Function: The handle for this request.
Notes: (Read only property)

130.22.11 Events

130.22.12 ServiceDomainEnumeration(message as Integer, domain as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

Function: Domains changed.
Notes:

Meaning of message:

0: Domain found.
1: Domain found (and should be selected by default).
2: Domain has been removed from network.

Flags=1 means that more data is coming. Flags=0 means the end of the current list of services. But several minutes later when a new Mac connects to the network another ServiceLookup Event may inform you, even if flags was 0.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

130.23 class DNSServiceDiscoveryRegisterMBS

130.23.1 class DNSServiceDiscoveryRegisterMBS

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for Apple's implementation of ZeroConfig named Bonjour.
Deprecated: This item is deprecated and should no longer be used. You can use DNSServiceRegisterMBS instead. **Notes:**

This class allows you to register names on the local network using Bonjour.

Common error codes for Rendevouz:

kDNSServiceDiscoveryUnknownErr	-65537
kDNSServiceDiscoveryNoSuchNameErr	-65538
kDNSServiceDiscoveryNoMemoryErr	-65539
kDNSServiceDiscoveryBadParamErr	-65540
kDNSServiceDiscoveryBadReferenceErr	-65541
kDNSServiceDiscoveryBadStateErr	-65542
kDNSServiceDiscoveryBadFlagsErr	-65543
kDNSServiceDiscoveryUnsupportedErr	-65544
kDNSServiceDiscoveryNotInitializedErr	-65545
kDNSServiceDiscoveryNoCache	-65546
kDNSServiceDiscoveryAlreadyRegistered	-65547
kDNSServiceDiscoveryNameConflict	-65548
kDNSServiceDiscoveryInvalid	-65549
kDNSServiceDiscoveryMemFree	-65792

But several other Mac OS error codes may also be there.
This class requires Mac OS X 10.2 to work. Use DNSServiceRegisterMBS if you want to support Mac OS X 10.3 and Windows.

Not available on Mac OS X 10.9.

130.23.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4

130.23.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

130.23.4 Methods

130.23.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether Bonjour (zeroconfig) is installed.
Notes: If this function returns true, all the needed stuff is installed and the function have been loaded.

130.23.6 Close

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops the current request and releases all used memory.

130.23.7 Register(servicename as string, servicetype as string, domain as string, port as Integer, text as string) as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Register a named service with DNS Service Discovery.
Notes:

servicename:
The name of this service instance (e.g. "Steve's Printer")

servicetype:
The service type (e.g. "_printer._tcp."
See RFC 2782 (DNS SRV) and this website:
http://www.iana.org/assignments/port-numbers

domain:
The domain in which to register the service (e.g. "apple.com.")

port:
The local port on which this service is being offered (in network byte order)

text:
Optional protocol-specific additional information

Returns true if successfull.
The ServiceRegistration event may be called till this registration request is closed.

130.23.8 Running as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: True if there is a running request.

130.23.9 UpdateText(data as string, ttl as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Changes the TXT Record.
Notes:

data is the TXT Record composed of Pascal Strings.
ttl = time to live.
Returns an error code. (0=success)

130.23.10 Properties

130.23.11 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle for this request.
Notes: (Read only property)

130.23.12 Text as String

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last TXT Record text used.
Notes: (Read only property)

130.23.13 Events

130.23.14 ServiceRegistration(errorcode as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

Function: Registration was done.
Notes:

errorcode is 0 if successfull.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

130.24 class DNSServiceDiscoveryResolveMBS

130.24.1 class DNSServiceDiscoveryResolveMBS

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for Apple's implementation of ZeroConfig named Bonjour.
Deprecated: This item is deprecated and should no longer be used. You can use DNSServiceResolveMBS instead. **Notes:**

This class allows you to lookup names on the local network using Bonjour.

Common error codes for Rendevouz:

kDNSServiceDiscoveryUnknownErr	-65537
kDNSServiceDiscoveryNoSuchNameErr	-65538
kDNSServiceDiscoveryNoMemoryErr	-65539
kDNSServiceDiscoveryBadParamErr	-65540
kDNSServiceDiscoveryBadReferenceErr	-65541
kDNSServiceDiscoveryBadStateErr	-65542
kDNSServiceDiscoveryBadFlagsErr	-65543
kDNSServiceDiscoveryUnsupportedErr	-65544
kDNSServiceDiscoveryNotInitializedErr	-65545
kDNSServiceDiscoveryNoCache	-65546
kDNSServiceDiscoveryAlreadyRegistered	-65547
kDNSServiceDiscoveryNameConflict	-65548
kDNSServiceDiscoveryInvalid	-65549
kDNSServiceDiscoveryMemFree	-65792

But several other Mac OS error codes may also be there.
This class requires Mac OS X 10.2 to work. Use DNSServiceResolveMBS if you want to support Mac OS X 10.3 and Windows.

Not available on Mac OS X 10.9.

130.24.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4

130.24.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr4
- MBS Xojo / Real Studio Plugins, version 13.2pr7

130.24.4 Methods

130.24.5 Available as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether Bonjour (zeroconfig) is installed.
Notes: If this function returns true, all the needed stuff is installed and the function have been loaded.

130.24.6 Close

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Stops the current request and releases all used memory.

130.24.7 Lookup(servicename as string, servicetype as string, domain as string) as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Resolved a named instance of a service to its address, port, and (optionally) a text description.
Notes:

servicename:
The name of the service instance.

servicetype:
The type of service.

domain:
The domain in which to find the service.

Returns true if successfull.
The ServiceLookup event may be called till this lookup request is closed.

130.24.8 Running as boolean

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: True if there is a running request.

130.24.9 Properties

130.24.10 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle for this request.
Notes: (Read only property)

130.24.11 Events

130.24.12 ServiceLookup(ip as string, port as Integer, text as string, flags as Integer)

MBS MacOSX Plugin, Plugin Version: 5.0, Platform: macOS, Targets: .

Function: Lookup got something.
Notes:

IP is a string like "192.168.1.14".
Flags=1 means that more data is coming. Flags=0 means the end of the current list of services. But several minutes later when a new Mac connects to the network another ServiceLookup Event may inform you, even if flags was 0.

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

130.25 class DNSServiceDomainEnumerationMBS

130.25.1 class DNSServiceDomainEnumerationMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

Function: A class for Apple's implementation of ZeroConfig named Bonjour.
Notes:

This class allows you to enumerate domains.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

```
kDNSServiceErr_NoError              = 0
kDNSServiceErr_Unknown              = -65537 (=& hFFFE FFFF)
kDNSServiceErr_NoSuchName           = -65538
kDNSServiceErr_NoMemory             = -65539
kDNSServiceErr_BadParam             = -65540
kDNSServiceErr_BadReference         = -65541
kDNSServiceErr_BadState             = -65542
kDNSServiceErr_BadFlags             = -65543
kDNSServiceErr_Unsupported          = -65544
kDNSServiceErr_NotInitialized       = -65545
kDNSServiceErr_AlreadyRegistered    = -65547
kDNSServiceErr_NameConflict         = -65548
kDNSServiceErr_Invalid              = -65549
kDNSServiceErr_Incompatible         = -65551 (client library incompatible with daemon)
kDNSServiceErr_BadinterfaceIndex    = -65552
```

Subclass of the DNSServiceBaseMBS class.

130.25.2 Methods

130.25.3 EnumerateDomains(Flags as Integer, InterfaceIndex as Integer) as boolean

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

Function: Asynchronously enumerate domains available for browsing and registration.
Notes:

Note that the names returned are (like all of DNS-SD) UTF-8 strings, and are escaped using standard DNS

escaping rules.
A graphical browser displaying a hierarchical tree-structured view should cut the names at the bare dots to yield individual labels, then de-escape each label according to the escaping rules, and then display the resulting UTF-8 text.

Flags for specifying domain enumeration type in DNSServiceEnumerateDomains.
BrowseDomains enumerates domains recommended for browsing, RegistrationDomains enumerates domains recommended for registration:

```
kDNSServiceFlagsBrowseDomains        = 64
kDNSServiceFlagsRegistrationDomains  = 128
```

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.25.4 Events

130.25.5 ServiceDomainEnumeration(flags as Integer, interfaceIndex as Integer, errorcode as Integer, Domain as string)

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: .

Function: Domains changed.
Notes:

Flags uses this flags: kFlagsAdd, kFlagsDefault.

"Default" applies only to enumeration and is only valid in conjuction with "Add"

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.
For interface indexes, please also check NetworkInterfaceMBS class.

130.26 class DNSServiceMetaQueryMBS

130.26.1 class DNSServiceMetaQueryMBS

MBS MacOSX Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: Queries all Bonjour services.
Notes: Useful to learn what services are available. This queries the bonjour cache.

130.26.2 Blog Entries

- MacOSX plugin for iOS

130.26.3 Blog Entries

- MacOSX plugin for iOS

130.26.4 Properties

130.26.5 Lasterror as Integer

MBS MacOSX Plugin, Plugin Version: 12.0, Platform: macOS, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

130.26.6 Events

130.26.7 AddService(type as string, domain as string, interfaceName as string, rrtype as Integer, rrclass as Integer)

MBS MacOSX Plugin, Plugin Version: 12.0, Platform: macOS, Targets: .

Function: A service was found.

130.26.8 RemoveService(type as string, domain as string, interfaceName as string, rrtype as Integer, rrclass as Integer)

MBS MacOSX Plugin, Plugin Version: 12.0, Platform: macOS, Targets: .

Function: A service was removed.
Notes: Remove is only called when a network interface is disabled or if the record expires from the cache. For network efficiency reasons, clients do not send goodbye packets for meta-query PTR records when deregistering a service.

130.27 class DNSServiceRegisterMBS

130.27.1 class DNSServiceRegisterMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

Function: A class for Apple's implementation of ZeroConfig named Bonjour.
Notes:

This class allows you to register names on the local network using Bonjour.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

kDNSServiceErr_NoError	= 0
kDNSServiceErr_Unknown	= -65537 (=& hFFFE FFFF)
kDNSServiceErr_NoSuchName	= -65538
kDNSServiceErr_NoMemory	= -65539
kDNSServiceErr_BadParam	= -65540
kDNSServiceErr_BadReference	= -65541
kDNSServiceErr_BadState	= -65542
kDNSServiceErr_BadFlags	= -65543
kDNSServiceErr_Unsupported	= -65544
kDNSServiceErr_NotInitialized	= -65545
kDNSServiceErr_AlreadyRegistered	= -65547
kDNSServiceErr_NameConflict	= -65548
kDNSServiceErr_Invalid	= -65549
kDNSServiceErr_Incompatible	= -65551 (client library incompatible with daemon)
kDNSServiceErr_BadinterfaceIndex	= -65552

Subclass of the DNSServiceBaseMBS class.

130.27.2 Blog Entries

- Using ServerSocket with a system chosen port

130.27.3 Blog Entries

- Using ServerSocket with a system chosen port

130.27.4 Methods

130.27.5 AddRecord(rrType as Integer, TXTRecord as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

Function: Add a record to a registered service.
Notes:

Lasterror is set.

The name of the record will be the same as the registered service's name. The record can later be updated or deregistered by UpdateRecord() or RemoveRecord().

rrtype: The type of the record (e.g. kTypeTXT, kTypeSRV, etc)
data: The raw rdata to be contained in the added resource record.
ttl: The time to live of the resource record, in seconds. Pass 0 to use a default value.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.27.6 Register(Flags as Integer, interfaceIndex as Integer, servicename as string, servicetype as string, domain as string, host as string, port as Integer, txtRecord as string) as boolean

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

Function: Register a service that is discovered via Browse() and Resolve() calls.
Notes:

Flag for specifying renaming behavior on name conflict when registering non-shared records. NoAutorename is only valid if a name is explicitly specified when registering a service (ie the default name is not used.)

```
kDNSServiceFlagsNoAutoRename   = 8,
 kDNSServiceFlagsAutoRename    = 0 (i.e. bit not set)
```

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.

In a perfect application you use DNSServiceDomainEnumerationMBS class to enumerate which domains you should use.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.27.7 RemoveRecord

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

Function: Remove a record previously added to a service record set via AddTextRecord.
Notes: Returns false on any error and true on success. Please check lasterror property when false is returned.

130.27.8 UpdateRecord(TXTRecord as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Changes the TXT Record.
Notes:

data is the TXT Record composed of Pascal Strings.
ttl = time to live.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.27.9 Events

130.27.10 ServiceRegistration(flags as Integer, errorcode as Integer, Name as string, RegType as string, Domain as string)

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: .

Function: Registration was done.
Notes: Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

130.28 class DNSServiceRegisterRecordMBS

130.28.1 class DNSServiceRegisterRecordMBS

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

Function: A class for Apple's implementation of ZeroConfig named Bonjour.
Notes:

This class is to register a name record with the dns service.
Subclass of the DNSServiceBaseMBS class.

130.28.2 Methods

130.28.3 RegisterRecord(Flags as Integer, interfaceIndex as Integer, fullname as string, rrtype as Integer, rrClass as Integer, data as string, ttl as Integer) as boolean

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

Function: Registers a record on the DNS system.
Example:

```
const kDNSServiceClass_IN = 1
const kDNSServiceType_SRV = 33
const kDNSServiceFlagsShared = & h10
const kDNSServiceFlagsUnique = & h20
```

Notes:

flags: Possible values are kDNSServiceFlagsShared or kDNSServiceFlagsUnique (see flag type definitions for details).
interfaceIndex: If non-zero, specifies the interface on which to register the record (the index for a given interface is determined via the if_nametoindex() family of calls.) Passing 0 causes the record to be registered on all interfaces. See "Constants for specifying an interface index" for more details.
fullname: The full domain name of the resource record.
rrtype: The numerical type of the resource record (e.g. kDNSServiceType_PTR, kDNSServiceType_SRV, etc)
rrclass: The class of the resource record (usually kDNSServiceClass_IN)
data: the raw rdata, as it is to appear in the DNS record.
ttl: The time to live of the resource record, in seconds. Pass 0 to use a default value.

Lasterror is set. kDNSServiceErr_NoError on success (any subsequent, asynchronous errors are delivered to the event), otherwise returns an error code indicating the error that occurred (the event is never invoked)

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can receive events.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.28.4 UpdateRecord(TXTRecord as string, ttl as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: All.

Function: Changes the TXT Record.
Notes:

data is the TXT Record composed of Pascal Strings.
ttl = time to live.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.28.5 Events

130.28.6 ServiceRegistration(flags as Integer, errorcode as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Windows, Targets: .

Function: Registration was done.
Notes: Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.

130.29 class DNSServiceResolveMBS

130.29.1 class DNSServiceResolveMBS

MBS Network Plugin, Plugin Version: 5.0, Platforms: macOS, Windows, Targets: All.

Function: A class for Apple's implementation of ZeroConfig named Bonjour.
Notes:

This class allows you to lookup names on the local network using Bonjour.

This class requires Mac OS X 10.3 or Windows (with installed Bonjour support and the dnssd.dll) to work. Use DNSServiceDiscoveryBrowseMBS if you want to support Mac OS X 10.2.

common error codes:

```
kDNSServiceErr_NoError              = 0
kDNSServiceErr_Unknown              = -65537 (=& hFFFE FFFF)
kDNSServiceErr_NoSuchName           = -65538
kDNSServiceErr_NoMemory             = -65539
kDNSServiceErr_BadParam             = -65540
kDNSServiceErr_BadReference         = -65541
kDNSServiceErr_BadState             = -65542
kDNSServiceErr_BadFlags             = -65543
kDNSServiceErr_Unsupported          = -65544
kDNSServiceErr_NotInitialized       = -65545
kDNSServiceErr_AlreadyRegistered    = -65547
kDNSServiceErr_NameConflict         = -65548
kDNSServiceErr_Invalid              = -65549
kDNSServiceErr_Incompatible         = -65551 (client library incompatible with daemon)
kDNSServiceErr_BadinterfaceIndex    = -65552
```

Subclass of the DNSServiceBaseMBS class.

130.29.2 Methods

130.29.3 Resolve(InterfaceIndex as Integer, servicename as string, servicetype as string, domain as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Resolves a named instance of a service to its address, port, and (optionally) a text description.
Notes:

You need to keep this object alive (keep a reference in a window, a module or your app class) so you can

receive events.

If you call this method in response to a browse call, please pass the domain string you got in the ServiceBrowse event and do not replace it with something else.
For interface indexes, please also check NetworkInterfaceMBS class.

Returns false on any error and true on success. Please check lasterror property when false is returned.

130.29.4 Events

130.29.5 ServiceResolve(flags as Integer, InterfaceIndex as Integer, ErrorCode as Integer, Fullname as string, Hosttarget as string, Port as Integer, TxtRecord as string)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: .

Function: Resolve got something.
Notes:

Starting a new query from within this event on the same object can cause problems. Better you create a new instance for another query if you need one.
For interface indexes, please also check NetworkInterfaceMBS class.

130.30 class NetSNMPMBS

130.30.1 class NetSNMPMBS

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The class to do SNMP queries.
Example:

```
dim s as new NetSNMPMBS

s.Community = "demopublic"
s.IP = "test.net-snmp.org"

dim r as string = s.Query("system.sysUpTime.0")

MsgBox r
```

Notes:

Performs a SNMP GET query.
Using version 1, no authentication and no security options.

130.30.8 Methods

130.30.9 Constructor

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The constructor.

130.30.10 Destructor

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The destructor.

130.30.11 Query(ObjectID as String) as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: Peforms a SNMP Get Query
Example:

```
dim s as new NetSNMPMBS
```

```
s.Community = "demopublic"
s.IP = "test.net-snmp.org"

dim r as string = s.Query("system.sysUpTime.0")

MsgBox r
```

Notes:

Please set community and IP properties before.
Lasterror and ErrorMessage properties are set.

130.30.12 QueryMT(ObjectID as String) as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: Peforms a SNMP Get Query
Example:

```
dim s as new NetSNMPMBS

s.Community = "demopublic"
s.IP = "test.net-snmp.org"

dim r as string = s.Query("system.sysUpTime.0")

MsgBox r
```

Notes:

Please set community and IP properties before.
Lasterror and ErrorMessage properties are set.

Same as Query, but thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.

130.30.13 Properties

130.30.14 Community as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The community name to use.
Notes:

e.g. "public"
(Read and Write property)

130.30.15 ErrorMessage as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The last error message as text.
Notes: (Read and Write property)

130.30.16 IP as String

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The IP and port to connect to.
Notes:

e.g. "192.168.2.5:1234"
(Read and Write property)

130.30.17 LastError as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

130.30.18 MaximumReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: The maximum bytes to allocate for receiving buffer.
Notes:

By default 100000 bytes.
(Read and Write property)

130.30.19 Retries as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: Number of retries.
Notes:

Default is -1 to use system default.
(Read and Write property)

130.30.20 TimeOut as Integer

MBS Network Plugin, Plugin Version: 17.3, Platforms: macOS, Linux, Targets: All.

Function: Timeout in seconds.
Notes:

Default is -1 to use system default.
(Read and Write property)

130.31 Globals

130.31.1 DNSAddressToNameIPv6MBS(HostAddress as string) as string

MBS Network Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolves an IP to it's name.
Notes:

Only for IPv6.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

130.31.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr13

130.31.3 DNSAddressToNameMBS(HostAddress as string) as string

MBS Network Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolves an IP to it's name.
Notes:

Only for IPv4.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

130.31.4 Blog Entries

- MBS Real Studio Plugins, version 13.1pr13

130.31.5 DNSNameToAddressIPv6MBS(HostName as string) as string

MBS Network Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolves the IP address for this name.
Example:

msgBox dnsnameToAddressIPv6MBS("localhost") + endofLine + dnsnameToAddressMBS("localhost")

Notes:

Only for IPv6.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

130.31.6 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.3pr1
- MBS Real Studio Plugins, version 13.1pr13

130.31.7 DNSNameToAddressMBS(HostName as string) as string

MBS Network Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resolves the IP address for this name.
Example:

msgBox dnsnameToAddressIPv6MBS("localhost") + endofLine + dnsnameToAddressMBS("localhost")

Notes:

Only for IPv4.
Returns "" on any error (like no name known).
Improved in 13.1 plugins to work on all platforms.

This may not work on Windows or Linux with Bonjour host names!

130.31.9 OptionReuseAddressMBS(extends s as SocketCore) as Boolean

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries whether to allow reuse of same port.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEADDR option.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.10 OptionReuseAddressMBS(extends s as SocketCore, assigns value as Boolean) 21144

130.31.10 OptionReuseAddressMBS(extends s as SocketCore, assigns value as Boolean)

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether to allow reuse of same port.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Raises UnsupportedOperationException in case of failure.

130.31.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.0pr1

See also:

- 130.31.9 OptionReuseAddressMBS(extends s as SocketCore) as Boolean 21143

130.31.12 OptionReusePortMBS(extends s as SocketCore) as Boolean

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query whether reuse of same port and IP is allowed.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.13 OptionReusePortMBS(extends s as SocketCore, assigns value as Boolean) 21145

130.31.13 OptionReusePortMBS(extends s as SocketCore, assigns value as Boolean)

MBS Network Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets whether to allow reuse of same port and IP.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Raises UnsupportedOperationException in case of failure.

130.31.14 Blog Entries

- MBS Xojo / Real Studio Plugins, version 17.0pr1

See also:

- 130.31.12 OptionReusePortMBS(extends s as SocketCore) as Boolean 21144

130.31.15 VerifyEmailMBS(email as string, NetworkCheck as boolean) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Targets: All.

Function: Checks if an email can be valid.
Example:

```
// should be okay
dim r1 as Integer = VerifyEmailMBS("testing@monkeybreadsoftware.de", true)

// should fail
dim r2 as Integer = VerifyEmailMBS("testing@monkeybreadsoftware.test", true)

MsgBox str(r1)+EndOfLine+str(r2)
```

Notes:

If NetworkCheck is true, the DNS server is queries for whether an email service is available (MX Record).
Else we only do a syntax check.

Result is zero for scuccess or one of this error codes:

IDN support is not included. You may need to preprocess email if you need that.

1 Invalid character in local part of email address.
2 Missing dot in local part of email address.
3 Invalid character in local part of email address.
4 Unescaped special character in local part of email address.
5 No local part in email address.
6 Dot found before @ character.
7 No domain in email address.
8 Domain starting with dot.
9 Domain is not allowed to have two dots.
10 Invalid character in domain of email address.
11 Special character in domain of email address.
12 No dot in domain in email address.
13 Domain longer than allowed in email address.
14 DNS failed to find mail server for the domain in email address. (Windows)
15 DNS failed to find mail server for the domain in email address. (Mac/Linux)
16 DNS did not find a mail server for the domain in email address.
17 DNS failed to find mail server for the domain in email address
18 DNS server answers try again too often.

If you have a DNS server, which will redirect all mistyped domain names to a search website, this won't really work well and detect too many valid domain names.

130.31.18 ClearOptionsMBS(extends s as SocketCore)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clears all options.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.

130.31.19 OptionKeepAliveMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the keep alive.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Returns -1 on any error.

Enables the periodic transmission of messages on a connected socket. Should the connected party fail to respond to these messages, the connection is considered broken and processes using the socket are notified via a SIGPIPE signal when attempting to send data.
See also:

- 130.31.20 OptionKeepAliveMBS(extends s as SocketCore, assigns value as Integer) 21147

130.31.20 OptionKeepAliveMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the keep alive.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.

Enables the periodic transmission of messages on a connected socket. Should the connected party fail to respond to these messages, the connection is considered broken and processes using the socket are notified via a SIGPIPE signal when attempting to send data.

130.31.22 OptionMaximumSegmentSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the maximum segment size.
Example:

```
dim s as new TCPSocket

s.Port = 0
s.listen

MsgBox str(s.OptionMaximumSegmentSizeMBS)
```

Notes:

Only for TCP sockets.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.23 OptionMaximumSegmentSizeMBS(extends s as SocketCore, assigns value as Integer) 21148

130.31.23 OptionMaximumSegmentSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the maximum segment size.
Notes: Raises UnsupportedOperationException in case of failure.

130.31.25 OptionMutliCastTTLMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the multicast time to live value.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.26 OptionMutliCastTTLMBS(extends s as SocketCore, assigns value as Integer) 21149

130.31.26 OptionMutliCastTTLMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the multicast time to live value.
Example:

```
dim t as new UDPSocket

// create a socket
t.Port=80
t.Connect

// wait a second to connect
app.DoEvents 1000

// shows handle
MsgBox str(t.Handle)

// shows current value
MsgBox str(t.OptionMutliCastTTLMBS)
t.OptionMutliCastTTLMBS=10

// shows new value
MsgBox str(t.OptionMutliCastTTLMBS)
```

Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.25 OptionMutliCastTTLMBS(extends s as SocketCore) as Integer 21148

130.31.27 OptionReceiveBufferSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the receiving buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.28 OptionReceiveBufferSizeMBS(extends s as SocketCore, assigns value as Integer) 21150

130.31.28 OptionReceiveBufferSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the receiving buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.

130.31.30 OptionSendBufferSizeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the sending buffer size.
Example:

```
dim s as new UDPSocket

s.Port = 0
s.Connect
```

MsgBox str(s.OptionSendBufferSizeMBS)

Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.31 OptionSendBufferSizeMBS(extends s as SocketCore, assigns value as Integer) 21151

130.31.31 OptionSendBufferSizeMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adjusts the sending buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Raises UnsupportedOperationException in case of failure.

130.31.33 OptionTOSMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the type of service value.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.34 OptionTOSMBS(extends s as SocketCore, assigns value as Integer) 21152

130.31.34 OptionTOSMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the type of service value.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Possible values:
IPTOS_MINCOST = 2
IPTOS_RELIABILITY = 4
IPTOS_THROUGHPUT = 8
IPTOS_LOWDELAY = 16

You may want to set it after connecting.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.33 OptionTOSMBS(extends s as SocketCore) as Integer 21151

130.31.35 OptionTTLMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets the time to live value.
Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.36 OptionTTLMBS(extends s as SocketCore, assigns value as Integer) 21152

130.31.36 OptionTTLMBS(extends s as SocketCore, assigns value as Integer)

MBS Network Plugin, Plugin Version: 8.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the time to live value.
Example:

```
dim t as new TCPSocket

// create a socket
t.Port=80
t.Address="www.apple.com"
t.Connect
```

```
// wait a second to connect
app.DoEvents 1000

// shows handle
MsgBox str(t.Handle)

// shows current value
MsgBox str(t.OptionTTLMBS)
t.OptionTTLMBS=10

// shows new value
MsgBox str(t.OptionTTLMBS)
```

Notes:

Works only on BSD Sockets and if the socket handle value is valid.
Raises UnsupportedOperationException in case of failure.
See also:

- 130.31.35 OptionTTLMBS(extends s as SocketCore) as Integer 21152

130.31.37 OptionTypeMBS(extends s as SocketCore) as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the type of socket.
Example:

```
dim u as new UDPSocket

u.Port = 9000
u.Connect

// shows 2 for UDP
MsgBox str(u.OptionTypeMBS)
```

Notes:

Type is 1 for stream socket, 2 for datagram socket, 3 for raw socket, 4 for reliably-delivered message socket and 5 for a sequenced packet stream.
Raises UnsupportedOperationException in case of failure.

130.31.38 Blog Entries

- MBS Real Studio Plugins, version 13.0pr6

130.32 class NetworkInterfaceMBS

130.32.1 class NetworkInterfaceMBS

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The class for unix network interfaces.
Example:

```
// show IPv4 addresses
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

Notes:

For Windows, please use WindowsEthernetMBS class.
The values are not updated for this class. Just when you create the interface objects, you get a snapshot of the current state.

- MBS Xojo / Real Studio Plugins, version 14.2pr8

- Tip of the day: Find network interfaces by name
- MBS Real Studio Plugins, version 13.0pr2

130.32.4 Methods

130.32.5 AllInterfaces(Merge as boolean = true) as NetworkInterfaceMBS()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Returns array with all interfaces.
Example:

```
// show IPv4 addresses
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

Notes:

By default we merge several records for the same interface.
You may see one record for each protocol (IPv4, IPv6, LINK layer).

130.32.6 IndexMap as Dictionary

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Builds a dictionary to map indexes to names.
Example:

```
dim d as Dictionary = NetworkInterfaceMBS.IndexMap
dim lines() as string

for each key as Variant in d.keys
lines.Append key+": "+d.Value(key)
next

MsgBox Join(lines,EndOfLine)
```

Notes:

This is convenient method for the case you need to show list to user.

On Windows requires Windows Vista or newer.

130.32.7 IndexToName(Index as Integer) as string

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries name for network interface with index.
Example:

```
dim Name as string
Name = NetworkInterfaceMBS.IndexToName(1)
msgbox Name
```

Notes: On Windows requires Windows Vista or newer.

130.32.8 IPv4s as string()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: All IPv4 addresses for this interface.

130.32.9 IPv6s as string()

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: All IPv6 addresses for this interface.

130.32.10 NameToIndex(Name as String) as Integer

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: Queries index for network interface with given name..
Example:

```
dim index as Integer
index = NetworkInterfaceMBS.NameToIndex("en0")
```

Notes: On Windows requires Windows Vista or newer.

130.32.11 Properties

130.32.12 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether a broadcast address exists for this interface.
Notes: (Read and Write property)

130.32.13 BroadcastAddress as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The broadcast address.
Notes: (Read and Write property)

130.32.14 Flags as Integer

MBS Network Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Targets: All.

Function: The interface flags.
Notes:

See if.h file in C system headers.
(Read and Write property)

130.32.15 Index as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The index of this interface.
Notes: (Read and Write property)

130.32.16 InterfaceIndex as Integer

MBS Network Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Targets: All.

Function: The index of this interface.
Notes:

Index counts by plugin from 0 on the interfaces.
But this is real index from operation system.

On Windows requires Windows Vista or newer.
(Read and Write property)

130.32.17 IPv4 as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The IPv4 address for this interface.
Example:

```
// show IPv4 addresses
dim interfaces() as NetworkInterfaceMBS = NetworkInterfaceMBS.AllInterfaces

for each n as NetworkInterfaceMBS in interfaces
MsgBox n.name+": "+n.IPv4
next
```

Notes: (Read and Write property)

130.32.18 IPv4count as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Returns the number of IPv4 addresses for this interface.
Notes: (Read and Write property)

130.32.19 IPv6 as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The IPv6 address for this interface.
Notes: (Read and Write property)

130.32.20 IPv6count as Integer

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Returns the number of IPv6 addresses for this interface.
Notes: (Read and Write property)

130.32.21 Loopback as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether this interface is the loopback interface.
Notes: (Read and Write property)

130.32.22 MAC as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The ethernet hardware address (MAC).
Notes: (Read and Write property)

130.32.23 Multicast as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether this interface supports multicast.
Notes: (Read and Write property)

130.32.24 Name as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The name of the network interface.
Notes: (Read and Write property)

130.32.25 Netmask as String

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: The network mask.
Notes:

Returns the IPv4 netmask.
if that one is undefined, returns the IPv6 netmask.
This property is just kept for compatibility.
(Read only property)

130.32.26 NetmaskIPv4 as String

MBS Network Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

Function: The network mask for IPv4.
Notes: (Read and Write property)

130.32.27 NetmaskIPv6 as String

MBS Network Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Targets: All.

Function: The network mask for IPv6.
Notes: (Read and Write property)

130.32.28 Running as Boolean

MBS Network Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Targets: All.

Function: Whether the interface is running (resources allocated).
Notes: (Read and Write property)

130.32.29 Up as Boolean

MBS Network Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Targets: All.

Function: Whether the interface is up.
Notes: (Read and Write property)

130.33 class PacketSocketMBS

130.33.1 class PacketSocketMBS

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: An extension to the socket class for easy sending packets through the net.
Notes:

A packet is made like this:
+0: Size of data block
+4: 4 byte code string
+8: 4 byte for ID
+12: variable data.

The numbers are send in low endian format so this is crossplatform.

This socket subclass can be easily made in Xojo code itself. I did it for several of my applications, so if you like it decide between making it yourself or using this one which may even be faster, because it is written in C?

This class is only available in RB 4.0 or newer, because it crashes on RB 3.5.

As the strings are transferred as binary data you need to take care that you send text e.g. as UTF8 and restore this encoding setting on receiving.
Subclass of the TCPSocket class.

130.33.4 Methods

130.33.5 SendPacket(data as string)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sends a packet.
Notes: Uses ID=0 and code="" as a shortcut for the long SendPacket call.

See also:

- 130.33.6 SendPacket(data as string,code as string) 21162
- 130.33.7 SendPacket(data as string,code as string,ID as Integer) 21162

130.33.6 SendPacket(data as string,code as string)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sends a packet.
Notes: Uses ID=0 as a shortcut for the long SendPacket call.
See also:

- 130.33.5 SendPacket(data as string) 21161
- 130.33.7 SendPacket(data as string,code as string,ID as Integer) 21162

130.33.7 SendPacket(data as string,code as string,ID as Integer)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Sends a packet.
Notes:

code and ID are optional.
Code is a 4 byte string to identify the content.
(e.g. "mess" for a message or "link" for a link.)
See also:

- 130.33.5 SendPacket(data as string) 21161
- 130.33.6 SendPacket(data as string,code as string) 21162

130.33.8 Events

130.33.9 ReceivedPacket(data as string,code as string,ID as Integer)

MBS Network Plugin, Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: .

Function: A packet was received.

130.34 class RAWSocketMBS

130.34.1 class RAWSocketMBS

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for low level and raw sockets.
Example:

```
dim sock as RAWSocketMBS

// create UDP socket
sock = new RAWSocketMBS(RAWSocketMBS.AddressFamilyINet, RAWSocketMBS.SocketTypeDatagram,
RAWSocketMBS.ProtocolUDP)
```

Notes:

Similar to Xojo's built in Socket class, but more low level and with more options.
Raw sockets for things like PING may need root permissions.

130.34.8 Methods

130.34.9 Accept(byref RemoteAddress as String, byref RemotePort as Integer, NewSocket as RAWSocketMBS) as RAWSocketMBS

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Listens for connections on this socket.
Notes: Lasterror is set.

130.34.10 AddressFamilyINet6 as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the address family constants.
Notes:

IPv6
This is a method as value is different.
Mac 30, Windows 23 and Linux 10.

130.34.11 Bind(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds the socket to the given destination address.
Notes:

Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.
Returns true on success and false on failure.
Please specify with port and IP in destAddress where to bind against.
Structure of DestAddress is OS and address family dependent.
See also:

- 130.34.12 Bind(Port as Integer, IP as string = "") 21165

130.34.12 Bind(Port as Integer, IP as string = "")

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds the socket to the given port.
Notes:

If IP is not empty, you can bind the socket to only the given network interface with that IPv4.
Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.
See also:

- 130.34.11 Bind(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean 21165

130.34.13 CalcChecksum(data as ptr, ByteCount as Integer) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Calculates checksum for IP header.

