sizing border around the perimeter of a window that can be resized. (or SM_CXSIZEFRAME)
SM_CXFULLSCREEN	16	Width of the client area for a full-screen window on the primary display monitor.
SM_CXHSCROLL	21	Width, in pixels, of the arrow bitmap on a horizontal scroll bar.
SM_CXHTHUMB	10	Width, in pixels, of the thumb box in a horizontal scroll bar.
SM_CXICON	11	The default width, in pixels, of an icon. TheLoadIcon function can load only icons of these dimensions.
SM_CXICONSPACING	38	Width, in pixels, of a grid cell for items in large icon view. Each item fits into a rectangle of this size when arranged. These values are always greater than or equal to SM_CXICON and SM_CYICON.
SM_CXMAXIMIZED	61	Default width, in pixels, of a maximized top-level window on the primary display monitor.
SM_CXMAXTRACK	59	Default maximum width, in pixels, of a window that has a caption and sizing borders. This metric refers to the entire desktop. The user cannot drag the window frame to a size larger than these dimensions.
SM_CXMENUCHECK	71	Width, in pixels, of the default menu check-mark bitmap.
SM_CXMENUSIZE	54	Width, in pixels, of menu bar buttons, such as the child window close button used in the multiple document interface.
SM_CXMIN	28	Minimum width, in pixels, of a window.
SM_CXMINIMIZED	57	Width, in pixels, of a normal minimized window.
SM_CXMINSPACING	47	Width, in pixels, of a grid cell for minimized windows. Each minimized window fits into a rectangle this size when arranged. These values are always greater than or equal to SM_CXMINIMIZED and SM_CYMINIMIZED.
SM_CXMINTRACK	34	Minimum tracking width, in pixels, of a window. The user cannot drag the window frame to a size smaller than these dimensions. A window can override these values by processing the WM_GETMINMAXINFO message.
SM_CXSCREEN	0	Width, in pixels, of the screen of the primary display monitor.
SM_CXSIZE	30	Width, in pixels, of a button in a window's caption or title bar.
SM_CXSMICON	49	Recommended width, in pixels, of a small icon. Small icons typically appear in window captions and in small icon view.
SM_CXSMSIZE	52	Width, in pixels, of small caption buttons.
SM_CXVIRTUALSCREEN	78	Width, in pixels, of the virtual screen. The virtual screen is the bounding rectangle of all display monitors. (Windows 98/ME and 2000 or newer)
SM_CXVSCROLL	2	Width, in pixels, of a vertical scroll bar; and height, in pixels, of the arrow bitmap on a vertical scroll bar.
SM_CYBORDER	6	Height, in pixels, of a window border.
SM_CYCAPTION	4	Height, in pixels, of a normal caption area.
SM_CYCURSOR	14	Height, in pixels, of a cursor. The system cannot create cursors of other sizes.
SM_CYDLGFRAME	8	Thickness, in pixels, of the frame around the perimeter of a window that has a caption but is not sizable. (or SM_CYFIXEDFRAME)
SM_CYDOUBLECLK	37	Height, in pixels, of the rectangle around the location of a first click in a double-click sequence. The second click must occur within this rectangle for the system to consider the two clicks a double-click. (The two clicks must also occur within a specified time.)
SM_CYDRAG	69	Height, in pixels, of a rectangle centered on a drag point to allow for limited movement of the mouse pointer before a drag operation begins. This allows the user to click and release the mouse button easily without unintentionally starting a drag operation.
SM_CYEDGE	46	Height, in pixels, of a 3-D border.

ARW_BOTTOMLEFT	0x0000L	Start at the lower-left corner of the screen (default position).
ARW_BOTTOMRIGHT	0x0001L	Start at the lower-right corner of the screen. Equivalent to ARW_STARTRIGHT.
ARW_HIDE	0x0008L	Hide minimized windows by moving them off the visible area of the screen.
ARW_TOPLEFT	0x0002L	Start at the upper-left corner of the screen. Equivalent to ARV_STARTTOP.
ARW_TOPRIGHT	0x0003L	Start at the upper-right corner of the screen. Equivalent to ARW_STARTTOP | SRW_STARTRIGHT.

ARW_DOWN	0x0004L	Arrange vertically, top to bottom.
ARW_LEFT	0x0000L	Arrange horizontally, left to right.
ARW_RIGHT	0x0000L	Arrange horizontally, right to left.
ARW_UP	0x0004L	Arrange vertically, bottom to top.

SECURITY_MANDATORY_UNTRUSTED_RID	= & h0	Means untrusted level. It is used by processes started by the Anonymous group. Blocks most write access.
SECURITY_MANDATORY_LOW_RID	= & h1000	Means low integrity level. It is used by Protected Mode Internet Explorer. Blocks write acess to most objects (such as files and registry keys) on the system.
SECURITY_MANDATORY_MEDIUM_RID	= & h2000	Means medium integrity level. It is used by normal applications being launched while UAC is enabled.
SECURITY_MANDATORY_HIGH_RID	= & h3000	Means high integrity level. It is used by administrative applications launched through elevation when UAC is enabled, or normal applications if UAC is disabled and the user is an administrator.
SECURITY_MANDATORY_SYSTEM_RID	= & h4000	Means system integrity level. It is used by services and other system-level applications (such as Wininit, Winlogon, Smss, etc.)

170.3 class GlobalExceptionHandlerMBS

170.3.1 class GlobalExceptionHandlerMBS

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs an exception handler to show a message dialog with custom message before the app crashes.
Notes:

The plugin allocates some memory which we release later to make sure there is free memory for the message box.

On Windows this method does not work as currently we use static runtime on Windows which does not allow the plugin to access the runtime inside the RB framework.

170.3.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr2

170.3.3 Events

170.3.4 GotException

MBS Main Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Called when an unhandled C++ exception was raised.
Notes: Your application is in a very instable state when this event is called. Don't do much here and quit soon with ExitMBS/AbortMBS.

170.4 class LinuxSysInfoMBS

170.4.1 class LinuxSysInfoMBS

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class to query memory and processor statistics.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

170.4.2 Blog Entries

- Updater Kit 1.5 and BugReporter Kit 1.1
- MonkeyBread Software releases MBS Real Studio plug-ins in version 12.1
- MBS Real Studio Plugins, version 12.1pr7
- Adding Linux SysInfo class

170.4.3 Xojo Developer Magazine

- 10.4, page 9: News

170.4.4 Methods

170.4.5 Constructor

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Queries values and fills properties.

170.4.6 loads(index as Integer) as Double

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: 1, 5, and 15 minute load averages.

170.4.7 Properties

170.4.8 availablePhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of available physical pages of memory in the system.
Notes: (Read only property)

170.4.9 BufferRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Memory used by buffers.
Notes: (Read only property)

170.4.10 FreeHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Available high memory size.
Notes: (Read only property)

170.4.11 FreeRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Available memory size.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.FreeRam)+" bytes free."
```

Notes: (Read only property)

170.4.12 FreeSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Swap space still available.
Notes: (Read only property)

170.4.13 MemoryUnit as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Memory unit size in bytes.
Notes: (Read only property)

170.4.14 NumberOfProcesses as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Number of current processes.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcesses)+" processes"
```

Notes: (Read only property)

170.4.15 NumberOfProcessors as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of available processors.
Example:

```
dim l as new LinuxSysInfoMBS

MsgBox str(l.NumberOfProcessors)+" processors"
```

Notes: (Read only property)

170.4.16 NumberOfProcessorsConfigured as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of configured processors.
Notes: (Read only property)

170.4.17 PhysicalPages as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Return number of physical pages of memory in the system.
Notes: (Read only property)

170.4.18 SharedRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Amount of shared memory.
Notes: (Read only property)

170.4.19 TotalHigh as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total high memory size.
Notes: (Read only property)

170.4.20 TotalRam as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total usable main memory size.
Notes: (Read only property)

170.4.21 TotalSwap as UInt64

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Total swap space size.
Notes: (Read only property)

170.4.22 upTime as Integer

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Seconds since boot.
Notes: (Read only property)

170.4.23 Valid as Boolean

MBS Linux Plugin, Plugin Version: 12.1, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether constructor got values.
Notes:

Should be true on Linux and false on other platforms.
(Read only property)

170.5 class SignalHandlerMBS

170.5.1 class SignalHandlerMBS

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: A signal handler for an unix signal.
Notes:

You can use this class to catch signals like SIGALRM oder SIGQUIT.

See
http://en.wikipedia.org/wiki/Signal_(computing)

170.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr5
- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.0
- MBS Xojo / Real Studio Plugins, version 14.0pr3
- MBS REALbasic Plugins, version 10.6pr11

170.5.3 Xojo Developer Magazine

- 12.2, page 10: News

170.5.4 Methods

170.5.5 alarm(seconds as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Set signal timer alarm.
Example:

SignalHandlerMBS.alarm 1

Notes:

The alarm() function sets a timer to deliver the signal SIGALRM to the calling process after the specified number of seconds. If an alarm has already been set with alarm() but has not been delivered, another call to alarm() will supersede the prior call. The request alarm(0) voids the current alarm and the signal SIGALRM

will not be delivered.

Due to setitimer restriction the maximum number of seconds allowed is 100000000.

alarm sends signal 14 after the time out.

170.5.6 ClearFlag(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears the flag with given index.
Notes: Please call this after you got IsFlagSet.

170.5.7 ClearFlags

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all flags.

170.5.8 ClearStacktrace(signalIndex as Integer)

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Clears stored stack trace for the signal with given index.

170.5.9 Close

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Releases this object's resources.

170.5.10 IsFlagSet(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks if a given flag was set.

170.5.11 QueryStacktrace(signalIndex as Integer, skip as Integer = 2) as string()

MBS Util Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries stack at the time the signal handler was triggered.
Notes:

Useful to know later which code got the signal.
Works for flag handlers and for the event handlers if enabled.

170.5.12 SendSignal(PID as Integer, Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

Function: Sends a signal.
Example:

```
// send signal to a process
// PID is 17779 here
// 9 means kill on Mac OS X
call SignalHandlerMBS.SendSignal(17779, 9)
```

Notes:

Returns true on success and false on failure.
Without a signal handler the target app could quit.

Lookup signal.h for the list of signals. They can be different on Mac and Linux.

170.5.13 SendSignalToSelf(Signal as Integer) as boolean

MBS Util Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Targets: All.

Function: Send a signal to the current process
Notes:

Returns true on success and false on failure.
Without a signal handler the target app could quit.

170.5.14 SetDefaultHandler(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to use the default handler for the given signal number.
Example:

```
Const SIGALRM = 14
if SignalHandlerMBS.SetDefaultHandler(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success and false on failure.

170.5.15 SetEventHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to call the Signal Event whenever a signal with the given number is received.
Notes:

Returns true on success and false on failure.
If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

170.5.16 SetFlagHandler(signalIndex as Integer, CollectStackTrace as boolean = false) as boolean

MBS Util Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

Function: Defines to set the flag whenever a signal with the given number is received.
Notes:

Returns true on success and false on failure.
Please use IsFlagSet in your app regularly to check if the flag was set.

If CollectStackTrace is true, you can later use QueryStacktrace to get the stack trace from the time the signal was captured.

170.5.17 SetIgnore(signalIndex as Integer) as boolean

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Defines to ignore the event with the given number.
Example:

```
Const SIGALRM = 14
if SignalHandlerMBS.SetIgnore(SIGALRM) then
MsgBox "Done"
else
MsgBox "Failed"
end if
```

Notes: Returns true on success and false on failure.

170.5.18 SignalStatus(signalIndex as Integer) as Integer

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: All.

Function: Queries the signal state.
Notes: Returns 0 (unknown), kSignalDefault, kSignalEvent, kSignalFlag or kSignalIgnored.

170.5.19 Events

170.5.20 Signal(n as Integer)

MBS Util Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Targets: .

Function: A signal was called and you set an event handler.
Example:

```
Sub Signal(n as Integer)
// restore system handler in case we get that crash again!

MySignalHandlerMBS.SetDefaultHandler n

// Mac and Linux can have different signal numbers:

# if TargetMacOS then
dim c as string = "Signal "+str(n)+" on Mac OS X"
# elseif TargetLinux then
dim c as string = "Signal "+str(n)+" on Linux"
# else
dim c as string = "Signal "+str(n)+" on ?"
# endif

dim BackTraceLines() as string
```

```
# if mbs.BuildNumber>17662 and not TargetWin32 then // new in 13.0 plugins
BackTraceLines = BacktraceMBS
# endif

// show your bug reporter (or the MBS one)
'dim b as new Bugreporter
'b.ShowExceptionReporter c, BackTraceLines

// quit now without cleaning up the RB runtime which may crash again
ExitMBS 1
End Sub
```

Notes: This function may be called at any time, so you need to use code which is thread safe. (see ThreadMBS class)

170.5.21 Constants

170.5.22 kSignalDefault = 1

MBS Util Plugin, Plugin Version: 8.5.

Function: One of the signal state values.
Notes: The signal calls default handler.

170.5.23 kSignalEvent = 3

MBS Util Plugin, Plugin Version: 8.5.

Function: One of the signal state values.
Notes: The signal raises an event and sets the flag.

170.5.24 kSignalFlag = 4

MBS Util Plugin, Plugin Version: 14.0.

Function: One of the signal state values.
Notes: The signal sets a flag.

170.5.25 kSignalIgnored = 2

MBS Util Plugin, Plugin Version: 8.5.

Function: One of the signal state values.
Notes: The signal is ignored.

170.6 module SystemInformationMBS

170.6.1 module SystemInformationMBS

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module to collect all the system information functions.
Example:

msgbox "Welcome "+SystemInformationMBS.Username+"!"

170.6.4 Methods

170.6.5 AvailableRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the available memory.
Example:

msgBox format(SystemInformationMBS.AvailableRAM/1024/1024,"0")+" MB of RAM free."

Notes:

This function is useful if you want to know how much memory you can allocate without the system swapping.

On Windows, Mac OS X and Linux you can normally allocate up to 2 or 3 GB of memory in your address-room. A swap file on disc is used to cache memory which does not fit into physical memory.

So if you need to allocate a buffer to store temporary data, you can use this function to calculate a good size.
For example a file copy function could use something like this:

```
// a quarter of free memory is good to leave room for some OS buffers:
buffersize=SystemInformationMBS.AvailableRAM/4

// minimum 4 MB
if buffersize<1024*1024*4 then
buffersize<1024*1024*4
end if

// maximum 128 MB to make chunks not too big and application too unresponsible
if buffersize<1024*1024*128 then
buffersize<1024*1024*128
end if
```

In older plugins this function was named AvailableRAMMBS.

170.6.6 BusSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the speed of the System bus in Hz.
Example:

msgbox "Your main CPU has "+format(SystemInformationMBS.BusSpeed/1000000.0,"0")+" MHz"

170.6.7 Computername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the computer.
Example:

msgbox "Hi, I'm "+SystemInformationMBS.Computername+"."

Notes:

On Mac OS, the name is queried in this order:
1. Try to ask the Mac OS X Corefoundation for the name.
2. Try to ask via AppleEvents the Finder or FileSharing.
3. Read it from the system resources.

On Linux or Windows the system name.

In older plugins this function was named ComputerNameMBS.

170.6.8 CPUBrandString as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the CPU brand string.
Example:

MsgBox SystemInformationMBS.CPUBrandString

Notes:

If it is an Intel x86 Chip or something compatible, you get strings like this: "Intel(R) Core(TM) i7 CPU M 620 @ 2.67GHz" (Same as CPUIDMBS.BrandString). But on PowerPC chips we return strings like "PowerPC G5 (970MP)" (same as CPUInfoMBS.CPUName).

May return "" if the processor is unknown.

170.6.9 CPUSpeed as Double

MBS Util Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the Speed of the main CPU in Hz.
Example:

```
msgbox "Your main CPU has "+format(SystemInformationMBS.CPUSpeed/1000000.0,"0")+" MHz"
```

170.6.10 DomainName as string

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

Function: Returns the domain name of a Windows PC.
Example:

```
msgbox SystemInformationMBS.DomainName
```

Notes: Returns an empty string on any error.

170.6.11 HardDiscSerial as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the hard disc serial number of the first hard disc which has a serial number.
Example:

```
MsgBox SystemInformationMBS.HardDiscSerial
```

Notes:

This function can return "" if nothing is found.
Seems to return always empty string on Mac OS X 10.4 as the system properties dictionary does not contain the serial number there.

On Windows this function sometimes returns empty string, but later works again on the same machine. Reason unknown.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

170.6.12 HostName as string

MBS Util Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hostname for this computer.
Example:

MsgBox SystemInformationMBS.HostName

170.6.13 Is64bitWindows as boolean

MBS Util Plugin, Plugin Version: 9.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the Windows you are using is a 64-bit Windows.
Example:

msgbox str(SystemInformationMBS.Is64bitWindows)

Notes:

Returns true for x64 Windows editions for 32-bit applications.
This function could also be named isWoW64 for "is Windows on Windows 64 bit."

Returns always true on 64bit target.

170.6.14 isARM as Boolean

MBS Util Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether CPU is ARM.
Notes:

Returns true on Raspberry Pi for Linux ARM as well as for iOS or Android on device.
If we someday produce ARM plugins for Mac, this may also return true.

Returns false for x86 CPUs, e.g. MacOS as well as iOS/Android in simulator.

170.6.15 isBigSur(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 11 Big Sur or newer.
Notes: Returns 1 if this is Big Sur or newer, otherwise 0.

170.6.16 isCatalina(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 19.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is MacOS 10.15 Catalina or newer.
Example:

MsgBox str(SystemInformationMBS.isMojave)

Notes: Returns true on MacOS 10.15 or newer.

170.6.17 isElCapitan(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 15.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.11 El Capitan or newer.
Example:

MsgBox str(SystemInformationMBS.isElCapitan)

Notes:

Returns true on Mac OS X 10.11.
If orHigher is set, it will also return true on 10.12.

170.6.18 isHighSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 10.13 High Sierra or newer.

Example:

MsgBox str(SystemInformationMBS.isHighSierra)

Notes:

Returns true on Mac OS X 10.13.
If orHigher is set, it will also return true on 10.14.

170.6.19 isLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.5 Leopard or newer.
Example:

MsgBox str(SystemInformationMBS.isLeopard)

Notes: Returns true on Mac OS X 10.5 or newer.

170.6.20 isLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 11.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.7 Lion or newer.
Example:

MsgBox str(SystemInformationMBS.isLion)

Notes: Returns true on Mac OS X 10.7 or newer.

170.6.21 isMacOSX as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if being called on Mac OS X.
Example:

msgbox str(SystemInformationMBS.isMacOSX)

170.6.22 isMavericks(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 13.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.9 Mavericks or newer.
Example:

MsgBox str(SystemInformationMBS.isMavericks)

Notes: Returns true on Mac OS X 10.9 or newer.

170.6.23 isMojave(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is MacOS 10.14 Mojave or newer.
Example:

MsgBox str(SystemInformationMBS.isMojave)

Notes: Returns true on MacOS 10.14 or newer.

170.6.24 isMountainLion(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.8 Mountain Lion or newer.
Example:

MsgBox str(SystemInformationMBS.isMountainLion)

Notes: Returns true on Mac OS X 10.8 or newer.

170.6.25 isSierra(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is macOS 10.12 Sierra or newer.
Example:

MsgBox str(SystemInformationMBS.isSierra)

Notes:

Returns true on Mac OS X 10.12.
If orHigher is set, it will also return true on 10.13.

170.6.26 isSnowLeopard(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.6 Snow Leopard or newer.
Example:

MsgBox str(SystemInformationMBS.isSnowLeopard)

Notes: Returns true on Mac OS X 10.6 or newer.

170.6.27 IsTranslated as Integer

MBS Util Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries whether application is translated on Apple Silicon Macs.
Notes:

Returns 1 if Intel code gots translated to ARM code.
Returns 0 for a native ARM application.
Returns -1 if unknown.

170.6.28 isWindows10(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 10.
Example:

msgbox str(SystemInformationMBS.isWindows10)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/8.1.
If orHigher, than it returns true if OS Version is newer.

170.6.29 isWindows2000(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 2000.
Example:

msgbox str(SystemInformationMBS.isWindows2000)

Notes:

And False on Mac OS X, Linux, Windows 7/XP/Vista/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

170.6.30 isWindows7(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 10.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 7.
Example:

msgbox str(SystemInformationMBS.isWindows7)

Notes:

And False on Mac OS X, Linux, Windows Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

170.6.31 isWindows8(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 8.
Example:

msgbox str(SystemInformationMBS.isWindows8)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

170.6.32 isWindows81(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows 8.1
Example:

msgbox str(SystemInformationMBS.isWindows81)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/XP/2000/ME/98/95/8/10.
If orHigher, than it returns true if OS Version is newer.

170.6.33 isWindowsVista(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows Vista.
Example:

msgbox str(SystemInformationMBS.isWindowsVista)

Notes:

And False on Mac OS X, Linux, Windows 7/XP/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

170.6.34 isWindowsXP(orHigher as boolean = false) as Boolean

MBS Util Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns true if called on Windows XP.
Example:

msgbox str(SystemInformationMBS.isWindowsXP)

Notes:

And False on Mac OS X, Linux, Windows 7/Vista/2000/ME/98/95.
If orHigher, than it returns true if OS Version is newer.

170.6.35 isYosemite(orHigher as boolean = true) as boolean

MBS Util Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the operation system is Mac OS X 10.10 Yosemite or newer.
Example:

MsgBox str(SystemInformationMBS.isYosemite)

Notes: Returns true on Mac OS X 10.10 or newer.

170.6.36 LogicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the size of the logical installed memory.
Example:

msgBox format(SystemInformationMBS.LogicalRAM/1024/1024,"0")+" MB of RAM built in."

Deprecated: This item is deprecated and should no longer be used. **Notes:**

On Mac OS Classic the virtual memory used or the physical memory. The virtual memory includes the memory used for filemapping. You'll have some MB more than you might exspect, because the Mac OS ROM needs for example 3 MB and this is added. So 320 MB physical RAM can lead into 330 MB logical RAM. 320 MB physical plus 1 MB minimum for virtual memory plus 3 MB for the Mac ROM and around 6 MB for some application file mapping.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM.

On Windows the total virtual memory size.
On Linux always 4 GB.

In older plugins this function was named LogicalRAMMBS.

170.6.37 MACAddress as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hardware ethernet address of the first ethernet card.
Example:

msgBox SystemInformationMBS.MACAddress

Notes:

It returns a string with 6 bytes.
Works now with MBS Plugin 2.6 for Mac OS Classic, Carbon inside Classic and Mac OS X, but may not work for a Classic application running on Mac OS X. And may fail on some machines if no OpenTransport is running.

On Windows and Mac OS X you can have multiple ethernet cards and you should use a command line tool with the shell class to find what you need.

For example on Windows:

ipconfig /all

or on Mac OS X:

ifconfig -a

You can replace this function with usage of the NetworkInterface class in newer RB versions.

Added Linux support in version 16.4.

170.6.38 MACAddressString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the hardware ethernet address of the first ethernet card.
Example:

msgBox SystemInformationMBS.MACAddressString

Notes:

Same as MACAddress, but with different format of output.

You can replace this function with usage of the NetworkInterface class in newer RB versions.

The plugin asks on Mac OS X the IOKit framework for the primary ethernet interface. We are not sure what Apple really defines for being the primary one, so let's test it:

- Ethernet on and Airport off ->Ethernet MAC Address
- Ethernet off and Airport on ->Ethernet MAC Address

Added Linux support in version 16.4.

170.6.39 MacBoardID as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries board-id for Mac.
Example:

MsgBox SystemInformationMBS.MacBoardID

Notes: e.g. "Mac-1234567890123456"

170.6.40 MacBugFixVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The BugFix part of the Mac OS version number.
Example:

MsgBox str(SystemInformationMBS.MacBugFixVersion)

Notes: The bug fix system version number; in 10.4.17 this would be the decimal value 17.

170.6.41 MacHasHardwareAcceleratedCoreImage as boolean

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries whether hardware accerlation is used for CoreImage.
Example:

```
if SystemInformationMBS.MacHasHardwareAcceleratedCoreImage then
msgbox "CoreImage should be very fast."
else
msgbox "CoreImage may be slow."
end if
```

Notes: Queries OpenGL whether programmable fragments are supported.

170.6.42 MachineID(flags as Integer = 15) as string

MBS Util Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a Machine ID for the current computer.
Example:

```
// this is how we build it.
dim t as string = "MachineID"+SystemInformationMBS.HardDiscSerial+SystemInformationMBS.MacSeri-
```

```
alNumber+SystemInformationMBS.MacModel+SystemInformationMBS.CPUBrandString

// you could extend it with SystemInformationMBS.WinProductKey

dim m as string = MD5StringMBS(t)

MsgBox "Machine ID: "+SystemInformationMBS.MachineID+EndOfLine+"My Machine ID: "+m
```

Notes:

Returns a 32 byte long hex string with a Machine ID.
Example value: "EE537483656B25996B51B7F4C99F9083".

This ID is based on the results of the MacSerialNumber, MacModel, CPUBrandString and HardDiscSerial functions. If all 4 functions have no value, the result is always "A2254DEF74A74608D76D1BA49BD2E82A". Also the result could change in future if we fix a bug in one of the functions so that the result values differ.

It is not based on the MACAddressString function as your MAC Address can change when switching between wired and wireless networks. Also we do not check the PhysicalRAM as RAM is a typical thing which changes over time.

You can store this value in some prerences/license file and later compare it agains the current value to see if the machine may have changed. In that case ask user to revalidate license, for example by asking for the serial number.

It can happen that 2 PCs have the same MachineID, typical two virtual machines. So this ID is not unique. But it is very likely that two different computers produce different MachineIDs.

Added flags parameter in 14.1:

flagHardDiscSerial	1	Use hard disk serial.
flagMacSerialNumber	2	Use Mac Serial number (on Mac)
flagMacModel	4	Use Mac Model (on Mac)
flagCPUBrandString	8	Use CPU Brand String.
flagWinProductKey	16	Use Product Key (on Windows only)

The Machine ID may be different if one of the components returns a different result. Result may be different in whether app runs as admin or not on Windows.

In Windows 8.1 it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.open time as Xojo will do some things in background when opening first window which block our queries.

170.6.43 MacMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The major Mac OS version number.
Example:

```
// show major version number
MsgBox str(SystemInformationMBS.MacMajorVersion)

// and show all three version numbers together:
MsgBox str(SystemInformationMBS.MacMajorVersion)+"."+str(SystemInformationMBS.MacMinorVersion)+"."+str(SystemInformationMBS.MacBugFixVersion)
```

Notes: The major system version number; in 10.4.17 this would be the decimal value 10.

170.6.44 MacMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: macOS, Targets: All.

Function: The minor Mac OS version number.
Example:

```
MsgBox str(SystemInformationMBS.MacMinorVersion)
```

Notes: The minor system version number; in 10.4.17 this would be the decimal value 4.

170.6.45 MacModel as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Mac model string.
Example:

```
msgbox SystemInformationMBS.MacModel
```

Notes: for example "<powermac7,3>".

170.6.46 MacROMBootVersion as string

MBS Util Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns boot ROM version string.
Example:

MsgBox SystemInformationMBS.MacROMBootVersion

Notes: e.g. "220.270.99.0.0 (iBridge: 16.16.6571.0.0,0)"

170.6.47 MacSerialNumber as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the serial number of your local Mac.
Example:

msgbox SystemInformationMBS.MacSerialNumber

Notes:

May return an empty string in case of an error.
(e.g. when being user on Windows or if the Mac does not know its serialnumber)

170.6.48 MacUUID as string

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the unique identifier for the given Mac.
Example:

msgbox SystemInformationMBS.MacUUID

Notes: Returns "" on any error.

170.6.49 MacVRAMSize as Int64

MBS Util Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries the size of the main video graphics memory size.
Example:

msgbox format(SystemInformationMBS.MacVRAMSize,"0")+" Bytes VRAM."

Notes:

Walks over the list of displays, asks on each display for its VRAM size and returns the first value found.

For some reason this seems not to return more than 256 MB of memory.

170.6.50 OSName as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string to display which OS Version you have.
Example:

msgBox SystemInformationMBS.OSName
' may show: Mac OS X

Notes:

Return values possible:
Windows NT
Windows 2000
Windows XP
Windows Vista
Mac OS
Mac OS X
Linux

and a few other Windows versions like 6.2 alias 8.

In older plugins this function was named OSNameMBS.

170.6.51 OSVersionString as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a string to display which OS Version you have.

Example:

msgBox SystemInformationMBS.OSVersionString
' may show: Mac OS X 10.1.2

Notes:

GetOSVersionStr returns the version string of the OS.
Some Possible values:
"System 7.5.3",
"MacOS 8",
"MacOS 9.1",
"MacOS X 10.4.1",
"Windows NT 3.5",
"Windows 2000 (Service Pack 3)".

In older plugins this function was named OSVersionStrMBS.

170.6.52 PhysicalRAM as Double

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the size of the physical installed memory.
Example:

msgBox format(SystemInformationMBS.PhysicalRAM/1024/1024,"0")+" MB of RAM built in."

Notes:

On old Windows versions some hundred KBs less for DOS.

Result changed from integer to double in plugin version 3.4 to return correct results on 2 GB RAM. In v5.2 changed to return correct values on Macs with more than 4 GB of RAM.

On Windows the total physical memory size.

In older plugins this function was named PhysicalRAMMBS.

170.6.53 ProcessorCount(Mode as Integer = 0) as Integer

MBS Util Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of processors on the target system.
Example:

```
MsgBox _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountDefault ))+" default"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountLogical ))+" logical"
+ EndOfLine + _
str(SystemInformationMBS.ProcessorCount(SystemInformationMBS.kProcessorCountPhysical))+" physical"
```

Notes:

With plugin version 18.0, we added mode parameter. Pass 2 for physical CPU (kProcessorCountPhysical) and 1 for logical CPU count (kProcessorCountLogical) on Mac/Win.

On Windows or Mac OS the number of cores.
On Linux the number of configured CPUs.

Returns 1 on any error.

170.6.54 ShortUsername as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the short name of the current user.
Example:

```
msgbox "Welcome "+SystemInformationMBS.ShortUsername+"!"
```

Notes:

On Linux and Mac OS X the short user name.

On all other cases the same as UserName function.

170.6.55 SystemFont as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the name of the used system font.
Example:

msgbox "You are using the system font "+SystemInformationMBS.SystemFont+"."

Notes:

On Windows the system function returns "System" for our tests. Please tell us if this function is not working for you correct on Windows.

On Linux something like "Sans 10" is returned.

In older plugins this function was named SystemFontMBS.

170.6.56 Username as string

MBS Util Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the name of the current user.
Example:

msgbox "Welcome "+SystemInformationMBS.Username+"!"

Notes:

Code for Multiple User on Mac OS 9 is build in, but I can't test it.

This is tried on Mac OS:
1. Mac OS X Username function.
2. AppleEvent to FileSharing.
3. Mulitple User Username (Mac OS 9)
4. System username from system resource.

In older plugins this function was named UserNameMBS.

170.6.57 WinBuildNumber as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The build number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinBuildNumber)

Notes: For example returns 2600 on Windows XP Build 2600.

170.6.58 WinCSDVersion as string

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string, such as "Service Pack 3", that indicates the latest Service Pack installed on the system.
Example:

MsgBox SystemInformationMBS.WinCSDVersion

Notes:

Shows here "Service Pack 3" on a Windows XP installation.
If no Service Pack has been installed, the string is empty.

170.6.59 WindowsAero as boolean

MBS Util Plugin, Plugin Version: 10.1, Platform: Windows, Targets: All.

Function: Whether Windows is using the Aero Interface?
Example:

msgbox str(SystemInformationMBS.WindowsAero)

Notes: True if aero is used. False if the status is unknown (e.g. on Windows XP) or Aero is not used.

170.6.60 WinMajorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The major version number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinMajorVersion)

Notes: Returns 5 on Windows 2000/XP and 6 on Windows Vista/7/8.

170.6.61 WinMinorVersion as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minor version number of the operating system.
Example:

MsgBox str(SystemInformationMBS.WinMinorVersion)

Notes: Returns 0 on Windows 2000/Vista and 1 on Windows XP/7 and 2 on Windows 8.

170.6.62 WinPlatformId as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The operating system platform.
Example:

MsgBox str(SystemInformationMBS.WinPlatformId)

Notes:

This member can be VER_PLATFORM_WIN32_NT (2).
e.g. 2 on Windows XP.

170.6.63 WinProductKey as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the product key of the Windows installation.
Notes: Returns "" on any error.
See also:

- 170.6.64 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string 23090

170.6.64 WinProductKey(path as string, name as string, keyStartIndex as Integer = 52) as string

MBS Util Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the product key of the Windows installation.
Notes:

Returns "" on any error.
With the right path and name you can read also the office versions.

For Office 10, it looks like you need to use 808 as offset.
See also:

- 170.6.63 WinProductKey as string 23089

170.6.65 WinProductType as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Any additional information about the system.
Example:

MsgBox str(SystemInformationMBS.WinProductType)

Notes:

e.g. 1 on Windows XP.

This member can be one of the following values:

VER_NT_DOMAIN_CONTROLLER	2	The system is a domain controller and the operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server.
VER_NT_SERVER	3	The operating system is Windows Server 2008, Windows Server 2003, or Windows 2000 Server. Note that a server that is also a domain controller is reported as VER_NT_DOMAIN_CONTROLLER, not VER_NT_SERVER.
VER_NT_WORKSTATION	1	The operating system is Windows Vista, Windows XP Professional, Windows XP Home Edition, or Windows 2000 Professional.

170.6.66 WinServicePackMajor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The major version number of the latest Service Pack installed on the system.
Example:

MsgBox str(SystemInformationMBS.WinServicePackMajor)

Notes: For example, for Service Pack 3, the major version number is 3. If no Service Pack has been installed, the value is zero.

170.6.67 WinServicePackMinor as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minor version number of the latest Service Pack installed on the system.
Example:

MsgBox str(SystemInformationMBS.WinServicePackMinor)

Notes: For example, for Service Pack 3, the minor version number is 0.

170.6.68 WinSuiteMask as Integer

MBS Util Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A bit mask that identifies the product suites available on the system.
Example:

MsgBox str(SystemInformationMBS.WinSuiteMask)

Notes:

e.g. 256 on Windows XP.

This member can be a combination of the following values.

VER_SUITE_BACKOFFICE	4	Microsoft BackOffice components are installed.
VER_SUITE_BLADE	& h0400	Windows Server 2003, Web Edition is installed.
VER_SUITE_COMPUTE_SERVER	& h4000	Windows Server 2003, Compute Cluster Edition is installed.
VER_SUITE_DATACENTER	& h0080	Windows Server 2008 Datacenter, Windows Server 2003, Datacenter Edition, or Windows 2000 Datacenter Server is installed.
VER_SUITE_ENTERPRISE	2	Windows Server 2008 Enterprise, Windows Server 2003, Enterprise Edition, or Windows 2000 Advanced Server is installed. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_EMBEDDEDNT	& h0040	Windows XP Embedded is installed.
VER_SUITE_PERSONAL	& h0200	Windows Vista Home Premium, Windows Vista Home Basic, or Windows XP Home Edition is installed.
VER_SUITE_SINGLEUSERTS	& h0100	Remote Desktop is supported, but only one interactive session is supported. This value is set unless the system is running in application server mode.
VER_SUITE_SMALLBUSINESS	1	Microsoft Small Business Server was once installed on the system, but may have been upgraded to another version of Windows. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_SMALLBUSINESS_RESTRICTED	& h0020	Microsoft Small Business Server is installed with the restrictive client license in force. Refer to the Remarks section for more information about this bit flag.
VER_SUITE_STORAGE_SERVER	& h2000	Windows Storage Server 2003 R2 or Windows Storage Server 2003is installed.
VER_SUITE_TERMINAL	& h0010	Terminal Services is installed. This value is always set. If VER_SUITE_TERMINAL is set but VER_SUITE_SINGLEUSERTS is not set, the system is running in application server mode.
VER_SUITE_WH_SERVER	& h8000	Windows Home Server is installed.

170.6.69 Constants

170.6.70 kProcessorCountDefault = 0

MBS Util Plugin, Plugin Version: 13.0.

Function: One of the mode values for ProcessorCount function.
Notes: Default behavior.

170.6.71 kProcessorCountLogical = 1

MBS Util Plugin, Plugin Version: 13.0.

Function: One of the mode values for ProcessorCount function.
Notes: Logical Processors

170.6.72 kProcessorCountPhysical = 2

MBS Util Plugin, Plugin Version: 13.0.

Function: One of the mode values for ProcessorCount function.
Notes: Physical Processors

Chapter 171

SystemConfiguration

171.1 class SCNetworkReachabilityMBS

171.1.1 class SCNetworkReachabilityMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class to check network reachability.
Notes:

The SCNetworkReachability class allow an application to determine the status of a system's current network configuration and the reachability of a target host. In addition, the reachability can be monitored with a notification being provided when/if the status has changed.

The term "reachable" reflects whether a data packet, sent by an application into the network stack, can be sent to the the target host/address. Please note that there is no guarantee that the data packet will actually be received by the host.

Requires Mac OS X 10.3 or newer.
Subclass of the CFObjectMBS class.

171.1.2 Methods

171.1.3 CreateWithAddress(ip as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network address.
Notes: Returns true on success.

171.1.4 CreateWithAddressPair(LocalIP as string, RemoteIP as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network address.
Notes:

Returns true on success.
LocalIP: The local address associated with a network connection.
RemoteIP: The remote address associated with a network connection.
One of the IP addresses can be empty.

171.1.5 CreateWithName(name as string) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a reference to the specified network host/node name.
Notes: Returns true on success.

171.1.6 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an error string for a given SC Error Code.
Notes: A utility function which works at any time.

171.1.7 Properties

171.1.8 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the last error code.
Notes:

A utility function which works with all SystemConfiguration methods.

(Read only property)

kSCStatusOK	= 0	Success
kSCStatusFailed	= 1001	Non-specific failure
kSCStatusInvalidArgument	= 1002	Invalid argument
kSCStatusAccessError	= 1003	Permission denied - must be root to obtain lock - could not create access/create preferences
kSCStatusNoKey	= 1004	No such key
kSCStatusKeyExists	= 1005	Key already defined
kSCStatusLocked	= 1006	Lock already held
kSCStatusNeedLock	= 1007	Lock required for this operation
kSCStatusNoStoreSession	= 2001	Configuration daemon session not active
kSCStatusNoStoreServer	= 2002	Configuration daemon not (no longer) available
kSCStatusNotifierActive	= 2003	Notifier is currently active
kSCStatusNoPrefsSession	= 3001	Preference session not active
kSCStatusPrefsBusy	= 3002	Preferences update currently in progress
kSCStatusNoConfigFile	= 3003	Configuration file not found
kSCStatusNoLink	= 3004	No such link
kSCStatusStale	= 3005	Write attempted on stale version of object
kSCStatusMaxLink	= 3006	Maximum link count exceeded
kSCStatusReachabilityUnknown	= 4001	Network reachability cannot be determined

171.1.9 Flags as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given target is reachable using the current network configuration.
Notes:

Returns 0 on any error.
See the event for the flag constants.
(Read only property)

171.1.10 Events

171.1.11 Changed(flags as Integer)

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: .

Function: The reachability changed.
Notes:

useful constants:

Flags that indicate whether the specified network
nodename/address is reachable, requires a connection,
requires some user intervention in establishing the
connection, and whether the calling application must
initiate the connection using the (TBD???) API.

kSCNetworkFlagsTransientConnection	= 1
kSCNetworkFlagsReachable	= 2
kSCNetworkFlagsConnectionRequired	= 4
kSCNetworkFlagsConnectionAutomatic	= 8
kSCNetworkFlagsInterventionRequired	= 5
kSCNetworkFlagsIsLocalAddress	= 65536
kSCNetworkFlagsIsDirect	= 131072

kSCNetworkFlagsTransientConnection
This flag indicates that the specified nodename/address can be reached via a transient (e.g. PPP) connection.

kSCNetworkFlagsReachable
This flag indicates that the specified nodename/address can be reached using the current network configuration.

kSCNetworkFlagsConnectionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established.

As an example, this status would be returned for a dialup connection that was not currently active but could handle network traffic for the target system.

kSCNetworkFlagsConnectionAutomatic
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. Any traffic directed to the specified name/address will initiate the connection.

kSCNetworkFlagsInterventionRequired
This flag indicates that the specified nodename/address can be reached using the current network configuration but a connection must first be established. In addition, some form of user intervention will be required to establish this connection (e.g. providing a password, authentication token, etc.).

kSCNetworkFlagsIsLocalAddress
This flag indicates that the specified nodename/address is one associated with a network interface on the current system.

kSCNetworkFlagsIsDirect
This flag indicates that network traffic to the specified nodename/address will not go through a gateway but is routed directly to one of the interfaces in the system.

171.2 class SCPreferencesMBS

171.2.1 class SCPreferencesMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for System Configuration Preferences.
Notes:

Please remember that you may need root access to change something.

The SCPreferences classes allow an application to load and store XML configuration data in a controlled manner and provide the necessary notifications to other applications that need to be aware of configuration changes.

The stored XML configuration data is accessed using a prefsID. A
nil value indicates that the default system preferences are to be accessed.
A string which starts with a leading "/" character specifies the path to the file containing te preferences to be accessed. A string which does not start with a leading "/" character specifies a file relative to the default system preferences directory.

The Path APIs make certain assumptions about the layout of the preferences data. These APIs view the data as a collection of dictionaries of key/value pairs and an associated path name. The root path ("/") identifies the top-level dictionary. Additional path components specify the keys for sub-dictionaries.

For example, the following dictionary can be accessed via two paths. The root ("/") path would return a dictionary with all keys and values. The path "/path1" would only return the dictionary with the "key3" and "key4" properties.

```
<dict>
<key>key1</key>
<string>val1</string>
<key>key2</key>
<string>val2</string>
<key>path1</key>
<dict>
<key>key3</key>
<string>val3</string>
<key>key4</key>
<string>val4</string>
</dict>
</dict>
```

Each dictionary can also include the kSCResvLink key. The value associated with this key is interpreted as

a "link" to another path. If this key is present, a call to the GetPathValue() API will return the dictionary specified by the link.
Subclass of the CFObjectMBS class.

171.2.2 Blog Entries

- MBS Xojo Plugins, version 20.5pr4
- MBS Real Studio Plugins, version 12.5pr7

171.2.3 Methods

171.2.4 AddValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Adds data for a preference key.
Notes:

This function associates new data with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was added; false if the key already exists or if an error occurred.

171.2.5 ApplyChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Requests that the currently stored configuration preferences be applied to the active configuration.
Notes: Returns true if the lock was obtained; false if an error occurred.

171.2.6 CommitChanges as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Commits changes made to the configuration preferences to persitent storage.
Notes:

This function commits any changes to permanent storage. An implicit call to Lock/Unlock will be made if exclusive access has not already been established.

Note: This routine commits changes to persistent storage. Call ApplyChanges to apply the changes to the running system.

Returns true if the lock was obtained; false if an error occurred.

171.2.7 Create(name as CFStringMBS, prefid as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Initiates access to the per-system set of configuration preferences.
Notes:

name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.

171.2.8 CreateUniquePathChild(prefix as CFStringMBS) as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Creates a new path component within the dictionary hierarchy.
Notes:

prefix: A string that represents the parent path.
Returns a string representing the new (unique) child path; nil if the specified path does not exist.

171.2.9 CreateWithAuthorization(name as CFStringMBS, prefid as CFStringMBS, AuthorizationHandle as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 12.5, Platform: macOS, Targets: All.

Function: Initiates access to the per-system set of configuration preferences.
Notes:

name: A string that describes the name of the calling process.
prefsID: A string that identifies the name of the group of preferences to be accessed/updated.
AuthorizationHandle: Handle to authorization object for root access.

171.2.10 ErrorString(errorcode as Integer) as string

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an error string for a given SC Error Code.
Notes: A utility function which works at any time.

171.2.11 GetPathLink(path as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the link (if one exists) associated with the specified path.
Notes:

path: A string that represents the path to be returned.
The dictionary associated with the specified path; nil if the path is not a link or does not exist.

171.2.12 GetPathValue(path as CFStringMBS) as CFDictionaryMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the dictionary associated with the specified path.
Notes:

path: A string that represents the path to be returned.
Returns the dictionary associated with the specified path; nil if the path does not exist.

171.2.13 GetValue(key as CFStringMBS) as CFObjectMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the data associated with a preference key.
Notes:

This function retrieves data associated with a key for the prefsID.

You could read stale data and not know it, unless you first call Lock.

Returns the value associated with the specified preference key; If no value was located, nil is returned.

171.2.14 KeyList as CFArrayMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns an array of currently defined preference keys.

Notes: Returns nil on any error.

171.2.15 Lock(wait as boolean) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Locks access to the configuration preferences.
Notes:

This function obtains exclusive access to the configuration preferences associated with this prefsID. Clients attempting to obtain exclusive access to the preferences will either receive an kSCStatusPrefsBusy error or block waiting for the lock to be released.

wait: A boolean flag indicating whether the calling process should block waiting for another process to complete its update operation and release its lock.

Returns true if the lock was obtained; false if an error occurred.

171.2.16 RemovePathValue(path as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes the data associated with the specified path.
Notes:

path: A string that represents the path to be returned.
Returns a boolean indicating the success (or failure) of the call.

171.2.17 RemoveValue(key as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Removes the data associated with a preference key.
Notes:

This function removes the data associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was removed; false if the key did not exist or if an error occurred.

171.2.18 SetComputerName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the computer/host name in the system preferences.
Notes:

In order to commit these changes to permanent storage a call must be made to CommitChanges.
A call to ApplyChanges is also required for the new name to become active.
A boolean indicating the success (or failure) of the call.

171.2.19 SetLocalHostName(name as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the local host name in the system preferences.
Notes:

In order to commit these changes to permanent storage a call must be made to CommitChanges.

A call to ApplyChanges is also required for the new name to become active.

171.2.20 SetPathLink(path as CFStringMBS, link as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Associates a link to a second dictionary at the specified path.
Notes:

path: A string that represents the path to be updated.
link: A string that represents the link to be stored at the specified path.
Returns a boolean indicating the success (or failure) of the call.

171.2.21 SetPathValue(path as CFStringMBS, value as CFDictionaryMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Associates a dictionary with the specified path.
Notes:

path: A string that represents the path to be updated.
value: A dictionary that represents the data to be stored at the specified path.

Returns a boolean indicating the success (or failure) of the call.

171.2.22 SetValue(key as CFStringMBS, value as CFObjectMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Updates the data associated with a preference key.
Notes:

This function adds or replaces the value associated with the specified key. In order to commit these changes to permanent storage a call must be made to CommitChanges.

Returns true if the value was set; false if an error occurred.

171.2.23 Signature as CFBinaryDataMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns a sequence of bytes that can be used to determine if the saved configuration preferences have changed.
Notes: A CFBinaryDataMBS that reflects the signature of the configuration preferences at the time of the call to Create.

171.2.24 Unlock as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Releases exclusive access to the configuration preferences.
Notes:

This function releases the exclusive access "lock" for this prefsID. Other clients will be now be able to establish exclusive access to the preferences.

Returns true if the lock was obtained; false if an error occurred.

171.2.25 Properties

171.2.26 Available as Boolean

MBS MacCF Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes:

Returns true on macOS.
(Read only property)

171.2.27 Error as Integer

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Returns the last error code.
Notes:

A utility function which works with all SystemConfiguration methods.

kSCStatusOK	= 0	Success
kSCStatusFailed	= 1001	Non-specific failure
kSCStatusInvalidArgument	= 1002	Invalid argument
kSCStatusAccessError	= 1003	Permission denied - must be root to obtain lock - could not create access/create preferences
kSCStatusNoKey	= 1004	No such key
kSCStatusKeyExists	= 1005	Key already defined
kSCStatusLocked	= 1006	Lock already held
kSCStatusNeedLock	= 1007	Lock required for this operation
kSCStatusNoStoreSession	= 2001	Configuration daemon session not active
kSCStatusNoStoreServer	= 2002	Configuration daemon not (no longer) available
kSCStatusNotifierActive	= 2003	Notifier is currently active
kSCStatusNoPrefsSession	= 3001	Preference session not active
kSCStatusPrefsBusy	= 3002	Preferences update currently in progress
kSCStatusNoConfigFile	= 3003	Configuration file not found
kSCStatusNoLink	= 3004	No such link
kSCStatusStale	= 3005	Write attempted on stale version of object
kSCStatusMaxLink	= 3006	Maximum link count exceeded
kSCStatusReachabilityUnknown	= 4001	Network reachability cannot be determined

(Read only property)

171.3 Globals

171.3.1 kSCNetworkReachabilityMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns the CoreFoundation TypeID for SCNetworkReachability.

171.3.2 kSCPreferencesMBSTypeID as Integer

MBS MacCF Plugin, Plugin Version: 12.4, Platform: macOS, Targets: All.

Function: Returns the CoreFoundation TypeID for SCPreferences.

171.4 class SystemConfigurationMBS

171.4.1 class SystemConfigurationMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: A class for the global System Configuration framework functions.
Notes: See the file "SCSchemaDefinitions.h" for details on the constants.

171.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.1pr1
- Need Proxy Settings?

171.4.3 Methods

171.4.4 ComputerName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current computer name.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.ComputerName
```

Notes: Returns "" on an error.

171.4.5 ComputerNameEncoding as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The encoding of the computer name.

171.4.6 ConsoleUser as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the name of the currently logged-in user.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.ConsoleUser
```

Notes: Returns the user currently logged into the system; "" if no user is logged in or if an error was encountered.

171.4.7 ConsoleUserGID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the group ID of the currently logged-in user.
Notes: The group ID of the current console user.

171.4.8 ConsoleUserUID as Integer

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the user ID of the currently logged-in user.
Notes: The user ID of the current console user.

171.4.9 kSCCompAnyRegex as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.10 kSCCompGlobal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.11 kSCCompHostNames as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.12 kSCCompInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.13 kSCCompNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.14 kSCCompService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.15 kSCCompSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.16 kSCCompUsers as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.17 kSCDynamicStoreDomainFile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.18 kSCDynamicStoreDomainPlugin as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.19 kSCDynamicStoreDomainPrefs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.20 kSCDynamicStoreDomainSetup as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.21 kSCDynamicStoreDomainState as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.22 kSCDynamicStorePropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.23 kSCDynamicStorePropNetPrimaryInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.24 kSCDynamicStorePropNetPrimaryService as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.25 kSCDynamicStorePropNetServiceIDs as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.26 kSCDynamicStorePropSetupCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.27 kSCDynamicStorePropSetupLastUpdated as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.28 kSCEntNet6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.29 kSCEntNetAirPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.30 kSCEntNetDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.31 kSCEntNetDNS as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.32 kSCEntNetEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.33 kSCEntNetFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.34 kSCEntNetInterface as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.35 kSCEntNetIPv4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.36 kSCEntNetIPv6 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.37 kSCEntNetL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.38 kSCEntNetLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.39 kSCEntNetModem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.40 kSCEntNetPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.41 kSCEntNetPPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.42 kSCEntNetPPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.43 kSCEntNetPPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.44 kSCEntNetProxies as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.45 kSCEntUsersConsoleUser as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.46 kSCPrefCurrentSet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.47 kSCPrefNetworkServices as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.48 kSCPrefSets as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.49 kSCPrefSystem as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.50 kSCPropInterfaceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.51 kSCPropMACAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.52 kSCPropNet6to4Relay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.53 kSCPropNetAirPortAllowNetCreation as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.54 kSCPropNetAirPortAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.55 kSCPropNetAirPortAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.56 kSCPropNetAirPortJoinMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.57 kSCPropNetAirPortPowerEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.58 kSCPropNetAirPortPreferredNetwork as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.59 kSCPropNetAirPortSavePasswords as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.60 kSCPropNetDNSDomainName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.61 kSCPropNetDNSSearchDomains as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.62 kSCPropNetDNSServerAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.63 kSCPropNetDNSSortList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.64 kSCPropNetEthernetMediaOptions as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.65 kSCPropNetEthernetMediaSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.66 kSCPropNetEthernetMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.67 kSCPropNetInterfaceDeviceName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.68 kSCPropNetInterfaceHardware as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.69 kSCPropNetInterfaces as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.70 kSCPropNetInterfaceSubType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.71 kSCPropNetInterfaceSupportsModemOnHold as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.72 kSCPropNetInterfaceType as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.73 kSCPropNetIPv4Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.74 kSCPropNetIPv4BroadcastAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.75 kSCPropNetIPv4ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.76 kSCPropNetIPv4DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.77 kSCPropNetIPv4DHCPClientID as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.78 kSCPropNetIPv4Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.79 kSCPropNetIPv4SubnetMasks as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.80 kSCPropNetIPv6Addresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.81 kSCPropNetIPv6ConfigMethod as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.82 kSCPropNetIPv6DestAddresses as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.83 kSCPropNetIPv6Flags as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.84 kSCPropNetIPv6PrefixLength as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.85 kSCPropNetIPv6Router as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.86 kSCPropNetL2TPIPSecSharedSecret as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.87 kSCPropNetL2TPIPSecSharedSecretEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.88 kSCPropNetL2TPTransport as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.89 kSCPropNetLinkActive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.90 kSCPropNetLinkDetaching as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.91 kSCPropNetLocalHostName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.92 kSCPropNetModemConnectionScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.93 kSCPropNetModemConnectSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.94 kSCPropNetModemDataCompression as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.95 kSCPropNetModemDialMode as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.96 kSCPropNetModemErrorCorrection as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.97 kSCPropNetModemHoldCallWaitingAudibleAlert as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.98 kSCPropNetModemHoldDisconnectOnAnswer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.99 kSCPropNetModemHoldEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.100 kSCPropNetModemHoldReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.101 kSCPropNetModemHoldReminderTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.102 kSCPropNetModemNote as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.103 kSCPropNetModemPulseDial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.104 kSCPropNetModemSpeaker as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.105 kSCPropNetModemSpeed as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.106 kSCPropNetOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.107 kSCPropNetPPPACSPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.108 kSCPropNetPPPAuthEAPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.109 kSCPropNetPPPAuthName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.110 kSCPropNetPPPAuthPassword as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.111 kSCPropNetPPPAuthPasswordEncryption as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.112 kSCPropNetPPPAuthPrompt as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.113 kSCPropNetPPPAuthProtocol as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.114 kSCPropNetPPPCCPEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.115 kSCPropNetPPPCommAlternateRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.116 kSCPropNetPPPCommConnectDelay as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.117 kSCPropNetPPPCommDisplayTerminalWindow as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.118 kSCPropNetPPPCommRedialCount as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.119 kSCPropNetPPPCommRedialEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.120 kSCPropNetPPPCommRedialInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.121 kSCPropNetPPPCommRemoteAddress as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.122 kSCPropNetPPPCommTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.123 kSCPropNetPPPCommUseTerminalScript as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.124 kSCPropNetPPPConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.125 kSCPropNetPPPDeviceLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.126 kSCPropNetPPPDialOnDemand as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.127 kSCPropNetPPPDisconnectOnIdle as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.128 kSCPropNetPPPDisconnectOnIdleTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.129 kSCPropNetPPPDisconnectOnLogout as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.130 kSCPropNetPPPDisconnectOnSleep as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.131 kSCPropNetPPPDisconnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.132 kSCPropNetPPPIdleReminder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.133 kSCPropNetPPPIdleReminderTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.134 kSCPropNetPPPIPCPCompressionVJ as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.135 kSCPropNetPPPLastCause as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.136 kSCPropNetPPPLCPCompressionACField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.137 kSCPropNetPPPLCPCompressionPField as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.138 kSCPropNetPPPLCPEchoEnabled as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.139 kSCPropNetPPPLCPEchoFailure as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.140 kSCPropNetPPPLCPEchoInterval as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.141 kSCPropNetPPPLCPMRU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.142 kSCPropNetPPPLCPMTU as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.143 kSCPropNetPPPLCPReceiveACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.144 kSCPropNetPPPLCPTransmitACCM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.145 kSCPropNetPPPLogfile as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.146 kSCPropNetPPPOverridePrimary as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.147 kSCPropNetPPPPlugins as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.148 kSCPropNetPPPRetryConnectTime as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.149 kSCPropNetPPPSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.150 kSCPropNetPPPStatus as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.151 kSCPropNetPPPUseSessionTimer as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.152 kSCPropNetPPPVerboseLogging as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.153 kSCPropNetProxiesExceptionsList as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.154 kSCPropNetProxiesFTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.155 kSCPropNetProxiesFTPPassive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.156 kSCPropNetProxiesFTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.157 kSCPropNetProxiesFTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.158 kSCPropNetProxiesGopherEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.159 kSCPropNetProxiesGopherPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.160 kSCPropNetProxiesGopherProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.161 kSCPropNetProxiesHTTPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.162 kSCPropNetProxiesHTTPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.163 kSCPropNetProxiesHTTPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.164 kSCPropNetProxiesHTTPSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.165 kSCPropNetProxiesHTTPSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.166 kSCPropNetProxiesHTTPSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.167 kSCPropNetProxiesRTSPEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.168 kSCPropNetProxiesRTSPPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.169 kSCPropNetProxiesRTSPProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.170 kSCPropNetProxiesSOCKSEnable as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.171 kSCPropNetProxiesSOCKSPort as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.172 kSCPropNetProxiesSOCKSProxy as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.173 kSCPropNetServiceOrder as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.174 kSCPropSystemComputerName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.175 kSCPropSystemComputerNameEncoding as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.176 kSCPropUserDefinedName as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.177 kSCPropVersion as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.178 kSCResvInactive as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.
Notes: Value should be "___INACTIVE___"

171.4.179 kSCResvLink as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.
Notes: Value should be "___LINK___"

171.4.180 kSCValNetAirPortAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.181 kSCValNetAirPortJoinModeAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.182 kSCValNetAirPortJoinModePreferred as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.183 kSCValNetAirPortJoinModeRecent as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.184 kSCValNetAirPortJoinModeStrongest as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.185 kSCValNetInterfaceSubTypeL2TP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.186 kSCValNetInterfaceSubTypePPPoE as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.187 kSCValNetInterfaceSubTypePPPSerial as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.188 kSCValNetInterfaceSubTypePPTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.189 kSCValNetInterfaceType6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.190 kSCValNetInterfaceTypeEthernet as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.191 kSCValNetInterfaceTypeFireWire as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.192 kSCValNetInterfaceTypePPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.193 kSCValNetIPv4ConfigMethodBOOTP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.194 kSCValNetIPv4ConfigMethodDHCP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.195 kSCValNetIPv4ConfigMethodINFORM as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.196 kSCValNetIPv4ConfigMethodLinkLocal as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.197 kSCValNetIPv4ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.198 kSCValNetIPv4ConfigMethodPPP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.199 kSCValNetIPv6ConfigMethod6to4 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.200 kSCValNetIPv6ConfigMethodAutomatic as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.201 kSCValNetIPv6ConfigMethodManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.202 kSCValNetIPv6ConfigMethodRouterAdvertisement as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.203 kSCValNetL2TPIPSecSharedSecretEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.204 kSCValNetL2TPTransportIP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.205 kSCValNetL2TPTransportIPSec as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.206 kSCValNetModemDialModeIgnoreDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.207 kSCValNetModemDialModeManual as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.208 kSCValNetModemDialModeWaitForDialTone as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.209 kSCValNetPPPAuthPasswordEncryptionKeychain as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.210 kSCValNetPPPAuthPromptAfter as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.211 kSCValNetPPPAuthPromptBefore as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.212 kSCValNetPPPAuthProtocolCHAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.213 kSCValNetPPPAuthProtocolEAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.214 kSCValNetPPPAuthProtocolMSCHAP1 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.215 kSCValNetPPPAuthProtocolMSCHAP2 as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.216 kSCValNetPPPAuthProtocolPAP as CFStringMBS

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Just a constant for the System Configuation API functions.

171.4.217 LocalHostName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current local host name.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.LocalHostName
```

Notes: Returns the current local host name; "" if the name has not been set or if an error was encountered.

171.4.218 Location as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: Gets the current location identifier.
Example:

```
dim s as new SystemConfigurationMBS
msgbox s.Location
```

Notes: Returns a string representing the current location identifier; "" if no location identifier has been defined or if an error was encountered.

171.4.219 MachineName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The local machine name.

171.4.220 NetworkCheckReachabilityByAddress(ip as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given network address is reachable using the current network configuration.
Notes:

address: The network address of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified address.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

171.4.221 NetworkCheckReachabilityByName(nodename as string, byref flags as Integer) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Determines if the given network host/node name is reachable using the current network configuration.
Notes:

nodename: The node name of the desired host.
flags: An integer that will be filled with a set of SCNetworkConnectionFlags detailing the reachability of the specified node name.
Returns true if the network connection flags are valid; false if the status could not be determined.
(see the SCNetworkReachabilityMBS class for more details)

171.4.222 NetworkInterfaceRefreshConfiguration(ifname as CFStringMBS) as boolean

MBS MacCF Plugin, Plugin Version: 4.2, Platform: macOS, Targets: All.

Function: Sends a notification to interested configuration agents to have them immediately retry their configuration over a particular network interface.
Notes:

This API must be invoked by root (uid == 0).
ifName: The BSD name of the network interface e.g. NewCFStringMBS("en0").
Returns true if the notification was sent; false otherwise.

171.4.223 ShortUserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The short user name.

171.4.224 UserName as string

MBS MacCF Plugin, Plugin Version: 7.8, Platform: macOS, Targets: All.

Function: The user name.
Notes: The function UserName returns a string based on the read UID (RUID, as returned by getuid) of the calling process. This can result in unexpected behavior (that is, Name returning different results than ConsoleUser) for processes that manipulate their UID.

Chapter 172

Tapi

172.1 class ITAddressMBS

172.1.1 class ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an address.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

172.1.2 Methods

172.1.3 Calls as ITCallInfoMBS()

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an array of calls currently active on the address.
Notes: Sets lasterror property.

172.1.4 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

172.1.5 CreateCall(DestAddress as string = """, AddressType as Integer = 1, MediaTypes as Integer = 0) as TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new call.
Notes:

Creates a new Call object that can be used to make an outgoing call and returns a TAPICallControlMBS object. The newly created call is in the StateIdle state and has no media or terminals selected.

See also MediaTypes and LineAddressType constants.

172.1.6 Properties

172.1.7 AddressName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the displayable name of the address.
Notes:

Returns the containing a displayable address name.
Sets lasterror property.
(Read only property)

172.1.8 DialableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the text which can be used to connect to this address.
Notes:

The text corresponds to the destination address string that another application would use to connect to this address, such as a phone number or an e-mail name.
You can use this address with the CreateCall method.
Sets lasterror property.
(Read only property)

172.1.9 DoNotDisturb as Boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current status of the do not disturb feature on the address.
Notes:

The do not disturb feature may not be available on all addresses.
If true, the do not disturb feature has been activated. If false, the do not disturb feature is not active.
Sets lasterror property.
(Read and Write property)

172.1.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITAddress* pointer.
(Read and Write property)

172.1.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

172.1.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

172.1.13 MessageWaiting as Boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines if the address has a message waiting.
Notes:

Returns true if a message is waiting; false, if no message is waiting.
Sets lasterror property.
(Read and Write property)

172.1.14 ServiceProviderName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the Telephony Service Provider (TSP) that supports this address.
Notes:

For example, Unimdm.tsp for the Unimodem service provider or H323.tsp for the H323 service provider.
Sets lasterror property.
(Read only property)

172.1.15 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current state of the address.
Notes:

Sets lasterror property.
Can be StateInService or StateOutOfService.
(Read only property)

172.1.16 Constants

172.1.17 LineAddressTypeDomainName = 8

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is a domain name.

172.1.18 LineAddressTypeEmailName = 4

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is an e-mail name.

172.1.19 LineAddressTypeIPAddress = 16

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is an IP address.

172.1.20 LineAddressTypePhoneNumber = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is a standard phone number.

172.1.21 LineAddressTypeSDP = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the line address types.
Notes: Address type is Session Description Protocol (SDP) conference.

172.1.22 MediaTypeAudio = 8

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: An audio media stream that is entering or leaving the computer. An entering media stream would typically be played on speakers, or sent to a handset device and a leaving stream would typically be captured through a microphone or handset device.

172.1.23 MediaTypeDataModem = 16

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A data media stream that is associated with a data modem.

172.1.24 MediaTypeG3Fax = 32

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A data media stream that is associated with a G3 protocol fax.

172.1.25 MediaTypeMultiTrack = & h10000

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A stream is on a multitrack terminal.

172.1.26 MediaTypeVideo = & h8000

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the media types.
Notes: A video media stream that is entering or leaving the computer. An entering media stream would typically be rendered in a video window and a leaving media stream would typically be captured with a video camera.

172.1.27 StateInService = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the address state constants.
Notes: Normal state; the address can be used.

172.1.28 StateOutOfService = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the address state constants.
Notes: The address is temporarily out of service, but may go back into service at some time.

172.2 class ITCallInfoMBS

172.2.1 class ITCallInfoMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for information about a call.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

172.2.2 Methods

172.2.3 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

Lasterror is set.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

172.2.4 Properties

172.2.5 Address as ITAddressMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the address of the call.
Notes:

Lasterror is set.
(Read only property)

172.2.6 CalledIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the called location.
Notes:

Lasterror is set.

(Read only property)

172.2.7 CalledIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the called location.
Notes:

Lasterror is set.
(Read only property)

172.2.8 CalledPartyFriendlyName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The called party friendly name.
Notes:

Lasterror is set.
(Read only property)

172.2.9 CallerIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the caller.
Notes:

Lasterror is set.
(Read only property)

172.2.10 CallerIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the caller.
Notes:

Lasterror is set.
(Read only property)

172.2.11 CallingPartyID as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identifier of the calling party.
Notes:

Lasterror is set.
(Read only property)

172.2.12 Comment as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A comment about the call provided by the application that originated the call. The call state must be StateIdle when setting the comment.
Notes:

Lasterror is set.
(Read only property)

172.2.13 ConnectedIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the connected location.
Notes:

Lasterror is set.
(Read only property)

172.2.14 ConnectedIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the connected location.
Notes:

Lasterror is set.
(Read only property)

172.2.15 DisplayableAddress as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A displayable version of the called or calling address.
Notes:

Lasterror is set.
(Read only property)

172.2.16 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITCallInfo* pointer.
(Read and Write property)

172.2.17 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

172.2.18 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

172.2.19 RedirectingIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the location that redirected the call.
Notes:

Lasterror is set.
(Read only property)

172.2.20 RedirectingIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the location that redirected the call.
Notes:

Lasterror is set.
(Read only property)

172.2.21 RedirectionIDName as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the location to which a call has been redirected.
Notes:

Lasterror is set.
(Read only property)

172.2.22 RedirectionIDNumber as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of the location to which a call has been redirected.
Notes:

Lasterror is set.
(Read only property)

172.2.23 State as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current state call.
Notes:

Can be StateConnected, StateDisconnected, StateHold, StateIdle, StateInProgress, StateOffering or StateQueued.
Lasterror is set.
(Read only property)

172.2.24 Constants

172.2.25 StateConnected = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: Call has been connected to the remote end and communication can take place.

172.2.26 StateDisconnected = 3

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: Call has been disconnected. There are several causes for disconnection. See the table of valid call state transitions below.

172.2.27 StateHold = 5

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: The call is in the hold state.

172.2.28 StateIdle = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: The call has been created, but Connect has not been called yet. A call can never transition into the idle state. This is the initial state for both incoming and outgoing calls.

172.2.29 StateInProgress = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: Connect has been called, and the service provider is working on making a connection. This state is valid only on outgoing calls. This message is optional, because a service provider may have a call transition directly to the connected state.

172.2.30 StateOffering = 4

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: A new call has appeared, and is being offered to an application. If the application has owner privileges on the call, it can either call Answer or Disconnect while the call is in the offering state. Current call privilege can be determined by calling Privilege.

172.2.31 StateQueued = 6

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the state constants.
Notes: The call is queued.

172.3 class TAPICallControlMBS

172.3.1 class TAPICallControlMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The interface used by the application to connect, answer, and perform basic telephony operations on a call object.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

172.3.2 Methods

172.3.3 Answer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: answers an incoming call.
Notes:

This method can succeed only if the call state is StateOffering.
Lasterror is set.

172.3.4 BlindTransfer(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: performs a blind or single-step transfer of the specified call to the specified destination address.
Notes:

The application must be the owner of the call. After a successful transfer, the call state transitions to StateDisconnected.

DestAddress: Text containing destination address for the transfer.
Lasterror is set.

172.3.5 Conference(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a consultation call to the conference in which the current call is a participant.
Notes:

If an associated ITCallHub object does not exist, it is created.

otherCall: The consultation call.
Sync: Indicates whether the call should be conferenced synchronously (true) or asynchronously (false). See Connect method for additional explanation.
Lasterror is set.

172.3.6 Connect(sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Attempts to complete the connection of an outgoing call.
Notes:

Sync: Boolean indicating whether connection is to be performed synchronously (true) or asynchronously (false).

If the call is asynchronous, the application will receive information about the call's progress through the TAPIMBS CallStateChanged event. Connect may return no error, but the actual connection may fail (and the application will be notified through the event).
If the call is synchronous, this method will not return until the call is in the connected state or fails.
Lasterror is set.

To make a call, please find the ITAddressMBS for the line, use CreateCall there. Than use TAPICallControlMBS.Connect here.

172.3.7 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

172.3.8 Dial(DestAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Dials the specified address.
Notes:

DestAddress: Representation of address to be dialed. The format must conform to a standard dialable address.

Lasterror is set.

172.3.9 Disconnect(Mode as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Disconnects the call.
Notes:

The call state will transition to StateDisconnected after the method completes successfully.
Pass DisconnectModeNoAnswer, DisconnectModeNormal or DisconnectModeReject.
Lasterror is set.

172.3.10 Finish(Mode as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Called on a consultation call to finish a conference or a transfer.
Notes:

Pass FinishModeAsConference or FinishModeAsTransfer.
Lasterror is set.

172.3.11 HandoffDirect(ApplicationName as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hands off the call to another application.
Notes:

This indicates that the application no longer requires ownership of the call.

ApplicationName: Text containing the specific application name to hand off call to. Can be full path name or executable name.
Lasterror is set.

172.3.12 HandoffIndirect(MediaType as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hands off the call to another application based on the media type of the call.
Notes:

If multiple applications have registered as able to handle the types involved, TAPI will hand off to the highest-priority application, which is usually the one that registered first.
This indicates that the application no longer requires ownership of the call.

for media types, please check constants in ITAddressMBS class and this website:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx
Lasterror is set.

172.3.13 Hold(hold as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Places or removes the call from the hold.
Notes:

If Hold is true and the method succeeds, the call state transitions to the StateHold state. If Hold is false, the call state transitions to StateConnected.
Lasterror is set.

172.3.14 ParkDirect(ParkAddress as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parks the call at a specified address.
Notes:

ParkAddress: Text containing the address where the call is to be parked.
Lasterror is set.

172.3.15 ParkIndirect as string

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parks the call and returns the parked address.
Notes:

Returns representation of the address where the call was parked.
Lasterror is set.

172.3.16 Pickup(GroupID as String)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Picks up a call alerting at the specified group identification.
Notes:

GroupID: The group identifier to which the alerting station belongs.
Lasterror is set.

172.3.17 RemoveFromConference

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes the call from a conference if it is involved in one.
Notes: Lasterror is set.

172.3.18 SetQOS(MediaType as Integer, ServiceLevel as Integer)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the quality of service level for the call.
Notes:

for media types, please check constants in ITAddressMBS class and this website:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734210(v=vs.85).aspx

Lasterror is set.

172.3.19 SwapHold(otherCall as TAPICallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Swaps the call (which is active) with the specified call on hold.
Notes:

Swapping the active call with the call on consultation hold allows the application to toggle between these two calls. This is typical in call waiting.
OtherCall: Call, currently on hold, that is to be made active.
Lasterror is set.

172.3.20 Transfer(otherCall as TAPICallControlMBS, sync as boolean)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transfers the current call to the destination address.
Notes:

otherCall: Other interface of consultation call created for the transfer.
Sync: Indicates whether the method should be completed synchronously (true) or asynchronously (false).
Lasterror is set.

172.3.21 Unpark

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the call from park.
Notes:

To unpark a call, CreateCall must be called using as the destination address the current parked location of the call.
Lasterror is set.

172.3.22 Properties

172.3.23 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITBasicCallControl* pointer.
(Read and Write property)

172.3.24 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.
(Read and Write property)

172.3.25 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

172.3.26 Constants

172.3.27 DisconnectModeNoAnswer = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the disconnect modes.
Notes:

The call is being disconnected because it has not been answered.
(For example, an application may set a certain amount of time for the user to answer the call. If the user does not answer, the application can call Disconnect with the NOANSWER code.)
Lasterror is set.

172.3.28 DisconnectModeNormal = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the disconnect modes.
Notes:

The call is being disconnected as part of the normal cycle of the call.
Lasterror is set.

172.3.29 DisconnectModeReject = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the disconnect modes.
Notes:

The user rejected the offered call.
Lasterror is set.

172.3.30 FinishModeAsConference = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the finish mode constants.
Notes:

A call is being added to a conference call.
Lasterror is set.

172.3.31 FinishModeAsTransfer = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the finish mode constants.
Notes:

A call transfer is being finished.
Lasterror is set.

172.3.32 QualityOfServerLevelBestEffort = 2

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the QOS level constants.
Notes: Quality of service level desired is "best effort".

172.3.33 QualityOfServerLevelIfAvailable = 1

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the QOS level constants.
Notes: Quality of service level desired if available.

172.3.34 QualityOfServerLevelNeeded = 0

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the QOS level constants.
Notes: Quality of service level required.

172.4 class TAPIMBS

172.4.1 class TAPIMBS

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The central class for TAPI.
Notes: MBS Plugin implements TAPI (telephone API) on Windows to catch incoming calls, so you can display e.g. customer data for the phone number when customer calls. Also you can create new call objects to dial or query information on calls or addresses.

172.4.2 Methods

172.4.3 Addresses as ITAddressMBS()

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an array with all addresses.
Notes: Lasterror is set.

172.4.4 Available as boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether TAPI is available.
Notes: Returns true on Windows and false elsewhere.

172.4.5 Constructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

172.4.6 Destructor

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

172.4.7 ListenOnAllAddresses

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of addresses and registers event handlers to receive events.
Notes:

Please call this method to get the IncomingCall event working.
Lasterror is set.

172.4.8 Properties

172.4.9 EventFilter as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The event filter.
Notes:

The plugin sets this to EventCallNotification + EventCallState automatically.

See constants:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms734238(v=vs.85).aspx
(Read and Write property)

172.4.10 Handle as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

This is an ITTAPI* pointer.
(Read and Write property)

172.4.11 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Set by all the methods to indicate the last error.
Value is 0 if no error.

(Read and Write property)

172.4.12 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

172.4.13 Events

172.4.14 CallStateChanged(CallInfo as ITCallInfoMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: .

Function: The call state changed.
Notes: The Call state has changed.

172.4.15 IncomingCall(CallInfo as ITCallInfoMBS, BasicCallControl as TAPI-CallControlMBS)

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: .

Function: A new call is incoming.

172.4.16 Constants

172.4.17 EventCallNotification = & h4

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the event types.
Notes: A new communications session has appeared on the address and the TAPI DLL has created a new call object. This could be a result from an incoming session, a session handed off by another application, or a session being parked on the address.

172.4.18 EventCallState = & h8

MBS Win Plugin, Plugin Version: 14.4.

Function: One of the event types.
Notes: The Call state has changed.

Chapter 173

Tidy

173.1 class TidyAttributeMBS

173.1.1 class TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An attribute of a node.

173.1.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr3
- MBS REALbasic Plugins, version 10.5pr4

173.1.3 Properties

173.1.4 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this attribute.
Notes: (Read only property)

173.1.5 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attribute ID.
Notes: (Read only property)

173.1.6 IsABBR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ABBR attribute.
Notes: (Read only property)

173.1.7 IsALINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ALINK attribute.
Notes: (Read only property)

173.1.8 IsALT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ALT attribute.
Notes: (Read only property)

173.1.9 IsBGCOLOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the BGCOLOR attribute.
Notes: (Read only property)

173.1.10 IsCHECKED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the CHECKED attribute.
Notes: (Read only property)

173.1.11 IsCOLSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the COLSPAN attribute.
Notes: (Read only property)

173.1.12 IsCONTENT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the CONTENT attribute.
Notes: (Read only property)

173.1.13 IsDATAFLD as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the DATAFLD attribute.
Notes: (Read only property)

173.1.14 IsEvent as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the Event attribute.
Notes: (Read only property)

173.1.15 IsFOR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the FOR attribute.
Notes: (Read only property)

173.1.16 IsHEIGHT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the HEIGHT attribute.
Notes: (Read only property)

173.1.17 IsHREF as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the HREF attribute.
Notes: (Read only property)

173.1.18 IsHTTP_EQUIV as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the HTTP_EQUIV attribute.
Notes: (Read only property)

173.1.19 IsID as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ID attribute.
Notes: (Read only property)

173.1.20 IsISMAP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ISMAP attribute.
Notes: (Read only property)

173.1.21 IsLANG as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LANG attribute.
Notes: (Read only property)

173.1.22 IsLANGUAGE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LANGUAGE attribute.
Notes: (Read only property)

173.1.23 IsLINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LINK attribute.
Notes: (Read only property)

173.1.24 IsLONGDESC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the LONGDESC attribute.
Notes: (Read only property)

173.1.25 IsNAME as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the NAME attribute.
Notes: (Read only property)

173.1.26 IsOnBLUR as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnBLUR attribute.
Notes: (Read only property)

173.1.27 IsOnCLICK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnCLICK attribute.
Notes: (Read only property)

173.1.28 IsOnFOCUS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnFOCUS attribute.
Notes: (Read only property)

173.1.29 IsOnKEYDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnKEYDOWN attribute.
Notes: (Read only property)

173.1.30 IsOnKEYPRESS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnKEYPRESS attribute.
Notes: (Read only property)

173.1.31 IsOnKEYUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnKEYUP attribute.
Notes: (Read only property)

173.1.32 IsOnMOUSEDOWN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEDOWN attribute.
Notes: (Read only property)

173.1.33 IsOnMOUSEMOVE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEMOVE attribute.
Notes: (Read only property)

173.1.34 IsOnMOUSEOUT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEOUT attribute.
Notes: (Read only property)

173.1.35 IsOnMOUSEOVER as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEOVER attribute.
Notes: (Read only property)

173.1.36 IsOnMOUSEUP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the OnMOUSEUP attribute.
Notes: (Read only property)

173.1.37 IsProp as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the Prop attribute.
Notes: (Read only property)

173.1.38 IsREL as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the REL attribute.
Notes: (Read only property)

173.1.39 IsROWSPAN as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the ROWSPAN attribute.
Notes: (Read only property)

173.1.40 IsSELECTED as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the SELECTED attribute.
Notes: (Read only property)

173.1.41 IsSRC as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the SRC attribute.
Notes: (Read only property)

173.1.42 IsSTYLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the STYLE attribute.
Notes: (Read only property)

173.1.43 IsSUMMARY as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the SUMMARY attribute.
Notes: (Read only property)

173.1.44 IsTARGET as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TARGET attribute.
Notes: (Read only property)

173.1.45 IsTEXT as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TEXT attribute.
Notes: (Read only property)

173.1.46 IsTITLE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TITLE attribute.
Notes: (Read only property)

173.1.47 IsTYPE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the TYPE attribute.
Notes: (Read only property)

173.1.48 IsUSEMAP as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the USEMAP attribute.
Notes: (Read only property)

173.1.49 IsVALUE as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the VALUE attribute.
Notes: (Read only property)

173.1.50 IsVLINK as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the VLINK attribute.
Notes: (Read only property)

173.1.51 IsWIDTH as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the WIDTH attribute.
Notes: (Read only property)

173.1.52 IsXMLNS as Boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this attribute is the XMLNS attribute.
Notes: (Read only property)

173.1.53 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the attribute.
Notes: (Read only property)

173.1.54 NextAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next attribute in the attribute list of the node.
Notes: (Read only property)

173.1.55 Value as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The value of the attribute.
Notes: (Read only property)

173.2 module TidyAttrIdMBS

173.2.1 module TidyAttrIdMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.2.2 Constants

173.2.3 TidyAttrABBR=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.4 TidyAttrABOUT=315

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.5 TidyAttrACCEPT=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.6 TidyAttrACCEPT_CHARSET=3

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.7 TidyAttrACCESSKEY=4

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.8 TidyAttrACTION=5

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.9 TidyAttrADD_DATE=6

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.10 TidyAttrALIGN=7

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.11 TidyAttrALINK=8

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.2.12 TidyAttrALLOWFULLSCREEN=9

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.13 TidyAttrALT=10

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.14 TidyAttrARCHIVE=11

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.15 TidyAttrARIA_ACTIVEDESCENDANT=271

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.16 TidyAttrARIA_ATOMIC=272

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.17 TidyAttrARIA_AUTOCOMPLETE=273

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.18 TidyAttrARIA_BUSY=274

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.19 TidyAttrARIA_CHECKED=275

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.20 TidyAttrARIA_CONTROLS=276

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.21 TidyAttrARIA_DESCRIBEDBY=277

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.22 TidyAttrARIA_DISABLED=278

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.23 TidyAttrARIA_DROPEFFECT=279

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.24 TidyAttrARIA_EXPANDED=280

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.25 TidyAttrARIA_FLOWTO=281

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.26 TidyAttrARIA_GRABBED=282

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.27 TidyAttrARIA_HASPOPUP=283

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.28 TidyAttrARIA_HIDDEN=284

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.29 TidyAttrARIA_INVALID=285

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.30 TidyAttrARIA_LABEL=286

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.31 TidyAttrARIA_LABELLEDBY=287

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.32 TidyAttrARIA_LEVEL=288

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.33 TidyAttrARIA_LIVE=289

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.34 TidyAttrARIA_MULTILINE=290

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.35 TidyAttrARIA_MULTISELECTABLE=291

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.36 TidyAttrARIA_ORIENTATION=292

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.37 TidyAttrARIA_OWNS=293

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.38 TidyAttrARIA_POSINSET=294

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.39 TidyAttrARIA_PRESSED=295

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.40 TidyAttrARIA_READONLY=296

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.41 TidyAttrARIA_RELEVANT=297

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.42 TidyAttrARIA_REQUIRED=298

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.43 TidyAttrARIA_SELECTED=299

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.44 TidyAttrARIA_SETSIZE=300

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.45 TidyAttrARIA_SORT=301

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.46 TidyAttrARIA_VALUEMAX=302

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.47 TidyAttrARIA_VALUEMIN=303

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.48 TidyAttrARIA_VALUENOW=304

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.49 TidyAttrARIA_VALUETEXT=305

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.50 TidyAttrAS=324

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.51 TidyAttrASYNC=171

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.52 TidyAttrAUTOCOMPLETE=172

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.53 TidyAttrAUTOFOCUS=173

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.54 TidyAttrAUTOPLAY=174

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.55 TidyAttrAXIS=12

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.56 TidyAttrBACKGROUND=13

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.57 TidyAttrBASEPROFILE=311

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.58 TidyAttrBGCOLOR=14

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.59 TidyAttrBGPROPERTIES=15

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.60 TidyAttrBORDER=16

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.61 TidyAttrBORDERCOLOR=17

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.62 TidyAttrBOTTOMMARGIN=18

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.63 TidyAttrCELLPADDING=19

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.64 TidyAttrCELLSPACING=20

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.2.328 TidyAttrZOOMANDPAN=310

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.3 module TidyConfigCategoryMBS

173.3.1 module TidyConfigCategoryMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.3.2 Constants

173.3.3 TidyDiagnostics=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.3.4 TidyEncoding=3

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.3.5 TidyMarkup=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.3.6 TidyMiscellaneous=4

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.3.7 TidyPrettyPrint=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.4 module TidyDoctypeModesMBS

173.4.1 module TidyDoctypeModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.4.2 Constants

173.4.3 TidyDoctypeAuto=2

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.4.4 TidyDoctypeHtml5=0

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.4.5 TidyDoctypeLoose=4

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.4.6 TidyDoctypeOmit=1

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.4.7 TidyDoctypeStrict=3

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.4.8 TidyDoctypeUser=5

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.5 class TidyDocumentMBS

173.5.1 class TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A document in the tidy library.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

Notes: The main class for using the tidy library in Xojo.

173.5.2 Blog Entries

- MBS Xojo Plugins, version 19.4pr2
- MBS Xojo Plugins, version 17.2pr2

173.5.3 Methods

173.5.4 AccessWarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of Tidy accessibility warnings encountered.

173.5.5 Body as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The body node in the html tree.

173.5.6 CleanAndRepair as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Execute configured cleanup and repair operations on parsed markup.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

173.5.7 ConfigErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of Tidy configuration errors encountered.

173.5.8 CopyConfig(otherDocument as TidyDocumentMBS) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy current configuration settings from one document to another.