130.34.14 Close

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes socket.
Notes: Same as destructor.

130.34.15 Connect(Address as String, Port as Integer, byref ErrorMessage as String) as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convenience method to connect.
Notes:

Will parse IPv4/IPv6 or query DNS server for IP and connect.
Returns true on success.
See also:

- 130.34.16 Connect(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean 21166

130.34.16 Connect(DestAddr as Ptr, DestAddrByteSize as Integer) as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Connects to destination address.
Notes:

lasterror is set.
Returns true on success and false on failure.
Please specify with port and IP in destAddress where package is sent to.
Structure of DestAddress is OS and address family dependent.
See also:

- 130.34.15 Connect(Address as String, Port as Integer, byref ErrorMessage as String) as Boolean 21166

130.34.17 Constructor(AddressFamily as Integer, SocketType as Integer, Protocol as Integer)

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Example:

```
dim sock as RAWSocketMBS
```

```
// create UDP socket
sock = new RAWSocketMBS(RAWSocketMBS.AddressFamilyINet, RAWSocketMBS.SocketTypeDatagram,
RAWSocketMBS.ProtocolUDP)
```

Notes:

Please pass valid combination of OS supported sockets.
Raises exception if creation is not possible.
Raw socket requires root access.

130.34.18 Destructor

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Closes the socket.

130.34.19 htonl(value as UInt32) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 32bit Integer from network to host byte order.

130.34.20 htons(value as UInt16) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 16bit Integer from network to host byte order.

130.34.21 inet_addr(IPv4 as String) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts IPv4 to numerical representation.

130.34.22 inet_ntoa(IPv4 as UInt32) as String

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts IPv4 to string representation.

130.34.23 Listen(BackLog as Integer = 2)

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts a new incoming connection.
Notes:

Sockets uses the accept function to enable incoming connection attempts on a socket.
RemoteAddress and RemotePort are set to address of remote peer.

If you like to pass in your own subclass object for NewSocket, we can use that socket object. Otherwise, we make a new RAWSocketMBS object.

Lasterror is set.

130.34.24 ntohl(value as UInt32) as UInt32

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 32bit Integer from host to network byte order.

130.34.25 ntohs(value as UInt16) as UInt16

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert 16bit Integer from host to network byte order.

130.34.26 Poll

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Polls for activity.
Notes:

Calls events if needed.
This is called automatically via timer by the plugin.

130.34.27 Read(ByteSize as Integer, peek as boolean = false) as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read at maximum the given number of bytes in buffer.
Notes:

Pass true for peek if data should not be removed from receiving buffer.
Lasterror is set.

Be aware that you may not get whole packages here, so data may come in several chunks.
For that, please collect the data and look for whether your package is complete or a required end mark arrived.

130.34.28 ReadAll(peek as boolean = false) as MemoryBlock

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read all bytes in buffer.
Example:

```
dim sock as RAWSocketMBS
dim data as MemoryBlock = sock.ReadAll
if data = nil then
// nothing read
else

end if
```

Notes:

Pass true for peek if data should not be removed from receiving buffer.
Lasterror is set.

Be aware that you may not get whole packages here, so data may come in several chunks.
For that, please collect the data and look for whether your package is complete or a required end mark arrived.

130.34.29 ReadDatagram(peek as boolean = false) as DatagramMBS

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a datagram.
Notes:

If peek is true, the data is not removed from read buffer.

On error returns nil.

130.34.30 Send(Data as Ptr, DataByteSize as Integer, Flags as Integer = 0) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data.
Notes:

Data is sent to address passed with Connect method.
Returns number of bytes sent.
Lasterror is set.

130.34.31 SendMessage(Data as DatagramMBS) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes:

Please specify with port and address of datagram where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 130.34.32 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21170
- 130.34.33 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21171

130.34.32 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes:

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 130.34.31 SendMessage(Data as DatagramMBS) as Integer 21170
- 130.34.33 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21171

130.34.33 SendMessage(Data as string, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data to target.
Notes:

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 130.34.31 SendMessage(Data as DatagramMBS) as Integer 21170
- 130.34.32 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21170

130.34.34 SendTo(Data as Ptr, DataByteSize as Integer, Flags as Integer, DestAddr as Ptr, DestAddrByteSize as Integer) as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends data to dest address.
Example:

```
dim sock as RawSocketMBS
dim Flags as integer
dim r as Integer

// port
dim port as integer = val(iPort.Text)
if port <= 0 or port >= 65535 then
break
MsgBox "Wrong port: "+iPort.Text
Return
end if

// dest address

'/*
'* Socket address, internet style. C declaration for Mac
'*/
'struct sockaddr_in {
'__uint8_t sin_len; // 1 byte, Mac only
'sa_family_t sin_family; // 1 byte
'in_port_t sin_port; // 2 byte in Network byte order
'struct in_addr sin_addr; // 4 byte
'char sin_zero [ 8 ] ; // 8 bytes filler
```

```
' } ;

// convert IPv4 from text to numeric value
dim IP as Uint32 = RAWSocketMBS.inet_addr(iIP.Text)

// create destination address. This is for Mac! Windows and Linux have different structures
dim dest as new MemoryBlock(16)
dest.UInt8Value(0) = dest.size
dest.UInt8Value(1) = RAWSocketMBS.AddressFamilyINet
dest.UInt16Value(2) = RAWSocketMBS.htons(port)
dest.UInt32Value(4) = IP

// message
dim m as string = ConvertEncoding(iMessage.Text, encodings.UTF8)
dim data as MemoryBlock = m

// send
r = sock.SendTo(data, data.size, Flags, dest, dest.size)
```

Notes:

Please specify with port and IP in destAddress where package is sent to.
Returns number of bytes sent. Structure of DestAddress is OS and address family dependent.
Lasterror is set.

130.34.35 Properties

130.34.36 AddressFamily as Integer

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address family of the socket.
Notes:

This is either RAWSocketMBS.AddressFamilyINet (2) for IPv4 or RAWSocketMBS.AddressFamilyINet6 (Mac 30, Windows 23 and Linux 10) for IPv6.
(Read and Write property)

130.34.37 AvailableBytes as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of bytes available for reading.
Notes:

Lasterror is set.
(Read only property)

130.34.38 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether broadcasts are allowed.
Notes:

Set to true before sending a broadcast message.
Internally this uses SOL_SOCKET/SO_BROADCAST option.
Lasterror is set.
(Read and Write property)

130.34.39 Handle as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal socket handle.
Notes: (Read and Write property)

130.34.40 IPHeaderIncluded as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the OS provides IP header or you.
Notes:

Default is false.
Set to true when you include IP header in data.
(Read and Write property)

130.34.41 Lasterror as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

Platform dependent.
(Read and Write property)

130.34.42 LocalIP as String

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Notes:

Can be 0.0.0.0 if unknown.
May only be set if connected or binded.
Lasterror is set.
(Read only property)

130.34.43 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local port.
Notes:

Lasterror is set.
Can be -1 if unknown.
(Read only property)

130.34.44 Protocol as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket protocol.
Notes:

The value from constructor.
(Read and Write property)

130.34.45 ReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the receiving buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_RCVBUF option.
Lasterror is set.

(Read and Write property)

130.34.46 ReuseAddress as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows reuse of same port.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Lasterror is set.
(Read and Write property)

130.34.47 ReusePort as Boolean

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow reuse of same port and IP.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Lasterror is set.
(Read and Write property)

130.34.48 SendBufferSize as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sending buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_SNDBUF option.
Lasterror is set.
(Read and Write property)

130.34.49 SocketError as Integer

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native socket error.
Notes:

Internally this uses SOL_SOCKET/SO_ERROR option.
Lasterror is set.
(Read only property)

130.34.50 SocketType as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket type.
Notes:

The value from constructor.
(Read and Write property)

130.34.51 Events

130.34.52 DataAvailable

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when new data is available.
Notes: Requires the socket to be bound.

130.34.53 Error

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called if socket is in error state.

130.34.54 SendComplete

MBS Network Plugin, Plugin Version: 17.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The last write operation is done.

130.34.55 Constants

130.34.56 AddressFamilyINet = 2

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the address family constants.
Notes: IPv4

130.34.57 ProtocolICMP = 1

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the protocol constants.
Notes: ICMP

130.34.58 ProtocolIP = 0

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the protocol constants.
Notes: IPv4

130.34.59 ProtocolIPv6 = 41

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the protocol constants.
Notes: IPv6

130.34.60 ProtocolRaw = 255

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the protocol constants.
Notes: Raw protocol

130.34.61 ProtocolTCP = 6

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the protocol constants.
Notes: TCP

130.34.62 ProtocolUDP = 17

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the protocol constants.
Notes: UDP

130.34.63 SocketTypeDatagram = 2

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the socket types.
Notes: Datagram, e.g. UDP.

130.34.64 SocketTypeRaw = 3

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the socket types.
Notes: Raw socket, requires root permissions.

130.34.65 SocketTypeStream = 1

MBS Network Plugin, Plugin Version: 17.4.

Function: One of the socket types.
Notes: Stream socket, e.g. TCP/IP.

130.35 class SSH2ChannelMBS

130.35.1 class SSH2ChannelMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSH2 channel.

130.35.2 Blog Entries

- MBS Xojo Plugins in version 20.5
- MBS Xojo Plugins, version 20.5pr3
- SSH Terminal example for Xojo
- SSH tunnel in Xojo

130.35.3 Blog Entries

130.35.4 Methods

130.35.5 Close(Wait as Boolean = true)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Close a channel.
Notes:

Lasterror is set.
Close an active data channel. In practice this means sending an SSH_MSG_CLOSE packet to the remote host which serves as instruction that no further data will be sent to it. The remote host may still send data back until it sends its own close message in response. To wait for the remote end to close its connection as well, follow this command with WaitClosed.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

If wait parameter is true, the plugin does a loop to try close until it receives an okay (and not EAGAIN).

130.35.6 Constructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.
See also:

- 130.35.7 Constructor(session as SSH2SessionMBS) 21180

130.35.7 Constructor(session as SSH2SessionMBS)

MBS Network Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create new channel.
Notes: May raise UnsupportedOperationException if channel creation fails.
See also:

- 130.35.6 Constructor 21180

130.35.8 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

130.35.9 EOF as boolean

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Check a channel's EOF status.
Example:

```
dim s as string
dim channel as SSH2ChannelMBS // your channel

// read all till end of channel
s = ""
do
app.YieldToNextThread
dim r as string = channel.Read(50000)
s = s + r

if channel.LastError = SSH2SessionMBS.kErrorEagain then
// no answer yet
Continue
```

```
elseif channel.LastError = SSH2SessionMBS.kErrorNone then
// we got something
if channel.EOF then
// done?
MsgBox "Result: " + s
exit
end if
else
exit
end if
loop
```

Notes:

Check if the remote host has sent an EOF status for the selected stream.
Returns true if the remote host has sent EOF, otherwise false.
Lasterror is set. On error, this function returns true.

130.35.10 Execute(command as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Executes something on the server.
Notes:

Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.11 Flush

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush stream for this channel.
Notes: Lasterror is set.

130.35.12 FlushAll

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush all streams for this channel.
Notes: Lasterror is set.

130.35.13 FlushExtendedData

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush extended data stream for this channel.
Notes: Lasterror is set.

130.35.14 FlushStdErr

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush stderr stream for this channel.
Notes: Lasterror is set.

130.35.15 Read(length as Integer = 65536) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read data from a channel stream.
Example:

```
dim s as string
dim channel as SSH2ChannelMBS // your channel

// read all till end of channel
s = ""
do
app.YieldToNextThread
dim r as string = channel.Read(50000)
s = s + r

if channel.LastError = SSH2SessionMBS.kErrorEagain then
// no answer yet
Continue
elseif channel.LastError = SSH2SessionMBS.kErrorNone then
// we got something
if channel.EOF then
// done?
MsgBox "Result: " + s
exit
end if
else
```

```
exit
end if
loop
```

Notes:

Lasterror is set.
Attempt to read data from a stdout channel stream.
Returns data read.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.
Version up to 18.2 return text marked as UTF-8, but in 18.3 we change to return text without encoding marking. So if you expect UTF-8, you can apply UTF-8 encoding with DefineEncoding.

130.35.16 ReadStdErr(length as Integer = 65536) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read data from a channel stream.
Notes:

Lasterror is set.
Attempt to read data from a stderr channel stream.
Returns data read.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.17 RequestPTY(term as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request a PTY on an established channel.
Notes:

Lasterror is set.
Note that this does not make sense for all channel types and may be ignored by the server despite returning success.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.18 SendEOF

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Send EOF to remote server.
Notes:

Lasterror is set.
Tell the remote host that no further data will be sent on the specified channel. Processes typically interpret this as a closed stdin descriptor.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.19 SetBlocking(blocking as boolean)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set or clear blocking mode on channel.

130.35.20 SetEnv(name as string, value as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set an environment variable on the channel.
Notes:

Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.21 Shell

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Request a shell on a channel.
Notes:

Lasterror is set.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.22 WaitClosed

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait for the remote to close the channel.
Notes:

Lasterror is set.

Enter a temporary blocking state until the remote host closes the named channel. Typically sent after Close in order to examine the exit status.
Lasterror is set to kErrorEAgain when it would otherwise block. While kErrorEAgain is an error, it isn't really a failure per se.

130.35.23 WaitEOF

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Wait for the remote end to acknowledge an EOF request.
Notes:

Lasterror is set.
May give kErrorEAgain error which means you should try again later.

130.35.24 Write(data as MemoryBlock) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stdout stream.
Notes:

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.
See also:

- 130.35.25 Write(text as string) as Integer 21186

130.35.25 Write(text as string) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stdout stream.
Notes:

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.

Until version 18.2 we send text as UTF-8. Version 18.3 or newer send bytes as they are in whatever encoding your string has.
See also:

- 130.35.24 Write(data as MemoryBlock) as Integer 21185

130.35.26 WriteStdErr(data as MemoryBlock) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stderr stream.
Notes:

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.
See also:

- 130.35.27 WriteStdErr(text as string) as Integer 21186

130.35.27 WriteStdErr(text as string) as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write data to a channel stderr stream.
Notes:

Lasterror is set.

Write functions will use as much as possible of the buffer and put it into a single SSH protocol packet. This means that to get maximum performance when sending larger files, you should try to always pass in at least 32K of data to this function.

Returns actual number of bytes written. Lasterror being kErrorEagain when it would otherwise block. While kErrorEagain is an error, it isn't really a failure per se.

Until version 18.2 we send text as UTF-8. Version 18.3 or newer send bytes as they are in whatever encoding your string has.
See also:

- 130.35.26 WriteStdErr(data as MemoryBlock) as Integer 21186

130.35.28 Properties

130.35.29 ExitStatus as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the remote exit code.
Notes:

Returns the exit code raised by the process running on the remote host at the other end of the named channel. Note that the exit status may not be available if the remote end has not yet set its status to closed. Returns 0 on failure, otherwise the Exit Status reported by remote host.
(Read only property)

130.35.30 Handle as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

130.35.31 LastError as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

See SSH2SessionMBS.kError* constants.
(Read and Write property)

130.35.32 Session as SSH2SessionMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The session this channel belongs to.
Notes: (Read and Write property)

130.35.33 Tag as Variant

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

A property where you can store any value you like.
(Read and Write property)

130.35.34 Events

130.35.35 DataAvailable(Data as string, ErrorChannel as boolean)

MBS Network Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for new data coming in.
Notes:

For console app with DoEvents loop or for GUI apps.
Works starting with running Execute as that initializes the DataAvailable event.

ErrorChannel is true, if we got data from the stderr channel instead of stdout channel.

130.36 class SSH2ConnectFailedExceptionMBS

130.36.1 class SSH2ConnectFailedExceptionMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception for an error in the SSH2SessionMBS.Constructor.
Notes: Subclass of the RuntimeException class.

130.36.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr5

130.36.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.0pr5

130.37 class SSH2SessionMBS

130.37.1 class SSH2SessionMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSH2 session.

130.37.6 Methods

130.37.7 Banner as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the remote banner.
Notes: Once the session has been setup and Handshake has completed successfully, this function can be used to get the server id from the banner each server presents.

130.37.8 CipherNames as String()

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all ciphers.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = SSH2SessionMBS.CipherNames
dim DigestNames() as string = SSH2SessionMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

130.37.9 ConfigureKeepAlive(WantReply as Boolean = true, Interval as Integer = 2)

MBS Network Plugin, Plugin Version: 20.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configures keep alive probes.
Notes:

Set how often keepalive messages should be sent.
WantReply indicates whether the keepalive messages should request a response from the server.
Interval is number of seconds that can pass without any I/O, use 0 to disable keepalives. To avoid some busy-loop corner-cases, if you specify an interval of 1 it will be treated as 2.

130.37.10 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for using a new socket.
Notes:

The plugin creates a new socket, connects to the given IP& Port and than creates a new session for it.
Lasterror is set.
Please check if Handle property is non zero after constructor finishes.

Timeout defines timeout for connection in seconds. While waiting, the plugin yields time to other threads.
If timeout is zero, the connection will not yield and take up to the default TCP/IP timeout.

IPv4, IPv6 address or domain name with version 18.3 or newer.
See also:

- 130.37.11 Constructor(socket as TCPSocket) 21192
- 130.37.12 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false) 21192

130.37.11 Constructor(socket as TCPSocket)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for using an existing socket.
Notes:

Initializes a new session.
socket: The socket to use. The plugin keeps reference to this socket in socket property.

You can use a Xojo socket and connect it. Once connected, pass it here, so the session can use this socket for communication.
If you connect the xojo socket in a loop on a thread, be sure to call poll method of socket, so it processes events like connecting. In main thread with timer, you would get this automatically.
See also:

- 130.37.10 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30) 21192
- 130.37.12 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false) 21192

130.37.12 Constructor(socketHandle as Integer, CloseSocketLater as boolean = false)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for using an existing socket.
Notes:

Initializes a new session.
socketHandle: The socket to use. Can be TCPSocket's handle property for a Xojo socket. Or a socket connected via declares.
You can put the socket in the socket property to keep it alive as long as session is in memory.

Set CloseSocketLater = true if you pass a socket which can be closed in destructor. For Xojo socket, pass false as Xojo closes socket later.
You can use a Xojo socket and connect it. Once connected, pass it here, so the session can use this socket for communication.
See also:

- 130.37.10 Constructor(IP as string, Port as Integer = 22, TimeOut as Integer = 30) 21192
- 130.37.11 Constructor(socket as TCPSocket) 21192

130.37.13 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

130.37.14 DigestNames as String()

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries list of all digest algorithms.
Example:

```
// see hash and encryption algorithms available
dim CipherNames() as string = SSH2SessionMBS.CipherNames
dim DigestNames() as string = SSH2SessionMBS.DigestNames
Break
```

Notes: The list may not be the same for Mac, Windows and Linux.

130.37.15 Disconnect(description as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminate transport layer.
Notes:

Lasterror is set.
description: Human readable reason for disconnection.
See also:

- 130.37.16 Disconnect(reason as Integer, description as string, lang as string = "") 21194

130.37.16 Disconnect(reason as Integer, description as string, lang as string = "")

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Terminate transport layer.
Notes:

Lasterror is set.

reason: One of the Disconnect Reason constants.
description: Human readable reason for disconnection.
lang: Localization string describing the langauge/encoding of the description provided.
See also:

- 130.37.15 Disconnect(description as string) 21193

130.37.17 HostKey(byref Type as Integer) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the remote key.

130.37.18 HostKeyHash(HashType as Integer) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return a hash of the remote host's key.
Notes:

HashType: kHostKeyHashSHA1 or kHostKeyHashMD5.
Returns the computed digest of the remote system's hostkey. The length of the returned string is hash_type specific (e.g. 16 bytes for MD5, 20 bytes for SHA1).
Computed hostkey hash value, or empty string if the information is not available (either the session has not yet been started up, or the requested hash algorithm was not available). The hash consists of raw binary bytes, not hex digits, so it is not directly printable.

130.37.19 OpenDirectTCPIPChannel(host as string, port as integer, sourceHost as string = "127.0.0.1", sourcePort as Integer = 22) as SSH2ChannelMBS

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Tunnel a TCP connection through an SSH session.
Notes:

host: Third party host to connect to using the SSH host as a proxy.
port: Port on third party host to connect to.
SourceHost: Host to tell the SSH server the connection originated on.
SourcePort: Port to tell the SSH server the connection originated from.

Tunnel a TCP/IP connection through the SSH transport via the remote host to a third party. Communication from the client to the SSH server remains encrypted, communication from the server to the 3rd party host travels in cleartext.

This is not a replacement for ssh in command line with -L option.

Returns a newly allocated channel object, or nil on errors.

130.37.20 OpenSession as SSH2ChannelMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Establish a generic session channel.
Notes:

Lasterror is set.
Returns nil if the session start fails.

130.37.21 SessionFlag(Flag as Integer, Value as boolean)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get/Set a session flag.
Notes:

See kFlag* constants.
Lasterror is set.

130.37.22 SessionHandshake

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Perform the SSH handshake.
Notes: Lasterror is set.

130.37.23 SetBanner(Banner as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the SSH prococol banner for the local client.
Notes:

Set the banner that will be sent to the remote host when the SSH session is started with Handshake. This is optional; a banner corresponding to the protocol and libssh2 version will be sent by default.
Lasterror is set.

130.37.24 SetMethodPreference(methodType as Integer, Pref as string) as Boolean

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set preferred key exchange method.
Example:

```
// set preferences for key exchange method:
dim r as Boolean = s.SetMethodPreference(SSH2SessionMBS.kMethodKEX, "diffie-hellman-group-exchange-sha256")
```

Notes:

methodType: One of the Method Type constants.
Pref: Coma delimited list of preferred methods to use with the most preferred listed first and the least preferred listed last. If a method is listed which is not supported by libssh2 it will be ignored and not sent to the remote host during protocol negotiation.

Set preferred methods to be negotiated. These preferences must be set prior to calling SessionHandshake, as they are used during the protocol initiation phase.

Return true on success or false on failure. Lasterror is set. Lasterror is set to LIBSSH2_ERROR_EAGAIN (-37) when it would otherwise block. While LIBSSH2_ERROR_EAGAIN is a negative number, it isn't really a failure per se.

130.37.25 SupportedAlgorithms(methodType as Integer) as String()

MBS Network Plugin, Plugin Version: 18.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get list of supported algorithms.
Example:

```
dim s as new SSH2SessionMBS("localhost")

dim KeyExchange() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodKEX)
dim HostKey() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodHostKey)
dim CryptCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCryptCS)
dim CryptSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCryptSC)
dim MacCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodMacCS)
dim MacSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodMacSC)
dim CompCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCompCS)
dim CompSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodCompSC)
dim LangCS() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodLangCS)
dim LangSC() as string = s.SupportedAlgorithms(SSH2SessionMBS.kMethodLangSC)

Break
```

Notes:

Method type: see kMethod* constants.

Get a list of supported algorithms for the given methodType. The methodType parameter is equivalent to methodType in SetMethodPreference.

In order to get a list of all supported compression algorithms, SessionFlag(SSH2SessionMBS.kFlagCompress, true) must be called before calling this function, otherwise only "none" will be returned.

On success, returns array with algorithms
Lasterror is set with error code.

130.37.26 UserAuthKeyboardInteractive(UserName as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session using keyboard-interactive authentication.
Notes:

username: Name of user to attempt keyboard-interactive authentication for.
Lasterror is set.

Calls KeyboardCallback callback to query input from user.

130.37.27 UserAuthList(username as string) as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: List supported authentication methods.
Notes:

username: Username which will be used while authenticating. Note that most server implementations do not permit attempting authentication with different usernames between requests. Therefore this must be the same username you will use on later userauth calls.

Send a SSH_USERAUTH_NONE request to the remote host. Unless the remote host is configured to accept none as a viable authentication scheme (unlikely), it will return SSH_USERAUTH_FAILURE along with a listing of what authentication schemes it does support. In the unlikely event that none authentication succeeds, this method with return NULL. This case may be distinguished from a failing case by examining Authenticated.

130.37.28 UserAuthPassword(UserName as string, Password as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with username and password.
Notes:

username: Name of user to attempt plain password authentication for.
password: Password to use for authenticating username.

Attempt basic password authentication. Note that many SSH servers which appear to support ordinary password authentication actually have it disabled and use Keyboard Interactive authentication (routed via PAM or another authentication backed) instead.
Lasterror is set.

130.37.29 UserAuthPublicKeyFromFile(UserName as string, publickey as folderitem, privatekey as folderitem, Passphrase as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with a public key, read from a file.
Notes:

Lasterror is set.

username: user name to authenticate as.
publickey: Path of the public key file. (e.g. /etc/ssh/hostkey.pub). If libssh2 is built against OpenSSL, this option can be set to ""/nil.
privatekey: Path of the private key file. (e.g. /etc/ssh/hostkey)
passphrase: Passphrase to use when decoding privatekey.

Attempt public key authentication using a PEM encoded private key file stored on disk
See also:

- 130.37.30 UserAuthPublicKeyFromFile(UserName as string, publickey as string, privatekey as string, Passphrase as string) 21199

130.37.30 UserAuthPublicKeyFromFile(UserName as string, publickey as string, privatekey as string, Passphrase as string)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with a public key, read from a file.
Notes:

Lasterror is set.
username: user name to authenticate as.
publickey: Path of the public key file. (e.g. /etc/ssh/hostkey.pub). If libssh2 is built against OpenSSL, this option can be set to ""/nil.
privatekey: Path of the private key file. (e.g. /etc/ssh/hostkey)
passphrase: Passphrase to use when decoding privatekey.

Attempt public key authentication using a PEM encoded private key file stored on disk
See also:

- 130.37.29 UserAuthPublicKeyFromFile(UserName as string, publickey as folderitem, privatekey as folderitem, Passphrase as string) 21198

130.37.31 UserAuthPublicKeyFromMemory(UserName as string, publickey as string, privatekey as string, Passphrase as string)

MBS Network Plugin, Plugin Version: 16.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Authenticate a session with a public key, read from memory
Notes:

This function allows to authenticate a session with a public key read from memory.
Lasterror is set.

username - Remote user name to authenticate as.

publickeydata - Buffer containing the contents of a public key file. Optional.
privatekeydata - Buffer containing the contents of a private key file.
passphrase - Passphrase to use when decoding private key file.

Keys must have LF as line ending, not CR.

Attempt public key authentication using a PEM encoded private key file stored in memory.

130.37.32 Version as string

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the version for the SSH library.
Example:

MsgBox SSH2SessionMBS.Version

130.37.33 WaitSocket

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Waits on the socket for sending or receiving.

130.37.34 Properties

130.37.35 Authenticated as Boolean

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return authentication status.
Notes:

Indicates whether or not the named session has been successfully authenticated.
Returns true if authenticated and false if not.
(Read only property)

130.37.36 Blocking as Boolean

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The blocking mode on session.
Notes:

blocking: Set to a non-zero value to make the channel block, or zero to make it non-blocking.

Set or clear blocking mode on the selected on the session. This will instantly affect any channels associated with this session. If a read is performed on a session with no data currently available, a blocking session will wait for data to arrive and return what it receives. A non-blocking session will return immediately with an empty buffer. If a write is performed on a session with no room for more data, a blocking session will wait for room. A non-blocking session will return immediately without writing anything.
(Read and Write property)

130.37.37 Handle as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal object reference.
Notes: (Read and Write property)

130.37.38 LastErrNo as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get the most recent error number.
Notes:

Returns a numeric error code corresponding to the the Error Code constants.
(Read only property)

130.37.39 LastError as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes: (Read and Write property)

130.37.40 Socket as TCPSocket

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket value.
Notes:

This is set by constructor if you base the session on an existing session.
But you can assign a socket here if you like.
(Read and Write property)

130.37.41 Tag as Variant

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tag value.
Notes:

A property where you can store any value you like.
(Read and Write property)

130.37.42 TimeOut as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timeout for blocking functions.
Notes:

In milliseconds.
(Read and Write property)

130.37.43 Events

130.37.44 KeyboardCallback(Name as string, Instruction as string, PromptCount as Integer, Prompts() as SSH2UserAuthKeyboardInteractivePromptMBS, responses() as SSH2UserAuthKeyboardInteractiveResponseMBS)

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: .

Function: Event to ask for user input on a UserAuthKeyboardInteractive run.
Notes:

You can ask user for password, e.g. with a modal dialog.
You find prompt text in SSH2UserAuthKeyboardInteractivePromptMBS object and place answer in SSH2UserAuthKeyboardInteractiveResponseMBS objects.

130.37.45 Constants

130.37.46 kErrorAgentProtocol = -42

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Invalid agent protocol.

130.37.47 kErrorAlloc = -6

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Out of memory.

130.37.48 kErrorAuthenticationFailed = -18

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Authentication failed.

130.37.49 kErrorBadSocket = -45

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Bad socket handle.

130.37.50 kErrorBadUse = -39

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Bad use.

130.37.51 kErrorBannerRecv = -2

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Failed to receive banner.

130.37.52 kErrorBannerSend = -3

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Failed to send banner.

130.37.53 kErrorBufferTooSmall = -38

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Memory buffer is too small.

130.37.54 kErrorChannelClosed = -26

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Channel is already closed.

130.37.55 kErrorChannelEofSent = -27

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Chanel sent EOF.

130.37.56 kErrorChannelFailure = -21

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Generic error on a channel.

130.37.57 kErrorChannelOutoforder = -20

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Channel commands out of order.

130.37.58 kErrorChannelPacketExceeded = -25

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Channel packet exceeded.

130.37.59 kErrorChannelRequestDenied = -22

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Channel request denied.

130.37.60 kErrorChannelUnknown = -23

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Unknown channel.

130.37.61 kErrorChannelWindowExceeded = -24

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Channel window exceeded.

130.37.62 kErrorChannelWindowFull = -47

MBS Network Plugin, Plugin Version: 19.5.

Function: One of the SSH error codes.
Notes: Channel window is full.

130.37.63 kErrorCompress = -40

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Compression error.

130.37.64 kErrorDecrypt = -12

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Error with decryption.

130.37.65 kErrorEagain = -37

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Please try again later.

130.37.66 kErrorEncrypt = -44

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Error on encrypting.

130.37.67 kErrorFile = -16

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: File IO error.

130.37.68 kErrorHostkeyInit = -10

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Failed to init host key.

130.37.69 kErrorHostkeySign = -11

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Failed to sign host key.

130.37.70 kErrorInval = -34

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Input value error.

130.37.71 kErrorInvalidMac = -4

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Invalid MAC address.

130.37.72 kErrorInvalidPollType = -35

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Invalid poll type.

130.37.73 kErrorKexFailure = -5

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Key exchange failed.

130.37.74 kErrorKeyExchangeFailure = -8

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Key exchange failed.

130.37.75 kErrorKeyfileAuthFailed = -48

MBS Network Plugin, Plugin Version: 19.5.

Function: One of the SSH error codes.
Notes: Authorization with key file failed.

130.37.76 kErrorKnownHosts = -46

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Unknown host.

130.37.77 kErrorMethodNone = -17

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: No method.

130.37.78 kErrorMethodNotSupported = -33

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Method not supported.

130.37.79 kErrorNone = 0

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: No error.

130.37.80 kErrorOutOfBoundary = -41

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Out of Boundary.

130.37.81 kErrorPasswordExpired = -15

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Password expired.

130.37.82 kErrorProto = -14

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Protocol error.

130.37.83 kErrorPublickeyProtocol = -36

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Publickey protocol failed.

130.37.84 kErrorPublickeyUnverified = -19

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Publickey is not verified.

130.37.85 kErrorRequestDenied = -32

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Request denied.

130.37.86 kErrorScpProtocol = -28

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Error with SCP protocol.

130.37.87 kErrorSftpProtocol = -31

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Error with SFTP protocol.

130.37.88 kErrorSocketDisconnect = -13

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Socket got disconnected.

130.37.89 kErrorSocketNone = -1

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: No socket error.

130.37.90 kErrorSocketRecv = -43

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Socket receive failed.

130.37.91 kErrorSocketSend = -7

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Socket send failed.

130.37.92 kErrorSocketTimeout = -30

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Socket timeout.

130.37.93 kErrorTimeout = -9

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Timeout.

130.37.94 kErrorZlib = -29

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the SSH error codes.
Notes: Error with zlib (Compression).

130.37.95 kFlagCompress = 2

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the session flag constants.
Notes:

Set options for the created session. flag is the option to set, while value is typically set to 1 or 0 to enable or disable the option.
If set - before the connection negotiation is performed - libssh2 will try to negotiate compression enabling for this connection. By default libssh2 will not attempt to use compression.

130.37.96 kFlagSigPipe = 1

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the session flag constants.
Notes:

Set options for the created session. flag is the option to set, while value is typically set to 1 or 0 to enable or disable the option.
If set, libssh2 will not attempt to block SIGPIPEs but will let them trigger from the underlying socket layer.

130.37.97 kHostKeyHashMD5 = 1

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the hash types.
Notes: MD5

130.37.98 kHostKeyHashSHA1 = 2

MBS Network Plugin, Plugin Version: 14.0.

Function: One of the hash types.
Notes: SHA1

130.37.99 kHostKeyHashSHA256 = 3

MBS Network Plugin, Plugin Version: 19.5.

Function: One of the hash types.

Notes: SHA256

130.37.100 kMethodCompCS = 6

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

Compression method.
e.g. zlib, zlib@openssh.com, none

130.37.101 kMethodCompSC = 7

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

Compression method.
e.g. zlib, zlib@openssh.com, none

130.37.102 kMethodCryptCS = 2

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

Crypt Method.
e.g. aes128-ctr, aes192-ctr, aes256-ctr, aes256-cbc, rijndael-cbc@lysator.liu.se, aes192-cbc, aes128-cbc, blowfish-cbc, arcfour128, arcfour, cast128-cbc, 3des-cbc.

130.37.103 kMethodCryptSC = 3

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

Crypt Method.
e.g. aes128-ctr, aes192-ctr, aes256-ctr, aes256-cbc, rijndael-cbc@lysator.liu.se, aes192-cbc, aes128-cbc, blowfish-

cbc, arcfour128, arcfour, cast128-cbc, 3des-cbc

130.37.104 kMethodHostKey = 1

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

Host key method.
e.g. ssh-rsa, ssh-dss

130.37.105 kMethodKEX = 0

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

Key Exchange Method.
e.g. diffie-hellman-group-exchange-sha256, diffie-hellman-group-exchange-sha1, diffie-hellman-group14-sha1 or diffie-hellman-group1-sha1.

130.37.106 kMethodLangCS = 8

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes: Language.

130.37.107 kMethodLangSC = 9

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes: Language.

130.37.108 kMethodMacCS = 4

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

MAC method (hash)
e.g. hmac-sha2-256, hmac-sha2-512, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96, hmac-ripemd160, hmac-ripemd160@openssh.com

130.37.109 kMethodMacSC = 5

MBS Network Plugin, Plugin Version: 18.5.

Function: One of the method constants for SetMethodPreference and SupportedAlgorithms.
Notes:

MAC method (hash)
e.g. hmac-sha2-256, hmac-sha2-512, hmac-sha1, hmac-sha1-96, hmac-md5, hmac-md5-96, hmac-ripemd160, hmac-ripemd160@openssh.com

130.38 class SSH2TunnelMBS

130.38.1 class SSH2TunnelMBS

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a SSH tunnel.
Notes:

The MBS Plugin can spin of a new preemptive thread to run a tunnel to forward a SSH connection from local socket to remote server via SSH tunnel.
This works well for database access with MySQL.
By using our own thread, we are not blocking or blocked by your Xojo code.

The tunnel allows currently one connection through it, e.g. run one tunnel per MySQL connection to go through the tunnel. If you need multiple tunnels, please create multiple SSH tunnels.

130.38.6 Methods

130.38.7 Constructor(session as SSH2SessionMBS)

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Please pass connected SSH session.

130.38.8 Destructor

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

130.38.9 Run

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs the thread with the tunnel.

130.38.10 Properties

130.38.11 BytesReceived as Int64

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes received.
Notes: (Read only property)

130.38.12 BytesSent as Int64

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Number of bytes sent.
Notes: (Read only property)

130.38.13 Cancel as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to cancel tunnel.
Notes:

This property can be set to request end of the thread.
(Read and Write property)

130.38.14 Connected as Boolean

MBS Network Plugin, Plugin Version: 20.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries whether tunnel is connected and transfers data.
Notes:

Returns true if connected or false if not.
(Read only property)

130.38.15 KeepAlive as Boolean

MBS Network Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to sent keep-alive packets.
Example:

```
dim tunnel as SSH2TunnelMBS // your tunnel

// avoid timeing out in Socket and SSH layers
tunnel.KeepAlive = True
session.ConfigureKeepAlive
```

Notes:

If set to true, TCP keep alive probes will be sent to avoid TCP/IP timeouts.

Set to false (default behavior) to disable keep alive probes.

You may also need to use ConfigureKeepAlive on the SSH2SessionMBS class.
(Read and Write property)

130.38.16 LocalAddress as String

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local address to use.
Notes:

Defines where we wait for a connection to forward.
IPv4 or IPv6 address.
(Read and Write property)

130.38.17 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The local port to use.
Notes: (Read and Write property)

130.38.18 Messages as String

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Log messages.
Notes:

Filled by thread to tell you about errors.
(Read only property)

130.38.19 RemoteAddress as String

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote address to use.
Notes:

When connecting through tunnel this address is used from server to connect to.
IPv4 or IPv6 address.

(Read and Write property)

130.38.20 RemotePort as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The remote port to use.
Notes:

When connecting through tunnel this port is used from server to connect to.
(Read and Write property)

130.38.21 Running as Boolean

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether tunnel is running.
Notes:

True if running, false if not.
(Read only property)

130.38.22 Session as SSH2SessionMBS

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The session used for the tunnel.
Notes: (Read only property)

130.39 class SSH2UserAuthKeyboardInteractivePromptMBS

130.39.1 class SSH2UserAuthKeyboardInteractivePromptMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an interactive keyboard authentication prompt.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.39.2 Methods

130.39.3 Constructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

130.39.4 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

130.39.5 Properties

130.39.6 Echo as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The echo flag.
Notes:

(not sure what this is)
(Read and Write property)

130.39.7 Length as Integer

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of the text.
Notes: (Read and Write property)

130.39.8 Text as String

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text message.
Notes: (Read and Write property)

130.40 class SSH2UserAuthKeyboardInteractiveResponseMBS

130.40.1 class SSH2UserAuthKeyboardInteractiveResponseMBS

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a response with interactive keyboard login.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.40.2 Methods

130.40.3 Constructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

130.40.4 Destructor

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destrutor.

130.40.5 Properties

130.40.6 Text as String

MBS Network Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The response text.
Notes:

Usually a password.
(Read and Write property)

130.41 class TCPSocket

130.41.1 class TCPSocket

Plugin Version: 8.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The Socket class in Xojo which is the superclass of the PacketSocketMBS class.

130.42 class TXTRecordMBS

130.42.1 class TXTRecordMBS

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: The class to represent a DNS-SD TXT record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.Bytes // show complete record
MsgBox t.Value("Hello") // lookup value
```

Notes: The constructor creates an empty TXTRecord where you can add values using TXTRecordSetValue.

130.42.2 Methods

130.42.3 Bytes as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to retrieve a copy of to the raw bytes within a TXTRecord.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

Notes: Returns a string with the raw bytes inside the TXTRecord which you can pass directly to DNSServiceRegisterMBS.Register() or to DNSServiceRegisterMBS.UpdateRecord().

130.42.4 ContainsKey(key as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to determine if a given TXT Record contains a specified key.
Example:

```
dim t as new TXTRecordMBS
```

```
call t.SetValue "Hello", "World"

if t.ContainsKey("Hello") then
MsgBox "Hello found."
else
MsgBox "Hello not found ->bug."
end if

if t.ContainsKey("hallo") then
MsgBox "hallo found ->bug."
else
MsgBox "hallo not found."
end if
```

Notes:

key: An ASCII string containing the key name.

Returns true if the TXT Record contains the specified key. Otherwise, it returns false.
See also:

- 130.42.5 ContainsKey(txtRecord as string, key as string) as boolean 21226

130.42.5 ContainsKey(txtRecord as string, key as string) as boolean

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to determine if a given TXT Record contains a specified key.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

dim s as string = t.Bytes // copy record to string

// now search in that string:
if TXTRecordMBS.ContainsKey(s, "Hello") then
MsgBox "Hello found."
else
MsgBox "Hello not found ->bug."
end if

if TXTRecordMBS.ContainsKey(s, "hallo") then
MsgBox "hallo found ->bug."
```

```
else
MsgBox "hallo not found."
end if
```

Notes:

txtRecord: The txt record to search in as a string.
key: An ASCII string containing the key name.

Returns true if the TXT Record contains the specified key. Otherwise, it returns false.
See also:

- 130.42.4 ContainsKey(key as string) as boolean 21225

130.42.6 Count as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the number of keys stored in the TXT Record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

MsgBox str(t.Count)
```

See also:

- 130.42.7 Count(txtRecord as string) as Integer 21227

130.42.7 Count(txtRecord as string) as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the number of keys stored in the TXT Record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
```

```
call t.SetValue "Hello3", "World3"

dim s as string = t.Bytes // copy record

// now count in that record
MsgBox str(TXTRecordMBS.Count(s))
```

See also:

- 130.42.6 Count as Integer 21227

130.42.8 KeyAtIndex(index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.KeyAtIndex(0) +EndOfLine + t.ValueAtIndex(0)
```

Notes:

index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through keys in a TXT record by simply calling KeyAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 130.42.9 KeyAtIndex(txtRecord as string, index as Integer) as string 21228

130.42.9 KeyAtIndex(txtRecord as string, index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"
```

```
dim s as string = t.Bytes // copy record to string

// now search in that string:
MsgBox TXTRecordMBS.KeyAtIndex(s,0) +EndOfLine + TXTRecordMBS.ValueAtIndex(s,0)
```

Notes:

txtRecord: The txt record to search in as a string.
index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through keys in a TXT record by simply calling KeyAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 130.42.8 KeyAtIndex(index as Integer) as string 21228

130.42.10 Length as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to determine the length of the raw bytes within a TXTRecord.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"

MsgBox str(t.Length) // shows 42
```

130.42.11 RemoveValue(key as string)

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Removes a key from a TXTRecordRef. The "key" must be an ASCII string which exists in the TXTRecord.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
```

```
call t.SetValue "Hello3", "World3"

t.RemoveValue "Hello2"

MsgBox t.Bytes
```

Notes:

key: A key name which exists in the TXTRecord.

Lasterror is kErrorNoError on success or kErrorNoSuchKey if the "key" does not exist in the TXTRecord.

130.42.12 SetValue(key as string, value as string) as Integer

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Adds a key (optionally with value) to a TXTRecordRef.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello1", "World1"
call t.SetValue "Hello2", "World2"
call t.SetValue "Hello3", "World3"
```

Notes:

If the "key" already exists in the TXTRecord, then the current value will be replaced with the new value.

Keys may exist in four states with respect to a given TXT record:

- Absent (key does not appear at all)
- Present with no value ("key" appears alone)
- Present with empty value ("key=" appears in TXT record)
- Present with non-empty value ("key=value" appears in TXT record)

For more details refer to "Data Syntax for DNS-SD TXT Records" in

http://files.dns-sd.org/draft-cheshire-dnsext-dns-sd.txt

key: A string which only contains printable ASCII values (& h20-& h7E), excluding '=' (& h3D). Keys should be 8 characters or less.
value: Any binary value. For values that represent textual data, UTF-8 is STRONGLY recommended.

Returns kErrorNoError on success. Returns kErrorInvalid if the "key" string contains illegal characters. Returns kErrorNoMemory if adding this key would exceed the available storage.

The plugin currently does not create keys with empty value. If you need that, please email us.

130.42.13 Value(key as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to retrieve the value for a given key from a TXT Record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"
MsgBox t.Value("Hello") // lookup value
```

Notes:

key: The ASCII string containing the key name.

Returns an empty string if the key does not exist in this TXT record, or exists with no value (to differentiate between these two cases use ContainsKey()).
See also:

- 130.42.14 Value(txtRecord as string, key as string) as string 21231

130.42.14 Value(txtRecord as string, key as string) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Allows you to retrieve the value for a given key from a TXT Record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

dim s as string = t.bytes
```

```
MsgBox TXTRecordMBS.Value(s, "Hello") // lookup value
```

Notes:

txtRecord: Pointer to the received TXT Record bytes.
key: The ASCII string containing the key name.

Returns an empty string if the key does not exist in this TXT record, or exists with no value (to differentiate between these two cases use ContainsKey()).
See also:

- 130.42.13 Value(key as string) as string 21231

130.42.15 ValueAtIndex(index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

MsgBox t.KeyAtIndex(0) +EndOfLine + t.ValueAtIndex(0)
```

Notes:

index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through values in a TXT record by simply calling ValueAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 130.42.16 ValueAtIndex(txtRecord as string, index as Integer) as string 21232

130.42.16 ValueAtIndex(txtRecord as string, index as Integer) as string

MBS Network Plugin, Plugin Version: 10.1, Platforms: macOS, Windows, Targets: All.

Function: Returns the key with the given index from the txt record.
Example:

```
dim t as new TXTRecordMBS

call t.SetValue "Hello", "World"

dim s as string = t.Bytes // copy record to string

// now search in that string:
MsgBox TXTRecordMBS.KeyAtIndex(s,0) +EndOfLine + TXTRecordMBS.ValueAtIndex(s,0)
```

Notes:

txtRecord: The txt record to search in as a string.
index: the index you want in the range from zero to GetCount()-1.

It's also possible to iterate through values in a TXT record by simply calling GetValueAtIndex() repeatedly, beginning with index zero and increasing until lasterror is set to kErrorInvalid.
See also:

- 130.42.15 ValueAtIndex(index as Integer) as string 21232

130.43 class UDPSocketMBS

130.43.1 class UDPSocketMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for UDP sockets.
Notes: Similar to Xojo's built in UDPSocket class, but more low level and with more options.

130.43.6 Methods

130.43.7 AddMembership(MultiAddress as string, InterfaceAddress as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds this socket to a multicast group.
Notes:

Internally this uses IPPROTO_IP/IP_ADD_MEMBERSHIP option.
Lasterror is set.

MultiAddress: The IPv4 address of the group to join.
InterfaceAddress: The IPv4 address of the network interface to use. Can be empty for any interface.

130.43.8 Bind(Port as Integer, IP as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Binds the socket to the given port.
Notes:

If IP is not empty, you can bind the socket to only the given network interface with that IPv4.
Set ReuseAddress to bind to an address which already a socket is bound to.
Lasterror is set.

130.43.9 Constructor

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.

130.43.10 Destructor

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.
Notes: Closes the socket.

130.43.11 DropMembership(MultiAddress as string, InterfaceAddress as string = "")

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Removes this socket from a multicast group.
Notes:

Internally this uses IPPROTO_IP/IP_DROP_MEMBERSHIP option.
Lasterror is set.

MultiAddress: The IPv4 address of the group to join.
InterfaceAddress: The IPv4 address of the network interface to use. Can be empty for any interface.

130.43.12 Poll

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Polls for activity.
Notes:

Calls events if needed.
This is called automatically via timer by the plugin.

130.43.13 Read(peek as boolean = false) as DatagramMBS

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a datagram.
Notes:

If peek is true, the data is not removed from read buffer.
On error returns nil.

130.43.14 SendMessage(Data as DatagramMBS) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes:

Please specify with port and address of datagram where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 130.43.15 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21237
- 130.43.16 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21237

130.43.15 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes:

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 130.43.14 SendMessage(Data as DatagramMBS) as Integer 21237
- 130.43.16 SendMessage(Data as string, IP as String, Port as Integer) as Integer 21237

130.43.16 SendMessage(Data as string, IP as String, Port as Integer) as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a datagram.
Notes:

Please specify with port and IP where package is sent to.
Returns number of bytes sent.
Lasterror is set.
See also:

- 130.43.14 SendMessage(Data as DatagramMBS) as Integer 21237

• 130.43.15 SendMessage(Data as MemoryBlock, IP as String, Port as Integer) as Integer 21237

130.43.17 Properties

130.43.18 AddressFamily as Integer

MBS Network Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The address family of the socket.
Notes:

This is either RAWSocketMBS.AddressFamilyINet (2) for IPv4 or RAWSocketMBS.AddressFamilyINet6 (Mac 30, Windows 23 and Linux 10) for IPv6.
(Read and Write property)

130.43.19 AvailableBytes as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns number of bytes available for reading.
Notes:

Lasterror is set.
(Read only property)

130.43.20 BindAddress as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The IP used for bind operation.
Notes:

This is set by Bind on success.
(Read and Write property)

130.43.21 BindPort as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The port used for bind operation.
Notes:

This is set by Bind on success.
(Read and Write property)

130.43.22 Broadcast as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether broadcasts are allowed.
Notes:

Set to true before sending a broadcast message.
Internally this uses SOL_SOCKET/SO_BROADCAST option.
Lasterror is set.
(Read and Write property)

130.43.23 Handle as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal socket handle.
Notes: (Read and Write property)

130.43.24 Lasterror as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error code.
Notes:

Platform dependent.
(Read and Write property)

130.43.25 LocalIP as String

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local IP.
Notes:

Can be 0.0.0.0 if unknown.
May only be set if connected or binded.
Lasterror is set.
(Read only property)

130.43.26 LocalPort as Integer

MBS Network Plugin, Plugin Version: 18.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries local port.
Notes:

Lasterror is set.
Can be -1 if unknown.
(Read only property)

130.43.27 MulticastInterface as String

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interface to use for multicast.
Notes:

Internally this uses IPPROTO_IP/IP_MULTICAST_IF option.
Lasterror is set.

Assign empty string to use all interfaces.
May return 0.0.0.0 to indicate all interfaces.
(Read and Write property)

130.43.28 MulticastLoop as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether multicast packets are also sent to the sending socket.
Notes:

Internally this uses IPPROTO_IP/IP_MULTICAST_LOOP option.
Lasterror is set.
(Read and Write property)

130.43.29 MulticastTimeToLive as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The multicast time to live value.
Notes:

Internally this uses IPPROTO_IP/IP_MULTICAST_TTL option.

Lasterror is set.
Range from 0 to 255.
(Read and Write property)

130.43.30 Protocol as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket protocol.
Notes:

Is ProtocolUDP (17) for UDP sockets.
(Read and Write property)

130.43.31 ReceiveBufferSize as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the receiving buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_RCVBUF option.
Lasterror is set.
(Read and Write property)

130.43.32 ReuseAddress as Boolean

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allows reuse of same port.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEADDR option.

see also
http://stackoverflow.com/questions/14388706/socket-options-so-reuseaddr-and-so-reuseport-how-do-they-differ-do-they-mean-t

Lasterror is set.
(Read and Write property)

130.43.33 ReusePort as Boolean

MBS Network Plugin, Plugin Version: 14.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allow reuse of same port and IP.
Notes:

Internally this uses SOL_SOCKET/SO_REUSEPORT option.
On Windows, this is not supported, so this property sets ReuseAddress.
Lasterror is set.
(Read and Write property)

130.43.34 SendBufferSize as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sending buffer size.
Notes:

The buffer size may be increased for high-volume connections, or may be decreased to limit the possible backlog of incoming data. The system places an absolute limit on these values.
Internally this uses SOL_SOCKET/SO_SNDBUF option.
Lasterror is set.
(Read and Write property)

130.43.35 SocketError as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The native socket error.
Notes:

Internally this uses SOL_SOCKET/SO_ERROR option.
Lasterror is set.
(Read only property)

130.43.36 SocketType as Integer

MBS Network Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The socket type.
Notes:

Is SocketTypeDatagram (2) for UDP sockets.
(Read and Write property)

130.43.37 TimeToLive as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time to live value.
Notes:

Internally this uses IPPROTO_IP/IP_TTL option.
Lasterror is set.
Range from 0 to 255.
(Read and Write property)

130.43.38 Type as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Socket type.
Notes:

Always 2 as this is a datagram socket.
Internally this uses SOL_SOCKET/SO_TYPE option.
Lasterror is set.
(Read only property)

130.43.39 TypeOfService as Integer

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of service value.
Notes:

Works only on BSD Sockets.

Possible values:
IPTOS_MINCOST = 2
IPTOS_RELIABILITY = 4
IPTOS_THROUGHPUT = 8
IPTOS_LOWDELAY = 16

Internally this uses IPPROTO_IP/IP_TOS option.
(May not work on Windows.

Lasterror is set.
(Read and Write property)

130.43.40 Events

130.43.41 DataAvailable

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when new data is available.
Notes: Requires the socket to be bound.

130.43.42 Error

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called if socket is in error state.

130.43.43 SendComplete

MBS Network Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The last write operation is done.

130.44 module WebSocketHelperMBS

130.44.1 module WebSocketHelperMBS

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Helper functions for implementing web sockets.
Example:

```
// short packet
dim s as string = WebSocketHelperMBS.AddHeader("Hello")
dim b as Boolean = WebSocketHelperMBS.FrameMasked(s)
dim t as string = WebSocketHelperMBS.Unmask(s)

// long packet
dim text as string = "Hello World. This is just a sample text with a little bit more characters to make it at least 127 characters long for this test."
dim s2 as string = WebSocketHelperMBS.AddHeader(text)
dim b2 as Boolean = WebSocketHelperMBS.FrameMasked(s2)
dim t2 as string = WebSocketHelperMBS.Unmask(s2)

Break // look in debugger
```

Deprecated: This item is deprecated and should no longer be used.

130.44.4 Methods

130.44.5 AddHeader(data as Memoryblock, opCode as Integer = 7) as Memoryblock

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds header to a frame.
Notes: Depending on the length of the frame we add two to ten bytes in front with the opcode included and the length information.
See also:

- 130.44.6 AddHeader(data as string, opCode as Integer = 7) as string 21246

130.44.6 AddHeader(data as string, opCode as Integer = 7) as string

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds header to a frame.
Notes: Depending on the length of the frame we add two to ten bytes in front with the opcode included and the length information.
See also:

- 130.44.5 AddHeader(data as Memoryblock, opCode as Integer = 7) as Memoryblock 21245

130.44.7 FrameMasked(data as Memoryblock) as boolean

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the frame is masked or not.
Notes: Returns true if the first bit of the first byte is set.
See also:

- 130.44.8 FrameMasked(data as string) as boolean 21246

130.44.8 FrameMasked(data as string) as boolean

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the frame is masked or not.
Notes: Returns true if the first bit of the first byte is set.
See also:

- 130.44.7 FrameMasked(data as Memoryblock) as boolean 21246

130.44.9 Unmask(data as Memoryblock) as Memoryblock

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unmasks a data packet.
Notes:

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
See also:

- 130.44.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock 21247
- 130.44.11 Unmask(data as string) as string 21247
- 130.44.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string 21248

130.44.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock

MBS Network Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unmasks a data packet.
Notes:

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
This method also sets Offset, Length and TotalLength parameters.
See also:

- 130.44.9 Unmask(data as Memoryblock) as Memoryblock 21246
- 130.44.11 Unmask(data as string) as string 21247
- 130.44.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string 21248

130.44.11 Unmask(data as string) as string

MBS Network Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unmasks a data packet.
Notes:

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
See also:

- 130.44.9 Unmask(data as Memoryblock) as Memoryblock 21246

- 130.44.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock 21247
- 130.44.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string 21248

130.44.12 Unmask(data as string, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as string

MBS Network Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unmasks a data packet.
Notes:

Does the reverse of AddHeader.
The string returned has no encoding defined.
For a text frame, you should use DefineEncoding with UTF-8.
This method also sets Offset, Length and TotalLength parameters.
See also:

- 130.44.9 Unmask(data as Memoryblock) as Memoryblock 21246
- 130.44.10 Unmask(data as Memoryblock, byref Offset as Integer, byref Length as Integer, byref TotalLength as Integer) as Memoryblock 21247
- 130.44.11 Unmask(data as string) as string 21247

130.44.13 Constants

130.44.14 kOpCodeBinaryFrame = 2

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: Binary Frame

130.44.15 kOpCodeClose = 8

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: Close

130.44.16 kOpCodeContinuation = 0

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: Continuation

130.44.17 kOpCodeEnd = 7

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: End

130.44.18 kOpCodePing = 9

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: Ping

130.44.19 kOpCodePong = 10

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: Pong

130.44.20 kOpCodeTextFrame = 1

MBS Network Plugin, Plugin Version: 12.5.

Function: One of the OpCode values.
Notes: Text frame

130.45 class WindowsDNSRecordAAAAMBS

130.45.1 class WindowsDNSRecordAAAAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS IPv6 (AAAA) record.
Notes:

Be aware that IPv6 is not available on Windows XP and older.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.45.2 Methods

130.45.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordAAAAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.45.4 Properties

130.45.5 Address as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The address in a human readable format.
Notes: (Read and Write property)

130.45.6 RawAddress as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw address as a 16byte string.
Notes: (Read and Write property)

130.46 class WindowsDNSRecordAMBS

130.46.1 class WindowsDNSRecordAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS address (A) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.46.2 Methods

130.46.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.46.4 Properties

130.46.5 Address as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IPv4 address as a string.
Notes: (Read and Write property)

130.46.6 IPAddress as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw address as an integer.
Notes: (Read and Write property)

130.47 class WindowsDNSRecordMBS

130.47.1 class WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for DNS query results on Windows.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.47.2 Methods

130.47.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.47.4 Query(name as string, type as Integer, options as Integer = 0) as WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs a DNS query on Windows.
Notes:

The DnsQuery function type is the generic query interface to the DNS namespace, and provides application developers with a DNS query resolution interface.

name: a string that represents the name of the owner of the record set that is queried.
type: A value that represents the RR DNS Record Type that is queried.
Options: A value that contains a combination of kDNSQuery* constants.

Returns the record chain on success.

Applications that call the DnsQuery function build a query using a fully-qualified DNS name and Resource Record (RR) type, and set query options depending on the type of service desired. When the kDNSQuery-

Standard option is set, DNS uses the resolver cache, queries first with UDP, then retries with TCP if the response is truncated, and requests that the server to perform recursive resolution on behalf of the client to resolve the query.

Note When calling one of the DnsQuery function types, be aware that a DNS server may return multiple records in response to a query. A computer that is multihomed, for example, will receive multiple A records for the same IP address. The caller must use as many of the returned records as necessary.

Consider the following scenario, in which multiple returned records require additional activity on behalf of the application: A Query function call is made for a multihomed computer and the application finds that the address associated with the first A record is not responding. The application should then attempt to use other IP addresses specified in the (additional) A records returned from the Query function call.

130.47.5 Properties

130.47.6 A as WindowsDNSRecordAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The address record.
Notes: (Read and Write property)

130.47.7 AAAA as WindowsDNSRecordAAAAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The IPv6 address record.
Notes: (Read and Write property)

130.47.8 AFSDB as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.9 CharSet as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value specifies the character set used in the associated function call.
Notes: (Read and Write property)

130.47.10 CNAME as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.11 DataLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length, in bytes, of Data.
Notes: (Read and Write property)

130.47.12 HINFO as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.13 ISDN as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.14 MB as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.15 MD as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.16 MF as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.17 MG as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.18 MINFO as WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.19 MR as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.20 MX as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.21 Name as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A pointer to a string that represents the domain name of the record set.
Notes: (Read and Write property)

130.47.22 NextRecord as WindowsDNSRecordMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The next record in the answer.
Notes: (Read and Write property)

130.47.23 NS as WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.24 Null as WindowsDNSRecordNullMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.25 RawData as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: the RAW data of this record.
Notes:

For debugging.
(Read and Write property)

130.47.26 RP as WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.27 RT as WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.28 Section as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value specifies the section of interest returned from the DnsQuery function call.
Notes: (Read and Write property)

130.47.29 SOA as WindowsDNSRecordSOAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.30 TTL as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DNS RR's Time To Live value (TTL), in seconds.
Notes: (Read and Write property)

130.47.31 TXT as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.32 Type as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DNS record type for this record.
Notes:

If type is kDNSTypeA, the A property is filled.
(Read and Write property)

130.47.33 X25 as WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The data record.
Notes: (Read and Write property)

130.47.34 Constants

130.47.35 kCharSetAnsi = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the CharSet property.
Notes: The character set is ANSI.

130.47.36 kCharSetUnicode = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the CharSet property.
Notes: The character set is Unicode.

130.47.37 kCharSetUnknown = 0

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the CharSet property.
Notes: The character set is unknown.

130.47.38 kCharSetUtf8 = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the CharSet property.
Notes: The character set is UTF8.

130.47.39 kDNSClassAll = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.40 kDNSClassAny = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.41 kDNSClassCHAOS = & h0003

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.42 kDNSClassCSNET = & h0002

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.43 kDNSClassHESIOD = & h0004

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.44 kDNSClassInternet = & h0001

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.45 kDNSClassNone = & h00fe

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in native byte order (little endian on Windows).

130.47.46 kDNSQueryAcceptTruncatedResponse = & h00000001

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Returns truncated results. Does not retry under TCP.

130.47.47 kDNSQueryBypassCache = & h00000008

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Bypasses the resolver cache on the lookup.

130.47.48 kDNSQueryDontResetTTLValues = & h00100000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: If set, and if the response contains multiple records, records are stored with the TTL corresponding to the minimum value TTL from among all records. When this option is set, "Do not change the TTL of

individual records" in the returned record set is not modified.

130.47.49 kDNSQueryMulticastOnly = & h00000400

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes:

Prevents the query from using DNS and uses only Local Link Multicast Name Resolution (LLMNR).
Windows Vista and Windows Server 2008 or later.: This value is supported.

130.47.50 kDNSQueryNoHostsFile = & h00000040

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes:

Prevents the DNS query from consulting the HOSTS file.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

130.47.51 kDNSQueryNoLocalName = & h00000020

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes:

Directs DNS to ignore the local name.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

130.47.52 kDNSQueryNoMulticast = & h00000800

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.

130.47.53 kDNSQueryNoNetBT = & h00000080

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes:

Prevents the DNS query from using NetBT for resolution.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

130.47.54 kDNSQueryNoRecursion = & h00000004

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Directs the DNS server to perform an iterative query (specifically directs the DNS server not to perform recursive resolution to resolve the query).

130.47.55 kDNSQueryNoWireQuery = & h00000010

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Directs DNS to perform a query on the local cache only.

130.47.56 kDNSQueryReserved = & hff000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Reserved.

130.47.57 kDNSQueryReturnMessage = & h00000200

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes:

Directs DNS to return the entire DNS response message.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

130.47.58 kDNSQueryStandard = & h00000000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Standard query.

130.47.59 kDNSQueryTreatAsFQDN = & h00001000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Prevents the DNS response from attaching suffixes to the submitted name in a name resolution process

130.47.60 kDNSQueryUseTCPOnly = & h00000002

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes: Uses TCP only for the query.

130.47.61 kDNSQueryWireOnly = & h00000100

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible flags for the Query function.
Notes:

Directs DNS to perform a query using the network only, bypassing local information.
Windows 2000 Server and Windows 2000 Professional: This value is not supported.

130.47.62 kDNSRClassAll = & hff00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.63 kDNSRClassAny = & hff00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.64 kDNSRClassCHAOS = & h0300

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.65 kDNSRClassCSNET = & h0200

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.66 kDNSRClassHESIOD = & h0400

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.67 kDNSRClassInternet = & h0100

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.68 kDNSRClassNone = & hfe00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the DNS classes in network byte order.

130.47.69 kDNSRTypeA = & h0100

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.70 kDNSRTypeAAAA = & h1c00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.71 kDNSRTypeAFSDB = & h1200

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.72 kDNSRTypeALL = & hff00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.73 kDNSRTypeANY = & hff00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.74 kDNSRTypeATMA = & h2200

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.75 kDNSRTypeAXFR = & hfc00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.76 kDNSRTypeCNAME = & h0500

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.77 kDNSRTypeGPOS = & h1b00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.78 kDNSRTypeHINFO = & h0d00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.79 kDNSRTypeISDN = & h1400

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.80 kDNSRTypeIXFR = & hfb00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.81 kDNSRTypeKEY = & h1900

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.82 kDNSRTypeLOC = & h1d00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.83 kDNSRTypeMAILA = & hfe00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.84 kDNSRTypeMAILB = & hfd00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.85 kDNSRTypeMB = & h0700

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.86 kDNSRTypeMD = & h0300

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.87 kDNSRTypeMF = & h0400

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.88 kDNSRTypeMG = & h0800

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.89 kDNSRTypeMINFO = & h0e00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.90 kDNSRTypeMR = & h0900

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.91 kDNSRTypeMX = & h0f00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.92 kDNSRTypeNS = & h0200

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.93 kDNSRTypeNSAP = & h1600

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.94 kDNSRTypeNSAPPTR = & h1700

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.95 kDNSRTypeNULL = & h0a00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.96 kDNSRTypeNXT = & h1e00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.97 kDNSRTypePTR = & h0c00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.98 kDNSRTypePX = & h1a00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.99 kDNSRTypeRP = & h1100

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.100 kDNSRTypeRT = & h1500

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.101 kDNSRTypeSIG = & h1800

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.102 kDNSRTypeSOA = & h0600

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.103 kDNSRTypeSRV = & h2100

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.104 kDNSRTypeTEXT = & h1000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.105 kDNSRTypeTKEY = & hf900

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.106 kDNSRTypeTSIG = & hfa00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.107 kDNSRTypeWINS = & h01ff

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.108 kDNSRTypeWINSR = & h02ff

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.109 kDNSRTypeWKS = & h0b00

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.110 kDNSRTypeX25 = & h1300

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in network byte order).

130.47.111 kDNSTypeA = & h0001

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.112 kDNSTypeAAAA = & h001c

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.113 kDNSTypeAFSDB = & h0012

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.114 kDNSTypeALL = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.115 kDNSTypeANY = & h00ff

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.116 kDNSTypeATMA = & h0022

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.117 kDNSTypeAXFR = & h00fc

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.118 kDNSTypeCNAME = & h0005

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.119 kDNSTypeGPOS = & h001b

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.120 kDNSTypeHINFO = & h000d

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.121 kDNSTypeISDN = & h0014

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.122 kDNSTypeIXFR = & h00fb

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.123 kDNSTypeKEY = & h0019

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.124 kDNSTypeLOC = & h001d

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.125 kDNSTypeMAILA = & h00fe

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.126 kDNSTypeMAILB = & h00fd

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.127 kDNSTypeMB = & h0007

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.128 kDNSTypeMD = & h0003

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.129 kDNSTypeMF = & h0004

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.130 kDNSTypeMG = & h0008

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.131 kDNSTypeMINFO = & h000e

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.132 kDNSTypeMR = & h0009

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.133 kDNSTypeMX = & h000f

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.134 kDNSTypeNBSTAT = & hff02

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.135 kDNSTypeNS = & h0002

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.136 kDNSTypeNSAP = & h0016

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.137 kDNSTypeNSAPPTR = & h0017

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.138 kDNSTypeNULL = & h000a

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.139 kDNSTypeNXT = & h001e

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.140 kDNSTypePTR = & h000c

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.141 kDNSTypePX = & h001a

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.142 kDNSTypeRP = & h0011

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.143 kDNSTypeRT = & h0015

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.144 kDNSTypeSIG = & h0018

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.145 kDNSTypeSOA = & h0006

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.146 kDNSTypeSRV = & h0021

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.147 kDNSTypeTEXT = & h0010

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.148 kDNSTypeTKEY = & h00f9

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.149 kDNSTypeTSIG = & h00fa

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.150 kDNSTypeWINS = & hff01

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.151 kDNSTypeWINSR = & hff02

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.152 kDNSTypeWKS = & h000b

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.153 kDNSTypeX25 = & h0013

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.154 kDNSTypeZERO = & h0000

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the possible DNS record type constants (in native byte order).

130.47.155 kSectionAddtional = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the Section Property.
Notes: The DNS section specified is additional DNS information.

130.47.156 kSectionAnswer = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the Section Property.
Notes: The DNS section specified is a DNS answer.

130.47.157 kSectionAuthority = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the Section Property.
Notes: The DNS section specified indicates a DNS authority.

130.47.158 kSectionQuestion = 0

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the Section Property.
Notes: The DNS section specified is a DNS question.