173.5.9 DetectedGenericXml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input is generic XML (not HTML or XHTML)?

173.5.10 DetectedHtmlVersion as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detected HTML version: 0, 2, 3 or 4.

173.5.11 DetectedXhtml as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Input is XHTML?

173.5.12 ErrorBuffer as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies the error text save in the error buffer.
Notes: You need to use InstallErrorBuffer before using this function.

173.5.13 ErrorCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of Tidy errors encountered.
Notes: If >0, output is suppressed unless ForceOutput is set.

173.5.14 ErrorSummary

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write more complete information about errors to current error sink.

173.5.15 FileExists(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the file with that name exists.

173.5.16 GeneralInfo

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write more general information about markup to current error sink.

173.5.17 GetBooleanOption(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of a boolean option.

173.5.18 GetIntegerOption(OptionID as Integer) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of an integer option.

173.5.19 GetStringOption(OptionID as Integer) as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the value of a string option.

173.5.20 Head as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The head node in the html tree.

173.5.21 Html as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The html node in the html tree.

173.5.22 InstallErrorBuffer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Installs an error buffer.
Notes: Use ErrorBuffer to get the text later.

173.5.23 LibraryVersion as string

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version number of the library.

173.5.24 LoadConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Load an ASCII Tidy configuration file.

173.5.25 LoadConfigFileWithEncoding(Filename as string, CharacterEncoding as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Load a Tidy configuration file with the specified character encoding.

173.5.26 NextOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds the next option in the list.

173.5.27 NextRelatedOption(Iterator as TidyIteratorMBS) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get next related option.

173.5.28 NextUserDeclaredTag(OptionID as Integer, Iterator as TidyIteratorMBS) as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get next declared tag of specified type: TidyInlineTags, TidyBlockTags, TidyEmptyTags or TidyPreTags.
Notes: See TidyOptionIdMBS for constants.

173.5.29 OptionCharcterEncodingName(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get character encoding name.
Notes: Used with TidyCharEncoding, TidyOutCharEncoding, TidyInCharEncoding options.

173.5.30 OptionCurrentPick(OptionID as Integer) as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get current pick list value for option by ID.
Notes: Useful for enum types.

173.5.31 OptionForID(OptionID as Integer) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds option based on given ID.
Notes: Returns nil on failure.

173.5.32 OptionForName(OptionName as string) as TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds option by name.

173.5.33 OptionIDForName(OptionName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finds Option by name.
Notes: Returns nil on failure.

173.5.34 OptionList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An iterator running through all the options available.

173.5.35 OptionResetToDefault(OptionID as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets the option to default value.

173.5.36 OptionsDifferentThanDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Any settings different than default?

173.5.37 OptionsDifferentThanSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Any settings different than snapshot?

173.5.38 OptionsResetAllToDefault as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset all options to their default values.

173.5.39 OptionsResetToSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset config settings to snapshot (after document processing).

173.5.40 OptionsSnapshot as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Take a snapshot of current config settings.

173.5.41 ParseFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse markup in named file.

173.5.42 ParseSource(theInput as TidyInputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse markup in given generic input source.

173.5.43 ParseString(data as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse markup in given string.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

173.5.44 ParseStringOption(OptionName as string, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parses a string to set an option.
Example:

```
dim t as new TidyDocumentMBS

MsgBox str(t.OptionQuiet)
dim b1 as boolean = t.ParseStringOption("Quiet","true")
MsgBox str(t.OptionQuiet)

dim b2 as boolean = t.ParseStringOption("Quiet","false")
MsgBox str(t.OptionQuiet)
```

Notes:

Useful if you don't know the type of the option.
Returns true on success and false on failure.

173.5.45 RelatedOptionsList(Option as TidyOptionMBS) as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate over a list of related options.

173.5.46 ReleaseDate as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get release date (version) for current library.

173.5.47 ReportDoctype as Integer

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The report document type.

173.5.48 Root as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The root node in the html tree.

173.5.49 RunDiagnostics as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run configured diagnostics on parsed and repaired markup.
Notes: Must call CleanAndRepair first.

173.5.50 SaveConfig(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save current settings to given output sink.
Notes: Only non-default values are written.

173.5.51 SaveConfigFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save current settings to named file.
Notes: Only non-default values are written.

173.5.52 SaveFile(filename as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save to named file.

173.5.53 SaveOutput(theOutput as TidyOutputMBS) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save to given generic output.

173.5.54 SaveString as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Save to a string.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As String=t.SaveString
MsgBox s // show fixed html
```

Notes:

Returns "" on failure.

The returned string has no encoding set. You need to use DefineEncoding.

173.5.55 SetBooleanOption(OptionID as Integer, value as boolean) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with a given boolean value.
Notes: Returns true on success and false on failure.

173.5.56 SetCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the input/output character encoding for parsing markup.
Notes: Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

173.5.57 SetErrorFile(filename as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Redirects error output to named file.
Notes: Returns true on success.

173.5.58 SetInputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the input character encoding for parsing markup.
Example:

```
dim t as new TidyDocumentMBS

MsgBox str(t.OptionInCharEncoding)
call t.SetInputCharacterEncoding "utf8"
MsgBox str(t.OptionInCharEncoding)
```

Notes: Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

173.5.59 SetIntegerOption(OptionID as Integer, value as Integer) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with a given integer value.
Notes: Returns true on success and false on failure.

173.5.60 SetOutputCharacterEncoding(encodingName as string) as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the output character encoding for parsing markup.
Notes: Values include: ascii, latin1, raw, utf8, iso2022, mac, win1252, utf16le, utf16be, utf16, big5 and shiftjis. Case in-sensitive.

173.5.61 SetStringOption(OptionID as Integer, value as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets an option with a given string value.
Notes: Returns true on success and false on failure.

173.5.62 Status as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get status of current document.

173.5.63 UserDeclaredTagList as TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Iterate over user declared tags.

173.5.64 WarningCount as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of warnings encountered.

173.5.65 Properties

173.5.66 ErrorOutput as TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output where the error report is written to.
Notes: (Read and Write property)

173.5.67 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy document object.
Notes: (Read only property)

173.5.68 OptionAccessibilityCheck as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option accessibility-check.
Notes:

This option specifies what level of accessibility checking, if any, that Tidy should perform.
Level 0 (Tidy Classic) is equivalent to Tidy Classic's accessibility checking.
For more information on Tidy's accessibility checking, visit Tidy's Accessibility Page (http://www.html-tidy.org/accessibility/).
(Read and Write property)

173.5.69 OptionAccessibilityCheckLevel as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies what level of accessibility checking, if any, that Tidy should do.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Level 0 is equivalent to Tidy Classic's accessibility checking. For more information on Tidy's accessibility checking, visit the Adaptive Technology Resource Centre at the University of Toronto. :

http://www.aprompt.ca/Tidy/accessibilitychecks.html
(Read and Write property)

173.5.70 OptionAddXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option add-xml-decl.
Notes:

This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Note that if the input already includes an & lt;?xml ... ?& gt; declaration then this option will be ignored.
If the encoding for the output is different from ascii, one of the utf* encodings, or raw, then the declaration is always added as required by the XML standard.
(Read and Write property)

173.5.71 OptionAddXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option add-xml-space.
Notes:

This option specifies if Tidy should add xml:space="preserve" to elements such as & lt;pre& gt;, & lt;style& gt; and & lt;script& gt; when generating XML.
This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

173.5.72 OptionAltText as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option alt-text.
Notes:

This option specifies the default alt= text Tidy uses for & lt;img& gt; attributes when the alt= attribute is missing.
Use with care, as it is your responsibility to make your documents accessible to people who cannot see the images.

(Read and Write property)

173.5.73 OptionAnchorAsName as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option anchor-as-name.
Notes:

This option controls the deletion or addition of the name attribute in elements where it can serve as anchor.
If set to yes a name attribute, if not already existing, is added along an existing id attribute if the DTD allows it.
If set to no any existing name attribute is removed if an id attribute exists or has been added.
(Read and Write property)

173.5.74 OptionAsciiChars as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option ascii-chars.
Notes:

Can be used to modify behavior of the clean option when set to yes.
If set to yes when using clean, & amp;emdash;, & amp;rdquo;, and other named character entities are downgraded to their closest ASCII equivalents.
(Read and Write property)

173.5.75 OptionAssumeXmlProcins as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option assume-xml-procins.
Notes:

This option specifies if Tidy should change the parsing of processing instructions to require ?& gt; as the terminator rather than & gt;.
This option is automatically set if the input is in XML.
(Read and Write property)

173.5.76 OptionBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option bare.
Notes:

This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
(Read and Write property)

173.5.77 OptionBlockTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new block-level tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can't change the content model for elements such as <TABLE>, <UL>, <OL>and <DL>. This option is ignored in XML mode.
(Read and Write property)

173.5.78 OptionBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

If set to "auto", this is performed only if the body tag has been inferred. Useful for incorporating existing whole pages as a portion of another page. This option has no effect if XML output is requested.

Value is 0 for no, 1 for yes and 2 for auto.
(Read and Write property)

173.5.79 OptionBreakBeforeBr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option break-before-br.
Notes:

This option specifies if Tidy should output a line break before each & lt;br& gt; element.
(Read and Write property)

173.5.80 OptionCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option char-encoding.
Notes:

This option specifies the character encoding Tidy uses for both the input and output.
For ascii Tidy will accept Latin-1 (ISO-8859-1) character values, but will use entities for all characters whose value & gt;127.
For raw, Tidy will output values above 127 without translating them into entities.
For latin1, characters above 255 will be written as entities.
For utf8, Tidy assumes that both input and output are encoded as UTF-8.
You can use iso2022 for files encoded using the ISO-2022 family of encodings e.g. ISO-2022-JP.
For mac and win1252, Tidy will accept vendor specific character values, but will use entities for all characters whose value & gt;127.
For unsupported encodings, use an external utility to convert to and from UTF-8.
(Read and Write property)

173.5.81 OptionClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option clean.
Notes:

This option specifies if Tidy should perform cleaning of some legacy presentational tags (currently & lt;i& gt;, & lt;b& gt;, & lt;center& gt; when enclosed within appropriate inline tags, and & lt;font& gt;). If set to yes then legacy tags will be replaced with CSS & lt;style& gt; tags and structural markup as appropriate.
(Read and Write property)

173.5.82 OptionCoerceEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option coerce-endtags.
Notes:

This option specifies if Tidy should coerce a start tag into an end tag in cases where it looks like an end tag was probably intended; for example, given
& lt;span& gt;foo & lt;b& gt;bar& lt;b& gt; baz& lt;/span& gt;
Tidy will output
& lt;span& gt;foo & lt;b& gt;bar& lt;/b& gt; baz& lt;/span& gt;
(Read and Write property)

173.5.83 OptionCssPrefix as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option css-prefix.
Notes:

This option specifies the prefix that Tidy uses for styles rules.
By default, c will be used.
(Read and Write property)

173.5.84 OptionDecorateInferredUl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option decorate-inferred-ul.
Notes:

This option specifies if Tidy should decorate inferred & lt;ul& gt; elements with some CSS markup to avoid indentation to the right.
(Read and Write property)

173.5.85 OptionDoctype as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option doctype.
Notes:

This option specifies the DOCTYPE declaration generated by Tidy.
If set to omit the output won't contain a DOCTYPE declaration. Note this this also implies numeric-entities is set to yes.
If set to html5 the DOCTYPE is set to & lt;!DOCTYPE html& gt;.
If set to auto (the default) Tidy will use an educated guess based upon the contents of the document.
If set to strict, Tidy will set the DOCTYPE to the HTML4 or XHTML1 strict DTD.
If set to loose, the DOCTYPE is set to the HTML4 or XHTML1 loose (transitional) DTD.
Alternatively, you can supply a string for the formal public identifier (FPI).
For example:
doctype: "-//ACME//DTD HTML 3.14159//EN"
If you specify the FPI for an XHTML document, Tidy will set the system identifier to an empty string. For an HTML document, Tidy adds a system identifier only if one was already present in order to preserve the processing mode of some browsers. Tidy leaves the DOCTYPE for generic XML documents unchanged.
This option does not offer a validation of document conformance.
(Read and Write property)

173.5.86 OptionDoctypeMode as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option doctype-mode.
Notes:

(Read only property)

173.5.87 OptionDropEmptyElements as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-empty-elements.
Notes:

This option specifies if Tidy should discard empty elements.
(Read and Write property)

173.5.88 OptionDropEmptyParas as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-empty-paras.
Notes:

This option specifies if Tidy should discard empty paragraphs.
(Read and Write property)

173.5.89 OptionDropFontTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-font-tags.
Notes:

Deprecated; do not use. This option is destructive to & lt;font& gt; tags, and it will be removed from future versions of Tidy. Use the clean option instead.
If you do set this option despite the warning it will perform as clean except styles will be inline instead of put into a CSS class. & lt;font& gt; tags will be dropped completely and their styles will not be preserved.
If both clean and this option are enabled, & lt;font& gt; tags will still be dropped completely, and other styles will be preserved in a CSS class instead of inline.
See clean for more information.
(Read and Write property)

173.5.90 OptionDropPropAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip out proprietary attributes, such as MS data binding attributes.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.91 OptionDropProprietaryAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-proprietary-attributes.
Notes:

This option specifies if Tidy should strip out proprietary attributes, such as Microsoft data binding attributes. Additionally attributes that aren't permitted in the output version of HTML will be dropped if used with strict-tags-attributes.
(Read and Write property)

173.5.92 OptionDuplicateAttrs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.93 OptionEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.94 OptionEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used internally.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.95 OptionEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new empty inline tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Remember to also declare empty tags as either inline or blocklevel. This option is ignored in XML mode.
(Read and Write property)

173.5.96 OptionEncloseBlockText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option enclose-block-text.
Notes:

This option specifies if Tidy should insert a & lt;p& gt; element to enclose any text it finds in any element that allows mixed content for HTML transitional but not HTML strict.
(Read and Write property)

173.5.97 OptionEncloseBodyText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should enclose any text it finds in the body element within a <P>element.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

173.5.98 OptionEncloseText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option enclose-text.
Notes:

This option specifies if Tidy should enclose any text it finds in the body element within a & lt;p& gt; element. This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

173.5.99 OptionErrFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the error file Tidy uses for errors and warnings.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Normally errors and warnings are output to "stderr".
(Read and Write property)

173.5.100 OptionErrorFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option error-file.
Notes:

This option specifies the error file Tidy uses for errors and warnings. Normally errors and warnings are output to stderr.
(Read and Write property)

173.5.101 OptionEscapeCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option escape-cdata.
Notes:

This option specifies if Tidy should convert & lt;! [CDATA [ ]] & gt; sections to normal text.
(Read and Write property)

173.5.102 OptionEscapeScripts as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option escape-scripts.
Notes:

This option causes items that look like closing tags, like & lt;/g to be escaped to & lt;\/g. Set this option to 'no' if you do not want this.
(Read and Write property)

173.5.103 OptionFixBackslash as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-backslash.
Notes:

This option specifies if Tidy should replace backslash characters \in URLs with forward slashes /.
(Read and Write property)

173.5.104 OptionFixBadComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-bad-comments.
Notes:

This option specifies if Tidy should replace unexpected hyphens with = characters when it comes across adjacent hyphens.
The default is yes.
This option is provided for users of Cold Fusion which uses the comment syntax: & lt;!— —& gt;.
(Read and Write property)

173.5.105 OptionFixComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should replace unexpected hyphens with "=" characters when it comes across adjacent hyphens.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is yes. This option is provided for users of Cold Fusion which uses the comment syntax: <!——>
(Read and Write property)

173.5.106 OptionFixUri as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-uri.
Notes:

This option specifies if Tidy should check attribute values that carry URIs for illegal characters and if such are found, escape them as HTML4 recommends.
(Read and Write property)

173.5.107 OptionForceOutput as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option force-output.
Notes:

This option specifies if Tidy should produce output even if errors are encountered.
Use this option with care; if Tidy reports an error, this means Tidy was not able to (or is not sure how to) fix the error, so the resulting output may not reflect your intention.
(Read and Write property)

173.5.108 OptionGdoc as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gdoc.
Notes:

This option specifies if Tidy should enable specific behavior for cleaning up HTML exported from Google Docs.

(Read and Write property)

173.5.109 OptionGnuEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gnu-emacs.
Notes:

This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.
(Read and Write property)

173.5.110 OptionGnuEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gnu-emacs-file.
Notes:

Used internally.
(Read and Write property)

173.5.111 OptionHideComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option hide-comments.
Notes:

This option specifies if Tidy should print out comments.
(Read and Write property)

173.5.112 OptionHideEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option hide-endtags.
Notes:

This option is an alias for omit-optional-tags.
(Read and Write property)

173.5.113 OptionHtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate pretty printed output, writing it as HTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.114 OptionInCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the character encoding Tidy uses for the input.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info.
(Read and Write property)

173.5.115 OptionIndent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent.
Notes:

This option specifies if Tidy should indent block-level tags.
If set to auto Tidy will decide whether or not to indent the content of tags such as & lt;title& gt;, & lt;h1& gt;-& lt;h6& gt;, & lt;li& gt;, & lt;td& gt;, or & lt;p& gt; based on the content including a block-level element.
Setting indent to yes can expose layout bugs in some browsers.
Use the option indent-spaces to control the number of spaces or tabs output per level of indent, and indent-with-tabs to specify whether spaces or tabs are used.
(Read and Write property)

173.5.116 OptionIndentAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-attributes.
Notes:

This option specifies if Tidy should begin each attribute on a new line.
(Read and Write property)

173.5.117 OptionIndentCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-cdata.
Notes:

This option specifies if Tidy should indent & lt;! [CDATA [ ]] & gt; sections.
(Read and Write property)

173.5.118 OptionIndentContent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.119 OptionIndentSpaces as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-spaces.
Notes:

This option specifies the number of spaces or tabs that Tidy uses to indent content when indent is enabled. Note that the default value for this option is dependent upon the value of indent-with-tabs (see also).
(Read and Write property)

173.5.120 OptionIndentWithTabs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-with-tabs.
Notes:

This option specifies if Tidy should indent with tabs instead of spaces, assuming indent is yes.
Set it to yes to indent using tabs instead of the default spaces.
Use the option indent-spaces to control the number of tabs output per level of indent. Note that when indent-with-tabs is enabled the default value of indent-spaces is reset to 1.
Note tab-size controls converting input tabs to spaces. Set it to zero to retain input tabs.
(Read and Write property)

173.5.121 OptionInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. This option is ignored in XML mode.
(Read and Write property)

173.5.122 OptionInputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option input-encoding.
Notes:

This option specifies the character encoding Tidy uses for the input. See char-encoding for more info.
(Read and Write property)

173.5.123 OptionInputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option input-xml.
Notes:

This option specifies if Tidy should use the XML parser rather than the error correcting HTML parser.
(Read and Write property)

173.5.124 OptionJoinClasses as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option join-classes.
Notes:

This option specifies if Tidy should combine class names to generate a single, new class name if multiple class assignments are detected on an element.
(Read and Write property)

173.5.125 OptionJoinStyles as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option join-styles.
Notes:

This option specifies if Tidy should combine styles to generate a single, new style if multiple style values are detected on an element.
(Read and Write property)

173.5.126 OptionKeepFileTimes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is no. Setting the option to yes allows you to tidy files without causing these files to be uploaded to a web server when using a tool such as SiteCopy. Note this feature is not supported on some platforms.
(Read and Write property)

173.5.127 OptionKeepTime as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option keep-time.
Notes:

This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place. Setting the option to yes allows you to tidy files without changing the file modification date, which may be useful with certain tools that use the modification date for things such as automatic server deployment. Note this feature is not supported on some platforms.
(Read and Write property)

173.5.128 OptionLanguage as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option language.
Notes:

Currently not used, but this option specifies the language Tidy would use if it were properly localized. For example: en.

(Read and Write property)

173.5.129 OptionLiteralAttribs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should ensure that whitespace characters within attribute values are passed through unchanged.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.130 OptionLiteralAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option literal-attributes.
Notes:

This option specifies how Tidy deals with whitespace characters within attribute values.
If the value is no Tidy normalizes attribute values by replacing any newline or tab with a single space, and further by replacing any contiguous whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes and ensure that whitespace within attribute values is passed through unchanged, set this option to yes.
(Read and Write property)

173.5.131 OptionLogicalEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option logical-emphasis.
Notes:

This option specifies if Tidy should replace any occurrence of & lt;i& gt; with & lt;em& gt; and any occurrence of & lt;b& gt; with & lt;strong& gt;. Any attributes are preserved unchanged.
This option can be set independently of the clean option.
(Read and Write property)

173.5.132 OptionLowerLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option lower-literals.
Notes:

This option specifies if Tidy should convert the value of an attribute that takes a list of predefined values to lower case.
This is required for XHTML documents.
(Read and Write property)

173.5.133 OptionMakeBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.134 OptionMakeClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip out surplus presentational tags and attributes replacing them by style rules and structural markup as appropriate.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

It works well on the HTML saved by Microsoft Office products.
(Read and Write property)

173.5.135 OptionMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy won't add a meta element if one is already present.
(Read and Write property)

173.5.136 OptionMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option markup.
Notes:

This option specifies if Tidy should generate a pretty printed version of the markup. Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

173.5.137 OptionMergeDivs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-divs.
Notes:

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;div& gt; such as & lt;div& gt;& lt;div& gt;...& lt;/div& gt;& lt;/div& gt;.
If set to auto the attributes of the inner & lt;div& gt; are moved to the outer one. Nested & lt;div& gt; with id attributes are not merged.
If set to yes the attributes of the inner & lt;div& gt; are discarded with the exception of class and style.
(Read and Write property)

173.5.138 OptionMergeEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-emphasis.
Notes:

This option specifies if Tidy should merge nested & lt;b& gt; and & lt;i& gt; elements; for example, for the case
& lt;b class="rtop-2"& gt;foo & lt;b class="r2-2"& gt;bar& lt;/b& gt; baz& lt;/b& gt;,
Tidy will output & lt;b class="rtop-2"& gt;foo bar baz& lt;/b& gt;.
(Read and Write property)

173.5.139 OptionMergeSpans as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-spans.
Notes:

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;span& gt; such as & lt;span& gt;& lt;span& gt;...& lt;/span& gt;& lt;/span& gt;.
The algorithm is identical to the one used by merge-divs.

(Read and Write property)

173.5.140 OptionNcr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option ncr.
Notes:

This option specifies if Tidy should allow numeric character references.
(Read and Write property)

173.5.141 OptionNewBlocklevelTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-blocklevel-tags.
Notes:

This option specifies new block-level tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you can't change the content model for elements such as & lt;table& gt;, & lt;ul& gt;, & lt;ol& gt; and & lt;dl& gt;.
This option is ignored in XML mode.
(Read and Write property)

173.5.142 OptionNewEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-empty-tags.
Notes:

This option specifies new empty inline tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Remember to also declare empty tags as either inline or blocklevel.
This option is ignored in XML mode.
(Read and Write property)

173.5.143 OptionNewInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-inline-tags.
Notes:

This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
This option is ignored in XML mode.
(Read and Write property)

173.5.144 OptionNewline as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option newline.
Notes:

The default is appropriate to the current platform.
Genrally CRLF on PC-DOS, Windows and OS/2; CR on Classic Mac OS; and LF everywhere else (Linux, Mac OS X, and Unix).
(Read and Write property)

173.5.145 OptionNewPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-pre-tags.
Notes:

This option specifies new tags that are to be processed in exactly the same way as HTML's & lt;pre& gt; element. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you cannot as yet add new CDATA elements.
This option is ignored in XML mode.
(Read and Write property)

173.5.146 OptionNumEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;, & lt;, & gt; and & quot;) in the numeric rather than the named entity form.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only entities compatible with the DOCTYPE declaration generated are used. Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

173.5.147 OptionNumericEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option numeric-entities.
Notes:

This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;amp;, & amp;lt;, & amp;gt;, and & amp;quot;) in the numeric rather than the named entity form.
Only entities compatible with the DOCTYPE declaration generated are used.
Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

173.5.148 OptionOmitOptionalTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option omit-optional-tags.
Notes:

This option specifies if Tidy should omit optional start tags and end tags when generating output.
Setting this option causes all tags for the & lt;html& gt;, & lt;head& gt;, and & lt;body& gt; elements to be omitted from output, as well as such end tags as & lt;/p& gt;, & lt;/li& gt;, & lt;/dt& gt;, & lt;/dd& gt;, & lt;/option& gt;, & lt;/tr& gt;, & lt;/td& gt;, and & lt;/th& gt;.
This option is ignored for XML output.
(Read and Write property)

173.5.149 OptionOutCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the character encoding Tidy uses for the output.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info. May only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).

(Read and Write property)

173.5.150 OptionOutFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the output file Tidy uses for markup.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Normally markup is written to "stdout".
(Read and Write property)

173.5.151 OptionOutputBom as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-bom.
Notes:

This option specifies if Tidy should write a Unicode Byte Order Mark character (BOM; also known as Zero Width No-Break Space; has value of U+FEFF) to the beginning of the output, and only applies to UTF-8 and UTF-16 output encodings.
If set to auto this option causes Tidy to write a BOM to the output only if a BOM was present at the beginning of the input.
A BOM is always written for XML/XHTML output using UTF-16 output encodings.
(Read and Write property)

173.5.152 OptionOutputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-encoding.
Notes:

This option specifies the character encoding Tidy uses for the output.
Note that this may only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).
See char-encoding for more information
(Read and Write property)

173.5.153 OptionOutputFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-file.
Notes:

This option specifies the output file Tidy uses for markup. Normally markup is written to stdout.
(Read and Write property)

173.5.154 OptionOutputHtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-html.
Notes:

This option specifies if Tidy should generate pretty printed output, writing it as HTML.
(Read and Write property)

173.5.155 OptionOutputXhtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-xhtml.
Notes:

This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML, and will use the corrected value in output regardless of other sources.
For XHTML, entities can be written as named or numeric entities according to the setting of numeric-entities.
The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

173.5.156 OptionOutputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-xml.
Notes:

This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by an XML parser.
The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

173.5.157 OptionPreserveEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option preserve-entities.
Notes:

This option specifies if Tidy should preserve well-formed entities as found in the input.
(Read and Write property)

173.5.158 OptionPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new tags that are to be processed in exactly the same way as HTML's <PRE>element.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can not as yet add new CDATA elements (similar to <SCRIPT>). This option is ignored in XML mode.
(Read and Write property)

173.5.159 OptionPunctuationWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option punctuation-wrap.
Notes:

This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
(Read and Write property)

173.5.160 OptionPunctWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.161 OptionQuiet as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quiet.
Notes:

This option specifies if Tidy should output the summary of the numbers of errors and warnings, or the welcome or informational messages.
(Read and Write property)

173.5.162 OptionQuoteAmpersand as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-ampersand.
Notes:

This option specifies if Tidy should output unadorned & amp; characters as & amp;amp;.
(Read and Write property)

173.5.163 OptionQuoteMarks as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-marks.
Notes:

This option specifies if Tidy should output & quot; characters as & amp;quot; as is preferred by some editing environments.
The apostrophe character ' is written out as & amp;# 39; since many web browsers don't yet support & amp;apos;.
(Read and Write property)

173.5.164 OptionQuoteNbsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-nbsp.
Notes:

This option specifies if Tidy should output non-breaking space characters as entities, rather than as the Unicode character value 160 (decimal).
(Read and Write property)

173.5.165 OptionRepeatedAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option repeated-attributes.
Notes:

This option specifies if Tidy should keep the first or last attribute, if an attribute is repeated, e.g. has two align attributes.
(Read and Write property)

173.5.166 OptionReplaceColor as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option replace-color.
Notes:

This option specifies if Tidy should replace numeric values in color attributes with HTML/XHTML color names where defined, e.g. replace # ffffff with white.
(Read and Write property)

173.5.167 OptionShowBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-body-only.
Notes:

This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
If set to auto, this is performed only if the body tag has been inferred.
Useful for incorporating existing whole pages as a portion of another page.
This option has no effect if XML output is requested.
(Read and Write property)

173.5.168 OptionShowErrors as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-errors.
Notes:

This option specifies the number Tidy uses to determine if further errors should be shown. If set to 0, then no errors are shown.

(Read and Write property)

173.5.169 OptionShowInfo as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-info.
Notes:

This option specifies if Tidy should display info-level messages.
(Read and Write property)

173.5.170 OptionShowMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate a pretty printed version of the markup.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

173.5.171 OptionShowWarnings as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-warnings.
Notes:

This option specifies if Tidy should suppress warnings. This can be useful when a few errors are hidden in a flurry of warnings.
(Read and Write property)

173.5.172 OptionSkipNested as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option skip-nested.
Notes:

This option specifies that Tidy should skip nested tags when parsing script and style data.
(Read and Write property)

173.5.173 OptionSlideStyle as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option slide-style.
Notes:

This option has no function and is deprecated.
(Read and Write property)

173.5.174 OptionSortAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option sort-attributes.
Notes:

This option specifies that Tidy should sort attributes within an element using the specified sort algorithm. If set to alpha, the algorithm is an ascending alphabetic sort.
(Read and Write property)

173.5.175 OptionSplit as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option split.
Notes:

This option has no function and is deprecated.
(Read and Write property)

173.5.176 OptionStrictTagsAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option strict-tags-attributes.
Notes:

This options ensures that tags and attributes are applicable for the version of HTML that Tidy outputs. When set to yes (the default) and the output document type is a strict doctype, then Tidy will report errors. If the output document type is a loose or transitional doctype, then Tidy will report warnings.
Additionally if drop-proprietary-attributes is enabled, then not applicable attributes will be dropped, too.
When set to no, these checks are not performed.
(Read and Write property)

173.5.177 OptionTabSize as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option tab-size.
Notes:

This option specifies the number of columns that Tidy uses between successive tab stops. It is used to map tabs to spaces when reading the input.
(Read and Write property)

173.5.178 OptionTidyMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option tidy-mark.
Notes:

This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Tidy won't add a meta element if one is already present.
(Read and Write property)

173.5.179 OptionUppercaseAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option uppercase-attributes.
Notes:

This option specifies if Tidy should output attribute names in upper case.
The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.
(Read and Write property)

173.5.180 OptionUpperCaseAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should output attribute names in upper case.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.

(Read and Write property)

173.5.181 OptionUppercaseTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option uppercase-tags.
Notes:

This option specifies if Tidy should output tag names in upper case.
The default is no which results in lower case tag names, except for XML input where the original case is preserved.
(Read and Write property)

173.5.182 OptionVerticalSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option vertical-space.
Notes:

This option specifies if Tidy should add some extra empty lines for readability.
The default is no.
If set to auto Tidy will eliminate nearly all newline characters.
(Read and Write property)

173.5.183 OptionVertSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add some empty lines for readability.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.184 OptionWord2000 as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option word-2000.
Notes:

This option specifies if Tidy should go to great pains to strip out all the surplus stuff Microsoft Word 2000 inserts when you save Word documents as "Web pages". It doesn't handle embedded images or VML.

You should consider using Word's "Save As: Web Page, Filtered".
(Read and Write property)

173.5.185 OptionWrap as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap.
Notes:

This option specifies the right margin Tidy uses for line wrapping.
Tidy tries to wrap lines so that they do not exceed this length.
Set wrap to 0(zero) if you want to disable line wrapping.
(Read and Write property)

173.5.186 OptionWrapAsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-asp.
Notes:

This option specifies if Tidy should line wrap text contained within ASP pseudo elements, which look like: & lt;% ... % & gt;.
(Read and Write property)

173.5.187 OptionWrapAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-attributes.
Notes:

This option specifies if Tidy should line-wrap attribute values, meaning that if the value of an attribute causes a line to exceed the width specified by wrap, Tidy will add one or more line breaks to the value, causing it to be wrapped into multiple lines.
Note that this option can be set independently of wrap-script-literals. By default Tidy replaces any newline or tab with a single space and replaces any sequences of whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes, and ensure that whitespace characters within attribute values are passed through unchanged, set literal-attributes to yes.
(Read and Write property)

173.5.188 OptionWrapAttVals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap attribute values, for easier editing.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option can be set independently of wrap-script-literals.
(Read and Write property)

173.5.189 OptionWrapJste as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-jste.
Notes:

This option specifies if Tidy should line wrap text contained within JSTE pseudo elements, which look like: & lt;# ... # & gt;.
(Read and Write property)

173.5.190 OptionWrapLen as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the right margin Tidy uses for line wrapping.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy tries to wrap lines so that they do not exceed this length. Set wrap to zero if you want to disable line wrapping.
(Read and Write property)

173.5.191 OptionWrapPhp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-php.
Notes:

This option specifies if Tidy should line wrap text contained within PHP pseudo elements, which look like: & lt;?php ... ?& gt;.
(Read and Write property)

173.5.192 OptionWrapScriptlets as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap string literals that appear in script attributes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

173.5.193 OptionWrapScriptLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-script-literals.
Notes:

This option specifies if Tidy should line wrap string literals that appear in script attributes.
Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

173.5.194 OptionWrapSection as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap text contained within <! [...] >section tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.195 OptionWrapSections as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-sections.
Notes:

This option specifies if Tidy should line wrap text contained within & lt;! [...] & gt; section tags.
(Read and Write property)

173.5.196 OptionWriteBack as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option write-back.
Notes:

This option specifies if Tidy should write back the tidied markup to the same file it read from.
You are advised to keep copies of important files before tidying them, as on rare occasions the result may not be what you expect.
(Read and Write property)

173.5.197 OptionXhtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML. If a DOCTYPE or namespace is given they will checked for consistency with the content of the document. In the case of an inconsistency, the corrected values will appear in the output. For XHTML, entities can be written as named or numeric entities according to the setting of the "numeric-entities" option. The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

173.5.198 OptionXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note that if the input already includes an <?xml ... ?>declaration then this option will be ignored. If the encoding for the output is different from "ascii", one of the utf encodings or "raw", the declaration is always added as required by the XML standard.
(Read and Write property)

173.5.199 OptionXmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by a XML parser. The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

173.5.200 OptionXmlPIs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.201 OptionXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add xml:space="preserve" to elements such as <PRE>, <STYLE>and <SCRIPT>when generating XML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

173.5.202 OptionXmlTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set this option if the input is xml.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

173.5.203 Events

173.5.204 Filter(level as Integer, line as Integer, column as Integer, message as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The filter called for every error and warning.
Notes:

Callback to filter messages by diagnostic level: info, warning, etc. Just set diagnostic output handler to redirect all diagnostics output.

Return false to proceed with output, true to cancel.

173.5.205 PrettyPrintProgress(line as Integer, column as Integer, destLine as Integer)

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Reports progress on the print process.

173.6 module TidyDupAttrModesMBS

173.6.1 module TidyDupAttrModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.6.2 Constants

173.6.3 TidyKeepFirst=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.6.4 TidyKeepLast=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.7 class TidyInputMBS

173.7.1 class TidyInputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Delivers raw bytes of input.

173.7.2 Events

173.7.3 EndOfFile as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Return true if all your data is processed.
Notes: Return false if more data is available for the GetByte call.

173.7.4 GetByte as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Read one byte and returns it to the tidy library.

173.7.5 UngetByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Returns a byte to the buffer for later processing.

173.8 class TidyIteratorMBS

173.8.1 class TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An iterator for various uses.

173.8.2 Properties

173.8.3 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy iterator object.
Notes: (Read only property)

173.9 module TidyLineEndingMBS

173.9.1 module TidyLineEndingMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.9.2 Constants

173.9.3 TidyCR=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.9.4 TidyCRLF=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.9.5 TidyLF=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.10 class TidyNodeMBS

173.10.1 class TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A node in the document parse tree.

173.10.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

173.10.3 Properties

173.10.4 Child as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The child node of this node.
Example:

```
dim t as TidyDocumentMBS // the tidy document
dim n as TidyNodeMBS
dim c as TidyNodeMBS

// iterating over root and its children (for more children you need recursion)
n=t.Root
while n<>nil
MsgBox n.Text

c=n.Child
while c<>nil
MsgBox c.Text
c=c.NextNode
wend

n=n.NextNode
wend
```

Notes: (Read only property)

173.10.5 Column as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position of this node.
Notes: (Read only property)

173.10.6 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this node.
Notes: (Read only property)

173.10.7 FirstAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first attribute for this node.
Notes: (Read only property)

173.10.8 GetABBR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ABBR attribute for this node.
Notes: (Read only property)

173.10.9 GetALINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ALINK attribute for this node.
Notes: (Read only property)

173.10.10 GetALT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ALT attribute for this node.
Notes: (Read only property)

173.10.11 GetBGCOLOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first BGCOLOR attribute for this node.
Notes: (Read only property)

173.10.12 GetCHECKED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first CHECKED attribute for this node.
Notes: (Read only property)

173.10.13 GetCOLSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first COLSPAN attribute for this node.
Notes: (Read only property)

173.10.14 GetCONTENT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first CONTENT attribute for this node.
Notes: (Read only property)

173.10.15 GetDATAFLD as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first DATAFLD attribute for this node.
Notes: (Read only property)

173.10.16 GetFOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first FOR attribute for this node.
Notes: (Read only property)

173.10.17 GetHEIGHT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HEIGHT attribute for this node.
Notes: (Read only property)

173.10.18 GetHREF as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HREF attribute for this node.
Notes: (Read only property)

173.10.19 GetHTTP_EQUIV as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HTTP_EQUIV attribute for this node.
Notes: (Read only property)

173.10.20 GetID as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ID attribute for this node.
Notes: (Read only property)

173.10.21 GetISMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ISMAP attribute for this node.
Notes: (Read only property)

173.10.22 GetLANG as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LANG attribute for this node.
Notes: (Read only property)

173.10.23 GetLANGUAGE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LANGUAGE attribute for this node.
Notes: (Read only property)

173.10.24 GetLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LINK attribute for this node.
Notes: (Read only property)

173.10.25 GetLONGDESC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LONGDESC attribute for this node.
Notes: (Read only property)

173.10.26 GetNAME as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first NAME attribute for this node.
Notes: (Read only property)

173.10.27 GetOnBLUR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnBLUR attribute for this node.
Notes: (Read only property)

173.10.28 GetOnCLICK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnCLICK attribute for this node.
Notes: (Read only property)

173.10.29 GetOnFOCUS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnFOCUS attribute for this node.
Notes: (Read only property)

173.10.30 GetOnKEYDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYDOWN attribute for this node.
Notes: (Read only property)

173.10.31 GetOnKEYPRESS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYPRESS attribute for this node.
Notes: (Read only property)

173.10.32 GetOnKEYUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYUP attribute for this node.
Notes: (Read only property)

173.10.33 GetOnMOUSEDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEDOWN attribute for this node.
Notes: (Read only property)

173.10.34 GetOnMOUSEMOVE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEMOVE attribute for this node.
Notes: (Read only property)

173.10.35 GetOnMOUSEOUT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEOUT attribute for this node.
Notes: (Read only property)

173.10.36 GetOnMOUSEOVER as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEOVER attribute for this node.
Notes: (Read only property)

173.10.37 GetOnMOUSEUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEUP attribute for this node.
Notes: (Read only property)

173.10.38 GetREL as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first REL attribute for this node.
Notes: (Read only property)

173.10.39 GetROWSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ROWSPAN attribute for this node.
Notes: (Read only property)

173.10.40 GetSELECTED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SELECTED attribute for this node.
Notes: (Read only property)

173.10.41 GetSRC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SRC attribute for this node.
Notes: (Read only property)

173.10.42 GetSTYLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first STYLE attribute for this node.
Notes: (Read only property)

173.10.43 GetSUMMARY as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SUMMARY attribute for this node.
Notes: (Read only property)

173.10.44 GetTARGET as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TARGET attribute for this node.
Notes: (Read only property)

173.10.45 GetTEXT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TEXT attribute for this node.
Notes: (Read only property)

173.10.46 GetTITLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TITLE attribute for this node.
Notes: (Read only property)

173.10.47 GetTYPE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TYPE attribute for this node.
Notes: (Read only property)

173.10.48 GetUSEMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first USEMAP attribute for this node.
Notes: (Read only property)

173.10.49 GetVALUE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first VALUE attribute for this node.
Notes: (Read only property)

173.10.50 GetVLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first VLINK attribute for this node.
Notes: (Read only property)

173.10.51 GetWIDTH as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first WIDTH attribute for this node.
Notes: (Read only property)

173.10.52 GetXMLNS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first XMLNS attribute for this node.
Notes: (Read only property)

173.10.53 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy node object.
Notes: (Read only property)

173.10.54 HasText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether there is text attached to this node.
Notes:

Returns true if yes.
(Read only property)

173.10.55 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The node ID.
Notes: (Read only property)

173.10.56 IsDATALIST as Boolean

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this node is a data list.
Notes: (Read only property)

173.10.57 IsProperty as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the node is a property.
Notes: (Read only property)

173.10.58 Line as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position of this node.
Notes: (Read only property)

173.10.59 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this node.
Notes: (Read only property)

173.10.60 NextNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next node in the node list of the parent node.
Notes: (Read only property)

173.10.61 NodeIsA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a A node.
Notes: (Read only property)

173.10.62 NodeIsADDRESS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a ADDRESS node.
Notes: (Read only property)

173.10.63 NodeIsAPPLET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a APPLET node.
Notes: (Read only property)

173.10.64 NodeIsAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a AREA node.
Notes: (Read only property)

173.10.65 NodeIsB as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a B node.
Notes: (Read only property)

173.10.66 NodeIsBASE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BASE node.
Notes: (Read only property)

173.10.67 NodeIsBASEFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BASEFONT node.
Notes: (Read only property)

173.10.68 NodeIsBIG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BIG node.
Notes: (Read only property)

173.10.69 NodeIsBLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BLINK node.
Notes: (Read only property)

173.10.70 NodeIsBLOCKQUOTE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BLOCKQUOTE node.
Notes: (Read only property)

173.10.71 NodeIsBODY as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BODY node.
Notes: (Read only property)

173.10.72 NodeIsBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BR node.
Notes: (Read only property)

173.10.73 NodeIsCAPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a CAPTION node.
Notes: (Read only property)

173.10.74 NodeIsCENTER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a CENTER node.
Notes: (Read only property)

173.10.75 NodeIsCOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a COL node.
Notes: (Read only property)

173.10.76 NodeIsCOLGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a COLGROUP node.
Notes: (Read only property)

173.10.77 NodeIsDD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DD node.
Notes: (Read only property)

173.10.78 NodeIsDIR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DIR node.
Notes: (Read only property)

173.10.79 NodeIsDIV as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DIV node.
Notes: (Read only property)

173.10.80 NodeIsDL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DL node.
Notes: (Read only property)

173.10.81 NodeIsDT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DT node.
Notes: (Read only property)

173.10.82 NodeIsEM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a EM node.
Notes: (Read only property)

173.10.83 NodeIsEMBED as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a EMBED node.
Notes: (Read only property)

173.10.84 NodeIsFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FONT node.
Notes: (Read only property)

173.10.85 NodeIsFORM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FORM node.
Notes: (Read only property)

173.10.86 NodeIsFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FRAME node.
Notes: (Read only property)

173.10.87 NodeIsFRAMESET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FRAMESET node.
Notes: (Read only property)

173.10.88 NodeIsH1 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H1 node.
Notes: (Read only property)

173.10.89 NodeIsH2 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H2 node.
Notes: (Read only property)

173.10.90 NodeIsH3 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H3 node.
Notes: (Read only property)

173.10.91 NodeIsH4 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H4 node.
Notes: (Read only property)

173.10.92 NodeIsH5 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H5 node.
Notes: (Read only property)

173.10.93 NodeIsH6 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H6 node.
Notes: (Read only property)

173.10.94 NodeIsHEAD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HEAD node.
Notes: (Read only property)

173.10.95 NodeIsHeader as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Header node.
Notes: (Read only property)

173.10.96 NodeIsHR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HR node.
Notes: (Read only property)

173.10.97 NodeIsHTML as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HTML node.
Notes: (Read only property)

173.10.98 NodeIsI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a I node.
Notes: (Read only property)

173.10.99 NodeIsIFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a IFRAME node.
Notes: (Read only property)

173.10.100 NodeIsIMG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a IMG node.
Notes: (Read only property)

173.10.101 NodeIsINPUT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a INPUT node.
Notes: (Read only property)

173.10.102 NodeIsISINDEX as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a ISINDEX node.
Notes: (Read only property)

173.10.103 NodeIsLABEL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LABEL node.
Notes: (Read only property)

173.10.104 NodeIsLAYER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LAYER node.
Notes: (Read only property)

173.10.105 NodeIsLI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LI node.
Notes: (Read only property)

173.10.106 NodeIsLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LINK node.
Notes: (Read only property)

173.10.107 NodeIsLISTING as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LISTING node.
Notes: (Read only property)

173.10.108 NodeIsMAP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MAP node.
Notes: (Read only property)

173.10.109 NodeIsMARQUEE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MARQUEE node.
Notes: (Read only property)

173.10.110 NodeIsMENU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MENU node.
Notes: (Read only property)

173.10.111 NodeIsMETA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a META node.
Notes: (Read only property)

173.10.112 NodeIsNOBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOBR node.
Notes: (Read only property)

173.10.113 NodeIsNOFRAMES as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOFRAMES node.
Notes: (Read only property)

173.10.114 NodeIsNOSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOSCRIPT node.
Notes: (Read only property)

173.10.115 NodeIsOBJECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OBJECT node.
Notes: (Read only property)

173.10.116 NodeIsOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OL node.
Notes: (Read only property)

173.10.117 NodeIsOPTGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OPTGROUP node.
Notes: (Read only property)

173.10.118 NodeIsOPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OPTION node.
Notes: (Read only property)

173.10.119 NodeIsP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a P node.
Notes: (Read only property)

173.10.120 NodeIsPARAM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a PARAM node.
Notes: (Read only property)

173.10.121 NodeIsPRE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a PRE node.
Notes: (Read only property)

173.10.122 NodeIsQ as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Q node.
Notes: (Read only property)

173.10.123 NodeIsS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a S node.
Notes: (Read only property)

173.10.124 NodeIsSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SCRIPT node.
Notes: (Read only property)

173.10.125 NodeIsSELECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SELECT node.
Notes: (Read only property)

173.10.126 NodeIsSMALL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SMALL node.
Notes: (Read only property)

173.10.127 NodeIsSPACER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SPACER node.
Notes: (Read only property)

173.10.128 NodeIsSPAN as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SPAN node.
Notes: (Read only property)

173.10.129 NodeIsSTRIKE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STRIKE node.
Notes: (Read only property)

173.10.130 NodeIsSTRONG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STRONG node.
Notes: (Read only property)

173.10.131 NodeIsSTYLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STYLE node.
Notes: (Read only property)

173.10.132 NodeIsTABLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TABLE node.
Notes: (Read only property)

173.10.133 NodeIsTD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TD node.
Notes: (Read only property)

173.10.134 NodeIsText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Text node.
Notes: (Read only property)

173.10.135 NodeIsTEXTAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TEXTAREA node.
Notes: (Read only property)

173.10.136 NodeIsTH as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TH node.
Notes: (Read only property)

173.10.137 NodeIsTITLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TITLE node.
Notes: (Read only property)

173.10.138 NodeIsTR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TR node.
Notes: (Read only property)

173.10.139 NodeIsU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a U node.
Notes: (Read only property)

173.10.140 NodeIsUL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a UL node.
Notes: (Read only property)

173.10.141 NodeIsWBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a WBR node.
Notes: (Read only property)

173.10.142 NodeIsXMP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a XMP node.
Notes: (Read only property)

173.10.143 Parent as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent node of this node.
Notes: (Read only property)

173.10.144 PrevNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The previous node in the node list of the parent node.
Notes: (Read only property)

173.10.145 Text as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text of this node.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As TidyNodeMBS=t.Root

MsgBox s.Text
```

Notes:

This text has no encoding defined.
(Read only property)

173.10.146 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this node.
Notes: (Read only property)

173.10.147 Value as string

MBS Tools Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded value of the node as UTF-8 String.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim nodes(-1) as TidyNodeMBS
dim root as TidyNodeMBS = t.Root

// we iterate over all child nodes

nodes.Append root.Child
nodes.Append root.NextNode

while UBound(nodes)>=0
dim n as TidyNodeMBS = nodes.Pop

if n<>Nil then

nodes.Append n.Child // maybe a child?
nodes.Append n.NextNode // maybe a sibiling?

if n.HasText then
MsgBox n.Value // Shows "Hello World"
end if
end if
wend
```

Notes: (Read only property)

173.11 module TidyNodeTypeMBS

173.11.1 module TidyNodeTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.11.2 Constants

173.11.3 TidyNodeAsp=10

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.11.4 TidyNodeCDATA=8

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.11.5 TidyNodeComment=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.11.6 TidyNodeDocType=1

173.13 class TidyOptionMBS

173.13.1 class TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An option in the tidy preferences.

173.13.2 Methods

173.13.3 Category as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Category of the option.

173.13.4 DefaultBoolean as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for a boolean property.

173.13.5 DefaultInteger as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for an integer property.

173.13.6 DefaultString as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for a string property.

173.13.7 Description as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Description of the option.

173.13.8 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get ID of given Option.

173.13.9 IsReadOnly as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is Option read-only?

173.13.10 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get name of given Option.

173.13.11 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get datatype of given Option.

173.13.12 Properties

173.13.13 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this option.
Notes: (Read only property)

173.13.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy option object.
Notes: (Read only property)

173.14 module TidyOptionTypeMBS

173.14.1 module TidyOptionTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.14.2 Constants

173.14.3 TidyBoolean=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.14.4 TidyInteger=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.14.5 TidyString=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.15 class TidyOutputMBS

173.15.1 class TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts raw bytes of output from the tidy library.

173.15.2 Events

173.15.3 WriteByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Adds one byte to the output buffer.

173.16 module TidyReportLevelKeysMBS

173.16.1 module TidyReportLevelKeysMBS

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for report level keys.

173.16.2 Constants

173.16.3 TidyAccessString=603

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.16.4 TidyBadDocumentString=605

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.16.5 TidyConfigString=602

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.16.6 TidyErrorString=604

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.16.7 TidyFatalString=606

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.16.8 TidyInfoString=600

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.16.9 TidyWarningString=601

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.17 module TidyReportLevelMBS

173.17.1 module TidyReportLevelMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.17.2 Constants

173.17.3 TidyAccess=3

MBS Tools Plugin, Plugin Version: 5.4.

MBS Tools Plugin, Plugin Version: 17.1.

Function: A constant for use with the Tidy classes.

173.19 module TidyTriStateMBS

173.19.1 module TidyTriStateMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

173.19.2 Constants

173.19.3 TidyAutoState=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.19.4 TidyNoState=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

173.19.5 TidyYesState=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

Chapter 174

TIFF

174.1 Globals

174.1.1 CombineBitCMYKtoRGBMBS(CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, byref output as picture, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Combines 1bit raw image files to one 8bit RGB tiff.
Example:

```
dim t(4) as FolderItem
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer
dim p as Picture

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
```

```
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, Sonderfarbe, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
t(0)=GetFolderItem("test.Cyan.bit")
t(1)=GetFolderItem("test.Magenta.bit")
t(2)=GetFolderItem("test.Yellow.bit")
t(3)=GetFolderItem("test.Black.bit")
t(4)=GetFolderItem("test.S0.bit")

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

// Scale 1/n, 1/3, 1/2, 1, 2, 3, n

Title=str(CombineBitCMYKtoRGBMBS(nC,nM,nY,nK, t, 1, 545,567,0,0,545,567,p,0))
Backdrop=p
Width=p.Width
Height=p.Height
```

Notes:

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error. CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

174.1.2 TIFFStringToPictureMBS(data as string) as picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff string and returns the RGB image for this tiff file.
Notes:

Returns nil on any error.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

174.1.3 TIFFStringToTiffPictureMBS(data as string) as TiffPictureMBS

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff string and returns a TiffPictureMBS object.
Notes:

if you want to read the picture after this line you need to call ReadBW, ReadRGB or use the Scanline methods.
Returns nil on any error.

174.1.4 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 1bit tiff image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

174.1.5 CombineBitCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 1bit raw image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 1bit grayscal esource image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

174.1.6 CombineTiffCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines Grayscale tiff images to one CMYK tiff.
Example:

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
const PHOTOMETRIC_SEPARATED=5

dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
```

```
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
f=GetFolderItem("test.Cyan.tif")
t(0)=f.OpenAsTiffMBS

f=GetFolderItem("test.Magenta.tif")
t(1)=f.OpenAsTiffMBS

f=GetFolderItem("test.Yellow.tif")
t(2)=f.OpenAsTiffMBS

f=GetFolderItem("test.Black.tif")
t(3)=f.OpenAsTiffMBS

f=GetFolderItem("test.S0.tif")
t(4)=f.OpenAsTiffMBS

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

f=GetFolderItem("resultCMYK.tif")
ot=new TiffPictureMBS
if ot.Create(f) then
v=t(0)
u=ot
u.Width=v.Width
```

```
u.Height=v.Height
u.RowsPerStrip=v.Height
u.BitsPerSample=8
u.SamplesPerPixel=4
u.ResolutionUnit=v.ResolutionUnit
u.HorizontalPosition=v.HorizontalPosition
u.HorizontalResolution=v.HorizontalResolution
u.VerticalPosition=v.VerticalPosition
u.VerticalResolution=v.VerticalResolution
u.Orientation=v.Orientation
u.PlanarConfig=PLANARCONFIG_CONTIG
u.Photometric=PHOTOMETRIC_SEPARATED
u.FillOrder=FILLORDER_MSB2LSB
Title=str(CombineTiffCMYKtoCMYKMBS(ot, nC,nM,nY,nK,t))
ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

Notes:

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

174.1.7 CombineTiffCMYKtoRGBMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines Grayscale tiff images to one RGB tiff.
Example:

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
```

```
dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
f=GetFolderItem("test.Cyan.tif")
t(0)=f.OpenAsTiffMBS

f=GetFolderItem("test.Magenta.tif")
t(1)=f.OpenAsTiffMBS

f=GetFolderItem("test.Yellow.tif")
t(2)=f.OpenAsTiffMBS

f=GetFolderItem("test.Black.tif")
t(3)=f.OpenAsTiffMBS

f=GetFolderItem("test.S0.tif")
```

```
t(4)=f.OpenAsTiffMBS

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

f=GetFolderItem("resultRGB.tif")
ot=new TiffPictureMBS
if ot.Create(f) then
v=t(0)
u=ot
u.Width=v.Width
u.Height=v.Height
u.RowsPerStrip=v.Height
u.BitsPerSample=8
u.SamplesPerPixel=3
u.ResolutionUnit=v.ResolutionUnit
u.HorizontalPosition=v.HorizontalPosition
u.HorizontalResolution=v.HorizontalResolution
u.VerticalPosition=v.VerticalPosition
u.VerticalResolution=v.VerticalResolution
u.Orientation=v.Orientation
u.PlanarConfig=PLANARCONFIG_CONTIG
u.Photometric=PHOTOMETRIC_RGB
u.FillOrder=FILLORDER_MSB2LSB
Title=str(CombineTiffCMYKtoRGBMBS(ot, nC,nM,nY,nK,t))
ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

Notes:

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.

174.1.8 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, TiffData as TiffPictureMBS, scalex as Double, scaley as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines a one bit gray tiff image to one 1 bit gray tiff.
Notes:

Basicly only scales the data.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

174.1.9 CombineTiff8BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 8bit tiff image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 8bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

174.2 class TiffPictureMBS

174.2.1 class TiffPictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a Tiff picture.
Example:

```
Dim p As Picture = LogoMBS(500)
```

```
// save tiff file

Dim t As New TiffPictureMBS
Dim file4 As FolderItem = SpecialFolder.Desktop.Child("test4.tif")

t.Pict = p

If t.Create(file4) Then
If t.WriteRGB Then
t.Close
// ok
Else
Break
End If
Else
Break
End If
```

Notes: Bases on libtiff.

174.2.4 Methods

174.2.5 AddCustomTag(Tag as Integer, FieldReadCount as Integer, FieldWriteCount as Integer, FieldType as Integer, FieldBit as Integer, OkToChange as Integer, PassCount as Integer, FieldName as string) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a custom tag.
Example:

```
const TIFFTAG_ASCIITAG = 40666
const TIFFTAG_LONGTAG = 40667
const TIFFTAG_SHORTTAG = 40668
const TIFFTAG_RATIONALTAG = 40669
const TIFFTAG_FLOATTAG = 40670
const TIFFTAG_DOUBLETAG = 40671
const TIFFTAG_BYTE = 40672

const TIFFTAG_SOFTWARE=305

const TIFF_BYTE=1
const TIFF_ASCII=2
const TIFF_SHORT=3 // integer 16 bit signed
const TIFF_LONG=4 // integer 32 bit
const TIFF_FLOAT=11
const TIFF_DOUBLE=12

const FIELD_CUSTOM = 65

dim t as new TiffPictureMBS

// open tiff

if not t.AddCustomTag(TIFFTAG_ASCIITAG, -1, -1, TIFF_ASCII, FIELD_CUSTOM, 1, 0, "MyString")
then
MsgBox "AddCustomTag failed1."
end if
```

Notes: See tiff documentation for details.

174.2.6 AddImage as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file and starts a new one.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim p as Picture

f=SpecialFolder.Desktop.Child("test.tif")
t=new TiffPictureMBS
if t.Create(f) then

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
if t.AddImage then
p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,255)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
MsgBox "Written multi picture tiff."
end if
end if
end if
end if
```

Notes:

Returns true on success and false on any error.

Calls TIFFWriteDirectory internally.

174.2.7 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the Tiff handle.
Notes:

In 5.1 and older the destructor.
In 5.2 and later only closes the tiff handle so you can still read the pictures, the output or input buffer.

174.2.8 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new picture which is created using the picture and it's mask.
Example:

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

174.2.9 Create(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes: Returns true on success.
See also:

- 174.2.10 Create(file as folderitem, endian as Integer) as boolean 23394
- 174.2.11 Create(Path as String, endian as integer = 0) as boolean 23395

174.2.10 Create(file as folderitem, endian as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")

If t.Create(f, 0) Then
If t.WriteRGB Then
t.Close

// open in viewer
f.Launch
End If
End If
```

Notes:

Returns true on success.

Endian settings:

0	Default (System)
1	BigEndian (Mac)
2	LittleEndian (Win)

See also:

- 174.2.9 Create(file as folderitem) as boolean 23393
- 174.2.11 Create(Path as String, endian as integer = 0) as boolean 23395

174.2.11 Create(Path as String, endian as integer = 0) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim p as string = f.NativePath

If t.Create(p) Then
If t.WriteRGB Then
t.Close

// open in viewer
f.Launch
End If
End If
```

Notes:

Returns true on success.

Endian settings:

0	Default (System)
1	BigEndian (Mac)
2	LittleEndian (Win)

See also:

- 174.2.9 Create(file as folderitem) as boolean 23393
- 174.2.10 Create(file as folderitem, endian as Integer) as boolean 23394

174.2.12 CreateString(Size as Integer) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string based tiff writer.
Example:

```
Function PictureToTiffStringMBS(pic as picture) As string
dim t as TiffPictureMBS

t=new TiffPictureMBS
if t.CreateString(& h100000) then
t.Pict=pic
if t.WriteRGB then
t.Close
Return t.OutputBuffer
end if
end if
End Function
```

Notes:

Same as the Create() function, but memory based. You can now use functions like Scanline(), WriteSW() or WriteRGB() to put the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.

The size parameter you pass in is a guess for the initial size of the memory block used. If more data is written, the memory block is resized, but it is quite slow to resize a memoryblock, so make a good guess!

You can and should use this function to write yourself a PictureToTiffString function. The plugin can not well make such a function as there are thousands of possible parameters combination you may want to use. (compared to the JPEG library where you only have the compression level parameter.)
See also:

- 174.2.13 CreateString(Size as Integer, Mode as string) as boolean 23396

174.2.13 CreateString(Size as Integer, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string based tiff writer.
Notes:

Same as the other CreateString method, but you can pass a mode string to the library.

mode="wb" for big endian and mode="wl" for little endian.

See also:

- 174.2.12 CreateString(Size as Integer) as boolean 23395

174.2.14 Flush as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush causes any pending writes for the specified file (including writes for the current directory) to be done.
Notes: In normal operation this call is never needed - the library automatically does any flushing required.

174.2.15 FlushData as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlushData flushes any pending image data for the specified file to be written out; directory-related data are not flushed.
Notes: In normal operation this call is never needed Å | the library automatically does any flushing required.

174.2.16 GetColorMap(byref red as memoryblock, byref green as memoryblock, byref blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the color map for a paletten image.
Notes:

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

174.2.17 GetColorProfile as string

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the color profile data stored in the tiff file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string
dim p as LCMS2ProfileMBS
```

```
f=SpecialFolder.Desktop.Child("horsehead_steinberg_big.tif")

t=f.OpenAsTiffMBS

s=t.GetColorProfile

p = LCMS2ProfileMBS.OpenProfileFromString(s)

MsgBox p.Name
```

Notes: Returns "" on any error.

174.2.18 GetData(Tag as Integer) as string

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the string stored for this tag.

174.2.19 GetField(Tag as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
The memoryblock you pass in must be big enough to hold whatever data the library stores there.

174.2.20 GetFieldByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.21 GetFieldCount(Tag as Integer, byref count as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
'TIFF Tag ImageID
'
'IFD Image
'Code 32781 (hex 0x800D)
'Name ImageID
'Type ASCII
'Count N
'Default None
'Description
'
'OPI-related.
'
'ImageID is the full pathname of the original, high-resolution image, or any other identifying string that uniquely identifies the original image.
'
'The high-resolution image is not required to be in TIFF format. It can be in any format that an OPI Consumer wishes to support.

DIm tiffImport As TiffPictureMBS
Dim xx as string

tiffImport = New TiffPictureMBS
Call tiffImport.Open(SpecialFolder.Desktop.Child("test.tif"))

// the memoryblock is a storage for the data. In this case a pointer to the CString
dim m as MemoryBlock=NewMemoryBlock(4)
dim count as Integer

if tiffImport.GetFieldCount(32781, count, m) then
MsgBox str(count)
MsgBox m.Ptr(0).CString(0)
end if

tiffImport.close
```

Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.22 GetFieldDefaultedByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

174.2.23 GetFieldDefaultedDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

174.2.24 GetFieldDefaultedInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.

Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

174.2.25 GetFieldDefaultedShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

174.2.26 GetFieldDefaultedSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

174.2.27 GetFieldDefaultedString(Tag as Integer, byref value as String) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
```

```
dim s as string

f=SpecialFolder.Desktop.Child("ChristianSchmitz.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldDefaultedString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

174.2.28 GetFieldDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.29 GetFieldInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.30 GetFieldMemory(Tag as Integer, byref ItemCount as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.31 GetFieldShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.32 GetFieldSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.33 GetFieldString(Tag as Integer, byref value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
dim t as TiffPictureMBS
```

```
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_HOSTCOMPUTER=316

if t.GetFieldString(TIFFTAG_HOSTCOMPUTER, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_IMAGEDESCRIPTION=270

if t.GetFieldString(TIFFTAG_IMAGEDESCRIPTION, s) then
MsgBox "TIFFTAG_IMAGEDESCRIPTION"+EndOfLine+s
end if

const TIFFTAG_MAKE=271

if t.GetFieldString(TIFFTAG_MAKE, s) then
MsgBox "TIFFTAG_MAKE"+EndOfLine+s
end if

const TIFFTAG_ARTIST=315

if t.GetFieldString(TIFFTAG_ARTIST, s) then
MsgBox "TIFFTAG_ARTIST"+EndOfLine+s
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

174.2.34 GetXMP as string

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the xmp metadata package stored in the tiff file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")

t=f.OpenAsTiffMBS

s=t.GetXMP

MsgBox left(s,500)
```

Notes: Returns "" on any error.

174.2.35 ImageCount as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of images in the TIFF file.
Notes: Returns 0 on any error.

174.2.36 ImageIndex as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current image index.
Notes: 0 based.

174.2.37 IsLastImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the current picture is the last picture.
Notes: Useful if you walk through all pictures using NextImage.

174.2.38 MirrorVertical(output as TiffPictureMBS) as boolean

MBS Images Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the current picture to another tiff object.
Notes:

You may be able to pass the current tiff file as the output one if you have it open for read and write.
Returns true on success and false on failure.
Works for any color depth or color mode.

174.2.39 NextImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the next image in the TIFF file.
Notes: Returns true on success and false on any error.
See also:

- 174.2.40 NextImage(HeaderOnly as boolean) as boolean 23406

174.2.40 NextImage(HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next image.
Notes: If HeaderOnly is false the current picture is read into the pict& mask properties.
See also:

- 174.2.39 NextImage as boolean 23406

174.2.41 Open(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for readonly access.
Notes:

You need to use the ReadRGB method or the Scanline property to get data from this file.
Returns true on success.
See also:

- 174.2.42 Open(file as folderitem, Mode as string) as boolean 23407
- 174.2.43 Open(Path as String, Mode as string) as boolean 23407

174.2.42 Open(file as folderitem, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for read/write access.
Example:

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

Notes:

Same as the other Open method, but you can pass a mode string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 174.2.41 Open(file as folderitem) as boolean 23406
- 174.2.43 Open(Path as String, Mode as string) as boolean 23407

174.2.43 Open(Path as String, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for read/write access.
Example:

```
Dim t As New TiffPictureMBS

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
```

```
Dim p As String = f.NativePath

If t.Open(p, "r") Then

If t.ReadRGB Then

window1.Backdrop = t.Pict

End If
End If
```

Notes:

Same as the other Open method, but you can pass a mode and path as string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 174.2.41 Open(file as folderitem) as boolean 23406
- 174.2.42 Open(file as folderitem, Mode as string) as boolean 23407

174.2.44 OpenString(data as string) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff image located in a binary string.
Example:

```
Function TiffStringToPicture(data as string) As picture
dim t as MyTiffPictureMBS

t=new MyTiffPictureMBS

if t.OpenString(data) then
if t.ReadRGB then
return t.Pict
// you could add the mask here.
end if
end if

Return nil // failed
End Function
```

Notes:

Same as the Open() function, but memory based. You can now use functions like Scanline(), ReadSW() or ReadRGB() to get the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.
The string you pass is saved in the data property of the class for later use.

You can and should use this function to write yourself a TiffStringToPicture function.
See also:

- 174.2.45 OpenString(data as string, Mode as string) as boolean 23409

174.2.45 OpenString(data as string, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff image located in a binary string.
Notes: Same as the other OpenString method, but you can pass a mode string to the library.
See also:

- 174.2.44 OpenString(data as string) as boolean 23408

174.2.46 RawStripSize(strip as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a raw strip (i.e. not decoded).

174.2.47 ReadBW as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode.
Example:

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
```

```
t=f.OpenAsTiffMBS(true)

if t.ReadBW then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

Notes:

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 174.2.48 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 23410

174.2.48 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode.
Example:

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW(0,0,t.width/2,t.height/2) then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

Notes:

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 174.2.47 ReadBW as boolean 23409

174.2.49 ReadEncodedStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read and decode a strip of data from an open TIFF file.
Notes:

Read the specified strip of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of strip is a "raw strip number". That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.
The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

174.2.50 ReadEncodedTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read and decode a tile of data from an open TIFF file.

Notes:

Read the specified tile of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should be at least as large as the value returned by TileSize.

The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns −1 if an error was encountered.

174.2.51 ReadPreviewBW as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode as a preview.
Notes:

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 174.2.52 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

174.2.52 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode as a preview.
Notes:

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 174.2.51 ReadPreviewBW as boolean 23412

174.2.53 ReadPreviewRGB(ReduceFactor as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a CMYK or RGB picture and stores it in the pict and name properties.
Notes:

This method is faster than ReadRGB, because it reads only every ReduceFactorth line and every ReduceFactorth pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

174.2.54 ReadRawStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the undecoded contents of a strip of data from an open TIFF file.
Notes:

Read the contents of the specified strip into the (user supplied) data buffer. Note that the value of strip is a ”raw strip number”. That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

174.2.55 ReadRawTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return an undecoded tile of data from an open TIFF file.
Notes:

Read the contents of the specified tile into the (user supplied) data buffer. Note that the value of tile is a ”raw tile number”. That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should typically be at least as large as the value returned by TileSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns −1 if an error was encountered.

174.2.56 ReadRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a CMYK or RGB picture and stores it in the pict and name properties.
Notes:

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.
See also:

- 174.2.57 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock

174.2.57 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image into a memoryblock as RGB.
Notes:

The Scanline() array gives you the raw uncompressed data. But this method decodes the data into a RGBA image.

The Memoryblock has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns nil. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).
See also:

- 174.2.56 ReadRGB as boolean 23414

174.2.58 ReadRGBMemoryBegin(byref ErrorMessage as string) as boolean

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts a RGBA reader for the given TIFF picture.
Notes:

Like ReadRGB, but with ReadRGBMemoryBegin, ReadRGBMemoryEnd and ReadRGBMemoryStep you can read the RGBA data in portions.

The Memoryblock returned by ReadRGBMemoryStep has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns false. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

174.2.59 ReadRGBMemoryEnd

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cleans up the internal data structures created by ReadRGBMemoryBegin.

174.2.60 ReadRGBMemoryStep(x as Integer, y as Integer, width as Integer, height as Integer, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image into a memoryblock as RGBA.
Example:

```
dim t as new TiffPictureMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim e as string

if t.Open(f) then
if t.ReadRGBMemoryBegin(e) then

dim w as Integer = t.Width
dim h as Integer = t.Height

dim p as new PictureMBS(w, h, PictureMBS.ImageFormatRGB)

for y as Integer = 0 to h-1 step 100

dim m as MemoryBlock = t.ReadRGBMemoryStep(0, y, w, 100)

for i as Integer = 0 to 99
p.RowInFormat(i+y, PictureMBS.ImageFormatRGBA)=m
next

next

t.ReadRGBMemoryEnd
Backdrop = p.copypicture(0,0,1000,1000) // display a portion
end if

end if
```

Notes:

As you see in the example, you can use this method to easily read huge TIFF files into a PictureMBS object.

If the decompression fails the function returns nil. (e.g. out of memory).
Please make sure that the range in x and y, width and height is right.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).

174.2.61 ReadWithLUT(ColorLookupTable() as color) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture with a Color Lookup Table.
Notes:

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 174.2.62 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean 23417

174.2.62 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture with a Color Lookup Table.
Notes:

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 174.2.61 ReadWithLUT(ColorLookupTable() as color) as boolean 23417

174.2.63 RewriteDirectory as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file replacing the old data.
Notes:

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as SaveImage.

174.2.64 SaveImage as boolean

MBS Images Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file replacing the old data.
Notes:

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as RewriteDirectory.

174.2.65 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image scanline in a memoryblock.
Notes:

Returns false on any error.
Thee Memoryblock must be big enough. The BytesPerRow functions returns the number of bytes needed.
The first scanline has the index of 0.
This is the fastest way to read scanlines. You provide the memoryblock and you can reuse it for all calls to this method for one tiff.
See also:

- 174.2.140 Scanline(index as Integer, sample as Integer = 0) as memoryblock 23451

174.2.66 ScanlinesScaled(index as integer, count as integer, sample as integer = 0, scaleFactor as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get image scanlines scaled down as one memoryblock.
Notes:

Returns nil on any error.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If scaleFactor is >1, we scale down and return scaleFactor rows reduced to one row.

This scaling down is to quicker get preview pictures.

174.2.67 SetColorMap(red as memoryblock, green as memoryblock, blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color map for a paletten image.
Notes:

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

174.2.68 SetColorProfile(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color profile for this tiff file.
Example:

```
Dim p As New Picture(100,100,32)

Dim ImageFile As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim ProfileFile As FolderItem = SpecialFolder.Desktop.Child("Generic RGB Profile.icc")

Dim t As New TiffPictureMBS
t.Pict = p

Dim ProfileStream As BinaryStream = BinaryStream.Open(ProfileFile)
Dim ProfileData As String = ProfileStream.Read(ProfileStream.Length)

If t.Create(ImageFile) Then
// set profile before writing
If t.SetColorProfile(ProfileData) Then
// now write picture
If t.WriteRGB Then
t.Close

ImageFile.Launch
```

```
Else
Break
End If
Else
Break
End If
Else
Break
End If
```

Notes: Returns true on success and false on failure.

174.2.69 SetData(Tag as Integer, data as string) as boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the string for this tag.

174.2.70 SetFieldByte(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.71 SetFieldDouble(Tag as Integer, value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.72 SetFieldInteger(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem

const TIFFTAG_IMAGELENGTH=257 // integer
const TIFFTAG_IMAGEWIDTH=256 // integer

f=GetTemporaryFolderItem
t=new TiffPictureMBS

if t.Create(f) then

if t.SetFieldInteger(TIFFTAG_IMAGELENGTH,100) then
if t.Height=100 then
MsgBox "ok"
end if
end if

end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.73 SetFieldMemory(Tag as Integer, ItemCount as Integer, data as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

This is the special version of the setter which passes a memoryblock and a count value so you can set an array using this method.

Please look for Tag values in the tiff specification.
Returns true on success.

Please make sure to use the correct setter depending on data type associated with the tag.

174.2.74 SetFieldShort(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.75 SetFieldSingle(Tag as Integer, value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

174.2.76 SetFieldString(Tag as Integer, value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets one of the fields to the value of the string.
Example:

```
dim m,p as Picture
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics
dim s as string

// make pictures
p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100
```

```
p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

// save
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then

const TIFFTAG_SOFTWARE=305

s="Example Software"
call t.SetFieldString TIFFTAG_SOFTWARE,s

const TIFFTAG_HOSTCOMPUTER=316

s="Example HostComputer"
call t.SetFieldString TIFFTAG_HOSTCOMPUTER,s

const TIFFTAG_IMAGEDESCRIPTION=270

s="Example ImageDescription"
call t.SetFieldString TIFFTAG_IMAGEDESCRIPTION,s

const TIFFTAG_MAKE=271

s="Example Make"
call t.SetFieldString TIFFTAG_MAKE,s

const TIFFTAG_ARTIST=315

s="Example Artist"
call t.SetFieldString TIFFTAG_ARTIST,s

t.Close
MsgBox "Ok"
f.Launch
end if
```

```
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
You have to pass in the string with the correct encoding.

174.2.77 SetImageIndex(index as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current image index and reads the new image.
Example:

```
dim t as TiffPictureMBS // your tiff picture

if t.SetImageIndex(1) then
Canvas1.Backdrop=t.pict
end if
```

Notes:

Reads automatically a RGB picture for you, so the pict property is filled on success.
Returns true on success.
Index is zero based.
See also:

- 174.2.78 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean 23424

174.2.78 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current image index.
Notes:

If HeaderOnly is false the current picture is read into the pict& mask properties.
Returns true on success.
See also:

- 174.2.77 SetImageIndex(index as Integer) as boolean 23424

174.2.79 SetXMP(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the xmp metadata package for this tiff file.
Notes: Returns true on success and false on failure.

174.2.80 VStripSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a strip with nrows rows of data.

174.2.81 VTileSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a row-aligned tile with nrows of data.

174.2.82 WriteBW as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a black & white image.
Example:

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,0)
p.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS

if t.Create(f) then
t.Pict=p
if t.WriteBW then
MsgBox "ok"
end if
end if
```

Backdrop=p

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 1
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

174.2.83 WriteEncodedStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compress and write a strip of data to an open TIFF file.
Notes:

Compress size bytes of raw data from buf and write the result to the specified strip; replacing any previously written data. Note that the value of strip is a "raw strip number." That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2).

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteEncodedStrip.

Returns −1 is returned if an error was encountered. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

174.2.84 WriteEncodedTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compress and write a tile of data to an open TIFF file.
Notes:

Compress size bytes of raw data from buf and append the result to the end of the specified tile. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate places (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number.

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

Returns −1 is returned if an error was encountered. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

174.2.85 WriteGray as boolean

MBS Images Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a grayscale image with 256 colors.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
if t.Create(f) then
t.Pict=LogoMBS(500)
```

```
call t.WriteGray
t.Close
end if
```

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 8
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.
Version 13.1 of our plugins writes a 16 bit Gray image if you set BitsPerSample to 16 before calling this method.

174.2.86 WriteRawStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a strip of raw data to an open TIFF file.
Notes:

Append size bytes of raw data to the specified strip.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteRawStrip.

Returns -1 is returned if an error occurred. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

174.2.87 WriteRawTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a tile of raw data to an open TIFF file
Notes:

Append size bytes of raw data to the specified tile.
Returns −1 is returned if an error occurred. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

174.2.88 WriteRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a RGB image.
Example:

```
dim m,p as Picture
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics

p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")
```

```
t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes:

Uses the pictures in the mask and pict properties to write a picture.
If mask is set, the picture is saved with an alpha channel.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_RGB
BitsPerSample = 8
SamplesPerPixel = 3
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

174.2.89 Properties

174.2.90 BitsPerSample as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The count of bits for each pixel component.
Notes:

Should normally by 8 for RGB images.
(Read and Write property)

174.2.91 BytesPerRow as Int64

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes needed for each row in a scan line.
Notes:

0 on any error.
(Read only property)

174.2.92 Compression as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The compression used.
Notes:

some constants:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.93 Copyright as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copyright notice of this image.
Example:

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
```

```
st.Close
end if
```

Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.94 CurrentDirOffset as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current directory offset.
Notes: (Read only property)

174.2.95 CurrentRow as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current row, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

174.2.96 CurrentStrip as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current strip, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

174.2.97 CurrentTile as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current tile, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

174.2.98 DateTime as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Date and time of the TIFF file.
Notes:

Check some TIFF files for the format used.

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.99 DocumentName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the document.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.100 ExtraSamples as MemoryBlock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The settings for the extra samples.
Notes:

A memoryblock filled with an array of shorts (16bit integers).

constants:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.101 FillOrder as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill order of the bits in a byte.
Notes:

constants:

(MSB = Most significant bit, LSB = Least significant bit)

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.102 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: (Read and Write property)

174.2.103 HorizontalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x Offset of this image in the drawing area.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.104 HorizontalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution used.
Notes:

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.105 HostComputer as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the machine where the tiff file was created.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

l When creating a new file force information be written with Little-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

b When creating a new file force information be written with Big-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

L Force image data that is read or written to be treated with bits filled from Least Significant Bit (LSB) to Most Significant Bit (MSB). Note that this is the opposite to the way the library has worked from its inception.

B Force image data that is read or written to be treated with bits filled from Most Significant Bit (MSB) to Least Significant Bit (LSB); this is the default.

H Force image data that is read or written to be treated with bits filled in the same order as the native CPU.

M Enable the use of memory-mapped files for images opened read-only. If the underlying system does not support memory-mapped files or if the specific image being opened cannot be memory-mapped then the library will fallback to using the normal system interface for reading information. By default the library will attempt to use memory-mapped files.

m Disable the use of memory-mapped files.

C Enable the use of ”strip chopping” when reading images that are comprised of a single strip or tile of uncompressed data. Strip chopping is a mechanism by which the library will automatically convert the single-strip image to multiple strips, each of which has about 8 Kilobytes of data. This facility can be useful in reducing the amount of memory used to read an image because the library normally reads each strip in its entirety. Strip chopping does however alter the apparent contents of the image because when an image is divided into multiple strips it looks as though the underlying file contains multiple separate strips. Finally, note that default handling of strip chopping is a compile-time configuration parameter. The default behaviour, for backwards compatibility, is to enable strip chopping.

c Disable the use of strip chopping when reading images.

FILLORDER_LSB2MSB	2

174.2.106 ImageDescription as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Information about the image.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.107 InputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string passed for OpenString.
Notes:

Used for the read requests from the Tiff library.
(Read only property)

174.2.108 IsBigEndian as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether file is big endian.
Notes: (Read only property)

174.2.109 IsByteSwapped as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether bytes are swapped.
Notes:

Returns true if the image data was in a different byte-order than the host machine. Zero is returned if the TIFF file and local host byte-orders are the same.
Note that ReadTile(), ReadStrip() and ReadScanline() functions already normally perform byte swapping to local host order if needed.
(Read only property)

174.2.110 IsMSB2LSB as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the image data is being returned with bit 0 as the most significant bit.
Notes: (Read only property)

174.2.111 IsTiled as Boolean

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a non-zero value if the image data has a tiled organization.
Notes:

Zero is returned if the image data is organized in strips.
(Read only property)

174.2.112 IsUpSampled as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether data is upsampled.
Notes:

Returns a non-zero value if image data returned through the read interface routines is being up-sampled. This can be useful to applications that want to calculate I/O buffer sizes to reflect this usage (though the usual strip and tile size routines already do this).
(Read only property)

174.2.113 JPEGQuality as Integer

MBS Images Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG quality.
Example:

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS

if pic <>nil then
```

```
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

Notes:

Default is 75.
(Read and Write property)

174.2.114 Make as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanner manufacturer name.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.115 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes:

May be nil.
(Read and Write property)

174.2.116 Model as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanner model name/number.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.117 NumberOfStrips as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of strips in the image.
Notes: (Read only property)

174.2.118 NumberOfTiles as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of tiles in the image.
Notes: (Read only property)

174.2.119 Orientation as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of this image.
Example:

```
// creates a tif file with a horizontal flipped image
// red rectangle is on the left in the image data, but with orientation tag it should be displayed on the right
```

```
side.
// Mac OS X Preview.app shows it correctly.

dim p as Picture
dim t as TiffPictureMBS
dim f as FolderItem

const ORIENTATION_TOPLEFT = 1 //* row 0 top, col 0 lhs */
const ORIENTATION_TOPRIGHT = 2 //* row 0 top, col 0 rhs */
const ORIENTATION_BOTRIGHT = 3 //* row 0 bottom, col 0 rhs */
const ORIENTATION_BOTLEFT = 4 //* row 0 bottom, col 0 lhs */
const ORIENTATION_LEFTTOP = 5 //* row 0 lhs, col 0 top */
const ORIENTATION_RIGHTTOP = 6 //* row 0 rhs, col 0 top */
const ORIENTATION_RIGHTBOT = 7 //* row 0 rhs, col 0 bottom */
const ORIENTATION_LEFTBOT = 8 //* row 0 lhs, col 0 bottom */

p=New Picture(150,100,32)

p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillRect 0,0,10,10

t=new TiffPictureMBS
f=SpecialFolder.Desktop.Child("test.tif")

if t.Create(f) then
t.Pict=p

t.Orientation=ORIENTATION_TOPRIGHT
if t.WriteRGB then
end if
t.Orientation=ORIENTATION_TOPRIGHT

t.Close
end if
```

Notes:

Orientation:

The orientation of the image with respect to the rows and columns.
Tag = 274 (112.H)
Type = SHORT
N = 1
1 = The 0th row represents the visual top of the image, and the 0th column represents the visual left-hand side.
2 = The 0th row represents the visual top of the image, and the 0th column represents the visual right-hand

side.
3 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual right-hand side.
4 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual left-hand side.
5 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual top.
6 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual top.
7 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual bottom.
8 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual bottom.

Default is 1.
Support for orientations other than 1 is not a Baseline TIFF requirement.
(This text was sent in by David Austin)
(Read and Write property)

174.2.120 OutputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current output data from the CreateString function.
Notes:

Between CreateString and Close the plugin will record all the output data and you can get a copy using this property.
(Read only property)

174.2.121 PageName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the current page.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.122 Photometric as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A property of the TIFF image.
Example:

```
// read and write a BW fax tiff with compression

dim d as new OpenDialog()
dim f as FolderItem = GetFolderItem("myfax.tiff")
if f = nil then
return
end if

dim tiff as new TiffPictureMBS()
if not tiff.Open(f) then
MsgBox("Error while opening.")
return
end if

if not tiff.ReadBW() then
MsgBox("Error reading.")
end if

dim tiff2 as TiffPictureMBS = new TiffPictureMBS()

dim f2 as FolderItem = SpecialFolder.Desktop.Child("Copy.tiff")
if not tiff2.Create(f2) then
MsgBox("Error creating file.")
end if

const COMPRESSION_CCITTFAX3=3
const WhiteIsZero=0
const BlackIsZero=1

tiff2.Pict = tiff.pict
tiff2.Photometric=WhiteIsZero
tiff2.Compression=COMPRESSION_CCITTFAX3
if not tiff2.WriteBW() then
MsgBox("Error writing.") // Error
end if

tiff2.Close()
```

Notes:

PhotometricInterpretation:
The color space of the image data.
Tag = 262 (106.H)
Type = SHORT

N = 1

0 = WhiteIsZero. For bilevel and grayscale images: 0 is imaged as white. 2**BitsPerSample-1 is imaged as black. This is the normal value for Compression=2.

1 = BlackIsZero. For bilevel and grayscale images: 0 is imaged as black. 2**BitsPerSample-1 is imaged as white. If this value is specified for Compression=2, the image should display and print reversed.

2 = RGB. In the RGB model, a color is described as a combination of the three primary colors of light (red, green, and blue) in particular concentrations. For each of the three components, 0 represents minimum intensity, and 2**BitsPerSample - 1 represents maximum intensity. Thus an RGB value of (0,0,0) represents black, and (255,255,255) represents white, assuming 8-bit components. For PlanarConfiguration = 1, the components are stored in the indicated order: first Red, then Green, then Blue. For PlanarConfiguration = 2, the StripOffsets for the component planes are stored in the indicated order: first the Red component plane StripOffsets, then the Green plane StripOffsets, then the Blue plane StripOffsets.