130.48 class WindowsDNSRecordMInfoMBS

130.48.1 class WindowsDNSRecordMInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS mail information (MINFO) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.48.2 Methods

130.48.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordMInfoMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.48.4 Properties

130.48.5 NameErrorsMailbox as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the FQDN of the mailbox to receive error messages related to the mailing list.
Notes: (Read and Write property)

130.48.6 NameMailbox as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the fully qualified domain name (FQDN) of the mailbox responsible for the mailing list or mailbox specified in the record's owner name.
Notes: (Read and Write property)

130.49 class WindowsDNSRecordMXMBS

130.49.1 class WindowsDNSRecordMXMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS mail exchanger (MX) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.49.2 Methods

130.49.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordMXMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.49.4 Properties

130.49.5 NameExchange as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the fully qualified domain name (FQDN) of the host willing to act as a mail exchange.
Notes: (Read and Write property)

130.49.6 Preference as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A preference given to this resource record among others of the same owner. Lower values are preferred.
Notes: (Read and Write property)

130.50 class WindowsDNSRecordNullMBS

130.50.1 class WindowsDNSRecordNullMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a NULL data DNS resource record
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.50.2 Methods

130.50.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordNullMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.50.4 Properties

130.50.5 ByteCount as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes represented in Data.
Notes: (Read and Write property)

130.50.6 Data as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The raw data as a string.
Notes: (Read and Write property)

130.51 class WindowsDNSRecordPTRMBS

130.51.1 class WindowsDNSRecordPTRMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS pointer (PTR) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.51.2 Methods

130.51.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordPTRMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.51.4 Properties

130.51.5 NameHost as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The named host.
Notes: (Read and Write property)

130.52 class WindowsDNSRecordSOAMBS

130.52.1 class WindowsDNSRecordSOAMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS start of authority (SOA) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.52.2 Methods

130.52.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordSOAMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.52.4 Properties

130.52.5 DefaultTTL as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The lower limit on the time, in seconds, that a DNS server or caching resolver are allowed to cache any resource records (RR) from the zone to which this record belongs.
Notes: (Read and Write property)

130.52.6 Expire as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, before an unresponsive zone is no longer authoritative.
Notes: (Read and Write property)

130.52.7 NameAdministrator as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the name of the responsible party for the zone to which the record belongs.
Notes: (Read and Write property)

130.52.8 NamePrimaryServer as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that represents the name of the authoritative DNS server for the zone to which the record belongs.
Notes: (Read and Write property)

130.52.9 Refresh as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, before the zone containing this record should be refreshed.
Notes: (Read and Write property)

130.52.10 Retry as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time, in seconds, before retrying a failed refresh of the zone to which this record belongs.
Notes: (Read and Write property)

130.52.11 SerialNo as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the SOA record.
Notes: (Read and Write property)

130.53 class WindowsDNSRecordTXTMBS

130.53.1 class WindowsDNSRecordTXTMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a DNS text (TXT) record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.53.2 Methods

130.53.3 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless WindowsDNSRecordTXTMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

130.53.4 Strings as String()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: An array of strings representing the descriptive text of the TXT resource record.

130.53.5 Properties

130.53.6 StringCount as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of strings represented in Strings array.
Notes: (Read and Write property)

130.54 class WindowsEthernetAdapterMBS

130.54.1 class WindowsEthernetAdapterMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: A class for the properties of an ethernet adapter.

130.54.2 Methods

130.54.3 Gateway(index as Integer) as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Returns one of the IP address of the default gateway for this adapter.
Notes: Index goes from 0 to GatewayGount-1.

130.54.4 IP(index as Integer) as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Returns one of the IP addresses associated with this adapter.
Notes: Index goes from 0 to IPcount-1.

130.54.5 Properties

130.54.6 AdapterName as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Name of the adapter.
Notes: (Read and Write property)

130.54.7 Address as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Hardware address for the adapter.
Notes: (Read and Write property)

130.54.8 CurrentIpAddress as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: The current IP from within the IP list.
Notes:

This field is currently normally nil, but in the future it may point to the current IP inside the IP list.
But currently on Windows 2000 it seems to be always nil.
(Read and Write property)

130.54.9 Description as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Description for the adapter.
Notes: (Read and Write property)

130.54.10 DhcpEnabled as Boolean

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Specifies whether dynamic host configuration protocol (DHCP) is enabled for this adapter.
Notes: (Read and Write property)

130.54.11 DhcpServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: IP address of the DHCP server for this adapter.
Notes: (Read and Write property)

130.54.12 Gatewaycount as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: How many gateway IPs are allocated for this adapter.
Notes: (Read and Write property)

130.54.13 HaveWins as Boolean

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Specifies whether this adapter uses Windows Internet Name Service (WINS).
Notes: (Read and Write property)

130.54.14 Index as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Adapter index.
Notes: (Read and Write property)

130.54.15 IPcount as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: How many IPs are allocated for this adapter.
Notes: (Read and Write property)

130.54.16 LeaseExpires as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Time when the current DHCP lease expires.
Notes: (Read and Write property)

130.54.17 LeaseObtained as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Time when the current DHCP lease was obtained.
Notes: (Read and Write property)

130.54.18 PrimaryWinsServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: IP address of the primary WINS server.
Notes: (Read and Write property)

130.54.19 SecondaryWinsServer as WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: IP address of the secondary WINS server.
Notes: (Read and Write property)

130.54.20 Type as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Adapter type.
Notes:

The type must be of the following values:

MIB_IF_TYPE_OTHER	1
MIB_IF_TYPE_ETHERNET	6
MIB_IF_TYPE_TOKENRING	9
MIB_IF_TYPE_FDDI	15
MIB_IF_TYPE_PPP	23
MIB_IF_TYPE_LOOPBACK	24
MIB_IF_TYPE_SLIP	28

(Read and Write property)

130.55 class WindowsEthernetMBS

130.55.1 class WindowsEthernetMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: A list of the Windows Ethernet Interfaces.
Notes:

Requires Windows 98 or 2000 or newer.
Reports count=0 on Windows 95 and NT 4.0.

Only activate adapters are listed.

130.55.2 Methods

130.55.3 Item(index as Integer) as WindowsEthernetAdapterMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Returns the Ethernet Adapter object for the given index.
Notes: Index goes from 0 to count-1.

130.55.4 Update

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: Updates the list.
Notes: Calls the Destructor and than the Constructor so the list is completly rebuilt.

130.55.5 Properties

130.55.6 Count as Integer

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: How much ethernet adapters are available.
Notes:

Note that there may be dummy or virtual adapters.
(Read and Write property)

130.56 class WindowsIPAddressMBS

130.56.1 class WindowsIPAddressMBS

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: An IP address.

130.56.2 Properties

130.56.3 IP as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: The IP as a string.
Notes:

Maximum 15 bytes long.
e.g. "192.168.0.1"
(Read and Write property)

130.56.4 Mask as String

MBS Network Plugin, Plugin Version: 3.1, Platform: Windows, Targets: All.

Function: The mask for the IP.
Notes:

e.g. "255.255.255.0"
(Read and Write property)

130.57 class WindowsProxyMBS

130.57.1 class WindowsProxyMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to query the current windows proxy settings.

130.57.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- Need Proxy Settings?

130.57.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5
- Need Proxy Settings?

130.57.4 Properties

130.57.5 ByPass as String

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The proxy
Notes:

Example values:
"testserver:1234 apple.de <local>"
or
"testserver3:1234 testserver4:1234 testserver1:1234 testserver2:1234 apple.de <local>"
(Read and Write property)

130.57.6 Proxy as String

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current proxy setting.
Notes:

Example values:
"testserver:1234"

or
”https=testserver2:1234 http=testserver1:1234 gopher=testserver4:1234 ftp=testserver3:1234”
(Read and Write property)

130.57.7 UsingProxy as Boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a proxy is in use.
Notes: (Read and Write property)

130.58 class WindowsQOSMBS

130.58.1 class WindowsQOSMBS

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Quality Windows Audio/Video Experience (qWAVE).
Notes:

Quality Windows Audio/Video Experience (qWAVE) is the next generation Quality of Service (QOS) platform introduced in Windows Vista.
qWAVE provides new features focused on streaming multimedia and real-time content over variable bandwidth networks. These features include the following.

- Auto-discovery of end-to-end QOS compatibility.
- End-to-end bandwidth estimation of maximum link capacity (bottleneck bandwidth) and real-time available bandwidth.
- Intelligent packet prioritization.
- Congestion notification.
- Flow shaping.
- Distributed admission control, including caching to improve performance and minimize latency.

Requires Windows 6 (Vista).

130.58.6 Methods

130.58.7 AddSocketToFlow(Socket as Integer, DestAddr as string, DestPort as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a socket to a flow.
Notes:

Socket: Identifies the socket that the application will use to flow traffic.
DestAddr: The destination IP address to which the application will send traffic. DestAddr and DestPort are optional if the socket is already connected. If this parameter is specified, the remote IP address and port must match those used in the socket's connect call.
If the socket is not connected, this parameter must be specified. If the socket is already connected, this parameter does not need to be specified. In this case, if the parameter is still specified, the destination host and port must match what was specified during the socket connect call.
Since, under TCP, the socket connect call can be delayed, AddSocketToFlow can be called before a connection is established, passing in the remote system's IP address and port number in the DestAddr parameter.
DestPort: The port for the connection.
TrafficType: A QOSTrafficType* constant that specifies the type of traffic for which this flow will be used.
Flags: Optional flag values. Can be QOSNonAdaptiveFlow.
FlowID: Receives a flow identifier. On input, this value must be 0. On output, the buffer contains a flow identifier if the call succeeds.
If a socket is being added to an existing flow, this parameter will be the identifier of that flow.
An application can make use of this parameter if multiple sockets used can share the same QoS flow properties. The QoS subsystem, then does not have to incur the overhead of provisioning new flows for subsequent sockets with the same properties. Note that only non-adaptive flows can have multiple sockets attached to an existing flow.
A FlowID is an unsigned 32-bit integer.

Lasterror is set.

The use of IPv4/v6 mixed addresses is not supported in qWAVE. The address specified by the DestAddr parameter must be either IPv4 or IPv6.
If there is a requirement for network experiments over a specific network interface, the socket must be bound to that particular interface. Otherwise the most appropriate interface for the experiment, as indicated by the network stack, is assigned by the qWAVE subsystem.
Network traffic associated with this flow is not affected by making this call alone. For example, packet prioritization does not occur immediately.
There are two categories of applications that use this function: adaptive and non-adaptive. An adaptive application makes use of notifications and information in the FlowFundamentals for adapting to network changes such as congestion. The qWAVE service uses Link Layer Topology Discovery (LLTD) QoS extensions for adaptive flows which can be present on the destination device.
After calling this function adaptive A/V applications should call the SetFlowRate function to affect network traffic.
A non-adaptive application either does not adapt to changing network characteristics or is sending traffic to an endpoint that does not support adaptive capabilities as indicated by ERROR_NOT_SUPPORTED.
Non-adaptive applications, or adaptive applications making non-adaptive flows, should call this function with the QOSNonAdaptiveFlow flag. After calling this function A/V applications should call the setOutgoingDSCPValue, setOutgoingRate or setTrafficType function with a Operation. They do not need to be called unless shaping is desired.
See also:

- 130.58.8 AddSocketToFlow(Socket as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean 21297

130.58.8 AddSocketToFlow(Socket as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a socket to a flow.
Notes:

Socket: Identifies the socket that the application will use to flow traffic.
DestAddr: The destination IP address to which the application will send traffic. DestAddr and DestPort are optional if the socket is already connected. If this parameter is specified, the remote IP address and port must match those used in the socket's connect call.
If the socket is not connected, this parameter must be specified. If the socket is already connected, this parameter does not need to be specified. In this case, if the parameter is still specified, the destination host and port must match what was specified during the socket connect call.
Since, under TCP, the socket connect call can be delayed, AddSocketToFlow can be called before a connection is established, passing in the remote system's IP address and port number in the DestAddr parameter.
DestPort: The port for the connection.
TrafficType: A QOSTrafficType* constant that specifies the type of traffic for which this flow will be used.
Flags: Optional flag values. Can be QOSNonAdaptiveFlow.
FlowID: Receives a flow identifier. On input, this value must be 0. On output, the buffer contains a flow

identifier if the call succeeds.
If a socket is being added to an existing flow, this parameter will be the identifier of that flow.
An application can make use of this parameter if multiple sockets used can share the same QoS flow properties. The QoS subsystem, then does not have to incur the overhead of provisioning new flows for subsequent sockets with the same properties. Note that only non-adaptive flows can have multiple sockets attached to an existing flow.
A FlowID is an unsigned 32-bit integer.

Lasterror is set.

The use of IPv4/v6 mixed addresses is not supported in qWAVE. The address specified by the DestAddr parameter must be either IPv4 or IPv6.
If there is a requirement for network experiments over a specific network interface, the socket must be bound to that particular interface. Otherwise the most appropriate interface for the experiment, as indicated by the network stack, is assigned by the qWAVE subsystem.
Network traffic associated with this flow is not affected by making this call alone. For example, packet prioritization does not occur immediately.
There are two categories of applications that use this function: adaptive and non-adaptive. An adaptive application makes use of notifications and information in the FlowFundamentals for adapting to network changes such as congestion. The qWAVE service uses Link Layer Topology Discovery (LLTD) QoS extensions for adaptive flows which can be present on the destination device.
After calling this function adaptive A/V applications should call the SetFlowRate function to affect network traffic.
A non-adaptive application either does not adapt to changing network characteristics or is sending traffic to an endpoint that does not support adaptive capabilities as indicated by ERROR_NOT_SUPPORTED.
Non-adaptive applications, or adaptive applications making non-adaptive flows, should call this function with the QOSNonAdaptiveFlow flag. - 130.58.7 AddSocketToFlow(Socket as Integer, DestAddr as string, DestPort as Integer, TrafficType as Integer, Flags as Integer, byref FlowId as UInt32) as boolean 21296

130.58.9 Constructor

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: This function initializes the QOS subsystem.
Notes:

On success Handle property is not zero.
Lasterror is set.

Every process intending to use qWAVE must first call Constructor.
If a machine enters a power save mode that interrupts connectivity such as sleep or standby, existing and

active network experiments such as QOSStartTrackingClient must be reinitiated. This recreation of the flow mirrors the cleanup and creation activities also necessary for existing sockets. A new handle must be created, and the flow must be recreated and readmitted.

130.58.10 getFlowFundamentals(FlowID as Integer, byref BottleneckBandwidthSet as boolean, byref BottleneckBandwidth as UInt64, byref AvailableBandwidthSet as boolean, byref AvailableBandwidth as UInt64, byref RTTSet as boolean, byref RTT as UInt32, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries flow fundamentals.
Notes:

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Flags: Optional, can be QOSQueryFlowFresh.
BottleneckBandwidthSet: This Boolean value is set to true if the BottleneckBandwidth field contains a value.
BottleneckBandwidth: Indicates the maximum end-to-end link capacity between the source and sink device, in bits.
AvailableBandwidthSet: Set to true if the AvailableBandwidth field contains a value.
AvailableBandwidth: Indicates how much bandwidth is available for submitting traffic on the end-to-end network path between the source and sink device, in bits.
RTTSet: Set to true if the RTT field contains a value.
RTT: Measures the round-trip time between the source and sink device, in microseconds.

Lasterror is set. Returns true on success or false on failure.

130.58.11 getOutgoingRate(FlowID as Integer, byref Bandwidth as UInt64, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries flow rate.
Notes:

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Bandwidth: will contain a UINT64 value that indicates the flow rate specified when requesting the contract, in bits per second.
Flags: Optional, can be QOSQueryFlowFresh.
Lasterror is set. Returns true on success or false on failure.

130.58.12 getPacketPriority(FlowID as Integer, byref ConformantDSCPValue as Integer, byref NonConformantDSCPValue as Integer, byref ConformantL2Value as Integer, byref NonConformantL2Value as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries packet priorities.
Notes:

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Flags: Optional, can be QOSQueryFlowFresh.

ConformantDSCPValue: Differential Services Code Point (DSCP) mark used for flow traffic that conforms to the specified flow rate.
NonConformantDSCPValue: DSCP marking used for flow traffic that exceeds the specified flow rate. Non-conformant DSCP values are only applicable only if value is QOSUseNonConformantMarkings.
ConformantL2Value: Layer-2 (L2) tag used for flow traffic that conforms to the specified flow rate. L2 tags will not be added to packets if the end-to-end path between source and sink does not support them.
NonConformantL2Value: L2 tag used for flow traffic that exceeds the specified flow rate. Non-conformant L2 values are only applicable if value is QOSUseNonConformantMarkings.

Lasterror is set. Returns true on success or false on failure.

130.58.13 RemoveAllSocketsFromFlow(FlowID as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RemoveSocketFromFlow function notifies the QOS subsystem that a previously added flow has been terminated by the application, and that the subsystem must update its internal information accordingly.
Notes:

FlowId: A flow identifier. A QOS_FLOWID is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.
The plugin closes all flows in destructor.

130.58.14 RemoveSocketFromFlow(socketHandle as Integer, FlowID as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The RemoveSocketFromFlow function notifies the QOS subsystem that a previously added flow has been terminated by the application, and that the subsystem must update its internal information accordingly.
Notes:

Socket: Socket to be removed from the flow.
Only flows created with the QOSNonAdaptiveFlow flag may have multiple sockets added to the same flow. By passing the Socket parameter in this call, each socket can be removed individually. If the Socket parameter is not passed, the entire flow will be destroyed. If only one socket was attached to the flow, passing this socket as a parameter to this function and passing 0 as a socket are equivalent calls.
FlowId: A flow identifier. A QOS_FLOWID is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.
The plugin closes all flows in destructor.

130.58.15 setOutgoingDSCPValue(FlowID as Integer, OutgoingDSCPValue as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the outgoing DSCP value.
Notes:

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.

Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.

130.58.16 setOutgoingRate(FlowID as Integer, Bandwidth as UInt64, ShapingBehavior as Integer, Reason as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets a new outgoing rate.
Notes:

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
Bandwidth: The rate at which data should be sent, in units of bits per second.
Note Traffic on the network is measured at the IP level, and not at the application level. The rate that is specified should account for the IP and protocol headers.
ShapingBehavior: A shaping constant that defines the shaping behavior of the flow.
Reason: A QOSFlowRate* constant that indicates the reason for a flow rate change.
Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.#

130.58.17 setTrafficType(FlowID as Integer, TrafficType as Integer, Flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the type of traffic
Notes:

FlowID: A flow identifier. A flow id is an unsigned 32-bit integer.
TrafficType: One of the traffic type constants.
Lasterror is set. Returns true on success or false on failure.

If StartTrackingClient has not already been called, calling QOSSetFlow will cause the QOS subsystem to perform the following.

- Discover whether the end-to-end network path supports prioritization.
- Track end-to-end network characteristics by way of network experiments. These experiments do not place any noteworthy stress on the network.#

130.58.18 StartTrackingClient(DestAddr as string, flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StartTrackingClient function notifies the QOS subsystem of the existence of a new client.
Notes:

Calling this function increases the likelihood that the QOS subsystem will have gathered sufficient information on the network path to assist when calling QOSSetFlow to set the flow.
Note This call is not required to add a flow with the QOSAddSocketToFlow function although it is highly recommended. Not calling this function may require network experiments to be started during the QOSSetFlow call and can result in QOSSetFlow failing with ERROR_NETWORK_BUSY on initial use.

DestAddr: The IP address of the client device. Clients are identified by their IP address and address family. Any port number specified in the sockaddr structure will be ignored.
Flags: Reserved for future use. Must be set to 0.

On receipt of a QOSStartTrackingClient call the QoS subsystem begins gathering information about the client such as the QoS capabilities and available bandwidth on the end-to-end path.
An application should call this function as soon as it becomes aware of a client device that may need QoS flow. For example this function should be called when a media player device first connects to a media server application.
Network experiments performed by QOSStartTrackingClient do not introduce noteworthy load on the network even if no stream is started for a long period of time. The qWAVE service dynamically adjusts experiment traffic based on QoS subsystem activity.
Link Layer Topology Discovery (LLTD) must be implemented on the sink PC or device for this function to work.

Lasterror is set. Returns true on success or false on failure.

130.58.19 StopTrackingClient(DestAddr as string, flags as Integer = 0) as boolean

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The StopTrackingClient function notifies the QoS subsystem to stop tracking a client that has previously used the StartTrackingClient function.
Notes:

If a flow is currently in progress, this function will not affect it.

DestAddr: The IP address of the client device. Clients are identified by their IP address and address family. A port number is not required and will be ignored.
Flags: Reserved for future use.

Lasterror is set. Returns true on success or false on failure.

130.58.20 Properties

130.58.21 Handle as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

130.58.22 Lasterror as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

130.58.23 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The generic window error message for the error in lasterror property.
Notes: (Read and Write property)

130.58.24 Constants

130.58.25 QOSFlowRateCongestion = 2

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flow reason constants.
Notes: Indicates that the flow has changed due to congestion.

130.58.26 QOSFlowRateContentChange = 1

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flow reason constants.
Notes: Indicates that the content of a flow has changed.

130.58.27 QOSFlowRateHigherContentEncoding = 3

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flow reason constants.
Notes: Indicates that the user has caused the flow to change.

130.58.28 QOSFlowRateNotApplicable = 0

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flow reason constants.
Notes: Indicates that there has not been a change in the flow.

130.58.29 QOSFlowRateUserCaused = 4

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flow reason constants.
Notes: Indicates that the user has caused the flow to change.

130.58.30 QOSNonAdaptiveFlow = 2

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flags.
Notes: If specified, the QoS subsystem will not gather data about the network path for this flow. As a result, functions which rely on bandwidth estimation techniques will not be available. For example, this would block QOSQueryFlow with an Operation value of QOSQueryFlowFundamentals and QOSNotifyFlow with an Operation value of QOSNotifyCongested, QOSNotifyUncongested, and QOSNotifyAvailable.

130.58.31 QOSQueryFlowFresh = 1

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the flags.
Notes:

The QOS subsystem will only return fresh, not cached, data. If fresh data is unavailable, it will try to obtain such data, at the expense of possibly taking more time. If this is not possible, the call will fail with the error code ERROR_RETRY.

This flag is only applicable when the Operation parameter is set to QOSQueryFlowFundamentals.

130.58.32 QOSShapeAndMark = 1

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the constants for shaping behavior of a flow.
Notes: Indicates that the Windows Scheduler will be used to enforce the requested flow rate. Data packets exceeding the rate are delayed accordingly. Packets receive conformant priority values.

130.58.33 QOSShapeOnly = 0

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the constants for shaping behavior of a flow.
Notes: Indicates that the Windows packet scheduler (Pacer) will be used to enforce the requested flow rate. Data packets that exceed the rate are delayed until appropriate in order to maintain the specified flow rate. If the network supports prioritization, packets will always receive conformant priority values when QOSShapeFlow is specified.

130.58.34 QOSTrafficTypeAudioVideo = 3

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the traffic type constants.
Notes:

Flow traffic has a network priority higher than QOSTrafficTypeExcellentEffort, yet lower than QOSTrafficTypeVoice. This traffic type should be used for A/V streaming scenarios such as MPEG2 streaming.
Sent traffic will contain a DSCP mark with a value of 0x28 and an 802.1p tag with a value of 5.

130.58.35 QOSTrafficTypeBackground = 1

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the traffic type constants.
Notes:

Flow traffic has a network priority lower than that of QOSTrafficTypeBestEffort. This traffic type could be used for traffic of an application doing data backup.
Sent traffic will contain a DSCP mark with a value of 0x08 and an 802.1p tag with a value of 2.

130.58.36 QOSTrafficTypeBestEffort = 0

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the traffic type constants.
Notes:

Flow traffic has the same network priority as regular traffic not associated with QOS.
This traffic type is the same as not specifying priority, and as a result, the DSCP mark and 802.1p tag are not added to sent traffic.

130.58.37 QOSTrafficTypeControl = 5

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the traffic type constants.
Notes:

Flow traffic has the highest network priority. This traffic type should only be used for the most critical of data. For example, it may be used for data carrying user inputs.
Sent traffic will contain a DSCP mark with a value of 0x38 and an 802.1p tag with a value of 7.

130.58.38 QOSTrafficTypeExcellentEffort = 2

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the traffic type constants.
Notes:

Flow traffic has a network priority higher than QOSTrafficTypeBestEffort, yet lower than QOSTrafficTypeAudioVideo. This traffic type should be used for data traffic that is more important than normal end-user scenarios, such as email.
Sent traffic will contain a DSCP mark with value of 0x28 and 802.1p tag with a value of 5.

130.58.39 QOSTrafficTypeVoice = 4

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the traffic type constants.
Notes:

Flow traffic has a network priority higher than QOSTrafficTypeAudioVideo, yet lower than QOSTrafficTypeControl. This traffic type should be used for realtime voice streams such as VOIP.
Sent traffic will contain a DSCP mark with a value of 0x38 and an 802.1p tag with a value of 7.

130.58.40 QOSUseNonConformantMarkings = 2

MBS Win Plugin, Plugin Version: 13.5.

Function: One of the constants for shaping behavior of a flow.
Notes: Indicates that the flow rate requested will not be enforced. Data packets that would exceed the flow rate will receive a priority that indicates they are non-conformant. This may lead to lost and reordered packets.

130.59 class WinHTTPClientAutoProxyOptionsMBS

130.59.1 class WinHTTPClientAutoProxyOptionsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The WinHTTPClientAutoProxyOptionsMBS class is used to indicate to the WinHttpGetProxyForURL function whether to specify the URL of the Proxy Auto-Configuration (PAC) file or to automatically locate the URL with DHCP or DNS queries to the network.
Notes:

see also:
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384123(v=vs.85).aspx

130.59.2 Methods

130.59.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

130.59.4 Properties

130.59.5 AutoConfigUrl as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The URL for the config URL.
Notes:

If Flags includes the kAutoProxyConfigURL flag, the AutoConfigUrl contains the URL of the proxy auto-configuration (PAC) file.
If Flags does not include the kAutoProxyConfigURL flag, then AutoConfigUrl must be "".
(Read and Write property)

130.59.6 AutoDetectFlags as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags for auto detecting.
Notes:

If Flags includes the kAutoProxyAutoDetect flag, then AutoDetectFlags specifies what protocols are to be used to locate the PAC file. If both the DHCP and DNS auto detect flags are specified, then DHCP is used first; if no PAC URL is discovered using DHCP, then DNS is used.
If Flags does not include the kAutoProxyAutoDetect flag, then AutoDetectFlags must be zero.

Value	Meaning
kAutoDetectTypeDHCP	Use DHCP to locate the proxy auto-configuration file.
kAutoDetectTypeDNSA	Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

(Read and Write property)

130.59.7 AutoLogonIfChallenged as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies whether the client's domain credentials should be automatically sent in response to an NTLM or Negotiate Authentication challenge when WinHTTP requests the PAC file.
Notes:

If this flag is true, credentials should automatically be sent in response to an authentication challenge. If this flag is false and authentication is required to download the PAC file, the WinHttpGetProxyForUrl function fails.
(Read and Write property)

130.59.8 Flags as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Flags for detecting proxy.
Notes: (Read and Write property)

130.59.9 Constants

130.59.10 kAutoDetectTypeDHCP = 1

MBS Win Plugin, Plugin Version: 14.1.

Function: The flags for auto detection types.
Notes: Use DHCP to locate the proxy auto-configuration file.

130.59.11 kAutoDetectTypeDNSA = 2

MBS Win Plugin, Plugin Version: 14.1.

Function: The flags for auto detection types.
Notes: Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

130.59.12 kAutoProxyAutoDetect = 1

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy flags.
Notes: Attempt to automatically discover the URL of the PAC file using both DHCP and DNS queries to the local network.

130.59.13 kAutoProxyConfigURL = 2

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy flags.
Notes: Download the PAC file from the URL specified by AutoConfigUrl in the WinHTTPClientAutoProxyOptionsMBS class.

130.60 class WinHTTPClientCurrentUserIEProxyConfigMBS

130.60.1 class WinHTTPClientCurrentUserIEProxyConfigMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Internet Explorer proxy configuration information.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384250(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.60.2 Methods

130.60.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

130.60.4 Properties

130.60.5 AutoConfigUrl as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The auto-configuration URL.
Notes:

The auto-configuration URL if the Internet Explorer proxy configuration for the current user specifies "Use automatic proxy configuration".
(Read and Write property)

130.60.6 AutoDetect as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to auto detect proxy settings.
Notes:

If true, indicates that the Internet Explorer proxy configuration for the current user specifies "automatically detect settings".

(Read and Write property)

130.60.7 Proxy as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains the proxy URL if the Internet Explorer proxy configuration for the current user specifies "use a proxy server".
Notes: (Read and Write property)

130.60.8 ProxyBypass as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Optional proxy by-pass server list.
Notes: (Read and Write property)

130.61 class WinHTTPClientMBS

130.61.1 class WinHTTPClientMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for Windows to do http requests.
Notes:

The plugin only implements proxy related functions.
But this class could be extended to work like HTTPSocket.

130.61.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

130.61.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo / Real Studio plug-ins in version 14.1
- MBS Xojo / Real Studio Plugins, version 14.1pr1

130.61.4 Methods

130.61.5 Close as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Closes the session.

130.61.6 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The constructor.

130.61.7 CrackUrl(URL as string, Flags as Integer = 0) as WinHTTPClientURLComponentsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Separates a URL into its component parts such as host name and path.
Notes:

URL: the canonical URL to separate. WinHttpCrackUrl does not check this URL for validity or correct format before attempting to crack it.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384092(v=vs.85).aspx

130.61.8 DetectAutoProxyConfigUrl(AutoDetectFlags as Integer, byref AutoConfigUrl as string) as Boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Finds the URL for the Proxy Auto-Configuration (PAC) file.
Notes:

This function reports the URL of the PAC file, but it does not download the file.

AutoDetectFlags: A data type that specifies what protocols to use to locate the PAC file. If both the DHCP and DNS auto detect flags are set, DHCP is used first; if no PAC URL is discovered using DHCP, then DNS is used.

Value	Meaning
kAutoDetectTypeDHCP	Use DHCP to locate the proxy auto-configuration file.
kAutoDetectTypeDNSA	Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

AutoConfigUrl: String that contains the configuration URL that receives the proxy data.

Returns true if successful, or false otherwise. For extended error information, call LastError. Among the error codes returned are the following.

WinHTTP implements the Web Proxy Auto-Discovery (WPAD) protocol, often referred to as autoproxy. For more information about well-known locations, see the Discovery Process section of the WPAD protocol document.
Note that because the DetectAutoProxyConfigUrl function takes time to complete its operation, it should not be called from a UI thread.

130.61.9 GetDefaultProxyConfiguration as WinHTTPClientProxyInfoMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves the default WinHTTP proxy configuration from the registry.
Notes: Returns the default proxy configuration.

130.61.10 GetIEProxyConfigForCurrentUser as WinHTTPClientCurrentUserIEProxyConfigMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves the Internet Explorer proxy configuration for the current user.
Notes:

Queries the Internet Explorer proxy settings for the current active network connection (for example, LAN, dial-up, or VPN connection).

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384096(v=vs.85).aspx

130.61.11 GetProxyForHost(URL as string, Host as string, byref proxy as string, byref proxyPort as string, AutoConfigURL as string = "") as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Queries the proxy for a host.
Notes:

This is an universal functions using InternetGetProxyInfo, DetectAutoProxyUrl and InternetQueryOption.

URL: The target URL.
Host: The hostname of the target server.

Returns true on success and sets proxy and port. Returns false on failure.
AutoConfigURL is only used on first call instead of a configured auto config URL in Internet Explorer.

130.61.12 GetProxyForUrl(URL as string, AutoProxyOptions as WinHTTPClientAutoProxyOptionsMBS, byref ProxyInfo as WinHTTPClientProxyInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves the proxy data for the specified URL.
Notes:

Url: Contains the URL of the HTTP request that the application is preparing to send.
AutoProxyOptions: Specifies the auto-proxy options to use.
ProxyInfo: Receives the proxy setting.

If the function succeeds, the function returns true.
If the function fails, it returns false. Lasterror is set.

This function implements the Web Proxy Auto-Discovery (WPAD) protocol for automatically configuring the proxy settings for an HTTP request. The WPAD protocol downloads a Proxy Auto-Configuration (PAC) file, which is a script that identifies the proxy server to use for a given target URL. PAC files are typically deployed by the IT department within a corporate network environment. The URL of the PAC file can either be specified explicitly or GetProxyForUrl can be instructed to automatically discover the location of the PAC file on the local network.

GetProxyForUrl supports only ECMAScript-based PAC files.
GetProxyForUrl must be called on a per-URL basis, because the PAC file can return a different proxy server for different URLs. This is useful because the PAC file enables an IT department to implement proxy server load balancing by mapping (hashing) the target URL (specified by the lpcwszUrl parameter) to a certain proxy in a proxy server array.
GetProxyForUrl caches the autoproxy URL and the autoproxy script when auto-discovery is specified in the dwFlags member of the pAutoProxyOptions structure. For more information, see Autoproxy Cache.

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384097(v=vs.85).aspx

130.61.13 InternetGetProxyInfo(URL as string, Host as string) as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Retrieves proxy data for accessing specified resources.
Notes:

This function can only be called by dynamically linking to "JSProxy.dll" (plugin loads this for you). For better autoproxy support, use HTTP Services (WinHTTP) version 5.1 instead.

Url: Secifies the URL of the target HTTP resource.
HostName: Specifies the host name of the target URL.

Returns the URL of the proxy to use in an HTTP request for the specified resource.
Returns empty string on any error.

130.61.14 Open(UserAgent as string, AccessType as Integer, ProxyName as string = ””, ProxyByPass as string = ””) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Initializes an application's use of the WinINet functions.
Notes:

lUserAgent: Specifies the name of the application or entity calling the WinINet functions. This name is used as the user agent in the HTTP protocol.
AccessType: Type of access required. This parameter can be one of the following values.

Value	Meaning
INTERNET_OPEN_TYPE_DIRECT	Resolves all host names locally.
INTERNET_OPEN_TYPE_PRECONFIG	Retrieves the proxy or direct configuration from the registry.
INTERNET_OPEN_TYPE_PRECONFIG_WITH_NO_AUTOPROXY	Retrieves the proxy or direct configuration from the registry and prevents the use of a startup Microsoft JScript or Internet Setup (INS) file.
INTERNET_OPEN_TYPE_PROXY	Passes requests to the proxy unless a proxy bypass list is supplied and the name to be resolved bypasses the proxy. In this case, the function uses INTERNET_OPEN_TYPE_DIRECT.

ProxyName: String that specifies the name of the proxy server(s) to use when proxy access is specified by setting dwAccessType to INTERNET_OPEN_TYPE_PROXY. Do not use an empty string, because InternetOpen will use it as the proxy name. The WinINet functions recognize only CERN type proxies (HTTP only) and the TIS FTP gateway (FTP only). If Microsoft Internet Explorer is installed, these functions also support SOCKS proxies. FTP requests can be made through a CERN type proxy either by changing them to an HTTP request or by using InternetOpenUrl. If dwAccessType is not set to INTERNET_OPEN_TYPE_PROXY, this parameter is ignored and should be NULL. For more information about listing proxy servers, see the Listing Proxy Servers section of Enabling Internet Functionality.
ProxyBypass: Specifies an optional list of host names or IP addresses, or both, that should not be routed through the proxy when dwAccessType is set to INTERNET_OPEN_TYPE_PROXY. The list can contain wildcards. Do not use an empty string, because InternetOpen will use it as the proxy bypass list. If this parameter specifies the ”<local>” macro, the function bypasses the proxy for any host name that does not contain a period.
By default, WinINet will bypass the proxy for requests that use the host names ”localhost”, ”loopback”, ”127.0.0.1”, or ” [::1] ”. This behavior exists because a remote proxy server typically will not resolve these addresses properly.
Internet Explorer 9: You can remove the local computer from the proxy bypass list using the ”<-loopback>” macro.
If dwAccessType is not set to INTERNET_OPEN_TYPE_PROXY, this parameter is ignored and should be NULL.

Flags: Options. This parameter can be a combination of the following values.

Value	Meaning
INTERNET_FLAG_ASYNC	Makes only asynchronous requests on handles descended from the handle returned from this function.
INTERNET_FLAG_FROM_CACHE	Does not make network requests. All entities are returned from the cache. If the requested item is not in the cache, a suitable error, such as ERROR_FILE_NOT_FOUND, is returned.
INTERNET_FLAG_OFFLINE	Identical to INTERNET_FLAG_FROM_CACHE. Does not make network requests. All entities are returned from the cache. If the requested item is not in the cache, a suitable error, such as ERROR_FILE_NOT_FOUND, is returned.

Returns a valid handle that the application passes to subsequent WinINet functions. If Open fails, it returns false. To retrieve a specific error message, call GetLastError.

http://msdn.microsoft.com/en-us/library/windows/desktop/aa385096(v=vs.85).aspx

130.61.15 SetDefaultProxyConfiguration(info as WinHTTPClientProxyInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: Sets the default WinHTTP proxy configuration in the registry.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384113(v=vs.85).aspx

SetDefaultProxyConfiguration changes the proxy configuration set by ProxyCfg.exe.
The default proxy configuration set by this function can be overridden for an existing WinHTTP session by calling SetOption and specifying the OptionProxy flag. The default proxy configuration can be overridden for a new session by specifying the configuration with the WinHttpOpen function.
The dwAccessType member of the WinHTTPClientProxyInfoMBS structure pointed to by pProxyInfo should be set to kAccessTypeNamedProxy if a proxy is specified. Otherwise, it should be set to kAccessTypeDefaultProxy.
Any new sessions created after calling this function use the new default proxy configuration.
Even when WinHTTP is used in asynchronous mode (that is, when WINHTTP_FLAG_ASYNC has been set in WinHttpOpen), this function operates synchronously. The return value indicates success or failure. To get extended error information, call GetLastError.
Note For Windows XP and Windows 2000, see the Run-Time Requirements section of the WinHTTP start page.

130.61.16 Properties

130.61.17 Handle as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference.
Notes:

This is a HINTERNET type.
(Read and Write property)

130.61.18 Lasterror as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error.
Notes:

see also error list:
http://msdn.microsoft.com/en-us/library/aa383770(VS.85).aspx
(Read and Write property)

130.61.19 LasterrorString as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes: (Read and Write property)

130.61.20 OptionConnectTimeOut as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the connect timeout.
Notes:

Lasterror is set.

Sets or retrieves an unsigned long integer value that contains the time-out value, in milliseconds. Setting this option to infinite (-1) will disable this timer.
If a TCP connection request takes longer than this time-out value, the request is canceled. The default timeout is 60 seconds. When you are attempting to connect to multiple IP addresses for a single host (a

multihomed host), the timeout limit is for each individual connection.
(Read and Write property)

130.61.21 OptionProxyPassword as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the proxy password.
Notes:

Sets or retrieves a string value that contains the password used to access the proxy.
Lasterror is set.
(Read and Write property)

130.61.22 OptionProxyUsername as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Get or set the proxy user name.
Notes:

Sets or retrieves a string value that contains the user name used to access the proxy.
Lasterror is set.
(Read and Write property)

130.61.23 Constants

130.61.24 kAccessTypeDefaultProxy = 0

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy access types.
Notes: Applies only when setting proxy information.

130.61.25 kAccessTypeNamedProxy = 3

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy access types.
Notes: Internet accessed using a proxy.

130.61.26 kAccessTypeNoProxy = 1

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy access types.
Notes: Internet accessed through a direct connection.

130.61.27 kAutoDetectTypeDHCP = 1

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the auto detect type flags.
Notes: Use DHCP to locate the proxy auto-configuration file.

130.61.28 kAutoDetectTypeDNSA = 2

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the auto detect type flags.
Notes: Use DNS to attempt to locate the proxy auto-configuration file at a well-known location on the domain of the local computer.

130.61.29 kInternetSchemeHTTP = 1

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the scheme type constants.
Notes: HTTP scheme.

130.61.30 kInternetSchemeHTTPS = 2

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the scheme type constants.
Notes: HTTPS scheme.

130.62 class WinHTTPClientProxyInfoMBS

130.62.1 class WinHTTPClientProxyInfoMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the session or default proxy configuration.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa383912(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.62.2 Methods

130.62.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

130.62.4 Properties

130.62.5 AccessType as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The access type.
Notes:

Can be kAccessTypeDefaultProxy, kAccessTypeNamedProxy or kAccessTypeNoProxy.
(Read and Write property)

130.62.6 Proxy as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The proxy server list.
Notes: (Read and Write property)

130.62.7 ProxyBypass as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The proxy bypass list.
Notes: (Read and Write property)

130.62.8 Constants

130.62.9 kAccessTypeDefaultProxy = 0

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy access types.
Notes: Applies only when setting proxy information.

130.62.10 kAccessTypeNamedProxy = 3

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy access types.
Notes: Internet accessed using a proxy.

130.62.11 kAccessTypeNoProxy = 1

MBS Win Plugin, Plugin Version: 14.1.

Function: One of the proxy access types.
Notes: Internet accessed through a direct connection.

130.63 class WinHTTPClientURLComponentsMBS

130.63.1 class WinHTTPClientURLComponentsMBS

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class containing the constituent parts of an URL.
Notes:

see also
http://msdn.microsoft.com/en-us/library/windows/desktop/aa384078(v=vs.85).aspx
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

130.63.2 Methods

130.63.3 Constructor

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

130.63.4 Properties

130.63.5 ExtraInfo as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The extra information, for example, ?something or # something.
Notes: (Read and Write property)

130.63.6 ExtraInfoLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the extra information, in characters.
Notes: (Read and Write property)

130.63.7 HostName as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The host name.
Notes: (Read and Write property)

130.63.8 HostNameLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the host name, in characters.
Notes: (Read and Write property)

130.63.9 Password as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The password.
Notes: (Read and Write property)

130.63.10 PasswordLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the password, in characters.
Notes: (Read and Write property)

130.63.11 Port as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Port number.
Notes: (Read and Write property)

130.63.12 Scheme as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The scheme name.
Notes: (Read and Write property)

130.63.13 SchemeID as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internet protocol scheme.
Notes:

Normally 1 for HTTP and 2 for HTTPS.
(Read and Write property)

130.63.14 SchemeLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the scheme name, in characters.
Notes: (Read and Write property)

130.63.15 UrlPath as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The URL path.
Notes: (Read and Write property)

130.63.16 UrlPathLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the URL path, in characters.
Notes: (Read and Write property)

130.63.17 UserName as String

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The user name.
Notes: (Read and Write property)

130.63.18 UserNameLength as Integer

MBS Win Plugin, Plugin Version: 14.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of the user name, in characters.
Notes: (Read and Write property)

Chapter 131

Nikon Cameras

131.1 class NikonCapInfoMBS

131.1.1 class NikonCapInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for Capability Information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

131.1.2 Methods

131.1.3 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The private constructor.

131.1.4 Properties

131.1.5 Description as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The description of this capability.
Notes: (Read only property)

131.1.6 ID as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The ID of this property.
Notes:

See eNkMAIDCapability in Nikon's documentation.
(Read only property)

131.1.7 Operations as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The supported operations for this capability.
Notes:

See eNkCapOperations in Nikon's documentation.
(Read only property)

131.1.8 OperationsString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The operation value as a string for displaying.
Notes: (Read only property)

131.1.9 Type as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The type of this capability.
Notes:

See eNkMAIDCababilityType in Nikon's documentation.
(Read only property)

131.1.10 TypeString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The type value as a string for displaying.
Notes: (Read only property)

131.1.11 Visibility as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The visibility of this capability.
Notes:

See eNkCapVisibility in Nikon's documentation.
(Read only property)

131.1.12 VisibilityString as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The visibility value as a string for displaying.
Notes: (Read only property)

131.2 class NikonFileInfoMBS

131.2.1 class NikonFileInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for the File Data Delivery Structure.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

131.2.2 Methods

131.2.3 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The private constructor.

131.2.4 Properties

131.2.5 DiskFile as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: True if the file is delivered on disk.
Notes: (Read and Write property)

131.2.6 FileDataType as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: One of eNkMAIDFileDataTypes.
Notes:

Possible values:

(Read and Write property)

kNkMAIDFileDataType_NotSpecified	0
kNkMAIDFileDataType_JPEG	1
kNkMAIDFileDataType_TIFF	2
kNkMAIDFileDataType_FlashPix	3
kNkMAIDFileDataType_NIF	4
kNkMAIDFileDataType_QuickTime	5
kNkMAIDFileDataType_UserType	& h100

131.2.7 Length as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Number of bytes in this delivery.
Notes: (Read and Write property)

131.2.8 RemoveObject as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: True if the object should be removed.
Notes: (Read and Write property)

131.2.9 Start as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Index of starting byte (0-based)
Notes: (Read and Write property)

131.2.10 TotalLength as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Total number of bytes to be transferred.
Notes: (Read and Write property)

131.3 class NikonImageInfoMBS

131.3.1 class NikonImageInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for the Image Data Delivery structure.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

131.3.2 Methods

131.3.3 Bits(index as Integer) as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Number of bits per plane per pixel.
Notes: Index from 0 to 3.

131.3.4 Constructor

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The private constructor.

131.3.5 Properties

131.3.6 ColorSpace as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The colorspace.
Notes:

Possible values:

(Read and Write property)

kNkMAIDColorSpace_LineArt	0
kNkMAIDColorSpace_Grey	1
kNkMAIDColorSpace_RGB	2
kNkMAIDColorSpace_sRGB	3
kNkMAIDColorSpace_CMYK	4
kNkMAIDColorSpace_Lab	5
kNkMAIDColorSpace_LCH	6
kNkMAIDColorSpace_AppleRGB	7
kNkMAIDColorSpace_ColorMatchRGB	8
kNkMAIDColorSpace_NTSCRGB	9
kNkMAIDColorSpace_BruceRGB	10
kNkMAIDColorSpace_AdobeRGB	11
kNkMAIDColorSpace_CIERGB	12
kNkMAIDColorSpace_AdobeWideRGB	13
kNkMAIDColorSpace_AppleRGB_Compensated	14

131.3.7 Plane as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The plane configuration.
Notes: (Read and Write property)

131.3.8 Rect as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The rectangle.
Notes: (Read and Write property)

131.3.9 RemoveObject as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: True if the object should be removed.
Notes: (Read and Write property)

131.3.10 RowBytes as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Number of bytes per row of pixels.
Notes: (Read and Write property)

131.3.11 TotalPixels as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Total size of image to be transfered.
Notes: (Read and Write property)

131.4 class NikonLiveImageMBS

131.4.1 class NikonLiveImageMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for the live image data structure.
Notes: As there are 5 variants of the data structure for the different camera SDKs, some fields may not be filled for the camera you have.

131.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr10

131.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.5pr10

131.4.4 Methods

131.4.5 AFframes(index as UInt32) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The auto focus frames array.
Notes:

Index from 0 to 34 (fixed to 0 for D5100)
Area of the AF frame size and the AF frame center coordinates for thirty-five persons

131.4.6 Properties

131.4.7 AFAreaIndex as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The Autofocus area index.
Notes:

From 0 to 34 (fixed to 0 for D5100)
(Read and Write property)

131.4.8 AFstate as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: AF mode status of the face detection system.
Notes:

0: The face detection system is not set to AF.
1: The face detection system is set to AF.
(Read and Write property)

131.4.9 Aperture as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The aperture value.
Notes:

Aperture = F number*100
Only for type 2 and 3.
(Read only property)

131.4.10 AutoFocusHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the auto focus area.
Notes: (Read and Write property)

131.4.11 AutoFocusWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the auto focus area.
Notes: (Read and Write property)

131.4.12 AutoFocusX as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The x coordinate of the auto focus area.
Notes: (Read and Write property)

131.4.13 AutoFocusY as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The y coordinate of the auto focus area.
Notes: (Read and Write property)

131.4.14 CountDownTime as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The Countdown time.
Notes:

Countdown every one second starting from 3600 (one hour); countdown starting from thirty seconds with a rise in temperature.
(Read and Write property)

131.4.15 DirectionOfRotation as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The Rotation direction.
Notes: (Read and Write property)

131.4.16 DisplayCenterX as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Display center coordinate.
Notes: (Read and Write property)

131.4.17 DisplayCenterY as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Display center coordinate.
Notes: (Read and Write property)

131.4.18 DisplayHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the display area size.
Notes: (Read and Write property)

131.4.19 DisplayWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the display area size.
Notes: (Read and Write property)

131.4.20 FaceDetectionCount as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The number of persons whose faces are detected by the system.
Notes:

From 0 to 35 (Thirty-five is the maximum number of persons for D5100.)
(Read and Write property)

131.4.21 FacePriorityAFMode as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Face priority AF mode.
Notes:

0: Face priority AF is not active.
1: Face priority AF is active.
(Read and Write property)

131.4.22 FocusDriveState as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Focus driving status.
Notes:

0: Not driving
1: Driving
(Read and Write property)

131.4.23 FocusResult as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Focusing judgment result.
Notes:

0: No information
1: Not focused
2: Focused
(Read and Write property)

131.4.24 Height as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Height of the JPEG image.
Notes: (Read and Write property)

131.4.25 JPEGData as MemoryBlock

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The JPEG data of the live image.
Notes:

You can use JPEGStringToPictureMBS to decode it.
(Read and Write property)

131.4.26 MovieRecordingInformation as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Movie recording information.
Notes:

0: During LV execution
1: During movie recording

(Read and Write property)

131.4.27 RawData as MemoryBlock

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The raw data used to build this image object and the fill the properties.
Notes: (Read and Write property)

131.4.28 RemainingMovieRecordingTime as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Remaining time of movie recording.
Notes:

From 0 to 1200000 [msec] .
It is valid during the movie recording state.
(Read and Write property)

131.4.29 SelectedFocusPoint as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The number of the selected focus area.
Notes:

Range from 0 to 11.
(Read and Write property)

131.4.30 ShutterSpeed as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The shutter speed.
Notes:

Only for type 2 and 3.
(Read only property)

131.4.31 TotalHeight as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The total size of the image.
Notes: (Read and Write property)

131.4.32 TotalWidth as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The total size of the image.
Notes: (Read and Write property)

131.4.33 Width as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Width of the JPEG image.
Notes: (Read and Write property)

131.4.34 Constants

131.4.35 kAFStateDriveImpossibility = 0

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the values for state that AF can be driven.
Notes: AF drive impossibility.

131.4.36 kAFStateDrivePossible = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the values for state that AF can be driven.
Notes: AF drive possible.

131.4.37 kDirectionClockWise = 2

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the constants for rotation direction.
Notes: Rotate clockwise

131.4.38 kDirectionCounterClockWise = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the constants for rotation direction.
Notes: Rotate counterclockwise

131.4.39 kDirectionNone = 0

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the constants for rotation direction.
Notes: No rotation

131.4.40 kFacePriorityAFModeActive = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the auto focus modes.
Notes: Active

131.4.41 kFacePriorityAFModeNotActive = 0

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the auto focus modes.
Notes: Inactive

131.4.42 kFocusDriveStateDriving = 0

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the focus driving values.
Notes: Driving

131.4.43 kFocusDriveStateNotDriving = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the focus driving values.
Notes: Not driving.

131.4.44 kFocusResultInFocus = 2

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the focus result values.
Notes: In Focus

131.4.45 kFocusResultNoInformation = 0

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the focus result values.
Notes: Focused

131.4.46 kFocusResultOutOfFocus = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the focus result values.
Notes: Not focused.

131.5 class NikonMBS

131.5.1 class NikonMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class to talk to a Nikon camera.
Notes: You need to get the SDKs yourself for the various cameras, so you have the PDF manuals, the C header files and the shared libraries.

131.5.2 Blog Entries

- MBS Xojo Plugins, version 17.4pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr1

131.5.3 Blog Entries

- MBS Xojo Plugins, version 17.4pr4
- MBS Xojo / Real Studio Plugins, version 13.4pr1

131.5.4 Methods

131.5.5 Acquire as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Acquires an image.

131.5.6 Async_ as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Performs an asynchronously operation.

131.5.7 AutoFocus as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Performs autofocus.
Notes: Performs operation kNkMAIDCapability_AutoFocus.

131.5.8 AvailableDatatypes as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns available data types.

131.5.9 Capabilities(what as Integer) as NikonCapInfoMBS()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the list of capabilities.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.10 CapabilitiesCount(what as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns the number of capabilities.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.11 Capability(what as Integer, ID as Integer) as NikonCapInfoMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the capability with given ID.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.12 Capture as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Performs a capture.
Notes: Performs operation kNkMAIDCapability_Capture.

131.5.13 CloseData

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current data object.

131.5.14 CloseItem

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current item.

131.5.15 CloseModule

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current module.

131.5.16 CloseSource

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes current source.

131.5.17 GetCapBoolean(what as Integer, ID as Integer) as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a boolean value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.18 GetCapDefaultBoolean(what as Integer, ID as Integer) as Boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a boolean value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.19 GetCapDefaultDouble(what as Integer, ID as Integer) as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a double value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.20 GetCapDefaultInt32(what as Integer, ID as Integer) as Int32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with an Int32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.21 GetCapDefaultPoint(what as Integer, ID as Integer) as NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a point value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.22 GetCapDefaultRect(what as Integer, ID as Integer) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a rectangle value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.23 GetCapDefaultSize(what as Integer, ID as Integer) as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a size value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.24 GetCapDefaultString(what as Integer, ID as Integer) as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the default value for a capability with a string value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.25 GetCapDefaultUInt32(what as Integer, ID as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.26 GetCapDouble(what as Integer, ID as Integer) as Double

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a double value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.27 GetCapEnumPacketString(what as Integer, ID as Integer, byref current as UInt32) as string()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a packet string enum value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.28 GetCapEnumString(what as Integer, ID as Integer, byref current as UInt32) as string()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a string enum value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.29 GetCapEnumUInt32(what as Integer, ID as Integer, byref current as UInt32) as UInt32()

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an enum UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.30 GetCapInt32(what as Integer, ID as Integer) as Int32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an Int32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.31 GetCapPoint(what as Integer, ID as Integer) as NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a point value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.32 GetCapRange(what as Integer, ID as Integer, byref Value as Double, byref DefaultValue as Double, byref ValueIndex as UInt32, byref DefaultIndex as UInt32, byref LowerValue as Double, byref UpperValue as Double, byref Steps as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a range value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.33 GetCapRect(what as Integer, ID as Integer) as NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a rectangle value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.34 GetCapSize(what as Integer, ID as Integer) as NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a size value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.35 GetCapString(what as Integer, ID as Integer) as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with a string value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.36 GetCapUInt32(what as Integer, ID as Integer) as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a capability with an UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.37 GetItemCount as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries number of items.

131.5.38 GetLiveViewImage(type as Integer) as NikonLiveImageMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries a live image.
Notes:

Performs kNkMAIDCapability_GetLiveViewImage and decodes data returned into a NikonLiveImageMBS object.
Type: Which type of device you have. Value from 1 to 5.

131.5.39 GetSourceCount as UInt32

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the number of sources (cameras).

131.5.40 GetVideoImageData(Offset as UInt32, BlockSize as UInt32) as String

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries data of a video file.
Notes: Please use OpenData before to open the video.

131.5.41 GetVideoImageDataSize as UInt32

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries data size of a video.
Notes: Please use OpenData before to open the video.

131.5.42 LoadLibrary(file as folderitem) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Loads the Nikon shard library.
Notes:

Returns true on success.
Please pass folderitem pointing to dll on Windows and dylib on Mac OS X.
See also:

- 131.5.43 LoadLibrary(path as string) as boolean 21353

131.5.43 LoadLibrary(path as string) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Loads the Nikon shard library.
Notes:

Returns true on success.
Please pass string path pointing to dll on Windows and dylib on Mac OS X.
See also:

- 131.5.42 LoadLibrary(file as folderitem) as boolean 21353

131.5.44 OpenData(type as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens data of given type.

131.5.45 OpenItem(index as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the item with the given index.
Notes: Index is zero based.

131.5.46 OpenModule as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the module.

131.5.47 OpenSource(index as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the source with the given index.
Notes: Index is zero based.

131.5.48 PreCapture as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Prepares a capture.
Notes: Performs operation kNkMAIDCapability_PreCapture.

131.5.49 SetCapBoolean(what as Integer, ID as Integer, value as Boolean)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a boolean value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.50 SetCapDouble(what as Integer, ID as Integer, value as Double)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an double value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.51 SetCapEnumPackedString(what as Integer, ID as Integer, EnumIndex as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an enum of PacketString values.
Notes:

What: Selects what to query. Can be kModule, kSource, kItem or kData.
You first query the enum to get the list of options, than you can set a new one by passing index here.

131.5.52 SetCapEnumUInt32(what as Integer, ID as Integer, Value as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an enum UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.53 SetCapInt32(what as Integer, ID as Integer, value as Int32)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an Int32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.54 SetCapPoint(what as Integer, ID as Integer, value as NikonPointMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a point value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.55 SetCapRange(what as Integer, ID as Integer, Value as Double, ValueIndex as UInt32) as boolean

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a range value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.56 SetCapRect(what as Integer, ID as Integer, value as NikonRectMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a rectangle value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.57 SetCapSize(what as Integer, ID as Integer, value as NikonSizeMBS)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an size value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.58 SetCapString(what as Integer, ID as Integer, value as String)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with a string value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.59 SetCapUInt32(what as Integer, ID as Integer, value as UInt32)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with an UInt32 value.
Notes: What: Selects what to query. Can be kModule, kSource, kItem or kData.

131.5.60 Properties

131.5.61 FunctionPtr as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The main entry function pointer for the Nikon library.
Notes: (Read only property)

131.5.62 Lasterror as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read only property)

131.5.63 LoadErrorMessage as String

MBS Cameras Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The error message from loading library.
Notes:

Set by LoadLibrary methods to help debugging.

Windows error 193 means that 64-bit Xojo app tried to load 32-bit library or 32-bit Xojo app tried to load 64-bit library. The bit level must match between app and library. For Mac OS X the error message will tell you about wrong architecture.
(Read only property)

131.5.64 Events

131.5.65 FileDownloadComplete(info as NikonFileInfoMBS, data as Memoryblock, length as Integer)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: .

Function: Informs you about a finished file download.

131.5.66 ImageDownloadComplete(info as NikonImageInfoMBS, data as Memoryblock, length as Integer)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: .

Function: This event informs you about a finished event.

131.5.67 Progress(Command as Integer, Param as Integer, Done as UInt32, Total as UInt32, Percent as Double)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: .

Function: This event informs you about progress of an ongoing operation.

131.5.68 Constants

131.5.69 kData = 8

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the selector constants.
Notes: Apply to data.

131.5.70 kDataObjTypeFile = 16

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the data object types.
Notes: Other file

131.5.71 kDataObjTypeImage = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the data object types.
Notes: Image file

131.5.72 kDataObjTypeSound = 2

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the data object types.
Notes: Sound file

131.5.73 kDataObjTypeThumbnail = 8

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the data object types.
Notes: Picture thumbnail

131.5.74 kDataObjTypeVideo = 4

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the data object types.
Notes: Video file

131.5.75 kDevice = 2

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the selector constants.
Notes: Apply to device/source.

131.5.76 kItem = 4

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the selector constants.
Notes: Apply to item.

131.5.77 kModule = 1

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the selector constants.
Notes: Apply to module.

131.5.78 kSource = 2

MBS Cameras Plugin, Plugin Version: 13.1.

Function: One of the selector constants.
Notes: Apply to device/source.

131.6 class NikonPointMBS

131.6.1 class NikonPointMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for a point.

131.6.2 Methods

131.6.3 Constructor(x as Integer = 0, y as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The constructor.

131.6.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Converts the point to a string for displaying.

131.6.5 Properties

131.6.6 x as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The x coordinate.
Notes: (Read and Write property)

131.6.7 y as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The y coordinate.
Notes: (Read and Write property)

131.7 class NikonRectMBS

131.7.1 class NikonRectMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for a rectangle.

131.7.2 Methods

131.7.3 Constructor(x as Integer = 0, y as Integer = 0, w as Integer = 0, h as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The constructor.

131.7.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Converts the rectangle to a string for displaying.

131.7.5 Properties

131.7.6 h as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the rectangle.
Notes: (Read and Write property)

131.7.7 w as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the rectangle.
Notes: (Read and Write property)

131.7.8 x as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The x coordinate of the rectangle.
Notes: (Read and Write property)

131.7.9 y as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The y coordinate of the rectangle.
Notes: (Read and Write property)

131.8 class NikonSizeMBS

131.8.1 class NikonSizeMBS

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The class for a size.

131.8.2 Methods

131.8.3 Constructor(w as Integer = 0, h as Integer = 0)

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The constructor.

131.8.4 Operator_Convert as String

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: Converts the size to a string for displaying.

131.8.5 Properties

131.8.6 h as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the size object.
Notes: (Read and Write property)

131.8.7 w as Integer

MBS Cameras Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the size object.
Notes: (Read and Write property)

Chapter 132

Notifications

132.1 class NotificationCenterMBS

132.1.1 class NotificationCenterMBS

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for notifications sent on Mac OS X.
Notes:

From Apple's help, but modified:

Distributed notifications allow an application to broadcast a message to any number of other applications without needing to know who those other applications are, or even if the other applications exist. Every application type — Cocoa, Carbon, BSD — can use distributed notifications.

An application, the target application in this case, expresses an interest in receiving a broadcasted message by registering itself with the system's distributed notification center, identifying exactly what message, or notification type, it wants to receive. The notification type is defined by an arbitrary string agreed upon by the sender and receiver of the notification. As an example, Cocoa's NSWindow class defines the notification type "NSWindowDidCloseNotification", which an NSWindow instance broadcasts when its window closes. Any other object can register to receive this notification. (This notification, however, is internal to a single application and is not distributed to the rest of the system.)

In addition to the message, the application can identify the particular object sending the message. When the sender and receiver are in the same application—in other words, using nondistributed notifications—the observed object can be anything. When using distributed notifications, though, the object must be a string. A useful choice for the observed string is the bundle identifier of the target application.

In registering for the notification, the application provides a class with an Receive event, which will later be called.

Next, the broadcasting application — your preference pane — sends the notification. It calls the system's notification center, tells the center what notification to send, and optionally passes a dictionary containing additional information. The dictionary can be used to pass the modified preferences directly to the application. Or, the preference pane can choose not to use the dictionary and instead write the changes out to disk. The notification is then used to tell the application to update its preferences from the disk.

The notification center looks up all the applications that registered to receive the given notification type from the particular instance. It then notifies each application's run loop of the notification and gives it a copy of the dictionary. The selected callback function or method is executed during the application's next pass through its run loop.

When using Preference Services, be certain to flush changes to the disk with the appropriate synchronize functions before sending notifications of changes. Otherwise, due to the caching performed by Preference Services, the disk may not accurately reflect the changes when the target receives the notification. Likewise, the target application must resynchronize its preferences after receiving the notification.

- MBS Xojo / Real Studio Plugins, version 15.0pr10

132.1.4 Methods

132.1.5 Add(name as CFStringMBS, obj as CFObjectMBS, flags as Integer)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a new callback.
Notes:

This function costs around 24 bytes of memory per call which are never released (needed for the callback between framework and RB).

Values for the flags:

CFNotificationSuspensionBehaviorDrop	1	The server will not queue any notifications with this name and object while the process/app is in the background.
CFNotificationSuspensionBehaviorCoalesce	2	The server will only queue the last notification of the specified name and object; earlier notifications are dropped.
CFNotificationSuspensionBehaviorHold	3	The server will hold all matching notifications until the queue has been filled (queue size determined by the server) at which point the server may flush queued notifications.
CFNotificationSuspensionBehaviorDeliverImmediately	4	The server will deliver notifications matching this registration whether or not the process is in the background. When a notification with this suspension behavior is matched, it has the effect of first flushing any queued notifications.

132.1.6 close(name as CFStringMBS, obj as CFObjectMBS)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes the given callback.

132.1.7 closeAll

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes all registered callbacks.
Notes: This is called by the destructor.

132.1.8 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, deliverImmediately as Boolean)

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Posts a new notification.
Notes: Obj and userinfo may be nil.
See also:

- 132.1.9 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, options as Integer) 21367

132.1.9 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, options as Integer)

MBS MacCF Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Posts a new notification.
Example:

```
dim n as new NotificationCenterMBS
```

n.Post(NewCFStringMBS("test"), nil, nil, n.kCFNotificationPostToAllSessions + n.kCFNotificationDeliverImmediately)

Notes:

Obj and userinfo may be nil.
Requires Mac OS X 10.3.
For options you can use a combination with kCFNotificationDeliverImmediately=1 and kCFNotificationPostToAllSessions=2.
See also:

- 132.1.8 Post(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS, deliverImmediately as Boolean) 21367

132.1.10 Properties

132.1.11 Available as boolean

MBS MacCF Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the needed framework was successfull loaded.
Notes: (Read only property)

132.1.12 Events

132.1.13 Received(name as CFStringMBS, obj as CFObjectMBS, userinfo as CFDictionaryMBS)

MBS MacCF Plugin, Platform: macOS, Targets: .

Function: A notification was received.
Notes: All parameters may be for any reason nil.

132.1.14 Constants

132.1.15 kCFNotificationDeliverImmediately = 1

MBS MacCF Plugin, Plugin Version: 7.4.

Function: One of the constant you can use for the Post Method.

132.1.16 kCFNotificationPostToAllSessions = 2

MBS MacCF Plugin, Plugin Version: 7.4.

Function: One of the constant you can use for the Post Method.

132.2 class NotificationMBS

132.2.1 class NotificationMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for an application internal notification.
Example:

```
dim n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

Notes:

The point of notifications is to inform some other part of your application about something. For example a chart updating if the user enters data in textfields.

So you register for notifications in existing classes/windows with the NotificationReceiverMBS interface. Or you create a subclass of the NotificationObserverMBS class to receive notifications

All notifications are delivered on the same thread as the send method. If needed we could have an asyncron notification system. Please email for that.

Other notifications:

NSNotification: Notifications send from the Cocoa frameworks within your application over NSNotificationCenterMBS class or send across all applications with NSDistributedNotificationCenterMBS.

MacNotificationMBS: A notification message to the user which may have a sound, a message box and/or a jumping dock icon.

132.2.2 Blog Entries

132.2.6 Methods

132.2.7 Constructor(name as string = "", ref as Variant = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new notification with the given values.
Example:

```
dim n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)
```

132.2.8 RegisterReceiver(target as NotificationReceiverMBS, name as string = "", ref as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Registers a receiver.
Notes:

You have a class/window and you add NotificationReceiverMBS to the interfaces. Xojo will add a ReceivedNotification method which looks like this:

```
ReceivedNotification(name as string, ref as Variant, tag as Variant, notification as NotificationMBS)
```

Don't forget to call UnregisterReceiver later in the Close event or destructor.

If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

132.2.9 Send(name as string, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

NotificationMBS.Send("DatabaseChangedNotification")

Notes:

This is a convenience method which creates a new NSNotificationMBS object and sends it.

All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.
See also:

- 132.2.10 Send(notification as NotificationMBS) 21372

132.2.10 Send(notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

dim n as new NotificationMBS("DatabaseChangedNotification")
NotificationMBS.send(n)

Notes:

All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.
See also:

- 132.2.9 Send(name as string, ref as object = nil, tag as Variant = nil) 21372

132.2.11 SendDelayed(name as string, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

NotificationMBS.SendDelayed("DatabaseChangedNotification")

Notes: Same as Send method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.
See also:

- 132.2.12 SendDelayed(notification as NotificationMBS) 21373

132.2.12 SendDelayed(notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
dim n as new NotificationMBS("DatabaseChangedNotification", window1, "test")
NotificationMBS.SendDelayed(n)
```

Notes: Same as Send method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.
See also:

- 132.2.11 SendDelayed(name as string, ref as object = nil, tag as Variant = nil) 21372

132.2.13 SendNotification

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends this notification.
Example:

```
dim n as new NotificationMBS("DatabaseChangedNotification")
n.SendNotification
```

Notes:

All registered receivers will get the ReceivedNotification method called as well as all registered observers will get an ReceivedNotification event.
Of course notifications are filtered by name and/or referenced object.

132.2.14 SendNotificationDelayed

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sends a notification.
Example:

```
dim n as new NotificationMBS("DatabaseChangedNotification")
n.SendNotificationDelayed
```

Notes: Same as SendNotification method, but the notification will be delivered later on the main thread. The notification is queued and will wait until there is free CPU time.

132.2.15 UnregisterReceiver(target as NotificationReceiverMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Unregisters an receiver.

132.2.16 Properties

132.2.17 Name as String

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name for the notification.
Example:

```
dim n as new NotificationMBS("DatabaseChangedNotification", window1, "test")
MsgBox n.Name
```

Notes: (Read and Write property)

132.2.18 Ref as Variant

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The reference object.
Notes:

Defines which object the notification references. If nil, you target all objects.

(Read and Write property)

132.2.19 Tag as Variant

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The attached value.
Example:

```
dim n as new NotificationMBS
n.Tag = "Hello World"
```

Notes:

You can use this property as you like.
This value is sent to the receivers. It allows you to pass an additional value without needing to write a subclass of the NotificationMBS class.
(Read and Write property)

132.3 class NotificationObserverMBS

132.3.1 class NotificationObserverMBS

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for receiving notifications.

132.3.2 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes
- MBS REALbasic Plugins, version 10.4pr8

132.3.3 Blog Entries

- MBS REALbasic Plugins Version 10.4 release notes

132.3.4 Methods

132.3.5 Constructor(name as string = ””, ref as object = nil, tag as Variant = nil)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new notification observer.
Notes: If you register with name = ”” and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

132.3.6 Properties

132.3.7 Name as String

MBS DataTypes Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the notification to listen for.
Notes: (Read only property)

132.3.8 Ref as Object

MBS DataTypes Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The target object to listen for.
Notes: (Read only property)

132.3.9 Events

132.3.10 ReceivedNotification(name as string, ref as Variant, tag as Variant, notification as NotificationMBS)

MBS DataTypes Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called if a notification was received.
Notes:

This event is registered automatically, so do not call RegisterReceiver with the NotificationObserverMBS object.