3= Palette color. In this model, a color is described with a single component. The value of the component is used as an index into the red, green and blue curves in the ColorMap field to retrieve an RGB triplet that defines the color. When PhotometricInterpretation=3 is used, ColorMap must be present and SamplesPerPixel must be 1.

4 = Transparency Mask. This means that the image is used to define an irregularly shaped region of another image in the same TIFF file. SamplesPerPixel and BitsPerSample must be 1. PackBits compression is recommended. The 1-bits define the interior of the region; the 0-bits define the exterior of the region. A reader application can use the mask to determine which parts of the image to display. Main image pixels that correspond to 1-bits in the transparency mask are imaged to the screen or printer, but main image pixels that correspond to 0-bits in the mask are not displayed or printed. The image mask is typically at a higher resolution than the main image, if the main image is grayscale or color so that the edges can be sharp.

There is no default for PhotometricInterpretation, and it is required. Do not rely on applications defaulting to what you want.

For more details see:
http://partners.adobe.com/asn/developer/pdfs/tn/TIFF6.pdf
(Read and Write property)

174.2.123 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture data of the picture.

Notes: (Read and Write property)

174.2.124 PlanarConfig as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The storage organization used.
Notes:

Value is 1 for a single image plane and 2 for separated planes.

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.125 RasterScanlineSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the raster scanline size.
Notes:

Returns the size in bytes of a complete decoded and packed raster scanline.
Note that this value may be different from the value returned by ScanlineSize if data is stored as separate planes.
(Read only property)

174.2.126 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which unit is used for the Resolution values.
Notes:

constants:

RESUNIT_NONE	1	no meaningful units
RESUNIT_INCH	2	english
RESUNIT_CENTIMETER	3	metric

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.127 RowsPerStrip as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A property of the TIFF image.
Notes:

Should be same as the height for our uses. (with one strip)
(Read and Write property)

174.2.128 SampleFormat as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data sample format.
Notes:

Value is 1 for unsigned integer, 2 for signed integer, 3 for IEEE floating point, 4 for untyped data (e.g. JPEG compressed), 5 for complex signed int and 6 for complex IEEE floating point.
(Read and Write property)

174.2.129 SamplesPerPixel as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The count of components used for each pixel.
Notes:

SamplesPerPixel= 1=Grayscale, 3=RGB, 4=CMYK, ...
Photometric= 0 or 1=Grayscale depending on white point, 2=RGB, 5=CMYK, ...

For other formats see:
http://partners.adobe.com/asn/developer/pdfs/tn/TIFF6.pdf
(Read and Write property)

174.2.130 Software as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The software name used to make this image.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.131 StripSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the equivalent size for a strip of data as it would be returned in a call to ReadEncodedStrip or as it would be expected in a call to WriteEncodedStrip.
Notes: (Read only property)

174.2.132 TileRowSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes of a row of data in a tile.
Notes: (Read only property)

174.2.133 TileSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the equivalent size for a tile of data as it would be returned in a call to ReadTile or as it would be expected in a call to WriteTile.
Notes: (Read only property)

174.2.134 Version as Integer

MBS Images Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the Tiff library used.
Notes:

Updated to 3.7.1 in plugin version 5.0.
(Read only property)

174.2.135 VersionString as String

MBS Images Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the Tiff library used.
Example:

```
dim z as new TiffPictureMBS

MsgBox z.VersionString

// shows for example:
// LIBTIFF, Version 3.9.4
// Copyright (c) 1988-1996 Sam Leffler
// Copyright (c) 1991-1996 Silicon Graphics, Inc.
```

Notes: (Read only property)

174.2.136 VerticalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y Offset of this image in the drawing area.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.137 VerticalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution used.
Notes:

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

174.2.138 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: (Read and Write property)

174.2.139 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim t as new TiffPictureMBS
t.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

174.2.140 Scanline(index as Integer, sample as Integer = 0) as memoryblock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An image scanline.
Notes:

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0.
(Read and Write computed property)
See also:

- 174.2.65 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean 23418

174.2.141 Scanlines(index as Integer, count as Integer, sample as Integer = 0, lineStepScanlines as Integer = 1, lineStepReturn as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set image scanlines as one memoryblock.
Notes:

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If lineStepScanlines is >1, we skip scan lines so we read less data.
If lineStepReturn is >1, we return only every nth row.

If rows can be read with skipping, you should try lineStepScanlines = 2 or more for skipping lines.
If that doesn't work due to tiled data, you can use lineStepReturn = 2 or more.
This skipping is to quicker get preview pictures.
(Read and Write computed property)

174.2.142 Events

174.2.143 Error(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: .

Function: An event called whenever an error is to be reported.

174.2.144 Progress(line as Integer, total as Integer)

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Reports changes in progress.
Notes: Used in CombineBitCMYKtoCMYK, CombineTiffCMYKtoRGB and CombineTiffCMYKtoCMYK methods.

174.2.145 Warning(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: .

Function: An event called whenever a warning is to be reported.

174.2.146 Constants

174.2.147 kCompressionAdobeDeflate = 8

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Deflate compression, as recognized by Adobe

174.2.148 kCompressionCCITTFAX3 = 3

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT Group 3 fax encoding

174.2.149 kCompressionCCITTFAX4 = 4

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT Group 4 fax encoding

174.2.150 kCompressionCCITTRLE = 2

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT modified Huffman RLE

174.2.151 kCompressionCCITTRLEW = 32771

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.

174.2.152 kCompressionCCITT_T4 = 3

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT T.4 (TIFF 6 name)

174.2.153 kCompressionCCITT_T6 = 4

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT T.6 (TIFF 6 name)

174.2.154 kCompressionDCS = 32947

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Kodak DCS encoding

174.2.155 kCompressionDeflate = 32946

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Deflate compression

174.2.156 kCompressionIT8BL = 32898

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 Binary line art

174.2.157 kCompressionIT8CTPAD = 32895

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 CT w/padding

174.2.158 kCompressionIT8LW = 32896

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 Linework RLE

174.2.159 kCompressionIT8MP = 32897

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 Monochrome picture

174.2.160 kCompressionJBIG = 34661

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: ISO JBIG

174.2.161 kCompressionJP2000 = 34712

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Leadtools JPEG2000

174.2.162 kCompressionJPEG = 7

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Example:

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS
```

```
if pic <>nil then
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32 // 8 works also, but not 1
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

Notes: JPEG DCT compression

174.2.163 kCompressionLZMA = 34925

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: LZMA2

174.2.164 kCompressionLZW = 5

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Lempel-Ziv & Welch

174.2.165 kCompressionNeXT = 32766

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: NeXT 2-bit RLE

174.2.166 kCompressionNone = 1

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: No compression.

174.2.167 kCompressionOJPEG = 6

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: !6.0 JPEG

174.2.168 kCompressionPackBits = 32773

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Macintosh RLE

Chapter 175

Timecode

175.1 class LTCDecoderMBS

175.1.1 class LTCDecoderMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the timecode decoder.

175.1.2 Methods

175.1.3 Constructor(apv as Integer, queueSize as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a new LTC decoder.
Notes:

apv: audio-frames per video frame. This is just used for initial settings, the speed is tracked dynamically. setting this in the right ballpark is needed to properly decode the first LTC frame in a sequence.
queueSize: length of the internal queue to store decoded frames to SMPTEDecoderWrite.

Raises an out of memory exception if initialization fails.

175.1.4 Destructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

175.1.5 FlushQueue

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Remove all LTC frames from the internal queue.

175.1.6 Read as LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decoded LTC frames are placed in a queue.
Notes: This function retrieves a frame from the queue, and stores it a new LTCFrameMBS object.
See also:

- 175.1.7 Read(frame as LTCFrameMBS) as Boolean 23466

175.1.7 Read(frame as LTCFrameMBS) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decoded LTC frames are placed in a queue.
Notes:

This function retrieves a frame from the queue, and stores it the given LTCFrameMBS object.
You should prefer this method and reuse frame objects.
See also:

- 175.1.6 Read as LTCFrameMBS 23466

175.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 4.

posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23467
- 175.1.10 WriteSingle(data as String, posinfo as UInt64 = 0) 23467

175.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0) 23466
- 175.1.10 WriteSingle(data as String, posinfo as UInt64 = 0) 23467

175.1.10 WriteSingle(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 4.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0) 23466
- 175.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23467

175.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23468
- 175.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0) 23468

175.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0) 23468
- 175.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0) 23468

175.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0) 23468
- 175.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23468

175.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23469
- 175.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0) 23470

175.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0) 23469
- 175.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0) 23470

175.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0) 23469
- 175.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23469

175.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse. Taken from data.size.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23470
- 175.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0) 23471

175.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0) 23470
- 175.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0) 23471

175.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse. Taken from data.lenb.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 175.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0) 23470
- 175.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 23470

175.1.20 Properties

175.1.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

175.1.22 QueueLength as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Count number of LTC frames currently in the queue.
Notes:

Returns number of queued frames.
(Read only property)

175.2 class LTCEncoderMBS

175.2.1 class LTCEncoderMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timecode encoder.

175.2.2 Methods

175.2.3 Constructor(SampleRate as Double, FPS as Double, TVStandard as Integer, Flags as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocate and initialize LTC audio encoder.
Notes:

EncoderReinit internally see, see notes there.

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)
TVStandard: the TV standard to use for Binary Group Flag bit position
flags: binary combination of flags like LTC_NO_PARITY and LTC_BGF_DONT_TOUCH.

175.2.4 CopyBuffer as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the accumulated encoded audio to the given sample-buffer and flush the internal buffer.
Notes:

Allocates new MemoryBlock and puts bytes inside.
Returns nil if there is no data.

175.2.5 CopyBufferString as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the accumulated encoded audio to the given sample-buffer and flush the internal buffer.
Notes: Allocates new memory for string and puts bytes inside.

175.2.6 DecrementTimecode as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Move the encoder to the previous timecode frame.
Notes: This is useful for encoding reverse LTC.

175.2.7 Destructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

175.2.8 EncodeByte(byte as UInt8, speed as Double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generate LTC audio for given byte of the LTC-frame and place it into the internal buffer.
Notes:

see also GetBuffer and BufferPtr

LTC has 10 bytes per frame: 0 <= bytecnt <10 use TimeCode property to set the current frame before Encoding.

The default output signal is @ -3dBFS (38..218 at 8 bit unsigned). see also SetVolume

if speed is <0, the bits are encoded in reverse.
slowdown >10.0 requires custom buffer sizes; see \ref SetBufferSize.

byte: byte of the LTC-frame to encode 0..9
speed: vari-speed, <1.0 faster, >1.0 slower ; must be != 0

Returns true on success, -1 if byte is invalid or buffer overflow (speed >10.0)

175.2.9 EncodeFrame

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encode a full LTC frame at fixed speed.
Notes:

This is equivalent to calling EncodeByte 10 times for bytes 0..9 with speed 1.0.

Note: The internal buffer must be empty before calling this function.
Otherwise it may overflow. This is usually the case if it is read with GetBuffer after calling this function.

The default internal buffersize is exactly one full LTC frame at speed 1.0.
See also:

- 175.2.10 EncodeFrame(Speed as Double) 23475

175.2.10 EncodeFrame(Speed as Double)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encode a full LTC frame at fixed speed.
Notes:

This is equivalent to calling EncodeByte 10 times for bytes 0..9 with given speed.
Speed should be around 1.0 for normal speed.

Note: The internal buffer must be empty before calling this function.
Otherwise it may overflow. This is usually the case if it is read with GetBuffer after calling this function.

The default internal buffersize is exactly one full LTC frame at speed 1.0.
See also:

- 175.2.9 EncodeFrame 23474

175.2.11 EncoderReinit(SampleRate as Double, FPS as Double, TVStandard as Integer, Flags as Integer) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Change the encoder settings without re-allocating any library internal data structure (realtime safe).
Notes:

Changing the fps and or sample-rate implies a buffer flush, and biphase state reset.

This call will fail if the internal buffer is too small to hold one full LTC frame. Use SetBufferSize to prepare an internal buffer large enough to accommodate all SampleRate, fps combinations that you would like to re-init to.

The LTC frame payload data is not modified by this call, however, the flag-bits of the LTC-Frame are updated:
If fps equals to 29.97 or 30000.0/1001.0, the LTCFrame's 'dfbit' bit is set to 1 to indicate drop-frame timecode.

Unless the LTC_BGF_DONT_TOUCH flag is set the BGF1 is set or cleared depending on LTC_TC_CLOCK and BGF0,2 according to LTC_USE_DATE and the given standard.
ColFrame is cleared and the parity recomputed (unless LTC_NO_PARITY is given).

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)
TVStandard: the TV standard to use for Binary Group Flag bit position
Flags: binary combination of flags.

Returns 0 on success.

175.2.12 FlushBuffer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset the write-pointer of the encoder-buffer.

175.2.13 GetBuffer(byref size as Integer, flush as boolean) as Ptr

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a pointer to the accumulated encoded audio-data.
Notes:

size: if set, the number of valid bytes in the buffer is stored in the buffer.
Flush: call FlushBuffer - reset the buffer write-pointer.

Returns pointer to encoder-buffer.

175.2.14 IncrementTimecode as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Move the encoder to the next timecode frame.

175.2.15 Reset

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets ecoder state.
Notes: Flushes buffer, reset biphase state.

175.2.16 SetBufferSize(SampleRate as Double, FPS as Double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configure a custom size for the internal buffer.
Notes:

This is needed if you are planning to call EncoderReinit or if you want to keep more than one LTC frame's worth of data in the library's internal buffer.

The buffer-size is (1 + sample_rate / fps) bytes. resizing the internal buffer will flush all existing data in it - alike \ref FlushBuffer.

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)

Returns 0 on success, -1 if allocation fails (which makes the encoder unusable, call discard the object or realloc the buffer)

175.2.17 SetFilter(RiseTime as Double)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set encoder signal rise-time / signal filtering.
Notes:

LTC signal should have a rise time of 40us +/- 10 us. by default the encoder honors this and low-pass filters the output depending on the sample-rate.

If you want a perfect square wave, set 'rise_time' to 0.

Note EncoderReinit resets the filter-time-constant to use the default 40us for the given sample-rate, overriding any value previously set with SetFilter.

RiseTime the signal rise-time in us (10^(-6) sec), set to 0 for perfect square wave, default 40.0

175.2.18 SetVolume(dBFS as double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the volume of the generated LTC signal.
Notes:

Typically LTC is sent at 0dBu ; in EBU callibrated systems that corresponds to -18dBFS. - by default libltc creates -3dBFS

since libltc generated 8bit audio-data, the minimum dBFS is about -42dB which corresponds to 1 bit.

0dB corresponds to a signal range of 127
1..255 with 128 at the center.

dBFS: the volume in dB full-scale (<= 0.0)

Returns true on success, false if the value was out of range

175.2.19 Properties

175.2.20 BufferPtr as Ptr

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a pointer to the accumulated encoded audio-data.
Notes: (Read only property)

175.2.21 BufferSize as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query the length of the internal buffer.
Notes:

It is allocated to hold audio-frames for exactly one LTC frame for the given sample-rate and frame-rate. ie. (1 + sample-rate / fps) bytes

Note this returns the total size of the buffer, not the used/free part. See also BufferPtr.

Returns size of the allocated internal buffer.
(Read only property)

175.2.22 Filter as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current filter setting.
Notes: (Read and Write property)

175.2.23 Flags as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags used to create the encoder.
Notes: (Read only property)

175.2.24 FPS as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FPS setting.
Notes: (Read only property)

175.2.25 Frame as LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Low-level access to the internal LTCFrame data.
Notes:

Note: be careful to about dfbit flag in LTCFrameMBS object, the encoder sets this [only] upon initialization.
(Read and Write property)

175.2.26 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

175.2.27 SampleRate as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current sample rate.
Notes: (Read only property)

175.2.28 Standard as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TV Standard.
Notes: (Read only property)

175.2.29 TimeCode as LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the SMPTETimecode for the encoder LTC-frame.
Notes:

The next call to EncodeByte or EncodeFrame will encode this time to LTC audio-samples.
Internally this call uses TimeToFrame because the LTCEncoder operates on LTCframes only.
(Read and Write property)

175.2.30 UserBits as UInt32

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a 32-bits unsigned integer from the user-data bits.
Notes:

It is written LSB first continiously int the eight user fields.
(Read and Write property)

175.3 class LTCFrameExtMBS

175.3.1 class LTCFrameExtMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended LTC frame - includes audio-sample position offsets, volume, etc.
Notes:

Note: For TV systems, the sample in the LTC audio data stream where the LTC Frame starts is not necessarily at the same time as the video-frame which is described by the LTC Frame.

offStart denotes the time of the first transition of bit 0 in the LTC frame.

For 525/60 Television systems, the first transition shall occur at the beginning of line 5 of the frame with which it is associated. The tolerance is ± 1.5 lines.

For 625/50 systems, the first transition shall occur at the beginning of line 2 ± 1.5 lines of the frame with which it is associated.

Only for 1125/60 systems, the first transition occurs exactly at the vertical sync timing reference of the frame. ± 1 line.
Subclass of the LTCFrameMBS class.

175.3.2 Properties

175.3.3 OffEnd as Int64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: OffEnd the sample in the stream corresponding to the end of the LTC frame.
Notes: (Read and Write property)

175.3.4 OffStart as Int64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: OffStart the approximate sample in the stream corresponding to the start of the LTC frame.
Notes: (Read and Write property)

175.3.5 Reverse as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If non-zero, a reverse played LTC frame was detected.
Notes:

Since the frame was reversed, it started at offEnd and finishes as offStart (offEnd >offStart). (Note: in reverse playback the (reversed) sync-word of the next/previous frame is detected, this offset is corrected).
(Read and Write property)

175.3.6 SampleMax as UInt8

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum input sample signal for this frame (0..255).
Notes: (Read and Write property)

175.3.7 SampleMin as UInt8

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum input sample signal for this frame (0..255).
Notes: (Read and Write property)

175.3.8 Volume as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The volume of the input signal in dbFS.
Notes: (Read and Write property)

175.3.9 biphaseTics(index as Integer) as Single

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detailed timing info.
Notes:

Phase of the LTC signal; the time between each bit in the LTC-frame in audio-frames. Summing all 80 values in the array will yield audio-frames/LTC-frame = (offEnd - offStart + 1).
Range of index is 0 to 79.

(Read and Write computed property)

175.4 class LTCFrameMBS

175.4.1 class LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for a new empty frame.

175.4.2 Methods

175.4.3 Clone as LTCFrameExtMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the frame.
Notes:

Returns always LTCFrameExtMBS object.
Extended fields may not be set if LTCFrameMBS is cloned.

175.4.4 Constructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new frame.
Notes: Internally calls Reset to set soem default values.
See also:

- 175.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0) 23484
- 175.4.6 Constructor(other as LTCFrameMBS) 23485

175.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translate SMPTETimecode into its binary LTC representation and set the LTC frame's parity bit accordingly.
Notes:

InputTimecode: timecode input
TVStandard: the TV standard to use for parity bit assignment

Flags: flags binary combination of flag values - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.
If LTC_USE_DATE is given, user-fields in LTCFrame will be set from the date in SMPTETimecode, otherwise the user-bits are not modified. All non-timecode fields remain untouched - except for the parity bit unless LTC_NO_PARITY is given.
See also:

- 175.4.4 Constructor 23484
- 175.4.6 Constructor(other as LTCFrameMBS) 23485

175.4.6 Constructor(other as LTCFrameMBS)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a frame with copying data from existing frame.
See also:

- 175.4.4 Constructor 23484
- 175.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0) 23484

175.4.7 FrameAlignment(samples_per_frame as Double, TVStandard as Integer) as UInt64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: LTCFrame sample alignment offset.
Notes:

There is a relative offset of the LTC-Frame start and the TV-frame.
The first bit of a LTC frame corresponds to a specific line in the actual video frame. When decoding this offset needs to be subtracted from the LTC-frame's audio-sample-time to match the TV-frame's start position.

For film frames or HDV the offset is zero.

samples_per_frame: audio-samples per timecode-frame (eg. 1920 = 48000/25)
TVStandard: the TV standard

Returns the offset in samples.

175.4.8 FrameDecrement(fps as integer, TVStandard as integer, Flags as integer = 0) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrement the timecode by one Frame (1/framerate seconds) and set the Frame's parity bit accordingly (see SetParity)
Notes:

fps: integer framerate (for drop-frame-timecode set frame->dfbit and round-up the fps).
TVStandard: the TV standard to use for parity bit assignment. If set to 1 the 25fps standard is enabled and LTC Frame bit 59 instead of 27 is used for the parity. It only has only has effect flag bit 4 (LTC_NO_PARITY) is cleared.
Flags: binary combination of flags - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.

If the bit 0 is set (1) interpret user-data as date and decrement date if timecode wraps at 24h.
(Note: leap-years are taken into account, but since the year is two-digit only, the 100,400yr rules are ignored. "00" is assumed to be year 2000 which was a leap year.) bit 3 (8) indicates that the parity bit should not be touched.

Returns true if timecode was wrapped around at 23:59:59:ff, false otherwise.

175.4.9 FrameIncrement(fps as integer, TVStandard as integer, Flags as integer = 0) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increment the timecode by one Frame (1/framerate seconds) and set the Frame's parity bit accordingly (see SetParity)
Notes:

fps integer framerate (for drop-frame-timecode set frame->dfbit and round-up the fps).
TVStandard: the TV standard to use for parity bit assignment. If set to 1 the 25fps standard is enabled and LTC Frame bit 59 instead of 27 is used for the parity. It only has only has effect flag bit 4 (LTC_NO_PARITY) is cleared.
flags: binary combination of LTC_BG_FLAGS - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.

If the bit 0 (1) is set (1) interpret user-data as date and increment date if timecode wraps after 24h.
(Note: leap-years are taken into account, but since the year is two-digit only, the 100,400yr rules are ignored. "00" is assumed to be year 2000 which was a leap year.)

Returns true if timecode was wrapped around after 23:59:59:ff, false otherwise

175.4.10 ParseBCGFlags(TVStandard as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse Binary Group Flags into standard independent format.
Notes:

bit 0 (1) - BGF 0,
bit 1 (2) - BGF 1,
bit 2 (4) - BGF 2

TVStandard: the TV standard to use – see LTCFrameMBS class for BGF assignment.
Returns LTC Binary Group Flags.

175.4.11 Reset

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset all values of a LTC FRAME to zero, except for the sync-word (0x3FFD) at the end.
Notes:

The sync word is set according to architecture (big/little endian).
Also set the Frame's parity bit accordingly (see SetParity)

175.4.12 SetParity(TVStandard as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the parity of the LTC frame.
Notes:

Bi-Phase Mark Phase Correction bit (bit 27 - or 59) may be set or cleared so that that every 80-bit word contains an even number of zeroes. This means that the phase in every Sync Word will be the same.

This is merely cosmetic; the motivation to keep the polarity of the waveform constant is to make finding the Sync Word visibly (on a scope) easier.

There is usually no need to call this function directly. The encoder utility functions TimeToFrame, FrameIncrement and FrameDecrement include a call to it.

Standard: If 1 (aka LTC_TV_625_50) , the 25fps mode (bit 59 - aka binary_group_flag_bit2) is used, otherwise the 30fps, 24fps mode (bit 27 – biphase_mark_phase_correction) is set or cleared.

175.4.13 Properties

175.4.14 BinaryGroupFlagBit0 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicate user-data char encoding, see table above - bit 43.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

175.4.15 BinaryGroupFlagBit1 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicate timecode is local time wall-clock, see table above - bit 58.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

175.4.16 BinaryGroupFlagBit2 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicate user-data char encoding (or parity with 25fps), see table above - bit 59.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

175.4.17 BiphaseMarkPhaseCorrection as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bi-Phase Mark Phase Correction Bit.
Notes:

The Bi-Phase Mark Phase Correction Bit (Bit 27 or 59) may be set or cleared so that that every 80-bit word contains an even number of zeroes. This means that the phase of the pulse train in every Sync Word will be the same.
(Read and Write property)

175.4.18 ColFrame as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colour-frame: timecode intentionally synchronized to a colour TV field sequence
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

175.4.19 Data as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw frame data as memoryblock.
Notes:

When setting you can either pass 368 or 364 bytes (LTCFrameExt) or 10 bytes (LTCFrame)
(Read and Write property)

175.4.20 DFBit as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicated drop-frame timecode.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

175.4.21 Frames as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set frames field.
Notes:

Computed by the MBS Plugin for you as a convenience from both frames_tens and frames_unit.
(Read and Write property)

175.4.22 FrameTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE framenumber BCD tens 0..3.
Notes: (Read and Write property)

175.4.23 FrameUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE framenumber BCD unit 0..9.
Notes: (Read and Write property)

175.4.24 Hours as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set hours field.
Notes:

Computed by the MBS Plugin for you as a convenience from both hours_tens and hours_unit.
(Read and Write property)

175.4.25 HoursTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE hours BCD tens 0..2.
Notes: (Read and Write property)

175.4.26 HoursUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE hours BCD unit 0..9.
Notes: (Read and Write property)

175.4.27 Mins as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set minutes field.
Notes:

Computed by the MBS Plugin for you as a convenience from both minutes_tens and minutes_unit.
(Read and Write property)

175.4.28 MinsTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE minutes BCD tens 0..6.
Notes: (Read and Write property)

175.4.29 MinsUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE minutes BCD unit 0..9.
Notes: (Read and Write property)

175.4.30 Secs as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set seconds field.
Notes:

Computed by the MBS Plugin for you as a convenience from both seconds_tens and seconds_unit.
(Read and Write property)

175.4.31 SecsTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE seconds BCD tens 0..6
Notes: (Read and Write property)

175.4.32 SecsUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE seconds BCD unit 0..9
Notes: (Read and Write property)

175.4.33 SyncWord as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sync word file.
Notes: (Read and Write property)

175.4.34 TimeCode as LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert binary LTCFrame into a SMPTETimecode.
Notes: (Read only property)

175.4.35 User1 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.36 User2 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.37 User3 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.38 User4 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.39 User5 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.40 User6 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.41 User7 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.42 User8 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

175.4.43 UserBits as UInt32

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all user bits as one 32-bit value.
Notes: (Read only property)

175.5 module LTCMBS

175.5.1 module LTCMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The central module for global LTC methods.
Notes:

This plugin part can load libltc, a library to encode and decode linear timecode.

Linear (or Longitudinal) Timecode (LTC) is an encoding of timecode data as a Manchester-Biphase encoded audio signal.
The audio signal is commonly recorded on a VTR track or other storage media.

libltc facilitates decoding and encoding of LTC from/to timecode, including SMPTE date support.

see
https://github.com/x42/libltc

175.5.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.1
- MBS Xojo Plugins, version 20.1pr1

175.5.3 Xojo Developer Magazine

- 18.3, page 10: News

175.5.4 Methods

175.5.5 FrameToTime(OutputTimecode as LTCSMPTETimecodeMBS, InputFrame as LTCFrameMBS, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert binary LTCFrame into a SMPTETimecode.
Notes:

Binary combination of flags - here only LTC_USE_DATE is relevant.
if LTC_USE_DATE is set, the user-fields in LTCFrame will be parsed into the date variable of SMPTETimecode. otherwise the date information in the SMPTETimecode is set to zero.

175.5.6 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads LTC library from a file.
Notes:

Please get a libltc.dll/so/dylib for your platform and tell the plugin where to load it here.

Returns true on success and false on failure.
See LibraryLoadErrorMessage and LibraryLoadError in case of error.
See also:

- 175.5.7 LoadLibrary(path as string) as boolean 23496

175.5.7 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads LTC library from a file path.
Notes:

Please get a libltc.dll/so/dylib for your platform and tell the plugin where to load it here.

Returns true on success and false on failure.
See LibraryLoadErrorMessage and LibraryLoadError in case of error.
See also:

- 175.5.6 LoadLibrary(file as folderitem) as boolean 23496

175.5.8 TimeToFrame(OutputFrame as LTCFrameMBS, InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translate SMPTETimecode into its binary LTC representation and set the LTC frame's parity bit accordingly.
Notes:

OutputFrame: the frame to be set
InputTimecode: timecode input
TVStandard: the TV standard to use for parity bit assignment
Flags: flags binary combination of flag values - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.
If LTC_USE_DATE is given, user-fields in LTCFrame will be set from the date in SMPTETimecode, otherwise the user-bits are not modified. All non-timecode fields remain untouched - except for the parity bit

unless LTC_NO_PARITY is given.

175.5.9 Properties

175.5.10 LibraryLoaded as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the library is loaded.
Notes: (Read only property)

175.5.11 LibraryLoadError as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The load error code.
Notes: (Read only property)

175.5.12 LibraryLoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The load error message.
Notes: (Read only property)

175.5.13 Constants

175.5.14 LTC_BGF_DONT_TOUCH = 4

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the encoder flags.
Notes: Encoder init or re-init does not touch the BGF bits (initial values after initialization is zero)

175.5.15 LTC_FRAME_BIT_COUNT = 80

MBS Tools Plugin, Plugin Version: 20.1.

Function: The bit count for a raw 80 bit LTC frame

175.5.16 LTC_NO_PARITY = 8

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the encoder flags.
Notes: Parity bit is left untouched when setting or in/decrementing the encoder frame-number

175.5.17 LTC_TC_CLOCK = 2

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the frame <>timecode conversion flags.
Notes: The Timecode is wall-clock aka freerun. This also sets BGF1 (unless LTC_BGF_DONT_TOUCH is given)

175.5.18 LTC_TV_1125_60 = 2

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 30fps

175.5.19 LTC_TV_525_60 = 0

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 30fps

175.5.20 LTC_TV_625_50 = 1

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 25fps

175.5.21 LTC_TV_FILM_24 = 3

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 24fps

175.5.22 LTC_USE_DATE = 1

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the frame <>timecode conversion flags.
Notes: LTCFrame <>SMPTETimecode converter and LTCFrame increment/decrement use date, also set BGF2 to '1' when encoder is initialized or re-initialized (unless LTC_BGF_DONT_TOUCH is given)

175.6 class LTCSMPTETimecodeMBS

175.6.1 class LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a human readable time representation, decimal values.

175.6.2 Methods

175.6.3 Constructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new empty timecode.
See also:

- 175.6.4 Constructor(other as LTCSMPTETimecodeMBS) 23500

175.6.4 Constructor(other as LTCSMPTETimecodeMBS)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Constructors a new time object with copying given values.
See also:

- 175.6.3 Constructor 23500

175.6.5 Properties

175.6.6 Data as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets or sets data of this smtp timecode with a memoryblock.
Notes: (Read and Write property)

175.6.7 Date as Date

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set time stamp via date.
Notes:

When setting we take the year mod 100 to fill years field and frame field is set to zero.

When querying we return year + 2000 if year <67 and otherwise year + 1900, so we can have a year range of 1967 to 2066.
(Read and Write property)

175.6.8 DateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set time stamp via date.
Notes:

When setting we take the year mod 100 to fill years field and frame field is set to zero.

When querying we return year + 2000 if year <67 and otherwise year + 1900, so we can have a year range of 1967 to 2066.
(Read and Write property)

175.6.9 Days as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The days field.
Notes:

day of month 1..31
(Read and Write property)

175.6.10 Frame as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The frame field.
Notes:

sub-second frame 0..(FPS - 1)
(Read and Write property)

175.6.11 Hours as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hours field.
Notes:

hour 0..23
(Read and Write property)

175.6.12 Mins as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes field.
Notes:

minute 0..60
(Read and Write property)

175.6.13 Months as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month field.
Notes:

valid months are 1..12
(Read and Write property)

175.6.14 Secs as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds field.
Notes:

second 0..60
(Read and Write property)

175.6.15 TimeZone as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time zone field.
Notes:

the timezone is maximum 5 characters: "+HHMM" textual representation
(Read and Write property)

175.6.16 Years as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The years field.
Notes:

LTC-date uses 2-digit year 00.99.
(Read and Write property)

Chapter 176

TimeZone

176.1 class TimeZoneMBS

176.1.1 class TimeZoneMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Allows you to access information about the current time zone.
Example:

```
dim t as new TimeZoneMBS
MsgBox str(t.GmtDeltaTotalseconds)
```

Deprecated: This item is deprecated and should no longer be used. You can use TimeZone instead. **Notes:** on Mac OS Cocoa applications, better use newer NSTimezoneMBS class.

176.1.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr7
- MBS Xojo / Real Studio Plugins, version 14.2pr5

176.1.3 Properties

176.1.4 DaylightName as String

MBS Util Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A description for daylight saving time.
Example:

```
dim t as new TimeZoneMBS
MsgBox t.DaylightName
```

Notes:

For example, "PDT" could indicate Pacific Daylight Time. This string can be empty.
e.g. "Mitteleuropäische Sommerzeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

176.1.5 GmtDeltaHours as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in hours.
Example:

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

Notes:

On Windows this information is not available.
(Read only property)

176.1.6 GmtDeltaMinutes as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in minutes.
Example:

```
dim t as TimeZoneMBS

t=new TimeZoneMBS
```

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")

Notes:

On Windows this information is not available.
(Read only property)

176.1.7 GmtDeltaSeconds as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in seconds.
Example:

dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")

Notes: (Read only property)

176.1.8 GmtDeltaTotalseconds as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in seconds.
Example:

dim t as new TimeZoneMBS

MsgBox str(t.GmtDeltaTotalseconds)

Notes: (Read only property)

176.1.9 Latitude as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the latitude of the current position on earth.
Example:

```
dim longdeg,longmin as Integer
dim t as TimeZoneMBS

t=new TimeZoneMBS

longdeg=floor(t.longitude*90)
longmin=floor((t.longitude*90-longdeg)*60)

statictext1.text=format(longdeg,"0")+"°"
statictext2.text=format(longmin,"0")+"'"
```

Notes:

On Windows this information is not available.
(Read only property)

176.1.10 Longitude as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the longitude of the current position on earth.
Example:

```
dim latdeg,latmin as Integer
dim t as TimeZoneMBS

t=new TimeZoneMBS

latdeg=floor(t.latitude*90)
latmin=floor((t.latitude*90-latdeg)*60)

statictext1.text=format(latdeg,"0")+"°"
statictext2.text=format(latmin,"0")+"'"
```

Notes:

On Windows this information is not available.
(Read only property)

176.1.11 StandardName as String

MBS Util Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A description for standard time.
Example:

```
dim t as new TimeZoneMBS
MsgBox t.StandardName
```

Notes:

For example, "EST" could indicate Eastern Standard Time. This string can be empty.
e.g. "Mitteleuropäische Zeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

Chapter 177

TouchBar

177.1 class LAContextMBS

177.1.1 class LAContextMBS

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: The class for local authentication via password or TouchID.

177.1.2 Blog Entries

177.1.4 Methods

177.1.5 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Whether the class is available.
Notes: Returns true on OS X 10.10 and newer in 64-bit application.

177.1.6 canEvaluatePolicy(Policy as Integer, byref Error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Determines if a particular policy can be evaluated.
Example:

```
try
dim e as NSErrorMBS

if lc.canEvaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, e) then
List.AddRow "Can authenticate with biometrics."
else
List.AddRow "Can't authenticate with biometrics."
end if
if e <>nil then
List.AddRow "Error: "+e.LocalizedDescription
end if

catch ex as NSExceptionMBS

List.AddRow "Exception: "+ex.Message

end try
```

Notes:

Policies can have certain requirements which, when not satisfied, would always cause the policy evaluation to fail. Examples can be a passcode set or a fingerprint enrolled with Touch ID. This method allows easy checking for such conditions.

Applications should consume the returned value immediately and avoid relying on it for an extensive period of time. At least, it is guaranteed to stay valid until the application enters background.

policy: Policy for which the preflight check should be run.

error: contains error information if policy evaluation is not possible.

Returns true if the policy can be evaluated, false otherwise.

177.1.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: The constructor.

177.1.8 evaluatePolicy(Policy as Integer, localizedReason as String, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Evaluates the specified policy.
Example:

```
dim lc as LAContextMBS // your context

try

lc.evaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, "We need to test.")

catch ex as NSExceptionMBS

List.AddRow "Exception: "+ex.Message

end try
```

Notes:

Policy evaluation may involve prompting user for various kinds of interaction or authentication. Actual behavior is dependent on evaluated policy, device type, and can be affected by installed configuration profiles.

Be sure to keep a strong reference to the context while the evaluation is in progress. Otherwise, an evaluation would be canceled when the context is being deallocated.

The method does not block. Instead the event is called asynchronously when evaluation finishes.

Implications of successful policy evaluation are policy specific. In general, this operation is not idempotent. Policy evaluation may fail for various reasons, including user cancel, system cancel and others, see error codes.

policy: Policy to be evaluated.
localizedReason: Application reason for authentication. This string must be provided in correct localization and should be short and clear. It will be eventually displayed in the authentication dialog subtitle. A name of the calling application will be already displayed in title, so it should not be duplicated here.

177.1.9 invalidate

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Invalidates the context.
Notes:

The context is invalidated automatically when it is (auto)released. This method allows invalidating it manually while it is still in scope.

Invalidation terminates any existing policy evaluation and the respective call will fail with LAErrorAppCancel. After the context has been invalidated, it can not be used for policy evaluation and an attempt to do so will fail with LAErrorInvalidContext.

Invalidating a context that has been already invalidated has no effect.

177.1.10 isCredentialSet(CredentialType as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Reveals if credential was set with this context.
Notes:

type: Type of credential we are asking for.

Return true on success, false otherwise.

177.1.11 setCredential(credential as MemoryBlock, Type as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Sets a credential to this context.
Notes:

Some policies allow to bind application-provided credential with them.
This method allows credential to be passed to the right context.

credential: Credential to be used with subsequent calls. Setting this parameter to nil will remove any existing credential of the specified type.

Type: Type of the provided credential.

Return true if the credential was set successfully, false otherwise.

177.1.12 TouchIDAuthenticationMaximumAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: The maximum value for LAContext touchIDAuthenticationAllowableReuseDuration property.
Notes: Returns -1 if value is not available.

177.1.13 Properties

177.1.14 biometryType as Integer

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Indicates the type of the biometry supported by the device.
Notes:

This property is set when canEvaluatePolicy has been called for a biometric policy.
The default value is BiometryTypeNone.
(Read only property)

177.1.15 evaluatedPolicyDomainState as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Contains policy domain state.
Notes:

This property is set only when evaluatePolicy is called and succesful Touch ID authentication was performed, or when canEvaluatePolicy succeeds for a biometric policy. It stays nil for all other cases. If finger database was modified (fingers were removed or added), evaluatedPolicyDomainState data will change. Nature of such database changes cannot be determined but comparing data of evaluatedPolicyDomainState after different evaluatePolicy will reveal the fact database was changed between calls.
(Read only property)

177.1.16 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: The internal object handle.
Notes: (Read and Write property)

177.1.17 interactionNotAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Allows running authentication in non-interactive mode.
Notes:

If the context is used in a keychain query by the means of kSecUseAuthenticationContext, then setting this property to YES has the same effect as passing kSecUseNoAuthenticationUI in the query, i.e. the keychain call will eventually fail with errSecInteractionNotAllowed instead of displaying the authentication UI.

If this property is used with a LocalAuthentication evaluation, it will eventually fail with kErrorNotInteractive instead of displaying the authentication UI.
(Read and Write property)

177.1.18 localizedCancelTitle as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Cancel button title.
Notes:

Allows cancel button title customization. A default title "Cancel" is used when this property is set to empty string.
Requires MacOS 10.13 or newer.
(Read and Write property)

177.1.19 localizedFallbackTitle as String

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Fallback button title.
Example:

```
dim lc as new MyLAContextMBS
lc.localizedFallbackTitle = "Just a test"
```

Notes:

Allows fallback button title customization. A default title "Enter Password" is used when this property is left nil. If set to empty string, the button will be hidden.
(Read and Write property)

177.1.20 localizedReason as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Allows setting the default localized authentication reason on context.
Notes:

A localized string from this property is displayed in the authentication UI if the caller didn't specify its own authentication reason (e.g. a keychain operation with kSecUseAuthenticationContext). This property is ignored if the authentication reason was provided by caller.
Requires MacOS 10.13 or newer.
(Read and Write property)

177.1.21 touchIDAuthenticationAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Time interval for accepting a successful Touch ID unlock from the past.
Notes:

This property can be set with a time interval in seconds. If the device was successfully unlocked by Touch ID within this time interval, then Touch ID authentication on this context will succeed automatically and the reply block will be called without prompting user for Touch ID.

The default value is 0, meaning that no previous TouchID authentication can be reused.

The maximum supported interval is 5 minutes and setting the value beyond 5 minutes does not increase the accepted interval.
(Read and Write property)

177.1.22 Events

177.1.23 evaluatePolicyResult(Success as Boolean, error as NSErrorMBS, Policy as Integer, localizedReason as String, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: The event called for the result of evaluatePolicy method.
Notes:

success: Reply parameter that is true if the policy has been evaluated successfully or false if the evaluation failed.

error: Reply parameter that is nil if the policy has been evaluated successfully, or it contains error information about the evaluation failure.

Typical error codes returned by this call are:
ErrorUserFallback if user tapped the fallback button
ErrorUserCancel if user has tapped the Cancel button
ErrorSystemCancel if some system event interrupted the evaluation (e.g. Home button pressed).

177.1.24 Constants

177.1.25 BiometryTypeFaceID = 2

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the biometry type constants.
Notes: The device supports Face ID.

177.1.26 BiometryTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the biometry type constants.
Notes: The device does not support biometry.

177.1.27 BiometryTypeTouchID = 1

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the biometry type constants.
Notes: The device supports Touch ID.

177.1.28 CredentialTypeApplicationPassword = 0

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One oft he credential types.
Notes: The credential type for an application password.

177.1.29 CredentialTypeSmartCardPIN = 1

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One oft he credential types.
Notes:

Smart card PIN provided by application.

If not set, LocalAuthentication will ask users for the smart card PIN when necessary. Applications can provide the PIN using setCredential method. In such case, LocalAuthentication will not show the smart card PIN user interface.
When entered from the LocalAuthentication user interface, the PIN is stored as UTF-8 encoded string.

177.1.30 kErrorAppCancel = -9

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled by application (e.g. invalidate was called while authentication was in progress).

177.1.31 kErrorAuthenticationFailed = -1

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was not successful, because user failed to provide valid credentials.

177.1.32 kErrorBiometryLockout = -8

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes.
Notes: Authentication was not successful, because there were too many failed Biometry attempts and Biometry is now locked. Passcode is required to unlock Biometry, e.g. evaluating PolicyDeviceOwnerAuthenticationWithBiometrics will ask for passcode as a prerequisite.

177.1.33 kErrorBiometryNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes.
Notes: Authentication could not start, because Biometry is not available on the device.

177.1.34 kErrorBiometryNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes.
Notes: Authentication could not start, because Biometry has no enrolled fingers.

177.1.35 kErrorInvalidContext = -10

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: LAContext passed to this call has been previously invalidated.

177.1.36 kErrorPasscodeNotSet = -5

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication could not start, because passcode is not set on the device.

177.1.37 kErrorSystemCancel = -4

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled by system (e.g. another application went to foreground).

177.1.38 kErrorTouchIDLockout = -8

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was not successful, because there were too many failed Touch ID attempts and Touch ID is now locked. Passcode is required to unlock Touch ID, e.g. evaluating PolicyDeviceOwnerAuthenticationWithBiometrics will ask for passcode as a prerequisite.

177.1.39 kErrorTouchIDNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication could not start, because Touch ID is not available on the device.

177.1.40 kErrorTouchIDNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication could not start, because Touch ID has no enrolled fingers.

177.1.41 kErrorUserCancel = -2

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled by user (e.g. tapped Cancel button).

177.1.42 kErrorUserFallback = -3

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled, because the user tapped the fallback button (Enter Password).

177.1.43 kLAErrorDomain = "com.apple.LocalAuthentication"

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: The error domain for Local Authentication.

177.1.44 PolicyDeviceOwnerAuthentication = 2

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the policy constants.
Notes:

Device owner is going to be authenticated by biometry or user password.

Touch ID or user password authentication is required. If Touch ID is not available, not enrolled or locked out, then the user is asked for password right away.

Touch ID authentication dialog behaves similarly as the one used by PolicyDeviceOwnerAuthenticationWithBiometrics. However, the "Use Password.." button does not end the authentication. Instead, it switches the authentication mechanism to user password.

177.1.45 PolicyDeviceOwnerAuthenticationWithBiometrics = 1

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the policy constants.
Notes: The policy for owner authentication with biometrics.

177.1.46 PolicyDeviceOwnerAuthenticationWithBiometricsOrWatch = 4

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the policy constants.
Notes:

Device owner is going to be authenticated by biometry or Watch.

Watch or biometric authentication is required. If no nearby paired watch device can be found, it behaves as PolicyDeviceOwnerAuthenticationWithBiometrics. Similarly, if biometry is unavailable it behaves as PolicyDeviceOwnerAuthenticationWithWatch.

Watch authentication dialog looks and behaves similarly to biometric variant. When both mechanisms are available, user is asked to use biometry and watch authentication will run in parallel.

177.1.47 PolicyDeviceOwnerAuthenticationWithWatch = 3

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: Device owner is going to be authenticated by Watch.
Notes:

Watch authentication is required. If no nearby paired watch device can be found, kErrorWatchNotAvailable is returned.

Watch authentication dialog looks and behaves similarly to the biometric variant. Users can confirm authentication by double-clicking the side button on their watch.

177.2 class NSColorPickerTouchBarItemMBS

177.2.1 class NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a color picker.
Notes: Subclass of the NSTouchBarItemMBS class.

177.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.2.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

177.2.4 Methods

177.2.5 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the standard color picker icon that invokes the color picker.
Example:

```
dim t as NSColorPickerTouchBarItemMBS = NSColorPickerTouchBarItemMBS.colorPicker("test")
t.customizationLabel = "Drawing Color"
```

Notes: You may want to use AddHandler method to add an event handler to this object.
See also:

- 177.2.6 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS 23524

177.2.6 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the provided image that invokes the color picker.
Notes: You may want to use AddHandler method to add an event handler to this object.
See also:

- 177.2.5 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS 23524

177.2.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes: This instantiates a new touch bar item with the specified initializer.

177.2.8 strokeColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the standard stroke color picker icon that invokes the color picker.
Notes:

You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking stroke colors.

177.2.9 textColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the standard text color picker icon that invokes the color picker.
Notes:

You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking text colors.

177.2.10 Properties

177.2.11 color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The selected color of the picker.
Notes: (Read and Write property)

177.2.12 colorList as NSColorListMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The color list displayed in the list color picker.
Notes:

Defaults to the standard system color list. Setting a custom color list will disable the additional tints/shades that appear on long-press.
(Read and Write property)

177.2.13 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Example:

```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes:

The default value is empty string.
(Read and Write property)

177.2.14 enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Enables or disabled the color picker.
Notes:

If it is currently being shown in a popover, it will be dismissed.

(Read and Write property)

177.2.15 showsAlpha as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether or not the picker should allow picking a color with non-1.0 alpha.
Notes:

Defaults to "not NSColor.ignoresAlpha".
(Read and Write property)

177.2.16 Events

177.2.17 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The color picker changed color.

177.3 class NSCustomTouchBarItemMBS

177.3.1 class NSCustomTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a custom view.
Notes: Subclass of the NSTouchBarItemMBS class.

177.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.3.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

177.3.4 Methods

177.3.5 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "My Test"
```

Notes: This instantiates a new touch bar item with the specified initializer.

177.3.6 Properties

177.3.7 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Example:

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes:

The default value is empty string.
(Read and Write property)

177.3.8 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A view to be displayed in the touch bar in the location corresponding to this item.
Notes:

By default, the getter for this property will return this item's view controller's view. If this property is set explicitly, the view controller will be set to nil.
(Read and Write property)

177.3.9 viewController as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A view controller whose view is to be displayed in the touch bar in the location corresponding to this item.
Notes:

By default, this property is nil.
When set, this item's view property will automatically return the view associated with this view controller.
(Read and Write property)

177.4 class NSGroupTouchBarItemMBS

177.4.1 class NSGroupTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a group.
Notes: Subclass of the NSTouchBarItemMBS class.

177.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.4.3 Methods

177.4.4 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as new NSGroupTouchBarItemMBS("test")
t.customizationLabel = "My Group"
```

Notes: This instantiates a new touch bar item with the specified initializer.

177.4.5 groupItemWithIdentifier(identifier as string, items() as NSTouchBarItemMBS) as NSGroupTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Returns an autoreleased NSGroupTouchBarItem with a groupTouchBar built from the given items array.
Example:

```
dim t as NSGroupTouchBarItemMBS = NSGroupTouchBarItemMBS.groupItemWithIdentifier("test")
t.customizationLabel = "My Group"
```

Notes: Customization is not enabled by default when creating a NSGroupTouchBarItem this way.

177.4.6 Properties

177.4.7 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read and Write property)

177.4.8 groupTouchBar as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A touch bar, presented seamlessly as part of the touch bar this item is hosted in.
Notes:

This touch bar may have its own principal item, and can be customized (or not) per the normal touch bar customization rules.
By default this is an empty touch bar that cannot be customized.
(Read and Write property)

177.5 class NSPopoverTouchBarItemMBS

177.5.1 class NSPopoverTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a popover.
Notes: Subclass of the NSTouchBarItemMBS class.

177.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.5.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

177.5.4 Methods

177.5.5 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Notes: This instantiates a new touch bar item with the specified initializer.

177.5.6 dismissPopover

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: This method will restore the previously visible main touch bar.
Notes: This method can be invoked explicitly to order out a popover if interacting with an item inside it should close it.

177.5.7 showPopover

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Replaces the main touch bar with this item's popover touch bar.
Notes: If this item is not visible, this method will have no effect. If this item ceases to be visible, the

popover touch bar will automatically be ordered out.

177.5.8 Properties

177.5.9 collapsedRepresentation as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The view displayed when the item is in its hosted touch bar.
Notes:

By default, this is an NSButton whose target is this popover item, whose action is showPopover, and whose image and title are bound to this item's collapsedRepresentationImage and collapsedRepresentationLabel respectively.
(Read and Write property)

177.5.10 collapsedRepresentationImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The image displayed by the button used by default for the default collapsed representation.
Notes:

If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect.
(Read and Write property)

177.5.11 collapsedRepresentationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string displayed by the button used by default for the default collapsed representation.
Notes:

If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect. This property is archived.
(Read and Write property)

177.5.12 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read and Write property)

177.5.13 popoverTouchBar as NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The touch bar displayed when this item is "popped."
Notes:

By default this is an empty touch bar that cannot be customized. This property is archived.
(Read and Write property)

177.5.14 pressAndHoldTouchBar as NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A touchbar to be used exclusively for press-and-hold popovers.
Notes:

This touch bar can be the same as the one used for "popoverTouchBar" property, but does not have to be. When non-nil this touch bar will be displayed while the user holds their finger down on the collapsed representation and released when the user raises their finger. This tracking behavior is automatic, but popovers with custom collapsed representations will still need to send showPopover to start tracking.
(Read and Write property)

177.5.15 showsCloseButton as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: When true, automatically displays a close button in the popover.
Notes:

When false it is the responsibility of the client to dismiss the popover.
(Read and Write property)

177.6 class NSSliderTouchBarItemMBS

177.6.1 class NSSliderTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a slider.
Notes: Subclass of the NSTouchBarItemMBS class.

177.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.6.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

177.6.4 Methods

177.6.5 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.customizationLabel = "My Slider"
```

Notes: This instantiates a new touch bar item with the specified initializer.

177.6.6 Properties

177.6.7 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read and Write property)

177.6.8 label as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The text label displayed along with the slider.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.label = "Pen Size"
```

Notes:

If set to nil, the label will not have space reserved in the item.
(Read and Write property)

177.6.9 maxValue as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The maximum value of the slider.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

Notes: (Read and Write property)

177.6.10 minValue as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The minimum value of the slider.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
```

```
t.maxValue = 1.0
t.value = 0.5
```

Notes: (Read and Write property)

177.6.11 slider as NSSliderMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The slider displayed by the bar item.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

Notes:

It is automatically created, but can be set to a custom subclass.
Value, minValue, maxValue, etc can all be read and set through the slider.
(Read and Write property)

177.6.12 value as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The current value of the slider.
Notes: (Read and Write property)

177.6.13 Events

177.6.14 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The slider changed.

177.7 class NSTouchBarItemMBS

177.7.1 class NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a touch bar item.

177.7.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.7.3 Xojo Developer Magazine

- 15.5, page 37: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

177.7.4 Methods

177.7.5 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Example:

```
if NSTouchBarItemMBS.Available then
MsgBox "This Mac may have a TouchBar or not."
else
MsgBox "This Mac is too old for a TouchBar."
end if
```

Notes: Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

177.7.6 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Notes: This instantiates a new touch bar item with the specified initializer.

177.7.7 NSTouchBarItemIdentifierFixedSpaceLarge as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of an item appropriate for use as a large space in the touch bar.
Example:

```
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceLarge)
```

Notes: Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

177.7.8 NSTouchBarItemIdentifierFixedSpaceSmall as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of an item appropriate for use as a small space in the touch bar.
Example:

```
// create fixed space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceSmall)
```

Notes: Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

177.7.9 NSTouchBarItemIdentifierFlexibleSpace as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of an item appropriate for use as a flexible space in the touch bar.
Example:

```
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFlexibleSpace)
```

Notes: Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

177.7.10 NSTouchBarItemIdentifierOtherItemsProxy as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of the special "other items proxy."
Example:

```
// create proxy item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierOtherItemsProxy)
```

Notes:

Generally, you can use this identifier in a touch bar's itemIdentifiers array, and a special proxy item will be instantiated for you. When the touch bar containing this item is visible, touch bars provided by items closer to the first responder will be nested inside the space denoted for this item. Space items on either side of this item will be automatically massaged to handle cases where the touch bar containing this identifier is itself the bar closest to the first responder (or closer bars are empty.)
Note that a touch bar lacking this item identifier will be replaced in its entirety by touch bars closer to the first responder.

177.7.11 Properties

177.7.12 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read only property)

177.7.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

177.7.14 identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of this item.
Notes:

Apart from spaces, item identifiers should be globally unique.
(Read only property)

177.7.15 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Intended for subclassing.
Notes:

By default, this method returns this item's view controller's view.
(Read only property)

177.7.16 viewController as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Intended for subclassing.
Notes:

By default, this method returns nil.
(Read only property)

177.7.17 visibilityPriority as Single

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: If there are more items in the touch bar than can be displayed, some will be hidden.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.visibilityPriority = t.PriorityLow
```

Notes:

Items with high visibility priority will be hidden after items with low visibility priority.
(Read and Write property)

177.7.18 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: When true, this item is attached to a visible touch bar, and is being displayed.
Notes:

Note that some types of items are never considered visible, for example spaces, other items proxys, and groups.
This property is key value observable.
(Read only property)

177.7.19 Events

177.7.20 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the item is hidden.

177.7.21 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the item is shown.

177.7.22 Constants

177.7.23 PriorityHigh = 1000

MBS Mac64bit Plugin, Plugin Version: 16.5.

Function: One of the values for visibilityPriority property.
Notes: nItems with high visibility priority will be hidden after items with low visibility priority.one

177.7.24 PriorityLow = -1000

MBS Mac64bit Plugin, Plugin Version: 16.5.

Function: One of the values for visibilityPriority property.
Notes: nItems with high visibility priority will be hidden after items with low visibility priority.one

177.7.25 PriorityNormal = 0

MBS Mac64bit Plugin, Plugin Version: 16.5.

Function: One of the values for visibilityPriority property.
Notes: nItems with high visibility priority will be hidden after items with low visibility priority.one

177.8 class NSTouchBarMBS

177.8.1 class NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar on a new MacBook Pro.

177.8.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr1
- MBS Xojo / Real Studio Plugins, version 16.5pr7
- MBS Xojo / Real Studio Plugins, version 16.5pr5

177.8.3 Xojo Developer Magazine

- 15.5, page 41: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

177.8.4 Methods

177.8.5 AssignToApp

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the main TouchBar for the whole app.

177.8.6 AssignToWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the given window.
Notes: The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 177.8.7 AssignToWindow(window as window) 23544

177.8.7 AssignToWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the given window.
Notes: The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 177.8.6 AssignToWindow(window as NSWindowMBS) 23544

177.8.8 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Example:

```
if NSTouchBarMBS.Available then
MsgBox "This Mac may have a TouchBar or not."
else
MsgBox "This Mac is too old for a TouchBar."
end if
```

Notes: Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

177.8.9 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The constructor.

177.8.10 customizationAllowedItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The items that are presented in the customization palette for the user to add to the touch bar.
Notes: These items will be presented to the user in the order specified in this array.

177.8.11 customizationRequiredItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Some items are too important to be removed.
Notes: The corresponding item identifiers should be listed here. During customization the user will be

prevented from removing these items from the touch bar.

177.8.12 defaultItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: An array of identifiers specifying the items in this touch bar.
Notes:

When constructing the instantiated items array, the identifiers in this array will be fed through the itemForIdentifier method.
Item identifiers should be globally unique, excepting NSTouchBarItemIdentifierFixedSpaceSmall, NSTouchBarItemIdentifierFixedSpaceLarge, NSTouchBarItemIdentifierFlexibleSpace, and NSTouchBarItemIdentifierOtherItemsProxy.

This array also corresponds to the item ordering for the receiver in the "default set" in the customization palette.

177.8.13 itemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Returns an instantiated NSTouchBarItem for the given identifier.
Notes:

Items are resolved from the following locations, in order:

- items already in the instantiated items array
- items in the defaultTouchBarItems set
- items returned from the delegate's -touchBar:makeItemForIdentifier: method
- some special identifiers are handled automatically

NSTouchBarItemIdentifierFixedSpaceSmall ->NSTouchBar will automatically create a standard small space
NSTouchBarItemIdentifierFixedSpaceLarge ->NSTouchBar will automatically create a standard large space
NSTouchBarItemIdentifierFlexibleSpace ->NSTouchBar will automatically create a standard flexible space
NSTouchBarItemIdentifierOtherItemsProxy ->NSTouchBar will automatically create a special item that acts as a proxy for the items of touch bars closer to the first responder.

177.8.14 itemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The resolved array of item identifiers. If the bar has not been customized this will match the defaultItemIdentifiers.

177.8.15 RemoveTouchBarFromApp

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Removes TouchBar for app.

177.8.16 RemoveTouchBarFromWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Removes TouchBar for window.
See also:

- 177.8.17 RemoveTouchBarFromWindow(window as window) 23547

177.8.17 RemoveTouchBarFromWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Removes TouchBar for window.
See also:

- 177.8.16 RemoveTouchBarFromWindow(window as NSWindowMBS) 23547

177.8.18 setCustomizationAllowedItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the items that are presented in the customization palette for the user to add to the touch bar.
Notes: These items will be presented to the user in the order specified in this array.

177.8.19 setCustomizationRequiredItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the items are too important to be removed.
Notes: The corresponding item identifiers should be listed here. During customization the user will be

prevented from removing these items from the touch bar.

177.8.20 setDefaultItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the array of identifiers specifying the items in this touch bar.

177.8.21 setTemplateItems(Identifiers() as NSTouchBarItemMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the template item identifiers.
Notes:

Items in this set are the first step in resolving instantiated items from their identifiers.
If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

177.8.22 templateItems as NSTouchBarItemMBS()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Items in this set are the first step in resolving instantiated items from their identifiers.
Notes: If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

177.8.23 toggleTouchBarCustomizationPalette

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Show or dismiss the customization palette for the currently displayed touch bars.
Notes: NSApplication validates this selector against whether the current touch bars are customizable and, if configured on a menu item, will standardize and localize the title. If the current system does not have touch bar support, the menu item will be automatically hidden.

177.8.24 Properties

177.8.25 automaticCustomizeTouchBarMenuItemEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether or not a menu item to customize the touch bar can be automatically added to the main menu.
Notes:

It will only actually be added when a touch bar hardware or simulator is present. Defaults to false. Setting this property to True is the recommended way to add the customization menu item. But if non-standard placement of the menu item is needed, creating a menu item with an action of toggleTouchBarCustomizationPalette can be used instead.
(Read and Write property)

177.8.26 customizationIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A string uniquely identifying this bar for customization purposes.
Notes:

All bars with this identifier will have their items coordinated automatically during customization or instantiation.
Touch bars lacking a customizationIdentifier are not customizable.
(Read and Write property)

177.8.27 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

177.8.28 principalItemIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Specifying a principal item identifier communicates that the item with that identifier has special significance to this touch bar.
Notes:

Currently, that item will be placed in the center of the resolved touch row. Note that multiple visible bars

may each specify a principal item identifier - but only one of them can have the request honored.
(Read and Write property)

177.8.29 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: When true, the touch bar is attached to an eligible touch bar provider, and its items are displayable, assuming adequate space.
Notes: (Read only property)

177.8.30 Events

177.8.31 DidEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization did start.

177.8.32 DidExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization did exit.

177.8.33 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the bar is hidden.

177.8.34 makeItemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: When constructing the items array, this event will be invoked to construct a touch bar item if that item cannot be found in the defaultItems set.

177.8.35 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the bar is shown.

177.8.36 WillEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization will start soon.

177.8.37 WillExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization will exit soon.

Chapter 178

Twain

178.1 class TwainIdentityMBS

178.1.1 class TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Provides identification information about a TWAIN entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

178.1.2 Methods

178.1.3 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

178.1.4 Properties

178.1.5 Id as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: A unique, internal identifier for the TWAIN entity.
Notes:

This field is only filled by the Source Manager. Neither an application nor a Source should fill this field. The Source uses the contents of this field to "identify" which application is invoking the operation sent to the Source.
(Read and Write property)

178.1.6 Manufacturer as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: String identifying the manufacturer of the application or Source. e.g. "Aldus".
Notes: (Read and Write property)

178.1.7 ProductFamily as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Tells an application that performs device-specific operations which product family the Source supports.
Notes:

This is useful when a new Source has been released and the application doesn't know about the particular Source but still wants to perform Custom operations with it. e.g. "ScanMan".
(Read and Write property)

178.1.8 ProductName as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: A string uniquely identifying the Source.
Notes:

This is the string that will be displayed to the user at Source select-time. This string must uniquely identify your Source for the user, and should identify the application unambiguously for Sources that care. e.g. "ScanJet IIc".
(Read and Write property)

178.1.9 ProtocolMajor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Major number of latest TWAIN version that this element supports.
Notes: (Read and Write property)

178.1.10 ProtocolMinor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Minor number of latest TWAIN version that this element supports.
Notes: (Read and Write property)

178.1.11 SupportedGroups as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Supported grosups.
Notes:

The application will normally set this field to specify which Data Group(s) it wants the Source Manager to sort Sources by when presenting the Select Source dialog, or returning a list of available Sources. The application sets this prior to invoking a SelectDS operation.

- The application may also set this field to specify which Data Group(s) it wants the Source to be able to acquire and transfer. The application must do this prior to sending the Source its EnableDS operation.
- The Source must set this field to specify which Data Group(s) it can acquire. It will do this in response to a OpenDS.
- Beginning with TWAIN 2.0 the Source Manager reserves the most significant two byes in the SupportedGroups for the Data Flags (& h0001000 to & hFFFF0000).

DF_DSM2– identifies the Source Manager as TWAIN 2.0 compliant DF_APP2 – is set by an Application that is TWAIN 2.0 compliant DF_DS2– is set by a Source that is TWAIN 2.0 compliant
(Read and Write property)

178.1.12 Version as TwainVersionMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The version information.
Notes: (Read and Write property)

178.2 class TwainImageInfoMBS

178.2.1 class TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Describes the "real" image data, that is, the complete image being transferred between the Source and application.
Notes:

The Source may transfer the data in a different format–the information may be transferred in "strips" or "tiles" in either compressed or uncompressed form. See the TW_IMAGEMEMXFER structure for more information.
The term "sample" is referred to a number of times in this structure. It holds the same meaning as in the TIFF specification. A sample is a contiguous body of image data that can be categorized by the channel or "ink color" it was captured to describe. In an R-G-B (Red-Green-Blue) image, such as on your TV or computer's CRT, each color channel is composed of a specific color. There are 3 samples in an R-G-B; Red, Green, and Blue. A C-Y-M-K image has 4 samples. A Grayscale or Black and White image has a single sample.
Note: The value -1 in ImageWidth and ImageLength are special cases. It is possible for a Sourcetonot-knoweitheritsWidthorLength. Applicationsneedtoconsiderthiswhen allocating memory or otherwise dealing with the size of the Image.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

178.2.2 Methods

178.2.3 BitsPerSample(index as Integer) as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: For each sample, the number of bits of information.
Notes:

24-bit R-G-B will typically have 8 bits of information in each sample (8+8+8). Some 8-bit color is sampled at 3 bits Red, 3 bits Green, and 2 bits Blue. Such a scheme would put 3, 3, and 2 into the first 3 elements of this array. The supplied array allows up to 8 samples. Samples are not limited to 8 bits. However, both the application and Source must simultaneously support sample sizes greater than 8 bits per color.

Index from 0 to 7.

178.2.4 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

178.2.5 Properties

178.2.6 BitsPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The number of bits in each image pixel (or bit depth).
Notes:

This value is invariant across the image. 24-bit R-G-B has BitsPerPixel = 24. 40-bit C-M-Y-K has BitsPerPixel=40. 8-bit Grayscale has BitsPerPixel = 8. Black and White has BitsPerPixel = 1.
(Read and Write property)

178.2.7 Compression as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The compression method used to process the data being transferred.
Notes:

Default is no compression.
(plugin currently only supports no compression)
(Read and Write property)

178.2.8 ImageLength as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: How tall/long, in pixels, the image to be transferred is.
Notes:

If the Source doesn't know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn't support undefined image size)
(Read and Write property)

178.2.9 ImageWidth as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: How wide, in pixels, the entire image to be transferred is.
Notes:

If the Source doesn't know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn't support undefined image size)
(Read and Write property)

178.2.10 PixelType as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: This is the highest categorization for how the data being transferred should be interpreted by the application.
Notes:

This is how the application can tell if the data is Black and White, Grayscale, or Color. Currently, the only color type defined is "tri-stimulus", or color described by three characteristics. Most popular color description methods use tri- stimulus descriptors. For simplicity, the constant used to identify tri-stimulus color is called TWPT_RBG, for R-G-B color. There is no default for this value. Fill this field with the appropriate TWPT_xxxx constant.

The plugin does currently only support RGB, GRAY, BW and PALETTE.
(Read and Write property)

178.2.11 Planar as Boolean

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Whether image is planar.
Notes:

If SamplesPerPixel >1, indicates whether the samples follow one another on a pixel-by-pixel basis (R-G-B-R-G-B-R-G-B...) as is common with a one-pass scanner or all the pixels for each sample are grouped together (complete group of R, complete group of G, complete group of B) as is common with a three-pass scanner. If the pixel-by-pixel method (also known as "chunky") is used, the Source should set Planar = false. If the grouped method (also called "planar") is used, the Source should set Planar = true.
(Read and Write property)

178.2.12 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: All.

Function: The number of bytes in a row.
Notes:

This is not exactly the value as you may expect as Twain needs some rounding.
(Read and Write property)

178.2.13 SamplesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The number of samples being returned.
Notes:

For R-G-B, this field would be set to 3. For C-M-Y-K, 4. For Grayscale or Black and White, 1.
(Read and Write property)

178.2.14 XResolution as Double

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Horizontal resolution.
Notes:

In pixels per inch.
(Read and Write property)

178.2.15 YResolution as Double

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Vertical resolution.
Notes:

In pixels per inch.
(Read and Write property)

178.3 class TwainImageLayoutMBS

178.3.1 class TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The class for an image layout.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

178.3.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr4

178.3.3 Methods

178.3.4 Constructor

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

178.3.5 Properties

178.3.6 Bottom as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The bottom coordinate of the item.
Notes: (Read and Write property)

178.3.7 DocumentNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The document number.
Notes: (Read and Write property)

178.3.8 FrameNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The frame number.
Notes: (Read and Write property)

178.3.9 Height as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The height of the item.
Notes: (Read only property)

178.3.10 Left as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The left coordinate of the item.
Notes: (Read and Write property)

178.3.11 PageNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The page number.
Notes: (Read and Write property)

178.3.12 Right as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The right coordinate of the item.
Notes: (Read and Write property)

178.3.13 Top as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The top coordinate of the item.
Notes: (Read and Write property)

178.3.14 Width as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The width of the item.
Notes: (Read only property)

178.4 class TwainMBS

178.4.1 class TwainMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The plugin class for scanning with TWAIN compatible scanners.
Notes:

Use is like this:

- Declare subclass of TwainMBS so you can get events.
- Create new instance of your subclass and store object in some window/app/module property.
- For Windows call InstallEvent.
- To scan, call Acquire method.
- If driver runs synchronously, a modal window shows and you get back a picture object right away when scanning is done.
- If driver runs asynchronously, it shows a non modal window and you receive events.
- In TransferReady event you can call TransferImage method. In example a timer is triggered so this runs in the window.
- To cleanup, use DisableDS and CloseDS methods.
- We recommend only to have one instance of the TwainMBS object.

When Xojo or Xojo is used (32 bit), we can of course only see and use devices with 32 bit drivers.
Once Xojo will be ported to 64bit, we can only talk to 64bit drivers.

For 64-bit on Windows you can find 64-bit TwainDSM.dll here:
https://sourceforge.net/projects/twain-dsm/

178.4.3 Methods

178.4.4 Acquire(modal as boolean = false, showUI as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Acquires a new picture.
Notes:

Lasterror is set.
Plugin asks for asynchronously operation, so this function returns nil and success in lasterror.
If data source must be used with modal UI, this function returns with picture.

Modal can be true to ask for modal dialog. Seems to be only supported on Mac.

178.4.5 AllDevices as TwainIdentityMBS()

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns array with all devices.
Example:

```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices

if device.ProductName = NameToFind then
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <>0 then
MsgBox "Failed to select "+device.ProductName
```

```
else
'MsgBox "OK"
exit
end if
end if
next

if not found then
MsgBox "No scanner found named: "+NameToFind
end if
```

178.4.6 AppIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries app identity.
Notes: That's the identity the plugin used to register with twain library.

178.4.7 CanBW as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether device supports black and white pixel type.
Notes: Lasterror is set.

178.4.8 CanGray as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether device supports gray pixel type.
Notes: Lasterror is set.

178.4.9 CanPalette as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether current device supports palette pixel type.
Notes: Lasterror is set.

178.4.10 CanRGB as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether current device supports RGB pixel type.
Notes: Lasterror is set.

178.4.11 CloseDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Close data source.
Notes: Lasterror is set.

178.4.12 CloseDSM

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes the data source manager.
Notes: Lasterror is set.

178.4.13 Constructor(Country as Integer, Language as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Initializes Twain engine with given localization.
Notes: Lasterror is set.

178.4.14 DisableDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Diables data source.
Notes: Lasterror is set.

178.4.15 DontUnload

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Informs the plugin to not unload the twain library.
Notes: This avoids a crash for some people.

178.4.16 DSIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the details on the data source.
Notes: Lasterror is set.

178.4.17 GetEnumerationCapability(ID as Integer, byref ItemType as Integer, byref Count as Integer, byref CurrentIndex as Integer, byref DefaultIndex as Integer) as Integer()

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries an enum capability.
Example:

```
dim t as TwainMBS // your twain object

// check supported sizes

const ICAP_SUPPORTEDSIZES = &h1122
dim type5 as Integer
dim EnumCount as Integer = 0
dim EnumItemType as Integer = 0
dim EnumCurrentIndex as Integer = 0
dim EnumDefaultIndex as Integer = 0
dim EnumValues() as Integer = t.GetEnumerationCapability(ICAP_SUPPORTEDSIZES, EnumItemType,
EnumCount, EnumCurrentIndex, EnumDefaultIndex)
dim e5 as Integer = t.Lasterror
dim c5 as Integer = t.ConditionCode
```

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer enum types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

178.4.18 GetIntegerCapability(ID as Integer, byref Type as Integer) as Integer

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries an integer capability.
Example:

```
dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <>0 then
MsgBox "Failed to open device: "+str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode

// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
// not supported!
Break
end if
```

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

178.4.19 ImageInfo as TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries information about current image.
Notes: Lasterror is set.

178.4.20 IsDSEnabled as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether data source is enabled.

178.4.21 OpenDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the data source.

178.4.22 OpenDSM

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens Data source Manager.
Notes: Lasterror is set.

178.4.23 ProcessEvents

MBS Picture Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

Function: Process events in plugin.
Notes:

Only for Windows needed for some Twain drivers. You call it after you run Acquire to let the plugin wait for the events to start the transfer.
When transfer is ready or dialog is cancelled, this method ends.
On Mac OS X or Linux this method does nothing so it's no problem calling it.

178.4.24 SelectDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries dialog to ask the user to select a data source.
Notes: Lasterror is set.
See also:

- 178.4.25 SelectDS(device as TwainIdentityMBS) 23570

178.4.25 SelectDS(device as TwainIdentityMBS)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Selects the given device without dialog.
Example:

```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices

if device.ProductName = NameToFind then
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <>0 then
MsgBox "Failed to select "+device.ProductName
else
'MsgBox "OK"
exit
end if
end if
next
```

```
if not found then
MsgBox "No scanner found named: "+NameToFind
end if
```

Notes: Lasterror is set.
See also:

- 178.4.24 SelectDS 23570

178.4.26 SetBoolCapability(ID as Integer, Value as Boolean)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with boolean.
Example:

```
dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <>0 then
MsgBox "Failed to open device: "+str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode

// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
```

```
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
// not supported!
Break
end if
```

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a boolean.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

178.4.27 SetFloatCapability(ID as Integer, Value as Double)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with floating point value.
Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a floating point value (FIX32).
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

178.4.28 SetInt32Capability(ID as Integer, Value as Int32)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with 32 bit integer.
Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 32 bit integer.

Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

178.4.29 SetUInt16Capability(ID as Integer, Value as UInt16)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with 16 bit integer.
Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 16 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

178.4.30 SupportsMemoryTransfer as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether the twain data source supports memory transfers.
Notes: As our plugin uses only memory transfers, the source must support this in order to work with our plugin.

178.4.31 TransferImage as picture

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Transfers an image.
Notes:

Lasterror is set.
Image data is converted to a normal RGB picture.
Can return nil on any error.
The events TransferStarted, TransferEnded and TransferProgress are called when a transfer is running.

178.4.32 Properties

178.4.33 AutoFeed as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether plugin should auto feed (if feeder is enabled).
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto feed. If the scanner does not support auto feeding, the scanner will ignore this setting.
(Read and Write property)

178.4.34 AutomaticBorderDetection as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether plugin should enable automatic border detection.
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto border detection. If the scanner does not support this feature, the scanner will ignore this setting.
0 = off, 1 = on, -1 = default/undefined.
(Read and Write property)

178.4.35 AutomaticBrightness as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Enables or disables the Source's Auto-brightness function (if any).
Notes:

The plugin will apply this setting on the next scan.
Value is 0 to disable, 1 to enable or -1 if undefined/default.
(Read and Write property)

178.4.36 AutomaticRotate as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to enable automatic rotation when next scan starts.
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable automatic rotation. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

178.4.37 Brightness as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: The brightness setting to use.
Notes:

The plugin will apply this setting on the next scan.
Source should normalize the values into the range. Make sure that a '0' value is available as the Current Value when the Source starts up. If the Source's ± range is asymmetric about the '0' value, set range maxima to ±1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

178.4.38 ConditionCode as Integer

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: The condition code.
Notes:

If error code in Lasterror is 1, this Condition value is set.
(-1 if unknown)

Possible codes:

(Read and Write property)

178.4.39 Contrast as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: The contrast setting to use.
Notes:

The plugin will apply this setting on the next scan.
Scale the values available internally into a homogeneous range between -1000 and 1000. Make sure that a '0' value is available as the Current value when the Source starts up. If the Source's ± range is asymmetric about the '0' value, set range maxima to ±1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.
(Read and Write property)

TWCC_SUCCESS	0	Success
TWCC_BUMMER	1	Failure due to unknown causes
TWCC_LOWMEMORY	2	Not enough memory to perform operation
TWCC_NODS	3	No Data Source
TWCC_MAXCONNECTIONS	4	DS is connected to max possible applications
TWCC_OPERATIONERROR	5	DS or DSM reported error, application shouldn't
TWCC_BADCAP	6	Unknown capability
TWCC_BADPROTOCOL	9	Unrecognized MSG DG DAT combination
TWCC_BADVALUE	10	Data parameter out of range
TWCC_SEQERROR	11	DG DAT MSG out of expected sequence
TWCC_BADDEST	12	Unknown destination Application/Source in DSM_Entry
TWCC_CAPUNSUPPORTED	13	Capability not supported by source
TWCC_CAPBADOPERATION	14	Operation not supported by capability
TWCC_CAPSEQERROR	15	Capability has dependancy on other capability
TWCC_DENIED	16	File System operation is denied (file is protected)
TWCC_FILEEXISTS	17	Operation failed because file already exists.
TWCC_FILENOTFOUND	18	File not found
TWCC_NOTEMPTY	19	Operation failed because directory is not empty
TWCC_PAPERJAM	20	The feeder is jammed
TWCC_PAPERDOUBLEFEED	21	The feeder detected multiple pages
TWCC_FILEWRITEERROR	22	Error writing the file (meant for things like disk full conditions)
TWCC_CHECKDEVICEONLINE	23	The device went offline prior to or during this operation

178.4.40 DiscardBlankPages as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to have the scanner ask to discard blank pages.
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable blank pages discarding. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

178.4.41 Duplex as Integer

MBS Picture Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to enable duplex when next scan starts.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable duplex.
If the scanner does not support duplex, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)

178.4.42 FeederEnabled as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to enable feeder when next scan starts.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder.
If the scanner does not support the feeder, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)

178.4.43 Gamma as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Gamma correction value for the image data.
Notes:

The plugin will apply this setting on the next scan.
Default value 2.2. The setting is -10000 if not set.
(Read and Write property)

178.4.44 Highlight as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Specifies which value in an image should be interpreted as the lightest highlight.
Notes:

The plugin will apply this setting on the next scan.
All values lighter than this value will be clipped to this value. Whether lighter values are smaller or larger can be determined by examining the Current value of PixelFlavor.
If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
Value can be between 0 and 255.

Value can be between 0 and 255.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

178.4.45 Lasterror as Integer

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

178.4.46 Orientation as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The orientation for the scanner.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder. If the scanner does not support the feeder, the scanner will ignore this setting.

Value can be:

0	0 degree
1	90 degree
2	180 degree
3	270 degree
0	Portrait
3	Landscape

(Read and Write property)

178.4.47 Parent as Window

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The parent window.
Notes: (Read and Write property)

178.4.48 PendingTransferCount as Integer

MBS Picture Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: How many pages are pending.
Notes:

So when you transfer you can make a loop and run until PendingTransferCount is zero.
PendingTransferCount may be -1 or 65535 for unknown number of pages.
(Read and Write property)

178.4.49 PixelType as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: The pixel type requested.
Notes:

Value can be 0 for BW, 1 for Gray, 2 for RGB, 3 for Palette.
The plugin can request als CMY (4), CMYK (5), YUV (6), YUVK (7) and CIEXYZ (8), but can't currently decode those.

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to use the given pixel type. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

178.4.50 ProvideSliceData as Boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to pass Memoryblock with data with Progress event for new rows arrived.
Notes: (Read and Write property)

178.4.51 ProvideSlicePicture as Boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to pass picture with Progress event for new rows arrived.
Notes: (Read and Write property)

178.4.52 ResX as Double

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The horizontal resolution for scanning.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting.
Use -1 to use the default setting.
(Read and Write property)

178.4.53 ResY as Double

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The vertical resolution for scanning.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting.
Use -1 to use the default setting.
(Read and Write property)

178.4.54 Shadow as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Specifies which value in an image should be interpreted as the darkest shadow.
Notes:

The plugin will apply this setting on the next scan.
All values darker than this value will be clipped to this value.

Whether darker values are smaller or larger can be determined by examining the Current value of PixelFlavor.
Source

If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
(Read and Write property)

178.4.55 DefaultDevice as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The default device.
Notes: (Read and Write computed property)

178.4.56 Imagelayout as TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Get/Set the image layout.
Notes:

Lasterror is set. DataSource must be open.
(Read and Write computed property)

178.4.57 Events

178.4.58 CloseRequest

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: Closes a request.
Notes: Lasterror is set.

178.4.59 TransferEnded(pic as picture, ImageInfo as TwainImageInfoMBS, sliced as boolean, layout as TwainImageLayoutMBS)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: The transfer finished.
Notes:

Pic: The final picture. Nil if sliced is true.
ImageInfo: Details about the image format.
Sliced: Whether the image was transferred in slices.

178.4.60 TransferProgress(percent as Double, dataRead as Int64, DataSize as Int64, ImageInfo as TwainImageInfoMBS, NewDataSize as Integer, NewData as Memoryblock, NewPicture as Picture, layout as TwainImageLayoutMBS, Columns as Integer, Rows as Integer, XOffset as Integer, YOffset as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: The progress event.
Notes:

Percent: The percent value (0 to 100) of the progress.
dataRead: Number of bytes read.
DataSize: Total size of image in bytes.
ImageInfo: Details about the image format.
NewDataSize: The number of bytes received.
NewData: The memoryblock for the new data. Use NewDataSize to copy right amount of data as this memoryblock has no size value set.
NewPicture: The picture for the new data.
Layout: The image layout.
Columns: Number of columns got in this slice.
Rows: Number of rows got in this slice.
XOffset: Column start for this slice.
YOffset: Row start for this slice.

NewData is only valid if you set ProvideSliceData to true.
NewPicture is only valid if you set ProvideSlicePicture to true.

178.4.61 TransferReady

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: Called to tell you that a transfer is waiting.
Notes:

The user pressed button to start scan.
Please call TransferImage method when you are ready.

178.4.62 TransferStarted(DataSize as Int64, ImageInfo as TwainImageInfoMBS, layout as TwainImageLayoutMBS) as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: A transfer started.
Notes:

DataSize total numnber of bytes expected.
ImageInfo: details on the image we receive.

You can return true to have the plugin not created one big picture.
A 42 inch scanner normally creates huge images, so you only can process them in slices.

178.4.63 Constants

178.4.64 TWCY_AFGHANISTAN = 1001

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the country codes.

Notes: YUVK

178.4.441 TWRC_CANCEL = 3

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes: Operation has been canceled.

178.4.442 TWRC_CHECKSTATUS = 2

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with Capability and ImageLayout. Operation failed to completely perform the desired operation. For example, setting Brightness to 3 when its range is -1000 to 1000 with a step of 200. The data source may opt to set the value to 0 and return this status.
The application should confirm its last setting, if it depends on getting the exact value it requested.

178.4.443 TWRC_DATANOTAVAILABLE = 9

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with extended ImageInfo. There is no data available for the requested item.
Scanning may continue. The decision to continue with scanning is at the discretion of the application, depending on which field reported this status.

178.4.444 TWRC_DSEVENT = 4

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_EVENT. The data source processed the event.
The application must not take any further action on this message.

178.4.445 TWRC_ENDOFLIST = 7

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_IDENTITY and DAT_FILESYSTEM.
There are no more items to enumerate in this list. If a call is needed to close the list, it must be called next.

178.4.446 TWRC_FAILURE = 1

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

May be returned by any operation. An error has occurred.
The application must call status functions, and refer to the condition code for more information.

178.4.447 TWRC_INFONOTSUPPORTED = 8

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_EXTIMAGEINFO. The requested TWEI_ data is either not supported by this data source, or is not supported for this particular image.
Scanning may continue. The decision to continue with scanning is at the discretion of the application, depending on which field reported this status.

178.4.448 TWRC_NOTDSEVENT = 5

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_EVENT. The data source did not process the event.
The application passes the message to its own dialogs.

178.4.449 TWRC_SUCCESS = 0

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Operation was successful.
The application continues as normal.

178.4.450 TWRC_XFERDONE = 6

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with the Image Transfer operations. The image has been fully transferred.
The application must be in state 7. It should call GetImageInfo, if it needs to collect metadata for this image.

178.5 class TwainVersionMBS

178.5.1 class TwainVersionMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The class for version details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

178.5.2 Methods

178.5.3 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

178.5.4 Properties

178.5.5 Country as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The primary country where your Source or application is intended to be distributed.
Notes:

e.g. Germany.
(Read and Write property)

178.5.6 Info as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: General information string - fill in as needed.
Notes:

e.g. "1.0b3 Beta release".
(Read and Write property)

178.5.7 Language as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The primary language for your Source or application.
Notes:

e.g. TWLG_GER.
(Read and Write property)

178.5.8 MajorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: This refers to your application or Source's major revision number.
Notes:

e.g. The 2 in "version 2.1".
(Read and Write property)

178.5.9 MinorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The incremental revision number of your application or Source.
Notes:

e.g. The 1 in "version 2.1".
(Read and Write property)

Chapter 179

Unsanity Smart Crash Reporter

179.1 module UnsanitySmartCrashReporterMBS

179.1.1 module UnsanitySmartCrashReporterMBS

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Contains API definitions to use with Smart Crash Reports.
Notes:

See the Unsanity Smart Crash Reports SDK for more details.

Smart Crash Reports is an enhancement for the Apple's CrashReporter application introduced in Mac OS X 10.4. It allows 3rd party developers to register their own match specifiers, and if the crash log the user is about to submit contains the match specifier, the crash log will be sent to the developer as well as Apple. This greatly enhances the user experience of the OS, and allows developers to receive crashes and improve their software in a timely manner.

Smart Crash Reports requires no Application Enhancer or similar "patching" frameworks users have to install; they operate on the InputManager mechanism that built-in Mac OS X.

Smart Crash Reports is completely free to use for both users and developers; Unsanity is providing it as a service to the community being certain it will benefit all the users on the platform.

How does Smart Crash Reports work?
Whenever an application crashes on user's computer and they click on the Report... button, Smart Crash Reports analyzes the crash log that is about to be submitted to Apple. If the crash log is determined to be related to a developer that registered the application or product (Contextual Menu Module, InputManager, or any other type of system plugin), then the user is given an option to submit the bug report to both that

developer and Apple, thus giving the developer the chance to fix the bug in the crashed product in a timely manner. For developers, there is two ways to make Smart Crash Reports recognize your product. First, and probably the simplest one, is to add a couple of new keys into the application's Info.plist file that instruct Smart Crash Reports what to do in case that application crashes. However, this method only works for stand-alone applications and not plugins. Second method involves using of the supplied API calls to register a Match Specifier with the system. A match specifier is a simple string (no wildcards or regexp) that contains full or partial name of developer product(s) CFBundleIdentifier (for example, "com.somecompany."). When an application crashes on user's computer, Smart Crash Reports system analyzes the crashed thread of the crash log to determine if it contains any of the match specifiers registered with it. If so, the crash is likely related to the developer who registered the match specifier, so Smart Crash Reports takes the appropriate action from there on.

How Developer Receives The Crash Reports
Developer can receive the crash reports that Smart Crash Reports detected as belonging to them in either of two ways:

- By E-Mail to the address provided during the match specifier registration (Unsanity server will handle the mailing for you)
- By a custom CGI script on your web server that processes CrashReporter logs

So, How to Make My Application Work With Smart Crash Reports so I Receive Crash Logs?
If you develop an application and would like to simply receive all the crash logs related to it, do this:

Obtain an E-mail Ticket ID for the E-mail you wish to receive reports at by going to the following URL: http://www.unsanity.com/goto/email-ticket/.
Add the following keys to your application Info.plist:
<key>SmartCrashReports_CompanyName</key>
<string>Your Company Name</string>
<key>SmartCrashReports_EmailTicket</key>
<string>SCR-XXXXXXXX</string>
Replace "Your Company Name" with a readable (short) company name, and "SCR-XXXXXXXX" with the Email Ticket ID you will receive in the E-mail after performing Step 1.
You're all done! If you'd like to use your own CGI to process the crash logs, replace SmartCrashReports_EmailTicket key with the SmartCrashReports_URL key.
Now your application is successfully registered with the Smart Crash Reports system and you will receive crash logs for it in the mail.

If you are developing a plugin, InputManager, and whatnot, you have to use the API provided to register your Match Specifier:

Download the Smart Crash Reports SDK. It will contain two files (among others), SmartCrashReportsAPI.o and SmartCrashReportsAPI.h. Add them to your project.
Obtain an E-mail Ticket ID for the E-mail you wish to receive reports at by going to the following URL:

http://www.unsanity.com/goto/email-ticket/.
Somewhere in your application, or plugin, add the following line:
RegisterMatchSpecifier("", "Your Company Name", "", "SCR-XXXXXXXX", "");
Replace "Your Company Name" with a readable (short) company name, and "SCR-XXXXXXXX" with the Email Ticket ID you will receive in the E-mail after performing Step 2.
Note: The best way to call this is after your application has finished launching, such as applicationDidFinishLaunching: in the NSApp delegate for Cocoa apps, or
whatever for any other types of projects.
There's no Step 4! Now your product is successfully registered with the Smart Crash Reports system and you will receive crash logs containing the match specifier in the crashed thread in the mail.

Notes: It is not necessary to register with Smart Crash Reports on every application launch; once you register, it is permanent and will exist until user deletes the SCR database somehow. However, it takes little speed/memory overhead so you can safely call it on every launch to avoid doing 'is registered already' checks and whatnot.

How to Make a CGI to Accept Crash Reports On Your Site?
If you wish to receive crash reports on your Web site, you can implement the custom Submit URL script that user's CrashReporter.app will contact directly. However, keep in mind that the following criteria should be met:

Your web server script has to be in the same place over next several years, at the very least, to allow delivery of crash reports to you.
You are responsible for adjusting the web script if the format CrashReporter.app sends crash reports in changes.
Your web server should be accessible 24/7 and be on a reasonably fast connection to not delay user's submission process.

For the above reasons, it is recommended to obtain the E-mail ticket from Unsanity and use the E-mail feature of Smart Crash Reports. Unsanity will make sure the server is accessible, knows how to parse all formats of submissions, and will safely redirect the crash reports to the email you provide.
If your own Web script is still the way you want to go, here is the list of keys currently known to be passed to the script by the CrashReporter.app in a POST form data:

url_from: contains the subject of the crash report, usually "<Some Application>crash"
feedback_comments: user comments they entered in the additional info fields
bug_type: unknown constant, probably determines which POST elements are available; presently 9.
app_name: full crashed application name
app_version: version of the crashed application
os_version: Mac OS X version, in form 10.X.X:BUILD (for example, "10.4.2:8C46")
machine_config: Computer configuration string, for example, "PowerMac7,2 (2048 MB)"
page_source: Contains BASE64-encoded crash report
system_profile: Contains BASE64-encoded property list with a brief system profile of the user's system.

Please note that these form keys are subject to change by Apple, so it is your responsibility to adjust the scripts on your Web servers if such thing happens.

What Are The Licensing Terms for Smart Crash Reports and its SDK?
You are free to use and distribute Smart Crash Reports enabled products freely in any form without prior permission from Unsanity, LLC. If you like the system and would like to return the favor Unsanity is doing to the developer community, link to Smart Crash Reports somewhere on your SCR-enabled product page: This product uses http://www.unsanity.com/smartcrashreports/ by Unsanity.

179.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Plugins 8.2

179.1.3 Methods

179.1.4 CanInstall as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Check whether this library can install Smart Crash Reports on user's system.
Notes:

Returns TRUE if Smart Crash Reports can be installed, or FALSE if they are already installed (of the same or newer version).
See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 179.1.5 CanInstall(byref AuthenticationWillBeRequired as boolean) as Integer 23656

179.1.5 CanInstall(byref AuthenticationWillBeRequired as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Check whether this library can install Smart Crash Reports on user's system.
Notes:

outOptionalAuthenticationWillBeRequired: the Boolean the param points to will be set to TRUE if an authentication will be required to install Smart Crash Reports.
Returns TRUE if Smart Crash Reports can be installed, or FALSE if they are already installed (of the same or newer version).
See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 179.1.4 CanInstall as Integer 23656

179.1.6 Install(inInstallFlags as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Attempt to install Smart Crash Reports on user's system.
Notes:

Presents a dialog asking the user if he/she want to install Smart Crash Reports, along with a link for more information, and Don't Show Again checkbox, and, if confirmed by the user, installs Smart Crash Reports from the library's archive, if possible. The confirmation dialog will block the host application until the user makes the choice.

inInstallFlags: A bit mask containing the installation options.
Returns an error code.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.7 InstallableVersion as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Get the version of Smart Crash Reports that this library can install.
Notes:

Returns an unsigned integer containing the version of Smart Crash Reports (in CFBundleGetVersionNumber() format) bundled in this library.
See the Unsanity Smart Crash Reports SDK for more details.

179.1.8 InstalledVersion as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Get the version of Smart Crash Reports installed on user's system.
Notes:

Returns an unsigned integer containing the version of Smart Crash Reports (in CFBundleGetVersionNumber() format), or 0 if Smart Crash Reports are not installed.
See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 179.1.9 InstalledVersion(byref IsInstalledGlobally as boolean) as Integer 23658

179.1.9 InstalledVersion(byref IsInstalledGlobally as boolean) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Get the version of Smart Crash Reports installed on user's system.
Notes:

IsInstalledGlobally: The Boolean the param points to will hold TRUE if Smart Crash Reports are installed for all users, or FALSE if they are installed for the current user only.
Returns an unsigned integer containing the version of Smart Crash Reports (in CFBundleGetVersionNumber() format), or 0 if Smart Crash Reports are not installed.
See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 179.1.8 InstalledVersion as Integer 23657

179.1.10 IsMatchSpecifierRegistered(inMatchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Query whether the match specifier is registered with the Smart Crash Reports system.
Notes:

Queries whether the product is registered with the Smart Crash Reports system.

inMatchString: The match string to query for. Note that SCR will perform partial matches search, too, so for example if you have "com.mycompany" registered, and you query against "com.mycompany.otherapp", this function will return positive result.

See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 179.1.11 IsMatchSpecifierRegistered(inMatchString as string, byref RealMatchString as string) as Integer 23658

179.1.11 IsMatchSpecifierRegistered(inMatchString as string, byref RealMatchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Query whether the match specifier is registered with the Smart Crash Reports system.
Notes:

Queries whether the product is registered with the Smart Crash Reports system.

inMatchString: The match string to query for. Note that SCR will perform partial matches search, too, so

for example if you have "com.mycompany" registered, and you query against "com.mycompany.otherapp", this function will return positive result.
outOptionalRealMatchString: This variable will contain the "real" match string that SCR contains in the database. You can use it in calls to UnregisterProduct later, if you want.

Result:
0: The match string you have provided is not registered with SCR.
1: The match string you have provided is registered with SCR.
-1: inMatchString is "" or function not available.

See the Unsanity Smart Crash Reports SDK for more details.
See also:

- 179.1.10 IsMatchSpecifierRegistered(inMatchString as string) as Integer 23658

179.1.12 RegisterMatchSpecifier(inMatchString as string, inCompanyName as string,inSubmissionURL as string, inSubmissionEmailTicket as string, inOptionalCommentsTemplate as string="") as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Registers your match specifier with the Smart Crash Reports system.
Notes:

Register your match specifier with the Smart Crash Reports system. Once this call is done, crash reports containing inMatchString in the crashed thread will be submitted to you, either to the submission URL (you have to implement the script on your web server), or to the submission email (Unsanity server will forward the report to you).

Result codes:

See the Unsanity Smart Crash Reports SDK for more details.

179.1.13 UnregisterMatchSpecifier(inMatchString as string) as Integer

MBS MacOSX Plugin, Plugin Version: 8.2, Platform: macOS, Targets: All.

Function: Unregisters your product(s) with the Smart Crash Reports system.
Notes:

Unregisters your product(s) with the Smart Crash Reports system. Performing this call will cause Smart Crash Reports to stop submitting bug reports for the inMatchString provided. Note that for this call to succeed, inMatchString must exactly match the one used in call to RegisterProduct.

inMatchString:	The product ID string to match or "" to use the current bundle identifier. Normally, this is a part of a CFBundleIdentifier of your product. For example, if your product CFBundleIdentifier is "com.mycompany.myapp", it is a good idea to set inProductIDMatchString to "com.mycompany.", since it will catch all of the products of your company. If you pass "" to this argument, an attempt to use CFBundleIdentifier from the main bundle will be used, which is handy for most applications out there, but not acceptable for Contextual Menu Modules, Preference Panes and other plugins.
inCompanyName:	The company name in user-readable format. Smart Crash Reports will substitute "Apple" with this string, so make sure it's not too long. Example: "My Company"
inSubmissionURL:	The full URL to the script on your Web server that will handle the submissions, or "" if you prefer the crash report to be sent to you via email (in this case, inSubmissionEmail must be not ""). Example: "http://www.mycompany.com/cgi-bin/processor.cgi"
inSubmissionEmailTicket:	The email ticket for email you wish to receive crash report at, or "" if you are handling it yourself on your web server. If this is set, Unsanity server will handle the submission and email you the crash log. Important: this is NOT the email address. It is a unique email ticket that you have to register with Unsanity by going to http://www.unsanity.com/goto/email-ticket/. This is done for email verification purposes, and also to not expose your real email to end users, if they peek inside of the SCR database somehow
inOptionalCommentsTemplate:	this string will be inserted into the "Description" field of the CrashReporter dialog. This can be useful if you want to put something like "Put your email here if you wish to be contacted by the developer regarding this crash log", or anything else.

inMatchString: The match string to unregister. This must be the same match string as used in the RegisterProduct call before.

Result:

See the Unsanity Smart Crash Reports SDK for more details.

179.1.14 Constants

179.1.15 kUnsanitySCR_DoNotPresentInstallUI=4

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the install flags.
Notes:

If set, the confirmation dialog shown to the user will not be used and the silent installation will be attempted. If not set, the confirmation dialog will be shown to the user asking whether he/she wants to install Smart

noErr=0	Registration successful. If there is already such a match specifier registered, it is replaced with the fresh information supplied to this call.
paramErr=-50	inSubmissionURL and inSubmissionEmailTicket are "", or inMatchString is "", or inCompanyName is ""
cNoMemErr=-152	Not enough memory to perform selected operation.
permErr=-54	Not enough permissions to write changes to disk.
bdNamErr-37	The match string is malformed, or too wide to be accepted (don't try to register "com.", etc!)

noErr=0	Unregistration successful.
paramErr=-50	inMatchString is ""
cNoMemErr=-152	Not enough memory to perform selected operation.
permErr=-54	Not enough permissions to write changes to disk.
fnfErr=-43	The provided inMatchString was not found in the mart Crash Reports database. You can safely ignore this error, as it means that the match string you've provided does not exist already.

Crash Reports or not. The confirmation dialog will block the application until dismissed.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.16 kUnsanitySCR_GlobalInstall=2

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the install flags.
Notes:

If set, a global installation will be attempted (provided the user can authenticate). If not set, Smart Crash Reports will be installed for current user only.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.17 kUnsanitySCR_InfoPlist_CommentsTemplate="SmartCrashReports_CommentsTemplate"

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the keys defined for the Info.plist of the Application.
Notes: See the Unsanity Smart Crash Reports SDK for more details.

179.1.18 kUnsanitySCR_InfoPlist_CompanyName="SmartCrashReports_CompanyName"

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the keys defined for the Info.plist of the Application.
Notes: See the Unsanity Smart Crash Reports SDK for more details.

179.1.19 kUnsanitySCR_InfoPlist_SubmissionEmailTicket="SmartCrashReports_EmailT

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the keys defined for the Info.plist of the Application.
Notes: See the Unsanity Smart Crash Reports SDK for more details.

179.1.20 kUnsanitySCR_InfoPlist_SubmissionURL="SmartCrashReports_URL"

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the keys defined for the Info.plist of the Application.
Notes: See the Unsanity Smart Crash Reports SDK for more details.

179.1.21 kUnsanitySCR_Install_AuthFailure=-111

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

Could not install because user failed to authenticate for the global install.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.22 kUnsanitySCR_Install_InstalledGlobally=-13

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

Smart Crash Reports are already installed globally and this API can not install into /Library as it would require additional fiddling with the authorization which is beyond the scope of this API.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.23 kUnsanitySCR_Install_NoError=0

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

No error. Installation succeeded.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.24 kUnsanitySCR_Install_NoPermissions=-54

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

Could not install because of file permission issues.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.25 kUnsanitySCR_Install_OutOfMemory=-108

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

Could not allocate needed memory for the installation.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.26 kUnsanitySCR_Install_UserCancelled=-15

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

The user cancelled.

See the Unsanity Smart Crash Reports SDK for more details.

179.1.27 kUnsanitySCR_Install_WillNotInstall=-14

MBS MacOSX Plugin, Plugin Version: 8.2.

Function: One of the result codes returned from the Install() function.
Notes:

Could not install because a newer or same version of Smart Crash Reports is already installed.

See the Unsanity Smart Crash Reports SDK for more details.

Chapter 180

USB

180.1 class HIDAPIDeviceInfoMBS

180.1.1 class HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for device information.

180.1.2 Properties

180.1.3 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The USB interface which this logical device represents.
Notes:

Valid on both Linux implementations in all cases, and valid on the Windows implementation only if the device contains more than one interface.
(Read only property)

180.1.4 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manufacturer String.
Notes: (Read only property)

180.1.5 NextDevice as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Next device.
Notes: (Read only property)

180.1.6 Path as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Platform-specific device path.
Notes: (Read only property)

180.1.7 ProductID as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device Product ID.
Notes: (Read only property)

180.1.8 ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Product string.
Notes: (Read only property)

180.1.9 ReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device Release Number in binary-coded decimal, also known as Device Version Number.
Notes: (Read only property)

180.1.10 SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Serial Number.
Notes: (Read only property)

180.1.11 Usage as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Usage for this Device/Interface (Windows/Mac only).
Notes: (Read only property)

180.1.12 UsagePage as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Usage Page for this Device/Interface (Windows/Mac only).
Notes: (Read only property)

180.1.13 VendorID as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device Vendor ID.
Notes: (Read only property)

180.2 class HIDAPIDeviceMBS

180.2.1 class HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a HIDAPI device.
Notes:

For HIDAPI see website:
https://github.com/signal11/hidapi

The MBS Plugin includes a copy of hidapi for Mac, Windows and Linux.
The linux version needs libudev installed.

You can optionally load a different version of hidapi with LoadLibrary methods.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.2.2 Blog Entries

- MBS Xojo Plugins, version 19.1pr2
- MBS Xojo / Real Studio Plugins, version 16.1pr3

180.2.3 Methods

180.2.4 Close

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close a HID device.

180.2.5 Constructor

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

180.2.6 Enumerate(VendorID as Integer = 0, ProduceID as Integer = 0) as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enumerate the HID Devices.
Notes: This function returns a linked list of all the HID devices attached to the system which match VendorID and ProduceID. If VendorID is set to 0 then any vendor matches. If ProduceID is set to 0 then any product matches. If VendorID and ProduceID are both set to 0, then all HID devices will be returned.

180.2.7 GetFeatureReport(ReportID as Integer, MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a feature report from a HID device.
Notes:

Set the first byte of Data to the Report ID of the report to be read. Make sure to allow space for this extra byte in data. Upon return, the first byte will still contain the Report ID, and the report data will start in data.UInt8(1).

ReportID: The report ID to read.

This function returns the number of bytes read plus one for the report ID (which is still in the first byte), or -1 on error.

180.2.8 IndexedString(Index as Integer, MaxLen as Integer = 1024) as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a string from a HID device, based on its string index.
Notes:

Index: The index of the string to get.
maxlen: The maximum length for read buffer.
Returns text read.

180.2.9 Init as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initialize the HIDAPI library.
Notes:

This function initializes the HIDAPI library. Calling it is not strictly necessary, as it will be called automatically by Enumerate() and any of the Open*() functions if it is needed. This function should be called at the beginning of execution however, if there is a chance of HIDAPI handles being opened by different threads simultaneously.
This function returns 0 on success and -1 on error.

180.2.10 LoadError as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The load error message.

180.2.11 LoadLibrary(File as FolderItem) as boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the library.
Notes:

Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).
See also:

- 180.2.12 LoadLibrary(Path as string) as boolean 23670

180.2.12 LoadLibrary(Path as string) as boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the library.
Notes:

Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).
See also:

• 180.2.11 LoadLibrary(File as FolderItem) as boolean 23670

180.2.13 Open(VendorID as Integer, ProduceID as Integer, SerialNumber as String = "") as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a HID device using a Vendor ID (VID), Product ID (PID) and optionally a serial number.
Notes:

If SerialNumber is "", the first device with the specified VID and PID is opened.
VendorID: The Vendor ID (VID) of the device to open.
ProduceID: The Product ID (PID) of the device to open.
SerialNumber: The Serial Number of the device to open (Optionally "").

This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

180.2.14 OpenPath(path as string) as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a HID device by its path name.
Notes:

The path name be determined by calling Enumerate(), or a platform-specific path name can be used (eg: /dev/hidraw0 on Linux).
Path: The path name of the device to open
This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

180.2.15 Read(MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read an Input report from a HID device.
Notes:

Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.

MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.

This function returns the actual number of bytes read and -1 on error. If no packet was available to be read and the handle is in non-blocking mode, this function returns 0.

180.2.16 ReadTimeOut(MaxLength as Integer, TimeoutMS as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read an Input report from a HID device with timeout.
Notes:

Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.

MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.

TimeoutMS: timeout in milliseconds or -1 for blocking wait.

This function returns the actual number of bytes read and -1 on error. If no packet was available to be read within the timeout period, this function returns 0.

180.2.17 SendFeatureReport(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send a Feature report to the device.
Notes:

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

dat:a The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.

See also:

- 180.2.18 SendFeatureReport(data as String) as Integer 23673

180.2.18 SendFeatureReport(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send a Feature report to the device.
Notes:

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

dat:a The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
See also:

- 180.2.17 SendFeatureReport(data as MemoryBlock) as Integer 23672

180.2.19 Shutdown as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finalize the HIDAPI library.
Notes:

This function frees all of the static data associated with HIDAPI. It should be called at the end of execution to avoid memory leaks.
This function returns 0 on success and -1 on error.

180.2.20 Write(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write an Output report to a HID device.
Notes:

The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
Length of data to send is data.size.
See also:

- 180.2.21 Write(data as String) as Integer 23674

180.2.21 Write(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write an Output report to a HID device.
Notes:

The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
Length of data to send is LenB(data).
See also:

- 180.2.20 Write(data as MemoryBlock) as Integer 23673

180.2.22 WriteAsync(data as MemoryBlock)

MBS USB Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write an Output report to a HID device asynchronously.
Notes:

For MacOS, we use 10 second timeout.
For Windows, it uses the default OS timeout.
Linux just falls back to synchronous method.
See also:

- 180.2.23 WriteAsync(data as String) 23675

180.2.23 WriteAsync(data as String)

MBS USB Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write an Output report to a HID device asynchronously.
Notes:

For MacOS, we use 10 second timeout.
For Windows, it uses the default OS timeout.
Linux just falls back to synchronous method.
See also:

- 180.2.22 WriteAsync(data as MemoryBlock) 23674

180.2.24 Properties

180.2.25 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device handle used.
Notes:

For Windows a HANDLE to the open device, for Mac a IOHIDDeviceRef reference and Linux the handle from open function.
(Read only property)

180.2.26 Error as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a string describing the last error which occurred.
Notes:

This function returns a string containing the last error which occurred or "" if none has occurred.
(Read only property)

180.2.27 FeatureReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The length of a feature report.
Notes:

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

180.2.28 Handle as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

180.2.29 InputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The length of an input report.
Notes:

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

180.2.30 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Manufacturer String from a HID device.
Notes: (Read only property)

180.2.31 NonBlocking as Boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the device handle to be non-blocking.
Notes:

In non-blocking mode calls to Read() will return immediately with a value of 0 if there is no data to be read.
In blocking mode, Read() will wait (block) until there is data to read before returning.
Nonblocking can be turned on and off at any time.

Value true: enable or not the nonblocking reads.
Value false: to disable nonblocking.
(Read and Write property)

180.2.32 OutputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The length of an output report.
Notes:

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

180.2.33 ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Product String from a HID device.
Notes: (Read only property)

180.2.34 SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Serial Number String from a HID device.
Notes: (Read only property)

180.3 class LibUSBConfigDescriptorMBS

180.3.1 class LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB configuration descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.3.2 Methods

180.3.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

180.3.4 GetInterface(index as Integer) as LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries interface by index.

180.3.5 Properties

180.3.6 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configuration characteristics.
Notes: (Read only property)

180.3.7 Configuration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing this configuration.
Notes: (Read only property)

180.3.8 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Identifier value for this configuration.
Notes: (Read only property)

180.3.9 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

180.3.10 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

180.3.11 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

180.3.12 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of interfaces supported by this configuration.
Notes: (Read only property)

180.3.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

180.3.14 MaxPower as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum power consumption of the USB device from this bus in this configuration when the device is fully opreation.
Notes:

Expressed in units of 2 mA when the device is operating in high-speed mode and in units of 8 mA when the device is operating in super-speed mode.
(Read only property)

180.3.15 NumInterfaces as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of interfaces supported by this configuration.
Notes: (Read only property)

180.3.16 TotalLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Total length of data returned for this configuration.
Notes: (Read only property)

180.4 class LibUSBDeviceDescriptorMBS

180.4.1 class LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB device descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.4.2 Methods

180.4.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

180.4.4 Properties

180.4.5 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

180.4.6 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF class code for the device.
Notes: (Read only property)

180.4.7 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF protocol code for the device, qualified by the DeviceClass and DeviceSubClass values.
Notes: (Read only property)

180.4.8 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device release number in binary-coded decimal.
Notes: (Read only property)

180.4.9 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF subclass code for the device, qualified by the DeviceClass value.
Notes: (Read only property)

180.4.10 IndexManufacturer as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing manufacturer.
Notes: (Read only property)

180.4.11 IndexProduct as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing product.
Notes: (Read only property)

180.4.12 IndexSerialNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor containing device serial number.
Notes: (Read only property)

180.4.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes).
Notes: (Read only property)

180.4.14 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum packet size for endpoint 0.
Notes: (Read only property)

180.4.15 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of possible configurations.
Notes: (Read only property)

180.4.16 ProductID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF product ID.
Notes: (Read only property)

180.4.17 USBReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB specification release number in binary-coded decimal.
Notes: (Read only property)

180.4.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF vendor ID.
Notes: (Read only property)

180.4.19 Constants

180.4.20 kClassApplication = & hfe

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Application

180.4.21 kClassAudio = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Audio

180.4.22 kClassComm = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Comm

180.4.23 kClassContentSecurity = 13

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Security

180.4.24 kClassData = 10

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Data

180.4.25 kClassDiagnosticDevice = & hdc

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Diagnostic Device

180.4.26 kClassHID = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: HID

180.4.27 kClassHUB = 9

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: HUB

180.4.28 kClassImage = 6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Image

180.4.29 kClassMassStorage = 8

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Storage

180.4.30 kClassPerInterface = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Classes per Interface

180.4.31 kClassPersonalHealthcare = 15

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Personal Healthcare

180.4.32 kClassPhysical = 5

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Physical

180.4.33 kClassPrinter = 7

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Printer

180.4.34 kClassPTP = 6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: PTP

180.4.35 kClassSmartCard = 11

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: SmartCard

180.4.36 kClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Vendor Specific

180.4.37 kClassVideo = 14

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Video

180.4.38 kClassWireless = & he0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Wireless

180.5 class LibUSBDeviceMBS

180.5.1 class LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a device.
Notes:

This is both for a device as general and an open connection.

LibUSB abstracts on Mac, Windows and Linux for using USB devices. SO far it's the best generic USB interface we have.
You need libUSB dylib (mac), dll (Windows) and so (Linux) files from LibUSB. For Linux the LibUSB library is usually preinstalled with a LibUSB package, so the plugin finds it automatically.

180.5.2 Blog Entries

- MBS Xojo Plugins, version 18.1pr4
- LibUSB for Xojo in next MBS Plugins

180.5.3 Methods

180.5.4 AttachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-attach an interface's kernel driver, which was previously detached using libusb_detach_kernel_driver().
Notes:

This call is only effective on Linux and returns kErrorNotSupported on all other platforms.

This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to attach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active

kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
kErrorBusy if the driver cannot be attached because the interface is claimed by a program or driver
another error code on other failure

180.5.5 BulkTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB bulk transfer.
Notes:

The direction of the transfer is inferred from the direction bits of the endpoint address.

For bulk reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for bulk writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

Parameters:

endpoint	the address of a valid endpoint to communicate with
data	a suitably-sized data buffer for either input or output (depending on endpoint)
length	for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
transferred	output location for the number of bytes actually transferred.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

Lasterror is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out (and populates transferred)

kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other failures

180.5.6 ClaimInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Claim an interface on a given device handle.
Notes:

You must claim the interface you wish to use before you can perform I/O on any of its endpoints.

It is legal to attempt to claim an already-claimed interface, in which case libusb just returns 0 without doing anything.

Claiming of interfaces is a purely logical operation; it does not cause any requests to be sent over the bus. Interface claiming is used to instruct the underlying operating system that your application wishes to take ownership of the interface.

This is a non-blocking function.

Parameters:
interfaceNumber: the bInterfaceNumber of the interface you wish to claim

Lasterror is set:
0 on success
kErrorNotFound if the requested interface does not exist
kErrorBusy if another program or driver has claimed the interface
kErrorNoDevice if the device has been disconnected
a error code on other failure

180.5.7 ClearHalt(endpoint as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clear the halt/stall condition for an endpoint.
Notes:

Endpoints with halt status are unable to receive or transmit data until the halt condition is stalled.

You should cancel all pending transfers before attempting to clear the halt condition.

This is a blocking function.

Parameters:
endpoint: the endpoint to clear halt status

Returns:
0 on success
kErrorNotFound if the endpoint does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

180.5.8 Close

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close a device handle.
Notes:

Should be called on all open handles before your application exits.
Internally, this function destroys the reference that was added by Open on the given device.
This is a non-blocking function; no requests are sent over the bus.

180.5.9 ControlTransfer(requestType as Integer, Request as Integer, Value as Integer, Index as Integer, data as Ptr, Length as Integer, Timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB control transfer.
Notes:

The direction of the transfer is inferred from the RequestType field of the setup packet.

The Value, Index and Length fields values should be given in host-endian byte order.

Parameters:

RequestType	the request type field for the setup packet
Request	the request field for the setup packet
Value	the value field for the setup packet
Index	the index field for the setup packet
data	a suitably-sized data buffer for either input or output (depending on direction bits within bmRequestType)
Length	the length field for the setup packet. The data buffer should be at least this size.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

on success, the number of bytes actually transferred is returned.

Lasterror is set to:
kErrorTimeout if the transfer timed out
kErrorPipe if the control request was not supported by the device
kErrorNoDevice if the device has been disconnected
another error code on other failures

180.5.10 DetachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detach a kernel driver from an interface.
Notes:

If successful, you will then be able to claim the interface and perform I/O.
This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to detach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

180.5.11 Devices as LibUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of USB devices currently attached to the system.
Notes:

This is your entry point into finding a USB device to operate.

This return value of this function indicates the number of devices in the resultant list.

The number of devices in the outputted list.
Lasterror is set to zero on success or or any error codes according to errors encountered by the backend.

180.5.12 ErrorName(ErrorCode as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a constant string with the ASCII name of a libusb error code.

180.5.13 GetActiveConfigDescriptor as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the USB configuration descriptor for the currently active configuration.
Notes:

This is a non-blocking function which does not involve any requests being sent to the device.

Lasterror is set to:
0 on success
kErrorNotFound if the device is in unconfigured state
another error code on error.

180.5.14 GetConfigDescriptor(Index as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a USB configuration descriptor based on its index.
Notes:

This is a non-blocking function which does not involve any requests being sent to the device.

Parameters:

Index the index of the configuration you wish to retrieve

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

180.5.15 GetConfigDescriptorByValue(Value as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a USB configuration descriptor with a specific ConfigurationValue.
Notes:

This is a non-blocking function which does not involve any requests being sent to the device.

Value: the bConfigurationValue of the configuration you wish to retrieve.

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

180.5.16 GetConfiguration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determine the bConfigurationValue of the currently active configuration.
Notes:

You could formulate your own control request to obtain this information, but this function has the advantage that it may be able to retrieve the information from operating system caches (no I/O involved).

If the OS does not cache this information, then this function will block while a control transfer is submitted to retrieve the information.

This function will return a value of 0 in the config output parameter if the device is in unconfigured state.

Returns Configuration value of the active configuration (only valid for return code 0)

The lasterror is set to:
0 on success
kErrorNoDevice if the device has been disconnected
another error code on other failure

180.5.17 GetDescriptor(descType as Integer, descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from the default control pipe.
Notes:

This is a convenience function which formulates the appropriate control message to retrieve the descriptor.

Parameters:

descType	the descriptor type, see libusb_descriptor_type
descIndex	the index of the descriptor to retrieve
data	output buffer for descriptor
length	size of data buffer

Returns number of bytes returned in data or zero.
Sets lasterror to error code on failure

180.5.18 GetDeviceDescriptor as LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the USB device descriptor for a given device.
Notes:

This is a non-blocking function; the device descriptor is cached in memory.

Returns 0 on success or a error code on failure.

180.5.19 GetMaxISOPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calculate the maximum packet size which a specific endpoint is capable is sending or receiving in the duration of 1 microframe.
Notes:

Only the active configution is examined. The calculation is based on the wMaxPacketSize field in the endpoint descriptor as described in section 9.6.6 in the USB 2.0 specifications.

If acting on an isochronous or interrupt endpoint, this function will multiply the value found in bits 0:10 by the number of transactions per microframe (determined by bits 11:12). Otherwise, this function just returns the numeric value found in bits 0:10.

This function is useful for setting up isochronous transfers, for example you might pass the return value from this function to libusb_set_iso_packet_lengths() in order to set the length field of every isochronous packet in a transfer.

Since v1.0.3.

Parameters:
endpoint: address of the endpoint in question

Returns the maximum packet size which can be sent/received on this endpoint.

The lasterror is set to:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

180.5.20 GetMaxPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convenience function to retrieve the wMaxPacketSize value for a particular endpoint in the active device configuration.
Notes:

This function was originally intended to be of assistance when setting up isochronous transfers, but a design mistake resulted in this function instead. It simply returns the wMaxPacketSize value without considering its contents. If you're dealing with isochronous transfers, you probably want libusb_get_max_iso_packet_size() instead.

Parameters:
endpoint: address of the endpoint in question

Returns the Max Packet Size value.

The lasterror is set:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

180.5.21 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from a device.
Notes:

This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

Returns string.
Lasterror is set to zero or error code on failure.
See also:

descIndex	the index of the descriptor to retrieve
LangID	the language ID for the string descriptor

- 180.5.22 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer 23700

180.5.22 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from a device.
Notes:

This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

descIndex	the index of the descriptor to retrieve
LangID	the language ID for the string descriptor
data	output buffer for descriptor
length	size of data buffer

Returns number of bytes returned in data.
Lasterror is set to zero or error code on failure.
See also:

- 180.5.21 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String 23699

180.5.23 GetStringDescriptorAscii(descIndex as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a string descriptor in ASCII.
Notes:

Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

descIndex	the index of the descriptor to retrieve

Returns string.
Lasterror is set to error code on failure and zero on success.
See also:

- 180.5.24 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer 23701

180.5.24 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a string descriptor in ASCII.
Notes:

Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

descIndex	the index of the descriptor to retrieve
data	output buffer for ASCII string descriptor
length	size of data buffer

Returns number of bytes returned in data.
Lasterror is set to error code on failure and zero on success.
See also:

- 180.5.23 GetStringDescriptorAscii(descIndex as Integer) as String 23700

180.5.25 HasCapability(Capability as UInt32) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check at runtime if the loaded library has a given capability.
Notes: Returns true if the running library has the capability, false otherwise.

180.5.26 Initialize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initialize libusb.

180.5.27 InterruptTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB interrupt transfer.
Notes:

The direction of the transfer is inferred from the direction bits of the endpoint address.

For interrupt reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for interrupt writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

The default endpoint bInterval value is used as the polling interval.

Parameters:

endpoint	the address of a valid endpoint to communicate with
data	a suitably-sized data buffer for either input or output (depending on endpoint)
length	for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
transferred	output location for the number of bytes actually transferred.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

The lasterror property is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other error

180.5.28 KernelDriverActive(interfaceNumber as Integer) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determine if a kernel driver is active on an interface.
Notes:

If a kernel driver is active, you cannot claim the interface, and libusb will be unable to perform I/O.

This functionality is not available on Windows.

Parameters:
interfaceNumber: the interface to check

Lasterror is set:
0 if no kernel driver is active
1 if a kernel driver is active
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

180.5.29 LibraryLoaded as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library is loaded.

180.5.30 LibraryLoadErrorMessage as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message from loading library.

180.5.31 LibVersion as LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries version of library.

180.5.32 LoadLibrary(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the libusb library.
Notes:

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 180.5.33 LoadLibrary(path as string) as boolean 23704

180.5.33 LoadLibrary(path as string) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the libusb library.
Notes:

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 180.5.32 LoadLibrary(file as folderitem) as boolean 23704

180.5.34 Open as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a device and obtain a device handle.
Notes:

A handle allows you to perform I/O on the device in question.

Internally, this function adds a reference to the device. This reference is removed during Close().

This is a non-blocking function; no requests are sent over the bus.

The last error to:
0 on success
kErrorNoMemory on memory allocation failure
kErrorAccess if the user has insufficient permissions
kErrorNoDevice if the device has been disconnected
another error code on other failure

180.5.35 OpenDevice(VID as Integer, PID as Integer) as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convenience function for finding a device with a particular VID/PID combination.
Notes:

This function is intended for those scenarios where you are using libusb to knock up a quick test application - it allows you to avoid calling libusb_get_device_list() and worrying about traversing/freeing the list.

This function has limitations and is hence not intended for use in real applications: if multiple devices have the same IDs it will only give you the first one, etc.

Parameters:

VID	the idVendor value to search for
PID	the idProduct value to search for

Returns:
a handle for the first found device, or NULL on error or if the device could not be found.

180.5.36 ReleaseInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release an interface previously claimed with ClaimInterface.
Notes:

You should release all claimed interfaces before closing a device handle.

This is a blocking function. A SET_INTERFACE control request will be sent to the device, resetting interface state to the first alternate setting.

Parameters:
interfaceNumber: the bInterfaceNumber of the previously-claimed interface

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

180.5.37 Reset

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB port reset to reinitialize a device.
Notes:

The system will attempt to restore the previous configuration and alternate settings after the reset has completed.

If the reset fails, the descriptors change, or the previous state cannot be restored, the device will appear to be disconnected and reconnected. This means that the device handle is no longer valid (you should close it) and rediscover the device. An error code of kErrorNotFound indicates when this is the case.

This is a blocking function which usually incurs a noticeable delay.

Lasterror is set:
0 on success
kErrorNotFound if re-enumeration is required, or if the device has been disconnected
another error code on other failure

180.5.38 SetConfiguration(configuration as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the active configuration for a device.
Notes:

The operating system may or may not have already set an active configuration on the device. It is up to your application to ensure the correct configuration is selected before you attempt to claim interfaces and perform other operations.

If you call this function on a device already configured with the selected configuration, then this function will act as a lightweight device reset: it will issue a SET_CONFIGURATION request using the current configuration, causing most USB-related device state to be reset (altsetting reset to zero, endpoint halts cleared, toggles reset).

You cannot change/reset configuration if your application has claimed interfaces - you should free them with libusb_release_interface() first. You cannot change/reset configuration if other applications or drivers have claimed interfaces.

A configuration value of -1 will put the device in unconfigured state. The USB specifications state that a configuration value of 0 does this, however buggy devices exist which actually have a configuration 0.

You should always use this function rather than formulating your own SET_CONFIGURATION control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:
configuration: the bConfigurationValue of the configuration you wish to activate, or -1 if you wish to put the device in unconfigured state

The lasterror is set to:
0 on success
kErrorNotFound if the requested configuration does not exist
kErrorBusy if interfaces are currently claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

180.5.39 SetDebug(level as integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set message verbosity.
Notes:

Level 0: no messages ever printed by the library (default)
Level 1: error messages are printed to stderr
Level 2: warning and error messages are printed to stderr
Level 3: informational messages are printed to stdout, warning and error messages are printed to stderr
The default level is 0, which means no messages are ever printed. If you choose to increase the message verbosity level, ensure that your application does not close the stdout/stderr file descriptors.

You are advised to set level 3. libusb is conservative with its message logging and most of the time, will only log messages that explain error conditions and other oddities. This will help you debug your software.

If the LIBUSB_DEBUG environment variable was set when libusb was initialized, this function does nothing: the message verbosity is fixed to the value in the environment variable.

If libusb was compiled without any message logging, this function does nothing: you'll never get any messages.
If libusb was compiled with verbose debug message logging, this function does nothing: you'll always get messages from all levels.

180.5.40 SetInterfaceAltSetting(interfaceNumber as Integer, alternateSetting as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Activate an alternate setting for an interface.
Notes:

The interface must have been previously claimed with ClaimInterface().

You should always use this function rather than formulating your own SET_INTERFACE control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:

interfaceNumber	the InterfaceNumber of the previously-claimed interface
alternateSetting	the AlternateSetting of the alternate setting to activate

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed, or the requested alternate setting does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

180.5.41 Shutdown

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deinitialize libusb.
Notes: Should be called after closing all open devices and before your application terminates.

180.5.42 Properties

180.5.43 BusNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of the bus that a device is connected to.
Notes: (Read only property)

180.5.44 DeviceAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the address of the device on the bus it is connected to.
Notes: (Read only property)

180.5.45 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the device.
Notes: (Read only property)

180.5.46 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the negotiated connection speed for a device.
Notes:

a speed value, where kSpeedUnknown means that the OS doesn't know or doesn't support returning the negotiated speed.
(Read only property)

180.5.47 Handle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the open device.
Notes: (Read only property)

180.5.48 IsOpen as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether device is open.
Notes:

True if you called OpenDevice successful.
(Read only property)

180.5.49 Lasterror as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

180.5.50 Constants

180.5.51 kCapabilitiesHasCapabilities = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes: The HasCapability() API is available.

180.5.52 kCapabilitiesHasHIDAccess = 256

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes:

The library can access HID devices without requiring user intervention.
Note that before being able to actually access an HID device, you may still have to call additional libusb functions such as
DetachKernelDriver.

180.5.53 kCapabilitiesHasHotplug = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes: Hotplug support is available on this platform.

180.5.54 kCapabilitiesSupportsDetachKernelDriver = 257

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes: The library supports detaching of the default USB driver, using DetachKernelDriver, if one is set by the OS kernel.

180.5.55 kDescriptorTypeBOS = 6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: BOS descriptor

180.5.56 kDescriptorTypeConfig = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Configuration descriptor.

180.5.57 kDescriptorTypeDevice = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Device descriptor.

180.5.58 kDescriptorTypeDeviceCapabilities = 16

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Device Capability descriptor

180.5.59 kDescriptorTypeEndpoint = 5

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Endpoint descriptor.

180.5.60 kDescriptorTypeHID = & h21

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: HID descriptor.

180.5.61 kDescriptorTypeHub = & h29

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Hub descriptor.

180.5.62 kDescriptorTypeInterface = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Interface descriptor.

180.5.63 kDescriptorTypePhysical = & h23

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Physical descriptor.

180.5.64 kDescriptorTypeReport = & h22

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: HID report descriptor.

180.5.65 kDescriptorTypeString = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: String descriptor.

180.5.66 kDescriptorTypeSuperSpeedEndpointCompanion = & h30

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: SuperSpeed Endpoint Companion descriptor

180.5.67 kDescriptorTypeSuperSpeedHub = & h2A

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: SuperSpeed Hub descriptor

180.5.68 kErrorAccess = -3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Access

180.5.69 kErrorBusy = -6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Busy

180.5.70 kErrorInterrupted = -10

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Interrupted

180.5.71 kErrorInvalidParam = -2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Invalid parameter

180.5.72 kErrorIO = -1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: I/O Error

180.5.73 kErrorNoDevice = -4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: No device.

180.5.74 kErrorNoMemory = -11

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Out of Memory

180.5.75 kErrorNotFound = -5

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Not found

180.5.76 kErrorNotSupported = -12

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Function not supported

180.5.77 kErrorOther = -99

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Other errors

180.5.78 kErrorOverflow = -8

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Overflow

180.5.79 kErrorPipe = -9

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Pipe

180.5.80 kErrorTimeout = -7

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Timeout

180.5.81 kLogLevelDebug = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: debug and informational messages are printed to stdout, warnings and errors to stderr

180.5.82 kLogLevelError = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: error messages are printed to stderr

180.5.83 kLogLevelInfo = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: informational messages are printed to stdout, warning and error messages are printed to stderr

180.5.84 kLogLevelNone = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: no messages ever printed by the library (default)

180.5.85 kLogLevelWarning = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: warning and error messages are printed to stderr

180.5.86 kSpeedFull = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at full speed (12MBit/s).

180.5.87 kSpeedHigh = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at high speed (480MBit/s).

180.5.88 kSpeedLow = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at low speed (1.5MBit/s).

180.5.89 kSpeedSuper = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at super speed (5000MBit/s).

180.5.90 kSpeedUnknown = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The OS doesn't report or know the device speed.

180.6 class LibUSBEndpointDescriptorMBS

180.6.1 class LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB endpoint descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.6.2 Methods

180.6.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

180.6.4 Properties

180.6.5 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attributes which apply to the endpoint when it is configured using the bConfigurationValue.
Notes: (Read only property)

180.6.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

180.6.7 EndpointAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The address of the endpoint described by this descriptor.
Notes: (Read only property)

180.6.8 EndpointDirection as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The transfer direction.
Notes: (Read only property)

180.6.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

180.6.10 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

180.6.11 Interval as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Interval for polling endpoint for data transfers.
Notes: (Read only property)

180.6.12 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

180.6.13 MaxPacketSize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum packet size this endpoint is capable of sending/receiving.
Notes: (Read only property)

180.6.14 Refresh as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For audio devices only: the rate at which synchronization feedback is provided.
Notes: (Read only property)

180.6.15 SynchAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For audio devices only: the address if the synch endpoint.
Notes: (Read only property)

180.6.16 TransferType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The transfer type.
Notes: (Read only property)

180.6.17 Constants

180.6.18 kEndpointDirectionIn = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Endpoint Directions constants.
Notes: In: device-to-host

180.6.19 kEndpointDirectionOut = 128

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Endpoint Directions constants.
Notes: Out: host-to-device.

180.6.20 kTransferTypeBulk = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Bulk endpoint.

180.6.21 kTransferTypeBulkStream = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Bulk stream transfer.

180.6.22 kTransferTypeControl = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Control endpoint.

180.6.23 kTransferTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Interrupt endpoint.

180.6.24 kTransferTypeISOChronous = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Isochronous endpoint.

180.7 class LibUSBInterfaceDescriptorMBS

180.7.1 class LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB interface descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.7.2 Methods

180.7.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

180.7.4 EndpointDescriptor(index as Integer) as LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries endpoint descriptors by index.

180.7.5 Properties

180.7.6 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Value used to select this alternate setting for this interface.
Notes: (Read only property)

180.7.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

180.7.8 Endpoints as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of endpoint descriptors.
Notes: (Read only property)

180.7.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

180.7.10 ExtraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

180.7.11 IndexInterface as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing this interface.
Notes: (Read only property)

180.7.12 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF class code for this interface.
Notes: (Read only property)

180.7.13 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of this interface.
Notes: (Read only property)

180.7.14 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF protocol code for this interface, qualified by the InterfaceClass and InterfaceSubClass values.
Notes: (Read only property)

180.7.15 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF subclass code for this interface, qualified by the InterfaceClass value.
Notes: (Read only property)

180.7.16 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

180.7.17 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of endpoints used by this interface (excluding the control endpoint).
Notes: (Read only property)

180.8 class LibUSBInterfaceMBS

180.8.1 class LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A collection of alternate settings for a particular USB interface.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

180.8.2 Methods

180.8.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

180.8.4 InterfaceDescriptor(index as Integer) as LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries interface descriptor by index.

180.8.5 Properties

180.8.6 Count as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of alternate settings that belong to this interface.
Notes: (Read only property)

180.8.7 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of interface descriptors.
Notes: (Read only property)

180.9 class LibUSBVersionMBS

180.9.1 class LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class representing the libusb version.

180.9.2 Methods

180.9.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Queries library version if possible.

180.9.4 Properties

180.9.5 Describe as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Output of git describe –tags at library build time.
Notes: (Read only property)

180.9.6 Major as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library major version.
Notes:

Currently 1.
(Read only property)

180.9.7 Micro as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library micro version.
Notes: (Read only property)

180.9.8 Minor as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library minor version.
Notes: (Read only property)

180.9.9 Nano as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library nano version.
Notes: (Read only property)

180.9.10 RC as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library release candidate suffix string, e.g. ”-rc4”.
Notes: (Read only property)

180.10 class LinuxHIDInterfaceMBS

180.10.1 class LinuxHIDInterfaceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for linux to connect to USB HID devices.
Notes:

For newer development, please use our HIDAPIMBS class.

The constructor does the initialisation of the HID Library and the destructor does the cleanup. This works with several instances, too.

The plugin tries to load one of libhid.so, libhid.so.0 or libhid.so.0.0.0 and one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

180.10.2 Blog Entries

180.10.3 Methods

180.10.4 Available as boolean

MBS USB Plugin, Plugin Version: 10.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether libhid is available.
Notes: Not all Linux distribution have libusb and libhid installed by default.

180.10.5 Close as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Closes the device.
Notes: Returns error code. See kError* constants.

180.10.6 DumpTreeToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Dumps the device tree to stderr.
Example:

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStderr
```

Notes: Returns error code. See kError* constants.

180.10.7 DumpTreeToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Dumps the device tree to stdout.
Example:

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStdout
```

Notes: Returns error code. See kError* constants.

180.10.8 ForceOpen(theInterface as Integer, Vendor as Integer, Product as Integer, retries as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the USB device with the given interface index, vendor and product codes.
Example:

```
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500
```

```
const retries = 3

dim e as Integer = h.ForceOpen(0, vendor, product, retries)
```

Notes:

Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

180.10.9 GetInputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Reads an input report.
Notes:

Path: The path to the endpoint.
Data: the memoryblock to store the data.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.

180.10.10 InterruptRead(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Reads data from an endpoint with timeout.
Notes:

EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

180.10.11 InterruptWrite(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data from an endpoint with timeout.
Notes:

EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

180.10.12 IsInitialised as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the HID library was initialised in the constructor.
Notes: Should always be true on linux.

180.10.13 IsOpen as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the device is opened.
Notes: True if open, false if closed.

180.10.14 Open(theInterface as Integer, Vendor as Integer, Product as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the USB device with the given interface index, vendor and product codes.
Example:

```
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500

dim e as Integer = h.Open(0, vendor, product)
```

Notes:

Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

180.10.15 Reset

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Resets the device.
Notes: Returns error code. See kError* constants.

180.10.16 SetDebugLevel(level as Integer)

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Sets the debug level.
Example:

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugLevel(h.kDebugWarnings)
```

180.10.17 SetDebugOutputToStderr

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Tells HID library to write debug output to stderr.
Example:

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStderr
```

180.10.18 SetDebugOutputToStdout

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Tells HID library to write debug output to stdout.
Example:

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStdout
```

180.10.19 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data to the output.
Example:

```
dim h as LinuxHIDInterfaceMBS // your interface
dim n as Integer // some value

const IOW_PIPE_IO_PINS=0

dim m as MemoryBlock = NewMemoryBlock(4) // a device with 4 byte packets

m.Byte(3)=n
m.Byte(0)=IOW_PIPE_IO_PINS

dim path(-1) as Integer

path.Append & h00010000
path.Append 0

dim e as Integer = h.SetOutputReport(path, m, 0, m.size)
```

Notes:

Path: The path to the endpoint.
Data: the data to write.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.
See also:

- 180.10.20 SetOutputReport(path() as Integer, data as string) as Integer

180.10.20 SetOutputReport(path() as Integer, data as string) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data to the output.
Notes:

Path: The path to the endpoint.
Data: the data to write.

Returns error code. See kError* constants.
See also:

- 180.10.19 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer 23737

180.10.21 WriteIdentificationToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes identification to stderr.
Notes: Returns error code. See kError* constants.

180.10.22 WriteIdentificationToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes identification to stdout.
Notes: Returns error code. See kError* constants.

180.10.23 Properties

180.10.24 Handle as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal handle to the device connection.
Notes: (Read and Write property)

180.10.25 Events

180.10.26 MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: .

Function: The event called to decide whether you want to connect to this device.
Example:

```
Function MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) As boolean
MsgBox usbdev.Device.Descriptor.SerialNumber
End Function
```

Notes:

If several devices match the given vendor/product codes in Open/ForceOpen, you can decide here which one you accept.
Return true to accept a device.

180.10.27 Constants

180.10.28 kDebugAll = 31

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.
Notes: same as kDebugWarnings + kDebugTraces + kDebugNotices + kDebugErrors + kDebugAsserts

180.10.29 kDebugAsserts = 16

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

180.10.30 kDebugErrors = 1

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

180.10.31 kDebugNone = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

180.10.32 kDebugNotices = 4

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

180.10.33 kDebugNoTraces = 23

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.
Notes: same as kDebugWarnings + kDebugNotices + kDebugErrors + kDebugAsserts

180.10.34 kDebugTraces = 8

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

180.10.35 kDebugWarnings = 2

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

180.10.36 kErrorAlreadyInitialised = 3

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device alreay initialised.

180.10.37 kErrorDeviceAlreadyOpened = 9

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device already opened.

180.10.38 kErrorDeviceNotFound = 7

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device is not found.

180.10.39 kErrorDeviceNotOpened = 8

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device is not opened.

180.10.40 kErrorFailAlloc = 17

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to allocate.

180.10.41 kErrorFailClaimIFace = 11

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to claim the interface.

180.10.42 kErrorFailCloseDevice = 10

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to close device.

180.10.43 kErrorFailDetachDriver = 12

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to detach driver.

180.10.44 kErrorFailFindBusses = 4

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to find buses.

180.10.45 kErrorFailFindDevices = 5

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to find devices.

180.10.46 kErrorFailGetReport = 20

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Get Report failed.

180.10.47 kErrorFailIntRead = 21

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

180.10.48 kErrorFailOpenDevice = 6

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to open device.

180.10.49 kErrorFailSetReport = 19

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Set Report failed.

180.10.50 kErrorHIDDescShort = 14

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

180.10.51 kErrorInvalidParameter = 1

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Invalid Parameter.

180.10.52 kErrorNotFound = 22

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device not found.

180.10.53 kErrorNotHIDDevice = 13

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Not a HID Device.

180.10.54 kErrorNotInitialised = 2

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Not initialised.

180.10.55 kErrorOutOfSpace = 18

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Out of space.

180.10.56 kErrorReportDescLong = 16

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

180.10.57 kErrorReportDescShort = 15

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

180.10.58 kErrorSuccess = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Success. No error.

180.10.59 kMatchAny = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: The vendor/product ID to match any device.

180.11 class LinuxUSBBusMBS

180.11.1 class LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for an USB Bus on Linux.
Notes: This class only works, if the plugin could load one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

180.11.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr7
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

180.11.3 Methods

180.11.4 Buses as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 11.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the buses list.
Notes:

This function allows you to query the current buses and devices.
No device is opened and you just read through libusb data structures.

180.11.5 RescanBusses as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

Function: Finds all USB busses on system.
Notes:

RescanBusses will find all of the busses on the system.
Returns the number of changes since previous call to this function (total of new busses and busses removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch.

180.11.6 RescanDevices as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

Function: Find all devices on all USB devices.
Notes:

RescanDevices will find all of the devices on each bus.
This should be called after RescanBusses.
Returns the number of changes since the previous call to this function (total of new device and devices removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch. So you can call RescanDevices at any time.

180.11.7 Properties

180.11.8 Devices as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The devices attached to this bus.
Notes: (Read and Write property)

180.11.9 DirName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The dir name.
Notes: (Read and Write property)

180.11.10 Location as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The location value.
Notes: (Read and Write property)

180.11.11 NextBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The next bus.
Notes: (Read and Write property)

180.11.12 PrevBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The previous bus.
Notes: (Read and Write property)

180.11.13 RootDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The root device on this device.
Notes: (Read and Write property)

180.12 class LinuxUSBDeviceDescriptionMBS

180.12.1 class LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: A class for an USB device description.
Notes: Some linux installations require app to be run with sudo to allow reading USB device strings.

180.12.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

180.12.3 Properties

180.12.4 cdDevice as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device version.
Notes:

Identifies the version of the device. This value is a binary-coded decimal number.
(Read and Write property)

180.12.5 cdUSB as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The USB version.
Notes:

Identifies the version of the USB specification that this descriptor structure complies with. This value is a binary-coded decimal number.
(Read and Write property)

180.12.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The descriptor type.
Notes:

Specifies the descriptor type. Must be set to USB_DEVICE_DESCRIPTOR_TYPE.
(Read and Write property)

180.12.7 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device class.
Notes:

Specifies the class code of the device as assigned by the USB specification group.
See the kDeviceClass* constants.
(Read and Write property)

180.12.8 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes:

Specifies the protocol code of the device as assigned by the USB specification group.
(Read and Write property)

180.12.9 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes:

Specifies the subclass code of the device as assigned by the USB specification group.
(Read and Write property)

180.12.10 Manufacturer as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The manufacturer name string.
Notes:

A string containing the name of the manufacturer of this device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

180.12.11 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The maximum packet size.
Notes:

Specifies the maximum packet size, in bytes, for endpoint zero of the device. The value must be set to 8, 16, 32, or 64.
(Read and Write property)

180.12.12 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of configurations.
Notes:

Specifies the total number of possible configurations for the device.
(Read and Write property)

180.12.13 Product as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The product ID for this device.
Notes:

Specifies the product identifier. This value is assigned by the manufacturer and is device-specific.
Only available when the device has been opened.
(Read and Write property)

180.12.14 ProductName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The product name for this device.
Notes:

A string that contains a description of the device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

180.12.15 SerialNumber as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The serial number string for this device.
Notes:

A string that contains a manufacturer-determined serial number for the device.
Can be empty if the library does not know it.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

180.12.16 Vendor as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The vendor code for this device.
Notes:

Specifies the vendor identifier for the device as assigned by the USB specification committee.
Only available when the device has been opened.
(Read and Write property)

180.12.17 Constants

180.12.18 kDeviceClassAudio = 1

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: Audio device.

180.12.19 kDeviceClassCOMM = 2

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: COMM device.

180.12.20 kDeviceClassDATA = 10

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: DATA device.

180.12.21 kDeviceClassHID = 3

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: HID device.

180.12.22 kDeviceClassHUB = 9

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: The device is an USB HUB.

180.12.23 kDeviceClassMassStorage = 8

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: A mass storage device.

180.12.24 kDeviceClassPerInterface = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.

180.12.25 kDeviceClassPrinter = 7

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: Printer device.

180.12.26 kDeviceClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: Some vendor specific device.

180.13 class LinuxUSBDeviceHandleMBS

180.13.1 class LinuxUSBDeviceHandleMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for a device handle.

180.13.2 Blog Entries

- MBS Plugins 10.3 Release Notes
- MBS REALbasic Plugins, version 10.3pr4

180.13.3 Properties

180.13.4 AltSetting as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Some alt setting value.
Notes: (Read and Write property)

180.13.5 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bus for this device handle.
Notes: (Read and Write property)

180.13.6 Config as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: A config value.
Notes: (Read and Write property)

180.13.7 Device as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device.
Notes: (Read and Write property)

180.13.8 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The interface index.
Notes: (Read and Write property)

180.14 class LinuxUSBDeviceMBS

180.14.1 class LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for an USB device information on Linux.

180.14.2 Blog Entries

- Showing USB Devices

180.14.3 Methods

180.14.4 Children(index as Integer) as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the child device with the given index.
Notes: Index is zero based and from 0 to ChildrenCount-1.

180.14.5 Properties

180.14.6 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bus this device is attached to.
Notes: (Read and Write property)

180.14.7 ChildrenCount as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of child devices.
Notes: (Read and Write property)

180.14.8 Descriptor as LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The descriptior for this device.
Notes: (Read and Write property)

180.14.9 Filename as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The filename for this device.
Notes: (Read and Write property)

180.14.10 NextDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The next device on the same level.
Notes: (Read and Write property)

180.14.11 PrevDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The previous device on the same level.
Notes: (Read and Write property)

180.15 class MacHIDMBS

180.15.1 class MacHIDMBS

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to work with HID devices on Mac OS X.
Notes: For newer development, please use our HIDAPIMBS class.

180.15.3 Methods

180.15.4 Close

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes the active connection.

180.15.5 Connect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a connection to the current device.
Example:

```
Function OpenUSBDevice() As boolean
dim i as Integer
dim h as MacHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MsgBox "No XYZ device found."
Return false
end if
```

```
h.Connect

if h.Lasterror<>0 then
MsgBox "Failed to connect to USB Device."
Return false
end if

h.InstallCallback

Return true

End Function
```

Notes:

Lasterror is set.

Lasterror values for this function:

-1	Not supported (Windows and Linux).
0	Everything okay.
1	Failed to get IOKit Plugin Interface for this IO object.
2	Failed to query interface
3	Failed to open interface
4	Failed to create async port
5	Failed to create async event source
6	no longer used
7	Failed to start queue

180.15.6 Disconnect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disconnets current USB device.
Notes: Lasterror is set.

180.15.7 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first device and loads the properties.
Example:

```
Function FindDevice() As MyMacHIDMBS
dim h as MyMacHIDMBS
dim p as string

h=new MyMacHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

Notes: Returns true on success and false on failure.

180.15.8 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds next device.
Notes: Returns true on success and false on failure.

180.15.9 HIDProperties as Variant

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries HID properties dictionary.
Notes:

Value is a CFDictionaryMBS with details about current device. Returned as Variant to reduce plugin dependencies.

The plugin queries this dictionary to return SerialNumber, ProductID, Manufacturer, Product, VendorID and VersionNumber.

180.15.10 InstallCallback

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Installs the callback used for the event handler.
Notes:

Lasterror is set.
Please use after connect. For use with ReceivedData event.

180.15.11 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The manufacturer name.
Notes: On any error an empty string is returned.

180.15.12 Product as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product string of the selected device.
Notes: Lasterror is set.

180.15.13 ProductID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID of the selected device.
Notes: Lasterror is set.

180.15.14 ReadMessage(ReportID as Integer, reportType as Integer, length as Integer) as string

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads a message from usb device.
Notes:

This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

180.15.15 ReadMessageMemory(ReportID as Integer, reportType as Integer, length as Integer) as memoryblock

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads a message from usb device.
Notes:

This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

180.15.16 SendMessage(data as string)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Uses kIOHIDReportTypeOutput.
See also:

- 180.15.17 SendMessage(ReportID as Integer, reportType as Integer, data as string) 23764

180.15.17 SendMessage(ReportID as Integer, reportType as Integer, data as string)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 180.15.16 SendMessage(data as string) 23763

180.15.18 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Internally ReportID=0 is used.

While writing a crossplatform application for one specific device we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.
Uses kIOHIDReportTypeOutput.
See also:

- 180.15.19 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer) 23764

180.15.19 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 180.15.18 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer) 23764

180.15.20 SerialNumber as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The serial number of the current selected device.
Notes: Lasterror is set.

180.15.21 VendorID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID of the selected device.
Notes: Lasterror is set.

180.15.22 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device specific version number.
Notes:

Value can be anything.
On any error, 0 is returned.

180.15.23 Properties

180.15.24 IOHIDDeviceInterface122Handle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for the device interface object.
Notes:

This is of type IOHIDDeviceInterface122** from IOKit.
(Read only property)

180.15.25 IOHIDObjectIteratorHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The iterator used to find USB devices.
Notes:

This is of type io_iterator_t from IOKit.
(Read only property)

180.15.26 IOObjectHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference for current device.
Notes:

This is of type io_object_t from IOKit.
(Read only property)

180.15.27 Lasterror as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code.
Notes:

0 is success.
-1 means that the function is not available.
else Mac OS USB error codes.
error -536854447 is an USB timeout.
(Read and Write property)

180.15.28 OnlyOneEventPerTick as Boolean

MBS USB Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether to limit ReceivedData event.
Notes:

Some devices send a lot of measurement data.
This option allows to slow down and limit to 60 events per second.
So if device sends a thousand data records per second, we can ignore over 90% and just pick a few to display.
(Read and Write property)

180.15.29 TimeOut as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Timeout value to use for sending/reading USB data.
Notes:

Please specify time in Milliseconds. Default is 500ms.
(Read and Write property)

180.15.30 Events

180.15.31 DeviceRemoved(result as Integer)

MBS USB Plugin, Plugin Version: 8.7, Platform: macOS, Targets: .

Function: The event called whenever the device is removed.
Notes: You need to call connect to install the callback which raises this event.

180.15.32 ReceivedData(data as string, size as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

Function: Data was received and is available for processing.
Example:

```
Sub ReceivedData(data as string, size as Integer)
dim m as MemoryBlock
dim s as string
dim n,i as Integer

// Debug Output data received:

m=data

n=lenb(data)-1
for i=0 to n
s=s+str(m.Byte(i))+" "
next

s=s+"= "+data

System.DebugLog s

End Sub
```

Notes: Event is only called when InstallCallback was used and a connection is open.

180.15.33 Constants

180.15.34 kIOHIDReportTypeFeature = 2

MBS USB Plugin, Plugin Version: 14.0.

Function: One of the report type constants.
Notes: Feature report.

180.15.35 kIOHIDReportTypeInput = 0

MBS USB Plugin, Plugin Version: 14.0.

Function: One of the report type constants.
Notes: Input report.

180.15.36 kIOHIDReportTypeOutput = 1

MBS USB Plugin, Plugin Version: 14.0.

Function: One of the report type constants.
Notes: Output report.

180.16 class MacUSBDeviceMBS

180.16.1 class MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The class for an USB Device on Mac OS X.
Example:

```
// iterate over all devices without recursion and count devices
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim count as Integer = -1 // do not count Mac itself

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop

count = count + 1

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox str(Count)+" USB devices."
```

Notes:

Use the root method to get the device hierarchy.

For Windows you can take a look on the WindowsDeviceMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

- MacUSBDeviceMBS

180.16.3 Methods

180.16.4 children as MacUSBDeviceMBS()

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The array with all the USB device having the current device as parent.

180.16.5 Constructor

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless MacUSBDeviceMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

180.16.6 root as MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The root of the device tree.
Example:

```
// display devices with serialnumbers.
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim lines(-1) as string

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop

if len(dev.SerialNumber)>0 then
lines.Append dev.name+": "+dev.serialnumber
end if

for each child as MacUSBDeviceMBS in dev.children
```

```
devices.Append child
next
wend

MsgBox Join(lines,EndOfLine)
```

Notes: Root is the Mac itself. Below root you find the built in USB hubs.

180.16.7 Properties

180.16.8 Address as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device address number.
Notes: (Read and Write property)

180.16.9 BusPowerAvailable as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The available bus power.
Notes:

Value is in milli ampere.
(Read and Write property)

180.16.10 ClassName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The class name for this device.
Notes:

Basicly this is what driver Apple uses.
(Read and Write property)

180.16.11 DeviceClass as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device class.
Notes:

See kUSB*Class constants.

And read here:
http://www.usb.org/developers/defined_class
(Read and Write property)

180.16.12 DeviceMaxPacketSize as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The maximum device packet size.
Notes: (Read and Write property)

180.16.13 DeviceNumConfigs as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The number of configurations for this device.
Notes: (Read and Write property)

180.16.14 DeviceProtocol as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device protocol.
Notes: (Read and Write property)

180.16.15 DeviceReleaseNumber as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device release number.
Notes: (Read and Write property)

180.16.16 DeviceSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device speed.
Notes: (Read and Write property)

180.16.17 DeviceSubClass as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device sub class.
Notes:

See kUSB*SubClass constants.
(Read and Write property)

180.16.18 ExtraPowerForPorts as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The extra power asked for ports.
Notes:

Value is in milli ampere.
(Read and Write property)

180.16.19 Name as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The name of this device node.
Example:

```
// show all names of all devices in a msgbox
dim names(-1) as string

// iterate over all devices without recursion
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop
```

```
names.Append dev.name

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox Join(names,", ")
```

Notes: (Read and Write property)

180.16.20 NumEndpoints as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The number of endpoints.
Notes: (Read and Write property)

180.16.21 Path as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The object path.
Notes:

This is internally used by the kernel.
(Read and Write property)

180.16.22 Ports as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The number of ports on an USB hub.
Notes: (Read and Write property)

180.16.23 ProductID as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The product ID

Notes: (Read and Write property)

180.16.24 ProductName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The product name.
Notes: (Read and Write property)

180.16.25 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates dictionary with all the properties associated for this USB device in IORegistry.
Notes: (Read and Write property)

180.16.26 RequestedPower as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Requested power.
Notes:

Value is in milli ampere.
(Read and Write property)

180.16.27 SerialNumber as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device serial number.
Notes: (Read and Write property)

180.16.28 VendorID as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The vendor ID.
Notes:

Assigned by USB Org.
(Read and Write property)

180.16.29 VendorName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The vendor name.
Notes: (Read and Write property)

180.16.30 Constants

180.16.31 kUSBApplicationSpecificClass = 254

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.32 kUSBATMNetworkingSubClass = 7

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBCommunicationDataInterfaceClass.

180.16.33 kUSBAudioControlSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBAudioInterfaceClass.

180.16.34 kUSBAudioStreamingSubClass = 2

180.16.38 kUSBCommEthernetNetworkingSubClass = 6

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBCommunicationDataInterfaceClass.

180.16.39 kUSBCommMultiChannelSubClass = 4

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBCommunicationDataInterfaceClass.

180.16.40 kUSBCommonClassSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMiscellaneousClass.

180.16.41 kUSBCommTelephoneSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBCommunicationDataInterfaceClass.

180.16.42 kUSBCommunicationClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.43 kUSBCompositeClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.44 kUSBCompositeSubClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

180.16.45 kUSBDataClass = 10

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.46 kUSBDFUSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBApplicationSpecificInterfaceClass.

180.16.47 kUSBDiagnosticClass = 220

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.48 kUSBHIDBootInterfaceSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBHIDBootInterfaceSubClass.

180.16.49 kUSBHubClass = 9

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.50 kUSBHubSubClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

180.16.51 kUSBIrDABridgeSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBApplicationSpecificInterfaceClass.

180.16.52 kUSBMassStorageATAPISubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

180.16.53 kUSBMassStorageQIC157SubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

180.16.54 kUSBMassStorageRBCSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

180.16.55 kUSBMassStorageSCSISubClass = 6

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

180.16.56 kUSBMassStorageSFF8070iSubClass = 5

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

180.16.57 kUSBMassStorageUFISubClass = 4

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

180.16.58 kUSBMIDIStreamingSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBAudioInterfaceClass.

180.16.59 kUSBMiscellaneousClass = 239

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.60 kUSBPersonalHealthcareClass = 15

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.61 kUSBReprogrammableDiagnosticSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBDiagnosticDeviceInterfaceClass.

180.16.62 kUSBRFControllerSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBWirelessControllerInterfaceClass.

180.16.63 kUSBTestMeasurementSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBApplicationSpecificInterfaceClass.

180.16.64 kUSBVendorSpecificClass = 255

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.16.65 kUSBVideoControlSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

180.16.66 kUSBVideoInterfaceCollectionSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

180.16.67 kUSBVideoStreamingSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

180.16.68 kUSBWirelessControllerClass = 224

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

180.17 class MacUSBMBS

180.17.1 class MacUSBMBS

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to talk to an USB device.
Notes: Written for a client and probably not yet universally useable, so it may not work with your device.

180.17.3 Methods

180.17.4 AbortPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Aborts any outstanding transactions on the pipe with status kIOReturnAborted.
Notes:

If there are outstanding asynchronous transactions on the pipe, the callbacks will happen.
Note that this command will also clear the halted bit on the endpoint in the controller, but will NOT clear the data toggle bit. If you want to clear the data toggle bit as well, see ClearPipeStall or ClearPipeStallBothEnds for more information. The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

180.17.5 ClearPipeStall(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clears the halted bit and the data toggle bit on the pipe's endpoint in the controller.
Notes:

This function also returns any outstanding transactions on the pipe with status kIOUSBTransactionReturned.
If there are outstanding asynchronous transactions on the pipe, the callbacks will happen. The data toggle may need to be resynchronized. The driver may handle this by sending a ClearFeature(ENDPOINT_HALT) to the default control pipe, specifying the device's endpoint for this pipe.

pipeRef: Index for the desired pipe (1 - NumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

180.17.6 Close

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes connection to the device.

180.17.7 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current configuration value set in the device (the interface will be part of that configuration.)
Notes:

The interface does not have to be open to use this function.
Lasterror is set.

180.17.8 Connect as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Connects to the first device matching product and vendor IDs.
Notes: Returns true on success.

180.17.9 DeviceProduct as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Product ID (idProduct) of the device.
Notes:

The device does not have to be open to use this function.
Lasterror is set. Returns the actual product ID of the device.

180.17.10 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Device Release Number (bcdDevice) of the device.
Notes:

The device does not have to be open to use this function.
Lasterror is set.

180.17.11 DeviceVendor as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Vendor ID (idVendor) of the device.
Notes:

The device does not have to be open to use this function.
Lasterror is set. Returns the actual vendor ID of the device.

180.17.12 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Class of the interface.
Notes: Lasterror is set.

180.17.13 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the interface number (zero-based index) of this interface within the current configuration of the device.
Notes: Lasterror is set.

180.17.14 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Protocol of the interface.
Notes: Lasterror is set.

180.17.15 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Subclass of the interface.
Notes: Lasterror is set.

180.17.16 LocationID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the location ID.
Notes:

The location ID is a 32 bit number which is unique among all USB devices in the system, and which will not change on a system reboot unless the topology of the bus itself changes. The interface does not have to be open to use this function.
Lasterror is set.

180.17.17 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of endpoints in this interface.
Notes:

The interface does not have to be open to use this function.
Lasterror is set.

180.17.18 ReadPacket(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads data packet.

Notes: We developed this function for a client, so it's probably useless for everyone else.

180.17.19 ReadRaw(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads data on a BULK IN or an INTERRUPT pipe.
Notes: Reads up to MaxSize bytes from the given pipe. Pipe is in range 1 to GetNumEndpoints.

180.17.20 ResetPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Equivalent to ClearPipeStall.
Notes:

The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

180.17.21 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes:

We developed this function for a client, so it's probably useless for everyone else.
Lasterror is set.
See also:

- 180.17.22 WritePacket(PipeRef as Integer, Data as string) as boolean 23787

180.17.22 WritePacket(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes:

We developed this function for a client, so it's probably useless for everyone else.
Lasterror is set.
See also:

- 180.17.21 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean 23787

180.17.23 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes data on a BULK OUT or INTERRUPT OUT pipe.
Notes:

The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 180.17.24 WriteRaw(PipeRef as Integer, Data as string) as boolean 23788

180.17.24 WriteRaw(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes data on a BULK OUT or INTERRUPT OUT pipe.
Notes:

The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 180.17.23 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean 23788

180.17.25 Properties

180.17.26 completionTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The completion timeout.
Notes:

Specifies a time value in milliseconds. Once the request is queued on the bus, if the entire request is not completed in this amount of time, the request will be aborted and returned.

Default is 1000.
(Read and Write property)

180.17.27 LastError as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

180.17.28 noDataTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The timeout for no data.
Notes:

Specifies a time value in milliseconds. Once the request is queued on the bus, if no data is transferred in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

180.17.29 ProductID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID for connecting to the device.
Notes: (Read and Write property)

180.17.30 VendorID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID for connecting to the device.
Notes: (Read and Write property)

180.17.31 Constants

180.17.32 kIOReturnSuccess = 0

MBS USB Plugin, Plugin Version: 12.5.

Function: The error constant for no error.

180.17.33 kIOUSBConfigNotFound = & he0004056

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Configuration Not found.

180.17.34 kIOUSBDeviceNotHighSpeed = & he0004049

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: The device is not a high speed device, so the EHCI driver returns an error.

180.17.35 kIOUSBDevicePortWasNotSuspended = & he0004050

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Port was not suspended.

180.17.36 kIOUSBEndpointNotFound = & he0004057

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Endpoint Not found.

180.17.37 kIOUSBHighSpeedSplitError = & he000404b

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Error to hub on high speed bus trying to do split transaction.

180.17.38 kIOUSBInterfaceNotFound = & he000404e

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Interface ref not recognized.

180.17.39 kIOUSBLowLatencyBufferNotPreviouslyAllocated = & he000404d

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the data buffer) first.

180.17.40 kIOUSBLowLatencyFrameListNotPreviouslyAllocated = & he000404c

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the frame list) first.

180.17.41 kIOUSBNoAsyncPortErr = & he000405f

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: No async port.

180.17.42 kIOUSBNotEnoughPipesErr = & he000405e

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Not enough pipes in interface.

180.17.43 kIOUSBNotEnoughPowerErr = & he000405d

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Not enough power for selected configuration.

180.17.44 kIOUSBPipeStalled = & he000404f

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Pipe has stalled, error needs to be cleared.

180.17.45 kIOUSBSyncRequestOnWLThread = & he000404a

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: A synchronous USB request was made on the workloop thread (from a callback?). Only async requests are permitted in that case.

180.17.46 kIOUSBTooManyPipesErr = & he0004060

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Too many pipes.

180.17.47 kIOUSBTransactionReturned = & he0004050

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: The transaction has been returned to the caller.

180.17.48 kIOUSBTransactionTimeout = & he0004051

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Transaction timed out.

180.17.49 kIOUSBUnknownPipeErr = & he0004061

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Pipe ref not recognized.

180.18 class MacUSBNotificationMBS

180.18.1 class MacUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for receiving notifications if an USB device has been attached or removed.
Notes:

Please make a subclass so you can put your own code in the events.

Use WinUSBNotificationMBS for Windows.

180.18.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr3

180.18.3 Methods

180.18.4 Constructor(vendor as Integer = 0, product as Integer = 0)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Setup the notification system so you are informed about USB devices being attached or removed.
Example:

```
// look only for device with this vendor/product ID
dim m as new MyMacUSBNotificationMBS(& h5AC, & h263)
```

Notes:

You can use vendor and product IDs to limit the class to look only for devices with matching IDs.
Lasterror is set.

180.18.5 GetUSBDeviceInfo(DeviceHandle as Integer, byref Vendor as string, byref Product as string, byref SerialNumber as string, byref Revision as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries USB details for a given handle.
Notes:

This is a convenience function to query details on the devices found within the events.
Returns true on success.

180.18.6 QueryBSDName(DeviceHandle as Integer) as string

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Function to query BSDName of a given device.
Notes:

If the device is a disk or USB stick and has been mounted, this would give the bsd name of the disk.
Returns "" on any error.

180.18.7 Release(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Releases an object reference when you don't need it any longer.
Notes:

Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

180.18.8 Retain(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retains an object reference so it is available later.
Notes:

Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

180.18.9 Properties

180.18.10 LastError as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Zero is no error while other values are Mac OS error codes.
(Read and Write property)

180.18.11 Events

180.18.12 DeviceAdded(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: This event is called when the device is added.
Notes:

You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

180.18.13 DeviceRemoved(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: This event is called when the device is removed.
Notes:

You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

180.19 class WinHIDMBS

180.19.1 class WinHIDMBS

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to work with HID devices on Windows.
Example:

```
dim m as new WinHIDMBS
dim s as string

# if not TargetWin32
MsgBox "This example requires Windows."
# endif

if m.FindFirstDevice then

do
ListBox1.AddRow ""

ListBox1.Cell(ListBox1.LastIndex,0)=hex(m.ProductID)
ListBox1.Cell(ListBox1.LastIndex,1)=hex(m.VendorID)
ListBox1.cell(ListBox1.LastIndex,2)=m.Product
ListBox1.cell(ListBox1.LastIndex,3)=m.Manufacturer
ListBox1.cell(ListBox1.LastIndex,4)=m.SerialNumber
ListBox1.cell(ListBox1.LastIndex,5)=hex(m.VersionNumber)

if left(m.Product,3)="RF1" then // my test device

if m.Connect then
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)

MsgBox "Send bytes: "+str(m.SendMessage(s))

do
s=m.ReadMessage(17)
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again

m.Disconnect
end if
end if

loop until not m.FindNextDevice
```

```
end if

Title=str(ListBox1.ListCount)+" devices found."
```

Notes:

For newer development, please use our HIDAPIMBS class.

Updated in version 10.4 of plugins to ignore devices which you don't have permissions to access them. So you will now see devices with VendorID=0 and ProductID=0.

This class can be used in three different ways. First normal with Connect and ReadMessage/SendMessage. Second with InstallListener and SendMessage/Poll functions. Third low level via GetInputReport and SetOutputReport.

180.19.4 Methods

180.19.5 Close

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the active connection.

180.19.6 Connect as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a connection to the current device.
Example:

```
Function OpenUSBDevice() As boolean
dim i as Integer
dim h as WinHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MsgBox "No XYZ device found."
Return false
end if

call h.Connect

if h.Lasterror<>0 then
MsgBox "Failed to connect to USB Device."
Return false
end if

Return true

End Function
```

Notes:

Lasterror is set.
Returns true on success and false on failure.

The plugin tries to open a read and a write connection. If both fail, connect returns false. If one is okay, it returns true.

Some devices don't allow read or write because of missing permissions.

180.19.7 DevicePath as string

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal path used by Windows to identify the device.

Notes: Only for debugging.

180.19.8 Disconnect

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Disconnets current USB device.
Notes: Lasterror is set.

180.19.9 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds the first device and loads the properties.
Example:

```
Function FindDevice() As MyWinHIDMBS
dim h as MyWinHIDMBS
dim p as string

h=new MyWinHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

Notes:

Returns true on success and false on failure.

On Windows finds only devices which can be opened for Read/Write.

180.19.10 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds next device.
Notes: Returns true on success and false on failure.

180.19.11 GetInputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an input reports from a top-level collection.
Notes:

This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also:
https://msdn.microsoft.com/en-us/library/windows/hardware/ff538945(v=vs.85).aspx

180.19.12 InstallListener(PollSize as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Installs a second thread which performs Read.
Example:

```
dim h as new WinHIDMBS

call h.InstallListener 9 // 8 bytes + Report ID
```

Notes:

Use PollString or PollMemory in a timer or a loop to get the data.
This is an alternative way compared to ReadMessage functions.

180.19.13 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The manufacturer name.
Notes:

On any error an empty string is returned.
Lasterror is set.

180.19.14 PollMemory as memoryblock

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Notes:

A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

180.19.15 PollString as string

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
dim m as WinHIDMBS // your WinHIDMBS object
dim s as string

do
s=m.PollString
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

Notes:

A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

180.19.16 Product as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product string of the selected device.
Notes: Lasterror is set.

180.19.17 ProductID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID of the selected device.
Notes: Lasterror is set.

180.19.18 ReadMessage(length as Integer, timeOut as Integer = 0) as string

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
dim m as WinHIDMBS
dim s as string

do
s=m.ReadMessage(48)
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

Notes:

Length is the length of the receive buffer you want to use.
The string returned is 0 to length bytes long.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

180.19.19 ReadMessageMemory(length as Integer, timeOut as Integer = 0) as memoryblock

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
dim m as WinHIDMBS
dim s as memoryblock

do
s=m.ReadMessageMemory(48)
loop until s<>nil // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

Notes:

Length is the length of the receive buffer you want to use.
The memoryblock returned has a size of 0 to length bytes.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

180.19.20 SendMessage(data as string) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Example:

```
dim m as WinHIDMBS // your hid object
dim s as string
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)
MsgBox "Send bytes: "+str(m.SendMessage(s))
```

Notes:

A connection must be open.
Returns number of bytes sent.

The first byte must be the Report ID which seems to be zero for most devices.

180.19.21 SendMessageMemory(data as memoryblock, Offset as Integer = 0, length as Integer = 0) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set.
Returns number of bytes sent.

While writing a crossplatform application we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac for our device (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.

The first byte must be the Report ID which seems to be zero for most devices.
If length is zero, we use the length of memoryblock.

180.19.22 SerialNumber as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the current selected device.
Notes: Lasterror is set.

180.19.23 SetOutputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends an output report.
Notes:

This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also
https://msdn.microsoft.com/en-us/library/windows/hardware/ff539690(v=vs.85).aspx

180.19.24 VendorID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the selected device.
Notes: Lasterror is set.

180.19.25 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device specific version number.
Notes:

Value can be anything.
On any error, 0 is returned.
Lasterror is set.

180.19.26 Properties

180.19.27 FeatureReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum length, in bytes, of all the feature reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

180.19.28 HidHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the HID device.
Notes: (Read and Write property)

180.19.29 InputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum size, in bytes, of the input reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.

Notes: (Read and Write property)

180.19.30 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Last error code.
Notes:

0 is success.
-1 means that the function is not available.
else Windows error codes like 5 for Access Denied.
(Read and Write property)

180.19.31 LasterrorString as String

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code in a formatted and localized string.
Notes:

This does not work for plugin error codes.
Like -1 if the function is not available.
(Read only property)

180.19.32 OutputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum size, in bytes, of all the output reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

180.19.33 PnPHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for Plug and Play.
Notes: (Read and Write property)

180.19.34 ReadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the stream for reading data from the USB device.
Notes: (Read and Write property)

180.19.35 ThreadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the thread which waits in the background for new data.
Notes: (Read and Write property)

180.19.36 WriteHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the stream for writing data to the USB device.
Notes: (Read and Write property)

180.20 class WinUSBDeviceMBS

180.20.1 class WinUSBDeviceMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query USB devices.
Example:

```
dim devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MsgBox d.Vendor+" - "+d.Product
next
```

180.20.2 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr6

180.20.3 Methods

180.20.4 Devices as WinUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries a list of all USB Devices.
Example:

```
dim devices() as WinUSBDeviceMBS = WinUSBDeviceMBS.devices
for each d as WinUSBDeviceMBS in devices
msgbox d.vendor+" "+d.product+" "+d.serialnumber
next
```

Notes: Returns an emtpy array on errors.