If you register with name = "" and ref = nil, you receive all notifications. If you have a name, you get only notifications matching the name (case sensitive compare). If you have a reference object, you receive only objects for that object. And you can use both name and object.

132.4 class NSDistributedNotificationCenterMBS

132.4.1 class NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The NSDistributedNotificationCenter class provides a way to send notifications to objects in other tasks.
Notes:

It takes NSNotification objects and broadcasts them to any objects in other tasks that have registered for the notification with their task's default distributed notification center.

The NSDistributedNotificationCenter class implements a notification center that can distribute notifications asynchronously to tasks other than the one in which the notification was posted. An instance of this class are known as a distributed notification center.

Each task has a default distributed notification center that you access with the defaultCenter class method. There may be different types of distributed notification centers. Currently there is a single type—NSLocalNotificationCenterType. This type of distributed notification center handles notifications that can be sent between tasks on a single computer. For communication between tasks on different computers, use Distributed Objects Programming Topics.

Posting a distributed notification is an expensive operation. The notification gets sent to a system-wide server that distributes it to all the tasks that have objects registered for distributed notifications. The latency between posting the notification and the notification's arrival in another task is unbounded. In fact, when too many notifications are posted and the server's queue fills up, notifications may be dropped.
Subclass of the NSNotificationCenterMBS class.

132.4.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr11

132.4.4 Methods

132.4.5 addObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant, suspensionBehavior as Integer)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds an entry to the receiver's dispatch table with a specific observer and suspended-notifications behavior, and optional notification name and sender.
Notes:

observer: Object registering as an observer. Must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. When nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. When nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.
suspensionBehavior: Notification posting behavior when notification delivery is suspended.

The receiver does not retain notificationObserver. Therefore, you should always send removeObserver to the receiver before releasing notificationObserver.

132.4.6 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new instance with the default distributed notification center, representing the local notification center for the computer.
Notes:

Default distributed notification center for the computer.

This method calls notificationCenterForType: with an argument of NSLocalNotificationCenterType.

132.4.7 defaultCenter as NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the default distributed notification center, representing the local notification center for the computer.
Notes:

Default distributed notification center for the computer.

This method calls notificationCenterForType: with an argument of NSLocalNotificationCenterType.

132.4.8 notificationCenterForType(name as string) as NSDistributedNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the distributed notification center for a particular notification center type.
Notes:

name: Notification center type being inquired about.

Currently only one type, NSLocalNotificationCenterType, is supported.

132.4.9 NSLocalNotificationCenterType as string

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: This constant specifies the notification center type.
Notes: Distributes notifications to all tasks on the sender's computer.

132.4.10 postNotificationName(name as string, theObject as string, userInfo as dictionary, deliverImmediately as boolean)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a notification with information and an immediate-delivery specifier, and posts it to the receiver.
Notes:

name: Name of the notification to post. Must not be nil.
theObject: Sender of the notification. May be "".
userInfo: Dictionary containing additional information. May be nil.
deliverImmediately: Specifies when to deliver the notification. When false, the receiver delivers notifications to their observers according to the suspended-notification behavior specified in the corresponding dispatch table entry. When true, the receiver delivers the notification immediately to its observers.

This is the preferred method for posting notifications.
The notificationInfo dictionary is serialized as a property list, so it can be passed to another task. In the receiving task, it is deserialized back into a dictionary. This serialization imposes some restrictions on the

objects that can be placed in the notificationInfo dictionary. See XML Property Lists for details.
See also:

- 132.4.11 postNotificationName(name as string, theObject as string, userInfo as dictionary, options as UInt32) 21381

132.4.11 postNotificationName(name as string, theObject as string, userInfo as dictionary, options as UInt32)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a notification with information, and posts it to the receiver.
Example:

```
dim notifyData as string = "Hello World"
dim notifyName as string = "Test"

Dim notifyDict As New Dictionary
notifyDict.Value("nData")=notifyData
NSDistributedNotificationCenterMBS.DefaultCenter.postNotificationName(notifyName, "", notifyDict, 2)
```

Notes:

name: Name of the notification to post. Must not be nil.
theObject: Sender of the notification. May be "".
userInfo: Dictionary containing additional information. May be nil.
options: Specifies how the notification is posted to the task and when to deliver it to its observers.

The userInfo dictionary is serialized as a property list, so it can be passed to another task. In the receiving task, it is deserialized back into a dictionary. This serialization imposes some restrictions on the objects that can be placed in the notificationInfo dictionary. See XML Property Lists for details.
See also:

- 132.4.10 postNotificationName(name as string, theObject as string, userInfo as dictionary, deliverImmediately as boolean) 21380

132.4.12 Properties

132.4.13 suspended as boolean

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: A boolean value that indicates whether notification delivery is suspended.
Notes:

The NSApplication class automatically suspends distributed notification delivery when the application is not active. Applications based on the Application Kit framework should let AppKit manage the suspension of notification delivery. Foundation-only programs may have occasional need to use this method.
(Read and Write computed property)

132.4.14 Constants

132.4.15 NSNotificationDeliverImmediately = 1

MBS MacBase Plugin, Plugin Version: 9.7.

Function: One of the option constants to specify the behavior of notifications posted using the postNotificationName method.
Notes: When set, the notification is delivered immediately to all observers, regardless of their suspension behavior or suspension state. When not set, allows the normal suspension behavior of notification observers to take place.

132.4.16 NSNotificationPostToAllSessions = 2

MBS MacBase Plugin, Plugin Version: 9.7.

Function: One of the option constants to specify the behavior of notifications posted using the postNotificationName method.
Notes: When set, the notification is posted to all sessions. When not set, the notification is sent only to applications within the same login session as the posting task.

132.4.17 NSNotificationSuspensionBehaviorCoalesce = 2

MBS MacBase Plugin, Plugin Version: 9.7.

Function: One of the constants to specify the types of notification delivery suspension behaviors.
Notes: The server only queues the last notification of the specified name and object; earlier notifications are dropped. In cover methods for which suspension behavior is not an explicit argument, NSNotificationSuspensionBehaviorCoalesce is the default.

132.4.18 NSNotificationSuspensionBehaviorDeliverImmediately = 4

MBS MacBase Plugin, Plugin Version: 9.7.

Function: One of the constants to specify the types of notification delivery suspension behaviors.
Notes: The server delivers notifications matching this registration irrespective of whether Suspended is set

to true. When a notification with this suspension behavior is matched, it has the effect of first flushing any queued notifications. The effect is as if setSuspended: with an argument of false were first called if the application is suspended, followed by the notification in question being delivered, followed by a transition back to the previous suspended or unsuspended state.

132.4.19 NSNotificationSuspensionBehaviorDrop = 1

MBS MacBase Plugin, Plugin Version: 9.7.

Function: One of the constants to specify the types of notification delivery suspension behaviors.
Notes: The server does not queue any notifications with this name and object until Suspended is set to false.

132.4.20 NSNotificationSuspensionBehaviorHold = 3

MBS MacBase Plugin, Plugin Version: 9.7.

Function: One of the constants to specify the types of notification delivery suspension behaviors.
Notes: The server holds all matching notifications until the queue has been filled (queue size determined by the server), at which point the server may flush queued notifications.

132.5 class NSNotificationCenterMBS

132.5.1 class NSNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: An NSNotificationCenter object (or simply, notification center) provides a mechanism for broadcasting information within a task.
Notes:

An NSNotificationCenter object is essentially a notification dispatch table.

This is for sending broadcast messages from one application to other application on same computer.
For the notification center in Mac OS X 10.8, please use NSUserNotificationMBS class.

132.5.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr11

132.5.4 Methods

132.5.5 addObserver(observer as NSNotificationObserverMBS, name as string="", theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Adds an entry to the receiver's dispatch table with an observer and optional criteria: notification name and sender.
Notes:

observer: Object registering as an observer. This value must not be nil.
name: The name of the notification for which to register the observer; that is, only notifications with this name are delivered to the observer. If you pass nil, the notification center doesn't use a notification's name to decide whether to deliver it to the observer.
theObject: The object whose notifications the observer wants to receive; that is, only notifications sent by this sender are delivered to the observer. If you pass nil, the notification center doesn't use a notification's sender to decide whether to deliver it to the observer.

132.5.6 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The constructor to create a new instance of notification center pointing to the default notification center.
Notes: The current task's default notification center, which is used for system notifications.

132.5.7 defaultCenter as NSNotificationCenterMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the task's default notification center.
Notes: The current task's default notification center, which is used for system notifications.

132.5.8 postNotification(notification as NSNotificationMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Posts a given notification to the receiver.
Notes: notification: The notification to post. This value must not be nil.

132.5.9 postNotificationName(name as string)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Creates a notification with a given name and sender and posts it to the receiver.
Notes:

name: The name of the notification.
theObject: The object posting the notification.
See also:

- 132.5.10 postNotificationName(name as string, theObject as Variant) 21385
- 132.5.11 postNotificationName(name as string, theObject as Variant, userInfo as dictionary) 21386

132.5.10 postNotificationName(name as string, theObject as Variant)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Creates a notification with a given name and sender and posts it to the receiver.
Notes:

name: The name of the notification.
theObject: The object posting the notification.
See also:

- 132.5.9 postNotificationName(name as string) 21385
- 132.5.11 postNotificationName(name as string, theObject as Variant, userInfo as dictionary) 21386

132.5.11 postNotificationName(name as string, theObject as Variant, userInfo as dictionary)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Creates a notification with a given name, sender, and information and posts it to the receiver.
Notes:

name: The name of the notification.
theObject: The object posting the notification.
userInfo: Information about the the notification. May be nil.

This method is the preferred method for posting notifications.
See also:

- 132.5.9 postNotificationName(name as string) 21385
- 132.5.10 postNotificationName(name as string, theObject as Variant) 21385

132.5.12 removeObserver(observer as NSNotificationObserverMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Removes all the entries specifying a given observer from the receiver's dispatch table.
Notes:

observer: The observer to remove. Must not be nil.

Be sure to invoke this method before notificationObserver or any object specified in addObserver is deallocated.
See also:

- 132.5.13 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil) 21387

132.5.13 removeObserver(observer as NSNotificationObserverMBS, name as string, theObject as Variant=nil)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Removes matching entries from the receiver's dispatch table.
Notes:

notificationObserver: Observer to remove from the dispatch table. Specify an observer to remove only entries for this observer. Must not be nil, or message will have no effect.
notificationName: Name of the notification to remove from dispatch table. Specify a notification name to remove only entries that specify this notification name. When nil, the receiver does not use notification names as criteria for removal.
notificationSender: Sender to remove from the dispatch table. Specify a notification sender to remove only entries that specify this sender. When nil, the receiver does not use notification senders as criteria for removal.

Be sure to invoke this method before the observer object or any object specified in addObserver is deallocated.
See also:

- 132.5.12 removeObserver(observer as NSNotificationObserverMBS) 21386

132.5.14 Properties

132.5.15 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The internal reference to the notification center.
Notes: (Read and Write property)

132.6 class NSNotificationMBS

132.6.1 class NSNotificationMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: NSNotification objects encapsulate information so that it can be broadcast to other objects by an NSNotificationCenter object.
Notes:

An NSNotification object (referred to as a notification) contains a name, an object, and an optional dictionary. The name is a tag identifying the notification. The object is any object that the poster of the notification wants to send to observers of that notification (typically, it is the object that posted the notification). The dictionary stores other related objects, if any. NSNotification objects are immutable objects.

You can create a notification object with the class method notificationWithName. However, you don't usually create your own notifications directly. The NSNotificationCenter method postNotificationName allow you to conveniently post a notification without creating it first.

On Windows you can use WinNotificationMBS class for similar functionality.

This is for sending broadcast messages from one application to other application on same computer.
For the notification center in Mac OS X 10.8, please use NSUserNotificationMBS class.

132.6.4 Methods

132.6.5 Constructor(handle as Integer)

MBS MacBase Plugin, Plugin Version: 13.4, Platform: macOS, Targets: All.

Function: Creates a notification object with a NSNotification reference.
Notes: The object is retained and later in destructor it is released.
See also:

- 132.6.6 Constructor(name as string, theObject as Variant = nil, userInfo as dictionary = nil) 21389

132.6.6 Constructor(name as string, theObject as Variant = nil, userInfo as dictionary = nil)

MBS MacBase Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Creates a notification object with a specified name, object, and user information.
Example:

```
dim n as new NSNotificationMBS("Hello")
MsgBox n.name
```

Notes:

name: The name for the new notification. May not be nil.
theObject: The object for the new notification. Can be nil.
userInfo: The user information dictionary for the new notification. May be nil.
See also:

- 132.6.5 Constructor(handle as Integer) 21389

132.6.7 notificationWithName(name as string, theObject as Variant = nil, userInfo as dictionary = nil) as NSNotificationMBS

MBS MacBase Plugin, Plugin Version: 11.3, Platform: macOS, Targets: All.

Function: Returns a notification object with a specified name, object, and user information.
Example:

```
dim n as NSNotificationMBS = NSNotificationMBS.notificationWithName("Hello")
MsgBox n.name
```

Notes:

name: The name for the new notification. May not be nil.
theObject: The object for the new notification. Can be nil.
userInfo: The user information dictionary for the new notification. May be nil.

132.6.8 Print

MBS MacBase Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: Writes description for this event descriptor to the console.
Notes: You can see result in Console.app.

132.6.9 Properties

132.6.10 description as string

MBS MacBase Plugin, Plugin Version: 12.1, Platform: macOS, Targets: All.

Function: The descriptor for this notification.
Example:

```
dim n as NSNotificationMBS = NSNotificationMBS.notificationWithName("Hello")
MsgBox n.description
```

Notes:

This is a text representation for debugging.
(Read only property)

132.6.11 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The internal reference to the NSNotification object.
Notes: (Read and Write property)

132.6.12 name as string

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the name of the notification.
Notes:

The name of the notification. Typically you use this method to find out what kind of notification you are dealing with when you receive a notification.
Notification names can be any string. To avoid name collisions, you might want to use a prefix that's specific to your application.
(Read only property)

132.6.13 objectHandle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The reference to the object.
Notes:

May be useful for declares.
(Read only property)

132.6.14 objectVariant as Variant

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the object associated with the notification.
Notes:

The object associated with the notification. This is often the object that posted this notification. It may be nil.
Typically you use this method to find out what object a notification applies to when you receive a notification.

See the FAQ for the list of supported NSObject types for variant conversion.
(Read only property)

132.6.15 userInfo as dictionary

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: Returns the user information dictionary associated with the receiver.
Example:

```
// tests dictionary conversion:

dim d as new Dictionary
```

```
dim x as new Dictionary
x.Value("Hello") = "World"

dim b as Boolean = true
dim s as Single = 2.3
dim dd as Double = 3.4
dim h as int64 = 1234

d.Value(1) = 1
d.Value(2) = 2.0
d.Value(3) = x
d.Value(4) = "Hello"
d.Value(5) = b
d.Value(6) = s
d.Value(7) = dd
d.Value(8) = h

dim n as new NSNotificationMBS("test", nil, d)

dim nd as Dictionary = n.userInfo

// check nd object
break
```

Notes:

Returns the user information dictionary associated with the receiver. May be nil.
The user information dictionary stores any additional objects that objects receiving the notification might use.
(Read only property)

132.7 class NSNotificationObserverMBS

132.7.1 class NSNotificationObserverMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The notification class which you use to receive notifications.
Notes:

To use this class, please create a subclass. There you can put code in the event handler to do whatever you need in case your notification is received.

Than you create in code objects form this class. Normally only one. And you call addObserver on the NSNotificationCenterMBS or NSDistributedNotificationCenterMBS objects you have to tell the system which notifications you want to receive.

Do not forget to call removeObserver on the notification center for all your observers to avoid crashes.

132.7.2 Blog Entries

132.7.3 Blog Entries

- Tip of the day: Windows Notifications
- MBS Real Studio Plugins, version 12.3pr11

132.7.4 Methods

132.7.5 Constructor

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The constructor which creates the observer.
Notes: On success the handle property is not zero.

132.7.6 Destructor

MBS MacBase Plugin, Plugin Version: 12.3, Platform: macOS, Targets: All.

Function: The Destructor.
Notes: Removes in plugin version 12.3 and newer the observer from the NSNotificationCenterMBS and NSDistributedNotificationCenterMBS to avoid crashes.

132.7.7 Properties

132.7.8 Handle as Integer

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: All.

Function: The internal handle to the observer object.
Notes: (Read and Write property)

132.7.9 Events

132.7.10 GotNotification(notification as NSNotificationMBS)

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: .

Function: The event called if a new notification is received.
Notes: The MBS Plugin makes sure you receive this event always on the main thread.

132.8 class WinNotificationMBS

132.8.1 class WinNotificationMBS

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This is a class to send broadcast message to all windows applications listening for this notification.
Notes:

If you have several applications, you can send notifications from one to another.

Windows Desktop application: Sending and receiving notification works.
Windows Console application: Sending works.
Windows Web application: Sending works. Receives notification of own application, but of others.

This class is useful to tell other instance of your application or other application about something. Like for example whether background process is done.

On Mac OS X you can use NSNotificationMBS class for similar functionality.

With 14.2 plugins we added possibility to listen for any windows broadcast message. Like for example for WM_TIMECHANGE.

132.8.6 Methods

132.8.7 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The default constructor.
Notes: Creates an invisible dummy window to listen for notifications.
See also:

- 132.8.8 Constructor(Control as DesktopUIControl) 21397
- 132.8.9 Constructor(control as RectControl) 21397
- 132.8.10 Constructor(Window as DesktopWindow) 21397
- 132.8.11 Constructor(Window as window) 21398
- 132.8.12 Constructor(WindowHandle as Integer) 21398

132.8.8 Constructor(Control as DesktopUIControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The control constructor.
Notes:

Takes an existing Xojo control and intercepts messages going there to listen for the notifications you are interested for.
The class keeps a reference to the control to make sure it is not destroyed before this object is destroyed.
See also:

- 132.8.7 Constructor 21396
- 132.8.9 Constructor(control as RectControl) 21397
- 132.8.10 Constructor(Window as DesktopWindow) 21397
- 132.8.11 Constructor(Window as window) 21398
- 132.8.12 Constructor(WindowHandle as Integer) 21398

132.8.9 Constructor(control as RectControl)

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: The control constructor.
Notes:

Takes an existing Xojo control and intercepts messages going there to listen for the notifications you are interested for.
The class keeps a reference to the control to make sure it is not destroyed before this object is destroyed.
See also:

- 132.8.7 Constructor 21396
- 132.8.8 Constructor(Control as DesktopUIControl) 21397
- 132.8.10 Constructor(Window as DesktopWindow) 21397
- 132.8.11 Constructor(Window as window) 21398
- 132.8.12 Constructor(WindowHandle as Integer) 21398

132.8.10 Constructor(Window as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The window constructor.
Notes:

Takes an existing Xojo Window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 132.8.7 Constructor 21396
- 132.8.8 Constructor(Control as DesktopUIControl) 21397
- 132.8.9 Constructor(control as RectControl) 21397
- 132.8.11 Constructor(Window as window) 21398
- 132.8.12 Constructor(WindowHandle as Integer) 21398

132.8.11 Constructor(Window as window)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The window constructor.
Notes:

Takes an existing Xojo Window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 132.8.7 Constructor 21396
- 132.8.8 Constructor(Control as DesktopUIControl) 21397
- 132.8.9 Constructor(control as RectControl) 21397
- 132.8.10 Constructor(Window as DesktopWindow) 21397
- 132.8.12 Constructor(WindowHandle as Integer) 21398

132.8.12 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 17.1, Platform: Windows, Targets: Desktop only.

Function: The window constructor.
Notes:

Takes an existing window and intercepts messages going there to listen for the notifications you are interested for.
If you listen for global notifications sent to all windows, we prefer the other constructor.
The class keeps a reference to the window to make sure it is not destroyed before this object is destroyed.
See also:

- 132.8.7 Constructor 21396
- 132.8.8 Constructor(Control as DesktopUIControl) 21397
- 132.8.9 Constructor(control as RectControl) 21397
- 132.8.10 Constructor(Window as DesktopWindow) 21397
- 132.8.11 Constructor(Window as window) 21398

132.8.13 IsListeningFor(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this object is listening for the given message ID.
Example:

```
dim w as new WinNotificationMBS

const WM_TIMECHANGE = &h001E
if w.ListenForMessage(WM_TIMECHANGE) then
MsgBox str(w.IsListeningFor(WM_TIMECHANGE))
end if
```

Notes: Returns true if we listen for this notification name or false if not.
See also:

- 132.8.14 IsListeningFor(name as string) as boolean 21399

132.8.14 IsListeningFor(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this object is listening for the given notification.
Example:

```
dim w as new WinNotificationMBS

if w.ListenForMessage("Hello") then
MsgBox str(w.IsListeningFor("Hello"))
end if
```

Notes: Returns true if we listen for this notification name or false if not.
See also:

- 132.8.13 IsListeningFor(MessageID as Integer) as boolean 21399

132.8.15 ListenForMessage(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Listens for given notification message id.
Notes: Returns true on success and false on failure.
See also:

- 132.8.16 ListenForMessage(name as string) as boolean 21400

132.8.16 ListenForMessage(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Listens for given notification name.
Notes: Returns true on success and false on failure.
See also:

- 132.8.15 ListenForMessage(MessageID as Integer) as boolean 21400

132.8.17 SendMessage(byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to all applications listening for it.
Example:

```
dim w as new WinNotificationMBS
dim Result as Integer

// send a message and wait for result
if w.SendMessage(Result, 1234567, 123, 456) then
// okay
else
// failed
end if
```

Notes:

Sends a message with given message ID.
You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.

Timeout is in milliseconds and counts per receiving window.
Result returns the result code from the message.
See also:

- 132.8.18 SendMessage(name as string, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean 21401

132.8.18 SendMessage(name as string, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to all applications listening for it.
Example:

```
dim w as new WinNotificationMBS

if w.SendMessage(Result, "Hello", 123, 456) then
// okay
else
// failed
end if
```

Notes:

You can pass two integer parameters.
Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.
See also:

- 132.8.17 SendMessage(byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean 21400

132.8.19 SendMessageToWindow(WindowHandle as Integer, byref result as Integer, MessageID as Integer, Value1 as Integer = 0, Value2 as Integer = 0, TimeOut as Integer = 10) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to all applications listening for it.
Notes:

Like SendMessage, but with a target window.
You can pass two integer parameters.

Returns true if event was sent or false if it failed.
This doesn't tell you whether it was received by someone, but your own application receives it, too.
Timeout is in milliseconds and counts per receiving window.

132.8.20 StopListeningForMessage(MessageID as Integer) as boolean

MBS Win Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops listening for a given message ID.
Example:

```
dim w as new WinNotificationMBS

const WM_TIMECHANGE = &h001E
if w.ListenForMessage(WM_TIMECHANGE) then
if w.StopListeningForMessage(WM_TIMECHANGE) then
MsgBox "OK"
end if
end if
```

See also:

- 132.8.21 StopListeningForMessage(name as string) as boolean 21402

132.8.21 StopListeningForMessage(name as string) as boolean

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops listening for a given notification name.
Example:

```
dim w as new WinNotificationMBS

if w.ListenForMessage("Hello") then
if w.StopListeningForMessage("Hello") then
MsgBox "OK"
end if
end if
```

See also:

- 132.8.20 StopListeningForMessage(MessageID as Integer) as boolean 21402

132.8.22 Properties

132.8.23 WindowHandle as Integer

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal window handle.
Notes: (Read only property)

132.8.24 Events

132.8.25 GotNotification(Message as Integer, Name as string, Value1 as Integer, Value2 as Integer, byref Result as Integer, byref Handled as boolean)

MBS Win Plugin, Plugin Version: 12.1, Platform: Windows, Targets: .

Function: A notification was received.
Notes:

Message: The message ID.
Name: If you registered by name, this is the name for the message ID.
Value1 and Value2 are parameters provided with message. (WPARAM and LPARAM)

If Handled is set to true, we pass back Result to the Windows system (LRESULT).
Else the default handler is called.

Chapter 133

OCR

133.1 class TessChoiceIteratorMBS

133.1.1 class TessChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Class to iterate over the classifier choices for a single symbol.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

133.1.2 Methods

133.1.3 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

133.1.4 MoveNext as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to the next choice for the symbol and returns false if there are none left.

133.1.5 Properties

133.1.6 Confidence as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the confidence of the current choice depending on the used language data.
Notes:

If only LSTM traineddata is used the value range is 0.0 - 1.0. All choices for one symbol should roughly add up to 1.0. If only traineddata of the legacy engine is used, the number should be interpreted as a percent probability. (0.0 - 100.0) In this case probabilities won't add up to 100. Each one stands on its own.
(Read only property)

133.1.7 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

133.1.8 Text as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the null terminated UTF-8 encoded text string for the current choice.
Notes: (Read only property)

133.2 class TessEngineMBS

133.2.1 class TessEngineMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The class for OCR recognition using tesseract library.
Example:

```
Dim OCR As new TessEngineMBS // your instance of tesseract

If Not ocr.Initialize("C:\Program Files\Tesseract-OCR\tessdata", "eng") Then
MsgBox "failed to initialize"
Quit
End If

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Dim p As Picture = f.OpenAsPicture
OCR.SetImage(p)

// get the text
Dim OCRText As String = OCR.GetText
```

Notes:

This replaces the older TesseractMBS class.

The new class is for Tesseract 4.x and 5.x versions.

133.2.2 Blog Entries

- News from the MBS Xojo Plugins Version 21.3
- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.3
- Introducing Tesseract 4 to Xojo

133.2.4 Methods

133.2.5 AllWordConfidences as Integer()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns all word confidences (between 0 and 100) in an array.
Notes: The number of confidences should correspond to the number of space-delimited words in GetText.

133.2.6 AnalyseLayout as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Runs page layout analysis in the mode set by SetPageSegMode.
Notes:

May optionally be called prior to Recognize to get access to just the page layout results. Returns an iterator to the results.

Returns nil on error or an empty page.

133.2.7 Clear

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Free up recognition results and any stored image data, without actually freeing any recognition data that would be time-consuming to reload.
Notes: Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get* operation.

133.2.8 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The constructor.
Notes: Please call Initialize after this to get started.

133.2.9 GetAltoText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make an XML-formatted string with Alto markup from the internal data structures.

133.2.10 GetAvailableLanguages as String()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the available languages as array.
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract
Dim AvailableLanguages() As String = OCR.GetAvailableLanguages
```

133.2.11 GetBoolVariable(Name as String, byref value as boolean) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries boolean variable value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.2.12 GetBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as a char* which is coded in the same format as a box file used in training.
Notes:

Constructs coordinates in the original image - not just the rectangle.
PageNumber is a 0-based page index that will appear in the box file.

133.2.13 GetDoubleVariable(Name as String, byref value as Double) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries double variable value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.2.14 GetHOCRText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make a HTML-formatted string with hOCR markup from the internal data structures.
Notes: PageNumber is 0-based but will appear in the output as 1-based.

133.2.15 GetIntVariable(Name as String, byref value as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries integer variable value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.2.16 GetLoadedLanguages as String()

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the loaded languages as array.
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract
Dim LoadedLanguages() As String = OCR.GetLoadedLanguages
```

Notes: Includes all languages loaded by the last Init, including those loaded as dependencies of other loaded languages.

133.2.17 GetLSTMBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make a box file for LSTM training from the internal data structures.
Notes:

Constructs coordinates in the original image - not just the rectangle.
PageNumber is a 0-based page index that will appear in the box file.

133.2.18 GetStringVariable(Name as String) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries string variable value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.2.19 GetText as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as UTF-text.

133.2.20 GetTsvText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Make a TSV-formatted string from the internal data structures.
Notes: PageNumber is 0-based but will appear in the output as 1-based.

133.2.21 GetUNLVText as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as a char* which is coded as UNLV format Latin-1 with specific reject and suspect codes.

133.2.22 GetWordStrBoxText(PageNumber as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The recognized text is returned as a char* which is coded in the same format as a WordStr box file used in training.
Notes: PageNumber is a 0-based page index that will appear in the box file.

133.2.23 Initialize(dataPath as String, language as String, Mode as Integer = 3, configs() as String = nil) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Initializes tesseract.
Example:

```
Dim OCR As new TessEngineMBS // your instance of tesseract

If Not ocr.Initialize("C:\Program Files\Tesseract-OCR\tessdata", "eng") Then
MsgBox "failed to initialize"
Quit
End If
```

Notes:

Returns true on success and false on failure.

The datapath must be the name of the tessdata directory.
The language is (usually) an ISO 639-3 string or "" will default to eng.
It is entirely safe (and eventually will be efficient too) to call Initialize multiple times on the same instance to change language, or just to reset the classifier.

The language may be a string of the form [
textasciitilde] <lang>[+ [
textasciitilde] <lang>] * indicating that multiple languages are to be loaded. Eg hin+eng will load Hindi and English. Languages may specify internally that they want to be loaded with one or more other languages, so the
textasciitilde sign is available to override that. Eg if hin were set to load eng by default, then hin+
textasciitilde eng would force loading only hin. The number of loaded languages is limited only by memory, with the caveat that loading additional languages will impact both speed and accuracy, as there is more work to do to decide on the applicable language, and there is more chance of hallucinating incorrect words.

Warning: On changing languages, all Tesseract parameters are reset back to their default values. (Which may vary between languages.)
If you have a rare need to set a Variable that controls initialization for a second call to Init you should explicitly call End() and then use SetVariable before Init. This is only a very rare use case, since there are very few uses that require any parameters to be set before Init.

133.2.24 IsValidWord(Word as String) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Check whether a word is valid according to Tesseract's language model.
Notes: Return false if the word is invalid, true if valid.

133.2.25 LibraryLoaded as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the tesseract library was loaded.
Notes: Should be true after succesful call to LoadLibrary.

133.2.26 LibraryLoadError as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last error from LoadLibrary as number.

133.2.27 LibraryLoadErrorMessage as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The last error from LoadLibrary as text.

133.2.28 LoadLibrary(file as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the tesseract library.
Notes:

Returns true on success and false on failure.
See LibraryLoadErrorMessage for a textual description.
See also:

- 133.2.29 LoadLibrary(path as string) as boolean 21413

133.2.29 LoadLibrary(path as string) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Loads the tesseract library.
Notes:

Returns true on success and false on failure.
See LibraryLoadErrorMessage for a textual description.

For Windows load the DLL, for Linux the tesseract.so file and for macOS the dylib file.
You may need to first load leptonica library and second the tesseract library.
See example project for sample code.
See also:

- 133.2.28 LoadLibrary(file as folderitem) as boolean 21413

133.2.30 PrintVariablesToFile(File as FolderItem) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print Tesseract parameters to the given file.
Notes:

Returns true on success.
Fails if the file can't be created.

133.2.31 PrintVariablesToPath(Path as String) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Print Tesseract parameters to the given file.
Notes:

Returns true on success.
Fails if the file can't be created.

133.2.32 Recognize as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Recognize the image from SetAndThresholdImage, generating Tesseract internal structures.
Notes:

Returns true on success.

Optional. The Get*Text functions below will call Recognize if needed.

After Recognize, the output is kept internally until the next SetImage.

133.2.33 ResultIterator as TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries a result iterator.
Notes:

Loop over it to query details.
The result iterator is only valid until you end the engine.

133.2.34 SetCurrentWorkingDirectory(path as folderitem) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets current working directory.
Notes: Returns true on success.
See also:

- 133.2.35 SetCurrentWorkingDirectory(path as String) as boolean 21415

133.2.35 SetCurrentWorkingDirectory(path as String) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets current working directory.
Notes: Returns true on success.
See also:

- 133.2.34 SetCurrentWorkingDirectory(path as folderitem) as boolean 21415

133.2.36 SetImage(pic as picture)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via picture.
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
Dim p As Picture = f.OpenAsPicture
OCR.SetImage(p)
```

Notes:

Pass Xojo picture and we copy the pixels.
Mask or alpha channel is ignored.

133.2.37 SetImageData(Data as MemoryBlock)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via data.
Notes:

Image data can be an image file content like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 133.2.38 SetImageData(Data as String) 21416

133.2.38 SetImageData(Data as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via data.
Notes:

Image data can be an image file content like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 133.2.37 SetImageData(Data as MemoryBlock) 21416

133.2.39 SetImageFile(File as FolderItem)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via folderitem.
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.jpg")
OCR.SetImageFile(f)
```

Notes:

Point to an image file like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.

See also:

- 133.2.40 SetImageFile(Path as String) 21417

133.2.40 SetImageFile(Path as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Sets input image via file path.
Notes:

Point to an image file like JPEG or PNG.
Supported formats depends on what leptonica was compiled to support.
See also:

- 133.2.39 SetImageFile(File as FolderItem) 21416

133.2.41 SetRectangle(Left as Integer, Top as Integer, Width as Integer, Height as Integer)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Restrict recognition to a sub-rectangle of the image.
Notes:

Call after SetImage.
Each SetRectangle clears the recogntion results so multiple rectangles can be recognized with the same image.

133.2.42 SetVariable(Name as String, Value as String)

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Set the value of an internal "parameter."
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract

OCR.SetVariable("tessedit_char_blacklist", "xyz")
```

Notes:

Supply the name of the parameter and the value as a string, just as you would in a config file.
Returns false if the name lookup failed.
e.g.

SetVariable("tessedit_char_blacklist", "xyz") to ignore x, y and z.
Or
SetVariable("classify_bln_numeric_mode", "1") to set numeric-only mode.

SetVariable may be used before Init, but settings will revert to defaults on End().

Note: Must be called after Initialize(). Only works for non-init variables (init variables should be passed to Initialize()).

133.2.43 Properties

133.2.44 DeadlineMSecs as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The deadline in milliseconds.
Notes: (Read and Write property)

133.2.45 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

133.2.46 InitLanguagesAsString as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the languages string used in the last valid initialization.
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract

MsgBox OCR.InitLanguagesAsString
```

Notes:

If the last initialization specified "deu+hin" then that will be returned. If hin loaded eng automatically as well, then that will not be included in this list. To find the languages actually loaded use GetLoadedLanguages function.

(Read only property)

133.2.47 InputImage as Picture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries input image for debugging.
Notes: (Read only property)

133.2.48 InputName as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The name of the input file.
Notes:

Needed for training and reading a UNLV zone file, and for searchable PDF output.
(Read and Write property)

133.2.49 MeanTextConf as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the (average) confidence value between 0 and 100.
Notes: (Read only property)

133.2.50 PageSegMode as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The current page segmentation mode.
Example:

```
Dim OCR As TessEngineMBS // your instance of tesseract

OCR.PageSegMode = OCR.kPageSegModeAuto
```

Notes:

Defaults to kPageSegModeSingleBlock.
The mode is stored as an IntParam so it can also be modified by ReadConfigFile or SetVariable("tessedit_page-

seg_mode", mode as string).
(Read and Write property)

133.2.51 Resolution as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The resolution of the source image in pixels per inch so font size information can be calculated in results.
Notes:

Call this after SetImage functions.
(Read and Write property)

133.2.52 ThresholdedImage as Picture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Get a copy of the internal thresholded image from Tesseract.
Notes: (Read only property)

133.2.53 Version as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries version of tesseract library.
Example:

MsgBox TessEngineMBS.Version

Notes:

e.g. "4.1.1"
(Read only property)

133.2.54 Events

133.2.55 Cancel(words as integer) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: .

Function: Event called regularly to allow you to cancel.
Notes: Return true to cancel current job.

133.2.56 Progress(Left as integer, Right as Integer, Top as Integer, Bottom as Integer, Progress as Integer) as boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: .

Function: Event called regularly to allow you to monitor progress.
Notes: Return true to cancel current job.

133.2.57 Constants

133.2.58 kOcrEngineModeDefault = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the OCR engine modes.
Notes: Specify this mode when calling init_*(), to indicate that any of the above modes should be automatically inferred from the variables in the language-specific config, command-line configs, or if not specified in any of the above should be set to the default kOcrEngineModeTesseractOnly.

133.2.59 kOcrEngineModeLstmOnly = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the OCR engine modes.
Notes: Run just the LSTM line recognizer.

133.2.60 kOcrEngineModeTesseractLstmCombined = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the OCR engine modes.
Notes: Run the LSTM recognizer, but allow fallback to Tesseract when things get difficult. deprecated

133.2.61 kOcrEngineModeTesseractOnly = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the OCR engine modes.
Notes: Run Tesseract only - fastest; deprecated

133.2.62 kPageSegModeAuto = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Fully automatic page segmentation, but no OSD.

133.2.63 kPageSegModeAutoOnly = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Automatic page segmentation, but no OSD, or OCR.

133.2.64 kPageSegModeAutoOsd = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Automatic page segmentation with orientation and script detection. (OSD)

133.2.65 kPageSegModeCircleWord = 9

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Treat the image as a single word in a circle.

133.2.66 kPageSegModeOsdOnly = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Orientation and script detection only.

133.2.67 kPageSegModeRawLine = 13

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Treat the image as a single text line, bypassing hacks that are Tesseract-specific.

133.2.68 kPageSegModeSingleBlock = 6

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Assume a single uniform block of text. (Default.)

133.2.69 kPageSegModeSingleBlockVertText = 5

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Assume a single uniform block of vertically aligned text.

133.2.70 kPageSegModeSingleChar = 10

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Treat the image as a single character.

133.2.71 kPageSegModeSingleColumn = 4

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Assume a single column of text of variable sizes.

133.2.72 kPageSegModeSingleLine = 7

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Treat the image as a single text line.

133.2.73 kPageSegModeSingleWord = 8

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Treat the image as a single word.

133.2.74 kPageSegModeSparseText = 11

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Find as much text as possible in no particular order.

133.2.75 kPageSegModeSparseTextOsd = 12

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the page layout modes.
Notes: Sparse text with orientation and script det.

133.3 class TesseractChoiceIteratorMBS

133.3.1 class TesseractChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Class to iterate over the classifier choices for a single symbol.

133.3.2 Methods

133.3.3 Confidence as Double

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the confidence of the current choice.
Notes: The number should be interpreted as a percent probability. (0.0 - 100.0)

133.3.4 Constructor(result as TesseractResultIteratorMBS)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor.
Notes: Construction is from a ResultIterator that points to the symbol of interest. The ChoiceIterator allows a one-shot iteration over the choices for this symbol and after that is is useless.

133.3.5 NextItem as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves to the next choice for the symbol and returns false if there are none left.

133.3.6 Text as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the text string for the current choice.

133.3.7 Properties

133.3.8 Handle as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read only property)

133.3.9 Parent as TesseractResultIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent result iterator.
Notes: (Read only property)

133.4 class TesseractErrorExceptionMBS

133.4.1 class TesseractErrorExceptionMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception subclass raised for errors in OCR process.
Notes: Subclass of the RuntimeException class.

133.5 class TesseractMBS

133.5.1 class TesseractMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The plugin class to provide OCR by using the tesseract open source library.
Notes: See example projects on how to use it.

133.5.4 Methods

133.5.5 Clear

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Free up recognition results and any stored image data, without actually freeing any recognition data that would be time-consuming to reload.

Notes: Afterwards, you must call SetImage or TesseractRect before doing any Recognize or Get* operation.

133.5.6 ClearAdaptiveClassifier

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Call between pages or documents etc to free up memory and forget adaptive data.

133.5.7 Constructor

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Constructor which calls only InitForAnalysePage.
See also:

- 133.5.8 Constructor(folder as folderitem, lang as string) 21429
- 133.5.9 Constructor(path as string, lang as string) 21430

133.5.8 Constructor(folder as folderitem, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes tesseract.
Notes:

Same as Init method.
Pass folderitem to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
To use multiple languages, please concat them with plus sign: e.g. "eng+deu"
See also:

- 133.5.7 Constructor 21429
- 133.5.9 Constructor(path as string, lang as string) 21430

133.5.9 Constructor(path as string, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes tesseract.
Notes:

Same as Init method.
Pass path to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
To use multiple languages, please concat them with plus sign: e.g. "eng+deu"
See also:

133.5.10 GetBoolVariable(name as string, byref value as boolean) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a variable as boolean value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.5.11 GetBoxText(page as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The recognized text is returned as a char* which is coded in the same format as a box file used in training.
Notes: Constructs coordinates in the original image - not just the rectangle. page is a 0-based page index that will appear in the box file.

133.5.12 GetDoubleVariable(name as string, byref value as Double) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a variable as Double value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.5.13 GetHOCRText(page as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Make a HTML-formatted string with hOCR markup from the internal data structures.
Notes: Page is 0-based but will appear in the output as 1-based.

133.5.14 GetIntVariable(name as string, byref value as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries a variable as Integer value.
Notes:

Returns true if the parameter was found among Tesseract parameters.
Fills in value with the value of the parameter.

133.5.15 GetLastInitLanguage as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the language used in the last valid initialization.

133.5.16 GetStringVariable(name as string) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries variable's value as string.

133.5.17 GetText as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns recognized text.
Notes: Calls Recognize if needed internally.

133.5.18 GetVariableAsString(name as string) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get value of named variable as a string, if it exists.

133.5.19 Init(folder as folderitem, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes tesseract.
Notes:

Pass folderitem to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Start tesseract. Returns zero on success and -1 on failure.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
See also:

- 133.5.20 Init(path as string, lang as string) 21432

133.5.20 Init(path as string, lang as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes tesseract.
Notes:

Pass path to parent folder of tessdata folder and language you need.

Instances are now mostly thread-safe and totally independent, but some global parameters remain. Basically it is safe to use multiple TessBaseAPIs in different threads in parallel, UNLESS: you use SetVariable on some of the Params in classify and textord. If you do, then the effect will be to change it for all your instances.

Start tesseract. Returns zero on success and -1 on failure.

Note that the only members that may be called before Init are: SetInputName, SetOutputName, SetVariable, Get*Variable and PrintVariables.

The language is (usually) an ISO 639-3 string or "" will default to eng.
See also:

- 133.5.19 Init(folder as folderitem, lang as string) 21432

133.5.21 InitForAnalysePage

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Init only for page layout analysis.
Notes: Use only for calls to SetImage and AnalysePage. Calls that attempt recognition will generate an error.

133.5.22 MeanTextConf as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the (average) confidence value between 0 and 100.

133.5.23 NumDawgs as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the number of dawgs loaded.
Notes: Should be bigger than 0 if data files have been loaded.

133.5.24 PrintVariablesToStdErr

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print Tesseract parameters to standard error.

133.5.25 PrintVariablesToStdOut

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Print Tesseract parameters to standard output.

133.5.26 Recognize as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Recognize the image.
Notes:

Returns 0 on success.
Optional. The Get*Text functions below will call Recognize if needed. After Recognize, the output is kept internally until the next SetImage.

133.5.27 RecognizeMT as Integer

MBS OCR Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Recognize the image.
Notes:

Returns 0 on success.
Optional. The Get*Text functions below will call Recognize if needed. After Recognize, the output is kept internally until the next SetImage.

Same as Recognize, but thread friendly.

The work is performed on a preemptive thread, so this function does not block the application and can yield time to other Xojo threads. Must be called in a Xojo thread to enjoy benefits. If called in main thread will block, but keep other background threads running.
If you run several threads calling MT methods, you can get all CPU cores busy while main thread shows GUI with progress window.

133.5.28 ResultIterator as TesseractResultIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get an iterator to the results of LayoutAnalysis and/or Recognize.
Notes: This object points to data held within the TesseractMBS class, and therefore can only be used while the TesseractMBS class still exists and has not been subjected to a call of Init, SetImage, Recognize, Clear, End, DetectOS, or anything else that changes the internal PAGE_RES.

133.5.29 SetImage(buffer as memoryblock, width as Integer, height as Integer, BytesPerPixel as Integer, BytesPerLine as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provide an image for Tesseract to recognize as a memoryblock.
Notes: Returns true on success and false on failure.
See also:

- 133.5.30 SetImage(Pic as Picture) as boolean 21435

133.5.30 SetImage(Pic as Picture) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Provide an image for Tesseract to recognize.
Notes:

The plugin makes a copy of the picture.
Returns true on success and false on failure.
See also:

- 133.5.29 SetImage(buffer as memoryblock, width as Integer, height as Integer, BytesPerPixel as Integer, BytesPerLine as Integer) as boolean 21435

133.5.31 SetInputName(name as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name of the input file. Needed only for training and reading a UNLV zone file.

133.5.32 SetOutputName(name as string)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the name of the bonus output files. Needed only for debugging.

133.5.33 SetRectangle(left as Integer, top as Integer, width as Integer, height as Integer)

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Restrict recognition to a sub-rectangle of the image.
Notes: Call after SetImage. Each SetRectangle clears the recogntion results so multiple rectangles can be recognized with the same image.

133.5.34 SetResolution(Resolution as Integer)

MBS OCR Plugin, Plugin Version: 15.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the resolution of the source image in pixels per inch so font size information can be calculated in results.
Notes: Call this after SetImage.

133.5.35 SetVariable(name as string, value as string) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the value of an internal "parameter."
Notes:

Supply the name of the parameter and the value as a string, just as you would in a config file.
Returns false if the name lookup failed.
E.g. SetVariable("tessedit_char_blacklist", "xyz"); to ignore x, y and z.
Or SetVariable("classify_bln_numeric_mode", "1"); to set numeric-only mode.
SetVariable may be used before Init, but settings will revert to defaults on End().

Note: Must be called after Init(). Only works for non-init variables (init variables should be passed to Init()).

133.5.36 Version as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the version identifier.

133.5.37 Properties

133.5.38 Handle as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal Object reference.
Notes: (Read only property)

133.5.39 PageSegMode as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current page segmentation mode.
Notes:

Defaults to kPageSegModeSingleBlock.
The mode is stored as an IntParam so it can also be modified by ReadConfigFile or SetVariable("tessedit_page-seg_mode", mode as string).
(Read and Write computed property)

133.5.40 Constants

133.5.41 kPageSegModeAuto = 3

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Fully automatic page segmentation, but no OSD.

133.5.42 kPageSegModeAutoOnly = 2

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Automatic page segmentation, but no OSD, or OCR.

133.5.43 kPageSegModeAutoOSD = 1

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Automatic page segmentation with orientation and script detection. (OSD)

133.5.44 kPageSegModeCircleWord = 9

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Treat the image as a single word in a circle.

133.5.45 kPageSegModeOSDOnly = 0

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Orientation and script detection only.

133.5.46 kPageSegModeSingleBlock = 6

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Assume a single uniform block of text. (Default.)

133.5.47 kPageSegModeSingleBlockVerticalText = 5

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Assume a single uniform block of vertically aligned text.

133.5.48 kPageSegModeSingleChar = 10

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Treat the image as a single character.

133.5.49 kPageSegModeSingleColumn = 4

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Assume a single column of text of variable sizes.

133.5.50 kPageSegModeSingleLine = 7

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Treat the image as a single text line.

133.5.51 kPageSegModeSingleWord = 8

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the page segmentation mode constants.
Notes: Treat the image as a single word.

133.6 class TesseractNotInitializedExceptionMBS

133.6.1 class TesseractNotInitializedExceptionMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The exception to report about calling tesseract methods without initialization.
Notes: Subclass of the TesseractErrorExceptionMBS class.

133.7 class TesseractResultIteratorMBS

133.7.1 class TesseractResultIteratorMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Class to iterate over tesseract results, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

133.7.2 Methods

133.7.3 Begin

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves the iterator to point to the start of the page to begin an iteration.

133.7.4 BoundingBox(Level as Integer, byref left as Integer, byref top as Integer, byref right as Integer, byref bottom as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the bounding rectangle of the current object at the given level.
Notes:

Returns false if there is no such object at the current position.
The returned bounding box is guaranteed to match the size and position of the image returned by GetBinaryImage, but may clip foreground pixels from a grey image. The padding argument to GetImage can be used to expand the image to include more foreground pixels. See GetImage.

Coordinate system:
Integer coordinates are at the cracks between the pixels.
The top-left corner of the top-left pixel in the image is at (0,0).
The bottom-right corner of the bottom-right pixel in the image is at (width, height).
Every bounding box goes from the top-left of the top-left contained pixel to the bottom-right of the bottom-right contained pixel, so the bounding box of the single top-left pixel in the image is: (0,0)->(1,1).
If an image rectangle has been set in the API, then returned coordinates relate to the original (full) image, rather than the rectangle.

133.7.5 Confidence(Level as Integer) as Double

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the mean confidence of the current object at the given level.
Notes: The number should be interpreted as a percent probability. (0.0 - 100.0)

133.7.6 Constructor

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The private constructor.

133.7.7 IsAtBeginningOf(Level as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the iterator is at the start of an object at the given level.
Notes: Possible uses include determining if a call to Next(kLevelWord) moved to the start of a kLevelParagraph.

133.7.8 IsAtFinalElement(Level as Integer, element as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns whether the iterator is positioned at the last element in a given level.
Notes: (e.g. the last word in a line, the last line in a block)

133.7.9 NextItem(Level as Integer) as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Moves to the start of the next object at the given level in the page hierarchy, and returns false if the end of the page was reached.
Notes:

NOTE that kLevelSymbol will skip non-text blocks, but all other level values will visit each non-text block once.
Think of non text blocks as containing a single paragraph, with a single line, with a single imaginary word.
Calls to Next with different levels may be freely intermixed.
This function iterates words in right-to-left scripts correctly, if the appropriate language has been loaded

into Tesseract.

133.7.10 SymbolIsDropcap as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the current symbol is a dropcap.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

133.7.11 SymbolIsSubscript as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the current symbol is a subscript.
Notes: If iterating at a higher level object than symbols, e.g. words, then this will return the attributes of the first symbol in that word.

133.7.12 SymbolIsSuperscript as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the current symbol is a superscript.
Notes: If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

133.7.13 Text(Level as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the text string for the current object at the given level.

133.7.14 WordFontAttributes(byref bold as boolean, byref italic as boolean, byref underlined as boolean, byref monospace as boolean, byref serif as boolean, byref smallcaps as boolean, byref pointsize as Integer, byref fontid as Integer) as string

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the font attributes of the current word.
Notes:

If iterating at a higher level object than words, e.g. textlines, then this will return the attributes of the first word in that textline.
The actual return value is a string representing a font name.
Pointsize is returned in printers points (1/72 inch.)

133.7.15 WordIsFromDictionary as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the current word was found in a dictionary.

133.7.16 WordIsNumeric as boolean

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the current word is numeric.

133.7.17 Properties

133.7.18 Handle as Integer

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Internal Object reference.
Notes: (Read only property)

133.7.19 Parent as TesseractMBS

MBS OCR Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent tesseract object.
Notes: (Read only property)

133.7.20 Constants

133.7.21 kLevelBlock = 0

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the level constants.
Notes: Block of text/image/separator line.

133.7.22 kLevelParagraph = 1

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the level constants.
Notes: Paragraph within a block.

133.7.23 kLevelSymbol = 4

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the level constants.
Notes: Symbol/character within a word.

133.7.24 kLevelTextline = 2

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the level constants.
Notes: Line within a paragraph.

133.7.25 kLevelWord = 3

MBS OCR Plugin, Plugin Version: 12.3.

Function: One of the level constants.
Notes: Word within a textline.

133.8 class TessPageIteratorMBS

133.8.1 class TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The iterator to walk over page content.
Notes:

Class to iterate over tesseract page structure, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

133.8.2 Methods

133.8.3 Baseline(Level as Integer, byref x1 as Integer, byref y1 as Integer, byref x2 as Integer, byref y2 as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the baseline of the current object at the given level.
Notes:

The baseline is the line that passes through (x1, y1) and (x2, y2).

Warning: with vertical text, baselines may be vertical!

Returns false if there is no baseline at the current position.

133.8.4 Begin

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves the iterator to point to the start of the page to begin an iteration.

133.8.5 BinaryImage(Level as Integer) as PIcture

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns a binary image of the current object at the given level.
Notes: The position and size match the return from BoundingBoxInternal, and so this could be upscaled

with respect to the original input image.

133.8.6 BoundingBox(Level as Integer, byref Left as Integer, byref Top as Integer, byref Right as Integer, byref Bottom as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the bounding rectangle of the current object at the given level.
Notes:

Returns false if there is no such object at the current position.
The returned bounding box is guaranteed to match the size and position of the image returned by GetBinaryImage, but may clip foreground pixels from a grey image. The padding argument to GetImage can be used to expand the image to include more foreground pixels. See BinaryImage below.

133.8.7 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

133.8.8 CopyIterator as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Creates a copy of the iterator.

133.8.9 IsAtBeginningOf(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the iterator is at the start of an object at the given level.

133.8.10 IsAtFinalElement(Level as Integer, element as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns whether the iterator is positioned at the last element in a given level. (e.g. the last word in a line, the last line in a block)

133.8.11 MoveNext(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to the start of the next object at the given level in the page hierarchy, and returns false if the end of the page was reached.
Notes: NOTE that symbol will skip non-text blocks, but all other PageIteratorLevel level values will visit each non-text block once. Think of non text blocks as containing a single paragraph, with a single line, with a single imaginary word. Calls to Next with different levels may be freely intermixed. This function iterates words in right-to-left scripts correctly, if the appropriate language has been loaded into Tesseract.

133.8.12 Properties

133.8.13 BlockType as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the type of the current block.
Notes: (Read only property)

133.8.14 DeskewAngle as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The deskew angle.
Notes:

After rotating the block so the text orientation is upright, how many radians does one have to rotate the block anti-clockwise for it to be level?
-Pi/4 <= deskew_angle <= Pi/4
(Read only property)

133.8.15 FirstLineIndent as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The first line indent.
Notes:

For LEFT aligned paragraphs, the first text line of paragraphs of this kind are indented this many pixels from the left edge of the rest of the paragraph.
for RIGHT aligned paragraphs, the first text line of paragraphs of this kind are indented this many pixels from the right edge of the rest of the paragraph.

This value may be negative.

if IsCrown is true, the first line of this paragraph is actually flush, and first_line_indent is set to the "common" first line indent for subsequent paragraphs in this block of text.
(Read only property)

133.8.16 Handle as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

133.8.17 IsCrown as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether the current item is a crown.
Notes:

True if the first line of the paragraph is aligned with the other lines of the paragraph even though subsequent paragraphs have first line indents. This typically indicates that this is the continuation of a previous paragraph or that it is the very first paragraph in the chapter.
(Read only property)

133.8.18 IsListItem as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Whether current item is a list item.
Notes:

True if we believe this is a member of an ordered or unordered list.
(Read only property)

133.8.19 Justification as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries justification for current block.
Notes:

LEFT if ragged right, or fully justified and script is left-to-right.
RIGHT if ragged left, or fully justified and script is right-to-left.
unknown if it looks like source code or we have very few lines.
(Read only property)

133.8.20 Orientation as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The orientation of the current block.
Notes: (Read only property)

133.8.21 TextlineOrder as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The text orientation of the current block.
Notes: (Read only property)

133.8.22 WritingDirection as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The writing direction of the current block.
Notes: (Read only property)

133.8.23 Constants

133.8.24 kBlockTypeCaptionText = 8

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Text that belongs to an image.

133.8.25 kBlockTypeEquation = 4

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Partition belonging to an equation region.

133.8.26 kBlockTypeFlowingImage = 9

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Image that lives inside a column.

133.8.27 kBlockTypeFlowingText = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Text that lives inside a column.

133.8.28 kBlockTypeHeadingImage = 10

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Image that spans more than one column.

133.8.29 kBlockTypeHeadingText = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Text that spans more than one column.

133.8.30 kBlockTypeHorzLine = 12

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Horizontal Line.

133.8.31 kBlockTypeInlineEquation = 5

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Partition has inline equation.

133.8.32 kBlockTypeNoise = 14

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Lies outside of any column.

133.8.33 kBlockTypePulloutImage = 11

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Image that is in a cross-column pull-out region.

133.8.34 kBlockTypePulloutText = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Text that is in a cross-column pull-out region.

133.8.35 kBlockTypeTable = 6

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Partition belonging to a table region.

133.8.36 kBlockTypeUnknown = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Type is not yet known. Keep as the first element.

133.8.37 kBlockTypeVerticalText = 7

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Text-line runs vertically.

133.8.38 kBlockTypeVertLine = 13

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the block types.
Notes: Vertical Line.

133.8.39 kJustificationCenter = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the justification constants.
Notes: The text lines of the paragraph are centered about a line going down through their middle of the text lines.

133.8.40 kJustificationLeft = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the justification constants.
Notes: Each line, except possibly the first, is flush to the same left tab stop.

133.8.41 kJustificationRight = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the justification constants.
Notes: Each line, except possibly the first, is flush to the same right tab stop.

133.8.42 kJustificationUnknown = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the justification constants.
Notes: Unknown.

133.8.43 kLevelBlock = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Block

133.8.44 kLevelParagraph = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Paragraph

133.8.45 kLevelSymbol = 4

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Symbol

133.8.46 kLevelTextline = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Textline

133.8.47 kLevelWord = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Word

133.8.48 kOrientationPageDown = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the orientations.
Notes: Orientation is down.

133.8.49 kOrientationPageLeft = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the orientations.
Notes: Orientation is left.

133.8.50 kOrientationPageRight = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the orientations.
Notes: Orientation is right.

133.8.51 kOrientationPageUp = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the orientations.
Notes: Orientation is up.

133.8.52 kTextlineOrderLefttoRight = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: The text lines are read in the given sequence.
Notes: Mongolian is written in vertical columns top to bottom like Chinese, but the lines order left-to right.

133.8.53 kTextlineOrderRighttoLeft = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: The text lines are read in the given sequence.
Notes: In Chinese, vertical text lines are read right-to-left.

133.8.54 kTextlineOrderToptoBottom = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: The text lines are read in the given sequence.
Notes: In English, the order is top-to-bottom.

133.8.55 kWritingDirectionLefttoRight = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the writing direction constants.
Notes: For English text, the writing direction is left-to-right.

133.8.56 kWritingDirectionRighttoLeft = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the writing direction constants.
Notes: For Arabic the text direction is right to left.

133.8.57 kWritingDirectionToptoBottom = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the writing direction constants.
Notes: For the Chinese text in the above example, the writing direction is top-to-bottom.

133.9 class TessResultIteratorMBS

133.9.1 class TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Class to iterate over tesseract results, providing access to all levels of the page hierarchy, without including any tesseract headers or having to handle any tesseract structures.
Notes:

WARNING! This class points to data held within the TessEngineMBS class, and therefore can only be used while the TessBaseAPI class still exists and has not been subjected to a call of Init, SetImage, Recognize, Clear, End DetectOS, or anything else that changes the internal PAGE_RES.

See also base class TessPageIteratorMBS class, which contains the bulk of the interface. TessResultIteratorMBS adds text-specific methods for access to OCR output.
Subclass of the TessPageIteratorMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

133.9.2 Methods

133.9.3 ChoiceIterator as TessChoiceIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Queries choice iterator for current object.

133.9.4 Confidence(Level as Integer) as Single

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the mean confidence of the current object at the given level.
Notes: The number should be interpreted as a percent probability. (0.0 - 100.0)

133.9.5 Constructor

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The private constructor.

133.9.6 CopyIterator as TessResultIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Copies the result iterator.

133.9.7 MoveNext(Level as Integer) as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Moves to the next choice for the symbol and returns false if there are none left.

133.9.8 PageIterator as TessPageIteratorMBS

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Gets the page iterator for this result.

133.9.9 Text(Level as Integer) as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns the UTF-8 encoded text string for the current object at the given level.

133.9.10 Properties

133.9.11 FontID as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The font ID.
Notes:

The font attributes of the current word.
(Read only property)

133.9.12 FontName as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The font name.
Notes:

The font attributes of the current word.
(Read only property)

133.9.13 IsBold as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The bold font attribute.
Notes:

The font attributes of the current word.
(Read only property)

133.9.14 IsItalic as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The italic font attribute.
Notes:

The font attributes of the current word.
(Read only property)

133.9.15 IsMonoSpace as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The monospace font attribute.
Notes:

The font attributes of the current word.
(Read only property)

133.9.16 IsSerif as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The serif font attribute.
Notes:

The font attributes of the current word.
(Read only property)

133.9.17 IsSmallCaps as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The smallcaps font attribute.
Notes:

The font attributes of the current word.
(Read only property)

133.9.18 IsUnderlined as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The underlined font attribute.
Notes:

The font attributes of the current word.
(Read only property)

133.9.19 PointSize as Integer

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: The point size font attribute.
Notes:

The font attributes of the current word.
Pointsize is returned in printers points (1/72 inch.)
(Read only property)

133.9.20 SymbolIsDropcap as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current symbol is a dropcap.
Notes:

If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.

(Read only property)

133.9.21 SymbolIsSubscript as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current symbol is a subscript.
Notes:

If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

133.9.22 SymbolIsSuperscript as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current symbol is a superscript.
Notes:

If iterating at a higher level object than symbols, eg words, then this will return the attributes of the first symbol in that word.
(Read only property)

133.9.23 WordIsFromDictionary as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current word was found in a dictionary.
Notes: (Read only property)

133.9.24 WordIsNumeric as Boolean

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Returns true if the current word is numeric.
Notes: (Read only property)

133.9.25 WordRecognitionLanguage as String

MBS OCR Plugin, Plugin Version: 21.3, Platforms: macOS, Linux, Windows, iOS, Targets: All.

Function: Return the name of the language used to recognize this word.
Notes:

On error, this is empty.
(Read only property)

133.9.26 Constants

133.9.27 kLevelBlock = 0

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Block

133.9.28 kLevelParagraph = 1

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Paragraph

133.9.29 kLevelSymbol = 4

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Symbol

133.9.30 kLevelTextline = 2

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Textline

133.9.31 kLevelWord = 3

MBS OCR Plugin, Plugin Version: 21.3.

Function: One of the levels.
Notes: Word

Chapter 134

Open Directory

134.1 class ODNodeMBS

134.1.1 class ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: An Open Directory node.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

134.1.6 Methods

134.1.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

134.1.8 nodeDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary containing details about a node.
Notes:

Error: An error reference for error details. Can be nil.

Returns a dictionary containing details.

134.1.9 nodeDetailsForKeys(keys() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary containing details about a node.
Notes:

Keys: An array of keys corresponding to the values returned in the dictionary.
Error: An error reference for error details. Can be nil.

Returns a dictionary containing details about the node corresponding to keys specified by Keys.

134.1.10 nodeWithName(session as ODSessionMBS, name as string, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a node object with a specified session and name.
Notes:

Session: The session.
Name: The name of the node.
Error: An error reference for error details. Can be nil.

Returns the created node object.

134.1.11 nodeWithType(session as ODSessionMBS, type as integer, byref error as NSErrorMBS) as ODNodeMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a node object with a specified session and type.
Notes:

Session: The session.
Type: The node type.
Error: An error reference for error details.

Returns the created node object.

134.1.12 subnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the names of subnodes for the node.

134.1.13 supportedAttributesForRecordType(RecordType as String, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of attribute types supported by the node's records.
Notes:

RecordType: The record type to list supported attribute types for. Can be nil.
Error: An error reference for error details. Can be nil.

Returns an array of supported attribute types.

134.1.14 supportedRecordTypes(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the record types supported by the node.
Notes: If the node does not support checking for supported record types, all possible record types are returned.

134.1.15 unreachableSubnodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of the subnodes of a given node that are currently unreachable.

134.1.16 Properties

134.1.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

134.1.18 nodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The node's name.
Notes: (Read only property)

134.1.19 Constants

134.1.20 kODNodeTypeAuthentication = & h2201

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the Open Directory node types.
Notes: A node used for authentication or record lookups.

134.1.21 kODNodeTypeConfigure = & h2202

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the Open Directory node types.
Notes: A node that specifically refers to the Directory Services configuration.

134.1.22 kODNodeTypeContacts = & h2204

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the Open Directory node types.
Notes: A node used for applications that handle contact data.

134.1.23 kODNodeTypeLocalNodes = & h2200

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the Open Directory node types.
Notes: A node that specifically looks at the local directory.

134.1.24 kODNodeTypeNetwork = & h2205

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the Open Directory node types.
Notes: A node used for looking up network resource type data.

134.2 class ODQueryMBS

134.2.1 class ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: An Open Directory query.
Notes: Currently only partially implemented for Xojo for reading values. If you need more, please contact Monkeybread Software.

134.2.6 Methods

134.2.7 Constructor(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an query object created with provided parameters.
Notes:

Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.
inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

134.2.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

134.2.9 queryWithNode(node as ODNodeMBS, inRecordTypeOrList as Variant, inAttribute as String, matchType as Integer, inQueryValueOrList as Variant, inReturnAttributeOrList as Variant, maximumResults as Integer, byref error as NSErrorMBS) as ODQueryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an query object created with provided parameters.
Notes:

Node: The node to query.
in RecordTypeOrList: The type or types of record to query. Can be an NSString object for a single type or an NSArray object containing NSString objects for multiple types.

inAttribute: The name of the attribute to query.
MatchType: The type of query.
inQueryValueOrList: The value or values to query in the attribute. Can be a string or a memoryblock object for a single value, or an array containing string and memoryblock objects for multiple values.
inReturnAttributeOrList: The attribute or attributes to be returned from the query. Can be a string for a single attribute or an array object containing strings for multiple attributes. Passing nil is equivalent to passing kODAttributeTypeStandardOnly.
maximumResults: The maximum number of values to be returned.
Error: An error reference for error details.

134.2.10 resultsAllowingPartial(AllowPartialResults as Boolean, byref error as NSErrorMBS) as ODRecordMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns results from a query synchronously.
Notes:

AllowPartialResults: If true, only immediately available results are returned; otherwise, the function waits until all results are available.
Error: An error reference for error details. Can be nil.

Returns the results of the query in an array of ODRecordMBS objects.

134.2.11 start

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Starts asynchronous search.

134.2.12 synchronize

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Restarts a query, disposing of any results it has obtained.
Notes: If the query was originally started asynchronously, the event is called with inResults set to nil, error.code set to kODErrorQuerySynchronize, and error.domain set to kODErrorDomainFramework.

134.2.13 Properties

134.2.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

134.2.15 Constants

134.2.16 kODMatchAny = 1

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is used to search for any records (typically passed with nil search value)

134.2.17 kODMatchBeginsWith = & h2002

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is searching values that begin with the provided value

134.2.18 kODMatchContains = & h2004

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is searching values that contain the provided value

134.2.19 kODMatchEndsWith = & h2003

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is searching values that end with the provided value

134.2.20 kODMatchEqualTo = & h2001

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is searching values that are equal to the provided value

134.2.21 kODMatchGreaterThan = & h2006

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is searching values greater than the provided value

134.2.22 kODMatchLessThan = & h2007

MBS MacFrameworks Plugin, Plugin Version: 19.3.

Function: One of the match types.
Notes: is searching values less than the provided value

134.3 class ODRecordMBS

134.3.1 class ODRecordMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: An Open Directory record.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

134.3.6 Methods

134.3.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.

134.3.8 kODAttributeTypeAccessControlEntry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type which stores directory access control directives.

134.3.9 kODAttributeTypeAddressLine1 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Line one of multiple lines of address data for a user.

134.3.10 kODAttributeTypeAddressLine2 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Line two of multiple lines of address data for a user.

134.3.11 kODAttributeTypeAddressLine3 as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Line three of multiple lines of address data for a user.

134.3.12 kODAttributeTypeAdminLimits as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: XML plist indicating what an admin user can edit. Found in kODRecordTypeUsers records.

134.3.13 kODAttributeTypeAdvertisedServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.14 kODAttributeTypeAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Alias attribute, contain pointer to another node/record/attribute.

134.3.15 kODAttributeTypeAllAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in requesting all attribute types in a search.

134.3.16 kODAttributeTypeAllTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to indicated recommended attribute types for a record type in the Config node.

134.3.17 kODAttributeTypeAltSecurityIdentities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Used to store alternate identities for the record. Values will have standardized form as specified by Microsoft LDAP schema (1.2.840.113556.1.4.867).

Kerberos:user\@REALM

134.3.18 kODAttributeTypeAreaCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Area code of a user's phone number.

134.3.19 kODAttributeTypeAttrListRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute List reference count for a process.

134.3.20 kODAttributeTypeAttrListRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the attribute list references for a process.

134.3.21 kODAttributeTypeAttrListValueRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attr List Value reference count for a process.

134.3.22 kODAttributeTypeAttrListValueRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the attribute list value references for a process.

134.3.23 kODAttributeTypeAuthCredential as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: An authentication credential, to be used to authenticate to a Directory.

134.3.24 kODAttributeTypeAuthenticationAuthority as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Determines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

Authentication authorities are a multi-part string separated by semi-colons.
One component is the "type" of authority, such as those listed below:

"basic"	- is a crypt password
"ShadowHash"	- is a hashed password stored in a secure location
"ApplePasswordServer"	- is a password server-based account
"Kerberosv5"	- is a Kerberosv5 based
"LocalCachedUser"	- is a cached account based on an account from another node, using a ShadowHash password
"DisabledUser"	- is an account that has been disabled

134.3.25 kODAttributeTypeAuthenticationHint as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to identify the authentication hint phrase.