180.20.5 Properties

180.20.6 cdUSB as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device USB version.
Notes:

USB Specification Number which device complies too.

The cdUSB field reports the highest version of USB the device supports. The value is in binary coded decimal with a format of 0xJJMN where JJ is the major version number, M is the minor version number and N is the sub minor version number. e.g. USB 2.0 is reported as & h0200, USB 1.1 as 0x0110 and USB 1.0 as & h0100.
(Read and Write property)

180.20.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device descriptor type.
Notes:

Device Descriptor (0x01)
(Read and Write property)

180.20.8 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device class.
Notes:

See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

180.20.9 DeviceID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID.

Notes: (Read and Write property)

180.20.10 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes:

Assigned by USB Org
(Read and Write property)

180.20.11 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes:

See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

180.20.12 MaxEP0Size as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum Packet Size for Zero Endpoint.
Notes:

Valid Sizes are 8, 16, 32, 64
(Read and Write property)

180.20.13 Product as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product name.
Notes: (Read and Write property)

180.20.14 ProductID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID of the device.
Notes: (Read and Write property)

180.20.15 SerialNumber as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the USB device.
Example:

```
dim devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MsgBox d.Vendor+" - "+d.Product+": "+d.SerialNumber
next
```

Notes:

Not all vendors save the serial number in the device.
(Read and Write property)

180.20.16 Vendor as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor name of the USB device.
Notes: (Read and Write property)

180.20.17 VendorID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the USB device.
Notes:

Assigned by USB Org.
(Read and Write property)

180.21 class WinUSBInterfaceDescriptionMBS

180.21.1 class WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is used by USB clients to retrieve a USB-defined interface descriptor.

180.21.2 Properties

180.21.3 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index number of the alternate setting of the interface.
Notes: (Read and Write property)

180.21.4 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The descriptor type.
Notes:

Descriptor must be set to USB_INTERFACE_DESCRIPTOR_TYPE.
(Read and Write property)

180.21.5 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class code of the device that the USB specification group assigned.
Notes: (Read and Write property)

180.21.6 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of a string descriptor that describes the interface.
Notes:

For information about this field, see section 9.6.5 in the "Universal Serial Bus Revision 2.0" specification at USB Technology.
(Read and Write property)

180.21.7 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index number of the interface.
Notes: (Read and Write property)

180.21.8 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The protocol code of the device that the USB specification group assigned.
Notes: (Read and Write property)

180.21.9 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The subclass code of the device that the USB specification group assigned.
Notes: (Read and Write property)

180.21.10 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length, in bytes, of the descriptor.
Notes: (Read and Write property)

180.21.11 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of endpoints that are used by the interface, excluding the default status endpoint.
Notes: (Read and Write property)

180.22 class WinUSBMBS

180.22.1 class WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to any USB device on Windows.
Notes:

This class provides funtions exposed by Winusb.dll, which user-mode client drivers and applications can use to communicate with USB devices.
WinUSB functions require Windows XP or later.

180.22.3 Methods

180.22.4 AbortPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Aborts all of the pending transfers for a pipe. This is a synchronous operation.
Notes:

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

180.22.5 Available as boolean

MBS USB Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if winusb.dll has been found and loaded.
Notes: Always false on Linux and Mac OS X.

180.22.6 Constructor(path as string)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a WinUSB object for the device specified by a device path.
Example:

```
Dim path As String = "\\?\usb# vid_0e0f& pid_0003# 6& 30c8ca5f& 0& 5# { a5dcbf10-6530-11d2-901f-00c04fb951ed } "
Dim w As New WinUSBMBS(path)

If w.Lasterror <>0 Then
MsgBox "Lasterror: "+Str(w.Lasterror)
else
MsgBox "DeviceHandle: "+Hex(w.DeviceHandle)
End If
```

Notes:

Use WindowsDeviceMBS class to find USB devices and their device paths.
Lasterror is set.
On success DeviceHandle and Handle properties are not nil.

When Constructor is called, the policy settings of the interface are reset to the default values.
The Constructor call queries the underlying USB stack for various descriptors and allocates enough memory

to store the retrieved descriptor data.
Constructor first retrieves the device descriptor and then gets the associated configuration descriptor. From the configuration descriptor, the call derives the associated interface descriptors and stores them in an array. The interfaces in the array are identified by zero-based indexes. An index value of 0 indicates the first interface (the default interface), a value of 1 indicates the second associated interface, and so on. Constructor parses the default interface descriptor for the endpoint descriptors and caches information such as the associated pipes or state specific data. The handle received in the InterfaceHandle parameter is a pointer to the memory block allocated for the first interface in the array.

If an application wants to use another interface on the device, it must call GetAssociatedInterface, specify the index of the interface, and retrieve a handle to the memory block allocated for the specified interface.

e.g. path like this format.
\\?\usb# vid_0e0f& pid_0003# 6& 30c8ca5f& 0& 5# { a5dcbf10-6530-11d2-901f-00c04fb951ed }

180.22.7 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transmits control data over a default control endpoint.
Notes:

To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 180.22.8 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer 23817

180.22.8 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transmits control data over a default control endpoint.
Notes:

To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 180.22.7 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer 23817

180.22.9 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries device speed.
Notes:

Lasteror is set.
Use constants LowSpeed, HighSpeed and FullSpeed.

180.22.10 FlushPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Discards any data that is cached in a pipe. This is a synchronous operation.
Notes:

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

180.22.11 GetAssociatedInterface(index as Integer) as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a WinUSBMBS object for an associated interface.
Notes:

This is a synchronous operation.

AssociatedInterfaceIndex: An index that specifies the associated interface to retrieve. A value of 0 indicates the first associated interface, a value of 1 indicates the second associated interface, and so on.

Returns new WinUBSMBS object.
The first associated interface is the interface that immediately follows the interface whose handle the WinUsb_Initialize routine retrieves.

Callers of GetAssociatedInterfacecan retrieve only one handle for each interface. If a caller attempts to retrieve more than one handle for the same interface, the routine will fail with an error of ERROR_ALREADY_EXISTS.

180.22.12 QueryInterfaceSettings(index as Integer) as WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the interface descriptor for the specified alternate interface settings for a particular interface handle.
Notes:

To retrieve the settings of the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateSettingNumber: A value that indicates which alternate settings to return. A value of 0 indicates the first alternate setting, a value of 1 indicates the second alternate setting, and so on.

Returns WinUSBInterfaceDescriptionMBS object on success or nil on any error.

180.22.13 QueryPipe(AlternateInterfaceNumber as Integer, PipeIndex as Integer) as WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about the specified endpoint and the associated pipe for an interface.
Notes:

To query a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateInterfaceNumber: A value that specifies the alternate interface to return the information for.
PipeIndex: A value that specifies the pipe to return information about. This value is not the same as the bEndpointAddress field in the endpoint descriptor. A PipeIndex value of 0 signifies the first endpoint that is associated with the interface, a value of 1 signifies the second endpoint, and so on. PipeIndex must be less than the value in the NumEndpoints field of the interface descriptor.

Returns pipe information or nil on error. Also sets Lasterror property.

The QueryPipe function does not retrieve information about the control pipe.

Each interface on the USB device can have multiple endpoints. To communicate with each of these endpoints, the bus driver creates pipes for each endpoint on the interface. The pipe indices are zero-based. Therefore for n number of endpoints, the pipes' indices are set from n-1. WinUsb_QueryPipe parses the configuration descriptor to get the interface specified by the caller. It searches the interface descriptor for the endpoint descriptor associated with the caller-specified pipe. If the endpoint is found, the function populates a WinUSBPipeInformationMBS object with information from the endpoint descriptor.

180.22.14 ReadPipeMemory(PipeID as Integer, BufferLength as Integer) as Memoryblock

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from the specified pipe.
Notes:

To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns memoryblock with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ERROR_GEN_FAILURE.

180.22.15 ReadPipePacket(PipeID as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.

180.22.16 ReadPipeString(PipeID as Integer, BufferLength as Integer) as string

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from the specified pipe.
Notes:

To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns string with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ERROR_GEN_FAILURE.

180.22.17 ResetPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the data toggle and clears the stall condition on a pipe.
Notes:

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

180.22.18 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data to a pipe.
Notes:

To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.
Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 180.22.19 WritePipe(PipeID as Integer, Buffer as String) as Integer 23823

180.22.19 WritePipe(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data to a pipe.
Notes:

To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.
Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.

- 180.22.18 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer 23823

180.22.20 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
See also:

- 180.22.21 WritePipePacket(PipeID as Integer, Buffer as String) as Integer 23825

180.22.21 WritePipePacket(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
See also:

- 180.22.20 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer 23824

180.22.22 Properties

180.22.23 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the device.
Notes: (Read and Write property)

180.22.24 Lasterror as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

180.22.25 LasterrorMessage as String

MBS USB Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read and Write property)

180.22.26 Parent as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parent usb object.
Notes:

Objects created with GetAssociatedInterface have here the parent object, so you can go back to main interface.

(Read and Write property)

180.22.27 Tag as Variant

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The attached value.
Notes:

You can use this property as you like.
(Read and Write property)

180.22.28 USBHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the USB device.
Notes: (Read and Write property)

180.22.29 CurrentAlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current alternate interface setting for an interface.
Notes:

To get the current alternate setting in the first (default) interface on the device, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

Lasterror is set. You can set and get the value.
(Read and Write computed property)

180.22.30 PipePolicyAllowPartialReads(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to allow partial reads.
Notes:

The default value is true. To disable set to false.
Disabling AllowPartialReads causes the read requests to fail whenever the device returns more data (on bulk

and interrupt IN endpoints) than the caller requested.
Enabling AllowPartialReads causes WinUSB to save or discard the extra data when the device returns more data (on bulk and interrupt IN endpoints) than the caller requested. This behavior is defined by setting the auto flush value.
Lasterror is set.
(Read and Write computed property)

180.22.31 PipePolicyAutoClearStall(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether WinUSB resets the pipe in order to automatically clear the stall condition.
Notes:

Data continues to flow on the bulk and interrupt IN endpoints again as soon as a new or a queued transfer arrives on the endpoint. This policy parameter does not affect control pipes.
Disabling AutoClearStall causes all transfers (that arrive to the endpoint after the stalled transfer) to fail until the caller manually resets the endpoint's pipe by calling ResetPipe.
Lasterror is set.
(Read and Write computed property)

180.22.32 PipePolicyAutoFlush(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use auto flush.
Notes:

The default value is false (zero). To enable auto flush set to true.
auto flush must be used with AllowPartialReads enabled. If AllowPartialReads is TRUE, the value of auto flush determines the action taken by WinUSB when the device returns more data than the caller requested.
Disabling AllowPartialReads causes WinUSB to ignore the auto flush value.
Disabling auto flush with AllowPartialReads enabled causes WinUSB to save the extra data, add the data to the beginning of the caller's next read request, and send it to the caller in the next read operation.
Enabling auto flush with AllowPartialReads enabled causes WinUSB to discard the extra data remaining from the read request.
Lasterror is set.
(Read and Write computed property)

180.22.33 PipePolicyIgnoreShortPackets(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enabling IgnoreShortPackets causes the host controller to not complete a read operation after

it receives a short packet.
Notes:

Instead, the host controller completes the operation only after the host has read the specified number of bytes.
Disabling IgnoreShortPackets causes the host controller to complete a read operation when either the host has read the specified number of bytes or the host has received a short packet.
The default value is false. To enable set to true.
Lasterror is set.
(Read and Write computed property)

180.22.34 PipePolicyMaximumTransferSize(PipeID as Integer) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum size of a USB transfer supported by WinUSB.
Notes:

This is a read-only policy.
Lasterror is set.
(Read and Write computed property)

180.22.35 PipePolicyPipeTransferTimeout(PipeID as Integer) as UInt32

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the time-out interval.
Notes:

The default value is zero.
The PipeTransferTimeout value specifies the time-out interval, in milliseconds. The host controller cancels transfers that do not complete within the specified time-out interval.
A value of zero (default) indicates that transfers do not time out because the host controller never cancels the transfer.
Lasterror is set.
(Read and Write computed property)

180.22.36 PipePolicyRawIO(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use Raw IO.
Notes:

The default value is false.
Enabling raw IO causes WinUSB to send data directly to the USB driver stack, bypassing WinUSB's queuing and error handling mechanism.
The buffers that are passed to ReadPipe must be configured by the caller as follows:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of PipePolicyMaximumTransferSize.

Disabling raw IO (false) does not impose any restriction on the buffers that are passed to ReadPipe.
Lasterror is set.
(Read and Write computed property)

180.22.37 PipePolicyResetPipeOnResume(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to reset pipe on resume.
Notes:

True indicates that on resume from suspend, WinUSB resets the endpoint before it allows the caller to send new requests to the endpoint.
Lasterror is set.
(Read and Write computed property)

180.22.38 PipePolicyShortPacketTerminate(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the driver sends a zero-length packet at the end of every write request to the host controller.
Notes:

Lasterror is set.
(Read and Write computed property)

180.22.39 Constants

180.22.40 AutoSuspend = & h81

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the power policy type constants.

180.22.41 FullSpeed = 2

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the Device Speed Constants
Notes: Full Speed

180.22.42 HighSpeed = 3

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the Device Speed Constants
Notes: High Speed

180.22.43 LowSpeed = 1

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the Device Speed Constants
Notes: Low Speed

180.22.44 SuspendDelay = & h83

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the power policy type constants.

180.23 class WinUSBNotificationMBS

180.23.1 class WinUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for getting notifications about USB devices being connected or removed.
Notes: Use MacUSBNotificationMBS for Mac OS X.

180.23.2 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.3pr15
- MBS Real Studio Plugins, version 11.2pr3

180.23.3 Methods

180.23.4 Constructor

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor initializes the notification engine.
Notes: On success WindowHandle and NotifyHandle is not zero.

180.23.5 Properties

180.23.6 NotifyHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal handle to the notification system.
Notes: (Read and Write property)

180.23.7 WindowHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal handle to the dummy window for receiving notification.
Notes: (Read only property)

180.23.8 Events

180.23.9 DeviceAdded(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: .

Function: This event is called when a device has been attached.
Notes:

Name is typically for an USB device: "\\?\USB# Vid_05ac& Pid_8403# 000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

180.23.10 DeviceRemoved(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: .

Function: This event is called when a device has been removed.
Notes:

Name is typically for an USB device: "\\?\USB# Vid_05ac& Pid_8403# 000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

180.24 class WinUSBPipeInformationMBS

180.24.1 class WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for pipe details.

180.24.2 Properties

180.24.3 Interval as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe interval.
Notes: (Read and Write property)

180.24.4 MaximumPacketSize as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum size, in bytes, of the packets that are transmitted on the pipe.
Notes: (Read and Write property)

180.24.5 PipeId as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe identifier (ID).
Notes: (Read and Write property)

180.24.6 PipeType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe type.
Notes: (Read and Write property)

180.24.7 Constants

180.24.8 UsbdPipeTypeBulk = 2

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is a bulk transfer pipe.

180.24.9 UsbdPipeTypeControl = 0

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is a control pipe.

180.24.10 UsbdPipeTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is a interrupt pipe.

180.24.11 UsbdPipeTypeIsochronous = 1

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is an isochronous transfer pipe.

180.25 class WinUSBSetupPacketMBS

180.25.1 class WinUSBSetupPacketMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The metadata needed to create an USB packet.

180.25.2 Properties

180.25.3 Index as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The meaning of this member varies according to the request.
Notes:

For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

180.25.4 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes to transfer.
Notes: (Read and Write property)

180.25.5 Request as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device request.
Notes:

The values that are assigned to this member are defined in Table 9.3 of section 9.4 of the Universal Serial Bus (USB) specification.
(Read and Write property)

180.25.6 RequestType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The request type.
Notes:

The values that are assigned to this member are defined in Table 9.2 of section 9.3 of the Universal Serial Bus (USB) specification (www.usb.org).
(Read and Write property)

180.25.7 Value as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The meaning of this member varies according to the request.
Notes:

For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

Chapter 181

User Notifications

181.1 class NSUserNotificationActionMBS

181.1.1 class NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: An action shown to the user as part of a NSUserNotification in the additionalActions property. **Deprecated:** This item is deprecated and should no longer be used. You can use UNNotificationActionMBS class instead. **Notes:** Available on Mac OS X 10.10 and newer.

181.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr4
- New for Mac OS X 10.10 in MBS Xojo Plugins

181.1.3 Methods

181.1.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.10 or newer. False in all other cases.

181.1.5 Constructor(identifier as string, title as string)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

181.1.6 copy as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a copy of this object.

181.1.7 Properties

181.1.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

181.1.9 Identifier as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal identifier for this action.
Notes: (Read only property)

181.1.10 Title as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The localized title of the action.
Notes: (Read only property)

181.2 class NSUserNotificationCenterDelegateMBS

181.2.1 class NSUserNotificationCenterDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: This class allows you to react to events from the user notification center.
Deprecated: This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Notes:** This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

181.2.2 Blog Entries

- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

181.2.3 Methods

181.2.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes: Must be called to have the class register itself.

181.2.5 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

181.2.6 Properties

181.2.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

181.2.8 Events

181.2.9 didActivateNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent to the delegate when a user clicks on a user notification presented by the user notification center.
Example:

```
Sub applicationDidFinishLaunching(Notification as NSNotificationMBS)
dim userInfo as Dictionary = Notification.userInfo
dim key as string = NSApplicationMBS.NSApplicationLaunchUserNotificationKey
dim UserNotification as NSUserNotificationMBS = userInfo.Lookup(key, nil)

if UserNotification <>nil then
MsgBox UserNotification.identifier+": "+UserNotification.informativeText
end if
End Sub
```

Notes:

center: The user notification center.
notification: The user notification object.

This would be a good time to take action in response to user interacting with a specific notification.

To take an action when your application is launched as a result of a user clicking on a notification, be sure to implement the applicationDidFinishLaunching method in the application class that implements the NSApplicationDelegateMBS class. The notification parameter to that method has a userInfo dictionary, and if that dictionary has the NSApplicationLaunchUserNotificationKey key. The value of that key is the NSUserNotification object that caused the application to launch. The NSUserNotification object is delivered to the NSApplication delegate because that message will be sent before your application has a chance to set a delegate for the NSUserNotificationCenter.

Available in OS X v10.8 and later.

181.2.10 didDeliverNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent to the delegate when a notification delivery date has arrived.
Notes:

center: The user notification center.
notification: The user notification object.

This method is always called, regardless of your application state and even if you deliver the user notification yourself using deliverNotification:.

This event is invoked before the shouldPresentNotification event.
Available in OS X v10.8 and later.

181.2.11 shouldPresentNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent to the delegate when the user notification center has decided not to present your notification.
Notes:

center: The user notification center.
notification: The user notification object.

Return true if the user notification should be displayed regardless; false otherwise.
Available in OS X v10.8 and later.

181.3 class NSUserNotificationCenterMBS

181.3.1 class NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSUserNotificationCenterMBS class delivers user notifications to the user from applications or helper applications.
Example:

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

dim d as new date
d.Second = d.Second + 10
u.deliveryDate = d

dim c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

Deprecated: This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Notes:**

When a user notifications is delivery date has been reached, or it is manually delivered, the notification center it may display the notification to the user. The user notification center reserves the right to decide if a delivered user notification is presented to the user. For example, it may suppress the notification if the application is already frontmost (the delegate can override this action). The application can check the result of this decision by examining the presented property of a delivered user notification.

NSUserNotificationMBS instances the NSUserNotificationCenterMBS are tracking will be in one of two states: scheduled or delivered. A scheduled user notification has a deliveryDate. On that delivery date, the notification will move from being scheduled to being delivered. Note that the user notification may be displayed later than the delivery date depending on a number of factors.

A delivered user notification has an actualDeliveryDate. That is the date when it moved from being scheduled to delivered, or when it was manually delivered using the deliverNotification method.

The application and the user notification center are both ultimately subject to the user's preferences. If the user decides to hide all alerts from your application, the presented property will still behave as above, but the user will not see any animation or hear any sound.

The NSUserNotificationCenterDelegateMBS class provides more information about the delivered user notification and allows forcing the display of a user notification even if the application is frontmost.

Note: It the user wakes more than 15 minutes after a scheduled notification is scheduled to fire, it is discarded. If the notification repeats with an interval less than 15 minutes, then it expires in 1 minute. Expired notifications are just discarded, unless they repeat, in which case, they stay in the scheduled list and just fire again later.
Important Many of the NSUserNotificationCenterMBS class's methods involve talking to a server process, so calling them repeatedly can have a negative effect on performance.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

181.3.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr3
- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

181.3.3 Methods

181.3.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether user notification framework is available.
Notes: Returns true on Mac OS X 10.8 and false otherwise.

181.3.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes:

Initializes this object to point to the default user notification center.
Available in OS X v10.8 and later.

181.3.6 defaultUserNotificationCenter as NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the default user notification center.
Notes: Available in OS X v10.8 and later.

181.3.7 deliveredNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An array of all user notifications delivered to the notification center.
Notes:

The number of notifications the user actually sees in the user interface may be less than the size of this array.

Note that these may or may not have been actually presented to the user. See the presented property in the NSUserNotificationMBS class.

Note: A scheduled user notification that specifies a deliveryRepeatInterval remains in the scheduledNotifications list, even though it has been delivered. The item that goes into the deliveredNotifications list is a copy of the user notification item.

Available in OS X v10.8 and later.

181.3.8 deliverNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Deliver the specified user notification.
Example:

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "just a test"

dim c as new NSUserNotificationCenterMBS
c.deliverNotification u
```

Notes:

notification: The user notification.

The notification will be presented to the user (subject to the user's preferences). The presented property of the NSUserNotification object will always be set to true if a notification is delivered using this method.

Available in OS X v10.8 and later.

181.3.9 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Remove all delivered user notifications from the user notification center.
Notes: Available in OS X v10.8 and later.

181.3.10 removeAllScheduledNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Remove all scheduled user notifications from the user notification center.
Notes: Available in OS X v10.8 and later.

181.3.11 removeDeliveredNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Remove a delivered user notification from the user notification center.
Notes:

notification: The user notification.

If the user notification is not in deliveredNotifications, nothing happens.

Available in OS X v10.8 and later.

181.3.12 removeScheduledNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Removes the specified user notification for the scheduled notifications.
Notes:

notification: The user notification.

If the user notification's deliveryDate occurs before the cancellation finishes, the notification may still be delivered.
If the notification is not in the scheduled list, nothing happens.

Available in OS X v10.8 and later.

181.3.13 scheduledNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies an array of scheduled user notifications that have not yet been delivered.
Notes:

Newly scheduled notifications are added to the end of the array. You may also bulk-schedule notifications by setting this array. Bulk setting new scheduled notifications unschedules existing notifications.

Note: The scheduled user notification could be changing to a delivered notification at the time you are calling this method. and if that case the user notification will still be delivered.

Available in OS X v10.8 and later.

181.3.14 scheduleNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Schedules the specified user notification.
Notes:

notification: The user notification.

Scheduled notifications are added to the end of the notification queue.
Available in OS X v10.8 and later.

181.3.15 Properties

181.3.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

181.4 class NSUserNotificationMBS

181.4.1 class NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSUserNotificationMBS class is used to configure a notification that is scheduled for display by the NSUserNotificationCenterMBS class.
Example:

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

dim d as new date
d.Second = d.Second + 10
u.deliveryDate = d

dim c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

Deprecated: This item is deprecated and should no longer be used. You can use UNNotificationMBS class instead. **Notes:**

The NSUserNotificationMBS object not only configures the notification, when the notification is delivered information about when the notification was actually presented to the user (if at all) and other details are provided in the notification object. User applications can create NSUserNotification objects and register them with the NSUserNotificationCenterMBS object to notify the user when an application requires attention.

See NSUserNotificationCenterMBS Class Reference for more information.

Threading Information
The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.1
- MBS Xojo Plugins, version 19.1pr1
- MBS Xojo Plugins 17.2
- New for Mac OS X 10.10 in MBS Xojo Plugins
- MBS Xojo / Real Studio plug-ins in version 13.5
- MBS Xojo / Real Studio Plugins, version 13.5pr1
- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

181.4.3 Xojo Developer Magazine

- 17.3, page 11: News
- 15.4, page 9: News

181.4.4 Methods

181.4.5 additionalActions as NSUserNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Queries the array of additional actions.
Notes:

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but simply return empty array.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

181.4.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes:

Returns true on Mac OS X 10.8 and newer.
Returns false on other operation systems, e.g. older OS X, Windows or Linux.

181.4.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new notification.

181.4.8 copy as NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a clone of the notification object.

181.4.9 NSUserNotificationDefaultSoundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The default sound played by the user notification center for this notification.
Notes:

The default notification sound.
Available in OS X v10.8 and later.

181.4.10 Print

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Prints description of notification object to console for debugging.

181.4.11 setAdditionalActions(additionalActions() as NSUserNotificationActionMBS)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the array of additional actions.
Notes:

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

181.4.12 Properties

181.4.13 actionButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the title of the action button displayed in the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

Available in OS X v10.8 and later.
(Read and Write property)

181.4.14 activationType as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies what caused a user notification to occur.
Notes:

This property specifies why the user notification was sent to to the NSUserNotificationCenterDelegateMBS didActivateNotification event. The supported values are described in constants.

Available in OS X v10.8 and later.
(Read only property)

181.4.15 actualDeliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date this notification was actually delivered.
Notes:

The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCenterMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

181.4.16 actualDeliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date this notification was actually delivered.
Notes:

The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCenterMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

181.4.17 additionalActivationAction as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Queries which additional action was selected.
Notes:

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but always return nil.

When a user selects an additional action that action will be set on the notification's additionalActivationAction property when passed into the delegate event didActivateNotification.
(Read only property)

181.4.18 contentImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Image shown in the content of the notification.

Notes: (Read and Write property)

181.4.19 deliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies when the notification should be delivered.
Notes:

The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.20 deliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Specifies when the notification should be delivered.
Notes:

The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.21 deliveryRepeatInterval as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the date components that control how often a user notification is repeated.
Notes:

This value may be nil if the notification should not repeat.

The date component values are relative to the date the notification was delivered.

If the calendar value of the deliveryRepeatInterval is nil, the current calendar will be used to calculate the repeat interval. For example, if a notification should repeat every hour, set the hour property of the deliveryRepeatInterval to 1.

This value is ignored unless the user notification is scheduled with the NSUserNotificationCenterMBS object.

Available in OS X v10.8 and later.
(Read and Write property)

181.4.22 deliveryTimeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specify the time zone to interpret the delivery date in.
Notes:

If this value is nil and the user switches time zones, the notification center will adjust the time of presentation to account for the time zone change.

If a notification should be delivered at a time in a specific time zone (regardless of whether the user switches time zones), set this value to the specific time zone, for example the current time zone.

Available in OS X v10.8 and later.
(Read and Write property)

181.4.23 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Description of notification object for debugging.
Notes: (Read only property)

181.4.24 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

181.4.25 hasActionButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the notification displays an action button.
Notes:

Set to false if the notification has no action button. This will be the case for notifications that are purely for informational purposes and have no user action.

The default value is true.

Available in OS X v10.8 and later.
(Read and Write property)

181.4.26 hasReplyButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Set to true if the notification has a reply button.
Notes:

The default value is false. If both this and hasActionButton are true, the reply button will be shown.
(Read and Write property)

181.4.27 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: This identifier is used to uniquely identify a notification.
Notes:

A notification delivered with the same identifier as an existing notification will replace that notification, rather then display a new one.

Available in OS X 10.9 and newer.
(Read and Write property)

181.4.28 informativeText as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The body text of the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.29 otherButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies a custom title for the close button in an alert-style notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

An empty string will cause the default localized text to be used.

Available in OS X v10.8 and later.
(Read and Write property)

181.4.30 Presented as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user notification has been presented.
Notes:

In some cases, for example when your application is frontmost, the notification center may decide not to actually present a delivered notification. In that case, the value of this property will be false. It will be set to true if the notification was presented according to user preferences.

Available in OS X v10.8 and later.
(Read only property)

181.4.31 remote as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the remote was generated by a push notification.
Notes:

If this property is true then the user notification was generated by a push notification (that is, remotely); if false it was generated locally.
Available in OS X v10.8 and later.
(Read only property)

181.4.32 response as NSAttributedStringMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The response text.
Notes:

When a notification has been responded to, the NSUserNotificationCenter event didActivateNotification will be called with the notification with the activationType set to NSUserNotificationActivationTypeReplied and the response set on the response property.
(Read only property)

181.4.33 responsePlaceholder as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Optional placeholder for inline reply field.
Notes: (Read and Write property)

181.4.34 soundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the name of the sound to play when the notification is delivered.
Notes:

Passing the NSUserNotificationDefaultSoundName constant causes the default notification center sound to be played.
A value of nil means no sound is played.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.35 subtitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the subtitle of the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.36 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the title of the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.37 userInfo as dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Application-specific user info that can be attached to the notification.
Example:

```
dim u as new NSUserNotificationMBS
dim d as new dictionary
d.value("Key") = "Value"
u.userinfo = d
```

Notes:

All items must be property list types or an exception will be thrown.
The userInfo content must be of reasonable serialized size (less than 1k) or an exception will be thrown.
Available in OS X v10.8 and later.
(Read and Write property)

181.4.38 Constants

181.4.39 NSUserNotificationActivationTypeActionButtonClicked = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the activation type constants.
Notes:

The user clicked on the action button of the notification alert.
Available in OS X v10.8 and later.

181.4.40 NSUserNotificationActivationTypeAdditionalActionClicked = 4

MBS MacFrameworks Plugin, Plugin Version: 14.3.

Function: One of the activation type constants.
Notes:

User did select an additional action.
Only for Mac OS X 10.10 and newer.

181.4.41 NSUserNotificationActivationTypeContentsClicked = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the activation type constants.
Notes:

The user clicked on the contents of the notification alert.
Available in OS X v10.8 and later.

181.4.42 NSUserNotificationActivationTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the activation type constants.
Notes:

The user did not interact with the notification alert.
Available in OS X v10.8 and later.

181.4.43 NSUserNotificationActivationTypeReplied = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

Function: The activation type for a notification which got a reply.

181.5 class UNCalendarNotificationTriggerMBS

181.5.1 class UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that causes a notification to be delivered at a specific date and time.
Notes:

Create a UNCalendarNotificationTriggerMBS object when you want to schedule the delivery of a local notification at the specified date and time. You specify the temporal information using an NSDateComponentsMBS object, which lets you specify only the time values that matter to you. The system uses the provided information to determine the next date and time that matches the specified information.
Subclass of the UNNotificationTriggerMBS class.

181.5.2 Methods

181.5.3 Constructor(dateComponents as NSDateComponentsMBS, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a calendar trigger from the specified date components.
Notes:

dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

181.5.4 trigger(dateComponents as NSDateComponentsMBS, repeats as boolean) as UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a calendar trigger from the specified date components.
Notes:

dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

181.5.5 Properties

181.5.6 dateComponents as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The date components used to construct this object.
Notes:

Use this property to review the date components associated with this trigger.
(Read only property)

181.5.7 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

181.5.8 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

181.6 class UNMutableNotificationContentMBS

181.6.1 class UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The editable content for a notification.
Notes:

Create a UNMutableNotificationContent object when you want to specify the payload for a local notification. Specifically, use this object to specify the title and message for an alert, the sound to play, or the value to assign to your app's badge. You might also provide details about how the system handles the notification. For example, you can specify a custom launch image and a thread identifier for visually grouping related notifications.
After creating your content object, assign it to a UNNotificationRequest object, add a trigger condition, and schedule your notification. The trigger condition defines when the notification is delivered to the user. Listing 1 shows the scheduling of a local notification that displays an alert and plays a sound after a delay of five seconds. The strings for the alert's title and body are stored in the app's Localizable.strings file.
Subclass of the UNNotificationContentMBS class.

181.6.2 Methods

181.6.3 addAttachment(attachment as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Adds an attachment.

181.6.4 clearBadge

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Clears the badge.

181.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The constructor.

181.6.6 setAttachments(attachments() as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Sets an array of attachments to display in an alert-based notification.
Notes:

Use this property to include images or movies, or to include playable audio files, with the contents of an alert. The system displays the attachments alongside the title and body of your alert. You can also customize the presentation of attachments using a notification content app extension.
All attachments must reside locally on the current device before they can be added. For local notifications, modify this property before scheduling the notification. For remote notifications, use a notification service app extension to locate and download the specified files and modify the notification content before it is delivered.
For more information on how to specify attachments, see UNNotificationAttachmentMBS.

181.6.7 Properties

181.6.8 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number to apply to the app's icon.
Notes:

Use this property to specify the number to apply to the app's icon when the notification arrives. If your app is not authorized to display badge-based notifications, this property is ignored.
Specify the number 0 to remove the current badge, if present. Specify a number greater than 0 to display a badge with that number. Use clearBadge to leave the current badge unchanged.
(Read and Write property)

181.6.9 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized message to display in the notification alert.
Notes:

Use this property to specify the body of the notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
The body text should contain the final text that you want to display, and should not contain any placeholder characters. To include a percent symbol (%) in the message body, use two percent symbols (% %). The system strips all other printf style escape characters from your string prior to display.
(Read and Write property)

181.6.10 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier of the category object that represents the notification's type.
Notes:

Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications—that is, notifications with custom action buttons—and to redirect your notifications through either your notification service app extension or your notification content app extension.
Assign a value to this property that matches the identifier property of one of the UNNotificationCategory objects you previously registered with your app. If you assign a string that does not match one of your registered categories, the system displays your notification without custom actions and without routing it through your app extensions.
(Read and Write property)

181.6.11 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound to play when the notification is delivered.
Notes:

Use this property to specify the sound that you want played when the notification arrives. If your app is not authorized to play sounds for notifications, this property is ignored.
For information on how to specify sounds for your notifications, see UNNotificationSoundMBS.
(Read and Write property)

181.6.12 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized subtitle, containing a secondary description of the reason for the alert.
Notes:

Use this property to specify additional context about the purpose of the notification. Subtitles offer additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read and Write property)

181.6.13 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The string the notification adds to the category's summary format string.
Notes: (Read and Write property)

181.6.14 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number of items the notification adds to the category's summary format string.
Notes: (Read and Write property)

181.6.15 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An identifier that you use to group related notifications together.
Notes:

You may specify any value for the string, but assign the same thread identifier string to all notifications that you want to group together visually.
(Read and Write property)

181.6.16 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized title, containing the reason for the alert.
Notes:

Use this property to specify the title of your notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read and Write property)

181.6.17 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A dictionary of custom information associated with the notification.
Notes:

Use this property to associate custom information with the notification. The contents of the dictionary are not seen by the user, but are accessible to your app or to any notification-related app extensions.

The keys in this dictionary must be property-list types—that is, they must be types that can be serialized into the property-list format.
(Read and Write property)

181.7 class UNNotificationActionMBS

181.7.1 class UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The class for an action for a notification.
Notes:

Use UNNotificationAction objects to define the actions that your app can perform in response to a delivered notification. You define the actions that your app supports. For example, a meeting app might define actions for accepting or rejecting a meeting invitation. The action object itself contains the title to display in an action button and the button's appearance. After creating action objects, add them to a UNNotificationCategory object and register your categories with the system.
For information on how to define actions and categories, see Declaring Your Actionable Notification Types.

When the user selects one of your actions in response to a notification, the system notifies the delegate of the shared UNUserNotificationCenterMBS object. Specifically, the system calls the didReceiveNotificationResponse event. The response object passed to your delegate includes the identifier string of the action that was selected, which you can use to perform the corresponding task.

181.7.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1

181.7.3 Methods

181.7.4 action(identifier as string, title as string, options as integer) as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object with the specified title and options.
Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

181.7.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationAction class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.7.6 Constructor(identifier as string, title as string, options as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object with the specified title and options.
Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

181.7.7 copy as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.7.8 Properties

181.7.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.7.10 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique string that your app uses to identify the action.
Notes:

When the user selects an action, the system reports the value of this string to your app. Because all actions are handled by a single delegate method, the identifier strings for all of your app's actions must be unique.
(Read only property)

181.7.11 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The behaviors associated with the action.
Notes:

Options should be applied to an action when the corresponding behavior is required.
(Read only property)

181.7.12 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized string to use as the title of the action.
Notes:

This string is used as the title of the button that the user taps or selects in the notification interface.
(Read only property)

181.7.13 Constants

181.7.14 OptionAuthenticationRequired = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes:

The action can be performed only on an unlocked device.
When the user selects an action with this option, the system prompts the user to unlock the device. After unlocking, the system notifies your app of the selected action. You might use option to perform actions that require accessing data that is encrypted while the device is locked.

181.7.15 OptionDestructive = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes:

The action performs a destructive task.
Use this option for actions that delete user data or change the app irrevocably. The action button is displayed with special highlighting to indicate that it performs a destructive task.

181.7.16 OptionForeground = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes:

The action causes the app to launch in the foreground.
When the user selects an action containing this option, the system brings the app to the foreground, asking the user to unlock the device as needed. Use this option for actions that require the user to interact further with your app. Do not use this option simply to bring your app to the foreground.

181.7.17 OptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes: The action has the default behavior.

181.8 class UNNotificationAttachmentMBS

181.8.1 class UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A media file associated with a notification.
Notes:

Create a UNNotificationAttachmentMBS object when you want to include audio, image, or video content together in an alert-based notification. When creating the UNNotificationAttachmentMBS object, the file you specify must be on disk, and the file format must be one of the supported types.

You are responsible for supplying attachments before the system displays your notification's alert. For local notifications, add attachments when creating the notification's content. For remote notifications, use a notification service app extension to download the attached files and then add them to the notification's content before delivery.

The system validates attachments before displaying the associated notification. If you attach a file to a local notification request that is corrupted, invalid, or of an unsupported file type, the system doesn't schedule your request. For remote notifications, the system validates attachments after your notification service app extension finishes. Once validated, attached files are moved into the attachment data store so that they can be accessed by all of the appropriate processes. Attachments located inside an app's bundle are copied instead of moved.

Supported File Types
Table lists the types of files you can include as an attachment and the supported file formats. The table also lists the maximum size allowed for attachments of each type. An image file may contain a static image or an animated image sequence.

Supported attachment file types

Attachment	Supported file types	Maximum size
Audio	kUTTypeAudioInterchangeFileFormat, kUTTypeWaveformAudio, kUTTypeMP3 and kUTTypeMPEG4Audio	5 MB
Image	kUTTypeJPEG, kUTTypeGIF and kUTTypePNG	10 MB
Movie	kUTTypeMPEG, kUTTypeMPEG2Video, kUTTypeMPEG4 and kUTTypeAVIMovie	50 MB

When creating an attachment, you can specify optional details about how to present the thumbnail image for the image or movie. Use the UNNotificationAttachmentOptionsThumbnailClippingRectKey option to use only the specified portion of an image as a thumbnail. For animated images and movies, use the UNNotificationAttachmentOptionsThumbnailTimeKey option to select which frame to use for the thumbnail image.

The amount of storage space allocated for attachments is limited for each app. To delete attachments, use the methods of the UNUserNotificationCenterMBS class to remove the notification requests that contain those attachments.

181.8.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr1

181.8.3 Methods

181.8.4 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

- 181.8.5 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

181.8.5 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

181.8.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationAttachment class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.8.7 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 181.8.8 Constructor(identifier as String, URL as String, options as Dictionary = nil) 23874

181.8.8 Constructor(identifier as String, URL as String, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could

not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

- 181.8.7 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil) 23873

181.8.9 copy as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.8.10 UNNotificationAttachmentOptionsThumbnailClippingRectKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The clipping rectangle for a thumbnail image.
Notes: The value of this key is a dictionary containing a normalized CGRectMBS—that is, a unit rectangle whose values are in the range 0.0 to 1.0 and represent the portion of the original image that you want to display. For example, specifying an origin of (0.25, 0.25) and a size of (0.5, 0.5) defines a clipping rectangle that shows only the center portion of the image.

181.8.11 UNNotificationAttachmentOptionsThumbnailHiddenKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the attachment's thumbnail is hidden.
Notes: The value of this key is a number containing a Boolean value. When set to true, the attachment's thumbnail is not displayed. If you do not include this key, the thumbnail is shown.

181.8.12 UNNotificationAttachmentOptionsThumbnailTimeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The frame number of an animation to use as a thumbnail image.
Notes: For animated images, the value of this key is an number containing the frame number to use as the thumbnail. For movies, the value of this key is the time (in seconds) into the movie from which to grab the

thumbnail image.

181.8.13 UNNotificationAttachmentOptionsTypeHintKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A hint about an attachment's file type.
Notes: The value of this key is a string containing a Uniform Type Identifier (UTI) that describes the file's type. If you do not include this key, the attachment's filename extension is used to determine its type.

181.8.14 Properties

181.8.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.8.16 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique identifier for the attachment.
Notes: (Read only property)

181.8.17 type as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The UTI type of the attachment.
Notes:

The value of this property is derived from the attachment data.
(Read only property)

181.8.18 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The URL of the file for this attachment.
Notes:

The file at the specified URL is security scoped to your app. Before you access it, call the startAccessingSecurityScopedResource method of NSURL.
(Read only property)

181.9 class UNNotificationCategoryMBS

181.9.1 class UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A type of notification that your app supports and the custom actions to display with it.
Notes:

A UNNotificationCategoryMBS object defines a type of notification that your executable can receive. You create category objects to define your app's actionable notifications—that is, notifications that have action buttons that the user can select in response to the notification. Each category object you create stores the actions and other behaviors associated with a specific type of notification. Register your category objects using the setNotificationCategories method of UNUserNotificationCenterMBS. You can register as many category objects as you want.

To apply category objects to your notifications, include the category's identifier string in the payload of any notifications you create. For local notifications, put this string in the categoryIdentifier property of the UNMutableNotificationContentMBS object that you use to specify the notification's content. For remote notifications, use this string as the value of the category key in the aps dictionary of your payload.

Categories can have associated actions, which define custom buttons to display for notifications of that category. When space is unlimited, the system displays up to 10 actions. When space is limited, the system displays at most two actions.

181.9.2 Methods

181.9.3 actions as UNNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The actions to display when a notification of this type is presented.
Notes:

When displaying a notification assigned to this category, the system adds a button to the notification interface for each action in this property. These buttons are displayed after the notification's content but before the Dismiss button.
When displaying banner notifications, the system displays only the first two actions.

181.9.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationCategory class is available.

Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options, a hidden previous placeholder, and the category's summary format string.
See also:

- 181.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS 23879
- 181.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS 23880

181.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions, options, and a hidden previous placeholder.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters % u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "% u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization

Guide.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.
See also:

- 181.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS 23879

181.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.
See also:

- 181.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS 23879

181.9.9 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions, options, and a hidden previous placeholder.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters % u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "% u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization Guide.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) 23881

- 181.9.10 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) 23882

181.9.10 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.
See also:

- 181.9.8 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) 23881
- 181.9.9 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) 23881

181.9.11 copy as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.9.12 intentIdentifiers as String()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The intents related to notifications of this category.
Notes: When a notification is delivered, the presence of an intent identifier lets the system know that the

notification is potentially related to the handling of a request made through Siri.

181.9.13 Properties

181.9.14 categorySummaryFormat as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A format string for the summary description used when the system groups the category's notifications.
Notes: (Read only property)

181.9.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.9.16 hiddenPreviewsBodyPlaceholder as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The placeholder text to display when notification previews are disabled for the app.
Notes:

The string in this property may contain the special characters % u as a placeholder for the number of messages with the same thread identifier. If the string in this property is declared in a .stringsdict property list, the system formats the preview message using the information in that file. For more information about specifying a .stringsdict property file, see Internationalization and Localization Guide.
(Read only property)

181.9.17 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique string assigned to the category.
Notes:

Use this string to differentiate the different types of notifications that your app can send. To assign a category to a local notification, assign this string to the categoryIdentifier property of the content object. To assign a category to a remote notification, use the string as the value of the category key in the aps dictionary of

the notification payload.
(Read only property)

181.9.18 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Options for how to handle notifications of this type.
Notes: (Read only property)

181.9.19 Constants

181.9.20 OptionAllowInCarPlay = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes:

Allow CarPlay to display notifications of this type.
Apps must be approved for CarPlay overall and then you must enable CarPlay for the notification types you want displayed. If a category does not explicitly contain this option, notifications of that type are not displayed in a CarPlay environment.

181.9.21 OptionCustomDismissAction = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: Send dismiss actions to the UNUserNotificationCenter object's delegate for handling.

181.9.22 OptionHiddenPreviewsShowSubtitle = 8

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: Show the notification's subtitle, even if the user has disabled notification previews for the app.

181.9.23 OptionHiddenPreviewsShowTitle = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: Show the notification's title, even if the user has disabled notification previews for the app.

181.9.24 OptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: No options.

181.10 class UNNotificationContentMBS

181.10.1 class UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The uneditable content of a notification.
Notes:

A UNNotificationContent object contains the data associated with a notification. When your app receives a notification, the associated UNNotificationRequestMBS object contains an object of this type with the content that your app received. Use the content object to get the details of the notification, including the type of notification that was delivered, any custom data you stored in the userInfo dictionary before scheduling the notification, and any attachments.
Don't create instances of this class directly. For remote notifications, the contents of this object are derived from the JSON payload that your server sends to the APNS server. For local notifications, create a UNMutableNotificationContentMBS object, and configure the contents of that object instead.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.10.2 Methods

181.10.3 attachment(Index as integer) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Queries attachment with given index.
Notes: Index from 0 to attachmentCount-1.

181.10.4 attachments as UNNotificationAttachmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An array of attachments to display with the notification.
Notes: Use this property to retrieve the images, movies, and audio files associated with your notification's content. A notification content app extension might use these values to add the associated content to its view controller.

181.10.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationContent class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.10.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.10.7 copy as UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.10.8 mutableCopy as UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a mutable copy of the object.

181.10.9 Properties

181.10.10 attachmentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The attachment count.
Notes: (Read only property)

181.10.11 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number to display as the app's icon badge.
Notes:

When the number in this property is 0, the system does not display a badge. When the number is greater than 0, the system displays the badge with the specified number. When the value in this property is not set, the system leaves the current badge unchanged.
(Read only property)

181.10.12 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The message displayed in the notification alert.
Notes:

The body text contains the final text that you want to display. If your app is not authorized to display alert-based notifications, this property is ignored.
If you specified two percent symbols (% %) in the message body, the system replaces it with a single percent symbol (%). The system strips all other printf style escape characters from your string prior to display.
(Read only property)

181.10.13 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier of the app-defined category object.
Notes:

Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications—that is, notifications with custom action buttons—and to redirect your notifications through either your notification service app extension or your notification content app extension.
For remote notifications, this property is set to the value of the category key in the aps dictionary.
(Read only property)

181.10.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.10.15 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound to play when the notification is delivered.
Notes:

Notifications can play a default sound or a custom sound. For information on how to specify custom sounds for your notifications, see UNNotificationSoundMBS.
(Read only property)

181.10.16 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A secondary description of the reason for the alert.
Notes:

Subtitles offer additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read only property)

181.10.17 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The string the notification adds to the category's summary format string.
Notes: (Read only property)

181.10.18 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number of items the notification adds to the category's summary format string.
Notes: (Read only property)

181.10.19 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An identifier that you use to group related notifications together.
Notes:

For remote notifications, this property is set to the value of the thread-id key in the aps dictionary.
(Read only property)

181.10.20 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A short description of the reason for the alert.
Notes:

When a title is present, the system attempts to display a notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read only property)

181.10.21 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A dictionary of custom information associated with the notification.
Notes:

For remote notifications, this property contains the entire notification payload. For local notifications, you configure the property directly before scheduling the notification.
The keys in this dictionary must be property-list types—that is, they must be types that can be serialized into the property-list format.
(Read only property)

181.11 class UNNotificationMBS

181.11.1 class UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The data for a local or remote notification that was delivered to your app.
Notes:

A UNNotification object contains the initial notification request, which contains the notification's payload, and the date on which the notification was delivered.
Don't create notification objects directly. When handling notifications, the system delivers notification objects to your events. The UNUserNotificationCenterMBS object also maintains the list of notifications that were previously delivered, and you use the getDeliveredNotifications method to retrieve those objects.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.11.4 Methods

181.11.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotification class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.11.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.11.7 copy as UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.11.8 UNErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The error domain for notifications.

181.11.9 Properties

181.11.10 Date as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The delivery date of the notification.
Notes:

This date is displayed to the user in Notification Center.
(Read only property)

181.11.11 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The delivery date of the notification.
Notes:

This date is displayed to the user in Notification Center.
(Read only property)

181.11.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.11.13 request as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The notification request containing the payload and trigger condition for the notification.
Notes:

For local notifications, the request object is a copy of the one you originally configured. For remote notifications, the request object is synthesized from information received from Apple Push Notification service. (Read only property)

181.11.14 Constants

181.11.15 UNErrorCodeAttachmentCorrupt = 105

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The file for an attachment is corrupt.

181.11.16 UNErrorCodeAttachmentInvalidFileSize = 102

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: An attachment is too large.

181.11.17 UNErrorCodeAttachmentInvalidURL = 100

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The URL for an attachment was invalid.

181.11.18 UNErrorCodeAttachmentMoveIntoDataStoreFailed = 104

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: An error occurred when trying to move an attachment to the system data store.

181.11.19 UNErrorCodeAttachmentNotInDataStore = 103

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The specified attachment is not in the system data store.

181.11.20 UNErrorCodeAttachmentUnrecognizedType = 101

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The file type of an attachment is not supported.

181.11.21 UNErrorCodeNotificationInvalidNoContent = 1401

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The notification has no user-facing content, but should.

181.11.22 UNErrorCodeNotificationInvalidNoDate = 1400

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The notification does not have an associated date, but should.

181.11.23 UNErrorCodeNotificationsNotAllowed = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes:

Notifications are not allowed.
This error occurs when you try to submit a notification request and your app or app extension is not authorized to schedule notifications.

181.12 class UNNotificationRequestMBS

181.12.1 class UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A request to schedule a local notification, which includes the content of the notification and the trigger conditions for delivery.
Notes:

Create a UNNotificationRequestMBS object when you want to schedule the delivery of a local notification. A notification request object contains a UNNotificationContentMBS object with the payload to be delivered, and it contains the UNNotificationTriggerMBS object with the conditions that trigger the delivery of the notification. To schedule the delivery of your notification, pass your request object to the addNotificationRequest method of the shared user notification center object.

After scheduling a request, you interact with UNNotificationRequestMBS objects in the following ways:

- View your app's pending notifications by calling the getPendingNotificationRequestsWithCompletionHandler: method of your shared user notification center object.
- When a notification is delivered to your app, the provided UNNotificationMBS object contains a UNNotificationRequest object that you can inspect to get the notification details.
- Use the request's identifier to remove delivered notifications from Notification Center.

When receiving a local or remote notification, use the provided UNNotificationRequestMBS object to fetch details about the notification.

181.12.2 Methods

181.12.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationRequest class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.12.4 Constructor(identifier as string, content as UNNotificationContentMBS, trigger as UNNotificationTriggerMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a notification request object that you use to schedule a notification.
Notes:

identifier: An identifier for the request; this parameter must not be nil. You can use this identifier to cancel the request if it is still pending (see the removePendingNotificationRequests method).
content: The content of the notification. This parameter must not be nil.
trigger: The condition that causes the notification to be delivered. Specify nil to deliver the notification right away.

Returns a new notification request object.

Use this method when you want to schedule the delivery of a local notification. This method creates the request object that you subsequently pass to the addNotificationRequest method.
The system uses the identifier parameter to determine how to handle the request:

- If you provide a unique identifier, the system creates a new notification.
- If the identifier matches a previously delivered notification, the system alerts the user again, replaces the old notification with the new one, and places the new notification at the top of the list.
- If the identifier matches a pending request, the new request replaces the pending request.

181.12.5 Copy as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.12.6 request(identifier as string, content as UNNotificationContentMBS, trigger as UNNotificationTriggerMBS) as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a notification request object that you use to schedule a notification.
Notes:

identifier: An identifier for the request; this parameter must not be nil. You can use this identifier to cancel the request if it is still pending (see the removePendingNotificationRequests method).
content: The content of the notification. This parameter must not be nil.
trigger: The condition that causes the notification to be delivered. Specify nil to deliver the notification right away.

Returns a new notification request object.

Use this method when you want to schedule the delivery of a local notification. This method creates the request object that you subsequently pass to the addNotificationRequest method.
The system uses the identifier parameter to determine how to handle the request:

- If you provide a unique identifier, the system creates a new notification.
- If the identifier matches a previously delivered notification, the system alerts the user again, replaces the old notification with the new one, and places the new notification at the top of the list.
- If the identifier matches a pending request, the new request replaces the pending request.

181.12.7 Properties

181.12.8 content as UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The content associated with the notification.
Notes:

Use this property to access the contents of the notification.
(Read only property)

181.12.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.12.10 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique identifier for this notification request.
Notes:

Use this string to identify notifications in your app. For example, you can pass this string to the removePendingNotificationRequests method to cancel a previously scheduled notification.
If you use the same identifier when scheduling a new notification, the system removes the previously scheduled notification with that identifier and replaces it with the new one.
For local notifications, this property is set to the value passed to the request's initializer (see the request method). For remote notifications, it is set to the value of the apns-collapse-id key that you specified in the APNs request header when generating the remote notification. If no value is set, the system automatically

assigns an identifier.
(Read only property)

181.12.11 trigger as UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The conditions that trigger the delivery of the notification.
Notes:

For notifications that have already been delivered, use this property to determine what caused the delivery to occur. For remote notifications, this property contains a UNPushNotificationTriggerMBS object. For other notifications, the type is based on the trigger condition specified in the original request.
(Read only property)

181.13 class UNNotificationResponseMBS

181.13.1 class UNNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The user's response to an actionable notification.
Notes:

When the user interacts with a delivered notification, the system delivers a UNNotificationResponseMBS object to your app so that you can process the response. Users can interact with delivered notifications in many ways. If the notification's category had associated action buttons, they can select one of those buttons. Users can also dismiss the notification without selecting one of your actions and they can open your app. A response object tells you which option the user selected.

You don't create UNNotificationResponseMBS objects yourself. Instead, the shared user notification center object creates them and delivers them to the didReceiveNotificationResponse event. Use that method to extract any needed information from the response object and take appropriate action.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.13.2 Methods

181.13.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationResponse class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.13.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.13.5 copy as UNNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.13.6 UNNotificationDefaultActionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An action that indicates the user opened the app from the notification interface.
Notes: The delivery of this action does not require any special configuration of notification categories. Use the didReceiveNotificationResponse event to receive this action.

181.13.7 UNNotificationDismissActionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The action that indicates the user explicitly dismissed the notification interface.
Notes:

This action is delivered only if the notification's category object was configured with the UNNotificationCategoryOptionCustomDismissAction option. To trigger this action, the user must explicitly dismiss the notification interface. For example, the user must tap the Dismiss button or swipe down on the notification interface in watchOS to trigger this action.
Ignoring a notification or flicking away a notification banner does not trigger this action.

181.13.8 Properties

181.13.9 actionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier string of the action that the user selected.
Notes:

This parameter may contain one the identifier of one of your UNNotificationActionMBS objects or it may contain a system-defined identifier. The system defined identifiers are UNNotificationDefaultActionIdentifier and UNNotificationDismissActionIdentifier, which indicate that the user opened the app or dismissed the notification without any further actions.
(Read only property)

181.13.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.13.11 notification as UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The notification to which the user responded.
Notes: (Read only property)

181.14 class UNNotificationSettingsMBS

181.14.1 class UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The object for managing notification-related settings and the authorization status of your app.
Notes:

A UNNotificationSettingsMBS object contains the current authorization status and notification-related settings for your app. Apps must receive authorization to schedule notifications and to interact with the user. Apps that run in CarPlay must similarly receive authorization to do so. You use this object to determine what notification-related actions your app is allowed to perform. You might then use that information to enable, disable, or adjust your app's notification-related behaviors. Regardless of whether you take action, the system enforces your app's settings by preventing denied interactions from occurring.
You don't create instances of this class directly. Instead, call the getNotificationSettings method of your app's UNUserNotificationCenterMBS object to get the current settings.
For more information about requesting authorization for user interactions, see UNUserNotificationCenter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.14.2 Methods

181.14.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationSettings class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.14.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.14.5 copy as UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.14.6 settings as UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The last settings received via getNotificationSettingsCompleted event.
Notes: You call getNotificationSettings and whether you implement and handle the event or not, the settings are stored by plugin in a global variable, so you can query them here.

181.14.7 Properties

181.14.8 alertSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for displaying alerts.
Notes:

When the value of this property is NotificationSettingEnabled, the app is authorized to display alerts. Authorization does not guarantee that alerts always appear on the user's screen. When a device is unlocked, the alertStyle property determines the presentation style for the alert, which can include not displaying the alert at all.
The system tries to display an alert when the title, subtitle, or body properties of a UNNotificationContentMBS object contain values, or when the aps dictionary in a remote notification contains the alert key.
(Read only property)

181.14.9 alertStyle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The type of alert that the app may display when the device is unlocked.
Notes:

When alerts are authorized, this property specifies the presentation style for alerts when the device is unlocked. The user may choose to display alerts as automatically disappearing banners or as modal windows that require explicit dismissal. The user may also choose not to display alerts at all.
(Read only property)

181.14.10 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The app's ability to schedule and receive local and remote notifications.
Notes:

When the value of this property is AuthorizationStatusAuthorized, your app is allowed to schedule and receive local and remote notifications. When authorized, use the alertSetting, badgeSetting, and soundSetting properties to specify which types of interactions are allowed. When the value of the property is AuthorizationStatusDenied, the system doesn't deliver notifications to your app, and the system ignores any attempts to schedule local notifications.
The value of this property is AuthorizationStatusNotDetermined if your app has never requested authorization using the requestAuthorization method.
(Read only property)

181.14.11 badgeSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for badging your app's icon.
Notes:

When the value of this property is NotificationSettingEnabled, the app is authorized to badge its icon. The system tries to badge your app's icon when the badge property of a UNNotificationContentMBS object contain a value, or when the aps dictionary in a remote notification contains the badge key.
(Read only property)

181.14.12 criticalAlertSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status to play sounds for critical alerts.
Notes:

When NotificationSettingEnabled, this property authorizes the app to play critical sounds that ignore Do Not Disturb and the device's mute switch.
For local notifications, the system attempts to play a critical sound when the sound property of the UNNotificationContentMBS object contains an object returned by the defaultCriticalSound property, the criticalSoundNamed method, or a related method.
For remote notifications, the system attempts to play a critical sound when the notification's payload contains a sound directory that contains the critical key.
Critical alerts require a special entitlement issued by Apple.
(Read only property)

181.14.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.14.14 lockScreenSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether your app's notifications appear onscreen when the device is locked.
Notes:

Even if the user disables lock screen notifications, your notifications may still appear onscreen when the device is unlocked.
(Read only property)

181.14.15 notificationCenterSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether your app's notifications are displayed in Notification Center.
Notes:

The default value of this property is NotificationSettingEnabled.
(Read only property)

181.14.16 providesAppNotificationSettings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating the system displays a button for in-app notification settings.
Notes: (Read only property)

181.14.17 showPreviewsSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether the app shows a preview of the notification's content.
Notes: (Read only property)

181.14.18 soundSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for playing sounds for incoming notifications.
Notes:

When the value of this property is NotificationSettingEnabled, the app is authorized to play sounds. The system tries to play a sound when the sound property of the UNNotificationContentMBS object contains a value, or when the aps dictionary in a remote notification contains the sound key.
(Read only property)

181.14.19 Constants

181.14.20 AlertStyleAlert = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the presentation styles for alerts.
Notes:

Modal alerts.
Alerts are displayed in a modal window that must be dismissed explicitly by the user.

181.14.21 AlertStyleBanner = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the presentation styles for alerts.
Notes:

Banner alerts.
Alerts are displayed as a slide-down banner. Banners appear for a short time and then disappear automatically if the user does nothing.

181.14.22 AlertStyleNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the presentation styles for alerts.
Notes: No alert.

181.14.23 AuthorizationStatusAuthorized = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The app is authorized to schedule or receive notifications.

181.14.24 AuthorizationStatusDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The app isn't authorized to schedule or receive notifications.

181.14.25 AuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The user hasn't yet made a choice about whether the app is allowed to schedule notifications.

181.14.26 AuthorizationStatusProvisional = 3

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The application is provisionally authorized to post noninterruptive user notifications.

181.14.27 NotificationSettingDisabled = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the current status of a notification setting.
Notes: The setting is disabled.

181.14.28 NotificationSettingEnabled = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the current status of a notification setting.
Notes: The setting is enabled.

181.14.29 NotificationSettingNotSupported = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the current status of a notification setting.
Notes: The setting is not available to your app.

181.14.30 ShowPreviewsSettingAlways = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the style previewing a notification's content.
Notes: The notification's content is always shown, even when the device is locked.

181.14.31 ShowPreviewsSettingNever = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the style previewing a notification's content.
Notes: The notification's content is never shown, even when the device is unlocked.

181.14.32 ShowPreviewsSettingWhenAuthenticated = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the style previewing a notification's content.
Notes: The notification's content is shown only when the device is unlocked.

181.15 class UNNotificationSoundMBS

181.15.1 class UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound played when a notification is delivered.
Notes:

Create a UNNotificationSoundMBS object when you want the delivery of your notification to be accompanied by a specific sound. To play the default system sound, create your sound object using the defaultSound method. If you want to play a custom sound, create a new sound object and specify the name of the audio file that you want to play.

For local notifications, assign the sound object to the sound property of your UNMutableNotificationContentMBS object. For a remote notification, assign the name of your sound file to the sound key in the aps dictionary. You can also use a notification service app extension to add a sound file to a notification shortly before delivery. In your extension, create a UNNotificationSound object and add it to your notification content in the same way that you would for a local notification.
Audio files must already be on the user's device before they can be played. If you use a predefined set of sounds for your notifications, include the audio files in your app's bundle. For all other sounds, place a copy of the audio file in the Library/Sounds folder of your app's container directory. The UNNotificationSound object looks only in those two locations.

Prepare Sound Resources
The system sound facility plays custom alert sounds, so they must be in one of the following audio data formats:

- Linear PCM
- MA4 (IMA/ADPCM)
- µLaw
- aLaw

You can package the audio data in an aiff, wav, or caf file. Sound files must be less than 30 seconds in length. If the sound file is longer than 30 seconds, the system plays the default sound instead.

You can use the afconvert command-line tool to convert sounds. For example, to convert the system sound Submarine.aiff to IMA4 audio in a CAF file, use the following command in Terminal:

afconvert /System/Library/Sounds/Submarine.aiff
textasciitilde /Desktop/sub.caf -d ima4 -f caff -v
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.15.2 Methods

181.15.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationSound class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.15.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.15.5 copy as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.15.6 criticalSoundNamed(name as string) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a custom sound object for critical alerts.
Notes:

name: The name of the sound file to play. This file must be located in the current executable's main bundle or in the Library/Sounds directory of the current app container directory. If files exist at both locations, the system uses the file from the Library/Sounds directory. This parameter must not be nil.

Returns a sound object representing a custom critical alert sound.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.
See also:

- 181.15.7 criticalSoundNamed(name as string, volume as double) as UNNotificationSoundMBS

181.15.7 criticalSoundNamed(name as string, volume as double) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a custom sound object for critical alerts with the specified volume.
Notes:

name: The name of the sound file to play. This file must be located in the current executable's main bundle or in the Library/Sounds directory of the current app container directory. If files exist at both locations, the system uses the file from the Library/Sounds directory. This parameter must not be nil.
volume: The volume must be a value between 0.0 and 1.0.

Returns a sound object representing a custom critical alert sound at the specified volume.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.
See also:

- 181.15.6 criticalSoundNamed(name as string) as UNNotificationSoundMBS 23910

181.15.8 defaultCriticalSound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The default sound used for critical alerts.
Notes: Critical alerts ingore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.

181.15.9 defaultCriticalSoundWithAudioVolume(volume as double) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a sound object that plays the default critical alert sound at the specified volume.
Notes:

volume: The volume must be a value between 0.0 and 1.0.

Returns a sound object representing the default critical alert sound at the specified volume.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.

181.15.10 defaultSound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns an object representing the default sound for notifications.

181.15.11 soundNamed(name as string) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a sound object that represents a custom sound file.
Notes:

name: The name of the sound file to play. This file must be located in the current executable's main bundle or in the Library/Sounds directory of the current app container directory. This parameter must not be nil.

Returns a sound object representing the custom sound.

If a sound file with the given name exists both in the current bundle and in the Library/Sounds folder, this method chooses the file in the Library/Sounds folder.

181.15.12 Properties

181.15.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.16 class UNNotificationTriggerMBS

181.16.1 class UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The common behavior for subclasses that trigger the delivery of a local or remote notification.
Notes:

The UNNotificationTrigger class is an abstract class for representing an event that triggers the delivery of a notification. You don't create instances of this class directly. Instead, you instantiate the concrete subclass that defines the trigger condition you want for your notification. You then assign the resulting object to the UNNotificationRequestMBS object that you use to schedule your notification.

Concrete trigger classes include the following:

- UNTimeIntervalNotificationTriggerMBS
- UNCalendarNotificationTriggerMBS
- UNLocationNotificationTriggerMBS
- UNPushNotificationTriggerMBS

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.16.2 Methods

181.16.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationTrigger class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.16.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.16.5 copy as UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

181.16.6 Properties

181.16.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.16.8 repeats as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the system reschedules the notification after it is delivered.
Notes:

When this property is NO, the notification is delivered only once. When this property is YES, the notification request is rescheduled automatically, resulting in the notification being delivered each time the trigger condition is met. To unschedule the notification request, use the methods of the UNUserNotificationCenterMBS to remove the notification request.
(Read only property)

181.17 class UNPushNotificationTriggerMBS

181.17.1 class UNPushNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that indicates the notification was sent from Apple Push Notification Service (APNs).
Notes:

You don't create instances of this class yourself. The system creates UNPushNotificationTrigger objects and associates them with requests that originated from Apple Push Notification service. You encounter instances of this class when managing your app's delivered notification requests, which store an object of this type in their trigger property.
Subclass of the UNNotificationTriggerMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.17.2 Methods

181.17.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.18 class UNTextInputNotificationActionMBS

181.18.1 class UNTextInputNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An action that can accept user-typed text.
Notes:

Use UNTextInputNotificationActionMBS objects to define an action that allows the user to provide a custom text-based response. When the user selects an action of this type, the system displays controls for the user to enter or dictate the text content. That text is then included in the response object that is delivered to your app.
Subclass of the UNNotificationActionMBS class.

181.18.2 Methods

181.18.3 action(identifier as string, title as string, options as integer, textInputButtonTitle as string, textInputPlaceholder as string) as UNTextInputNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object that accepts text input from the user.
Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see options.
textInputButtonTitle: The localized title of the text input button that is displayed to the user.
textInputPlaceholder: The localized placeholder text to display in the text input field.

Returns a new text input action object.

181.18.4 Constructor(identifier as string, title as string, options as integer, textInputButtonTitle as string, textInputPlaceholder as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object that accepts text input from the user.

Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see options.
textInputButtonTitle: The localized title of the text input button that is displayed to the user.
textInputPlaceholder: The localized placeholder text to display in the text input field.

Returns a new text input action object.

181.18.5 Properties

181.18.6 textInputButtonTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized title of the text input button that is displayed to the user.
Notes: (Read only property)

181.18.7 textInputPlaceholder as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized placeholder text to display in the text input field.
Notes: (Read only property)

181.19 class UNTextInputNotificationResponseMBS

181.19.1 class UNTextInputNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The user's response to an actionable notification, including any custom text that the user typed or dictated.
Notes:

The system delivers a UNTextInputNotificationResponse object to your app so that you can process user-provided text content. When defining your categories, you can specify an UNTextInputNotificationActionMBS object instead of an UNNotificationActionMBS object for your action. If you do, the system creates an UNTextInputNotificationResponseMBS object when the user selects the accompanying action, and it fills the userText property with any user-entered text.

You don't create UNTextInputNotificationResponseMBS objects yourself. Instead, the shared user notification center object creates them and delivers them to the didReceiveNotificationResponse event. Use that method to extract any needed information from the response object and take appropriate action.
Subclass of the UNNotificationResponseMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

181.19.2 Methods

181.19.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

181.19.4 Properties

181.19.5 userText as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The text response provided by the user.
Notes:

If the user does not specify any text, this property contains an empty string.
(Read only property)

181.20 class UNTimeIntervalNotificationTriggerMBS

181.20.1 class UNTimeIntervalNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that causes a notification to be delivered after the specified amount of time elapses.
Notes:

Create a UNTimeIntervalNotificationTrigger object when you want to schedule the delivery of a local notification after the specified number of seconds elapse. You use this type of trigger to implement timers.
Subclass of the UNNotificationTriggerMBS class.

181.20.2 Methods

181.20.3 Constructor(timeInterval as double, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a time interval trigger from the specified time value.
Notes:

timeInterval: The time (in seconds) that must elapse from the current time before the trigger fires. This value must be greater than zero.
repeats: Specify false to deliver the notification one time. Specify true to reschedule the notification request each time the notification is delivered. If this parameter is true, the value in the timeInterval parameter must be 60 seconds or greater.

Return Value:
A new time interval trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

181.20.4 trigger(timeInterval as double, repeats as boolean) as UNTimeIntervalNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a time interval trigger from the specified time value.
Notes:

timeInterval: The time (in seconds) that must elapse from the current time before the trigger fires. This value must be greater than zero.
repeats: Specify false to deliver the notification one time. Specify true to reschedule the notification request each time the notification is delivered. If this parameter is true, the value in the timeInterval parameter must be 60 seconds or greater.

Return Value:
A new time interval trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

181.20.5 Properties

181.20.6 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

181.20.7 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

181.20.8 timeInterval as Double

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The time interval used to create the trigger.
Notes:

This property contains the original time interval that you specified when creating the trigger object. The

value in this property is not updated as time counts down. To find out when the trigger will fire next, call the nextTriggerDate method.
(Read only property)

181.21 class UNUserNotificationCenterMBS

181.21.1 class UNUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The central object for managing notification-related activities for your app or app extension.
Notes:

see also
https://developer.apple.com/documentation/usernotifications/unusernotificationcenter?language=objc

181.21.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr4

181.21.3 Methods

181.21.4 addNotificationRequest(request as UNNotificationRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Schedules a local notification for delivery.
Notes:

This method schedules local notifications only; you cannot use it to schedule the delivery of remote notifications. Upon calling this method, the system begins tracking the trigger conditions associated with your request. When the trigger condition is met, the system delivers your notification. If the request does not contain a UNNotificationTriggerMBS object, the notification is delivered right away.
You may call this method from any thread of your app.

request: The request object containing the notification payload and trigger information. This parameter must not be nil.

Calls addNotificationRequestCompleted event later. Request and tag parameter is passed through.

181.21.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNUserNotificationCenter class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

181.21.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns the shared user notification center object for your app or app extension.

181.21.7 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The destructor.

181.21.8 getDeliveredNotifications(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns a list of the app's notifications that are still displayed in Notification Center.
Notes:

This method executes asynchronously, returning immediately and executing the provided block on a background thread when the results become available.

Calls getDeliveredNotificationsCompleted event later. Tag parameter is

181.21.9 getNotificationCategories(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Retrieves the app's currently registered notification categories.
Notes:

Use this method to retrieve your app's currently registered notification types. You might use this method when you want to augment the current set of categories with new categories later on. Simply merge the returned set with any new category objects and register the updated set.

Calls getNotificationCategoriesCompleted event later. Tag parameter is passed through.

181.21.10 getNotificationSettings(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Requests the notification settings for this app.
Notes:

Use this method to determine the user interactions and notification-related features that your app is authorized to use. You might then use this information to enable or disable specific notification-related features of your app.
When the user initially grants authorization to your app, the system gives your app a set of default notification-related settings. The user may change those settings at any time to enable or disable specific capabilities. For example, the user might disable the playing of sounds when a notification arrives.

Calls getNotificationSettingsCompleted event later. Tag parameter is passed through.

181.21.11 getPendingNotificationRequests(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns a list of all notification requests that are scheduled and waiting to be delivered.
Notes:

This method executes asynchronously, returning immediately and executing the provided block on a secondary thread when the results are available.

Calls getPendingNotificationRequestsCompleted event later. Tag parameter is passed through.

181.21.12 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Removes all of the app's delivered notifications from Notification Center.
Notes: Use this method to remove all of your app's delivered notifications from Notification Center. The method executes asynchronously, returning immediately and removing the identifiers on a background thread. This method does not affect any notification requests that are scheduled, but have not yet been delivered.

181.21.13 removeAllPendingNotificationRequests

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Unschedules all pending notification requests.
Notes: This method executes asynchronously, removing all pending notification requests on a secondary

thread.

181.21.14 removeDeliveredNotifications(identifiers() as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Removes the specified notification requests from Notification Center.
Notes:

identifiers: An array of strings, each of which corresponds to a value in the identifier property of a UNNotificationRequestMBS object. This method ignores the identifiers of requests whose notifications are not currently displayed in Notification Center.

Use this method to selectively remove notifications that you no longer want displayed in Notification Center. The method executes asynchronously, returning immediately and removing the specified notifications on a background thread.

181.21.15 removePendingNotificationRequests(identifiers() as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Unschedules the specified notification requests.
Notes:

identifiers: An array of strings, each of which contains the identifier of an active UNNotificationRequestMBS object. If the identifier belongs to a non repeating request, and the trigger condition for that request has already been met, this method ignores the identifier.

This method executes asynchronously, removing the pending notification requests on a secondary thread.

181.21.16 requestAuthorization(options as integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Requests authorization to interact with the user when local and remote notifications are delivered to the user's device.
Notes:

options: The authorization options your app is requesting. You may combine the available constants to request authorization for multiple items. Request only the authorization options that you plan to use. For a list of possible values, see UNAuthorizationOptions.

Calls requestAuthorizationCompleted event later. The tag parameter is passed through.

If your app's local or remote notifications involve user interactions, you must request authorization for the system to perfom those interactions on your app's behalf. Interactions include displaying an alert, playing a sound, or badging the app's icon.

Always call this method before scheduling any local notifications and before registering with the Apple Push Notification service. Typically, you call this method at launch time when configuring your app's notification support.

The first time your app ever calls the method, the system prompts the user to authorize the requested interactions. The user may grant or deny authorization, and the system stores the user's response so that subsequent calls to this method do not prompt the user again. After determining the authorization status, the user notification center object executes the block in the completionHandler parameter. Use that block to make any adjustments to your app's behavior. For example, if authorization was denied, you might notify a remote notification server not to send notifications to the user's device.

The user may change the allowed interactions at any time in system settings. Use the getNotificationSettings method to determine what interactions are currently allowed for your app.

181.21.17 setNotificationCategories(categories() as UNNotificationCategoryMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Registers your app's notification types and the custom actions that they support.
Notes:

categories: A set of UNNotificationCategoryMBS objects, each of which contains the actions that are displayed with the notification interface. This parameter must contain all of your app's supported categories.

Call this method at launch time to register your app's actionable notification types. This method registers all of your categories at once, replacing any previously registered categories with the new ones in the categories parameter. Typically, you call this method only once.

Each object in the categories parameter contains a string for identifying the notification's type. It also contains one or more custom actions that the user may perform in response to notifications of that type. When the system displays an alert for a notification, it looks in the notification payload for one of the identifier strings from your category objects. If it finds one, it adds user-selectable buttons for each action associated with that category object. Tapping a button notifies your app of the selected action, without bringing your app to the foreground.

181.21.18 Properties

181.21.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

181.21.20 supportsContentExtensions as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the current device supports notification content extensions.
Notes:

Notification content extensions let you customize the appearance of the alerts displayed for your app's notifications. The value of this property is YES for devices that support notification content extensions and NO for devices that do not support them.
(Read only property)

181.21.21 Events

181.21.22 addNotificationRequestCompleted(request as UNNotificationRequestMBS, error as NSErrorMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by addNotificationRequest method when completed.
Notes: error: An error object indicating whether a problem occurred. If the notification was scheduled successfully, this parameter is nil; otherwise, it is set to an error object indicating the reason for the failure.

181.21.23 didReceiveNotificationResponse(response as UNNotificationResponseMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Asks you to process the user's response to a delivered notification.
Notes:

response: The user's response to the notification. This object contains the original notification and the identifier string for the selected action. If the action allowed the user to provide a textual response, this

parameter contains a UNTextInputNotificationResponseMBS object.

Use this method to process the user's response to a notification. If the user selected one of your app's custom actions, the response parameter contains the identifier for that action. (The response can also indicate that the user dismissed the notification interface, or launched your app, without selecting a custom action.) At the end of your implementation, call the completionHandler block to let the system know that you are done processing the user's response. If you do not implement this method, your app never responds to custom actions.

You specify your app's notification types at app launch using UNNotificationCategoryMBS objects, and you specify the custom actions for each type using UNNotificationActionMBS objects.

181.21.24 getDeliveredNotificationsCompleted(notifications() as UNNotificationMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getDeliveredNotifications method.
Notes: notifications: An array of UNNotificationMBS objects representing the local and remote notifications of your app that have been delivered and are still visible in Notification Center. If none of your app's notifications are visible in Notification Center, the array is empty.

181.21.25 getNotificationCategoriesCompleted(categories() as UNNotificationCategoryMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getNotificationCategories method later.
Notes: categories: The array of UNNotificationCategoryMBS objects containing your registered notification types. If your app has not yet registered any categories, this parameter is an empty set.

181.21.26 getNotificationSettingsCompleted(settings as UNNotificationSettingsMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getNotificationSettings when finished.

181.21.27 getPendingNotificationRequestsCompleted(requests() as UNNotificationRequestMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getPendingNotificationRequests method.
Notes: requests: An array of UNNotificationRequestMBS objects representing the scheduled notification requests. If there are no scheduled requests, this array is empty.

181.21.28 openSettingsForNotification(notification as UNNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Asks the delegate to display the in-app notification settings.

181.21.29 requestAuthorizationCompleted(granted as boolean, error as NSErrorMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by requestAuthorization method when completed.
Notes:

granted: A Boolean value indicating whether authorization was granted. The value of this parameter is YES when authorization was granted for one or more options. The value is false when authorization is denied for all options.
error: An object containing error information or nil if no error occurred.

181.21.30 willPresentNotification(notification as UNNotificationMBS, byref options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Asks you how to handle a notification that arrived while the app was running in the foreground.
Notes:

notification: The notification that is about to be delivered. Use the information in this object to determine an appropriate course of action. For example, you might use the information to update your app's interface.

options
The option for notifying the user. Specify NotificationPresentationOptionNone to silence the notification completely. Specify other values to interact with the user. For a list of possible options, see constants.

If your app is in the foreground when a notification arrives, the shared user notification center calls this method to deliver the notification directly to your app. If you implement this method, you can take whatever actions are necessary to process the notification and update your app. When you finish, call the completionHandler block and specify how you want the system to alert the user, if at all.
If your event does not implement this method, the system behaves as if you had passed the UNNotificationPresentationOptionNone option to the completionHandler block. If you do not provide a delegate at all for the UNUserNotificationCenterMBS object, the system uses the notification's original options to alert the user.

181.21.31 Constants

181.21.32 AuthorizationOptionAlert = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to display alerts.

181.21.33 AuthorizationOptionAnnouncement = 128

MBS MacFrameworks Plugin, Plugin Version: 20.5.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability for Siri to automatically read out messages over AirPods.

181.21.34 AuthorizationOptionBadge = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to update the app's badge.

181.21.35 AuthorizationOptionCarPlay = 8

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to display notifications in a CarPlay environment.

181.21.36 AuthorizationOptionCriticalAlert = 16

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes:

The ability to play sounds for critical alerts.
Critical alerts ignore the mute switch and Do Not Disturb; the system plays a critical alert's sound regardless of the device's mute or Do Not Disturb settings. You can specify a custom sound and volume.
Critical alerts require a special entitlement issued by Apple.

181.21.37 AuthorizationOptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: No options.

181.21.38 AuthorizationOptionProvidesAppNotificationSettings = 32

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: An option indicating the system should display a button for in-app notification settings.

181.21.39 AuthorizationOptionProvisional = 64

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to post noninterrupting notifications provisionally to the Notification Center.

181.21.40 AuthorizationOptionSound = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to play sounds.

181.21.41 NotificationPresentationOptionAlert = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: Display the alert using the content provided by the notification.

181.21.42 NotificationPresentationOptionBadge = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes:

Apply the notification's badge value to the app's icon.
for MacOS 11.0 or newer, please use NotificationPresentationOptionBanner + NotificationPresentationOptionList + NotificationPresentationOptionBadge.

181.21.43 NotificationPresentationOptionBanner = 16

MBS MacFrameworks Plugin, Plugin Version: 20.5.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: New for macOS 11.0

181.21.44 NotificationPresentationOptionList = 8

MBS MacFrameworks Plugin, Plugin Version: 20.5.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: New for macOS 11.0

181.21.45 NotificationPresentationOptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes:

No alert.
Specify this constant when you want to silence any user interactions for a notification.

181.21.46 NotificationPresentationOptionSound = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: Play the sound associated with the notification.

181.22 class WinUserNotificationCenterMBS

181.22.1 class WinUserNotificationCenterMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the window notification center.

181.22.2 Blog Entries

- MBS Xojo Plugins, version 18.3pr1

181.22.3 Methods

181.22.4 Available as Boolean

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this Windows version has required functions.
Notes: Returns true on Windows 8.1 and Windows 10.

181.22.5 configureAUMI(Company as String, Name as String, SurName as String, VersionInfo as String) as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Configures the AppUserModelID for Constructor.
Notes:

Concats strings with dot between.
Please be aware of maximum ID length of 128 characters.

181.22.6 Constructor(appName as string, aumi as string)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Please pass your AppUserModelID and application name.

181.22.7 Destructor

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

181.22.8 HideNotification(notification as WinUserNotificationMBS) as boolean

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hides a notification.
Notes: Returns true on success.

181.22.9 Setting as Integer

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value that tells you whether there is an app, user, or system block that prevents the display of a toast notification.
Notes:

Returns Enabled value, if you can show notifications.

When toast notifications have been disabled at more than one level, this property value reflects the setting with the largest scope. Precedence is as follows, from largest scope to smallest:

DisabledByManifest
DisabledByGroupPolicy
DisabledForUser
DisabledForApplication

If toast notifications have been disabled both by the user and by group policy, this property returns DisabledByGroupPolicy.

181.22.10 ShowNotification(notification as WinUserNotificationMBS) as boolean

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows a notification.
Notes: Returns true on success.

181.22.11 Properties

181.22.12 appName as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The application name used.
Notes: (Read only property)

181.22.13 aumi as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique id.
Notes: (Read only property)

181.22.14 Handle as Integer

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object handle.
Notes: (Read only property)

181.22.15 Events

181.22.16 Activated(Notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: .

Function: The notification was activated.

181.22.17 Dismissed(Notification as WinUserNotificationMBS, Reason as Integer)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: .

Function: The notification was dismissed.
Notes: See DismissalReason* constants.

181.22.18 Failed(Notification as WinUserNotificationMBS, ErrorCode as Integer)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: .

Function: Called when notification failed.

181.22.19 Constants

181.22.20 DismissalReasonApplicationHidden = 1

MBS Win Plugin, Plugin Version: 17.2.

Function: One of the dismissal reasons.
Notes: The application hid the notification using hide method.

181.22.21 DismissalReasonTimedOut = 2

MBS Win Plugin, Plugin Version: 17.2.

Function: One of the dismissal reasons.
Notes: The notification has expired.

181.22.22 DismissalReasonUserCanceled = 0

MBS Win Plugin, Plugin Version: 17.2.

Function: One of the dismissal reasons.
Notes: The user dismissed the notification.

181.22.23 SettingDisabledByGroupPolicy = 3

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: An administrator has disabled all notifications on this computer through group policy. The group policy setting overrides the user's setting.

181.22.24 SettingDisabledByManifest = 4

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: This app has not declared itself toast capable in its package.appxmanifest file. This setting is found on the manifest's Application UI page, under the Notification section. For an app to send toast, the Toast Capable option must be set to "Yes".

181.22.25 SettingDisabledForApplication = 1

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: The user has disabled notifications for this app.

181.22.26 SettingDisabledForUser = 2

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: The user or administrator has disabled all notifications for this user on this computer.

181.22.27 SettingEnabled = 0

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: All notifications raised by this app can be displayed.

181.23 class WinUserNotificationMBS

181.23.1 class WinUserNotificationMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the notification.
Example:

```
dim n as new WinUserNotificationMBS

n.Image = "C:\test.png"
n.text(0) = "Hello World"
n.text(1) = "Greetings from Xojo"
```

181.23.2 Blog Entries

- 15.4, page 8: News

181.23.4 Properties

181.23.5 Image as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The image file path.
Notes:

Leave empty if you don't need a picture.

May not be a network path as system needs to load it independent of your permissions.
Maybe better use image coming with application or put one in temp folder.
(Read and Write property)

181.23.6 Text as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text to display.
Notes:

Same as text(0).
(Read and Write property)
See also:

- 181.23.8 Text(Index as Integer) as String 23940

181.23.7 XMLUsed as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The XML template used.
Notes:

For debugging.
(Read only property)

181.23.8 Text(Index as Integer) as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text lines to display.
Notes:

Index from 0 to 2.
(Read and Write computed property)

- 181.23.6 Text as String 23940

Chapter 182

Vision

182.1 module VisionModuleMBS

182.1.1 module VisionModuleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The Vision module.
Notes:

Global declarations for the Vision framework on MacOS.
Requires MacOS 10.13 or newer.

182.1.2 Blog Entries

- Vision Framework for Xojo

182.1.3 Methods

182.1.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether the Vision module is available.
Notes: Returns true on MacOS 10.13 or newer.

182.1.5 ElementSize(ElementType as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries byte size of an element type.
Notes:

Returns 4 for floats and 8 for double.
Otherwise returns zero.

182.1.6 ImagePointForNormalizedPoint(normalizedPoint as CGPointMBS, imageWidth as Integer, imageHeight as Integer) as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Projects a point from normalized coordinate space into image coordinates.
Notes:

normalizedPoint: The input point, in normalized coordinate space.
imageWidth: The width of the image into whose coordinate space you're projecting the input point.
imageHeight: The height of the image into whose coordinate space you're projecting the input point.

Returns the input point projected into image coordinates.

The resulting point in image coordinate space may have nonintegral (floating-point) coordinates.

182.1.7 ImageRectForNormalizedRect(normalizedRect as CGRectMBS, imageWidth as Integer, imageHeight as Integer) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Projects a rectangle from normalized coordinate space into image coordinates.
Notes:

normalizedRect: The input rect, in normalized coordinate space.
imageWidth: The width of the image into whose coordinate space you're projecting the input rect.
imageHeight: The height of the image into whose coordinate space you're projecting the input rect.

Returns the input rect projected into image (pixel) coordinates.

182.1.8 NormalizedIdentityRect as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The normalized identity rectangle with origin (0,0) and unit length and width.

182.1.9 NormalizedRectForImageRect(imageRect as CGRectMBS, imageWidth as Integer, imageHeight as Integer) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Normalizes a rectangle from image coordinates.
Notes:

imageRect: The input rect, in image coordinate space.
imageWidth: The width of the image in whose coordinates the input rect resides.
imageHeight: The height of the image in whose coordinates the input rect resides.

Returns the input rect projected into normalized coordinates.

182.1.10 NormalizedRectIsIdentityRect(rect as CGRectMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns true if the rectangle has origin (0,0) and unit length and width.
Notes:

normalizedRect: Normalized input rect to test for identity.

Returns a Boolean value that indicates whether the input normalized rect is the identity rect.

182.1.11 VNErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The domain for NSError objects produced by Vision framework methods.

182.1.12 Properties

182.1.13 VersionNumber as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current version number of the Vision framework.
Notes: (Read only property)

182.1.14 Constants

182.1.15 VNErrorDataUnavailable = 17

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying unavailable data.

182.1.16 VNErrorInternalError = 9

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an error internal to the Vision system.

182.1.17 VNErrorInvalidArgument = 14

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid parameter passed to a Vision request.

182.1.18 VNErrorInvalidFormat = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid image format.

182.1.19 VNErrorInvalidImage = 13

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying a problematic image.

182.1.20 VNErrorInvalidModel = 15

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid model.

182.1.21 VNErrorInvalidOperation = 12

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an unsupported operation for a Vision request.

182.1.22 VNErrorInvalidOption = 5

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid option in a Vision request.

182.1.23 VNErrorIOError = 6

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an input or output error for an image, image sequence, or Core ML model.

182.1.24 VNErrorMissingOption = 7

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying that a Vision request is missing a required option.

182.1.25 VNErrorNotImplemented = 8

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying a method not implemented in the underlying model.

182.1.26 VNErrorOK = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying no error.

182.1.27 VNErrorOperationFailed = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying that a request operation failed.

182.1.28 VNErrorOutOfBoundsError = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an out-of-bounds access.

182.1.29 VNErrorOutOfMemory = 10

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying insufficient memory to complete a Vision request.

182.1.30 VNErrorRequestCancelled = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying a canceled Vision request.

182.1.31 VNErrorUnknownError = 11

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an unidentifiable error.

182.1.32 VNErrorUnsupportedRevision = 16

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an unsupported revision number.

182.1.33 Delegates

182.1.34 VNPerformRequestsCompletedMBS(Requests() as VNRequestMBS, result as boolean, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for completed event calls.
Notes: You declare a method with (Requests() as VNRequestMBS, result as boolean, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin method. Later the plugin may invoke the delegate and call your method.

182.1.35 VNProgressHandlerMBS(Request as VNRequestMBS, fractionCompleted as double, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for progress event calls.
Notes: You declare a method with (Request as VNRequestMBS, fractionCompleted as double, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin

method. Later the plugin may invoke the delegate and call your method.

182.1.36 VNRequestCompletedMBS(Request as VNRequestMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for completed event calls.
Notes: You declare a method with (Request as VNRequestMBS, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin method. Later the plugin may invoke the delegate and call your method.

182.2 class VNBarcodeObservationMBS

182.2.1 class VNBarcodeObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Barcode information detected by an image analysis request.
Notes:

This type of observation results from a VNDetectBarcodesRequest. It contains information about the detected barcode, including parsed payload data for supported symbology.
Available on MacOS 10.13 or newer.
Subclass of the VNRectangleObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.2.2 Blog Entries

- Vision Framework for Xojo

182.2.3 Methods

182.2.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.2.5 VNBarcodeSymbologyAztec as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Aztec code recognition.

182.2.6 VNBarcodeSymbologyCode128 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 128 barcode recognition.

182.2.7 VNBarcodeSymbologyCode39 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 39 barcode recognition.

182.2.8 VNBarcodeSymbologyCode39Checksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in standard Code 39 with checksum.

182.2.9 VNBarcodeSymbologyCode39FullASCII as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in full ASCII Code 39.

182.2.10 VNBarcodeSymbologyCode39FullASCIIChecksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in full ASCII Code 39 with checksum.

182.2.11 VNBarcodeSymbologyCode93 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 93 barcode recognition.

182.2.12 VNBarcodeSymbologyCode93i as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 93i barcode recognition.

182.2.13 VNBarcodeSymbologyDataMatrix as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Data Matrix barcode recognition.

182.2.14 VNBarcodeSymbologyEAN13 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for EAN-13 barcode recognition.

182.2.15 VNBarcodeSymbologyEAN8 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for EAN-8 barcode recognition.

182.2.16 VNBarcodeSymbologyI2of5 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Interleaved 2 of 5 (ITF) barcode recognition.

182.2.17 VNBarcodeSymbologyI2of5Checksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in Interleaved 2 of 5 (ITF) with checksum.

182.2.18 VNBarcodeSymbologyITF14 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for ITF-14 barcode recognition.

182.2.19 VNBarcodeSymbologyPDF417 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for PDF417 barcode recognition.

182.2.20 VNBarcodeSymbologyQR as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for QR code recognition.

182.2.21 VNBarcodeSymbologyUPCE as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for UPC-E barcode recognition.

182.2.22 Properties

182.2.23 barcodeDescriptor as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A CIBarcodeDescriptorMBS object with low-level details about the barcode and its data.
Notes:

This object is sufficient for Core Image to regenerate the observed barcode.
(Read only property)

182.2.24 payloadStringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The string representation of the barcode's payload.
Notes:

Depending on the symbology of the barcode or the payload data itself, a string representation of the payload may not be available.
(Read only property)

182.2.25 symbology as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The symbology of the observed barcode.
Notes:

To detect specific barcode symbologies in a Vision request, add the corresponding VNBarcodeSymbology to the supportedSymbologies property of your VNDetectBarcodesRequestMBS.
(Read only property)

182.3 class VNClassificationObservationMBS

182.3.1 class VNClassificationObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Classification information produced by an image analysis request.
Notes:

This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is classification (rather than prediction or image-to-image processing). Vision infers that an MLModel object is a classifier model if that model predicts a single feature. That is, the model's modelDescription object has a non-nil value for its predictedFeatureName property.
Subclass of the VNObservationMBS class.

182.3.2 Blog Entries

- Vision Framework for Xojo

182.3.3 Methods

182.3.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.3.5 hasMinimumPrecision(minimumPrecision as single, recall as single) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determines whether the observation for a specific recall has a minimum precision value.
Notes:

minimumPrecision: The minimum percentage of classification results that are relevant.
recall: The percentage of relevant results that the algorithm correctly classified.

Returns a Boolean indicating whether or not this classification observation provides a minimum percentage of relevant results that meet the desired recall criterion.

182.3.6 hasMinimumRecall(minimumRecall as single, precision as single) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determines whether the observation for a specific precision has a minimum recall value.
Notes:

minimumRecall: The minimum percentage of relevant results that the algorithm correctly classified.
precision: The percentage of classification results that are relevant.

Returns a Boolean indicating whether or not this classification observation provides a minimum percentage of relevant results that meet the desired precision criterion.

182.3.7 Properties

182.3.8 hasPrecisionRecallCurve as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable indicating whether the observation contains precision and recall curves.
Notes:

Precision refers to the percentage of your classification results that are relevant, while recall refers to the percentage of total relevant results correctly classified.
If this property is true, then you can call precision and recall-related methods in this observation. If this property is false, then the precision and recall-related methods won't return meaningful data.
(Read only property)

182.3.9 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Classification label identifying the type of observation.
Notes:

An example classification could be a string like cat or hotdog. The model used for the classification defines the domain of strings that may result. Usually, these strings are unlocalized technical labels not meant for direct presentation to the end user.
(Read only property)

182.4 class VNClassifyImageRequestMBS

182.4.1 class VNClassifyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to classify an image.
Notes:

This type of request produces a collection of VNClassificationObservationMBS objects that describe an image. Access the classifications through knownClassificationsForRevision function.

Available on MacOS 10.15 or newer.
Subclass of the VNImageBasedRequestMBS class.

182.4.2 Blog Entries

- Vision Framework for Xojo

182.4.3 Methods

182.4.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.4.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.4.6 knownClassificationsForRevision(requestRevision as Integer = 1, byref error as NSErrorMBS) as VNClassificationObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests the collection of classifications that the Vision framework recognizes.
Notes:

requestRevision: The revision of the request for which classifications should be reported.
error: The address of the error variable to populate should the call fail.

Returns an array of classifications for the given revision, or nil if an error occurred.

182.5 class VNCoreMLFeatureValueObservationMBS

182.5.1 class VNCoreMLFeatureValueObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of key-value information produced by a Core ML image analysis request.
Notes:

This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is prediction rather than classification or image-to-image processing.
Vision infers that an MLModel object is a predictor model if that model predicts multiple features. You can tell that a model predicts multiple features when its modelDescription object has a nil value for its predictedFeatureName property, or when it inserts its output in an outputDescriptionsByName dictionary.
Subclass of the VNObservationMBS class.

182.5.2 Blog Entries

- Vision Framework for Xojo

182.5.3 Methods

182.5.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.5.5 Properties

182.5.6 featureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name used in the model description of the CoreML model that produced this observation.
Notes: (Read only property)

182.5.7 featureValue as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The feature result of a VNCoreMLRequestMBS that outputs neither a classification nor an image.
Notes:

Refer to Core ML documentation and the model itself to learn about proper handling of the content.
Value is a MLFeatureValueMBS object.
(Read only property)

182.6 class VNCoreMLModelMBS

182.6.1 class VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A container for a Core ML model used with Vision requests.
Notes: A Core ML model encapsulates the information trained from a data set used to drive Vision recognition requests. See Getting a Core ML Model for instructions on training your own. Once you have the trained model, use this class to initialize a VNCoreMLRequestMBS for identification.

182.6.2 Blog Entries

- Vision Framework for Xojo

182.6.3 Methods

182.6.4 Constructor(MLModel as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a model container to be used with VNCoreMLRequestMBS.
Notes:

Please pass MLModelMBS object.

This method may fail if Vision does not support the created CoreML model. For example, a model that does not accept an image as any of its inputs will yield an VNErrorInvalidModel error.

182.6.5 modelForMLModel(MLModel as Variant) as VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a model container to be used with VNCoreMLRequestMBS.
Notes:

Please pass MLModelMBS object.

This method may fail if Vision does not support the created CoreML model. For example, a model that does not accept an image as any of its inputs will yield an VNErrorInvalidModel error.

182.6.6 Properties

182.6.7 featureProvider as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An optional object to support inputs outside Vision.
Notes:

An MLFeatureProviderMBS object.

This optional object conforms to the MLFeatureProvider protocol that the model uses to predict inputs that are not supplied by Vision. Vision provides the MLModel with the image for the inputImageFeatureName via the VNRequestHandlerMBS.
A feature provider is necessary for models that have more than one required input. Models with only one image input won't use the feature provider.

Available on MacOS 10.15 or newer.
(Read only property)

182.6.8 inputImageFeatureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name of the MLFeatureValueMBS that Vision sets from the request handler.
Notes:

By default, Vision uses the first input found, but you can manually set that input to another featureName instead.
(Read and Write property)

182.7 class VNCoreMLRequestMBS

182.7.1 class VNCoreMLRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that uses a Core ML model to process images.
Notes:

The results array of a Core ML-based image analysis request contains a different observation type depending on the kind of MLModel object you create the request with:

- If the model predicts a single feature (that is, the model's modelDescription object has a non-nil value for its predictedFeatureName property), Vision treats that model as a classifier: the results are VNClassificationObservationMBS objects.
- If the model's outputs include at least one output whose feature type is MLFeatureTypeImage, Vision treats that model as an image-to-image model: the results are VNPixelBufferObservationMBS objects.
- Otherwise, Vision treats the model as a general predictor model: the results are VNCoreMLFeatureValueObservationMBS objects.

Subclass of the VNImageBasedRequestMBS class.

182.7.2 Blog Entries

- Vision Framework for Xojo

182.7.3 Methods

182.7.4 Constructor(model as VNCoreMLModelMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.7.5 Properties

182.7.6 imageCropAndScaleOption as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determine what type of croping and scaling action should be applied to the image before generating the feature print.
Notes:

The default value for this property is VNImageCropAndScaleOptionScaleFill.
(Read and Write property)

182.7.7 model as VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The Core ML model on which the request is based, wrapped in a VNCoreMLModel.
Notes: (Read only property)

182.7.8 Constants

182.7.9 VNImageCropAndScaleOptionCenterCrop = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that maintains aspect ratio to fit the short side, and crops the centered image on its long side.

182.7.10 VNImageCropAndScaleOptionScaleFill = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that scales an image proportionally so that its shorter dimension fills the canvas, potentially cropping along the longer dimension.

182.7.11 VNImageCropAndScaleOptionScaleFit = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes:

An option that scales an image to fit the input image dimensions while maintaining aspect ratio.
This option ensures the entire image fits into the Vision algorithm's input image dimensions by scaling down the longer dimension until it fits. This option pads the image along the shorter dimension to maintain aspect ratio.

182.8 class VNDetectBarcodesRequestMBS

182.8.1 class VNDetectBarcodesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds and recognizes barcodes in an image.
Notes:

By default, a barcode request first locates all barcodes in the input image, then analyzes each to decode payload. To specify or limit the types of barcodes sought in the request, set the symbologies property to an array of barcode types you would like to support.
Subclass of the VNImageBasedRequestMBS class.

182.8.2 Blog Entries

- Vision Framework for Xojo

182.8.3 Methods

182.8.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.8.5 setSymbologies(symbologies() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of symbologies that Vision should detect in the image.
Notes: Use this array to specify or restrict the types of symbols you want the Vision algorithm to detect. The default value leads Vision to scan for all possible symbologies.

182.8.6 supportedSymbologies as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNBarcodeSymbology objects describing the symbologies that Vision currently supports.
Notes: Calling this method could be an expensive operation.

182.8.7 symbologies as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of symbologies that Vision should detect in the image.
Notes: Use this array to specify or restrict the types of symbols you want the Vision algorithm to detect. The default value leads Vision to scan for all possible symbologies.

182.9 class VNDetectedObjectObservationMBS

182.9.1 class VNDetectedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis result that provides the position and extent of a detected image feature.
Notes:

This type of observation results from a VNTrackObjectRequestMBS. It represents a detected object that the Vision request should track.
Subclass of the VNObservationMBS class.

182.9.2 Blog Entries

- Vision Framework for Xojo

182.9.3 Methods

182.9.4 Constructor(boundingBox as CGRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a detected object observation based on bounding box coordinates.
Notes: boundingBox: The observation's bounding box, in coordinates normalized to the dimensions of the processed image, with its origin at the image's lower-left corner.
See also:

- 182.9.5 Constructor(requestRevision as Integer, boundingBox as CGRectMBS) 23967

182.9.5 Constructor(requestRevision as Integer, boundingBox as CGRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a detected object observation with the specified revision number and bounding box coordinates.
See also:

- 182.9.4 Constructor(boundingBox as CGRectMBS) 23967

182.9.6 Properties

182.9.7 boundingBox as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The bounding box of the detected object.
Notes:

The coordinates are normalized to the dimensions of the processed image, with the origin at the image's lower-left corner.
(Read only property)

182.10 class VNDetectFaceCaptureQualityRequestMBS

182.10.1 class VNDetectFaceCaptureQualityRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that produces a floating-point number representing the capture quality of a given face in a photo.
Notes:

This request produces or updates a VNFaceObservationMBS object's property faceCaptureQuality with a floating-point value. The float will be a value between 0 and 1. Faces with quality closer to 1 are better lit, sharper, and centrally positioned than faces with quality closer to 0. If the request fails, or the face observation has never been processed, the property faceCaptureQuality will be nil.
Subclass of the VNImageBasedRequestMBS class.

182.10.2 Blog Entries

- Vision Framework for Xojo

182.10.3 Methods

182.10.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.10.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.10.6 inputFaceObservations as VNFaceObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNFaceObservation objects to process as part of the request.

182.10.7 setInputFaceObservations(faces() as VNFaceObservationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of VNFaceObservation objects to process as part of the request.

182.11 class VNDetectFaceLandmarksRequestMBS

182.11.1 class VNDetectFaceLandmarksRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds facial features (such as the eyes and mouth) in an image.
Notes:

By default, a face landmarks request first locates all faces in the input image, then analyzes each to detect facial features.
If you've already located all the faces in an image, or want to detect landmarks in only a subset of the faces in the image, set the inputFaceObservations property to an array of VNFaceObservationMBS objects representing the faces you want to analyze. (You can either use face observations output by a VNDetectFaceRectanglesRequestMBS or manually create VNFaceObservation instances with the bounding boxes of the faces you want to analyze.)
Subclass of the VNImageBasedRequestMBS class.

182.11.2 Blog Entries

- Vision Framework for Xojo

182.11.3 Methods

182.11.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.11.5 inputFaceObservations as VNFaceObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNFaceObservation objects to process as part of the request.

182.11.6 setInputFaceObservations(faces() as VNFaceObservationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of VNFaceObservation objects to process as part of the request.

182.11.7 supportsConstellation(requestRevision as Integer = 1, constellation as Integer) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable that indicates whether the Vision framework supports a given constellation type for a given request revision.

182.11.8 Properties

182.11.9 constellation as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A variable describing how a face landmarks request orders or enumerates the resulting features.
Notes:

Set this variable to one of the supported constellation types detailed in VNRequestFaceLandmarksConstellation. The default value is VNRequestFaceLandmarksConstellationNotDefined.
(Read and Write property)

182.11.10 Constants

182.11.11 VNRequestFaceLandmarksConstellation65Points = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants of face landmarks in a constellation object.
Notes: A constellation with 65 points.

182.11.12 VNRequestFaceLandmarksConstellation76Points = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants of face landmarks in a constellation object.
Notes: A constellation with 76 points.

182.11.13 VNRequestFaceLandmarksConstellationNotDefined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants of face landmarks in a constellation object.
Notes: An undefined constellation.

182.12 class VNDetectFaceRectanglesRequestMBS

182.12.1 class VNDetectFaceRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds faces within an image.
Notes:

This request returns faces as rectangular bounding boxes with origin and size.
Subclass of the VNImageBasedRequestMBS class.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.13 class VNDetectHorizonRequestMBS

182.13.1 class VNDetectHorizonRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the horizon angle in an image.
Notes:

This request returns the horizon angle detected in an image.
Subclass of the VNImageBasedRequestMBS class.

182.13.2 Blog Entries

- Vision Framework for Xojo

182.13.3 Methods

182.13.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.14 class VNDetectHumanRectanglesRequestMBS

182.14.1 class VNDetectHumanRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds rectangular regions containing humans in an image.
Notes: Subclass of the VNImageBasedRequestMBS class.

182.14.2 Blog Entries

- Vision Framework for Xojo

182.14.3 Methods

182.14.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.15 class VNDetectRectanglesRequestMBS

182.15.1 class VNDetectRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds projected rectangular regions in an image.
Notes:

A rectangle detection request locates regions of an image with rectangular shape, like credit cards, business cards, documents, and signs. The request returns its observations in the form of VNRectangleObservationMBS objects, which contain normalized coordinates of bounding boxes containing the rectangle.
Use this type of request to find the bounding boxes of rectangles in an image. Vision returns observations for rectangles found in all orientations and sizes, along with a confidence level to indicate how likely it is that the observation contains an actual rectangle.
To further configure or restrict the types of rectangles found, set properties on the request specifying a range of aspect ratios, sizes, and quadrature tolerance.
Subclass of the VNImageBasedRequestMBS class.

182.15.2 Blog Entries

- Vision Framework for Xojo

182.15.3 Methods

182.15.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.15.5 Properties

182.15.6 maximumAspectRatio as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the maximum aspect ratio of the rectangle to detect, defined as the shorter dimension over the longer dimension.
Notes:

The value should range from 0.0 to 1.0, inclusive. The default value is 0.5.
(Read and Write property)

182.15.7 maximumObservations as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An integer specifying the maximum number of rectangles Vision returns.
Notes:

The default value is 1.
Setting this property to 0 allows Vision algorithms to return an unlimited number of observations.
(Read and Write property)

182.15.8 minimumAspectRatio as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the minimum aspect ratio of the rectangle to detect, defined as the shorter dimension over the longer dimension.
Notes:

The value should range from 0.0 to 1.0, inclusive. The default value is 0.5.
(Read and Write property)

182.15.9 minimumConfidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value specifying the minimum acceptable confidence level.
Notes:

Vision won't return rectangles with a confidence score lower than the specified minimum.
The confidence score ranges from 0.0 to 1.0, inclusive, where 0.0 represents no confidence, and 1.0 represents full confidence.
(Read and Write property)

182.15.10 minimumSize as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the minimum size of the rectangle to be detected, as a proportion of the

smallest dimension.
Notes:

The value should range from 0.0 to 1.0 inclusive. The default minimum size is 0.2.
Any smaller rectangles that Vision may have detected aren't returned.
(Read and Write property)

182.15.11 quadratureTolerance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the number of degrees a rectangle corner angle can deviate from 90°.
Notes:

The tolerance value should range from 0 to 45, inclusive. The default tolerance is 30.
(Read and Write property)

182.16 class VNDetectTextRectanglesRequestMBS

182.16.1 class VNDetectTextRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds regions of visible text in an image.
Notes:

This request returns detected text characters as rectangular bounding boxes with origin and size.
Subclass of the VNImageBasedRequestMBS class.

182.16.2 Blog Entries

- Vision Framework for Xojo

182.16.3 Methods

182.16.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.16.5 Properties

182.16.6 reportCharacterBoxes as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable indicating interest in detecting character bounding boxes.
Notes:

Set to true to have the detector return character bounding boxes as an array of VNRectangleObservationMBS objects.
(Read and Write property)

182.17 class VNFaceLandmarkRegion2DMBS

182.17.1 class VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: 2D geometry information for a specific facial feature.
Notes:

This class represents the set of all facial landmark regions in 2D, exposed as properties.
Subclass of the VNFaceLandmarkRegionMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.17.2 Blog Entries

- Vision Framework for Xojo

182.17.3 Methods

182.17.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.17.5 normalizedPoints as CGPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A buffer in memory containing normalized landmark points.
Notes: Returns array with CGPointMBS representing landmark points.

182.17.6 pointsInImageOfSize(imageSize as CGSizeMBS) as CGPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A buffer in memory containing landmark points in the coordinate space of the specified image size.
Notes: imageSize: The pixel dimensions of the image in which to present landmark points.

182.17.7 precisionEstimatesPerPoint as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of precision estimates for each landmark point.
Notes: This property is only populated when you configure your VNDetectFaceLandmarksRequestMBS object with VNRequestFaceLandmarksConstellation76Points. For other constellation types, this array is set to nil.

182.18 class VNFaceLandmarkRegionMBS

182.18.1 class VNFaceLandmarkRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for information about a specific face landmark.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.18.2 Blog Entries

- Vision Framework for Xojo

182.18.3 Methods

182.18.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.18.5 copy as VNFaceLandmarkRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

182.18.6 Properties

182.18.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.18.8 pointCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of points in the face region.
Notes:

The value is zero if no points for a region could be found.
(Read only property)

182.18.9 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the VNRequest subclass used to generate the implementing object.
Notes: (Read only property)

182.19 class VNFaceLandmarks2DMBS

182.19.1 class VNFaceLandmarks2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of all facial features detected in a face observation, with 2D geometry information for each.
Notes:

This class represents the set of all detectable 2D face landmarks and regions, exposed as properties. The coordinates of the face landmarks are normalized to the dimensions of the face observation's boundingBox, with the origin at the bounding box's lower-left corner. Use the VNImagePointForFaceLandmarkPointMBS function to convert normalized face landmark points into absolute points within the image's coordinate system.
Subclass of the VNFaceLandmarksMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.19.3 Methods

182.19.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.19.5 Properties

182.19.6 allPoints as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing all face landmark points.
Notes: (Read only property)

182.19.7 faceContour as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the face contour from the left cheek, over the chin, to the right cheek.
Notes: (Read only property)

182.19.8 innerLips as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the space between the lips.
Notes: (Read only property)

182.19.9 leftEye as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the left eye.
Notes: (Read only property)

182.19.10 leftEyebrow as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the left eyebrow.
Notes: (Read only property)

182.19.11 leftPupil as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing the point where the left pupil is located.
Notes:

This value may be inaccurate if the eye is blinking.
(Read only property)

182.19.12 medianLine as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace a vertical line down the center of the face.
Notes: (Read only property)

182.19.13 nose as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the nose.
Notes: (Read only property)

182.19.14 noseCrest as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the center crest of the nose.
Notes: (Read only property)

182.19.15 outerLips as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the outside of the lips.
Notes: (Read only property)

182.19.16 rightEye as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the right eye.
Notes: (Read only property)

182.19.17 rightEyebrow as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the right eyebrow.
Notes: (Read only property)

182.19.18 rightPupil as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing the point where the right pupil is located.
Notes:

This value may be inaccurate if the eye is blinking.
(Read only property)

182.20 class VNFaceLandmarksMBS

182.20.1 class VNFaceLandmarksMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for containers of face landmark information.
Notes:

This class represents the set of all detectable facial landmarks and regions, exposed as properties.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.20.2 Blog Entries

- Vision Framework for Xojo

182.20.3 Methods

182.20.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.20.5 copy as VNFaceLandmarksMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

182.20.6 Properties

182.20.7 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A confidence estimate for the detected landmarks.
Notes:

A value of 0 indicates no confidence. A value of 1 indicates full confidence.
(Read only property)

182.20.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.20.9 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the VNRequestMBS subclass used to generate the implementing object.
Notes: (Read only property)

182.21 class VNFaceObservationMBS

182.21.1 class VNFaceObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Face or facial-feature information detected by an image analysis request.
Notes:

This type of observation results from a VNDetectFaceRectanglesRequestMBS. It contains information about facial landmarks and regions found in the image.
Subclass of the VNDetectedObjectObservationMBS class.

182.21.2 Blog Entries

- Vision Framework for Xojo

182.21.3 Methods

182.21.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.21.5 faceObservationWithRequestRevision(requestRevision as Integer = 2, boundingBox as CGRectMBS, roll as Variant, yaw as Variant) as VNFaceObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a face observation with the given revision number, bounding box, roll, and yaw.

182.21.6 Properties

182.21.7 faceCaptureQuality as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The capture quality of the face, normalized between 0.0 and 1.0.
Notes:

The capture quality of the face allows you to compare the quality of the face in terms of its capture attributes: lighting, blur, and prime positioning. Use this metric to compare the capture quality of a face against other captures of the same face in a given set. Faces with quality closer to 1.0 are better lit, sharper, and centrally positioned than faces with quality closer to 0.0.
(Read only property)

182.21.8 landmarks as VNFaceLandmarks2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The facial features found in the detected face.
Notes:

This property's value is nil for face observations produced by a VNDetectFaceRectanglesRequestMBS analysis. Use the VNDetectFaceLandmarksRequestMBS class to find facial features.
(Read only property)

182.21.9 roll as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The detected face's roll angle, as populated by the VNDetectFaceRectanglesRequestMBS.
Notes:

The roll is reported in radians. A positive angle corresponds to counterclockwise roll. The range is [-Pi, Pi). A nil value indicates that the roll angle hasn't been computed.
(Read only property)

182.21.10 yaw as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The detected face's yaw angle, as populated by the VNDetectFaceRectanglesRequestMBS.
Notes:

The yaw is reported in radians. A positive angle corresponds to counterclockwise roll. The range is [-Pi/2, Pi/2). A nil value indicates that the yaw angle hasn't been computed.
(Read only property)

182.22 class VNFeaturePrintObservationMBS

182.22.1 class VNFeaturePrintObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The observation resulting from a VNGenerateImageFeaturePrintRequestMBS.
Notes:

The observations returned from a VNGenerateImageFeaturePrintRequestMBS are of this class.
Subclass of the VNObservationMBS class.

182.22.2 Blog Entries

- Vision Framework for Xojo

182.22.3 Methods

182.22.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.22.5 computeDistance(byref outDistance as Single, featurePrint as VNFeaturePrintObservationMBS, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Computes the distance between two observations.
Notes: The larger the distance the more dissimlar the feature prints are. In case of an error this method returns false with an error describing the error condition, for instance comparing two non-comparable feature prints.

182.22.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.22.7 Values as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries values as a double array.
Notes: Floats are expanded to doubles for your convenience.

182.22.8 Properties

182.22.9 data as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The feature print data.
Notes:

The data is divided into separate elements. Determine the type of element using elementType, and the number of elements using elementCount.
(Read only property)

182.22.10 elementCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The total number of elements in the data.
Notes: (Read only property)

182.22.11 elementType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The type of each element in the data.
Notes: (Read only property)

182.22.12 Constants

182.22.13 ElementTypeDouble = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the element types.

Notes: The elements are double-precision floating-point numbers.

182.22.14 ElementTypeFloat = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the element types.
Notes: The elements are floating-point numbers.

182.22.15 ElementTypeUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the element types.
Notes: The element type isn't known.

182.23 class VNGenerateAttentionBasedSaliencyImageRequestMBS

182.23.1 class VNGenerateAttentionBasedSaliencyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Generates a heat map that identifies the parts of an image most likely to draw attention.
Notes:

The resulting observation, VNSaliencyImageObservationMBS, encodes this data as a heat map, which you can use to highlight regions of interest.
Subclass of the VNImageBasedRequestMBS class.

182.23.2 Blog Entries

- Vision Framework for Xojo

182.23.3 Methods

182.23.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.23.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.24 class VNGenerateImageFeaturePrintRequestMBS

182.24.1 class VNGenerateImageFeaturePrintRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image-based request to generate feature prints from an image.
Notes:

This request returns an array of feature print elements in the form of data wrapped in VNFeaturePrintObservationMBS objects.
Available in MacOS 10.15 or newer.
Subclass of the VNImageBasedRequestMBS class.

182.24.2 Blog Entries

- Vision Framework for Xojo

182.24.3 Methods

182.24.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.24.5 Properties

182.24.6 imageCropAndScaleOption as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determine what type of croping and scaling action should be applied to the image before generating the feature print.
Notes:

The default value for this property is VNImageCropAndScaleOptionScaleFill.
(Read and Write property)

182.24.7 Constants

182.24.8 VNImageCropAndScaleOptionCenterCrop = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that maintains aspect ratio to fit the short side, and crops the centered image on its long side.

182.24.9 VNImageCropAndScaleOptionScaleFill = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that scales an image proportionally so that its shorter dimension fills the canvas, potentially cropping along the longer dimension.

182.24.10 VNImageCropAndScaleOptionScaleFit = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes:

An option that scales an image to fit the input image dimensions while maintaining aspect ratio.
This option ensures the entire image fits into the Vision algorithm's input image dimensions by scaling down the longer dimension until it fits. This option pads the image along the shorter dimension to maintain aspect ratio.

182.25 class VNGenerateObjectnessBasedSaliencyImageRequestMBS

182.25.1 class VNGenerateObjectnessBasedSaliencyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Generates a heat map that identifies the parts of an image most likely to represent objects.
Notes:

The resulting observation, VNSaliencyImageObservationMBS, encodes this data as a heat map, which you can use to highlight regions of interest.
Subclass of the VNImageBasedRequestMBS class.

182.25.2 Blog Entries

- Vision Framework for Xojo

182.25.3 Methods

182.25.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.25.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.26 class VNHomographicImageRegistrationRequestMBS

182.26.1 class VNHomographicImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the perspective warp matrix needed to align the content of two images.
Notes:

Create and perform a homographic image registration request to align content in two images through a homography. A homography is an isomorphism of projected spaces, a bijection that maps lines to lines.
Requires MacOS 10.13 or newer.
Subclass of the VNImageRegistrationRequestMBS class.

182.26.2 Blog Entries

- Vision Framework for Xojo

182.26.3 Methods

182.26.4 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.27 class VNHorizonObservationMBS

182.27.1 class VNHorizonObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Horizon angle information detected by an image analysis request.
Notes:

Instances of this class result from invoking a VNDetectHorizonRequestMBS and report the angle and transform of the horizon in an image.
Subclass of the VNObservationMBS class.

182.27.2 Blog Entries

- Vision Framework for Xojo

182.27.3 Methods

182.27.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.27.5 Properties

182.27.6 angle as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Angle of the observed horizon.
Notes:

Use the angle to orient the image in an upright position and make the detected horizon level.
(Read only property)

182.27.7 transform as CGAffineTransformMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Transform applied to the detected horizon.
Notes:

Apply the transform's inverse to orient the image in an upright position and make the detected horizon level. (Read only property)

182.28 class VNImageAlignmentObservationMBS

182.28.1 class VNImageAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis results that describe the relative alignment of two images.
Notes:

This abstract superclass forms the basis of image alignment or registration output. You receive its subclasses, such as VNImageTranslationAlignmentObservationMBS and VNImageHomographicAlignmentObservationMBS, by performing specific registration requests. Don't create one of these classes yourself.
Subclass of the VNObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.28.2 Blog Entries

- Vision Framework for Xojo

182.28.3 Methods

182.28.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.29 class VNImageBasedRequestMBS

182.29.1 class VNImageBasedRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that focus on a specific part of an image.
Notes:

Other Vision request handlers that operate on still images inherit from this abstract base class. Don't use it directly.
Subclass of the VNRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.29.2 Blog Entries

- Vision Framework for Xojo

182.29.3 Methods

182.29.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.29.5 Properties

182.29.6 regionOfInterest as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region of the image in which Vision will perform the request.
Notes:

The rectangle is normalized to the dimensions of the processed image. Its origin is specified relative to the image's lower-left corner.

The default value is { { 0, 0 } , { 1, 1 } } .

Important
The request will fail to perform if you set this property to a rectangle outside the normalized coordinate

space.
(Read and Write property)

182.30 class VNImageHomographicAlignmentObservationMBS

182.30.1 class VNImageHomographicAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Perspective warp information produced by an image alignment request.
Notes:

This type of observation results from a VNHomographicImageRegistrationRequestMBS, informing the warpTransform performed to align the input images.
Subclass of the VNImageAlignmentObservationMBS class.

182.30.2 Blog Entries

- Vision Framework for Xojo

182.30.3 Methods

182.30.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.30.5 Properties

182.30.6 warpTransform as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The warp transform matrix to morph the floating image into the reference image.
Notes:

This is a 3x3 float matrix wrapped into a memoryblock.
(Read and Write property)

182.31 class VNImageRegistrationRequestMBS

182.31.1 class VNImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that align images based on their content.
Notes:

This abstract superclass forms the basis of image alignment or registration requests. Make specific requests through one of its subclasses, VNTranslationalImageRegistrationRequestMBS or VNHomographicImageRegistrationRequestMBS. Don't create an instance of this superclass yourself.
Subclass of the VNTargetedImageRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.31.2 Blog Entries

- Vision Framework for Xojo

182.31.3 Methods

182.31.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.32 class VNImageRequestHandlerMBS

182.32.1 class VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object that processes one or more image analysis requests pertaining to a single image.
Notes:

Instantiate this handler to perform Vision requests on a single image. You specify the image and, optionally, a completion handler at the time of creation, and call performRequests to begin executing the request.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.32.2 Blog Entries

- Vision Framework for Xojo

182.32.3 Methods

182.32.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.32.5 performRequests(requests() as VNRequestMBS, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules Vision requests to be performed.
Notes:

requests: A nonempty array of VNRequestMBS instances to perform.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. If the return value is false, check the error parameter.

The function returns after all requests have either completed or failed. Check individual requests and errors for their respective successes and failures.

182.32.6 performRequestsAsync(requests() as VNRequestMBS, DelegateHandler as VNPerformRequestsCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules Vision requests to be performed asynchronously in background.
Notes:

requests: A nonempty array of VNRequestMBS instances to perform.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. If the return value is false, check the error parameter.

The function returns immediately. Delegate will be called when finished.

182.32.7 RequestWithCGImage(CGImage as CGImageMBS, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a Core Graphics image.
Notes:

image: A CGImageMBS containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

182.32.8 RequestWithCIImage(CIImage as Variant, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on CIImage data.
Notes:

image: A CIImageMBS containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

182.32.9 RequestWithCVPixelBuffer(CVPixelBuffer as Variant, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a Core Video pixel buffer of a known orientation.
Notes:

pixelBuffer: A CVPixelBufferMBS containing the image to be used for performing the requests. Buffer contents can't be changed for the lifetime of the request handler.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

182.32.10 RequestWithData(Data as MemoryBlock, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on an image, contained in a memoryblock.
Notes:

imageData: Data containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

The intended use cases of this type of initializer include compressed images and network downloads, where a client may receive a JPEG from a website or the cloud.

182.32.11 RequestWithFile(File as FolderItem, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on an image, at the specified folderitem.
Notes:

File: A folderitem pointing to the image to be used for performing the requests. The image must be in a format supported by Image I/O. Image content is immutable.
orientation: The orientation of the input image. pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

182.32.12 RequestWithPicture(Picture as Picture, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a picture.
Notes:

image: A Picture containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

182.32.13 VNImageOptionCameraIntrinsics as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An option to specify the camera intrinstics as an MemoryBlock object representing a matrix_float3x3.
Notes:

see
https://developer.apple.com/documentation/vision/vnimageoptioncameraintrinsics?language=objc

182.32.14 VNImageOptionCIContext as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An option key to specify the CIContextMBS to be used in the handler's Core Image operations.
Notes:

If this key isn't specified, Vision will create its own CIContext.
Specify a CIContextMBS when you've used one in processing an input CIImageMBS or executing a CIFilterMBS chain, so you can save the cost of creating a new context.

182.32.15 VNImageOptionProperties as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The dictionary from CGImageSourceCopyPropertiesAtIndex containing metadata for algorithms like horizon detection.

182.32.16 Properties

182.32.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.32.18 Constants

182.32.19 kOrientationDown = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 180° from the image's intended display orientation.

182.32.20 kOrientationDownMirrored = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is vertically flipped from the image's intended display orientation.

182.32.21 kOrientationLeft = 8

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

182.32.22 kOrientationLeftMirrored = 5

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° counter-clockwise from the image's intended display orientation.

182.32.23 kOrientationRight = 6

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

182.32.24 kOrientationRightMirrored = 7

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° clockwise from the image's intended display orientation.

182.32.25 kOrientationUp = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data matches the image's intended display orientation.

182.32.26 kOrientationUpMirrored = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped from the image's intended display orientation.

182.33 class VNImageTranslationAlignmentObservationMBS

182.33.1 class VNImageTranslationAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Affine transform information produced by an image alignment request.
Notes:

This type of observation results from a VNTranslationalImageRegistrationRequestMBS, informing the alignmentTransform performed to align the input images.
Subclass of the VNImageAlignmentObservationMBS class.

182.33.2 Blog Entries

- Vision Framework for Xojo

182.33.3 Methods

182.33.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.33.5 Properties

182.33.6 alignmentTransform as CGAffineTransformMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The alignment transform to align the floating image with the reference image.
Notes: (Read only property)

182.34 class VNObservationMBS

182.34.1 class VNObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for analysis results.
Notes:

Observations resulting from Vision image analysis requests inherit from this abstract base class. Do not use this abstract superclass directly.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.34.2 Blog Entries

- Vision Framework for Xojo

182.34.3 Methods

182.34.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.34.5 copy as VNObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

182.34.6 Properties

182.34.7 className as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries class name of the observation.
Notes: (Read only property)

182.34.8 Confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence in the observation's accuracy, normalized to [0, 1.0] .
Notes:

A value of 0.0 indicates no confidence.
A value of 1.0 indicates the highest confidence. An observation that doesn't support or assign meaning to confidence also returns 1.0.
(Read only property)

182.34.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.34.10 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision used in request.
Notes: (Read only property)

182.34.11 UUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A unique identifier assigned to the Vision observation.
Notes: (Read only property)

182.35 class VNPixelBufferObservationMBS

182.35.1 class VNPixelBufferObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An output image produced by a Core ML image analysis request.
Notes:

This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is image-to-image processing. For example, this observation would result from a model that analyzes the style of one image and then transfers that style to a different image.
Vision infers that an MLModel object is an image-to-image model if that model includes an image. Its modelDescription object includes an image-typed feature description in its outputDescriptionsByName dictionary.
Subclass of the VNObservationMBS class.

182.35.2 Blog Entries

- Vision Framework for Xojo

182.35.3 Methods

182.35.4 CIImage as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates CIImageMBS object for given pixel buffer.

182.35.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.35.6 Properties

182.35.7 featureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name used in the model description of the CoreML model that produced this observation.
Notes:

This value can be empty if the observation is not the result of a VNCoreMLRequest operation.
Available in MacOS 10.15 or later.
(Read only property)

182.35.8 pixelBuffer as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The image that results from a request with image output.
Notes:

VNCoreMLRequestMBS produces observations that contain images in pixel buffer format. The confidence level is always 1.0.
(Read only property)

182.36 class VNRecognizeAnimalsRequestMBS

182.36.1 class VNRecognizeAnimalsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that will recognize various animals in an image.
Notes:

The list of animals supported by the recognition algorithm can be queried by knownAnimalIdentifiersFor-Revision.
This request will generate VNRecognizedObjectObservationMBS objects with a defined boundingBox, label and confidence level.

Availalble on MacOS 10.15.
Subclass of the VNImageBasedRequestMBS class.

182.36.2 Blog Entries

- Vision Framework for Xojo

182.36.3 Methods

182.36.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.36.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.36.6 knownAnimalIdentifiersForRevision(requestRevision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: This class method returns a list of all animals supported by the recognition algorithm
Notes: This request will generate a collection of names for supported animals by current recognition algorithm.

182.36.7 VNAnimalIdentifierCat as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The identifier for cats.

182.36.8 VNAnimalIdentifierDog as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The identifier for dogs.

182.37 class VNRecognizedObjectObservationMBS

182.37.1 class VNRecognizedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A detected object observation with an array of classification labels that classify the recognized object.
Notes:

The confidence of the classifications sum up to 1.0. Multiply the classification confidence with the confidence of this observation.

Available on MacOS 10.14 or newer.
Subclass of the VNDetectedObjectObservationMBS class.

182.37.2 Blog Entries

- Vision Framework for Xojo

182.37.3 Methods

182.37.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.37.5 labels as VNClassificationObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of observations that classify the recognized object.

182.38 class VNRecognizedTextMBS

182.38.1 class VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A block of recognized text.
Notes: There can be multiple VNRecognizedTextMBS objects returned in a VNRecognizedTextObservationMBS - one for each candidate.

182.38.2 Blog Entries

- Vision Framework for Xojo

182.38.3 Methods

182.38.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.38.5 boundingBoxForRange(range as NSRangeMBS, byref error as NSErrorMBS) as VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Calculate the bounding box around the characters in the range of the string.
Notes:

The bounding boxes are not guaranteed to be an exact fit around the characters and are purely meant for UI purposes and not for image processing.
Range is zero based!

182.38.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.38.7 copy as VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

182.38.8 Properties

182.38.9 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence normalized to [0.0, 1.0] where 1.0 is most confident.
Notes: (Read only property)

182.38.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.38.11 string as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Field that contains recognized text.
Notes:

This is the top candidate of the recognized text.
(Read only property)

182.39 class VNRecognizedTextObservationMBS

182.39.1 class VNRecognizedTextObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that detects and recognizes regions of text in an image.
Notes:

This type of observation results from a VNRecognizeTextRequestMBS. It contains information about both the location and content of text and glyphs that Vision recognized in the input image.
Subclass of the VNRectangleObservationMBS class.

182.39.2 Blog Entries

- Vision Framework for Xojo

182.39.3 Methods

182.39.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.39.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.39.6 topCandidates(maxCandidateCount as integer) as VNRecognizedTextMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests the n top candidates for a recognized text string.
Notes:

maxCandidateCount: The maximum number of candidates to return. This can't exceed 10.

Returns an array of the n top candidates, sorted by decreasing confidence score.

This function returns no more than n candidates, but it may return fewer than n candidates.

182.39.7 Properties

182.39.8 string as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The top candidate's string.
Notes:

For your convenience.
(Read only property)

182.39.9 topCanditate as VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: First top candidate.
Notes:

For your convenience.
Same as first element of topCanditates(1).
(Read only property)

182.40 class VNRecognizeTextRequestMBS

182.40.1 class VNRecognizeTextRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds and recognizes text in an image.
Notes:

By default, a text recognition request first locates all possible glyphs or characters in the input image, then analyzes each string. To specify or limit the languages sought in the request, set the recognitionLanguages property to an array containing the names of the languages of text you'd like to recognize. Vision returns the result of this request in a VNRecognizedTextObservationMBS object.

Available on MacOS 10.15.
Subclass of the VNImageBasedRequestMBS class.

182.40.2 Blog Entries

- Vision Framework for Xojo

182.40.3 Methods

182.40.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.40.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.40.6 customWords as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of strings to supplement the recognized languages at the word recognition stage.
Notes: The customWords list takes precedence over the standard lexicon.

182.40.7 recognitionLanguages as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of languages to detect, in priority order.
Notes:

The order of the languages in the array defines the order in which languages are used during language processing and text recognition.
Specify the languages as ISO language codes.

182.40.8 setCustomWords(customWords() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of strings to supplement the recognized languages at the word recognition stage.
Notes: The customWords list takes precedence over the standard lexicon.

182.40.9 setProgressHandler(ProgressHandler as VNProgressHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets progress handler.
Notes: The progress handler is an optional delegate that allows clients of the request to report progress to the user or to display partial results as they become available.

182.40.10 setRecognitionLanguages(recognitionLanguages() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets array of languages to detect, in priority order.
Notes:

The order of the languages in the array defines the order in which languages are used during language processing and text recognition.
Specify the languages as ISO language codes.

182.40.11 supportedRecognitionLanguages(recognitionLevel as Integer, requestRevision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests a list of languages recognized by the specified revision.
Example:

```
Dim recognitionLevel As Integer = VNRecognizeTextRequestMBS.RecognitionLevelAccurate
Dim languages() As String
Dim error As NSErrorMBS

languages = VNRecognizeTextRequestMBS.supportedRecognitionLanguages(recognitionLevel, error)

MsgBox Join(languages, EndOfLine)

If error <>Nil Then
MsgBox error.LocalizedDescription
End If
```

Notes:

recognitionLevel: The level of recognition to prioritize. Set this level to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate to prioritize accuracy at the expense of speed.
requestRevision: The revision of the text recognition algorithm for the Vision framework to use.
error: An error that contains information about failed language support, or nil if no error occurred.

Returns an array of supported languages, listed as ISO language codes.

A language supported in one recognition level may not be available in another recognition level.

May show just "en-US".

182.40.12 Properties

182.40.13 indeterminate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean set to true when a request can't determine its progress in fractions completed.
Notes:

A value of true doesn't mean that the request will run forever. Rather, it means that the nature of the request can't be broken down into identifiable fractions to report. The progressHandler will still be called at suitable intervals.
(Read only property)

182.40.14 minimumTextHeight as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The minimum height of the text expected to be recognized, relative to the image height.
Notes:

Specify a floating-point number relative to the image height. For example, to limit recognition to text that is half of the image height, use 0.5. Increasing the size reduces memory consumption and expedites recognition with the tradeoff of ignoring text smaller than the minimum height. The default value is 1/32, or 0.03125.
(Read and Write property)

182.40.15 recognitionLevel as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value that determines whether the request prioritizes accuracy or speed in text recognition.
Notes:

The recognition level determines which techniques are used during the text recognition. Set this value to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate for longer, more computationally intensive recognition.
(Read and Write property)

182.40.16 usesLanguageCorrection as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean indicating whether Vision applies language correction during the recognition process.
Notes:

When this Boolean is set to true, Vision applies language correction during the recognition process. Disabling this property returns the raw recognition results, which provides performance benefits but less accurate results.
(Read and Write property)

182.40.17 Constants

182.40.18 RecognitionLevelAccurate = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the recognition levels.
Notes: Accurate text recognition takes more time to produce a more comprehensive result.

182.40.19 RecognitionLevelFast = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the recognition levels.
Notes: Fast text recognition returns results more quickly at the expense of accuracy.

182.41 class VNRectangleObservationMBS

182.41.1 class VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Information about projected rectangular regions detected by an image analysis request.
Notes:

This type of observation results from a VNDetectRectanglesRequestMBS. It defines the four vertices of a detected rectangle.
Subclass of the VNDetectedObjectObservationMBS class.

182.41.2 Blog Entries

- Vision Framework for Xojo

182.41.3 Methods

182.41.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.41.5 rectangleObservationWithRequestRevision(requestRevision as Integer = 1, topLeft as CGPointMBS, bottomLeft as CGPointMBS, bottomRight as CGPointMBS, topRight as CGPointMBS) as VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A convenience initializer for creating a rectangle observation from its corner points.
Notes:

requestRevision: The rectangle detector revision number. A higher revision indicates more recent iterations of the framework.
topLeft: The upper-left corner point.
bottomLeft: The lower-left corner point.
bottomRight: The lower-right corner point.
topRight: The upper-right corner point.

Available on MacOS 10.15 or newer.

182.41.6 Properties

182.41.7 bottomLeft as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the lower-left corner of the observation bounding box.
Notes: (Read only property)

182.41.8 bottomRight as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the lower-right corner of the observation bounding box.
Notes: (Read only property)

182.41.9 topLeft as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the upper-left corner of the observation bounding box.
Notes: (Read only property)

182.41.10 topRight as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the upper-right corner of the observation bounding box.
Notes: (Read only property)

182.42 class VNRequestMBS

182.42.1 class VNRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for analysis requests.
Notes:

Other Vision request handlers that perform image analysis inherit from this abstract base class. Instantiate one of its subclasses to perform image analysis.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.42.2 Blog Entries

- Vision Framework for Xojo

182.42.3 Methods

182.42.4 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Cancels the request before it can finish executing.

182.42.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.42.6 copy as VNRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

182.42.7 currentRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current revison supported by the request.
Notes: Available on MacOS 10.14 or newer.

182.42.8 defaultRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the latest request for the particular SDK linked with the client application.
Notes: Available on MacOS 10.14 or newer.

182.42.9 results as VNObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The collection of VNObservationMBS results generated by request processing.
Notes:

If the request fails, this property is nil. Otherwise, it contains an array of VNObservationMBS subclasses specific to the VNRequest subclass.
Don't access this property until the request has finished processing.

182.42.10 supportedRevisions as NSIndexSetMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The collection of currently-supported algorithm versions for the class of request.
Notes:

This method allows clients to inspect at runtime what capabilities are available for each class of VNRequest in the Vision framework.
Available on MacOS 10.14 or newer.

182.42.11 Properties

182.42.12 className as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries class name of the request.
Notes: (Read only property)

182.42.13 ClassPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The class path.
Notes:

Useful for debugging to know what super classes the request has.
(Read only property)

182.42.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.42.15 preferBackgroundProcessing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A hint to minimize the resource burden of the request.
Notes:

If set to true, this property reduces the request's memory footprint, processing footprint, and CPU/GPU contention at the potential cost of longer execution time.
Setting this value can help ensure that Vision processing doesn't block UI updates and other rendering on the main thread.
(Read and Write property)

182.42.16 revision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The specific algorithm or implementation revision that is to be used to perform the request.
Notes: (Read and Write property)

182.42.17 usesCPUOnly as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean signifying that the Vision request should execute exclusively on the CPU.
Notes:

This value defaults to false to signify that the Vision request is free to leverage the GPU to accelerate its processing.
(Read and Write property)

182.43 class VNSaliencyImageObservationMBS

182.43.1 class VNSaliencyImageObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An observation containing a grayscale heat map of important areas across an image.
Notes:

The heat map is a CVPixelBufferRef in a one-component floating-point pixel format. Its dimensions are 64 x 64 when fetched in real time, or 68 x 68 when requested in its deferred form.
Available on MacOS 10.15 or later.
Subclass of the VNPixelBufferObservationMBS class.

182.43.2 Blog Entries

- Vision Framework for Xojo

182.43.3 Methods

182.43.4 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

182.43.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.43.6 salientObjects as VNRectangleObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of objects describing the distinct areas of the saliency heat map.
Notes:

The objects in this array don't follow any specific ordering. It's up to your app to iterate across the observations and apply desired ordering.

Requesting this array lazily computes the bounds of salient objects within the image.

182.44 class VNSequenceRequestHandlerMBS

182.44.1 class VNSequenceRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object that processes image analysis requests for each frame in a sequence.
Notes: Instantiate this handler to perform Vision requests on a series of images. Unlike the VNImageRequestHandlerMBS, you don't specify the image on creation. Instead, you supply each image frame one by one as you continue to call one of the perform methods.

182.44.2 Blog Entries

- Vision Framework for Xojo

182.44.3 Methods

182.44.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.44.5 performRequestsOnCGImage(requests() as VNRequestMBS, CGImage as CGImageMBS, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Graphics image with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
image: The input CGImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

182.44.6 performRequestsOnCIImage(requests() as VNRequestMBS, CIImage as Variant, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on CIImageMBS data with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
image: The input CIImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

182.44.7 performRequestsOnCVPixelBuffer(requests() as VNRequestMBS, CVPixelBuffer as Variant, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Video pixel buffer with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
pixelBuffer: The input CVPixelBufferMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

182.44.8 performRequestsOnImageData(requests() as VNRequestMBS, Data as MemoryBlock, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on raw data containing an image with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
imageData: The input MemoryBlock on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

182.44.9 performRequestsOnImageFile(requests() as VNRequestMBS, File as FolderItem, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on an image with known orientation, at a specific file.
Notes:

requests: An array of VNRequestMBS requests to perform.
File: A folderitem pointing to the image on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is NO.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

182.44.10 performRequestsOnPicture(requests() as VNRequestMBS, Picture as Picture, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Graphics image with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
image: The input CGImageMBS on which to perform the request.

orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

182.44.11 Properties

182.44.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.44.13 Constants

182.44.14 kOrientationDown = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 180° from the image's intended display orientation.

182.44.15 kOrientationDownMirrored = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is vertically flipped from the image's intended display orientation.

182.44.16 kOrientationLeft = 8

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

182.44.17 kOrientationLeftMirrored = 5

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° counter-clockwise from the image's intended display orientation.

182.44.18 kOrientationRight = 6

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

182.44.19 kOrientationRightMirrored = 7

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° clockwise from the image's intended display orientation.

182.44.20 kOrientationUp = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data matches the image's intended display orientation.

182.44.21 kOrientationUpMirrored = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped from the image's intended display orientation.

182.45 class VNTargetedImageRequestMBS

182.45.1 class VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that operate on both the processed image and a secondary image.
Notes:

Other Vision request handlers that operate on both the processed image and a secondary image inherit from this abstract base class. Instantiate one of its subclasses to perform image analysis, and pass in auxiliary image data by filling in the options dictionary at initialization.
Subclass of the VNImageBasedRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.45.2 Blog Entries

- Vision Framework for Xojo

182.45.3 Methods

182.45.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.45.5 TargetedImageRequestWithCGImage(CGImage as CGImageMBS, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a Core Graphics image of known orientation, executing the completion handler when done.
Notes:

cgImage: The targeted Core Graphics image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Value 0 means unknown.

options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.45.6 TargetedImageRequestWithCIImage(CIImage as Variant, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a CIImageMBS of known orientation, executing the completion handler when done.
Notes:

ciImage: The CIImage encapsulating the targeted image. Variant must be CIImageMBS.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.45.7 TargetedImageRequestWithCVPixelBuffer(CVPixelBuffer as Variant, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting an image in a CVPixelBufferMBS of known orientation, executing the completion handler when done.
Notes:

pixelBuffer: The pixel buffer containing the targeted image. Variant must be CVPixelBufferMBS.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.45.8 TargetedImageRequestWithImageData(Data as MemoryBlock, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a raw data image of known orientation, executing the completion handler when done.
Notes:

imageData: The data containing the targeted image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.45.9 TargetedImageRequestWithImageFile(File as FolderItem, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting an image of known orientation, at the specified file, executing the completion handler when done.
Notes:

File: The file of the targeted image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass 0 if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.45.10 TargetedImageRequestWithPicture(Picture as Picture, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a Core Graphics image of known orientation, executing the completion handler when done.
Notes:

Picture: The targeted Core Graphics image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Value 0 means unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.46 class VNTextObservationMBS

182.46.1 class VNTextObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Information about regions of text detected by an image analysis request.
Notes:

This type of observation results from a VNDetectTextRectanglesRequestMBS. It expresses the location of each detected character by its bounding box.
Available on MacOS 10.13 or newer.
Subclass of the VNRectangleObservationMBS class.

182.46.2 Blog Entries

- Vision Framework for Xojo

182.46.3 Methods

182.46.4 characterBoxes as VNRectangleObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of detected individual character bounding boxes.
Notes: If the associated VNDetectTextRectanglesRequestMBS request indicates interest in character boxes by setting the option VNRequestOptionReportCharacterBoxes to true, this property is non-nil. If no characters are found, it remains empty.

182.46.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

182.47 class VNTrackingRequestMBS

182.47.1 class VNTrackingRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that track unique features across multiple images or video frames.
Notes:

Instantiate a tracking request subclass to perform object tracking across multiple frames of an image. After initialization, configure the degree of accuracy by setting trackingLevel, and provide observations you would like to track by setting the inputObservation initial bounding box.
Subclass of the VNImageBasedRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.47.2 Blog Entries

- Vision Framework for Xojo

182.47.3 Methods

182.47.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

182.47.5 Properties

182.47.6 inputObservation as VNDetectedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The observation object defining a region to track.
Notes:

Providing an observation not returned from a tracker, such as a user-defined observation, begins a new tracker for the sequence. Providing an observation that was returned from a tracker continues the use of that tracker, to track the region to the next frame.
In general, unless specified in the request's documentation or header file, you must define the rectangle in normalized coordinates, with the origin at the lower-left corner.
(Read only property)

182.47.7 LastFrame as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates the last frame in a tracking sequence.
Notes:

If set to true, the current tracker will be released to the pool of available trackers when the current frame finishes processing.
(Read and Write property)

182.47.8 trackingLevel as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value for specifying whether to prioritize speed or location accuracy.
Notes:

Use VNRequestTrackingLevelAccurate or VNRequestTrackingLevelFast.
(Read only property)

182.47.9 Constants

182.47.10 VNRequestTrackingLevelAccurate = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the tracking levels.
Notes: Tracking level that favors location accuracy over speed.

182.47.11 VNRequestTrackingLevelFast = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the tracking levels.
Notes: Tracking level that favors speed over location accuracy.

182.48 class VNTrackObjectRequestMBS

182.48.1 class VNTrackObjectRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that tracks movement of a previously identified arbitrary object across multiple images or video frames.
Notes:

Use this type of request to track the bounding boxes around objects previously identified in an image. Vision will attempt to locate the same object from the input observation throughout the sequence.
Subclass of the VNTrackingRequestMBS class.

182.48.2 Blog Entries

- Vision Framework for Xojo

182.48.3 Methods

182.48.4 Constructor(observation as VNDetectedObjectObservationMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new object tracking request with a detected object observation.
Notes:

observation: A detected object observation with bounding box information.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.49 class VNTrackRectangleRequestMBS

182.49.1 class VNTrackRectangleRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that tracks movement of a previously identified rectangular object across multiple images or video frames.
Notes:

Use this type of request to track the bounding boxes of rectangles throughout a sequence of images. Vision returns locations for rectangles found in all orientations and sizes.
Subclass of the VNTrackingRequestMBS class.

182.49.2 Blog Entries

- Vision Framework for Xojo

182.49.3 Methods

182.49.4 Constructor(observation as VNRectangleObservationMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new rectangle tracking request with a rectangle observation.
Notes:

observation: A rectangle observation with bounding box and corner location information.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

182.50 class VNTranslationalImageRegistrationRequestMBS

182.50.1 class VNTranslationalImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the affine transform needed to align the content of two images.
Notes:

Create and perform a translational image registration request to align content in two images through translation.
Subclass of the VNImageRegistrationRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

182.50.2 Blog Entries

- Vision Framework for Xojo

182.50.3 Methods

182.50.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

Chapter 183

VLC

183.1 class VLCAudioOutputDeviceMBS

183.1.1 class VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for details on audio output devices.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

183.1.2 Methods

183.1.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

183.1.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.1.5 Properties

183.1.6 Description as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The User-friendly device description.
Notes: (Read and Write property)

183.1.7 Device as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output device ID.
Notes: (Read and Write property)

183.1.8 NextOutput as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next entry in the list.
Notes:

You can loop over entries. Last one has nil in this property.
(Read and Write property)

183.2 class VLCAudioOutputMBS

183.2.1 class VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Description for audio output.
Notes:

It contains name, description and pointer to next record.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

183.2.2 Methods

183.2.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

183.2.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.2.5 Properties

183.2.6 Description as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The description for this audio output.
Notes: (Read and Write property)

183.2.7 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this audio output.
Notes: (Read and Write property)

183.2.8 NextOutput as VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next audio output reference.
Notes: (Read and Write property)

183.3 class VLCEqualizerMBS

183.3.1 class VLCEqualizerMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for equalizer in VLC.
Notes: Requires VLC 2.2.

183.3.2 Blog Entries

- MBS Xojo Plugins, version 18.0pr8

183.3.3 Methods

183.3.4 BandFrequency(index as Integer) as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a particular equalizer band frequency.
Notes:

This value can be used, for example, to create a label for an equalizer band control in a user interface.

Index: index of the band, counting from zero
Returns equalizer band frequency (Hz), or -1 if there is no such band

Requires LibVLC 2.2.0 or later

183.3.5 Constructor(index as Integer, vlc as VLCInstanceMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a new equalizer, with initial frequency values copied from an existing preset.
Notes:

The new equalizer can subsequently be applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.

Index: index of the preset, counting from zero.

Requires VLC 2.2.
See also:

- 183.3.6 Constructor(vlc as VLCInstanceMBS = nil) 24060

183.3.6 Constructor(vlc as VLCInstanceMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a new default equalizer, with all frequency values zeroed.
Notes:

The new equalizer can subsequently be applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.
Requires VLC 2.2.
See also:

- 183.3.5 Constructor(index as Integer, vlc as VLCInstanceMBS = nil) 24059

183.3.7 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.3.8 PresetName(index as Integer) as string

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the name of a particular equalizer preset.
Notes:

This name can be used, for example, to prepare a preset label or menu in a user interface.

index: index of the preset, counting from zero
Returns name, or "" if there is no such preset
Requires LibVLC 2.2.0 or later.

183.3.9 Properties

183.3.10 BandCount as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of distinct frequency bands for an equalizer.
Notes:

Requires LibVLC 2.2.0 or later.
(Read only property)

183.3.11 Handle as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.3.12 Preamp as Single

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a new pre-amplification value for an equalizer.
Notes:

The new equalizer settings are subsequently applied to a media player by invoking VLCMediaPlayer.SetEqualizer.

The supplied amplification value will be clamped to the -20.0 to +20.0 range.

preamp value (-20.0 to 20.0 Hz)
Returns zero on success, -1 on error.

Requires LibVLC 2.2.0 or later
(Read and Write property)

183.3.13 PresetCount as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of equalizer presets.
Notes:

Requires LibVLC 2.2.0 or later
(Read only property)

183.3.14 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the parent VLC instance object.
Notes: (Read only property)

183.3.15 Map(Index as Integer) as Single

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a new amplification value for a particular equalizer frequency band.
Notes:

The new equalizer settings are subsequently applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.

The supplied amplification value will be clamped to the -20.0 to +20.0 range.

Value: amplification value (-20.0 to 20.0 Hz)
index, counting from zero, of the frequency band to set

Requires LibVLC 2.2.0 or later
(Read and Write computed property)

183.4 class VLCEventManagerMBS

183.4.1 class VLCEventManagerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for getting event with VLC.
Notes:

Only the events which the parent object sends are delivered.
With 12.3pr5 and newer plugins, this function sends events to main thread as it should be.

- 183.4.4 Constructor(Media as VLCMediaMBS) 24063
- 183.4.5 Constructor(MediaDiscoverer as VLCMediaDiscovererMBS) 24063
- 183.4.7 Constructor(MediaListPlayer as VLCMediaListPlayerMBS) 24064
- 183.4.8 Constructor(MediaPlayer as VLCMediaPlayerMBS) 24064

183.4.7 Constructor(MediaListPlayer as VLCMediaListPlayerMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes event manager for media list player.
See also:

- 183.4.4 Constructor(Media as VLCMediaMBS) 24063
- 183.4.5 Constructor(MediaDiscoverer as VLCMediaDiscovererMBS) 24063

- 183.4.8 Constructor(MediaPlayer as VLCMediaPlayerMBS) 24064

183.4.8 Constructor(MediaPlayer as VLCMediaPlayerMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes event manager for media player.
See also:

- 183.4.4 Constructor(Media as VLCMediaMBS) 24063
- 183.4.5 Constructor(MediaDiscoverer as VLCMediaDiscovererMBS) 24063

- 183.4.6 Constructor(MediaList as VLCMediaListMBS) 24064
- 183.4.7 Constructor(MediaListPlayer as VLCMediaListPlayerMBS) 24064

183.4.9 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.4.10 Listen

MBS VLC Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers internally events.
Notes:

This is normally called in the constructor.
If you add event handlers later via AddHandler command, you need to call this method to have those event handlers also registered.

183.4.11 Properties

183.4.12 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.4.13 Parent as Variant

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes:

Just a reference back, so the target object is not released too early.
(Read and Write property)

183.4.14 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.4.15 Events

183.4.16 Log(Message as String, level as Integer, Name as String, Header as String, ModuleName as String, FileName as String, Line as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: .

Function: A log message arrived.
Notes:

message: The message to log.
level: message level, e.g. kLogLevelError
Name: object name
Header: object header or empty.
ModuleName: module name
FileName: The source code file name.
Line: The source code line number.

Enable this event using VLCInstanceMBS.SetLogEvent method.

183.4.17 MediaDiscovererEnded

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media discovered ended.

183.4.18 MediaDiscovererStarted

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media discoverer started.

183.4.19 MediaDurationChanged(newDuration as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Duration of media changed.

183.4.20 MediaFreed(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media was released.

183.4.21 MediaListItemAdded(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list item added.

183.4.22 MediaListItemDeleted(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list item deleted.

183.4.23 MediaListPlayerNextItemSet(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.24 MediaListPlayerPlayed

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list player played.

183.4.25 MediaListPlayerStopped

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list player stopped.

183.4.26 MediaListWillAddItem(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list will add item.

183.4.27 MediaListWillDeleteItem(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list will delete item.

183.4.28 MediaMetaChanged(metatype as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Metadata changed.

183.4.29 MediaParsedChanged(newStatus as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Parsed status changed.

183.4.30 MediaPlayerBackward

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player moved backwards.

183.4.31 MediaPlayerBuffering

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.32 MediaPlayerEncounteredError

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.33 MediaPlayerEndReached

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player reached end of media.

183.4.34 MediaPlayerForward

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Player moved forward.

183.4.35 MediaPlayerLengthChanged(NewLength as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The length of the media changed.

183.4.36 MediaPlayerMediaChanged(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The media changed in the media player.

183.4.37 MediaPlayerNothingSpecial

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.38 MediaPlayerOpening

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The Media player is opening.

183.4.39 MediaPlayerPausableChanged(pausable as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player's pausable state changed.

183.4.40 MediaPlayerPaused

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The player was paused.

183.4.41 MediaPlayerPlaying

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The player is playing.

183.4.42 MediaPlayerPositionChanged(newPosition as Double)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Position changed.
Notes: This event does not fire if you assigned new position. It is only to inform you that position changed due to playing video.

183.4.43 MediaPlayerScrambledChanged(newScrambled as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The scrambled property changed.

183.4.44 MediaPlayerSeekableChanged(seekable as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media Player's seekable status changed.

183.4.45 MediaPlayerSnapshotTaken(filename as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: A snapshot has been taken.

183.4.46 MediaPlayerStopped

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player stopped.

183.4.47 MediaPlayerTimeChanged(newTime as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player reached a new time.

183.4.48 MediaPlayerTitleChanged(newTitle as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The title changed.

183.4.49 MediaPlayerVout(newCount as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.50 MediaStateChanged(newState as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: State changed on media.

183.4.51 MediaSubItemAdded(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media got a new subitem.

183.4.52 MediaSubItemTreeAdded(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: .

Function: A media item got new sub items.

183.4.53 VlmMediaAdded(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.54 VlmMediaChanged(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.55 VlmMediaInstanceStarted(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.56 VlmMediaInstanceStatusEnd(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.57 VlmMediaInstanceStatusError(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.58 VlmMediaInstanceStatusInit(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.59 VlmMediaInstanceStatusOpening(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.60 VlmMediaInstanceStatusPause(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.61 VlmMediaInstanceStatusPlaying(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.62 VlmMediaInstanceStopped(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

183.4.63 VlmMediaRemoved(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media was removed.

183.4.64 Constants

183.4.65 kLogLevelDebug = 0

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Debug message

183.4.66 kLogLevelError = 4

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Error message.

183.4.67 kLogLevelNotice = 2

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Important informational message

183.4.68 kLogLevelWarning = 3

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Warning (potential error) message

183.5 class VLCExitHandlerMBS

183.5.1 class VLCExitHandlerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to receive exit events from VLC user interface.
Notes: As you probably use this plugin with your own user interface, you don't need this class.

183.5.2 Events

183.5.3 ExitEvent

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: An exit event was received from VLC user interface.

183.6 class VLCInstanceMBS

183.6.1 class VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The main VLC class.
Notes:

Keep the instance in memory as long as you use any other VLC classes.
Only one instance per app, please.

183.6.2 Blog Entries

- MBS Xojo Plugins, version 18.6pr4

183.6.3 Methods

183.6.4 AddUserInterface(name as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Try to start a user interface for the libvlc instance.
Notes:

name: interface name, or nil for default.
Return true on success, false on error.

183.6.5 AudioOutputDevices(ModuleName as string) as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets a list of audio output devices for a given audio output module.
Notes:

Not all audio outputs support this. In particular, an empty (nil)
list of devices does not imply that the specified audio output does
not work.

The list might not be exhaustive.

Some audio output devices in the list might not actually work in some circumstances. By default, it is recommended to not specify any explicit audio device.

Modulename: audio output name.

Returns a nil-terminated linked list of potential audio output devices.
Requires VLC 2.1.

183.6.6 ClearError

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears the LibVLC error status for the current thread.
Notes:

This is optional.
By default, the error status is automatically overridden when a new error occurs, and destroyed when the thread exits.

183.6.7 ClearLog

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unsets the logging callback for a LibVLC instance.
Notes:

This is rarely needed: the callback is implicitly unset when the instance is destroyed.
This function will wait for any pending callbacks invocation to complete
(causing a deadlock if called from within the callback).

Requires VLC 2.1.

183.6.8 Clock as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the current time as defined by LibVLC.
Notes:

The unit is the microsecond.
Time increases monotonically (regardless of time zone changes and RTC adjustements).
The origin is arbitrary but consistent across the whole system (e.g. the system uptim, the time since the system was booted). On systems that support it, the POSIX monotonic clock is used.

183.6.9 Constructor(args() as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create and initialize a libvlc instance.
Notes:

This functions accept a list of "command line" arguments similar to the main(). These arguments affect the LibVLC instance default configuration.

Arguments are meant to be passed from the command line to LibVLC, just like VLC media player does. The list of valid arguments depends on the LibVLC version, the operating system and platform, and set of available LibVLC plugins. Invalid or unsupported arguments will cause the function to fail (i.e. return nil). Also, some arguments may alter the behaviour or otherwise interfere with other LibVLC functions.

There is absolutely no warranty or promise of forward, backward and cross-platform compatibility with regards to this Constructor() arguments. We recommend that you do not use them, other than when debugging.

On success handle property is not nil.
For Version 19.0 of the plugins, please do not pass app path as first argument.

For MacOS, please set VLC_PLUGIN_PATH environment variable for the path to the plugins folder.

183.6.10 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.6.11 ErrorMessage as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an human-readable error message for the last VLC error in the calling thread.

183.6.12 GetAudioFilterList as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of audio filters that are available.
Notes: Return a list of module descriptions.

183.6.13 GetAudioOutputDeviceCount(AudioOutputName as string) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get count of devices for audio output, these devices are hardware oriented like analor or digital output of sound card.
Notes:

AudioOutputName: name of audio output.
Returns number of devices.

183.6.14 GetAudioOutputDeviceID(AudioOutputName as string, index as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get id name of device.
Notes:

AudioOutputName: name of audio output.
Index: device index.
Returns id name of device, use for setting device.

183.6.15 GetAudioOutputDeviceLongName(AudioOutputName as string, index as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get long name of device, if not available short name given.
Notes:

AudioOutputName: name of audio output.
Index: Device Index.
Returns long name of device.

183.6.16 GetAudioOutputList as VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the list of available audio outputs.
Notes: Returns list of available audio outputs. In case of error, nil is returned.

183.6.17 GetChangeset as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc changeset.
Notes:

Example: "aa9bce0bc4"
Return a string containing the libvlc changeset.

183.6.18 GetCompiler as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc compiler version.
Notes:

Example: "gcc version 4.2.3 (Ubuntu 4.2.3-2ubuntu6)"
Return a string containing the libvlc compiler version.

183.6.19 getenv(name as string) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the environment variable with given name.

183.6.20 GetLoadError as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns error string from LoadLibrary function.

183.6.21 GetVersion as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc version.
Notes:

Example: "1.1.0-git The Luggage"
Return a string containing the libvlc version.

183.6.22 GetVideoFilterList as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of video filters that are available.
Notes: Return a list of module descriptions

183.6.23 LoadLibrary(path as folderitem) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the vlc library.
Notes:

Returns true on success and false on failure.

Please point to libVLC.dylib on Mac and libVLC.dll on Windows.
See also:

- 183.6.24 LoadLibrary(path as string) as boolean 24083

183.6.24 LoadLibrary(path as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the vlc library.
Notes:

Returns true on success and false on failure.
Please point to libVLC.dylib on Mac and libVLC.dll on Windows.
See also:

- 183.6.23 LoadLibrary(path as folderitem) as boolean 24082

183.6.25 SetAppID(ID as string, Version as string, Icon as String)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets some meta-information about the application.
Notes:

See also SetUserAgent().

id: Java-style application identifier, e.g. "com.acme.foobar"
version: application version numbers, e.g. "1.2.3"
icon: application icon name, e.g. "foobar"

Requires VLC 2.1.

183.6.26 setlocale(category as Integer, locale as string) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the locale to use.
Notes:

The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

183.6.27 SetLogEvent

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the logging callback for a LibVLC instance.
Notes:

This function is thread-safe: it will wait for any pending callbacks
invocation to complete.

Some log messages (especially debug) are emitted by LibVLC while
is being initialized. These messages cannot be captured with this interface.

A deadlock may occur if this function is called from the event.

Requires VLC 2.1.

183.6.28 SetLogFile(File as FolderItem)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets up logging to a file.
Notes: Requires VLC 2.1.

183.6.29 SetUserAgent(AppName as string, httpUserAgent as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the application name.
Notes:

VLC passes this as the user agent string when a protocol requires it.

name: human-readable application name, e.g. "FooBar player 1.2.3"
http: HTTP User Agent, e.g. "FooBar/1.2.3 Python/2.6.0"

183.6.30 WaitUserInterface

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits until an interface causes the instance to exit.
Notes: You should start at least one interface first, using AddUserInterface.

183.6.31 Properties

183.6.32 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.6.33 ExitHandler as VLCExitHandlerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers a callback for the LibVLC exit event.
Notes:

This is mostly useful if you have started at least one interface with AddUserInterface. Typically, this function will wake up your application main loop (from another thread).

This function and WaitUserInterface() cannot be used at the same time.
Use either or none of them but not both.
(Read and Write computed property)

183.7 class VLCMediaDiscovererMBS

183.7.1 class VLCMediaDiscovererMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The plugin class for the VLC media discovery.
Notes:

LibVLC media discovery finds available media via various means.
This corresponds to the service discovery functionality in VLC media player.
Different plugins find potential medias locally (e.g. user media directory), from peripherals (e.g. video capture device), on the local network (e.g. SAP) or on the Internet (e.g. Internet radios).

183.7.2 Methods

183.7.3 Constructor(vlc as VLCInstanceMBS, name as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Discover media service by name.
Notes:

vlc: The VLC instance.
Name: service name.
Handle is not nil on success.

183.7.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.7.5 IsRunning as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query if media service discover object is running.
Notes: Returns true if running, false if not.

183.7.6 LocalizedName as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the localized name.

183.7.7 MediaList as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media service discover media list.

183.7.8 Properties

183.7.9 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

183.7.10 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.8 class VLCMediaLibraryMBS

183.8.1 class VLCMediaLibraryMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for VLC media library.

183.8.2 Methods

183.8.3 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an new Media Library object.
Notes: On success handle property is not nil.

183.8.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.8.5 Load as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Load media library.
Notes: Return true on success, false on error.

183.8.6 MediaList as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media library subitems.

183.8.7 Properties

183.8.8 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.8.9 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.9 class VLCMediaListMBS

183.9.1 class VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a media list.

183.9.2 Methods

183.9.3 AddMedia(item as VLCMediaMBS) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add media instance to media list.
Notes:

item: a media instance
Return true on success, false if the media list is read-only.
The Lock should be held upon entering this function.

183.9.4 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an empty media list.
Notes: On success the handle property is not zero.

183.9.5 Count as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get count on media list items.
Notes:

The Lock should be held upon entering this function.
Return number of items in media list.

183.9.6 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.9.7 GetMedia as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media instance from this media list instance.
Notes:

The Lock should NOT be held upon entering this function.
Returns media instance or nil.

183.9.8 IndexOfItem(item as VLCMediaMBS) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Find index position of List media instance in media list.
Notes:

Warning: the function will return the first matched position.
The Lock should be held upon entering this function.

Returns position of media instance or -1 if media not found.

183.9.9 InsertMedia(item as VLCMediaMBS, index as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Insert media instance in media list on a position.
Notes:

The Lock should be held upon entering this function.
item: a media instance
index: position in array where to insert

Return true on success, false if the media list is read-only.

183.9.10 isReadOnly as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this media list is read-only from a user point of view.
Notes: Returns true if readonly and false if read/write.

183.9.11 ItemAtIndex(index as Integer) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: List media instance in media list at a position.
Notes:

The Lock should be held upon entering this function.
index: position in array where to get item.
Returns instance at position index, or nil if not found.

183.9.12 Lock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get lock on media list items.

183.9.13 Remove(index as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Remove media instance from media list on a position.
Notes:

The Lock should be held upon entering this function.
index: position in array where to insert
Returns true on success, false if the list is read-only or the item was not found.

183.9.14 SetMedia(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Associate media instance with this media list instance.
Notes:

If another media instance was present it will be released.
The Lock should NOT be held upon entering this function.

183.9.15 Unlock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release lock on media list items.
Notes: The Lock should be held upon entering this function.

183.9.16 Properties

183.9.17 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

183.9.18 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.10 class VLCMediaListPlayerMBS

183.10.1 class VLCMediaListPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a VLC media list player.
Notes:

This is required to especially support playlist files.
The normal media player can only play a single media, and does not handle playlist files properly.

183.10.2 Methods

183.10.3 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create new media list player.

183.10.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.10.5 IsPlaying as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is media list playing?
Notes: Return true for playing and false for not playing.

183.10.6 MoveNext as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play next item from media list.
Notes: Return true upon success false if there is no next item.

183.10.7 MovePrevious as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play previous item from media list.
Notes: Return true upon success false if there is no previous item.

183.10.8 Pause

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pause media list

183.10.9 Play

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play media list.

183.10.10 PlayItem(item as VLCMediaMBS) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play the given media item.
Notes: Return true upon success, false if the media is not part of the media list.

183.10.11 PlayItemAtIndex(index as Integer) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play media list item at position index.
Notes:

index: index in media list to play.
Return true upon success false if the item wasn't found.

183.10.12 SetMediaList(list as VLCMediaListMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the media list associated with the player.

183.10.13 SetMediaPlayer(player as VLCMediaPlayerMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Replace media player in media list player with this instance.

183.10.14 SetPlaybackMode(mode as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the playback mode for the playlist.
Notes: See kPlaybackMode* constants.

183.10.15 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current State of media list player.

183.10.16 Stop

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stop playing media list.

183.10.17 Properties

183.10.18 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.10.19 List as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The list assigned to this media list player.
Notes: (Read and Write property)

183.10.20 Player as VLCMediaPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The player assigned to this media list player.
Notes: (Read and Write property)

183.10.21 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.10.22 Constants

183.10.23 kPlaybackModeDefault = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the playback mode constants.
Notes: Default

183.10.24 kPlaybackModeLoop = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the playback mode constants.
Notes: Loop

183.10.25 kPlaybackModeRepeat = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the playback mode constants.
Notes: Repeat

183.11 class VLCMediaMBS

183.11.1 class VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The VLC class for a media item.

183.11.2 Blog Entries

- MBS Xojo Plugins, version 20.3pr9
- MBS Xojo / Real Studio Plugins, version 14.0pr5

183.11.3 Methods

183.11.4 AddOption(options as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add an option to the media.
Notes:

This option will be used to determine how the media_player will read the media. This allows to use VLC's advanced reading/streaming options on a per-media basis.

The options are detailed in vlc –long-help, for instance "–sout-all"

183.11.5 AddOptionFlag(options as string, flags as UInt32)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add an option to the media with configurable flags.
Notes:

This option will be used to determine how the media_player will read the media. This allows to use VLC's advanced reading/streaming options on a per-media basis.

The options are detailed in vlc –long-help, for instance "–sout-all"

183.11.6 Clone as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a duplicate of media object.

183.11.7 Constructor(original as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a copy of the media object.
See also:

- 183.11.8 Constructor(vlc as VLCInstanceMBS, URL as string) 24101

183.11.8 Constructor(vlc as VLCInstanceMBS, URL as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media with a certain given media resource location, for instance a valid URL.
Notes:

Do not pass a file path here! This is for URLs.

URL: the media location

To refer to a local file with this function, the file://... URI syntax must be used (see IETF RFC3986).
We recommend using MediaWithPath() instead when dealing with local files.
See also:

- 183.11.7 Constructor(original as VLCMediaMBS) 24101

183.11.9 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor to cleanup the media.

183.11.10 Duration as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get duration (in ms) of media descriptor object item.
Notes: Return duration of media item or -1 on error.

183.11.11 IsParsed as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get Parsed status for media descriptor object.
Notes: Returns true if media object has been parsed otherwise it returns false.

183.11.12 MediaWithData(vlc as VLCInstanceMBS, data as memoryblock) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain data.
Notes:

Internally creates temp file for the data and opens the file.
File is later deleted when VLCMediaMBS goes out of scope.
Returns new media object or nil.
See also:

- 183.11.13 MediaWithData(vlc as VLCInstanceMBS, data as string) as VLCMediaMBS 24102

183.11.13 MediaWithData(vlc as VLCInstanceMBS, data as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain data.
Notes:

Internally creates temp file for the data and opens the file.
File is later deleted when VLCMediaMBS goes out of scope.
Returns new media object or nil.
See also:

- 183.11.12 MediaWithData(vlc as VLCInstanceMBS, data as memoryblock) as VLCMediaMBS 24102

183.11.14 MediaWithFile(vlc as VLCInstanceMBS, file as folderitem) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain file path.
Notes:

file: local filesystem path as folderitem.
Returns new media object or nil.

183.11.15 MediaWithFileDescriptor(vlc as VLCInstanceMBS, fd as Integer) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for an already open file descriptor.
Notes:

The file descriptor shall be open for reading (or reading and writing).

Regular file descriptors, pipe read descriptors and character device descriptors (including TTYs) are supported on all platforms. Block device descriptors are supported where available.
Directory descriptors are supported on systems that provide fdopendir(). Sockets are supported on all platforms where they are file descriptors, i.e. all except Windows.

This library will not automatically close the file descriptor under any circumstance. Nevertheless, a file descriptor can usually only be rendered once in a media player. To render it a second time, the file descriptor should probably be rewound to the beginning with lseek().

Returns new media object or nil.

183.11.16 MediaWithPath(vlc as VLCInstanceMBS, Path as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain file path.
Notes:

path: local filesystem path
Returns new media object or nil.

183.11.17 MediaWithURL(vlc as VLCInstanceMBS, URL as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media with a certain given media resource location, for instance a valid URL.
Example:

```
dim v as VLCInstanceMBS // your vlc object
dim m as VLCMediaMBS

// load with URL
m = VLCMediaMBS.MediaWithURL(v, "http://www.mbsplugins.com/WriteInvoice-iPhone.m4v")

// or with file URL:
m = VLCMediaMBS.MediaWithURL(v, moviefile.URLPath)
```

Notes:

URL: the media location
Returns the new media object or nil.
To refer to a local file with this function, the file://... URI syntax must be used (see IETF RFC3986).
We recommend using MediaWithPath() instead when dealing with local files.

183.11.18 Meta(type as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the meta of the media.
Notes:

If the media has not yet been parsed this will return an empty string.

This methods automatically calls ParseAsync(), so after calling it you may receive a MediaMetaChanged event. If you prefer a synchronous version ensure that you call Parse() before get_meta().

183.11.19 MRL as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the media resource locator (mrl) from a media descriptor object.

183.11.20 NewAsNode(vlc as VLCInstanceMBS, name as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media as an empty node with a given name.
Notes:

Name: The name of the new node.
Returns new media object or nil.

183.11.21 Parse

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parse a media.
Notes:

This fetches (local) meta data and tracks information.
The method is synchronous.

183.11.22 ParseAsync

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parse a media.
Notes:

This fetches (local) meta data and tracks information.
The method is the asynchronous of Parse.
To track when this is over you can listen to MediaParsedChanged event. However if the media was already parsed you will not receive this event.

183.11.23 SaveMeta as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Save the meta previously set.
Notes: Return true if the write operation was successfull.

183.11.24 SetMeta(meta as Integer, value as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the meta of the media
Notes:

This function will not save the meta, call SaveMeta in order to save the meta.

meta: Which meta data. See kMeta* constants.
Value: the media's meta

183.11.25 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current state of media descriptor object.
Notes: See kState* constants.

183.11.26 Stats as VLCMediaStatsMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current statistics about the media.
Notes: Returns statistics for media.

183.11.27 SubItems as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get subitems of media descriptor object.

183.11.28 TrackInfos as VLCMediaTrackInfoMBS()

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media descriptor's elementary streams description.
Notes:

Note, you need to call Parse or play the media at least once before calling this function.
Not doing this will result in an empty array.

183.11.29 Tracks as VLCMediaTrackMBS()

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media descriptor's elementary streams description.
Notes:

Note, you need to call Parse or play the media at least once before calling this function.
Not doing this will result in an empty array.

Requires LibVLC 2.1.0 and later.

Returns an array of track objects.

183.11.30 Properties

183.11.31 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.11.32 Tag as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The media descriptor's user_data.
Notes:

This is a value you can use as you like.
This value survives even if the VLCMediaMBS object is destroyed and later recreated with the same VLC media object behind.
(Read and Write property)

183.11.33 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.11.34 Constants

183.11.35 kMetaActors = 22

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the Metadata Types Constants
Notes: Actors

183.11.36 kMetaAlbum = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Metadata Types Constants
Notes: Album

183.11.37 kMetaAlbumArtist = 23

MBS VLC Plugin, Plugin Version: 18.2.

Function: One of the Metadata Types Constants
Notes: Album artist

183.11.38 kMetaArtist = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Metadata Types Constants
Notes: Artist

183.11.39 kMetaArtworkURL = 15

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Metadata Types Constants
Notes: Artwork URL

Function: One of the media option constants.
Notes: Unique

183.11.63 kStateBuffering = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Buffering

183.11.64 kStateEnded = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Ended

183.11.65 kStateError = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Error

183.11.66 kStateNothingSpecial = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Nothing special. Video closed for example.

183.11.67 kStateOpening = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Opening

183.11.68 kStatePaused = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Paused

183.11.69 kStatePlaying = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Playing

183.11.70 kStateStopped = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Stopped

183.11.71 kTrackTypeAudio = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track type constants.
Notes: Audio

183.11.72 kTrackTypeText = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track type constants.
Notes: Text

183.11.73 kTrackTypeUnknown = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track type constants.
Notes: Unknown type

183.11.74 kTrackTypeVideo = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track type constants.
Notes: Video

183.12 class VLCMediaPlayerMBS

183.12.1 class VLCMediaPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The VLC class for video playback.

183.12.4 Methods

183.12.5 Constructor(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a Media Player object from a Media.
Notes: On success handle is not nil.
See also:

- 183.12.6 Constructor(VLCInstance as VLCInstanceMBS)

183.12.6 Constructor(VLCInstance as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an empty Media Player object.
Notes: On success handle is not nil.
See also:

- 183.12.5 Constructor(media as VLCMediaMBS) 24116

183.12.7 CopyCGImage as Variant

MBS VLC Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as CGImageMBS.
Notes: This method set HasNewFrame to false.

183.12.8 CopyMemory as memoryblock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as memoryblock.
Notes:

This method set HasNewFrame to false.
The format depends on what you passed to VideoSetFormat.
Byte order usually is BGRA.

183.12.9 CopyPicture as Picture

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as picture.
Notes:

This method set HasNewFrame to false.
If using CGContext, this returns a CGImageMBS. Else a Picture.

With version 19.0, this returns always a picture.

183.12.10 CopyToMemory(dest as Ptr, offset as Integer, RowBytes as Integer) as boolean

MBS VLC Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame into a given memory block.
Notes:

Offset: Position of first byte in memoryblock.
RowBytes: The row size in bytes of your memoryblock.

This way you can have your frame go into a buffer of bigger width/height representing an OpenGL texture for example.
Byte order usually is BGRA.

183.12.11 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.12.12 GetChapterCountForTitle(title as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get title chapter count.
Notes: Return number of chapters in title, or -1.

183.12.13 GetChapterDescription(index as Integer) as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available chapters for specific title.
Notes: Return list containing description of available chapter for title with index.

183.12.14 GetMemory as Ptr

MBS VLC Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to memory with current frame.
Notes:

This method set HasNewFrame to false.
The format depends on what you passed to VideoSetFormat.

183.12.15 Navigate(Navigate as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Navigate through DVD Menu.

183.12.16 NextChapter

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set next chapter (if applicable)

183.12.17 NextFrame

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Display the next frame (if supported)

183.12.18 Pause

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle pause (no effect if there is no media)
See also:

- 183.12.19 Pause(pause as boolean) 24120

183.12.19 Pause(pause as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pause or resume (no effect if there is no media)
Notes: pause: play/resume if false, pause if true.
See also:

- 183.12.18 Pause 24119

183.12.20 Play as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Plays video.
Notes: Return true if playback started (and was already started), or false on error.

183.12.21 PreviousChapter

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set previous chapter (if applicable)

183.12.22 SetAudioOutput(AudioOutputName as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the audio output.
Notes:

Change will be applied after stop and play.
Name: name of audio output.
Return true on success.

183.12.23 SetAudioOutputDevice(AudioOutputName as string, deviceID as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set audio output device. Changes are only effective after stop and play.
Notes:

AudioOutputName: name of audio output.
deviceID: device ID.

183.12.24 SetEqualizer(Equalizer as VLCEqualizerMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Apply new equalizer settings to a media player.
Notes:

It is possible to apply new equalizer settings to a media player whether the media player is currently playing media or not.
Invoking this method will immediately apply the new equalizer settings to the audio output of the currently playing media if there is any.
If there is no currently playing media, the new equalizer settings will be applied later if and when new media is played.

Equalizer settings will automatically be applied to subsequently played media.

To disable the equalizer for a media player invoke this method passing nil for the equalizer parameter.

The media player does not keep a reference to the supplied equalizer so it is safe for an application to release the equalizer reference any time after this method returns.

Requires VLC 2.2.

183.12.25 SetSubtitleFile(filename as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set new video subtitle file.
Notes:

filename: new video subtitle file
Returns the success status.

183.12.26 SetVideoTitleDisplay(position as Integer, timeout as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if, and how, the video title will be shown when media is played.
Notes:

position: position at which to display the title, or kVideoTitleDisplayPositionDisable to prevent the title from being displayed.
timeout: title display timeout in milliseconds (ignored if libvlc_position_disable)

Requires VLC 2.1.

183.12.27 Stop

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stop (no effect if there is no media)

183.12.28 ToggleFullScreen

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle fullscreen status on non-embedded video outputs.
Notes: See also Fullscreen property.

183.12.29 ToggleMute

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle mute status.

183.12.30 ToggleTeletext

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle teletext transparent status on video output.

183.12.31 VideoGetCursor(num as Integer, byref px as Integer, byref py as Integer) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the mouse pointer coordinates over a video.
Notes:

Coordinates are expressed in terms of the decoded video resolution, not in terms of pixels on the screen/viewport (to get the latter, you can query your windowing system directly).

Either of the coordinates may be negative or larger than the corresponding dimension of the video, if the cursor is outside the rendering area.

The coordinates may be out-of-date if the pointer is not located on the video rendering area. LibVLC does not track the pointer if it is outside of the video widget.

LibVLC does not support multiple pointers (it does of course support multiple input devices sharing the same pointer) at the moment.

num: number of the video (starting from, and most commonly 0)
px: get the abscissa.
py: get the ordinate.
Returns true on success, false if the specified video does not exist

183.12.32 VideoGetSize(num as Integer, byref px as UInt32, byref py as UInt32) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the pixel dimensions of a video.
Notes:

num: number of the video (starting from, and most commonly 0)
px: get the pixel width [OUT]
py: get the pixel height [OUT]
Return true on success, false if the specified video does not exist.

183.12.33 VideoSetCallback(width as integer, height as integer, CGContextHandle as integer = 0)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets video callbacks, so the plugin can provide current frame with CopyPicture method.
Notes:

You can use CopyPicture and CopyMemory methods to query new frame content.
The hasNewFrame property tells you whether a new frame is available.
The plugin will optionally draw the frames into the CGContext you provide.
Please use CopyCGImage to get a CGImage from image buffer.

183.12.34 VideoSetDeinterlace(Mode as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable deinterlace filter.
Notes: Mode: Type of deinterlace filter, "" to disable.

183.12.35 VideoSetFormat(chroma as string, width as UInt32, height as UInt32, pitch as UInt32)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set decoded video chroma and dimensions.
Notes:

This only works in combination with SetVideoCallbacks().
chroma: a four-characters string identifying the chroma (e.g. "RV32" or "YUYV")
width: pixel width
height: pixel height
pitch: line pitch (in bytes)

All pixel planes are expected to have the same pitch.

183.12.36 VideoSetKeyInput(on as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable key press events handling, according to the LibVLC hotkeys configuration.
Notes:

By default and for historical reasons, keyboard events are handled by the LibVLC video widget.

On X11, there can be only one subscriber for key press and mouse click events per window. If your application has subscribed to those events for the X window ID of the video widget, then LibVLC will not be able to handle key presses and mouse clicks in any case.

This function is only implemented for X11 and Win32 at the moment.

on: true to handle key press events, false to ignore them.

183.12.37 VideoSetLogoString(option as Integer, logo as String)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set logo option as string.
Notes: Options that take a different type value are ignored.

183.12.38 VideoSetMouseInput(on as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable mouse click events handling.
Notes:

By default, those events are handled. This is needed for DVD menus to work, as well as a few video filters such as "puzzle".

This function is only implemented for X11 and Win32 at the moment.

on: true to handle mouse click events, false to ignore them.

183.12.39 VideoTakeSnapshot(num as Integer, path as string, width as Integer, height as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Take a snapshot of the current video window.
Notes:

If width AND height is 0, original size is used.
If width XOR height is 0, original aspect-ratio is preserved. (e.g. width = 0 and height = -1)

num: number of video output (typically 0 for the first/only one)
Path: the path where to save the screenshot to
Width: the snapshot's width
Height: the snapshot's height

Returns true on success, false if the video was not found

183.12.40 Properties

183.12.41 AGL as UInt32

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the agl handler where the media player should render its video output.
Notes:

Returns the agl handler or 0 if none where set.
(Read and Write property)

183.12.42 AspectRatio as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set current video aspect ratio.
Notes:

Set new video aspect-ratio or "" to reset to default. Invalid aspect ratios are ignored.
Get the video aspect ratio or "" if unspecified.

The value must be something like "4:3", "16:9", "16:10", ...

(Read and Write property)

183.12.43 AudioChannel as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio channel.
Notes: (Read and Write property)

183.12.44 AudioDelay as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio delay in microseconds.
Notes:

The audio delay will be reset to zero each time the media changes.
(Read and Write property)

183.12.45 AudioOutputDevices as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets a list of potential audio output devices,
Notes:

See also SetAudioOutputDevice method.

Not all audio outputs support enumerating devices.
The audio output may be functional even if the list is empty (nil).

The list may not be exhaustive.

Some audio output devices in the list might not actually work in some circumstances. By default, it is recommended to not specify any explicit audio device.

Returns a nil-terminated linked list of potential audio output devices.
Requires LibVLC 2.2.0 or later.

(Read only property)

183.12.46 AudioOutputDeviceType as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set/Get current audio device type.
Notes:

Device type describes something like character of output sound - stereo sound, 2.1, 5.1 etc.
(Read and Write property)

183.12.47 AudioTrack as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio track.
Notes:

Get or set current audio track.
(Read and Write property)

183.12.48 AudioTrackCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get number of available audio tracks.
Notes:

Returns the number of available audio tracks (int), or -1 if unavailable.
(Read only property)

183.12.49 CanPause as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Can this media player be paused?
Notes:

Returns true if the media player can pause.
(Read only property)

183.12.50 Chapter as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set movie chapter.
Notes:

Returns chapter number currently playing, or -1 if there is no media.
Sets movie chapter (if applicable).
(Read and Write property)

183.12.51 ChapterCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie chapter count.
Notes:

Returns number of chapters in movie, or -1.
(Read only property)

183.12.52 CropGeometry as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current crop filter geometry.
Notes:

Returns the crop filter geometry or "" if unset.
Set with new crop filter geometry ("" to unset).

Seems to be broken in our tests inside libVLC.
(Read and Write property)

183.12.53 FPS as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie fps rate
Notes:

Returns frames per second (fps) for this playing movie, or 0 if unspecified.
(Read only property)

183.12.54 FullScreen as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable fullscreen.
Notes:

With most window managers, only a top-level windows can be in full-screen mode. Hence, this function will not operate properly if XWindow property was used to embed the video in a non-top-level window. In that case, the embedding window must be reparented to the root window before fullscreen mode is enabled. You will want to reparent it back to its normal parent when disabling fullscreen.
(Read and Write property)

183.12.55 GetAudioTrackDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available audio tracks.
Notes:

Returns list with description of available audio tracks, or nil.
(Read only property)

183.12.56 GetSPUDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available video subtitles.
Notes:

Return list containing description of available video subtitles or nil.

(Read only property)

183.12.57 GetVideoTitleDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available titles.
Notes:

Return list containing description of available titles.
(Read only property)

183.12.58 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

183.12.59 HasNewFrame as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether a new frame is available.
Notes: (Read and Write property)

183.12.60 HasVOut as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many video outputs does this media player have?
Notes:

Return the number of video outputs.
(Read only property)

183.12.61 Height as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current video height.
Notes:

Returns the video pixel height or 0 if not applicable.
(Read only property)

183.12.62 HWND as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a Win32/Win64 API window handle (HWND) where the media player should render its video output.
Notes:

If LibVLC was built without Win32/Win64 API output support, then this has no effects.

Get the Windows API window handle (HWND) previously set with this property. The handle will be returned even if LibVLC is not currently outputting any video to it.
Currently not supported by our plugin.
(Read and Write property)

183.12.63 IsPlaying as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether player is playing.
Notes: (Read only property)

183.12.64 IsSeekable as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is this media player seekable?
Notes:

Returns true if the media player can seek.

(Read only property)

183.12.65 Length as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current movie length (in ms).
Notes:

Return the movie length (in ms), or -1 if there is no media.
(Read only property)

183.12.66 Media as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current media.
Notes: (Read and Write property)

183.12.67 Mute as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current mute status.
Notes:

If true then mute, otherwise unmute.
(Read and Write property)

183.12.68 NSObject as Ptr

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the NSView handler where the media player should render its video output.
Notes:

Currently not supported by our plugin.
(Read and Write property)

183.12.69 Position as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set movie position.
Notes:

Movie position as percentage between 0.0 and 1.0.
Returns movie position, or -1. in case of error.
Set movie position. This has no effect if playback is not enabled. This might not work depending on the underlying input format and protocol.
(Read and Write property)

183.12.70 ProgramScrambled as boolean

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if the current program is scrambled.
Notes:

true if the current program is scrambled.
Requires VLC 2.2.
(Read only property)

183.12.71 Rate as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the requested movie play rate.
Notes:

Depending on the underlying media, the requested rate may be different from the real playback rate.
(Read and Write property)

183.12.72 Scale as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current video scaling factor.
Notes:

That is the ratio of the number of pixels on screen to the number of pixels in the original decoded video in each dimension. Zero is a special value; it will adjust the video to the output window/drawable (in windowed mode) or the entire screen.

Note that not all video outputs support scaling.
(Read and Write property)

183.12.73 SPU as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current video subtitle.
Notes:

Returns the video subtitle selected, or -1 if none.
(Read and Write property)

183.12.74 SPUCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of available video subtitles.
Notes: (Read only property)

183.12.75 SPUDelay as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current subtitle delay.
Notes:

This affects the timing of when the subtitle will be displayed.
Positive values means subtitles are being displayed later, while negative values will result in subtitles being displayed earlier.
The subtitle delay will be reset to zero each time the media changes.
(Read and Write property)

183.12.76 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current movie state.
Notes:

Returns the current state of the media player (playing, paused, ...)
(Read only property)

183.12.77 Tag as Variant

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes:

You can store whatever you like in this property.
(Read only property)

183.12.78 Time as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current movie time (in ms).
Notes:

Return the movie time (in ms), or -1 if there is no media.
Set the movie time (in ms). This has no effect if no media is being played.
Not all formats and protocols support this.
(Read and Write property)

183.12.79 Title as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set/Get movie title.
Notes:

Returns title number currently playing, or -1.
(Read and Write property)

183.12.80 TitleCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie title count.
Notes:

Returns title number count, or -1.
(Read only property)

183.12.81 VideoTeleText as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current teletext page requested.
Notes: (Read and Write property)

183.12.82 VideoTrack as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set video track.
Notes: (Read and Write property)

183.12.83 VideoTrackCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get number of available video tracks.
Notes:

Returns the number of available video tracks.
(Read only property)

183.12.84 VideoTrackDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available video tracks.
Notes:

Returns list with description of available video tracks, or nil on error.
(Read only property)

183.12.85 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

183.12.86 Volume as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current software audio volume.
Notes:

The volume in percents.
0 = mute, 100 = nominal / 0dB.
(Read and Write property)

183.12.87 Width as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current video width.
Notes:

Returns the video pixel width or 0 if not applicable.
(Read only property)

183.12.88 WillPlay as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is the player able to play.
Notes: (Read only property)

183.12.89 XWindow as UInt32

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set an X Window System drawable where the media player should render its video output.
Notes:

If LibVLC was built without X11 output support, then this has no effects.

The specified identifier must correspond to an existing Input/Output class X11 window. Pixmaps are not supported. The caller shall ensure that the X11 server is the same as the one the VLC instance has been configured with. This function must be called before video playback is started; otherwise it will only take effect after playback stop and restart.

Get the X Window System window identifier previously set with this property. Note that this will return the identifier even if VLC is not currently using it (for instance if it is playing an audio-only input).
Currently not supported by our plugin.
(Read and Write property)

183.12.90 VideoAdjust(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set adjust option as Integer.
Notes:

option: See kAdjust* constants.
Options that take a different type value are ignored.

Using kAdjustEnable with value 0 stops adjust filter. With other values you start adjust filter.
(Read and Write computed property)

183.12.91 VideoAdjustFloat(option as Integer) as single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set adjust option as float.
Notes:

option: See kAdjust* constants.
Options that take a different type value are ignored.
(Read and Write computed property)

183.12.92 VideoLogo(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set logo option as Integer.
Notes:

Options that take a different type value are ignored.
Passing kLogoEnable as option value has the side effect of starting (arg not 0) or stopping (arg 0) the logo filter.
(Read and Write computed property)

183.12.93 VideoMarquee(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get, Enable, disable or set an integer marquee option.
Notes:

Setting kMarqueeEnable has the side effect of enabling (arg not 0) or disabling (arg 0) the marq filter.
(Read and Write computed property)

183.12.94 VideoMarqueeString(option as Integer) as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a string marquee option value
Notes: (Read and Write computed property)

183.12.95 Constants

183.12.96 kAdjustBrightness = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Brightness

183.12.97 kAdjustContrast = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Contrast

183.12.98 kAdjustEnable = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Enable

183.12.99 kAdjustGamma = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Gamma

183.12.100 kAdjustHue = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Hue

183.12.101 kAdjustSaturation = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Saturation

183.12.102 kAudioChannelDolbys = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Dolbys

183.12.103 kAudioChannelError = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Error

183.12.104 kAudioChannelLeft = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Left channel

183.12.105 kAudioChannelRight = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Right channel

183.12.106 kAudioChannelRStereo = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: RStereo

183.12.107 kAudioChannelStereo = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Stereo

183.12.108 kAudioOutputDevice_2F2R = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 2F2R

183.12.109 kAudioOutputDevice_3F2R = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 3F2R

183.12.110 kAudioOutputDevice_5_1 = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 5/1

183.12.111 kAudioOutputDevice_6_1 = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 6/1

183.12.112 kAudioOutputDevice_7_1 = 8

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 7/1

183.12.113 kAudioOutputDevice_Error = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: Error

183.12.114 kAudioOutputDevice_Mono = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: Mono

183.12.115 kAudioOutputDevice_SPDIF = 10

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: SPDIF

183.12.116 kAudioOutputDevice_Stereo = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: Stereo

183.12.117 kLogoDelay = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Delay

183.12.118 kLogoEnable = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Enable/Disable

183.12.119 kLogoFile = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes:

File path.
Use with VideoSetLogoString: "file,d,t;file,d,t;..."

183.12.120 kLogoOpacity = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Opacity

183.12.121 kLogoPosition = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Position

183.12.122 kLogoRepeat = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Repeat

183.12.123 kLogoX = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: X Position

183.12.124 kLogoY = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Y Position

183.12.125 kMarqueeColor = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Color

183.12.126 kMarqueeEnable = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Enable

183.12.127 kMarqueeOpacity = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Opacity

183.12.128 kMarqueePosition = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Position

183.12.129 kMarqueeRefresh = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Refresh

183.12.130 kMarqueeSize = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Size

183.12.131 kMarqueeText = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Text

183.12.132 kMarqueeTimeout = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Timeout

183.12.133 kMarqueeX = 8

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: X

183.12.134 kMarqueeY = 9

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Y

183.12.135 kNavigateActivate = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Activate

183.12.136 kNavigateDown = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Down

183.12.137 kNavigateLeft = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Left

183.12.138 kNavigateRight = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Right

183.12.139 kNavigateUp = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Up

183.12.140 kStateBuffering = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Buffering

183.12.141 kStateEnded = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Ended

183.12.142 kStateError = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Error

183.12.143 kStateNothingSpecial = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Nothing special. Video closed for example.

183.12.144 kStateOpening = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Opening

183.12.145 kStatePaused = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Paused

183.12.146 kStatePlaying = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Playing

183.12.147 kStateStopped = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Stopped

183.12.148 kVideoTitleDisplayPositionBottom = 6

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Bottom

183.12.149 kVideoTitleDisplayPositionBottomLeft = 7

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Bottom Left

183.12.150 kVideoTitleDisplayPositionBottomRight = 8

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Bottom Right

183.12.151 kVideoTitleDisplayPositionCenter = 0

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Center

183.12.152 kVideoTitleDisplayPositionDisable = -1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Disabled

183.12.153 kVideoTitleDisplayPositionLeft = 1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Left

183.12.154 kVideoTitleDisplayPositionRight = 2

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Right

183.12.155 kVideoTitleDisplayPositionTop = 3

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Top

183.12.156 kVideoTitleDisplayPositionTopLeft = 4

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Top Left

183.12.157 kVideoTitleDisplayPositionTopRight = 5

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Top Right

183.13 class VLCMediaStatsMBS

183.13.1 class VLCMediaStatsMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for media statistics.

183.13.2 Properties

183.13.3 DecodedAudio as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decoded audio.
Notes: (Read and Write property)

183.13.4 DecodedVideo as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decoded video.
Notes: (Read and Write property)

183.13.5 DemuxBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitrate for demux input.
Notes: (Read and Write property)

183.13.6 DemuxCorrupted as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Demux corrupted.
Notes: (Read and Write property)

183.13.7 DemuxDiscontinuity as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The demux discontinuity.
Notes: (Read and Write property)

183.13.8 DemuxRead_bytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of read bytes by demuxer.
Notes: (Read and Write property)

183.13.9 DisplayedPictures as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of displayed video frames.
Notes: (Read and Write property)

183.13.10 InputBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input bit rate.
Notes: (Read and Write property)

183.13.11 LostAbuffers as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of lost audio buffers.
Notes: (Read and Write property)

183.13.12 LostPictures as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of lost video frames.
Notes: (Read and Write property)

183.13.13 PlayedAbuffers as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of played Audio buffers.
Notes: (Read and Write property)

183.13.14 ReadBytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bytes read from input.
Notes: (Read and Write property)

183.13.15 SendBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The sending bit rate.
Notes: (Read and Write property)

183.13.16 SentBytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bytes sent.
Notes: (Read and Write property)

183.13.17 SentPackets as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of packets sent.
Notes: (Read and Write property)

183.14 class VLCMediaTrackInfoMBS

183.14.1 class VLCMediaTrackInfoMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for track information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

183.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr2

183.14.3 Methods

183.14.4 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

183.14.5 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.14.6 Properties

183.14.7 Channels as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of channels in an audio track.
Notes: (Read and Write property)

183.14.8 Codec as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track's codec identifier.
Notes: (Read and Write property)

183.14.9 CodecString as String

MBS VLC Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track's codec identifier as string.
Notes: (Read and Write property)

183.14.10 Height as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height in pixel of a video track.
Notes: (Read and Write property)

183.14.11 ID as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track'S ID.
Notes: (Read and Write property)

183.14.12 Level as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec's level.
Notes: (Read and Write property)

183.14.13 Profile as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec's profile.
Notes: (Read and Write property)

183.14.14 Rate as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate for an audio track.
Notes:

e.g. 44000 Hz.
(Read and Write property)

183.14.15 Type as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track type.
Notes:

Can be TrackAudio, TrackText, TrackVideo or TrackUnknown.
(Read and Write property)

183.14.16 Width as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width in pixel of a video track.
Notes: (Read and Write property)

183.14.17 Constants

183.14.18 TrackAudio = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Audio

183.14.19 TrackText = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Text track, e.g. subtitles.

183.14.20 TrackUnknown = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Unknown

183.14.21 TrackVideo = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Video

183.15 class VLCMediaTrackMBS

183.15.1 class VLCMediaTrackMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the media track.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

183.15.2 Methods

183.15.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

183.15.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.15.5 Properties

183.15.6 Bitrate as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The bitrate.
Notes: (Read and Write property)

183.15.7 Channels as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of channels.
Notes: (Read and Write property)

183.15.8 Codec as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec ID.
Notes: (Read and Write property)

183.15.9 CodecString as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec ID as 4 letter text.
Notes: (Read and Write property)

183.15.10 Description as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track description.
Notes: (Read and Write property)

183.15.11 Encoding as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text encoding for subtitles.
Notes: (Read and Write property)

183.15.12 FrameRate as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

183.15.13 FrameRateDen as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

183.15.14 FrameRateNum as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

183.15.15 Height as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of a video track.
Notes: (Read and Write property)

183.15.16 ID as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of the track.
Notes: (Read and Write property)

183.15.17 Language as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The language for this track.
Notes: (Read and Write property)

183.15.18 Level as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec specific level value.
Notes: (Read and Write property)

183.15.19 OriginalCode as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The original code for codec.
Notes: (Read and Write property)

183.15.20 Profile as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Codec specific profile value.
Notes: (Read and Write property)

183.15.21 Rate as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The sound rate in Hz.
Notes: (Read and Write property)

183.15.22 Sar as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

183.15.23 SarDen as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

183.15.24 SarNum as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

183.15.25 Type as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track type.
Notes: (Read and Write property)

183.15.26 Width as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width of a video track.
Notes: (Read and Write property)

183.15.27 Constants

183.15.28 TrackAudio = 0

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Audio

183.15.29 TrackText = 2

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Text

183.15.30 TrackUnknown = -1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Unknown type

183.15.31 TrackVideo = 1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Video

183.16 class VLCMissingFunctionExceptionMBS

183.16.1 class VLCMissingFunctionExceptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception which is raised if you call a function which is not available.
Notes:

Either your VLC shared library does not have the function or you did not yet load the library.
Subclass of the RuntimeException class.

183.17 class VLCModuleDescriptionMBS

183.17.1 class VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a module description.

183.17.2 Methods

183.17.3 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.17.4 Properties

183.17.5 Help as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The help text.
Notes: (Read and Write property)

183.17.6 LongName as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The long name.
Notes: (Read and Write property)

183.17.7 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the module.
Notes: (Read and Write property)

183.17.8 NextModule as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The link to the next module.
Notes: (Read and Write property)

183.17.9 ShortName as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The short name.
Notes: (Read and Write property)

183.18 class VLCNotInitializedExceptionMBS

183.18.1 class VLCNotInitializedExceptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This exception is raised if you call a method on an uninitialized object.
Notes:

Should not happen. And if it happens, you have a bug in your code.
Subclass of the RuntimeException class.

183.19 class VLCTrackDescriptionMBS

183.19.1 class VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Description for video, audio tracks and subtitles.
Notes: It contains id, name (description string) and reference to next record.

183.19.2 Methods

183.19.3 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

183.19.4 Properties

183.19.5 ID as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track ID.
Notes: (Read and Write property)

183.19.6 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track name.
Notes: (Read and Write property)

183.19.7 NextTrack as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next track in the list.
Notes: (Read and Write property)

Chapter 184

WebKit2

184.1 class WKBackForwardListItemMBS

184.1.1 class WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKBackForwardListItem object represents a webpage in the back-forward list of a web view.
Notes:

For 32-bit a WebHistoryItem object, for 64-bit a WKBackForwardListItem object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

184.1.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

184.1.3 Methods

184.1.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

184.1.5 Properties

184.1.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.1.7 initialURL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL of the initial request that created this item.
Notes: (Read only property)

184.1.8 title as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the webpage represented by this item.
Notes: (Read only property)

184.1.9 URL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL of the webpage represented by this item.
Notes: (Read only property)

184.2 class WKBackForwardListMBS

184.2.1 class WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKBackForwardList object is a list of webpages previously visited in a web view that can be reached by going back or forward.
Notes: For 32-bit a WebBackForwardList object, for 64-bit a WKBackForwardList object.

184.2.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.0
- MBS Xojo Plugins, version 20.0r5

184.2.3 Methods

184.2.4 backList as WKBackForwardListItemMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The portion of the list preceding the current item.
Notes: The items are in the order in which they were originally visited.

184.2.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 184.2.6 Constructor(WKWebView as WKWebViewMBS) 24177

184.2.6 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries back forward list for a web view.
See also:

- 184.2.5 Constructor 24177

184.2.7 forwardList as WKBackForwardListItemMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The portion of the list following the current item.
Notes: The items are in the order in which they were originally visited.

184.2.8 itemAtIndex(index as Integer) as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the item at a specified distance from the current item.
Notes:

index: Index of the desired list item relative to the current item:
0 for the current item, -1 for the immediately preceding item, 1 for the immediately following item, and so on.

Returns the item at the specified distance from the current item, or nil if the index parameter exceeds the limits of the list.

184.2.9 Properties

184.2.10 backItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The item immediately preceding the current item, or nil if there isn't one.
Notes: (Read only property)

184.2.11 currentItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The current item.
Notes: (Read only property)

184.2.12 forwardItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The item immediately following the current item, or nil if there isn't one.
Notes: (Read only property)

184.2.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.3 class WKHTTPCookieStoreMBS

184.3.1 class WKHTTPCookieStoreMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that manages the HTTP cookies associated with a particular WKWebsiteDataStore.
Example:

```
Dim CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Dim cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Dim cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

184.3.3 Xojo Developer Magazine

- 18.3, page 10: News

184.3.4 Methods

184.3.5 AllCookies as NSHTTPCookieMBS()

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Fetches all stored cookies.
Example:

```
Dim CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Dim cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Dim cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

184.3.6 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes:

Creates an object for the http cookie store used by web view.
Adds an observer to the cookie store to call DidChange event.

184.3.7 deleteCookie(cookie as NSHTTPCookieMBS, wait as boolean = true)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Deletes the specified cookie.
Notes:

By default waits for this to complete.
Otherwise this is set asynchronously.

184.3.8 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

184.3.9 setCookie(cookie as NSHTTPCookieMBS, wait as boolean = true)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Sets a cookie.
Notes:

By default waits for this to complete.
Otherwise this is set asynchronously.

184.3.10 Properties

184.3.11 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.3.12 Events

184.3.13 DidChange

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: .

Function: Called when the cookies in the cookie store have changed.

184.4 class WKNavigationMBS

184.4.1 class WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: A WKNavigation object contains information for tracking the loading progress of a webpage.
Notes: A navigation object is returned from the web view load methods and is also passed to the navigation delegate methods to uniquely identify a webpage load from start to finish. It has no method or properties of its own.

184.4.2 Blog Entries

184.4.3 Methods

184.4.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

184.4.5 Properties

184.4.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The handle for the navigation action.
Notes: (Read only property)

184.4.7 request as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The request.
Notes:

May be nil if not available.
(Read only property)

184.5 class WKNavigationResponseMBS

184.5.1 class WKNavigationResponseMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKNavigationResponse object contains information about a navigation response, used for making policy decisions.

184.5.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

184.5.3 Methods

184.5.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

184.5.5 Properties

184.5.6 canShowMIMEType as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether WebKit can display the response's MIME type natively.
Notes: (Read only property)

184.5.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.5.8 isForMainFrame as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the frame being navigated is the main frame.
Notes: (Read only property)

184.5.9 response as NSURLResponseMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The frame's response.
Notes:

Allowing a navigation response with a MIME type that can't be shown will cause the navigation to fail.
(Read only property)

184.6 class WKPreferencesMBS

184.6.1 class WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A WKPreferences object encapsulates the preference settings for a web view.
Notes:

The preferences object associated with a web view is specified by its web view configuration.
Available on MacOS 10.10 or newer.

184.6.4 Methods

184.6.5 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries preferences object for a web view.

184.6.6 Properties

184.6.7 defaultFontSize as Integer

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The default font size for fonts.
Example:

HTMLViewer1.WKWebView.Preferences.defaultFontSize = 10

Notes: (Read and Write property)

184.6.8 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether developer extras are enabled.
Example:

HTMLViewer1.WKWebView.Preferences.developerExtrasEnabled = true

Notes:

Set to true, so you can inspect elements via contextual menus.
(Read and Write property)

184.6.9 FraudulentWebsiteWarningEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether warnings should be shown for suspected fraudulent content such as phishing or malware.
Notes:

The default value is true. This feature is currently available in the following region: China.
(Read and Write property)

184.6.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.6.11 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether Java is enabled.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.javaEnabled = False

Notes:

The default value is false.
Deprecated for macOS 10.15.
(Read and Write property)

184.6.12 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether JavaScript can open windows without user interaction.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.javaScriptCanOpenWindowsAutomatically = False

Notes:

The default value is false in iOS and true in macOS.
(Read and Write property)

184.6.13 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether JavaScript is enabled.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.javaScriptEnabled = False

Notes:

The default value is true. Setting this property to false disables JavaScripts that are loaded or executed by the web page. This setting does not affect user scripts. See WKUserScriptMBS class.

(Read and Write property)

184.6.14 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether images are loaded automatically.
Example:

HTMLViewer1.WKWebView.Preferences.loadsImagesAutomatically = False

Notes: (Read and Write property)

184.6.15 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum font size in points.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.minimumFontSize = 20

Notes:

The default value is 0.
(Read and Write property)

184.6.16 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether plug-ins are enabled.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.plugInsEnabled = False

Notes:

The default value is false.
Deprecated for macOS 10.15.

(Read and Write property)

184.6.17 shouldPrintBackgrounds as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether webkit draws background on printing.
Example:

HTMLViewer1.WKWebView.Preferences.shouldPrintBackgrounds = False

Notes: (Read and Write property)

184.6.18 standardFontFamily as String

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the standard font family.
Notes: (Read and Write property)

184.6.19 tabFocusesLinks as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: If tabFocusesLinks is true, the tab key will focus links and form controls.
Notes:

The Option key temporarily reverses this preference.
(Read and Write property)

184.7 class WKUserScriptMBS

184.7.1 class WKUserScriptMBS

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: A WKUserScript object represents a script that can be injected into a webpage.
Notes:

Requires MacOS 10.10 or newer.
64-bit target only.

184.7.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.5
- MBS Xojo Plugins, version 19.5pr8

184.7.3 Methods

184.7.4 Constructor(Source as String, injectionTime as Integer, isForMainFrameOnly as Boolean)

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an initialized user script that can be added to a user content controller.
Notes:

source: The script's source code.
injectionTime: The time when the script should be injected into the webpage. Either InjectionTimeAtDocumentStart
or InjectionTimeAtDocumentEnd.
isForMainFrameOnly: A Boolean value indicating whether the script should be injected only into the main frame (YES) or into all frames (NO).

184.7.5 Properties

184.7.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.7.7 injectionTime as Integer

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: The time when the script should be injected into the webpage.
Notes:

Either InjectionTimeAtDocumentStart or InjectionTimeAtDocumentEnd.
(Read only property)

184.7.8 isForMainFrameOnly as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the script should be injected only into the main frame (true) or into all frames (false).
Notes: (Read only property)

184.7.9 Source as String

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: The script's source code.
Notes: (Read only property)

184.7.10 Constants

184.7.11 InjectionTimeAtDocumentEnd = 1

MBS Mac64bit Plugin, Plugin Version: 19.5.

Function: One of the constants for the time when a user script should be injected into a webpage.
Notes: Inject the script after the document finishes loading, but before other subresources finish loading.

184.7.12 InjectionTimeAtDocumentStart = 0

MBS Mac64bit Plugin, Plugin Version: 19.5.

Function: One of the constants for the time when a user script should be injected into a webpage.
Notes: Inject the script after the document element is created, but before any other content is loaded.

184.8 class WKWebViewConfigurationMBS

184.8.1 class WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A collection of properties used to initialize a web view.
Notes:

Using the WKWebViewConfiguration class, you can determine how soon a webpage is rendered, how media playback is handled, the granularity of items that the user can select, and many other options. WKWebViewConfiguration is only used when a web view is first initialized. You cannot use this class to change the web view's configuration after it has been created.

184.8.2 Blog Entries

- News from the MBS Xojo Plugins Version 20.1
- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.1

184.8.3 Methods

184.8.4 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates Xojo object referencing configuration object for web viewer.

184.8.5 copy as WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the configuration object.

184.8.6 Properties

184.8.7 allowsAirPlayForMediaPlayback as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether AirPlay is allowed.
Notes:

The default value is true.
(Read and Write property)

184.8.8 applicationNameForUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the application as used in the user agent string.
Notes: (Read and Write property)

184.8.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

184.8.10 mediaTypesRequiringUserActionForPlayback as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines which media types require a user gesture to begin playing.
Notes:

Use AudiovisualMediaTypeNone to indicate that no user gestures are required to begin playing media.
(Read and Write property)

184.8.11 Preferences as WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The preference object to be used by the web view.
Notes: (Read and Write property)

184.8.12 suppressesIncrementalRendering as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the web view suppresses content rendering until it is fully loaded into memory.
Notes:

The default value is false.
(Read and Write property)

184.8.13 userInterfaceDirectionPolicy as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The directionality of user interface elements.
Notes:

The default value is serInterfaceDirectionPolicyContent. For other possible values, see constants.
Available on MacOS 10.12 or newer.

The policy used to determine the directionality of user interface elements in a web view.
When UserInterfaceDirectionPolicyContent is specified, the directionality of user interface elements is affected by the dir attribute or the direction CSS property. When UserInterfaceDirectionPolicySystem is specified, the directionality of user interface elements is affected by the direction of the view.
(Read and Write property)

184.8.14 Constants

184.8.15 AudiovisualMediaTypeAll = -1

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: All media types require a user gesture to begin playing.

184.8.16 AudiovisualMediaTypeAudio = 1

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: Media types containing audio require a user gesture to begin playing.

184.8.17 AudiovisualMediaTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: No media types require a user gesture to begin playing.

184.8.18 AudiovisualMediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: Media types containing video require a user gesture to begin playing.

184.8.19 UserInterfaceDirectionPolicyContent = 0

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the User Interface Direction Policy constants.
Notes: The directionality follows the CSS/HTML/XHTML specifications. This is the default value of user-InterfaceDirectionPolicy.

184.8.20 UserInterfaceDirectionPolicySystem = 1

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the User Interface Direction Policy constants.
Notes: The directionality follows the view's userInterfaceLayoutDirection property

184.9 control WKWebViewControlMBS

184.9.1 control WKWebViewControlMBS

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Example:

```
// print a WKWebViewControlMBS to PDF file:

dim browser as WKWebViewControlMBS // your control showing website
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pdf")
pi.SetSaveDestination f

Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = False
po.showsProgressPanel = False

If po.runOperation Then
f.launch
End If
```

Notes:

This is a control to use WebKit in 32-bit and WebKit 2 in 64-bit.
Most of the events provided by Xojo for the control will not work.
But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

184.9.4 Methods

184.9.5 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes:

Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

184.9.6 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Adds an user script.

184.9.7 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Example:

```
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 184.9.8 EvaluateJavaScript(JavaScript as String, Tag as String = "") 24200

184.9.8 EvaluateJavaScript(JavaScript as String, Tag as String = "")

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Notes:

Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 184.9.7 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 24200

184.9.9 goBack

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

184.9.10 goForward

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

184.9.11 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes:

item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

184.9.12 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

184.9.13 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested file.
Example:

```
Dim w as WKWebViewControlMBS // your web viewer
Dim HTMLFile as folderItem = getfolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

184.9.14 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

184.9.15 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

call browser.LoadURL "https://www.mbs-plugins.de/"
```

Notes:

Sets Navigation property.
Sets Navigation property.

184.9.16 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

184.9.17 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
dim browser as WKWebViewControlMBS // your web viewer
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes:

Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

184.9.18 reload

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

184.9.19 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

184.9.20 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Removes all associated user scripts.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.removeAllUserScripts
```

184.9.21 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

184.9.22 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes:

magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

184.9.23 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

```
WKWebViewControlMBS.setUsePrivateBrowsing True
```

Notes:

Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

184.9.24 stopLoading

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Stops loading all resources on the current page.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.stopLoading
```

184.9.25 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 184.9.26 takeSnapshot(tag as string = "") 24207

184.9.26 takeSnapshot(tag as string = "")

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes:

Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 184.9.25 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 24207

184.9.27 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: The user scripts associated with the user content controller.

184.9.28 Properties

184.9.29 AcceptTabs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop only.

Function: Whether the control should accept tab keys.
Notes:

If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

184.9.30 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Allow file access for file URLs.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

184.9.31 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

184.9.32 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

184.9.33 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view's magnification.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes:

The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

184.9.34 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

184.9.35 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The web view's back-forward list.
Notes: (Read only property)

184.9.36 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

184.9.37 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As WKWebViewControlMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

184.9.38 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The custom user agent string.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

184.9.39 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

184.9.40 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.

(Read only property)

184.9.41 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

184.9.42 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MsgBox "loaded"
```

Notes: (Read only property)

184.9.43 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether java is enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

184.9.44 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

184.9.45 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether javascript is enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

184.9.46 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether to load images automatically.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

184.9.47 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.magnification = 2.0
```

Notes:

The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

184.9.48 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: The minimum font size to use.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

184.9.49 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The current navigation action.
Notes: (Read only property)

184.9.50 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether plugins are enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

184.9.51 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed.
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.

(Read and Write property)

184.9.52 Title as String

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The page title.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox Browser.Title
```

Notes: (Read only property)

184.9.53 URL as String

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The active URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

184.9.54 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

```
WVWebViewModuleMBS.UsePrivateBrowsing = True
```

Notes:

Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

184.9.55 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The used view.
Notes:

Should be either a WebView (32bit) or WKWebView (64bit).
(Read only property)

184.9.56 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The used WKWebViewMBS view.
Notes:

Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

184.9.57 Events

184.9.58 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

184.9.59 Close

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: The webviewer should close.
Notes:

Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

184.9.60 CreateWebView(URL as String, request as NSURLRequestMBS) as WKWebViewControlMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: Creates a new web view.
Notes:

If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

184.9.61 decidePolicyForNavigationAction(URL as String, NavigationType as String, modifierFlags as Integer, buttonNumber as Integer, newWindow as boolean, frameName as string, request as NSURLRequestMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Decides whether to allow or cancel a navigation.
Notes:

Return true to cancel or false to allow.
URL is the URL to load.
NavigationType defines what navigation is happening: LinkClicked, FormSubmitted, BackForward, Reload, FormResubmitted or Other.

modifierFlags: The keyboard modifiers.
buttonNumber: Which mouse button was clicked: 0 for left button, 1 for middle button, 2 for right button
newWindow: True if a new window should be opened or false if not.
frameName: The frame name. (32-bit only)
request: the URL request. (added in v20.0)

184.9.62 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: Decides whether to allow or cancel a navigation after its response is known.
Notes:

navigationResponse: Descriptive information about the navigation response.

Return true to block or return false to allow.

184.9.63 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: .

Function: Will close contextual menu.

184.9.64 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when content starts arriving for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.9.65 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when an error occurs during a committed main frame navigation.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.9.66 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.9.67 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when a main frame navigation completes.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.
Same as DocumentComplete in HTMLViewer.

184.9.68 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: .

Function: Invoked when a script message is received from a webpage.
Notes:

body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

184.9.69 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when a server redirect is received for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.9.70 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when a main frame navigation starts.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.9.71 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event where you can enable menu items.

184.9.72 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

184.9.73 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

184.9.74 GotFocus

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

184.9.75 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: JavaScript was evaluated.
Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

184.9.76 LostFocus

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

184.9.77 MenuAction(HitItem as MenuItem) As Boolean

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

184.9.78 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.

Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

184.9.79 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

184.9.80 MouseUp(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

184.9.81 runJavaScriptAlertPanel(message as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Displays a JavaScript alert panel.
Notes:

message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

184.9.82 runJavaScriptConfirmPanel(message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Displays a JavaScript confirm panel.
Notes:

message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

184.9.83 runJavaScriptTextInputPanel(prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Displays a JavaScript text input panel.
Notes:

message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

184.9.84 ScaleFactorChanged(NewFactor as Double)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

184.9.85 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, tag as string)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: .

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

184.9.86 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The title of the webpage changed.

184.9.87 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: .

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

184.10 control WKWebViewIOSControlMBS

184.10.1 control WKWebViewIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Notes:

This is a control is for iOS only and uses 64-bit.

But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

184.10.2 Blog Entries

- Three new controls for iOS in Xojo
- MBS Xojo Plugins, version 20.6pr3

184.10.3 Methods

184.10.4 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes:

Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

184.10.5 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Adds an user script.

184.10.6 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Evaluates JavaScript.
Example:

```
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 184.10.7 EvaluateJavaScript(JavaScript as String, Tag as String = "") 24227

184.10.7 EvaluateJavaScript(JavaScript as String, Tag as String = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Evaluates JavaScript.
Notes:

Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 184.10.6 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 24227

184.10.8 goBack

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

184.10.9 goForward

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

184.10.10 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes:

item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

184.10.11 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

184.10.12 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested file.
Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

184.10.13 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

184.10.14 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

call browser.LoadURL "https://www.mbs-plugins.de/"
```

Notes:

Sets Navigation property.
Sets Navigation property.

184.10.15 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

184.10.16 reload

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewIOSControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
```

```
End If
End Sub
```

Notes: Sets Navigation property.

184.10.17 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewIOSControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

184.10.18 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Removes all associated user scripts.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.removeAllUserScripts
```

184.10.19 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

184.10.20 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to create WKWebViewIOSControlMBS with private browsing enabled.
Example:

```
WKWebViewIOSControlMBS.setUsePrivateBrowsing True
```

Notes:

Set this property to true before creating the WKWebViewIOSControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

184.10.21 stopLoading

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Stops loading all resources on the current page.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.stopLoading
```

184.10.22 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Requests a snapshot.
Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 184.10.23 takeSnapshot(tag as string = "")

184.10.23 takeSnapshot(tag as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Requests a snapshot.
Notes:

Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 184.10.22 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 24232

184.10.24 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The user scripts associated with the user content controller.

184.10.25 Properties

184.10.26 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Allow file access for file URLs.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

184.10.27 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

184.10.28 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

184.10.29 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.

(Read and Write property)

184.10.30 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The web view's back-forward list.
Notes: (Read only property)

184.10.31 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

184.10.32 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

184.10.33 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The custom user agent string.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

184.10.34 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

184.10.35 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.

(Read only property)

184.10.36 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

184.10.37 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MsgBox "loaded"
```

Notes: (Read only property)

184.10.38 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

184.10.39 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether javascript is enabled.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

184.10.40 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to load images automatically.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

184.10.41 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The minimum font size to use.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

184.10.42 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The current navigation action.
Notes: (Read only property)

184.10.43 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed.
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.
(Read and Write property)

184.10.44 Title as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The page title.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox Browser.Title
```

Notes: (Read only property)

184.10.45 URL as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The active URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

184.10.46 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to create WKWebViewIOSControlMBS with private browsing enabled.
Example:

```
WVWebViewModuleMBS.UsePrivateBrowsing = True
```

Notes:

Set this property to true before creating the WKWebViewIOSControlMBS control, so the plugin can enable private browsing.

Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

184.10.47 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The used view.
Notes:

Should be either a WKWebView (64bit).
(Read only property)

184.10.48 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The used WKWebViewMBS view.
Notes:

Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

184.10.49 Events

184.10.50 Close

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The webviewer should close.
Notes:

Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

184.10.51 CreateWebView(URL as String, request as NSURLRequestMBS) as WKWebViewIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Creates a new web view.
Notes:

If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

184.10.52 decidePolicyForNavigationAction(URL as String, NavigationType as String, newWindow as boolean, frameName as string, request as NSURLRequestMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Decides whether to allow or cancel a navigation.
Notes:

Return true to cancel or false to allow.
URL is the URL to load.
NavigationType defines what navigation is happening: LinkClicked, FormSubmitted, BackForward, Reload, FormResubmitted or Other.
modifierFlags: The keyboard modifiers.
buttonNumber: Which mouse button was clicked: 0 for left button, 1 for middle button, 2 for right button
newWindow: True if a new window should be opened or false if not.
frameName: The frame name. (32-bit only)
request: the URL request. (added in v20.0)

184.10.53 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Decides whether to allow or cancel a navigation after its response is known.
Notes:

navigationResponse: Descriptive information about the navigation response.

Return true to block or return false to allow.

184.10.54 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when content starts arriving for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.10.55 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when an error occurs during a committed main frame navigation.
Notes: Sets Navigation property.

184.10.56 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.10.57 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a main frame navigation completes.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

Same as DocumentComplete in HTMLViewer.

184.10.58 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a script message is received from a webpage.
Notes:

body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

184.10.59 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a server redirect is received for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.10.60 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a main frame navigation starts.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

184.10.61 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

184.10.62 GotFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

184.10.63 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: JavaScript was evaluated.
Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

184.10.64 LostFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

184.10.65 runJavaScriptAlertPanel(message as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Displays a JavaScript alert panel.
Notes:

message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

184.10.66 runJavaScriptConfirmPanel(message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Displays a JavaScript confirm panel.
Notes:

message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

184.10.67 runJavaScriptTextInputPanel(prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Displays a JavaScript text input panel.
Notes:

message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

184.10.68 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, tag as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

184.10.69 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The title of the webpage changed.

184.11 class WKWebViewMBS

184.11.1 class WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: An object that displays interactive web content, such as for an in-app browser.
Notes:

see
https://developer.apple.com/documentation/webkit/wkwebview

If something is missing, please let us know and we can add it for you.
Subclass of the NSViewMBS class.

184.11.4 Methods

184.11.5 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an user script.

184.11.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new web view with size 100/100 and position 0/0
Example:

```
dim x as new WebViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 184.11.7 Constructor(Handle as Integer) 24249
- 184.11.8 Constructor(left as double, top as double, width as double, height as double) 24249

184.11.7 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given WKWebView handle.
Example:

```
dim t as new WKWebViewMBS(0, 0, 100, 100)
dim v as new WKWebViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a WKWebView and the plugin retains this handle.
See also:

- 184.11.6 Constructor 24249
- 184.11.8 Constructor(left as double, top as double, width as double, height as double) 24249

184.11.8 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new button with the given size and position.
Example:

```
dim w as new WKWebViewMBS(0,0,800,600)
```

```
w.LoadHTMLString "Hello World","""
```

Notes: On success the handle property is not zero.
See also:

- 184.11.6 Constructor 24249
- 184.11.7 Constructor(Handle as Integer) 24249

184.11.9 copy

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Copies current text selection.

184.11.10 cut

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Cuts current text selection.

184.11.11 deleteSelection

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Deletes current text selection.

184.11.12 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Evaluates JavaScript.
Example:

```
Dim w As WKWebViewMBS = WKWebViewControlMBS1.WKWebView
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = w.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
```

```
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = w.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = w.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

184.11.13 goBack

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the back item in the back-forward list.

184.11.14 goForward

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the forward item in the back-forward list.

184.11.15 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes: item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

184.11.16 handlesURLScheme(urlScheme as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether or not WKWebViews handle the given URL scheme by default.
Notes:

urlScheme: The URL scheme to check.

Returns true if supported.

184.11.17 HTMLText as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries HTML text for the current main page.
Notes: This is live, so any changes made after loading will be included.

184.11.18 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

184.11.19 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested file.

Example:

```
Dim w as WKWebViewMBS // your web viewer
Dim HTMLFile as folderItem = getfolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

184.11.20 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

184.11.21 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.LoadURL "https://www.mbs-plugins.de/"
```

184.11.22 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested URL.

184.11.23 MainResourceData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries the source data from the webviewer.
Notes:

Returns nil in case of error.
Also sets error parameter to NSErrorMBS for details on the error.

184.11.24 paste

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Pastes clipboard into current position in document.

184.11.25 PDFData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a PDF document representation from the web page currently displayed in the WKWebView.
Notes:

Returns PDF data of new PDF Document.
If the data is written to a file the resulting file is a valid PDF document.

Available in macOS 11.0 or newer.
May also work if Safari 14 is installed on older macOS versions.

184.11.26 PlainText as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries plain text for the current main page.
Notes: This is live, so any changes made after loading will be included.

184.11.27 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
dim browser as WKWebViewMBS // your web viewer
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes:

Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

184.11.28 reload

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewMBS, force as Boolean)
If force Then
browser.reloadFromOrigin
Else
browser.reload
End If
End Sub
```

184.11.29 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewMBS, force as Boolean)
If force Then
browser.reloadFromOrigin
Else
browser.reload
End If
End Sub
```

184.11.30 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Removes all associated user scripts.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.removeAllUserScripts
```

184.11.31 selectAll

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Selects all.

184.11.32 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Dim browser As WKWebViewMBS // your instance
```

```
// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes:

magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

184.11.33 stopLoading

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Stops loading all resources on the current page.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.stopLoading
```

184.11.34 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a snapshot.
Example:

```
// get a webview reference
Dim web As WKWebViewMBS = HTMLViewer1.WKWebViewMBS

// take snapshot
Dim error As NSErrorMBS
Dim image As NSImageMBS = web.takeSnapshot(error)

If error <>Nil Then
MsgBox error.LocalizedDescription
return
End If

// save as PNG
Dim png As String = image.PNGRepresentation
```

```
// write to file
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim b As BinaryStream = BinaryStream.Create(f, True)
b.Write png
```

Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.

184.11.35 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The user scripts associated with the user content controller.

184.11.36 WebArchiveData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries web archive data for the website.
Example:

```
Dim w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS

Dim error As NSErrorMBS
Dim data As MemoryBlock = w.WebArchiveData(error)

Break // inspect in debugger
```

Notes: May return nil in case of error and maybe report the NSError in case of an error.

184.11.37 Properties

184.11.38 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Allow file access for file URLs.

Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

184.11.39 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
(Read and Write property)

184.11.40 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance
```

```
browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

184.11.41 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view's magnification.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes:

The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

184.11.42 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

184.11.43 backForwardList as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The web view's back-forward list.
Notes: (Read only property)

184.11.44 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color.
Example:

```
Dim w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS // your webviewer

w.drawsBackground = False
w.backgroundColor = NSColorMBS.clearColor
```

Notes:

If background is not drawn and/or transparent, you may see through.
Requires also CSS to have web view page transparent.
(Read and Write property)

184.11.45 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

184.11.46 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

184.11.47 Configuration as WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the configuration used to initialize the WKWebView.
Notes: (Read only property)

184.11.48 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The custom user agent string.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

184.11.49 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

Enables the context menu to inspect items.
(Read and Write property)

184.11.50 drawsBackground as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to draw background for the view.
Example:

```
Dim w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS // your webviewer

w.drawsBackground = False
w.backgroundColor = NSColorMBS.clearColor
```

Notes:

If background is not drawn and/or transparent, you may see through.
Requires also CSS to have web view page transparent.
(Read and Write property)

184.11.51 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

184.11.52 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely

encrypted connections.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

184.11.53 HTTPCookieStore as WKHTTPCookieStoreMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience property to directly query HTTP cookie store for WKWebview configuration.
Notes:

Dim CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Dim cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Dim cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
(Read only property)

184.11.54 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As WKWebViewMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend
```

```
MsgBox "loaded"
```

Notes: (Read only property)

184.11.55 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether java is enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

184.11.56 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As WKWebViewMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

184.11.57 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: JavaScript was evaluated.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.
(Read and Write property)

184.11.58 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to load images automatically.
Example:

```
Dim browser As WKWebViewMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False
```

Notes: (Read and Write property)

184.11.59 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.magnification = 2.0
```

Notes:

The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

184.11.60 mediaType as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The media type for the WKWebView.
Notes:

The value of mediaType will override the normal value of the CSS media property.
Setting the value to "" will restore the normal value.
The default value is "".

Available in macOS 11.0 or newer.
(Read and Write property)

184.11.61 MIMEType as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries current mime type for showing document.
Notes:

Should be "text/html" for a website or "application/pdf" for a PDF document.
(Read only property)

184.11.62 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum font size to use.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

184.11.63 pageZoom as Double

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The factor by which page content is scaled relative to the viewport.

Notes:

The default value is 1.0.
Changing this value is equivalent to web content setting the CSS "zoom" property on all page content.

Available in macOS 11.0 or newer.
(Read and Write property)

184.11.64 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether plugins are enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

184.11.65 Preferences as WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience property to directly query HTTP cookie store for WKWebview preferences.
Notes: (Read only property)

184.11.66 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed. Default is non-private mode for the web viewer.

It looks like you can't change mode after web viewer was created.
(Read and Write property)

184.11.67 Title as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The page title.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox Browser.Title
```

Notes: (Read only property)

184.11.68 URL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The active URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

184.12 module WVWebViewModuleMBS

184.12.1 module WVWebViewModuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: The module for global options to WKWebView.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

184.12.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr5

184.12.3 Properties

184.12.4 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

Notes:

Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.
(Read and Write property)

Chapter 185

WebView2

185.1 control WebView2ControlMBS

185.1.1 control WebView2ControlMBS

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The MBS control for the Chrome based WebView2 control from Microsoft.
Notes:

Read about WebView2 control here:

https://developer.microsoft.com/en-us/microsoft-edge/webview2/

There you also fine the installers needed to install it, unless you have the 2021 version of Windows, which may include it preinstalled.

If you use this control on macOS and Linux, it will do nothing.
On Windows if the control fails to initialize, the Opened event will not fire.
But if it fires, it will be some time after the open event fired as initialization is asynchronous.

If you call LoadURL, LoadHTML or set URL property too early, we cache that and perform the action later when the web viewer is initialized properly.

If you add an event, we register it with the C++ control. So if you don't specify an event, you may get the default behavior.

185.1.2 Blog Entries

185.1.4 Methods

185.1.5 AddScriptToExecuteOnDocumentCreated(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Add the provided JavaScript to a list of scripts that should be executed after the global object has been created, but before the HTML document has been parsed and before any other script included by the HTML document is executed.
Notes:

This method injects a script that runs on all top-level document and child frame page navigations. This method runs asynchronously, and you must wait for the completion handler to finish before the injected script is ready to run. When this method completes, the handler's Invoke method is called with the id of the injected script. id is a string. To remove the injected script, use RemoveScriptToExecuteOnDocumentCreated.
Note that if an HTML document has sandboxing of some kind via sandbox properties or the Content-Security-Policy HTTP header this will affect the script run here. So, for example, if the 'allow-modals' keyword is not set then calls to the alert function will be ignored.

Calls AddScriptToExecuteOnDocumentCreatedCompleted event later when done.

185.1.6 AddWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Adds a URI and resource context filter to the WebResourceRequested event.
Notes: The URI parameter can be a wildcard string ('*': zero or more, '?': exactly one). See kWebResourceContext constants for description of resource context filters.

185.1.7 AvailableCoreWebView2BrowserVersionString as string

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The available version of the WebView2 browser.
Notes:

Allows you to query the browser version before creating a control.
Returns empty text if none is available.

185.1.8 CanGoBack as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a previous page in the navigation history.
Notes:

The HistoryChanged event will fire if CanGoBack changes value.

Returns false if the browser is not yet initialized.

185.1.9 CanGoForward as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a next page in the navigation history.
Notes:

The HistoryChanged event will fire if CanGoForward changes value.

Returns false if the browser is not yet initialized.

185.1.10 CapturePreview(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Capture an image of what WebView is displaying.
Notes:

Specify the format of the image with the imageFormat parameter. The resulting image binary data is passed to the CapturePreviewCompleted event.

Calls CapturePreviewCompleted event when done or failed.

185.1.11 ExecuteScript(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
dim web as WebView2ControlMBS // your control

web.ExecuteScript "1+5" , "tag value"

// triggers ExecuteScriptCompeleted later with result "6"

web.ExecuteScript "window.chrome.webview.postMessage( { 'Test': 'Hello, world!' } );"

// triggers later WebMessageReceived later
```

Notes:

This will execute asynchronously and when complete, if a handler is provided in the ExecuteScriptCompletedHandler parameter, its Invoke method will be called with the result of evaluating the provided JavaScript. The result value is a JSON encoded string. If the result is undefined, contains a reference cycle, or otherwise cannot be encoded into JSON, the JSON null value will be returned as the string 'null'. Note that a function that has no explicit return value returns undefined. If the executed script throws an unhandled exception, then the result is also 'null'. This method is applied asynchronously. If the method is called after NavigationStarting event during a navigation, the script will be executed in the new document when loading it, around the time ContentLoading is fired. ExecuteScript will work even if IsScriptEnabled is set to false.

Calls ExecuteScriptCompleted event later.

185.1.12 ExecuteScriptSync(JavaScript as String, byref ErrorCode as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
dim web as WebView2ControlMBS // your control

dim errorCode as integer
dim s as string = web.ExecuteScriptSync("1+2", errorCode)

Break // s contains 3
```

Notes:

Same as ExecuteScript, but waits for event and returns result directly.
errorCode is zero on success.
Result is JSON as text, e.g. "null" if there is no result.

185.1.13 GoBack

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the previous page in the navigation history.

185.1.14 GoForward

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the next page in the navigation history.

185.1.15 LoadHTML(HTML as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Initiates a navigation to htmlContent as source HTML of a new document.
Notes: The htmlContent parameter may not be larger than 2 MB in total size. The origin of the new page will be about:blank.

185.1.16 LoadURL(URL as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Cause a navigation of the top level document to the specified URI.
Notes: See the navigation events for more information. Note that this starts a navigation and the corresponding NavigationStarting event will fire sometime after this Navigate call completes.

185.1.17 OpenDevToolsWindow

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Opens the DevTools window for the current document in the WebView.
Notes: Does nothing if called when the DevTools window is already open.

185.1.18 PostWebMessageAsJson(webMessageAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Post the specified webMessage to the top level document in this WebView.
Notes:

The top level document's window.chrome.webview's message event fires. JavaScript in that document may subscribe and unsubscribe to the event via the following:

window.chrome.webview.addEventListener('message', handler)
window.chrome.webview.removeEventListener('message', handler)

The event args is an instance of MessageEvent. The IsWebMessageEnabled setting must be true or this method will fail with E_INVALIDARG. The event arg's data property is the webMessage string parameter parsed as a JSON string into a JavaScript object. The event arg's source property is a reference to the window.chrome.webview object. See add_WebMessageReceived for information on sending messages from the HTML document in the WebView to the host. This message is sent asynchronously. If a navigation occurs before the message is posted to the page, then the message will not be sent.

185.1.19 PostWebMessageAsString(webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: This is a helper for posting a message that is a simple string rather than a JSON string representation of a JavaScript object..
Notes: This behaves in exactly the same manner as PostWebMessageAsJson but the window.chrome.web-

view message event arg's data property will be a string with the same value as webMessageAsString. Use this instead of PostWebMessageAsJson if you want to communicate via simple strings rather than JSON objects.

185.1.20 Reload

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Notes: This is similar to navigating to the URI of current top level document including all navigation events firing and respecting any entries in the HTTP cache. But, the back/forward history will not be modified.

185.1.21 RemoveScriptToExecuteOnDocumentCreated(ID as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Remove the corresponding JavaScript added using AddScriptToExecuteOnDocumentCreated with the specified script id.

185.1.22 RemoveWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Removes a matching WebResource filter that was previously added for the WebResourceRequested event.
Notes: If the same filter was added multiple times, then it will need to be removed as many times as it was added for the removal to be effective. Raises exception with E_INVALIDARG for a filter that was never added.

185.1.23 Stop

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Stop all navigations and pending resource fetches.
Notes: Does not stop scripts.

185.1.24 Properties

185.1.25 AdditionalBrowserArguments as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Additional browser arguments can be specified to change the behavior of the WebView.
Notes:

These will be passed to the browser process as part of the command line. See Run Chromium with Flags for more information about command line switches to browser process. If the app is launched with a command line switch –edge-webview-switches=xxx the value of that switch (xxx in the above example) will also be appended to the browser process command line. Certain switches like –user-data-dir are internal and important to WebView. Those switches will be ignored even if specified. If the same switches are specified multiple times, the last one wins. There is no attempt to merge the different values of the same switch, except for disabled and enabled features. The features specified by –enable-features and –disable-features will be merged with simple logic: the features will be the union of the specified features and built-in features, and if a feature is disabled, it will be removed from the enabled features list. App process's command line –edge-webview-switches value are processed after the additionalBrowserArguments parameter is processed. Certain features are disabled internally and can't be enabled. If parsing failed for the specified switches, they will be ignored. Default is to run browser process with no extra flags.
(Read and Write property)

185.1.26 AllowSingleSignOnUsingOSPrimaryAccount as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AllowSingleSignOnUsingOSPrimaryAccount property is used to enable single sign on with Azure Active Directory (AAD) resources inside WebView using the logged in Windows account and single sign on with web sites using Microsoft account associated with the login in Windows account.
Notes:

Default is disabled. Universal Windows Platform apps must also declare enterpriseCloudSSO restricted capability for the single sign on to work.
(Read and Write property)

185.1.27 AreDefaultContextMenusEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AreDefaultContextMenusEnabled property is used to prevent default context menus from being shown to user in WebView.
Notes:

It is true by default.
(Read and Write property)

185.1.28 AreDefaultScriptDialogsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: AreDefaultScriptDialogsEnabled is used when loading a new HTML document.
Notes:

If set to false, then WebView won't render the default JavaScript dialog box (Specifically those shown by the JavaScript alert, confirm, prompt functions and beforeunload event). Instead, if an event handler is set via add_ScriptDialogOpening, WebView will send an event that will contain all of the information for the dialog and allow the host app to show its own custom UI. It is true by default.
(Read and Write property)

185.1.29 AreDevToolsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: AreDevToolsEnabled controls whether the user is able to use the context menu or keyboard shortcuts to open the DevTools window.
Notes:

It is true by default.
(Read and Write property)

185.1.30 AreHostObjectsAllowed as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AreHostObjectsAllowed property is used to control whether host objects are accessible from the page in WebView.
Notes:

It is true by default.
(Read and Write property)

185.1.31 BrowserVersionString as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The browser version info of the current environment, including channel name if it is not the stable channel.
Notes:

This matches the format of the AvailableCoreWebView2BrowserVersionString API. Channel names are 'beta', 'dev', and 'canary'.
(Read only property)

185.1.32 ContainsFullScreenElement as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Indicates if the WebView contains a fullscreen HTML element.
Notes: (Read only property)

185.1.33 DocumentTitle as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The title for the current top level document.
Notes:

If the document has no explicit title or is otherwise empty, a default that may or may not match the URI of the document will be used.
(Read only property)

185.1.34 IsBuiltInErrorPageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsBuiltInErrorPageEnabled property is used to disable built in error page for navigation failure and render process failure.
Notes:

It is true by default. When disabled, blank page will be shown when related error happens.
(Read and Write property)

185.1.35 IsScriptEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Controls if JavaScript execution is enabled in all future navigations in the WebView.
Notes:

This only affects scripts in the document; scripts injected with ExecuteScript will run even if script is disabled. It is true by default.

(Read and Write property)

185.1.36 IsStatusBarEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: IsStatusBarEnabled controls whether the status bar will be displayed.
Notes:

The status bar is usually displayed in the lower left of the WebView and shows things such as the URI of a link when the user hovers over it and other information. It is true by default.
(Read and Write property)

185.1.37 IsWebMessageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsWebMessageEnabled property is used when loading a new HTML document.
Notes:

If set to true, communication from the host to the WebView's top level HTML document is allowed via PostWebMessageAsJson, PostWebMessageAsString, and window.chrome.webview's message event (see PostWebMessageAsJson documentation for details). Communication from the WebView's top level HTML document to the host is allowed via window.chrome.webview's postMessage function and add_WebMessageReceived method (see add_WebMessageReceived documentation for details). If set to false, then communication is disallowed. PostWebMessageAsJson and PostWebMessageAsString will fail with E_ACCESSDENIED and window.chrome.webview.postMessage will fail by throwing an instance of an Error object. It is true by default.
(Read and Write property)

185.1.38 IsZoomControlEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsZoomControlEnabled property is used to prevent the user from impacting the zoom of the WebView.
Notes:

It is true by default. When disabled, user will not be able to zoom using ctrl+/- or ctrl+mouse wheel, but the zoom can be set via ZoomFactor API.
(Read and Write property)

185.1.39 Language as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The default language that WebView will run with.
Notes:

It applies to browser UIs like context menu and dialogs. It also applies to the accept-languages HTTP header that WebView sends to web sites. It is in the format of language [-country] where language is the 2 letter code from ISO 639 and country is the 2 letter code from ISO 3166.
(Read and Write property)

185.1.40 ProcessID as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The process id of the browser process that hosts the WebView.
Notes: (Read only property)

185.1.41 TargetCompatibleBrowserVersion as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The version of the Edge WebView2 Runtime binaries required to be compatible with the calling application.
Notes:

This defaults to the Edge WebView2 Runtime version that corresponds with the version of the SDK the application is using. The format of this value is the same as the format of the BrowserVersionString property and other BrowserVersion values. Only the version part of the BrowserVersion value is respected. The channel suffix, if it exists, is ignored. The version of the Edge WebView2 Runtime binaries actually used may be different from the specified TargetCompatibleBrowserVersion. They are only guaranteed to be compatible. You can check the actual version on the BrowserVersionString property on the control.
(Read and Write property)

185.1.42 URL as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The URI of the current top level document.
Notes:

This value potentially changes as a part of the SourceChanged event firing for some cases such as navigating to a different site or fragment navigations. It will remain the same for other types of navigations such as

page reloads or history.pushState with the same URL as the current page.

If assigned, calls LoadURL method.
(Read and Write property)

185.1.43 ZoomFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The ZoomFactor property.
Notes: (Read and Write property)

185.1.44 Events

185.1.45 AddScriptToExecuteOnDocumentCreatedCompleted(JavaScript as String, ErrorCode as Integer, ID as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report that AddScriptToExecuteOnDocumentCreated is done and provide the ID.

185.1.46 CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called when CapturePreview call is done.
Notes:

We pass you the image data as a string, so you can e.g. write it to a PNG or JPEG file.
Otherwise ErrorCode tells you the reason for the error.

185.1.47 Configure

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called while initializing, where you can apply properties just before plugin reads them.

185.1.48 ContainsFullScreenElementChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: ContainsFullScreenElementChanged fires when the ContainsFullScreenElement property changes.
Notes: This means that an HTML element inside the WebView is entering fullscreen to the size of the WebView or leaving fullscreen. This event is useful when, for example, a video element requests to go fullscreen. The listener of ContainsFullScreenElementChanged can then resize the WebView in response.

185.1.49 ContentLoading(isErrorPage as Boolean, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The content loading event.d
Notes: ContentLoading fires before any content is loaded, including scripts added with AddScriptToExecuteOnDocumentCreated. ContentLoading will not fire if a same page navigation occurs (such as through fragment navigations or history.pushState navigations). This follows the NavigationStarting and SourceChanged events and precedes the HistoryChanged and NavigationCompleted events.

185.1.50 DocumentTitleChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a document title change.
Notes: DocumentTitleChanged fires when the DocumentTitle property of the WebView changes and may fire before or after the NavigationCompleted event.

185.1.51 ExecuteScriptCompleted(JavaScript as String, ErrorCode as Integer, resultObjectAsJson as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report ExecuteScript method is done.

185.1.52 FrameNavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: FrameNavigationCompleted fires when a child frame has completely loaded (body.onload has fired) or loading stopped with error.

185.1.53 FrameNavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: FrameNavigationStarting fires when a child frame in the WebView requests permission to navigate to a different URI. This will fire for redirects as well.
Notes:

Corresponding navigations can be blocked until the event handler returns.
Return true to block the request.

185.1.54 GotFocus

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: GotFocus fires when WebView got focus.

185.1.55 HistoryChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report history change.
Notes: HistoryChanged listens to the change of navigation history for the top level document. Use HistoryChanged to check if CanGoBack/CanGoForward value has changed. HistoryChanged also fires for using GoBack/GoForward. HistoryChanged fires after SourceChanged and ContentLoading.

185.1.56 LostFocus

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: LostFocus fires when WebView lost focus.
Notes: In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

185.1.57 NavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a navigation action completed.
Notes: NavigationCompleted fires when the WebView has completely loaded (body.onload has fired) or loading stopped with error.

185.1.58 NavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a navigation action.
Notes:

NavigationStarting fires when the WebView main frame is requesting permission to navigate to a different URI. This will fire for redirects as well.
Corresponding navigations can be blocked until the event handler returns.

Return true to cancel it like Xojo's CancelLoad event.

This event is great to check the URL. If you like to block it, you may just return true. If the user initiated the request, you may instead want to load a warning page. Also check the URL and decide whether to turn scripting on or off.

185.1.59 Opened

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called when browser initialization is done.
Notes:

Typical event flow is like this:

- Configure
- Open
- Window.Open
- Opened

Opened is called a few milliseconds later.

If you load an URL, the events happen like this:

- NavigationStarting
- SourceChanged
- ContentLoading
- HistoryChanged
- DocumentTitleChanged
- NavigationCompleted

185.1.60 PermissionRequested(URL as String, PermissionKind as Integer, IsUserInitiated as Boolean, byref State as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to query permissions from user.
Notes:

PermissionRequested fires when content in a WebView requests permission to access some privileged resources.
If a deferral is not taken on the event args, the subsequent scripts can be blocked until the event handler returns. If a deferral is taken, then the scripts are blocked until the deferral is completed.

URL: The origin of the web content that requests the permission.
PermissionKind: The type of the permission that is requested.
IsUserInitiated: True when the permission request was initiated through a user gesture.
State: The status of a permission request, i.e.

Please assign State the answer you like to provide.

185.1.61 ProcessFailed(processFailedKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: ProcessFailed fires when a WebView process is terminated unexpectedly or becomes unresponsive.

185.1.62 SourceChanged(isNewDocument as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a change in the URL.
Notes: SourceChanged fires when the Source property changes. SourceChanged fires for navigating to a different site or fragment navigations. It will not fire for other types of navigations such as page reloads or history.pushState with the same URL as the current page. SourceChanged fires before ContentLoading for navigation to a new document.

185.1.63 WebMessageReceived(Source as String, webMessageAsJson as String, webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called for a web message.
Notes:

WebMessageReceived fires when the IsWebMessageEnabled setting is set and the top level document of the WebView calls window.chrome.webview.postMessage. The postMessage function is void postMessage(object) where object is any object supported by JSON conversion.

webMessageAsString is empty if we can't serialize it to text.

185.1.64 WindowCloseRequested

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event where JavaScript asks to close window.
Notes: WindowCloseRequested fires when content inside the WebView requested to close the window, such as after window.close is called. The app should close the WebView and related app window if that makes sense to the app.

185.1.65 ZoomFactorChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: ZoomFactorChanged fires when the ZoomFactor property of the WebView changes.
Notes: The event could fire because the caller modified the ZoomFactor property, or due to the user manually modifying the zoom. When it is modified by the caller via the ZoomFactor property, the internal zoom factor is updated immediately and there will be no ZoomFactorChanged event. WebView associates the last used zoom factor for each site. Therefore, it is possible for the zoom factor to change when navigating to a different page. When the zoom factor changes due to this, the ZoomFactorChanged event fires right after

the ContentLoading event.

185.1.66 Constants

185.1.67 kCapturePreviewImageFormatJPEG = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the image formats to capture preview.
Notes: JPEG format.

185.1.68 kCapturePreviewImageFormatPNG = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the image formats to capture preview.
Notes: PNG format.

185.1.69 kPermissionKindCamera = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to capture video.

185.1.70 kPermissionKindClipboardRead = 6

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to read system clipboard without a user gesture.

185.1.71 kPermissionKindGeoLocation = 3

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to access geolocation.

185.1.72 kPermissionKindMicrophone = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to capture audio.

185.1.73 kPermissionKindNotifications = 4

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to send web notifications.

185.1.74 kPermissionKindOtherSensors = 5

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to access generic sensor.

185.1.75 kPermissionKindUnknownPermission = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Unknown permission.

185.1.76 kPermissionStateAllow = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission states.
Notes: Grant the permission request.

185.1.77 kPermissionStateDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission states.
Notes: Use default browser behavior, which normally prompt users for decision.

185.1.78 kPermissionStateDeny = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission states.
Notes: Deny the permission request.

185.1.79 kProcessFailedKindBrowserProcessExited = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the process failure kinds.
Notes: Indicates the browser process terminated unexpectedly.

185.1.80 kProcessFailedKindRenderProcessExited = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the process failure kinds.
Notes: Indicates the render process terminated unexpectedly.

185.1.81 kProcessFailedKindRenderProcessUnresponsive = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the process failure kinds.
Notes: Indicates the render process becomes unresponsive.

185.1.82 kWebErrorStatusCannotConnect = 12

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: Cannot connect to destination.

185.1.83 kWebErrorStatusCertificateCommonNameIsIncorrect = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate common name does not match the web address.

185.1.84 kWebErrorStatusCertificateExpired = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate has expired.

185.1.85 kWebErrorStatusCertificateIsInvalid = 5

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate is invalid – this could mean the certificate did not match the public key pins for the host name, the certificate is signed by an untrusted authority or using a weak sign algorithm, the certificate claimed DNS names violate name constraints, the certificate contains a weak key, the certificate's validity period is too long, lack of revocation information or revocation mechanism, non-unique host name, lack of certificate transparency information, or the certificate is chained to a legacy Symantec root.

185.1.86 kWebErrorStatusCertificateRevoked = 4

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate has been revoked.

185.1.87 kWebErrorStatusClientCertificateContainsErrors = 3

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL client certificate contains errors.

185.1.88 kWebErrorStatusConnectionAborted = 9

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The connection was aborted.

185.1.89 kWebErrorStatusConnectionReset = 10

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The connection was reset.

185.1.90 kWebErrorStatusDisconnected = 11

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The Internet connection has been lost.

185.1.91 kWebErrorStatusErrorHttpInvalidServerResponse = 8

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The server returned an invalid or unrecognized response.

185.1.92 kWebErrorStatusHostNameNotResolved = 13

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: Could not resolve provided host name.

185.1.93 kWebErrorStatusOperationCanceled = 14

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The operation was canceled.

185.1.94 kWebErrorStatusRedirectFailed = 15

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The request redirect failed.

185.1.95 kWebErrorStatusServerUnreachable = 6

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The host is unreachable.

185.1.96 kWebErrorStatusTimeout = 7

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The connection has timed out.

185.1.97 kWebErrorStatusUnexpectedError = 16

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: An unexpected error occurred.

185.1.98 kWebErrorStatusUnknown = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: An unknown error occurred.

185.1.99 kWebResourceContextAll = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: All resources.

185.1.100 kWebResourceContextCspViolationReport = 15

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: CSP Violation Reports.

185.1.101 kWebResourceContextDocument = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Document resources.

185.1.102 kWebResourceContextEventSource = 10

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: EventSource API communication.

185.1.103 kWebResourceContextFetch = 8

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Fetch API communication.

185.1.104 kWebResourceContextFont = 5

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Font resources.

185.1.105 kWebResourceContextImage = 3

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Image resources.

185.1.106 kWebResourceContextManifest = 12

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Web App Manifests.

185.1.107 kWebResourceContextMedia = 4

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Other media resources such as videos.

185.1.108 kWebResourceContextOther = 16

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Other resources.

185.1.109 kWebResourceContextPing = 14

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Ping requests.

185.1.110 kWebResourceContextScript = 6

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Script resources.

185.1.111 kWebResourceContextSignedExchange = 13

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Signed HTTP Exchanges.

185.1.112 kWebResourceContextStylesheet = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: CSS resources.

185.1.113 kWebResourceContextTextTrack = 9

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: TextTrack resources.

185.1.114 kWebResourceContextWebSocket = 11

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: WebSocket API communication.

185.1.115 kWebResourceContextXMLHttpRequest = 7

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: XML HTTP requests.

185.2 class WebView2ExceptionMBS

185.2.1 class WebView2ExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The class for the exceptions raised by our WebView2 control.
Notes: Subclass of the RuntimeException class.

Chapter 186

Window

186.1 class GTKWindowMBS

186.1.1 class GTKWindowMBS

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: The class to control a GTKWindow.
Notes:

We can directly modify a window on Linux using this class.
If you need methods to do something special, please do not hesitate to email us.

186.1.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.0
- MBS Xojo / Real Studio Plugins, version 14.0pr1
- MBS Real Studio Plugins, version 13.0pr1

186.1.3 Xojo Developer Magazine

- 12.2, page 10: News

186.1.4 Methods

186.1.5 Constructor(win as window)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Creates a new GTKWindow object pointing to a given window.
Notes: Raises exception on Mac/Win to prevent you from creating invalid object.

186.1.6 Deiconify

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to deiconify (i.e. unminimize) the specified window.
Notes: Note that you shouldn't assume the window is definitely deiconified afterward, because other entities (e.g. the user or window manager) could iconify it again before your code which assumes deiconification gets to run.

186.1.7 Fullscreen

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to place window in the fullscreen state.
Notes: Note that you shouldn't assume the window is definitely full screen afterward, because other entities (e.g. the user or window manager) could unfullscreen it again, and not all window managers honor requests to fullscreen windows. But normally the window will end up fullscreen. Just don't write code that crashes if not.

186.1.8 Iconify

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to iconify (i.e. minimize) the specified window.
Notes:

Note that you shouldn't assume the window is definitely iconified afterward, because other entities (e.g. the user or window manager) could deiconify it again, or there may not be a window manager in which case iconification isn't possible, etc. But normally the window will end up iconified. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be iconified before it ever appears onscreen.

186.1.9 IsComposited as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Whether this window can rely on having its alpha channel drawn correctly.
Notes: On X11 this function returns whether a compositing manager is running for window's screen.

186.1.10 Maximize

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to maximize window, so that it becomes full-screen.
Notes:

Note that you shouldn't assume the window is definitely maximized afterward, because other entities (e.g. the user or window manager) could unmaximize it again, and not all window managers support maximization. But normally the window will end up maximized. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be maximized when it appears onscreen initially.

186.1.11 SetIcon(pic as picture)

MBS Linux Plugin, Plugin Version: 14.0, Platform: Linux, Targets: Desktop only.

Function: Assigns an icon to the picture.
Notes:

The operation system will scale the picture to required size, so please use bigger images.
Please use picture with alpha channel for best result.

186.1.12 SetKeepAbove(setting as boolean)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to keep window above, so that it stays on top.
Notes:

Note that you shouldn't assume the window is definitely above afterward, because other entities (e.g. the user or window manager) could not keep it above, and not all window managers support keeping windows above. But normally the window will end kept above. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be kept above

when it appears onscreen initially.

Note that, according to the Extended Window Manager Hints specification, the above state is mainly meant for user preferences and should not be used by applications e.g. for drawing attention to their dialogs.

186.1.13 SetKeepBelow(setting as boolean)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to keep window below, so that it stays in bottom.
Notes:

Note that you shouldn't assume the window is definitely below afterward, because other entities (e.g. the user or window manager) could not keep it below, and not all window managers support putting windows below. But normally the window will be kept below. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be kept below when it appears onscreen initially.

Note that, according to the Extended Window Manager Hints specification, the above state is mainly meant for user preferences and should not be used by applications e.g. for drawing attention to their dialogs.

186.1.14 Stick

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to stick window, which means that it will appear on all user desktops.
Notes:

Note that you shouldn't assume the window is definitely stuck afterward, because other entities (e.g. the user or window manager) could unstick it again, and some window managers do not support sticking windows. But normally the window will end up stuck. Just don't write code that crashes if not.

It's permitted to call this function before showing a window.

186.1.15 Unfullscreen

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to toggle off the fullscreen state for window.
Notes: Note that you shouldn't assume the window is definitely not full screen afterward, because other

entities (e.g. the user or window manager) could fullscreen it again, and not all window managers honor requests to unfullscreen windows. But normally the window will end up restored to its normal state. Just don't write code that crashes if not.

186.1.16 Unmaximize

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to unmaximize window.
Notes: Note that you shouldn't assume the window is definitely unmaximized afterward, because other entities (e.g. the user or window manager) could maximize it again, and not all window managers honor requests to unmaximize. But normally the window will end up unmaximized. Just don't write code that crashes if not.

186.1.17 Unstick

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to unstick window, which means that it will appear on only one of the user's desktops.
Notes: Note that you shouldn't assume the window is definitely unstuck afterward, because other entities (e.g. the user or window manager) could stick it again. But normally the window will end up stuck. Just don't write code that crashes if not.

186.1.18 Properties

186.1.19 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: The internal window handle.
Notes: (Read and Write property)

186.1.20 AcceptFocus as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get/Set whether window should receive focus.
Notes:

Windows may set a hint asking the desktop environment not to receive the input focus. This function sets this hint.
(Read and Write computed property)

186.1.21 Opacity as Double

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set the Opacity of this window.
Notes:

Request the windowing system to make window partially transparent, with opacity 0 being fully transparent and 1 fully opaque. (Values of the opacity parameter are clamped to the [0,1] range.) On X11 this has any effect only on X screens with a compositing manager running. See isComposited.
(Read and Write computed property)

186.1.22 Resizable as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set whether the user can resize a window.
Notes: (Read and Write computed property)

186.1.23 Title as string

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set the window title.
Notes:

The title of a window will be displayed in its title bar; on the X Window System, the title bar is rendered by the window manager, so exactly how the title appears to users may vary according to a user's exact configuration. The title should help a user distinguish this window from other windows they may have open. A good title might include the application name and current document filename, for example.
(Read and Write computed property)

186.2 class MAAttachedWindowMBS

186.2.1 class MAAttachedWindowMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: A class for attached windows in Cocoa.
Notes:

For Mac OS X 10.7 you can use NSPopoverMBS. This class does something similar for Mac OS X 10.4 to 10.7.

Base on MAAttachedWindow code by Matt Gemmell.
See his website http://mattgemmell.com/

Below are the positions the attached window can be displayed at.

ote that these positions are relative to the point passed to the constructor, e.g. MAPositionBottomRight will put the window below the point and towards the right, MAPositionTop will horizontally center the window above the point, MAPositionRightTop will put the window to the right and above the point, and so on.

You can also pass MAPositionAutomatic and the attached window will try to position itself sensibly, based on available screen-space.

Notes regarding automatically-positioned attached windows:

(a) The window prefers to position itself horizontally centered below the specified point. This gives a certain enhanced visual sense of an attachment/relationship.

(b) The window will try to align itself with its parent window (if any); i.e. it will attempt to stay within its parent window's frame if it can.

(c) The algorithm isn't perfect. :) If in doubt, do your own calculations and then explicitly request that the window attach itself to a particular side.

Notes regarding accessor methods:

1. The border is drawn inside the viewMargin area, expanding inwards; it does not increase the width/height of the window. You can use the BorderWidth and ViewMargin methods together to achieve the exact look/geometry you want. (viewMargin is the distance between the edge of the view and the window edge.)

2. The specified setter methods are primarily intended to be used _before_ the window is first shown. If

you use them while the window is already visible, be aware that they may cause the window to move and/or resize, in order to stay anchored to the point specified in the initializer. They may also cause the view to move within the window, in order to remain centered there.

Note that the HasArrow method can safely be used at any time, and will not cause moving/resizing of the window. This is for convenience, in case you want to add or remove the arrow in response to user interaction. For example, you could make the attached window movable by its background, and if the user dragged it away from its initial point, the arrow could be removed. This would duplicate how Aperture's attached windows behave.

3. drawsRoundCornerBesideArrow takes effect when the arrow is being drawn at a corner, i.e. when it's not at one of the four primary compass directions. In this situation, if drawsRoundCornerBesideArrow is true (the default), then that corner of the window will be rounded just like the other three corners, thus the arrow will be inset slightly from the edge of the window to allow room for the rounded corner. If this value is false, the corner beside the arrow will be a square corner, and the other three corners will be rounded.

This is useful when you want to attach a window very near the edge of another window, and don't want the attached window's edge to be visually outside the frame of the parent window.

4. Note that to retrieve the background color of the window, you should use the windowBackgroundColor method, instead of backgroundColor. This is because we draw the entire background of the window (rounded path, arrow, etc) in an NSColor pattern image, and set it as the backgroundColor of the window.
Subclass of the NSWindowMBS class.

186.2.2 Blog Entries

186.2.3 Methods

186.2.4 attachedWindow(view as NSViewMBS, point as NSPointMBS = nil, window as NSWindowMBS = nil, onSide as Integer = 12, distance as Double = 0.0) as MAAttachedWindowMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new attached window.
Notes:

view: The view to display in the attached window. Must not be nil.
point: The point to which the attached window should be attached. If you are also specifying a parent window, the point should be in the coordinate system of that parent window. If you are not specifying a window, the point should be in the screen's coordinate space. This value is required.
window: The parent window to attach this one to. Note that no actual relationship is created (particularly, this window is not made a childWindow of the parent window). Default: nil.
onSide: The side of the specified point on which to attach this window. Default: MAPositionAutomatic.
distance: How far from the specified point this window should be. Default: 0.

Returns a new attached window.

186.2.5 Constructor(view as NSViewMBS, point as NSPointMBS = nil, window as NSWindowMBS = nil, onSide as Integer = 12, distance as Double = 0.0)

MBS MacExtras Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new attached window.
Notes:

After constructor finished without exception, please check handle property for success. Handle is zero on failure.

view: The view to display in the attached window. Must not be nil.
point: The point to which the attached window should be attached. If you are also specifying a parent window, the point should be in the coordinate system of that parent window. If you are not specifying a window, the point should be in the screen's coordinate space. This value is required.
window: The parent window to attach this one to. Note that no actual relationship is created (particularly, this window is not made a childWindow of the parent window). Default: nil.
onSide: The side of the specified point on which to attach this window. Default: MAPositionAutomatic.
distance: How far from the specified point this window should be. Default: 0.

186.2.6 setBackgroundImage(image as NSImageMBS)

MBS MacExtras Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: Here you can set the background image.

186.2.7 setPoint(point as NSPointMBS, side as Integer)

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Sets the position and redraws window.

186.2.8 side as Integer

MBS MacExtras Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Which side the attached window is showing at.
Notes: If you passed automatic side mode to Constructor or attachedWindow method, you can query here which side was chosen.

186.2.9 Properties

186.2.10 arrowBaseWidth as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The arrow base width.
Notes:

Default is 20.
(Read and Write computed property)

186.2.11 arrowHeight as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The height of the arrow.
Notes:

Default is 16.
(Read and Write computed property)

186.2.12 borderColor as NSColorMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The border color.
Notes:

Default is white.
(Read and Write computed property)

186.2.13 borderWidth as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The border width.
Notes:

Default is 2.
(Read and Write computed property)

186.2.14 cornerRadius as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The corner radius.
Notes:

Default is 8.
(Read and Write computed property)

186.2.15 drawsRoundCornerBesideArrow as boolean

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether to draw round corners beside arrow.
Notes:

Default is true.
(Read and Write computed property)

186.2.16 hasArrow as boolean

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether the window shows an arrow.
Notes:

Default is true.
(Read and Write computed property)

186.2.17 viewMargin as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The view margin.
Notes:

Default is 2.
(Read and Write computed property)

186.2.18 windowBackgroundColor as NSColorMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The window background color.
Notes:

Default is 25% dark gray.
(Read and Write computed property)

186.2.19 Constants

186.2.20 MAPositionAutomatic = 12

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: automatic

186.2.21 MAPositionBottom = 1

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: bottom

186.2.22 MAPositionBottomLeft = 10

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: bottom left

186.2.23 MAPositionBottomRight = 11

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: bottom right

186.2.24 MAPositionLeft = 0

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: left

186.2.25 MAPositionLeftBottom = 5

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: left bottom

186.2.26 MAPositionLeftTop = 4

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: left top

186.2.27 MAPositionRight = 2

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: right

186.2.28 MAPositionRightBottom = 7

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: right bottom

186.2.29 MAPositionRightTop = 6

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: right top

186.2.30 MAPositionTop = 3

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: top

186.2.31 MAPositionTopLeft = 8

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: top left

186.2.32 MAPositionTopRight = 9

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: top right

186.3 Globals

186.3.1 DisableScreenUpdatesMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: Temporarily disables redraw of the screen after changes to window geometry or window contents.
Notes:

It is appropriate to disable updates if you are moving or resizing multiple windows and you want all of the geometry changes to appear onscreen simulataneously. In most other cases, you should strive to avoid disabling screen updates. The window server will automatically re-enable updates (and print a message to the Console log) if you leave updates disabled for a sufficiently long period of time, currently about 1 second.

The window server records the number of calls to DisableScreenUpdates and does not re-enable updates until a matching number of calls to EnableScreenUpdates have been made.

Updated for 64-bit in plugin version 18.3.

186.3.2 EnableScreenUpdatesMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: Re-enables redraw of the screen after changes to window geometry or window contents.
Notes:

Screen redraw is not actually enabled until the number of calls to EnableScreenUpdatesMBS matches the number of calls to DisableScreenUpdatesMBS.

Updated for 64-bit in plugin version 18.3.

186.4 class OverlayMBS

186.4.1 class OverlayMBS

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This class gives you a window overlaying all other windows with an alpha channel.
Example:

```
dim o as OverlayMBS
dim p as Picture
```

```
o=new OverlayMBS(100,100,300,300)

p=New Picture(300,300,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,300,300

o.Pict=p

p=New Picture(300,300,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillOval 0,0,300,300
p.Graphics.ForeColor=& cFFFFFF
p.Graphics.FillOval 100,100,100,100

o.Mask=p

o.UpdateShow

// wait 5 seconds to see the window
DelayMBS 5
```

Notes:

Requires Mac OS X 10.3.9 or Windows 2000 or newer.

Cocoa implementation added with Mac OS X 10.4 class.
To support high resolution mode on Mac OS X high resolution displays, please make the picture+mask exact the double width and height of the window.

186.4.4 Methods

186.4.5 Close

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Calls the destructor.
Notes: Closes the window and releases all memory used from the overlay.

186.4.6 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, MacAttributes as Integer, WinExStyle as Integer, WinStyle as Integer)

MBS Overlay Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The advanced constructor where you can pass flags for Mac and Windows directly.
Notes:

Windows ExStyle flags:

Windows Style flags:

m.Graphics.DrawString "Hello",10,20

o=new OverlayMBS(200,200,rect_width, rect_height, true)
o.Pict=p
o.Mask=m
o.UpdateShow
```

Notes:

Requires Mac OS X 10.3.9 or Windows 2000 or newer.
On success the handle property is not zero.

If WindowsNoActivate the window is setup to not become the front window. This may be a better setup for a toolbar like window.
If WindowsTopMost is false the window is not floating in front of all other windows.

Seems like WindowsNoActivate on Windows works better if you call Show(4) right after the constructor.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
See also:

- 186.4.6 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, MacAttributes as Integer, WinExStyle as Integer, WinStyle as Integer) 24317

186.4.8 Hide

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Hides the window.

186.4.9 InvalidateShadow

MBS Overlay Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Invalidates the shadow of the window.
Notes:

As soon as possible the operation system will recalculate the shadow.
Works only on Mac OS X with Carbon or Cocoa window.

186.4.10 Move(left as Integer, top as Integer)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Moves the window on the screen to the given position.

186.4.11 Resize(width as Integer, height as Integer)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Resizes the window.
Notes: You need to provide bigger picture before you call this method.

186.4.12 SetFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The method to call to set focus to the overlay window.
Notes: Works for Windows and macOS Cocoa.

186.4.13 Show(WindowsShowMode as Integer = 0)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the window onscreen.
Notes:

Values for the Windows show mode:

default 0
SW_SHOWNORMAL 1
SW_NORMAL 1
SW_SHOWMINIMIZED 2
SW_SHOWMAXIMIZED 3
SW_MAXIMIZE 3
SW_SHOWNOACTIVATE 4
SW_SHOW 5
SW_MINIMIZE 6
SW_SHOWMINNOACTIVE 7
SW_SHOWNA 8
SW_RESTORE 9
SW_SHOWDEFAULT 10
SW_FORCEMINIMIZE 11

186.4.14 Update

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Updates the window.
Notes: After you draw new content into the pict and mask pictures, you call this method to apply changes to the window.
See also:

- 186.4.15 Update(NSImage as Variant) 24321

186.4.15 Update(NSImage as Variant)

MBS Overlay Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Updates overlay window with given NSImage.
Notes:

Please pass NSImageMBS object.

Version 16.2 and newer also accepts CGImageMBS object here.
If you pass picture, we use it as CGImage or NSImage depending on what picture type you pass.
See also:

- 186.4.14 Update 24321

186.4.16 UpdateShow

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the window and performs an update.
Notes: Runs Update and Show internally.

186.4.17 Properties

186.4.18 Alpha as Double

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The alpha value of the window.
Notes:

0 is invisible and 1.0 is visible.
(Read and Write property)

186.4.19 AutoCaptureMouse as Boolean

MBS Overlay Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop only.

Function: Whether the mouse should be captured automatically on Windows.
Notes:

If you return true from MouseDown the mouse is catched. This way you can get the drag events even if the mouse moves out of the window.
On MouseUp the mouse is released.
(Read and Write property)

186.4.20 CurrentImage as Variant

MBS Overlay Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Last image drawn.
Notes:

For debugging only.
CGImageMBS or NSImageMBS depending on what you set.
(Read only property)

186.4.21 Height as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the window.
Notes:

Using Resize method is more efficient than assigning width and height properties.
(Read and Write property)

186.4.22 IgnoreMouseClicks as Boolean

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether this window should react to mouse clicks.
Notes:

In Mac OS X 10.7 and newer setting IgnoreMouseClicks = false does not give the same behavior as without setting this property before.
(Read and Write property)

186.4.23 Left as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The position of the window.
Example:

```
static o as OverlayMBS // keep the variable global somewhere. Static or part of a module or in app class.

o = new OverlayMBS(100,100,100,100)

o.Pict = LogoMBS(100)
o.mask = LogoMBS(100)

o.Left = 200

o.UpdateShow
```

Notes:

Using Move method is more efficient than assigning left and top properties.
(Read and Write property)

186.4.24 Mask as Picture

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The mask for the window.
Notes:

You need to create and assign your own image.
If you assign nil for the mask, the plugin uses the mask or alpha channel of the picture.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
(Read and Write property)

186.4.25 NSView as Variant

MBS Overlay Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: The NSView showing the content of the overlay.
Notes: (Read only property)

186.4.26 NSWindow as Variant

MBS Overlay Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop only.

Function: Returns a reference to the NSWindowMBS object which you can use to make additional settings to the overlay window.
Example:

```
dim o as OverlayMBS // your window

dim n as NSWindowMBS = o.NSWindow
// this window should not hide if app hides
n.canHide = false
```

Notes:

Only for the Cocoa target in Xojo.
(Read only property)

186.4.27 Pict as Picture

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The picture for the window content.
Notes:

You need to provide your own picture here.
Pict and Mask pictures must have the same size.

Alpha Channel Pictures are not really supported.
But for Mac OS X an alpha channel picture does currently work.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
(Read and Write property)

186.4.28 Top as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The position of the window.
Example:

```
static o as OverlayMBS // keep the variable global somewhere. Static or part of a module or in app class.

o = new OverlayMBS(100,100,100,100)

o.Pict = LogoMBS(100)
o.mask = LogoMBS(100)

o.top = 200

o.UpdateShow
```

Notes:

Using Move method is more efficient than assigning left and top properties.

(Read and Write property)

186.4.29 Visible as Boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether the window is visible.
Example:

```
dim o as OverlayMBS
// ....
o.visible=true
```

Notes:

True if visible, false if hidden.
(Read and Write property)

186.4.30 Width as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the window.
Notes:

Using Resize method is more efficient than assigning width and height properties.
(Read and Write property)

186.4.31 WindowHandle as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The internal used window handle.
Notes:

On Mac OS a WindowRef and on Windows a HWND.
(Read only property)

186.4.32 WindowID as Integer

MBS Overlay Plugin, Plugin Version: 10.2, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes:

Returns 0 on any error.
This ID can be used for CGWindowListCreateImageMBS.
(Read only property)

186.4.33 WindowsClassName as String

MBS Overlay Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop only.

Function: The Windows' window class name.
Notes: (Read only property)

186.4.34 hasShadow as boolean

MBS Overlay Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Whether the window has a shadow.
Notes: (Read and Write computed property)

186.4.35 Title as string

MBS Overlay Plugin, Plugin Version: 11.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The title of the window.
Notes:

This name is not visible as the window has no title bar.
But if you see the window in some window list, this title property will give your overlay window a name.
(Read and Write computed property)

186.4.36 WinIsTopMost as boolean

MBS Overlay Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Notes:

If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays.
(Read and Write computed property)

186.4.37 Events

186.4.38 Draw(CGContext as Variant, NSGraphicsContext as Variant)

MBS Overlay Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: Draws the content of the window.
Example:

```
Sub Draw(CGContext as Variant, NSGraphicsContext as Variant)
dim c as CGContextMBS = CGContext
dim n as NSGraphicsMBS = NSGraphicsContext
// draw here
End Sub
```

Notes:

The drawing area is cleared for you.
Please put the given parameters in the local variables with correct type.
We use variants here to reduce plugin dependencies.

With version 19.5, the don't clear content anymore for you, so you may need to call ClearRect if needed.

186.4.39 GotFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The event called when focus is set on the overlay window.
Notes: Works for Windows and macOS Cocoa.

186.4.40 KeyDown(key as String, keyCode as Integer, modifiers as integer) as Boolean

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The key down event.
Notes:

The plugin translates keycodes into key as text, but also provides keycode and modifier flags.
Works for Windows and macOS Cocoa.

186.4.41 KeyUp(key as String, keyCode as Integer, modifiers as integer) as Boolean

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The key up event.
Notes:

The plugin translates keycodes into key as text, but also provides keycode and modifier flags.
Works for Windows and macOS Cocoa.

186.4.42 LostFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The event called when focus is lost on the overlay window.
Notes: Works for Windows and macOS Cocoa.

186.4.43 menuForEvent(NSEvent as variant) as Variant

MBS Overlay Plugin, Plugin Version: 17.3, Platform: macOS, Targets: .

Function: Provide a contextual menu for Cocoa Mac.
Notes:

NSEvent is an NSEventMBS object.
Please return NSMenuMBS object. (and please keep a reference somewhere)

186.4.44 MouseDown(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user clicks with the mouse inside the window.
Notes:

Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.45 MouseDragged(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user moves the mouse over the window while the mouse is pressed.
Notes:

Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.46 MouseEnter(x as Integer, y as Integer, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: .

Function: This is event is called when mouse enters window.
Notes:

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.47 MouseExit(x as Integer, y as Integer, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: .

Function: This is event is called when mouse leaves window.
Notes:

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.48 MouseMoved(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user moves the mouse over the window.
Notes:

Return true if you handled this event.

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.49 MouseUp(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user releases the mousebutton inside the window.
Notes:

Return true if you handled this event.

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.50 MouseWheel(x as Integer, y as Integer, dx as Double, dy as Double, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the user uses the mouse wheel inside the window.
Notes:

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

186.4.51 WindowBoundsChanged

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called whenever the size of the window changes.
Notes: Can also be called on position changes.

186.4.52 WindowClosed

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the window is closed.

186.4.53 WindowHidden

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the window is hidden.
Notes: Cocoa support added for version 14.0.

186.4.54 WindowShown

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the window is shown.
Notes: Cocoa support added for version 14.0.

186.4.55 Constants

186.4.56 kModifierFlagCommand = 1048576

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The command key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagCommand) <>0 to check if the flag is set in key events.

186.4.57 kModifierFlagControl = 262144

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The control key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagControl) <>0 to check if the flag is set in key events.

186.4.58 kModifierFlagOption = 524288

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The option (alt) key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagOption) <>0 to check if the flag is set in key events.

186.4.59 kModifierFlagShift = 131072

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The shift key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagShift) <>0 to check if the flag is set in key events.

186.5 class Window

186.5.1 class Window

Platform: macOS, Targets: Desktop only.

Function: Extends Xojo's Window Class.
Example:

window1.HasNoTitleBarMBS = true

Notes: In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

186.5.2 Methods

186.5.3 ActivateWindowMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Activates the window.
Notes:

This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

For MacOS Cocoa apps, we simply bring the window to the front.

186.5.4 BackingScaleFactorMBS as Double

MBS Util Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the scale factor representing the number of backing store pixels corresponding to each linear unit in window space on this window.
Notes:

This is generally only necessary when building a bitmap context or image whose resolution needs to match

that of a particular Window. Note that a Window's backing scale factor can change over time, such as when the window moves from one display to another, or when a display's resolution changes, so clients should not cache the value returned by this function.

If platform does not support scaling factor, we return 1.0. (on Windows, Linux and older Mac OS X)
Supported for Carbon and Cocoa windows.

For apps which are not enabled for retina support, the function returns 1. So you only see 2 here if app is Cocoa, display is retina and info.plist has the NSHighResolutionCapable key.

186.5.5 CGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContextMBS object for the given Window.
Example:

```
dim CGContext as CGContextMBS
dim OverlayPic as Picture=LogoMBS(500)
dim contentpicture as CGImageMBS= CGCreateImageMBS(OverlayPic)

CGContext=window1.CGContextMBS

CGContext.ClearRect CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
CGContext.DrawPicture contentpicture, CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
```

Notes:

Requires Mac OS X to work.
Please make sure the CGContextMBS object is released in the paint event if you use it there, so all the drawings are flushed. Not releasing it my be visible in missing statictext or other strange graphics effects.

Version 9.8 adds support for Cocoa target.
But on a Cocoa window the context is not always available, so in the window paint event, you can use GetCurrentCGContextMBS.

186.5.6 CleanUpTransparentMBS(refValue as Integer)

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Cleans up transparency support for a Xojo window.
Example:

```
dim p as Integer // property on Windows

p = window1.MakeTransparentMBS

// later in close event

window1.CleanUpTransparentMBS p
```

Notes:

Call this in the close event of a window passing the value you got from the MakeTransparentMBS call.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

186.5.7 ClearTransparencyMBS

MBS Util Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop only.

Function: Clears transparency of a window.

186.5.8 CollapsableMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window can be collapsed.
Example:

```
MsgBox str(window1.CollapsableMBS)
```

Notes:

Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.

186.5.9 ConstrainWindowToScreenMBS(animate as boolean)

MBS Util Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop only.

Function: Makes sure the window is on one screen visible.
Notes: Implemented on Mac for both Carbon and Cocoa.

186.5.10 GTKWindow as GTKWindowMBS

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Queries a GTKWindow object for this window.
Notes:

Returns only a valid object on linux.
On other platforms, this function returns nil.

186.5.11 InvalidateRectThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Invalidate the rectangle.
Notes:

This method is to allow you to invalidate in a thread without a problem.

If called on main thread, the plugin will simply call InvalidateRect method directly.
If called on other threads the plugin will schedule to call InvalidateRect method a short time later on the main thread.

186.5.12 InvalidateShadowMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: This method causes a window's shadow to be recalculated.
Notes:

InvalidateShadowMBS is not typically used by applications. However, it may be useful for applications with customized window frames that change shape dynamically; in this case, after the application has drawn the new window shape, the window shadow must be recalculated to follow the new window shape.

This method causes the window shadow to be immediately recalculated and redrawn based on the current contents of the window's back buffer. For best performance and visual appearance, you should follow these steps when invalidating a window shadow: disable updates with DisableScreenUpdatesMBS, draw, flush, invalidate the shadow, and enable updates. For a compositing window, after invalidating any views that should be redrawn, you will need to explicitly draw and flush using HIWindowFlush, rather than waiting for

the event loop to draw and flush the window, because you cannot disable updates or invalidate the window shadow if drawing is done via the event loop.

Requires Mac OS X 10.4 and should do nothing on 10.3.

186.5.13 InvalidateThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Invalidate the window.
Notes:

This method is to allow you to invalidate in a thread without a problem.

If called on main thread, the plugin will simply call Invalidate method directly.
If called on other threads the plugin will schedule to call Invalidate method a short time later on the main thread.

186.5.14 IsFullScreenMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Queries whether window is fullscreen.
Notes:

Indicates that a window has fullscreen appearance.
A fullscreen window does not draw its titlebar, and may have special handling for its toolbar.
Available in Mac OS X v10.7 and later.

186.5.15 MakeTransparentMBS as Integer

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Installs transparency support to a Xojo window.
Example:

```
dim p as Integer // property on Windows

p = window1.MakeTransparentMBS

// later in close event

window1.CleanUpTransparentMBS p
```

Notes:

Will return non zero value if successfull.
The window doesn't change if you don't use the CGContextMBS property.

Requires Mac OS X, Windows 2000 or Windows XP to work. The window must be a document window.

Set MacProcID of the window to 1104 and you can make it transparent without a title bar. (on Mac OS X)

With plugin version 11.1, we now return a value which should store with the window. Later in the Close event, you call CleanUpTransparentMBS passing this value.

Added Cocoa support in 11.3 plugins.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel. Calls to MakeTransparentMBS and CleanUpTransparentMBS are not required for Linux.

186.5.16 NSPanelMBS as NSPanelMBS

MBS MacBase Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSPanel for the given Xojo window.
Example:

MsgBox window1.NSPanelMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target which are floating panels.

186.5.17 NSToolbarMBS as NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The window's toolbar.
Notes:

So you can get the toolbar without going over NSWindowMBS.
But there you can assign a new toolbar...

186.5.18 NSWindowMBS as NSWindowMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSWindow for the given Xojo window.
Example:

MsgBox window1.NSWindowMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target and for Carbon Windows in carbon targets.

186.5.19 RefreshRectThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes:

This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call RefreshRect method directly.
If called on other threads the plugin will schedule to call RefreshRect method a short time later on the main thread.

186.5.20 RefreshThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes:

This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call Refresh method directly.
If called on other threads the plugin will schedule to call Refresh method a short time later on the main thread.

186.5.21 RemoveWindowProxyIconMBS

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Removes any Proxy Icon from the Window.
Example:

mainwindow.RemoveWindowProxyIconMBS

Notes:

Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

186.5.22 ScreenshotWindowMBS as picture

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the content of the window buffer on Mac OS X.
Example:

```
dim p as Picture
p=mainwindow.screenshotWindowMBS
```

Notes:

Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

186.5.23 ScreenshotWindowRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Returns a part of the content of the window buffer on Mac OS X.
Example:

```
dim p as picture
p=mainwindow.ScreenshotWindowRectMBS(100,100,200,200)
```

Notes:

Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

186.5.24 SetTransparencyMBS(value as Integer) as boolean

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Your window can have transparency on Mac OS X.
Example:

```
if window1.SetTransparencyMBS(127) then
'fine
else
'error
end if
```

Notes:

Use values between 0 and 255.
Requires Mac OS X, Windows 2000 or Windows XP to work.
May be limited to simple windows like normal document windows.
You need to call MakeTransparent before to install transparency.
(this function was replaced in v4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

186.5.25 SetWindowFeedbackSettingMBS(Feedback as Integer, value as Variant) as Boolean

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Sets the feedback configuration for a window.
Example:

```
const FEEDBACK_TOUCH_CONTACTVISUALIZATION = 1
const FEEDBACK_PEN_BARRELVISUALIZATION = 2
const FEEDBACK_PEN_TAP = 3
const FEEDBACK_PEN_DOUBLETAP = 4
const FEEDBACK_PEN_PRESSANDHOLD = 5
const FEEDBACK_PEN_RIGHTTAP = 6
const FEEDBACK_TOUCH_TAP = 7
```

```
const FEEDBACK_TOUCH_DOUBLETAP = 8
const FEEDBACK_TOUCH_PRESSANDHOLD = 9
const FEEDBACK_TOUCH_RIGHTTAP = 10
const FEEDBACK_GESTURE_PRESSANDTAP = 11
```

```
dim r as Boolean = self.SetWindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, true)

if r then
dim value as Boolean
dim b as Boolean = self.WindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, value)
if b then
MsgBox "WindowFeedbackSettingMBS: "+str(value)
end if
end if
```

Notes:

Returns true if successful; otherwise, returns false.

Value can be nil to reset value. Or true/false to set it.
Requires Windows 8 or Windows Server 2012 in desktop apps only.

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

186.5.26 SetWindowIconMBS(Type as Integer, File as FolderItem, IconID as Integer) as Boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the icon in the file.
Example:

```
call window1.SetWindowIconMBS(0,getfolderitem("icon.ico"),1)
```

Notes:

Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.

Type is 0 for a small icon and 1 for a big icon.
See also:

- 186.5.27 SetWindowIconMBS(Type as Integer, Icon as Picture, Mask as Picture) as Boolean 24344

186.5.27 SetWindowIconMBS(Type as Integer, Icon as Picture, Mask as Picture) as Boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the given picture with mask.
Example:

```
dim p as Picture
dim m as Picture

// random colored circle image
p=New Picture(16,16,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,16,16
p.Graphics.ForeColor=rgb(rnd*256,rnd*256,rnd*256)
p.Graphics.Filloval 0,0,16,16

// circle mask
m=New Picture(16,16,32)
m.Graphics.ForeColor=& cFFFFFF // transparent
m.Graphics.Fillrect 0,0,16,16
m.Graphics.ForeColor=& c000000 // color
m.Graphics.Filloval 0,0,16,16

Canvas1.Backdrop=p // show in canvas
Canvas2.Backdrop=m

call window1.SetWindowIconMBS(0,p,m)
```

Notes:

The mask picture ist converted to black/white.
What image depths are used and supported depends on the Windows version.
Returns true on success and false on failure.

Possible values for type:

ICON_BIG = 1	Set the large icon for the window.
ICON_SMALL = 0	Set the small icon for the window.

See also:

- 186.5.26 SetWindowIconMBS(Type as Integer, File as FolderItem, IconID as Integer) as Boolean 24343

186.5.28 SetWindowMaskMBS(p as picture, redraw as Boolean, transparentColor as color) as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop only.

Function: Sets the mask of a window.
Notes:

Redraw decides whether the window is redrawn after it has been changed.
Returns true if successfull.

If you want to do the same on Mac OS X, check the example projects "transparent window" and the Photoshop Splash Screen example.

On Mac OS 9 you need a solution with a WDEF Resource which is not part of the plugin collection.

186.5.29 ShowHideToolbarMBS(animate as boolean, value as boolean)

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Shows or hides the toolbar.
Notes: Only working on Mac OS X.

186.5.30 SmoothResizeCenteredMBS(width as Integer,height as Integer)

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly to all directions.
Example:

```
dim w,h as Integer
```

```
// get destination dimension

w=300
h=200

// Resize

window1.SmoothResizeCenteredMBS w,h

// Now resize via RB to make it permament.

width=w
height=h
```

Notes:

You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

186.5.31 SmoothResizeMBS(width as Integer,height as Integer)

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly.
Example:

```
dim w,h as Integer

// get destination dimension

w=300
h=200

// Resize

window1.SmoothResizeMBS w,h

// Now resize via RB to make it permament.

width=w
height=h
```

Notes:

You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa on 10.4 and newer.

186.5.32 ToggleFullScreenMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Toggles fullscreen mode for this window.
Notes:

Returns true on success.
If an application supports fullscreen, it should add a menu item to the View menu with toggleFullScreen as the action.
Available in Mac OS X v10.7 and later.
This method does not much if you don't mark a window to be the primary fullscreen window.

186.5.33 UpdateNowMBS

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: On Mac OS X all Windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update.
Example:

Mainwindow.UpdateNowMBS

Notes: Updated for 64-bit in plugin version 18.3.

186.5.34 UpdateNowRectMBS(left as Integer, top as Integer, width as Integer, height as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: On Mac OS X all Windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update for a part of your window.
Example:

Mainwindow.UpdateNowRectMBS Mainwindow.text.left, Mainwindow.text.top, Mainwindow.text.width, Mainwindow.text.height

Notes: Updated for 64-bit in plugin version 18.3.

186.5.35 WinAnimateWindowMBS(Flags as Integer, Time as Integer=200) as boolean

MBS Win Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop only.

Function: The AnimateWindow function enables you to produce special effects when showing or hiding windows.
Example:

```
dim flags as Integer

const AW_SLIDE = & h040000 // Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
const AW_ACTIVATE = & h020000 // Activates the window. Do not use this value with AW_HIDE.
const AW_BLEND = & h080000 // Uses a fade effect. This flag can be used only if hwnd is a top-level window.
const AW_HIDE = & h010000 //Hides the window. By default, the window is shown.
const AW_CENTER = & h10 // Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
const AW_HOR_POSITIVE = 1 // Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_HOR_NEGATIVE = 2 // Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_POSITIVE = 4 // Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_NEGATIVE = 8 // Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

window2.hide

flags=BitwiseOr(AW_SLIDE, AW_HOR_POSITIVE)

if window2.WinAnimateWindowMBS(flags, 1000) then
window2.show
else
MsgBox "Animatin failed."
end if
```

Notes:

There are four types of animation: roll, slide, collapse or expand, and alpha-blended fade.

self: The window to animate. The calling thread must own this window.
Time: Specifies how long it takes to play the animation, in milliseconds. Typically, an animation takes 200 milliseconds to play.
Flags: Specifies the type of animation. This parameter can be one or more of the following values. Note that, by default, these flags take effect when showing a window. To take effect when hiding a window, use AW_HIDE and a bitwiseor operator with the appropriate flags.

AW_SLIDE	= & h040000	Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
AW_ACTIVATE	= & h020000	Activates the window. Do not use this value with AW_HIDE.
AW_BLEND	= & h080000	Uses a fade effect. This flag can be used only if hwnd is a top-level window.
AW_HIDE	= & h010000	Hides the window. By default, the window is shown.
AW_CENTER	= & h10	Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
AW_HOR_POSITIVE	= 1	Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_HOR_NEGATIVE	= 2	Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_POSITIVE	= 4	Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_NEGATIVE	= 8	Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

Return Value:
If the function succeeds, the return value is true.
If the function fails, the return value is false.
The function will fail in the following situations:

- If the window uses the window region. Windows XP: This does not cause the function to fail.
- If the window is already visible and you are trying to show the window.
- If the window is already hidden and you are trying to hide the window.
- If there is no direction specified for the slide or roll animation.
- When trying to animate a child window with AW_BLEND.
- If the thread does not own the window. Note that, in this case, AnimateWindow fails but GetLastError returns ERROR_SUCCESS. To get extended error information, call the GetLastError function.

To show or hide a window without special effects, use Show.
When using slide or roll animation, you must specify the direction. It can be either AW_HOR_POSITIVE, AW_HOR_NEGATIVE, AW_VER_POSITIVE, or AW_VER_NEGATIVE.
You can combine AW_HOR_POSITIVE or AW_HOR_NEGATIVE with AW_VER_POSITIVE or AW_VER_NEGATIVE to animate a window diagonally.

The window procedures for the window and its child windows should handle any WM_PRINT or WM_PRINTCLIENT messages. Dialog boxes, controls, and common controls already handle WM_PRINTCLIENT. The default window procedure already handles WM_PRINT.
If a child window is displayed partially clipped, when it is animated it will have holes where it is clipped.
AnimateWindow supports RTL windows.
Avoid animating a window that has a drop shadow because it produces visually distracting, jerky animations.

186.5.36 WindowFeedbackSettingMBS(Feedback as Integer, byref value as boolean, IncludeAncestors as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves the feedback configuration for a window.
Notes:

IncludeAncestors: Specifies that the parent window chain should be checked.

Returns true if the specified feedback setting is configured on the specified window. Otherwise, it returns false (and config won't be modified).

Requires Windows 8 [desktop apps only] or Windows Server 2012 [desktop apps only] .

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

186.5.37 WinFlashWindowMBS(Invert as boolean)

MBS Util Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Flashes Window.
Example:

window1.WinFlashWindowMBS true

Notes:

Flashes the specified window one time. It does not change the active state of the window.

Invert: If this parameter is true, the window is flashed from one state to the other. If it is false, the window is returned to its original state (either active or inactive).

When an application is minimized and this parameter is true, the taskbar window button flashes active/inactive. If it is false, the taskbar window button flashes inactive, meaning that it does not change colors. It flashes, as if it were being redrawn, but it does not provide the visual invert clue to the user.

Flashing a window means changing the appearance of its caption bar as if the window were changing from inactive to active status, or vice versa. (An inactive caption bar changes to an active caption bar; an active caption bar changes to an inactive caption bar.)
Typically, a window is flashed to inform the user that the window requires attention but that it does not currently have the keyboard focus.
The FlashWindow function flashes the window only once; for repeated flashing, the application should create a system timer.

186.5.38 WinHideTooltipMBS as Integer

MBS Win Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop only.

Function: Hides all tooltips.
Notes:

You can call that in window.deactivate event to hide tooltips which did not hide themselves.
Returns number of hidden tooltips.

186.5.39 Properties

186.5.40 CanBeVisibleWithoutLoginMBS as Boolean

MBS Util Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Whether this window can be visible before login.
Example:

window1.CanBeVisibleWithoutLoginMBS = true

Notes:

This window can be made visible prior to user login. By default, in Mac OS X 10.5 and later no windows can be visible before a user logs into the system; this protects the user against certain types of malicious

use of insecure applications. However, some software, such as input methods or other accessibility software, may need to deliberately make windows available prior to user login. Such software should add this window attribute to its windows. Available for all windows in Mac OS X 10.5 and later.
(Read and Write computed property)

186.5.41 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Get or set the colorspace profile for this window.
Example:

```
dim c as CGColorSpaceMBS = window1.CGColorSpaceMBS

if c<>Nil then
MsgBox str(c.NumberOfComponents)
else
MsgBox "nil"
end if
```

Notes:

Requires Mac OS X 10.6.

On Cocoa, the NSColorSpace is queried and the matching CGColorspace is returned. For setting a NSColorSpace is created for the given CGColorspace.
In Carbon applications, the CoreGraphics color space is passed directly.
(Read and Write computed property)

186.5.42 collapsedMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window is collapsed. You can set it.
Example:

```
mainwindow.collapsedMBS=false 'show window
```

Notes:

Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

186.5.43 FullScreenAuxiliaryMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the auxiliary fullscreen window.
Notes: (Read and Write computed property)

186.5.44 FullScreenPrimaryMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the primary fullscreen window.
Notes:

If true, the window receives the fullscreen widget in the title bar.
(Read and Write computed property)

186.5.45 HasborderMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Decides whether the window has a border.
Example:

mainwindow.HasborderMBS=false ' Remove border

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it). This option removes the title bar. HasCaptionMBS removes even more.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.46 HasCaptionMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a caption (a title bar)
Example:

Window1.HasCaptionMBS=false

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.47 HasCloseBoxMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a CloseBox.
Example:

mainwindow.HasCloseboxMBS=false 'remove closebox

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.48 HasCollapseBoxMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a Collapsebox.
Example:

mainwindow.HasCollapseBoxMBS=false 'remove Collapsebox

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.49 HasMaximizeBoxMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Maximize Button.
Example:

mainwindow.HasMaximizeBoxMBS=false 'remove Maximize button

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.50 HasMinimizeBoxMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Minimize Button.
Example:

mainwindow.HasMinimizeBoxMBS=false 'remove Minimize button

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible

(for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.51 HasNoShadowMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has no shadow.
Example:

mainwindow.HasNoShadowMBS=true 'remove shadow

Notes:

Available for all windows on Mac OS X. This attribute is automatically given to windows of kOverlayWindowClass.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

186.5.52 HasNoTitleBarMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: For Document, Floating, and Utility windows, this attribute allows you to hide the title bar of a window.
Example:

```
window1.HasNoTitleBarMBS = true

// for Cocoa:
window1.HasCloseBoxMBS = false
window1.HasCollapseBoxMBS = false
window1.IsResizableMBS = false
window1.HasNoTitleBarMBS = true
```

Deprecated: This item is deprecated and should no longer be used. You can use NSWindowMBS for Cocoa instead. **Notes:**

For Mac OS X 10.4 or later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in Plugin version 10.4.
(Read and Write computed property)

186.5.53 HasSystemMenuMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a system menu inside the title bar.
Example:

Window1.HasSystemMenuMBS=false

Notes:

This property has only an effect on Windows. It will disable the system menu and also the minimize, maximize and close buttons. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.54 HasToolbarButtonMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a toolbar button.
Example:

mainwindow.HasToolbarButtonMBS=true 'shows Toolbar Button

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
The Button is shown on next redraw of the window frame.

Use the CarbonWindowsEventsMBS class to receive events when the button is pressed.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.55 IgnoreClicksMBS as Boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Can be used to control whether mouse clicks are ignored for this window.
Example:

Window1.IgnoreClicksMBS=true

Notes:

Whether this window never receives mouse events, even in areas that are opaque. Instead, clicks on the window will be passed through to windows beneath it. Available for all windows on Mac OS X 10.2 and later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

186.5.56 IsIconicMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window is inside the taskbar.
Example:

```
MsgBox str(window1.IsIconicMBS)
```

Notes:

If you set IsIconic to true the window is minimized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.57 IsMetalWindowMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Whether this window uses the Metal appearance.
Example:

```
if window1.Frame = window.FrameTypeMetal then
MsgBox "Window is metal. "+str(window1.IsMetalWindowMBS)
else
MsgBox "Window is not metal. "+str(window1.IsMetalWindowMBS)
end if
```

Notes:

Available for document windows on Mac OS X 10.2 and later, and for floating windows on Mac OS X 10.3 and later. Drawers can also be metal, but dynamically adjust their appearance based on their parent window's appearance; it is not necessary to specify this attribute for a metal drawer.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.58 IsResizableMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Whether this window is resizeable.
Example:

Window1.IsResizableMBS=false

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

Use GrowBoxTransparentMBS on Composite Mac OS X windows to enable the transparent grow box.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works in Cocoa.
(Read and Write computed property)

186.5.59 IsZoomedMacMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the window is zoomed.
Example:

MsgBox str(window1.IsZoomedMacMBS)

Notes:

Requires Mac OS 8.5 or newer.
Seems not to work correctly on RB 5.5.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

186.5.60 IsZoomedMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has been maximized.
Example:

MsgBox str(window1.IsZoomedMBS)

Notes:

If you set IsZoomed to true the window is maximized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa.
(Read and Write computed property)

186.5.61 ModifiedMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: You can set or get the value of the modified state.
Example:

mainwindow.modifiedMBS=true

Notes:

Requires Mac OS 8.5 or newer.
As long as you don't set modified to false the window keeps to tell you that it's modified. Not sure why, so just set modified to false early in creating the window.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

186.5.62 ToolbarVisibleMBS as boolean

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Whether the toolbar is shown in this window or not.
Notes:

Value is false on any error.
Only working on Mac OS X.
(Read and Write computed property)

186.5.63 TransparencyMBS as single

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The transparency of the window on Mac OS X, Windows 2000 and Windows XP.
Notes:

1 for opaque, 0 for invisible.
Return 1 on any error. On Windows it returns always 1 as the current transparency value can't be queried.
You need to call MakeTransparent before to install transparency.
(added Windows support in version 4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.
(Read and Write computed property)

186.5.64 UnifiedTitleAndToolbarMBS as Boolean

MBS Util Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Whether this window has an unified title and toolbar look.
Example:

window1.UnifiedTitleAndToolbarMBS = true

Notes:

This window draws its window title and toolbar using a unified appearance that has no separator between the two areas. A window may not have both UnifiedTitleAndToolbar and Metal appearance. If a window already has the metal attribute, attempting to set the Unified attribute will cause ChangeWindows to return an error, and vice versa. This constant was not added to this header file until Mac OS X 10.5, but it is actually available at runtime on Mac OS X 10.4 and later for windows of kDocumentWindowClass. However, on Mac OS X 10.5 and later, kHIWindowBitUnifiedTitleAndToolbar no longer has any effect, since all windows with toolbars now have a unified look.
(Read and Write computed property)

186.5.65 WindowProxyIconFileMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: That's the icon to the window which belongs to the file.
Example:

```
dim f as folderItem

f=getopenFolderItem("special/any")
if f<>nil then
window1.WindowProxyIconFileMBS=f
end if
```

Notes:

Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

186.5.66 WinMenuHandleMBS as Integer

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: A property to access the handle used for the menu of a Window.
Example:

```
dim menu as Integer // global

if menu=0 then
menu=Window1.WinMenuHandleMBS // read it on the first window
else
Window1.winmenuHandleMBS=menu // set it on the second window
end if
```

Notes:

Used in the example "Menu in every Window" to have a menubar in every window on Windows. But never forget to quit your app after all windows were closed.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

186.5.67 WinTopMostWindowMBS as boolean

MBS Win Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Example:

window1.WinTopMostWindowMBS=true

Notes:

If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays. (Read and Write computed property)

Chapter 187

Windows

187.1 class DirectDrawGraphicsMBS

187.1.1 class DirectDrawGraphicsMBS

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for drawing with DirectDraw 2D into a graphics context in Xojo.
Example:

```
dim p as Picture = BitmapForCaching(me.Width, me.Height)
dim g as graphics = p.Graphics

// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

// now draw a few things
dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash

const size = 50
const offset = 10
const delta = offset + size

d.FillRectangle offset + delta * 0, offset + 0 * delta, offset + delta * 0 + size, offset + 0 * delta +
size
d.DrawRectangle offset + delta * 0, offset + 1 * delta, offset + delta * 0 + size, offset + 1 * delta + size

d.FillEllipse offset + delta * 1 + size/2, offset + 0 * delta + size/2, size /2, size /2
```

```
d.DrawEllipse offset + delta * 1 + size/2, offset + 1 * delta + size/2, size /2, size /2

d.FillRoundedRectangle offset + delta * 2, offset + 0 * delta, offset + delta * 2 + size, offset + 0 *
delta + size, 20, 20
d.DrawRoundedRectangle offset + delta * 2, offset + 1 * delta, offset + delta * 2 + size, offset + 1 * delta
+ size, 20, 20

// save to desktop
dim f as FolderItem = SpecialFolder.Desktop.Child("directdraw.jpg")
p.Save(f, Picture.Formats.JPEG, picture.QualityMaximum)

// show in window
window1.Backdrop = p
```

187.1.3 Methods

187.1.4 ClearStrokeStyle

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears stroke style.
Notes: If no stroke style is defined, a default one is used.

187.1.5 Constructor(Graphics as Graphics)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
```

```
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
d.DrawLine 10, 10, 190,190

Backdrop = p
```

Notes:

Pass the graphics in a paint event or from a picture.

Requires Xojo 2019r2 or newer.

187.1.6 CreateSolidColorBrush(c as Color) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new solid color brush that has the specified color and a base opacity of 1.0.
Example:

```
dim d as new DirectDrawGraphicsMBS(g)

// make full blue with no alpha
call d.CreateSolidColorBrush(& c0000FFFF)
```

Notes: Pass the red, green, blue, and alpha values of the brush's color as a Xojo color.
See also:

- 187.1.7 CreateSolidColorBrush(red as Single, green as Single, blue as Single, alpha as Single = 1.0) as Boolean 24367

187.1.7 CreateSolidColorBrush(red as Single, green as Single, blue as Single, alpha as Single = 1.0) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new solid color brush that has the specified color and a base opacity of 1.0.
Notes:

Pass the red, green, blue, and alpha values of the brush's color.
Range of values is from 0.0 to 1.0.

See also:

- 187.1.6 CreateSolidColorBrush(c as Color) as Boolean 24367

187.1.8 CreateStrokeStyle(startCap as Integer = 0, endCap as Integer = 0, dashCap as Integer = 0, lineJoin as Integer = 0, miterLimit as Single = 1.0, dashStyle as Integer = 0, dashOffset as Single = 0, Dashes() as Single = nil) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an stroke style that describes start cap, dash pattern, and other features of a stroke.
Notes:

Creates and sets the stroke style. Returns true on success and false on failure.

startCap	The cap applied to the start of all the open figures in a stroked geometry.
endCap	The cap applied to the end of all the open figures in a stroked geometry.
dashCap	The shape at either end of each dash segment.
lineJoin	A value that describes how segments are joined. This value is ignored for a vertex if the segment flags specify that the segment should have a smooth join.
miterLimit	The limit of the thickness of the join on a mitered corner. This value is always treated as though it is greater than or equal to 1.0.
dashStyle	A value that specifies whether the stroke has a dash pattern and, if so, the dash style.
dashOffset	A value that specifies an offset in the dash sequence. A positive dash offset value shifts the dash pattern, in units of stroke width, toward the start of the stroked geometry. A negative dash offset value shifts the dash pattern, in units of stroke width, toward the end of the stroked geometry.
Dashes	An array whose elements are set to the length of each dash and space in the dash pattern. The first element sets the length of a dash, the second element sets the length of a space, the third element sets the length of a dash, and so on. The length of each dash and space in the dash pattern is the product of the element value in the array and the stroke width.

187.1.9 Destructor

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

187.1.10 DrawEllipse(x as single, y as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of the specified ellipse using the specified stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawEllipse 100, 100, 90, 90

Backdrop = p
```

Notes:

x/y: The position of the ellipse to draw, in device-independent pixels.
radiusX/radiusY: The radius of the ellipse to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

187.1.11 DrawLine(x1 as single, y1 as single, x2 as single, y2 as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws a line between the specified points using the specified stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
```

```
d.DrawLine 10, 10, 190,190

Backdrop = p
```

Notes:

x1/y1: The start point of the line, in device-independent pixels.
x2/y2: The end point of the line, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

187.1.12 DrawRectangle(left as single, top as single, right as single, bottom as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of a rectangle that has the specified dimensions and stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawRectangle 10, 10, 190, 190

Backdrop = p
```

Notes:

Pass the dimensions of the rectangle to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

187.1.13 DrawRoundedRectangle(left as single, top as single, right as single, bottom as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of the specified rounded rectangle using the specified stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawRoundedRectangle 10, 10, 190, 190, 20, 20

Backdrop = p
```

Notes:

Pass the dimensions of the rounded rectangle to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

187.1.14 FillEllipse(x as single, y as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified ellipse.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
```

```
d.FillEllipse 100, 100, 90, 90

Backdrop = p
```

Notes:

The position and radius, in device-independent pixels, of the ellipse to paint.
Uses current brush.

187.1.15 FillRectangle(left as single, top as single, right as single, bottom as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified rectangle.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)

d.FillRectangle 10, 10, 190, 190

Backdrop = p
```

Notes:

The dimension of the rectangle to paint, in device-independent pixels.
Uses current brush.

187.1.16 FillRoundedRectangle(left as single, top as single, right as single, bottom as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified rounded rectangle.

Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)

d.FillRoundedRectangle 10, 10, 190, 190, 20, 20

Backdrop = p
```

Notes:

The dimensions of the rounded rectangle to paint, in device independent pixels.
Uses current brush.

187.1.17 GetTransform(byref m11 as Single, byref m12 as Single, byref m21 as Single, byref m22 as Single, byref dx as Single, byref dy as Single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current transform of the render target.

187.1.18 RestoreDrawingState

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Restores the current drawing state.
Notes:

Our plugin manages the stack of drawing states saved.
We raise an exception if your calls to restore are not balanced with save.

187.1.19 SaveDrawingState

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Saves the current drawing state.
Notes: Our plugin manages the stack of drawing states saved, so you can restore them later.

187.1.20 SetTransform(m11 as Single, m12 as Single, m21 as Single, m22 as Single, dx as Single, dy as Single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies the specified transform to the render target, replacing the existing transformation.
Notes: All subsequent drawing operations occur in the transformed space.

187.1.21 Properties

187.1.22 AntialiasMode as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The antialiasing mode of the render target.
Notes:

The antialiasing mode applies to all subsequent drawing operations, excluding text and glyph drawing operations.
To specify the antialiasing mode for text and glyph operations, use the SetTextAntialiasMode method.
(Read and Write property)

187.1.23 brushHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for current brush.
Notes:

Reference to ID2D1Brush object.
(Read and Write property)

187.1.24 DPIX as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Return the render target's dots per inch (DPI).
Notes:

The horizontal DPI of the render target.
(Read only property)

187.1.25 DPIY as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Return the render target's dots per inch (DPI).
Notes:

The vertical DPI of the render target.
(Read only property)

187.1.26 factoryHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for the factory.
Notes:

Reference to ID2D1Factory object.
(Read and Write property)

187.1.27 Handle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Reference to ID2D1RenderTarget object.
(Read and Write property)

187.1.28 Height as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device-independent pixels.
Notes: (Read only property)

187.1.29 PixelHeight as UInt32

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device pixels.
Notes: (Read only property)

187.1.30 PixelWidth as UInt32

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device pixels.
Notes: (Read only property)

187.1.31 strokeStyleHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for current stroke style.
Notes:

Reference to ID2D1StrokeStyle object.
(Read and Write property)

187.1.32 strokeWidth as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stroke width to use.
Notes:

Default is 1.

The width of the stroke, in device-independent pixels. The value must be greater than or equal to 0.0. If this parameter isn't specified, it defaults to 1.0. The stroke is centered on the line.
(Read and Write property)

187.1.33 TextAntialiasMode as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the antialiasing mode to use for subsequent text and glyph drawing operations.
Notes:

The antialiasing mode to use for subsequent text and glyph drawing operations.
(Read and Write property)

187.1.34 Width as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device-independent pixels.
Notes: (Read only property)

187.1.35 Constants

187.1.36 AntiAliasModeAliased = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the anti alias modes.
Notes: Objects are aliased in most cases. Objects are antialiased only when they are drawn to a render target created by the CreateDxgiSurfaceRenderTarget method and Direct3D multisampling has been enabled on the backing DirectX Graphics Infrastructure (DXGI) surface.

187.1.37 AntiAliasModePerPrimitive = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the anti alias modes.
Notes: Edges are antialiased using the Direct2D per-primitive method of high-quality antialiasing.

187.1.38 CapStyleFlat = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: A cap that does not extend past the last point of the line. Comparable to cap used for objects other than lines.

187.1.39 CapStyleRound = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: A semicircle that has a diameter equal to the line thickness.

187.1.40 CapStyleSquare = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: Half of a square that has a length equal to the line thickness.

187.1.41 CapStyleTriangle = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: An isosceles right triangle whose hypotenuse is equal in length to the thickness of the line.

187.1.42 DashStyleCustom = 5

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: The dash pattern is specified by an array of floating-point values.

187.1.43 DashStyleDash = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dash followed by a gap of equal length. The dash and the gap are each twice as long as the stroke thickness. The equivalent dash array for D2D1_DASH_STYLE_DASH is { 2, 2 } .

187.1.44 DashStyleDashDot = 3

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dash, followed by a gap, followed by a dot, followed by another gap. The equivalent dash array for D2D1_DASH_STYLE_DASH_DOT is { 2, 2, 0, 2 } .

187.1.45 DashStyleDashDotDot = 4

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dash, followed by a gap, followed by a dot, followed by another gap, followed by another dot, followed by another gap. The equivalent dash array for D2D1_DASH_STYLE_DASH_DOT_DOT is { 2, 2, 0, 2, 0, 2 } .

187.1.46 DashStyleDot = 2

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dot followed by a longer gap. The equivalent dash array for D2D1_DASH_STYLE_DOT is { 0, 2 } .

187.1.47 DashStyleSolid = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A solid line with no breaks.

187.1.48 LineJoinBevel = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Beveled vertices.

187.1.49 LineJoinMiter = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Regular angular vertices.

187.1.50 LineJoinMiterOrBevel = 3

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Regular angular vertices unless the join would extend beyond the miter limit; otherwise, beveled vertices.

187.1.51 LineJoinRound = 2

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Rounded vertices.

187.1.52 TextAntiAliasModeAliased = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Do not use antialiasing.

187.1.53 TextAntiAliasModeClearType = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Use ClearType antialiasing.

187.1.54 TextAntiAliasModeDefault = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Use the system default. See Remarks.

187.1.55 TextAntiAliasModeGrayscale = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Use grayscale antialiasing.

187.2 class MapiFileMBS

187.2.1 class MapiFileMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class contain information about a file containing a message attachment stored as a temporary file.
Notes:

Important:
Simple MAPI is not installed by Exchange Server 2003 or later. However, Simple MAPI is supported for use with Exchange 2003. To function properly, the underlying Exchange or Microsoft Outlook® MAPI subsystem must be properly installed on the client computer.

187.2.2 Properties

187.2.3 Filename as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The attachment filename seen by the recipient, which may differ from the filename in the PathName member if temporary files are being used.
Notes:

If the FileName member is empty, the filename from PathName is used.
(Read and Write property)

187.2.4 Flags as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Currently not used with the plugin.
(Read and Write property)

187.2.5 Path as FolderItem

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The path of the attached file.
Notes:

When this property is set the PathName property is filled with the absolute path. If you query this property, you get the PathName property as a folderitem.
So this property was made for your convenience.
(Read and Write property)

187.2.6 PathName as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The fully qualified path of the attached file.
Notes:

This path should include the disk drive letter and directory name.
(Read and Write property)

187.2.7 Position as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: An integer used to indicate where in the message text to render the attachment.
Notes:

Attachments replace the character found at a certain position in the message text. That is, attachments replace the character in the MapiMessage NoteText property at offset nPosition (nPosition is zero based!). A value of -1 means the attachment position is not indicated; the client application will have to provide a way for the user to access the attachment.
(Read and Write property)

187.3 class MapiMessageMBS

187.3.1 class MapiMessageMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a message.

187.3.2 Blog Entries

- MBS Xojo Plugins, version 18.5pr6
- Problems with killing Xojo threads with plugin calls.
- MBS Xojo / Real Studio Plugins, version 15.1pr1

187.3.3 Methods

187.3.4 AddFile(file as MapiFileMBS)

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a file to the message file list.
Notes: file must be not nil.

187.3.5 AddRecipient(recipient as MapiRecipientMBS)

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a recipient to the message.
Notes: recipient must be nil.

187.3.6 IsAvailable as boolean

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether MAPI is available.
Notes:

Checks whether the library was loaded and whether the MAPI Registry key exists, so this has been initialized.
(mail account may not exist)

Returns true if MAPI can be used.

187.3.7 IsUnicodeAvailable as boolean

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether MAPI is available with unicode.
Notes:

Checks whether the library was loaded and whether the MAPI Registry key exists, so this has been initialized.
(mail account may not exist)

Returns true if MAPI can be used with unicode.

187.3.8 SendMail(parent as window, SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

Function: Sends an email.
Notes:

Parameters:

parent:
The parent window for the dialogs used. If not nil the dialogs used will be modal.

SendFlags: Send flags. Default in older plugin versions was kSendFlagDialog when DisplayDialog parameter is true and kSendFlagLogonDialog if DisplayLogonDialog parameter was true.

Error codes:

The MAPI SendMail function sends a standard message, with or without any user interaction. The profile must be configured so that MAPISendMail can open the default service providers without requiring user interaction.

Client applications can provide a full or partial list of recipient names, subject text, file attachments, or message text. If any information is missing, MAPISendMail can prompt the user for it. If no information is missing, either the message can be sent as is or the user can be prompted to verify the information, changing values if necessary.

const SUCCESS_SUCCESS = 0	No error.
const MAPI_USER_ABORT = 1	The user canceled one of the dialog boxes. No message was sent.
const MAPI_E_FAILURE = 2	One or more unspecified errors occurred. No message was sent.
const MAPI_E_LOGON_FAILURE = 3	There was no default logon, and the user failed to log on successfully when the logon dialog box was displayed. No message was sent.
const MAPI_E_DISK_FULL = 4	
const MAPI_E_INSUFFICIENT_MEMORY = 5	There was insufficient memory to proceed. No message was sent.
const MAPI_E_ACCESS_DENIED = 6	
const MAPI_E_TOO_MANY_SESSIONS = 8	
const MAPI_E_TOO_MANY_FILES = 9	There were too many file attachments. No message was sent.
const MAPI_E_TOO_MANY_RECIPIENTS = 10	There were too many recipients. No message was sent.
const MAPI_E_ATTACHMENT_NOT_FOUND = 11	The specified attachment was not found. No message was sent.
const MAPI_E_ATTACHMENT_OPEN_FAILURE = 12	The specified attachment could not be opened. No message was sent.
const MAPI_E_ATTACHMENT_WRITE_FAILURE = 13	
const MAPI_E_UNKNOWN_RECIPIENT = 14	
const MAPI_E_BAD_RECIPTYPE = 15	The type of a recipient was not TypeTO, TypeCC, or TypeBCC. No message was sent.
const MAPI_E_NO_MESSAGES = 16	
const MAPI_E_INVALID_MESSAGE = 17	
const MAPI_E_TEXT_TOO_LARGE = 18	The text in the message was too large. No message was sent.
const MAPI_E_INVALID_SESSION = 19	
const MAPI_E_TYPE_NOT_SUPPORTED = 20	
const MAPI_E_AMBIGUOUS_RECIPIENT = 21	A recipient matched more than one of the recipient descriptor structures and Dialog is false. No message was sent.
const MAPI_E_MESSAGE_IN_USE = 22	
const MAPI_E_NETWORK_FAILURE = 23	
const MAPI_E_INVALID_EDITFIELDS = 24	
const MAPI_E_INVALID_RECIPS = 25	One or more recipients were invalid or did not resolve to any address.
const MAPI_E_NOT_SUPPORTED = 26	

A successful return from MAPISendMail does not necessarily imply recipient validation. The message might not have been sent to all recipients. Depending on the transport provider, recipient validation can be a lengthy process.

A "" value for the Subject indicates that there is no text for the subject of the message. A "" value for the NoteText member indicates that there is no message text. Some client applications can truncate subject lines that are too long or contain carriage returns, line feeds, or form feeds.

Each paragraph should be terminated with a CR (0x0d), an LF (0x0a), or a CRLF pair (0x0d0a). MAPISendMail wraps lines as appropriate. If the text exceeds system limits, the function returns the MAPI_E_TEXT_TOO_LARGE value.

The MessageType property is used only by non-IPM applications. Applications that handle IPM messages can set it to "".

The number of attachments per message can be limited in some messaging systems. If the limit is exceeded, the MAPI_E_TOO_MANY_FILES value is returned. File attachments are copied to the message before MAPISendMail returns; therefore, later changes to the files do not affect the contents of the message. The files must be closed when they are copied. Do not attempt to display attachments outside the range of the message text.

Some messaging systems can limit the number of recipients per message. If the client application passes a non-nil value indicating a number of recipients exceeding the system limit, MAPISendMail returns the MAPI_E_TOO_MANY_RECIPIENTS value. If the recipient array is empty, the Dialog parameter must be true in the call to MAPISendMail.

Note that the recipients can include either an entry identifier, the recipient's name, an address, or a name and address pair. The following table shows how MAPISendMail handles the variety of information that can be specified:

Information	Action
entry identifier	No name resolution; the name and address are ignored.
name	Name resolved using the Simple MAPI resolution rules.
address	No name resolution; address is used for both message delivery and for displaying the recipient name.
name and address	No name resolution; name used only for displaying the recipient name.

Client applications that send messages to custom recipients can avoid name resolution. Such clients should set the Address member of the recipient to the custom address.

MAPISendMail does not require an originator-type recipient to send a message.

Important Simple MAPI is not installed by Exchange Server 2003 or later. However, Simple MAPI is supported for use with Exchange 2003. To function properly, the underlying Exchange or Microsoft Outlook® MAPI subsystem must be properly installed on the client computer.
See also:

- 187.3.9 SendMail(SendFlags as Integer, Threaded as Boolean) as integer 24387

187.3.9 SendMail(SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends an email.
Notes: This method is without parent window for dialogs, so you can use it in a console project.
See also:

- 187.3.8 SendMail(parent as window, SendFlags as Integer, Threaded as Boolean) as integer 24385

187.3.10 Properties

187.3.11 ConversationID as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string identifying the conversation thread to which the message belongs.
Notes:

Some messaging systems can ignore and not return this member.
(Read and Write property)

187.3.12 DateReceived as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string indicating the date when the message was received.
Notes:

The format is YYYY/MM/DD HH:MM, using a 24-hour clock.
(Read and Write property)

187.3.13 Flags as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bitmask of message status flags.
Notes:

Can be a combination of kFlagsReceiptRequested, kFlagsSent and kFlagsUnread.
(Read and Write property)

187.3.14 MessageType as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string indicating a non-IPM type of message.
Notes:

Client applications can select message types for their non-IPM messages. Clients that only support IPM messages can ignore the MessageType member when reading messages and set it to empty when sending messages.
(Read and Write property)

187.3.15 NoteText as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string containing the message text.
Notes:

If this member is empty, there is no message text.
(Read and Write property)

187.3.16 Originator as MapiRecipientMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The reference to the originator of this message.
Notes: (Read and Write property)

187.3.17 Subject as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text string describing the message subject, typically limited to 256 characters or less.
Notes:

If this member is empty, the user has not entered subject text.
(Read and Write property)

187.3.18 UseUnicode as Boolean

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use Unicode API.
Notes:

Microsoft offers both unicode and ANSI interfaces.
By default UseUnicode is true and you can set it to false to use ANSI interface if needed.
If no unicode interface is needed, we automatically use the ANSI interface.
(Read and Write property)

187.3.19 Constants

187.3.20 kFlagsReceiptRequested = 2

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the flags property.
Notes:

A receipt notification is requested. Client applications set this flag when sending a message.

Note: Most email applications ignore the receipt notifications.

187.3.21 kFlagsSent = 4

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the flags property.
Notes: The message has been sent.

187.3.22 kFlagsUnread = 1

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the flags property.
Notes: The message has not been read.

187.3.23 kSendFlagDialog = 8

MBS Win Plugin, Plugin Version: 18.5.

Function: One of the flags for SendMail.
Notes:

Display a send note UI
A dialog box should be displayed to prompt the user for recipients and other sending options. When Dialog is false, at least one recipient must be specified.

187.3.24 kSendFlagLogonDialog = 1

MBS Win Plugin, Plugin Version: 18.5.

Function: One of the flags for SendMail.
Notes:

Display logon UI.
A dialog box should be displayed to prompt the user to log on if required. When the DisplayLogonDialog is false, the client application does not display a logon dialog box and returns an error value if the user is not logged on. SendMail ignores this flag if the MessageID parameter is empty.

187.3.25 kSendFlagNewSession = 2

MBS Win Plugin, Plugin Version: 18.5.

Function: One of the flags for SendMail.
Notes:

Don't use shared session
Create a new session.

187.4 class MapiRecipientMBS

187.4.1 class MapiRecipientMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class contains information about a message sender or recipient.

187.4.2 Properties

187.4.3 Address as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Optional the recipient or sender's address.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator
```

Notes:

This address is provider-specific message delivery data. Generally, the messaging system provides such addresses for inbound messages. For outbound messages, the Address member can point to an address entered by the user for a recipient not in an address book (that is, a custom recipient). The format of an address pointed to by the Address member is [address type] [e-mail address] . Examples of valid addresses are FAX:206-555-1212 and SMTP:M@X.COM.
(Read and Write property)

187.4.4 Name as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the recipient.
Notes: (Read and Write property)

187.4.5 Type as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains a numeric value that indicates the type of recipient.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:you@example.com"
o.Name="You"
o.Type=o.TypeTo
```

Notes:

Use one of the Type constants.
(Read and Write property)

187.4.6 Constants

187.4.7 TypeBCC=3

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Notes: Indicates a recipient of a blind copy.

187.4.8 TypeCC=2

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Notes: Indicates a recipient of a message copy.

187.4.9 TypeOriginator=0

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator
```

Notes: Indicates the original sender of the message.

187.4.10 TypeTo=1

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:you@example.com"
o.Name="You"
o.Type=o.TypeTo
```

Notes: Indicates a primary message recipient.

187.5 class TaskDialogButtonMBS

187.5.1 class TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a button.

187.5.2 Properties

187.5.3 Default as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is default button.
Notes:

Only one button can be default.
(Read and Write property)

187.5.4 Enabled as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to enable this button.
Notes:

Default: true.

This is a live property. Setting it while dialog is open changes the button state.
(Read and Write property)

187.5.5 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique ID for the button.
Notes:

The IDs should be unique for all buttons.
(Read and Write property)

187.5.6 Text as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The caption for the button.
Notes: (Read and Write property)

187.5.7 Visible as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this button is visible.
Notes:

Default true.
(Read and Write property)

187.6 class TaskDialogMBS

187.6.1 class TaskDialogMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a dialog in Windows.
Notes:

This class function creates, displays, and operates a task dialog. The task dialog contains application-defined icons, messages, title, verification check box, command links, push buttons, and radio buttons.

Requires Windows Vista or newer.

- MBS Xojo / Real Studio Plugins, version 16.2pr2
- New TaskDialog Class

187.6.3 Methods

187.6.4 AppendButton(button as TaskDialogButtonMBS)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a button.
Example:

```
dim td as TaskDialogMBS

dim b as new TaskDialogButtonMBS
b.Text = "Hello"
b.ID = 123

td.AppendButton b
```

187.6.5 AppendRadioButton(button as TaskDialogButtonMBS)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a radio button.
Example:

```
dim td as TaskDialogMBS

dim b as new TaskDialogButtonMBS
b.Text = "Hello"
b.ID = 123

td.AppendRadioButton b
```

187.6.6 CloseDialog

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the dialog.

187.6.7 FindButtonByID(ID as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds button by ID.
Notes:

This searches buttons and radiobuttons for given ID.
It will not find common buttons.
Returns button if found or nil if not found.

187.6.8 ShowDialog as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows the dialog.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
```

```
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes:

Returns true if everything worked right.
Returns false if creation of dialog failed.

Requires Windows Vista or newer.

187.6.9 Properties

187.6.10 AllowDialogCancellation as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to allow cancel.
Notes:

Indicates that the dialog should be able to be closed using Alt-F4, Escape, and the title bar's close button even if no cancel button is specified in either the CommonButtons or Buttons members.
(Read and Write property)

187.6.11 CanBeMinimized as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the task dialog can be minimized.
Notes: (Read and Write property)

187.6.12 CollapsedControlText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the button for expanding the expandable information.

Notes:

This member is ignored when the ExpandedInformation member is empty. If this member is empty and the CollapsedControlText is specified, then the CollapsedControlText value will be used for this member as well. (Read and Write property)

187.6.13 CommonButtons as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the push buttons displayed in the task dialog.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes:

If no common buttons are specified and no custom buttons are specified through buttons array, the task dialog will contain the OK button by default. This parameter may be a combination of flags from the following group:

kCommonButtonOK	The task dialog contains the push button: OK.
kCommonButtonYes	The task dialog contains the push button: Yes.
kCommonButtonNo	The task dialog contains the push button: No.
kCommonButtonCancel	The task dialog contains the push button: Cancel. If this button is specified, the task dialog will respond to typical cancel actions (Alt-F4 and Escape).
kCommonButtonRetry	The task dialog contains the push button: Retry.
kCommonButtonClose	The task dialog contains the push button: Close.

(Read and Write property)

187.6.14 Content as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the dialog's primary content.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes:

If the EnableHyperlinks flag is true, then this string may contain hyperlinks in the form: <A HREF="executablestring">Hyperlink Text</A>.
WARNING: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.
(Read and Write property)

187.6.15 DefaultButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The default button for the task dialog.
Notes:

This may be any of the values specified in ID of one of the buttons, or one of the IDs corresponding to the buttons specified in the CommonButtons property.

kIDCancel	Make the Cancel button the default.
kIDNo	Make the No button the default.
kIDOk	Make the OK button the default.
kIDRetry	Make the Retry button the default.
kIDYes	Make the Yes button the default.
kIDClose	Make the Close button the default.

You can also mark buttons default with their default flag.
(Read and Write property)

187.6.16 DefaultRadioButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The button ID of the radio button that is selected by default.
Notes:

If this value does not correspond to a button ID, the first button in the array is selected by default.
You can also mark buttons default with their default flag.
(Read and Write property)

187.6.17 DialogHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the dialog.
Notes:

This is only valid (and non zero) while dialog is visible.
(Read only property)

187.6.18 EnableHyperlinks as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to enable hyperlinks.
Notes:

Enables hyperlink processing for the strings specified in the Content, ExpandedInformation and Footer members. When enabled, these members may point to strings that contain hyperlinks in the following form:

<A HREF="executablestring">Hyperlink Text</A>

Warning: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.

Note: Task Dialogs will not actually execute any hyperlinks. Hyperlink execution must be handled in the HyperlinkClicked event.
(Read and Write property)

187.6.19 ExpandedByDefault as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the string specified by the ExpandedInformation member is displayed when the dialog is initially displayed.
Notes:

This flag is ignored if the ExpandedInformation member is empty.
(Read and Write property)

187.6.20 ExpandedControlText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the button for collapsing the expandable information.
Notes:

This member is ignored when the ExpandedInformation member is empty. If this member is empty and the CollapsedControlText is specified, then the CollapsedControlText value will be used for this member as well.
(Read and Write property)

187.6.21 ExpandedInformation as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for displaying additional information.
Notes:

The additional information is displayed either immediately below the content or below the footer text depending on whether the ExpandFooterArea flag is true. If the EnableHyperlinks flag is true, then this string may contain hyperlinks in the form: <A HREF="executablestring">Hyperlink Text</A>.
WARNING: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.

(Read and Write property)

187.6.22 ExpandFooterArea as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether expand footer area is displayed at the bottom.
Notes:

Indicates that the string specified by the ExpandedInformation member is displayed at the bottom of the dialog's footer area instead of immediately after the dialog's content. This flag is ignored if the ExpandedInformation member is empty.
(Read and Write property)

187.6.23 Flags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

You should not need to set flags as we have properties for all relevant flags.
(Read and Write property)

187.6.24 Footer as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used in the footer area of the task dialog.
Notes:

If EnableHyperlinks is true, this can show clickable links.
(Read and Write property)

187.6.25 FooterIconPicture as Picture

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A picture to be used as Icon that is to be displayed in the footer of the task dialog.
Notes:

The picture must have a valid mask.
(Read and Write property)

187.6.26 Icon as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to be displayed in the task dialog.
Notes:

Can be one of the kIcon* constants.
Or you set IconPicture property.
(Read and Write property)

187.6.27 IconPicture as Picture

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to be displayed in the task dialog.
Notes:

The picture must have a valid mask.
(Read and Write property)

187.6.28 MainInstruction as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the main instruction.
Notes: (Read and Write property)

187.6.29 NoDefaultRadioButton as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that no default item will be selected.
Notes: (Read and Write property)

187.6.30 parent as Window

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Parent window.
Notes: (Read and Write property)

187.6.31 parentHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parent window handle.
Notes: (Read and Write property)

187.6.32 PositionRelativeToWindow as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the task dialog is positioned (centered) relative to the window specified by parent.
Notes:

If the flag is not supplied (or no parent member is specified), the task dialog is positioned (centered) relative to the monitor.
(Read and Write property)

187.6.33 ProgressbarMax as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum of progress bar.
Notes:

Default is 100.
This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

187.6.34 ProgressbarMin as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum value of the progress bar.
Notes:

This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

187.6.35 ProgressbarState as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the progress bar.
Notes:

Default kProgressbarNone.
Can be set to other states to turn on progressbar.
(Read and Write property)

187.6.36 ProgressbarValue as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current value of the progress bar.
Notes:

This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

187.6.37 RightToLeftLayout as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that text is displayed reading right to left.
Notes: (Read and Write property)

187.6.38 SelectedButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID of the clicked button.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
```

```
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes: (Read and Write property)

187.6.39 SelectedRadioButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID of the selected radio button.
Notes: (Read and Write property)

187.6.40 Showing as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether dialog is currently showing.
Notes: (Read and Write property)

187.6.41 TimedOut as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether we got a timeout.
Notes: (Read only property)

187.6.42 timeoutMS as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The timeout for the dialog.
Notes:

In Milliseconds. The dialog closes after given time.
(Read and Write property)

187.6.43 VerificationChecked as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the verification checkbox.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MsgBox "and we will not show again"
end if
```

Notes:

Before: Indicates whether the verification checkbox in the dialog is checked when the dialog is initially displayed.
After: True if the verification checkbox was checked when the dialog was dismissed.

This is a live property. Changing it while the dialog is open will change the checkbox.
(Read and Write property)

187.6.44 VerificationEnabled as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The enable state of the verification checkbox.
Notes:

Can be true to enable the checkbox or false to disable.
(Read and Write property)

187.6.45 VerificationText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the verification checkbox.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MsgBox "and we will not show again"
end if
```

Notes:

If this parameter is empty, the verification checkbox is not displayed in the task dialog. If the VerificationEnabled is false, the checkbox is not enabled.
(Read and Write property)

187.6.46 Width as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the task dialog's client area, in dialog units.
Notes:

If 0, the task dialog manager will calculate the ideal width.
(Read and Write property)

187.6.47 WindowTitle as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the task dialog title.
Notes: (Read and Write property)

187.6.48 Yield as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to yield time.
Notes:

Whether the plugin should yield time to other Xojo threads while dialog is open.
(Read and Write property)

187.6.49 Button(index as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Array of the custom buttons that are to be displayed in the task dialog.
Notes:

You can create TaskDialogButtonMBS objects and assign them to indexes in the array.
(Read and Write computed property)

187.6.50 RadioButton(index as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Array of the custom radio buttons that are to be displayed in the task dialog.
Notes:

You can create TaskDialogButtonMBS objects and assign them to indexes in the array.
(Read and Write computed property)

187.6.51 Events

187.6.52 ButtonClicked(ID as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that a button has been selected.
Notes:

The command ID of the button is specified by ID.
To prevent the task dialog from closing, the application must return true, otherwise the task dialog is closed and the button ID is returned via the original application call.

187.6.53 Close

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog has been destroyed.

187.6.54 Constructed

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog has been created but has not been displayed yet.
Notes: You can adjust here if you need.

187.6.55 ExpandButtonClicked(Expanded as Boolean)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the expand button has been selected.

187.6.56 Help

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the F1 key has been pressed while the Task Dialog has focus.

187.6.57 HyperlinkClicked(link as string)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that a hyperlink has been selected.

187.6.58 Navigated

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that navigation has occurred.

187.6.59 Open

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog has been created.

187.6.60 RadioButtonClicked(ID as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that a radio button has been selected.
Notes: The command ID of the radio button is specified by ID.

187.6.61 Timer(Time as Integer)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog timer has fired.
Notes:

The total elapsed time is specified by Time. You can update the progress bar by setting ProgressbarValue.

This is called regularly so you can do background work.
(or check time and dismiss dialog automatically)

187.6.62 VerificationClicked(Checked as Boolean)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog verification check box has been selected.

187.6.63 Constants

187.6.64 kCommonButtonCancel = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Cancel. If this button is specified, the task dialog will respond to typical cancel actions (Alt-F4 and Escape).

187.6.65 kCommonButtonClose = 32

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Close.

187.6.66 kCommonButtonNo = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: No.

187.6.67 kCommonButtonOK = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MsgBox "and we will not show again"
end if
```

Notes: The task dialog contains the push button: OK.

187.6.68 kCommonButtonRetry = 16

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.

Notes: The task dialog contains the push button: Retry.

187.6.69 kCommonButtonYes = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Yes.

187.6.70 kIconApplication = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: An application icon appears in the task dialog.

187.6.71 kIconError = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: A stop-sign icon appears in the task dialog.

187.6.72 kIconInformation = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: An icon consisting of a lowercase letter i in a circle appears in the task dialog.

187.6.73 kIconNone = 0

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: No icon.

187.6.74 kIconShield = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: A shield icon appears in the task dialog.

187.6.75 kIconWarning = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: An exclamation-point icon appears in the task dialog.

187.6.76 kIDAbort = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Abort button

187.6.77 kIDCancel = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Cancel button

187.6.78 kIDIgnore = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Ignore button

187.6.79 kIDNo = 7

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: No button

187.6.80 kIDOK = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: OK Button

187.6.81 kIDRetry = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Retry Button

187.6.82 kIDYes = 6

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Yes Button

187.6.83 kProgressbarError = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Error state.

187.6.84 kProgressbarMarquee = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Marquee state

187.6.85 kProgressbarNone = 0

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: No progress bar.

187.6.86 kProgressbarNormal = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Normal progressbar

187.6.87 kProgressbarPause = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Paused progress bar

187.7 class TimerMBS

187.7.1 class TimerMBS

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a timer.
Notes:

This timer can work with smaller periods than the normal Xojo timers on Windows.
Works on Mac OS X and Linux, too.

187.7.4 Methods

187.7.5 Constructor(Period as Integer)

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

Please pass a period between 1 and 999 Milliseconds.

The timer will try to be as exact as possible, but if main thread is busy, action events are delayed.

187.7.6 Destructor

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

187.7.7 Properties

187.7.8 Enabled as Boolean

MBS Win Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether timer is enabled.
Notes:

Default is true, but you can set to false to disable the timer for some time.
(Read and Write property)

187.7.9 Period as Integer

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The period used.
Notes:

In milliseconds.
(Read only property)

187.7.10 Events

187.7.11 Action

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The action event.

187.8 Globals

187.8.1 GetWindowsErrorMessageMBS(ErrorCode as Integer) as String

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formats a windows error message for the given error code.
Example:

```
EditField1.text = GetWindowsErrorMessageMBS(-2147352567)
```

Notes: Returns empty string for unknown error codes.

187.8.2 InitMessageFilterMBS

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes COM message filter.
Notes: If a COM message can't be handled right away, COM may show a standard dialog to retry, switch task or cancel, which may bring your app in an endless dialog series. MBS Plugin implements a message filter which delays messages till the current processing is done and avoids the dialog. So long running options can perform well.

187.8.3 WindowsExecuteMBS(ApplicationName as string, CommandLine as string, CurrentDirectory as string, byref PID as integer, Flags as integer = 0, ShowWindow as Integer = -1) as integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new process and its primary thread. The new process runs in the security context of the calling process.
Example:

```
dim error, pid as Integer

pid = 0

error = WindowsExecuteMBS("", "explorer.exe", "", pid)
if error = 0 then
MsgBox "Launched explorer with process id: "+str(pid)
else
MsgBox "Error: "+str(error)
end if
```

```
pid = 0

error = WindowsExecuteMBS("", "notepad.exe ""C:\boot.ini""", "", pid)
if error = 0 then
MsgBox "Launched Notepad with process id: "+str(pid)
else
MsgBox "Error: "+str(error)
end if
```

Notes:

ApplicationName:
The name of the module to be executed. This module can be a Windows-based application. It can be some other type of module (for example, MS-DOS or OS/2) if the appropriate subsystem is available on the local computer.

The string can specify the full path and file name of the module to execute or it can specify a partial name. In the case of a partial name, the function uses the current drive and current directory to complete the specification. The function will not use the search path. This parameter must include the file name extension; no default extension is assumed.