134.3.26 kODAttributeTypeAuthMethod as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Authentication method for an authentication capable record.

134.3.27 kODAttributeTypeAuthorityRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the authority revocation list.
A certificate revocation list that defines certificate authority certificates which are no longer trusted. No user certificates are included in this list.
Usually found in kODRecordTypeCertificateAuthorities records.

134.3.28 kODAttributeTypeAutomaticSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Automatic search path defined by the search node.

134.3.29 kODAttributeTypeAutomountInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

xDetermines what mechanism is used to verify or set a user's password.
If multiple values are present, the first attributes returned take precedence.
Typically found in User records (kODRecordTypeUsers).

134.3.30 kODAttributeTypeBirthday as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Single-valued attribute that defines the user's birthday.
Format is x.208 standard YYYYMMDDHHMMSSZ which we will require as GMT time.

134.3.31 kODAttributeTypeBootParams as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in host or machine records for storing boot params.

134.3.32 kODAttributeTypeBuilding as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the building name for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.33 kODAttributeTypeBuildVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Build version for reference.

134.3.34 kODAttributeTypeCACertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the certificate of a certificate authority.
Its corresponding private key is used to sign certificates.
Usually found in kODRecordTypeCertificateAuthority records.

134.3.35 kODAttributeTypeCapacity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type for the capacity of a resource.
found in resource records (kODRecordTypeResources).
Example: 50

134.3.36 kODAttributeTypeCertificateRevocationList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the certificate revocation list.
This is a list of certificates which are no longer trusted.
Usually found in kODRecordTypeCertificateAuthority records.

134.3.37 kODAttributeTypeCity as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Usually, city for a user or person record.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.38 kODAttributeTypeComment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used for unformatted comment.

134.3.39 kODAttributeTypeCompany as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines the user's company.
Example: Apple Inc.

134.3.40 kODAttributeTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of computers.

134.3.41 kODAttributeTypeConfigAvailable as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Config avail tag.

134.3.42 kODAttributeTypeConfigFile as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Config file name.

134.3.43 kODAttributeTypeContactGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type for the contact GUID of a group.
Usually found in group records (kODRecordTypeGroups)

134.3.44 kODAttributeTypeContactPerson as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type for the contact person of the machine.
Found in host or machine records.

134.3.45 kODAttributeTypeCopyTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Timestamp used in local account caching.

134.3.46 kODAttributeTypeCoreFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Core FW version for reference.

134.3.47 kODAttributeTypeCountry as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents country of a record entry.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.48 kODAttributeTypeCreationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute showing date/time of record creation.
Format is x.208 standard YYYYMMDDHHMMSSZ which should be GMT time.

134.3.49 kODAttributeTypeCrossCertificatePair as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing the binary of a pair of certificates which verify each other. Both certificates have the same level of authority.
Usually found in kODRecordTypeCertificateAuthority records.

134.3.50 kODAttributeTypeCustomSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Admin user configured custom search path defined by the search node.

134.3.51 kODAttributeTypeDataStamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for checksum/meta data

134.3.52 kODAttributeTypeDateRecordCreated as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Date of record creation.

134.3.53 kODAttributeTypeDepartment as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the department name of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.54 kODAttributeTypeDirRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Directory reference count for a process.

134.3.55 kODAttributeTypeDirRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the directory references for a process.

134.3.56 kODAttributeTypeDNSDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: DNS Resolver domain attribute.

134.3.57 kODAttributeTypeDNSName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: DNS Resolver nameserver attribute.

134.3.58 kODAttributeTypeDNSNameServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: DNS Resolver nameserver attribute.

134.3.59 kODAttributeTypeEMailAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Email address of usually a user record.

134.3.60 kODAttributeTypeEMailContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute that defines a record's custom email addresses.
found in user records (kODRecordTypeUsers).

Example: home:johndoe\@mymail.com

134.3.61 kODAttributeTypeENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute for hardware Ethernet address (MAC address).
Found in computer records (kODRecordTypeComputers).

134.3.62 kODAttributeTypeExpire as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for expiration date or time depending on association.

134.3.63 kODAttributeTypeFaxNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the FAX numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.64 kODAttributeTypeFirstName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for first name of user or person record.

134.3.65 kODAttributeTypeFullName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Full name of a record (e.g., "John Doe", "John Doe's Computer")

134.3.66 kODAttributeTypeFunctionalState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Functional state of plugin for example.

134.3.67 kODAttributeTypeFWVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Framework version for reference.

134.3.68 kODAttributeTypeGroup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of groups.

134.3.69 kODAttributeTypeGroupMembers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in group records containing lists of GUID values for members other than groups.

134.3.70 kODAttributeTypeGroupMembership as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually a list of users that below to a given group record.

134.3.71 kODAttributeTypeGroupServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

xml-plist attribute that defines a group's services.
Found in group records (kODRecordTypeGroups).

134.3.72 kODAttributeTypeGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for 36 character (128 bit) unique ID. An example value is "A579E95E-CDFE-4EBC-B7E7-F2158562170F". The standard format contains 32 uppercase hex characters and four hyphen characters.

134.3.73 kODAttributeTypeHardwareUUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to store hardware UUID in string form for a record. Typically found in kODRecordTypeComputers.

134.3.74 kODAttributeTypeHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Network home directory URL.

134.3.75 kODAttributeTypeHomeDirectoryQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the allowed usage for a user's home directory in bytes.
Found in user records (kODRecordTypeUsers).

134.3.76 kODAttributeTypeHomeDirectorySoftQuota as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to define home directory size limit in bytes when user is notified that the hard limit is approaching.

134.3.77 kODAttributeTypeHomeLocOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the owner of a workgroup's shared home directory.
Typically found in kODRecordTypeGroups records.

134.3.78 kODAttributeTypeHomePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Home telephone number of a user or person.

134.3.79 kODAttributeTypeHTML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: HTML location.

134.3.80 kODAttributeTypeIMHandle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the Instant Messaging handles of a user.
Values should be prefixed with the appropriate IM type
(i.e., AIM:, Jabber:, MSN:, Yahoo:, or ICQ:).
Usually found in user records (kODRecordTypeUsers).

134.3.81 kODAttributeTypeInternetAlias as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to track internet alias.

134.3.82 kODAttributeTypeIPAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: IP address expressed either as domain or IP notation.

134.3.83 kODAttributeTypeIPAddressAndENetAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: A pairing of IPv4 or IPv6 addresses with Ethernet addresses (e.g., "10.1.1.1/00:16:cb:92:56:41").
Usually found on kODRecordTypeComputers for use by services that need specific pairing of the two values.
This should be in addition to kODAttributeTypeIPAddress, kODAttributeTypeIPv6Address and kODAttributeTypeENetAddress. This is necessary because not all directories return attribute values in a guaranteed order.

134.3.84 kODAttributeTypeIPv6Address as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

IPv6 address expressed in the standard notation (e.g., "fe80::236:caff:fcc2:5641")
Usually found on kODRecordTypeComputers and kODRecordTypeHosts.

134.3.85 kODAttributeTypeJobTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the job title of a user.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.86 kODAttributeTypeJPEGPhoto as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Used to store binary picture data in JPEG format.
Usually found in user, people or group records (kODRecordTypeUsers, kODRecordTypePeople, kODRecordTypeGroups).

134.3.87 kODAttributeTypeKDCAuthKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: KDC master key RSA encrypted with realm public key.

134.3.88 kODAttributeTypeKDCConfigData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Contents of the kdc.conf file.

134.3.89 kODAttributeTypeKerberosRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

134.3.90 kODAttributeTypeKerberosServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: This is used to store the principals in host records (i.e., "host", "vnc", etc.)

134.3.91 kODAttributeTypeKeywords as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Keywords using for searching capability.

134.3.92 kODAttributeTypeLastName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for the last name of user or person record.

134.3.93 kODAttributeTypeLDAPReadReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of LDAP server URLs which can each be used to read directory data.

134.3.94 kODAttributeTypeLDAPSearchBaseSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Search base suffix for a LDAP server.

134.3.95 kODAttributeTypeLDAPWriteReplicas as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of LDAP server URLs which can each be used to write directory data.

134.3.96 kODAttributeTypeLocaleRelay as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.97 kODAttributeTypeLocaleSubnets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.98 kODAttributeTypeLocalOnlySearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Local only search path defined by the search node.

134.3.99 kODAttributeTypeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the location a service is available from (usually domain name).
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

134.3.100 kODAttributeTypeMailAttribute as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Holds the mail account config data.

134.3.101 kODAttributeTypeMapCoordinates as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines coordinates for a user's location.
found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).
Example: 7.7,10.6

134.3.102 kODAttributeTypeMapGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the GUID for a record's map.

134.3.103 kODAttributeTypeMapURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines the URI of a user's location.
Usually found in user records (kODRecordTypeUsers).
Example: http://example.com/bldg1

134.3.104 kODAttributeTypeMCXFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used by ManagedClient.

134.3.105 kODAttributeTypeMCXSettings as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used by ManagedClient.

134.3.106 kODAttributeTypeMetaAmbiguousName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Searches a configured list of attributes; by default: RecordName, FullName, EMailAddress.

134.3.107 kODAttributeTypeMetaAugmentedAttributes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attributes that have been augmented.

134.3.108 kODAttributeTypeMetaAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to query for kODRecordTypeAutomount entries associated with a specific kODRecordTypeAutomountMap.

134.3.109 kODAttributeTypeMetaNodeLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Meta attribute returning registered node name by directory node plugin.

134.3.110 kODAttributeTypeMetaRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Native record name, e.g. LDAP DN

134.3.111 kODAttributeTypeMiddleName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for the middle name of user or person record.

134.3.112 kODAttributeTypeMIME as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Data contained in this attribute type is a fully qualified MIME Type.

134.3.113 kODAttributeTypeMobileNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the mobile numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.114 kODAttributeTypeModificationTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute showing date/time of record modification.
Format is x.208 standard YYYYMMDDHHMMSSZ which is required as GMT time.

134.3.115 kODAttributeTypeNamePrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the title prefix of a user or person. ie. Mr., Ms., Mrs., Dr., etc.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.116 kODAttributeTypeNameSuffix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the name suffix of a user or person.
i.e., Jr., Sr., etc.

Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.117 kODAttributeTypeNativeOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in requesting all native attribute types in a search.

134.3.118 kODAttributeTypeNestedGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in group records for the list of GUID values for nested groups.

134.3.119 kODAttributeTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type that indicates which netgroups its record is a member of.
Found in user and host records.

134.3.120 kODAttributeTypeNetGroupTriplet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines the host, user and domain triplet combinations to support NetGroups. Each attribute value is comma separated string to maintain the triplet (e.g., host,user,domain).

134.3.121 kODAttributeTypeNetworkInterfaces as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.122 kODAttributeTypeNetworkNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines a network number. Usually found in network records (kODRecordTypeNetworks)

134.3.123 kODAttributeTypeNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Defines a user's home directory mount point on the local machine.

134.3.124 kODAttributeTypeNickName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the nickname of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.125 kODAttributeTypeNodeOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Any extended options supported by the node during creation

134.3.126 kODAttributeTypeNodePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute type in Neighborhood records describing the DS Node to search while looking up aliases in this neighborhood.

134.3.127 kODAttributeTypeNodeRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Node reference count for a process.

134.3.128 kODAttributeTypeNodeRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the node references for a process.

134.3.129 kODAttributeTypeNodeSASLRealm as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Contains the SASL realm associated with this node (if any)

134.3.130 kODAttributeTypeNote as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Note attribute.

134.3.131 kODAttributeTypeNTDomainComputerAccount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

134.3.132 kODAttributeTypeNumTableList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Summary of the reference table entries presented as attribute values from the Configure node.

134.3.133 kODAttributeTypeOperatingSystem as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Returns the operating system type where the daemon is running, e.g., Mac OS X or Mac OS X Server

134.3.134 kODAttributeTypeOperatingSystemVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Returns the operating system version where the daemon is running, e.g., 10.6

134.3.135 kODAttributeTypeOrganizationInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually the organization info of a user.

134.3.136 kODAttributeTypeOrganizationName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Usually the organization of a user.

134.3.137 kODAttributeTypeOriginalHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Home directory URL used in local account caching.

134.3.138 kODAttributeTypeOriginalNFSHomeDirectory as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: NFS home directory used in local account caching.

134.3.139 kODAttributeTypeOriginalNodeName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Nodename used in local account caching.

134.3.140 kODAttributeTypeOwner as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type for the owner of a record.
Typically the value is a LDAP distinguished name.

134.3.141 kODAttributeTypeOwnerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type for the owner GUID of a group.
Found in group records (kODRecordTypeGroups).

134.3.142 kODAttributeTypePagerNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the pager numbers of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.143 kODAttributeTypeParentLocales as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.144 kODAttributeTypePassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Holds the password or credential value.

134.3.145 kODAttributeTypePasswordPlus as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Holds marker data to indicate possible authentication redirection.

134.3.146 kODAttributeTypePasswordPolicyOptions as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Collection of password policy options in single attribute.
Used in user presets record.

134.3.147 kODAttributeTypePasswordServerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the attribute for storing the password server's replication information.

134.3.148 kODAttributeTypePasswordServerLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Specifies the IP address or domain name of the Password Server associated with a given directory node. Found in a config record named PasswordServer.

134.3.149 kODAttributeTypePGPPublicKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Pretty Good Privacy public encryption key.

134.3.150 kODAttributeTypePhoneContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines a record's custom phone numbers.
found in user or people records.
Example: home fax:408-555-4444

134.3.151 kODAttributeTypePhoneNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Telephone number of a user.

134.3.152 kODAttributeTypePicture as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the path of the picture for each user displayed in the login window.
Found in user records (kODRecordTypeUsers).

134.3.153 kODAttributeTypePIDValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: PID value.

134.3.154 kODAttributeTypePluginIndex as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Plugin index for reference.

134.3.155 kODAttributeTypePlugInInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Information (version, signature, about, credits, etc.) about the plug-in that is actually servicing a particular directory node.
Has never been supported.

134.3.156 kODAttributeTypePort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the port number a service is available on.
Typically found in service record types including kODRecordTypeAFPServer, kODRecordTypeLDAPServer, and kODRecordTypeWebServer.

134.3.157 kODAttributeTypePostalAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The postal address usually excluding postal code.

134.3.158 kODAttributeTypePostalAddressContacts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines a record's alternate postal addresses.
Found in user records (kODRecordTypeUsers) and resource records (kODRecordTypeResources).

134.3.159 kODAttributeTypePostalCode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The postal code such as zip code in the USA.

134.3.160 kODAttributeTypePresetUserIsAdmin as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Flag to indicate whether users created from this preset are administrators by default. Found in kODRecordTypePresetUsers records.

134.3.161 kODAttributeTypePrimaryComputerGUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

An attribute that defines a primary computer of the computer group.
Added to computer group record type (kODRecordTypeComputerGroups)

134.3.162 kODAttributeTypePrimaryComputerList as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The GUID of the computer list with which this computer record is associated.

134.3.163 kODAttributeTypePrimaryGroupID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: This is the 32 bit unique ID that represents the primary group a user is part of, or the ID of a group. Format is a signed 32 bit integer represented as a string.

134.3.164 kODAttributeTypePrimaryLocale as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.165 kODAttributeTypePrimaryNTDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Supports Kerberized SMB Server services.

134.3.166 kODAttributeTypePrinter1284DeviceID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute that defines the IEEE 1284 DeviceID of a printer.
This is used when configuring a printer.

134.3.167 kODAttributeTypePrinterLPRHost as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

134.3.168 kODAttributeTypePrinterLPRQueue as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

134.3.169 kODAttributeTypePrinterMakeAndModel as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for definition of the Printer Make and Model. An example value would be "HP LaserJet 2200". This would be used to determine the proper PPD file to be used when configuring a printer from the Directory. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

134.3.170 kODAttributeTypePrinterType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

134.3.171 kODAttributeTypePrinterURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines the URI of a printer "ipp://address" or "smb://server/queue". This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

134.3.172 kODAttributeTypePrinterXRISupported as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines additional URIs supported by a printer.
This is used when configuring a printer. This attribute is based on the IPP Printing Specification RFC and IETF IPP-LDAP Printer Record.

134.3.173 kODAttributeTypePrintServiceInfoText as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

134.3.174 kODAttributeTypePrintServiceInfoXML as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Standard attribute type for kODRecordTypePrinters.

134.3.175 kODAttributeTypePrintServiceUserData as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute for print quota configuration or statistics (XML data).
Found in user records (kODRecordTypeUsers) or print service statistics records (kODRecordTypePrintServiceUser).

134.3.176 kODAttributeTypeProcessName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Process Name.

134.3.177 kODAttributeTypeProfiles as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Profiles associated with the record.

134.3.178 kODAttributeTypeProfilesTimestamp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Timestamp for the profiles associated with the record.

134.3.179 kODAttributeTypeProtocolNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines a protocol number. Usually found in protocol records (kODRecordTypeProtocols)

134.3.180 kODAttributeTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of protocols.

134.3.181 kODAttributeTypePwdAgingPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Contains the password aging policy data for an authentication capable record.

134.3.182 kODAttributeTypeReadOnlyNode as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Can be found using dsGetDirNodeInfo and will return one of
ReadOnly, ReadWrite, or WriteOnly strings.
Note that ReadWrite does not imply fully readable or writable

134.3.183 kODAttributeTypeRealUserID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used by Managed Client

134.3.184 kODAttributeTypeRecordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of names/keys for this record.

134.3.185 kODAttributeTypeRecordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute for a Record or a Directory Node.

134.3.186 kODAttributeTypeRecRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Record reference count for a process.

134.3.187 kODAttributeTypeRecRefs as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: All the record references for a process.

134.3.188 kODAttributeTypeRelationships as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines the relationship to the record type.
found in user records (kODRecordTypeUsers).
Example: brother:John

134.3.189 kODAttributeTypeRelativeDNPrefix as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to map the first native LDAP attribute type required in the building of the Relative Distinguished Name for LDAP record creation.

134.3.190 kODAttributeTypeResourceInfo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: attribute that defines a resource record's info.

134.3.191 kODAttributeTypeResourceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute type for the kind of resource.
found in resource records (kODRecordTypeResources).

Example: ConferenceRoom

134.3.192 kODAttributeTypeRPCNumber as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute that defines an RPC number. Usually found in RPC records (kODRecordTypeRPC)

134.3.193 kODAttributeTypeSchema as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of attribute types.

134.3.194 kODAttributeTypeSearchPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Search path used by the search node.

134.3.195 kODAttributeTypeSearchPolicy as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Search policy for the search node.

134.3.196 kODAttributeTypeServicesLocator as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: the URI for a record's calendar

134.3.197 kODAttributeTypeServiceType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Represents the service type for the service. This is the raw service type of the service. For example a service record type of kODRecordTypeWebServer might have a service type of "http" or "https".

134.3.198 kODAttributeTypeSetupAdvertising as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

134.3.199 kODAttributeTypeSetupAutoRegister as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

134.3.200 kODAttributeTypeSetupLocation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

134.3.201 kODAttributeTypeSetupOccupation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used for Setup Assistant automatic population.

134.3.202 kODAttributeTypeSMBAcctFlags as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Account control flag.

134.3.203 kODAttributeTypeSMBGroupRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Constant for supporting PDC SMB interaction with DirectoryService.

134.3.204 kODAttributeTypeSMBHome as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: UNC address of Windows homedirectory mount point (\server\sharepoint).

134.3.205 kODAttributeTypeSMBHomeDrive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Drive letter for homedirectory mount point.

134.3.206 kODAttributeTypeSMBKickoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

134.3.207 kODAttributeTypeSMBLogoffTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

134.3.208 kODAttributeTypeSMBLogonTime as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: SMB Primary Group Security ID, stored as a string attribute of up to 64 bytes. Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

134.3.209 kODAttributeTypeSMBPrimaryGroupSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

134.3.210 kODAttributeTypeSMBProfilePath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Desktop management info (dock, desktop links, etc).

134.3.211 kODAttributeTypeSMBPWDLastSet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

134.3.212 kODAttributeTypeSMBRID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute in support of SMB interaction.

134.3.213 kODAttributeTypeSMBScriptPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Login script path.

134.3.214 kODAttributeTypeSMBSID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

SMB Security ID, stored as a string attribute of up to 64 bytes.
Found in user, group, and computer records (kODRecordTypeUsers, kODRecordTypeGroups, kODRecordTypeComputers).

134.3.215 kODAttributeTypeSMBUserWorkstations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of workstations user can login from (machine account names).

134.3.216 kODAttributeTypeStandardOnly as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in requesting all standard attribute types in a query.

134.3.217 kODAttributeTypeState as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: The state or province of a country.

134.3.218 kODAttributeTypeStreet as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Represents the street address of a user or person.
Usually found in user or people records (kODRecordTypeUsers or kODRecordTypePeople).

134.3.219 kODAttributeTypeSubNodes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute of a node which lists the available subnodes of that node.

134.3.220 kODAttributeTypeTimePackage as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Data of Create, Modify, Backup time in UTC.

134.3.221 kODAttributeTypeTimeToLive as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute recommending how long to cache the record's attribute values.
Format is an unsigned 32 bit representing seconds. ie. 300 is 5 minutes.

134.3.222 kODAttributeTypeTotalRefCount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Total count of references for a process.

134.3.223 kODAttributeTypeTotalSize as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: checksum/meta data.

134.3.224 kODAttributeTypeTrustInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to describe a node's trust information.

134.3.225 kODAttributeTypeUniqueID as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

This is the 32 bit unique ID that represents the user in the legacy manner.
Format is a signed integer represented as a string.

134.3.226 kODAttributeTypeURL as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: List of URLs.

134.3.227 kODAttributeTypeUserCertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the user's certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party.

134.3.228 kODAttributeTypeUserPKCS12Data as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing binary data in PKCS # 12 format.
Usually found in user records. The value can contain keys, certificates, and other related information and is encrypted with a passphrase.

134.3.229 kODAttributeTypeUserShell as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used to represent the user's shell setting.

134.3.230 kODAttributeTypeUserSMIMECertificate as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

Attribute containing the binary of the user's SMIME certificate.
Usually found in user records. The certificate is data which identifies a user.
This data is attested to by a known party, and can be independently verified by a third party. SMIME certificates are often used for signed or encrypted emails.

134.3.231 kODAttributeTypeVersion as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Version label.

134.3.232 kODAttributeTypeVFSDumpFreq as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.

Notes: Attribute used to support mount records.

134.3.233 kODAttributeTypeVFSLinkDir as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

134.3.234 kODAttributeTypeVFSOpts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Used in support of mount records.

134.3.235 kODAttributeTypeVFSPassNo as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

134.3.236 kODAttributeTypeVFSType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: Attribute used to support mount records.

134.3.237 kODAttributeTypeWeblogURI as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes:

attribute that defines the URI of a user's weblog.
Usually found in user records (kODRecordTypeUsers).

Example: http://example.com/blog/jsmith

134.3.238 kODAttributeTypeXMLPlist as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the attribute type constants.
Notes: XML plist used.

134.3.239 kODRecordTypeAFPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record type of AFP server records.

134.3.240 kODRecordTypeAliases as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to represent alias records.

134.3.241 kODRecordTypeAttributeTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies records that represent each possible attribute type.

134.3.242 kODRecordTypeAugments as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to store augmented record data.

134.3.243 kODRecordTypeAutomount as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to store automount record data.

134.3.244 kODRecordTypeAutomountMap as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to store automountMap record data.

134.3.245 kODRecordTypeAutoServerSetup as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Used to discover automated server setup information.

134.3.246 kODRecordTypeBootp as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing bootp info.

134.3.247 kODRecordTypeCertificateAuthorities as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record type that contains certificate authority informatio

134.3.248 kODRecordTypeComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies computer group records.

134.3.249 kODRecordTypeComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies computer list records.

134.3.250 kODRecordTypeComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies computer records.

134.3.251 kODRecordTypeConfiguration as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies configuration records.

134.3.252 kODRecordTypeEthernets as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the node for storing ethernets.

134.3.253 kODRecordTypeFileMakerServers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: FileMaker servers record type that describes available FileMaker servers, used for service discovery.

134.3.254 kODRecordTypeFTPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies ftp server records.

134.3.255 kODRecordTypeGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies group records.

134.3.256 kODRecordTypeHosts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies host records.

134.3.257 kODRecordTypeHostServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing host services.

134.3.258 kODRecordTypeLDAPServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies LDAP server records.

134.3.259 kODRecordTypeLocations as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Location record type.

134.3.260 kODRecordTypeMounts as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies mount records.

134.3.261 kODRecordTypeNetDomains as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing net domains.

134.3.262 kODRecordTypeNetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing net groups.

134.3.263 kODRecordTypeNetworks as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies network records.

134.3.264 kODRecordTypeNFS as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies NFS records.

134.3.265 kODRecordTypePeople as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record type that contains "People" records used for contact information.

134.3.266 kODRecordTypePresetComputerGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The computer group record type used for presets in record creation.

134.3.267 kODRecordTypePresetComputerLists as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The computer list record type used for presets in record creation.

134.3.268 kODRecordTypePresetComputers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The computer record type used for presets in record creation.

134.3.269 kODRecordTypePresetGroups as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The group record type used for presets in record creation.

134.3.270 kODRecordTypePresetUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: The user record type used for presets in record creation.

134.3.271 kODRecordTypePrinters as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies printer records.

134.3.272 kODRecordTypePrintService as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies print service records.

134.3.273 kODRecordTypePrintServiceUser as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Record in the local node for storing quota usage for a user.

134.3.274 kODRecordTypeProtocols as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies protocol records.

134.3.275 kODRecordTypeQTSServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies quicktime streaming server records.

134.3.276 kODRecordTypeQueryInformation as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Specifically to return query information inline such as skipped nodes

134.3.277 kODRecordTypeRecordTypes as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies records that represent each possible record type.

134.3.278 kODRecordTypeResources as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies resources used in group services.

134.3.279 kODRecordTypeRPC as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies remote procedure call records.

134.3.280 kODRecordTypeServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies generic server records.

134.3.281 kODRecordTypeServices as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies directory based service records.

134.3.282 kODRecordTypeSharePoints as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Share point record type.

134.3.283 kODRecordTypeSMBServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies SMB server records.

134.3.284 kODRecordTypeUsers as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies user records.

134.3.285 kODRecordTypeWebServer as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the record type constants.
Notes: Identifies web server records.

134.3.286 recordDetails(byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary of attributes with their respective values.
Notes:

Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

134.3.287 recordDetailsForAttributes(inAttributes() as string, byref error as NSErrorMBS) as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary of attributes with their respective values.
Notes:

inAttributes: An array of attributes. Can be nil.
Error: An error reference for error details.

Returns a dictionary of the attributes in inAttributes with their respective values.

If inAttributes is nil, all currently retrieved attributes are returned.

134.3.288 synchronize(byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Synchronizes the record from the directory to get current data and commit changes.
Notes:

Returns true if the record successfully synchronizes; otherwise, false.

This method only fetches those attributes that have been fetched before.

134.3.289 valuesForAttribute(inAttribute as String, byref error as NSErrorMBS) as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the values of an attribute of the record.
Notes:

inAttribute: The attribute.
Error: An error reference for error details. Can be nil.

Returns an array of attribute values. Elements are of type String or MemoryBlock.

134.3.290 Properties

134.3.291 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

134.3.292 recordName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The official name of the record.
Notes: (Read only property)

134.3.293 recordType as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The record's type.
Notes: (Read only property)

134.4 class ODSessionMBS

134.4.1 class ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for an Open Directory session.

134.4.6 Methods

134.4.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: gets default session.

134.4.8 defaultSession as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a shared instance of the local session.

134.4.9 nodeNames(byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the node names that are registered with this session.

134.4.10 ODSessionProxyAddress as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The address to connect to via proxy. The value is of type string.

134.4.11 ODSessionProxyPassword as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The password to connect with via proxy. The value is of type string.

134.4.12 ODSessionProxyPort as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The port to connect to via proxy. The value is of type integer.

134.4.13 ODSessionProxyUsername as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the keys for the options dictionary.
Notes: The username to connect with via proxy. The value is of type string.

134.4.14 session(options as dictionary, byref Error as NSErrorMBS) as ODSessionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a session object directed over proxy to another host.
Notes:

Options: A dictionary of options to associate with the session. Can be nil.
Error: An error reference for error details. Can be nil.

Returns the initialized session object.

134.4.15 UserName as String

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries user name.
Notes: Convenience function to query user name of current user.

134.4.16 Properties

134.4.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

Chapter 135

OpenCL

135.1 class CLCommandQueueMBS

135.1.1 class CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The class for an OpenCL command queue.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)
```

135.1.2 Blog Entries

- OpenCL support in our plugins

135.1.3 Blog Entries

- OpenCL support in our plugins

135.1.4 Methods

135.1.5 Constructor(context as CLContextMBS, device as CLDeviceMBS, flags as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Create a command-queue on a specific device.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)
```

Notes:

context: Must be a valid OpenCL context.
device: Must be a device associated with context. It can either be in the list of devices specified when context is created using CLContextMBS Constructor or have the same device type as the device type specified when the context is created.
flags: Specifies a list of properties for the command-queue. This is a bit-field. Only command-queue properties specified in the table below can be set in properties; otherwise the value specified in properties is considered to be not valid.

Command-Queue Properties	Description
kQueueOutOfOrderExecModeEnable	Determines whether the commands queued in the command-queue are executed in-order or out-of-order. If set, the commands in the command-queue are executed out-of-order. Otherwise, commands are executed in-order.
kQueueProfilingEnable	Enable or disable profiling of commands in the command-queue. If set, the profiling of commands is enabled. Otherwise profiling of commands is disabled. See clGetEventProfilingInfo for more information.

The OpenCL functions that are submitted to a command-queue are enqueued in the order the calls are made but can be configured to execute in-order or out-of-order. The properties argument in clCreateCommandQueue can be used to specify the execution order.

If the kQueueOutOfOrderExecModeEnable property of a command-queue is not set, the commands enqueued to a command-queue execute in order. For example, if an application calls EnqueueNDRangeKernel to execute kernel A followed by a EnqueueNDRangeKernel to execute kernel B, the application can assume that kernel A finishes first and then kernel B is executed. If the memory objects output by kernel A are

inputs to kernel B then kernel B will see the correct data in memory objects produced by execution of kernel A. If the kQueueOutOfOrderExecModeEnable property of a commandqueue is set, then there is no guarantee that kernel A will finish before kernel B starts execution.

Applications can configure the commands enqueued to a command-queue to execute out-of-order by setting the kQueueOutOfOrderExecModeEnable property of the command-queue. This can be specified when the command-queue is created or can be changed dynamically using this Constructor. In out-of-order execution mode there is no guarantee that the enqueued commands will finish execution in the order they were queued. As there is no guarantee that kernels will be executed in order, i.e. based on when the EnqueueNDRangeKernel calls are made within a command-queue, it is therefore possible that an earlier EnqueueNDRangeKernel call to execute kernel A identified by event A may execute and/or finish later than a EnqueueNDRangeKernel call to execute kernel B which was called by the application at a later point in time. To guarantee a specific order of execution of kernels, a wait on a particular event (in this case event A) can be used. The wait for event A can be specified in the event_wait_list argument to EnqueueNDRangeKernel for kernel B.

In addition, a wait for events or a barrier command can be enqueued to the command-queue. The wait for events command ensures that previously enqueued commands identified by the list of events to wait for have finished before the next batch of commands is executed. The barrier command ensures that all previously enqueued commands in a command-queue have finished execution before the next batch of commands is executed.

Similarly, commands to read, write, copy or map memory objects that are enqueued after EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel commands are not guaranteed to wait for kernels scheduled for execution to have completed (if the kQueueOutOfOrderExecModeEnable property is set). To ensure correct ordering of commands, the event object returned by EnqueueNDRangeKernel, EnqueueTask or EnqueueNativeKernel can be used to enqueue a wait for event or a barrier command can be enqueued that must complete before reads or writes to the memory object(s) occur.

Lasterror is set.

135.1.6 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the context specified when the command-queue is created.
Notes: Lasterror is set.

135.1.7 Device as CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the device specified when the command-queue is created.

Notes: Lasterror is set.

135.1.8 EnqueueBarrier

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A synchronization point that enqueues a barrier operation.
Notes:

EnqueueBarrier is a synchronization point that ensures that all queued commands in command_queue have finished execution before the next batch of commands can begin execution.

Lasterror is set.

135.1.9 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to another buffer object.
Notes:

sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 135.1.10 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

135.1.10 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to another buffer object.
Notes:

sourceBuffer: the source memory object.
destBuffer: the destination memory object.
sourceOffset: The offset where to begin copying data from sourceBuffer.
destOffset: The offset where to begin copying data into destBuffer.
size: Refers to the size in bytes to copy.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.
Lasterror is set.

- 135.1.9 EnqueueCopyBuffer(sourceBuffer as CLMemMBS, destBuffer as CLMemMBS, sourceOffset as Integer, destOffset as Integer, size as Integer) 21540

135.1.11 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy a buffer object to an image object.
Notes:

SourceBuffer: A valid buffer object.
destImage: A valid image object.

sourceOffset: The offset where to begin copying data from SourceBuffer.

destOrigin: The (x, y, z) offset in pixels where to begin copying data to destImage. If destImage is a 2D image object, the z value given by destOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If destImage is a 2D image object, the depth value given by RegionDepth must be 1.

The size in bytes of the region to be copied from SourceBuffer referred to as src_cb is computed as width * height * depth * bytes/image element if destImage is a 3D image object and is computed as width * height * bytes/image element if destImage is a 2D image object.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Lasterror is set.

- 135.1.11 EnqueueCopyBufferToImage(SourceBuffer as CLMemMBS, destImage as CLMemMBS, sourceOffset as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer) 21541

135.1.13 EnqueueCopyImage(sourceImage as CLMemMBS, destImage as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, destOriginX as Integer, destOriginY as Integer, destOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to copy image objects.
Notes:

sourceImage: Source image.
destImage: Dest image.

sourceOrigin: Defines the starting (x, y, z) location in pixels in src_image from where to start the data copy. If src_image is a 2D image object, the z value given by sourceOriginZ must be 0.

sourceOrigin: Defines the starting (x, y, z) location in pixels in dst_image from where to start the data copy. If dst_image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle to copy. If src_image or dst_image is a 2D image object, the depth value given by RegionDepth must be 1.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with

events in EventWaitList and CommandQueue must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

It is currently a requirement that the sourceImage and destImage image memory objects for EnqueueCopyImage must have the exact same image format (i.e. the cl_image_format descriptor specified when sourceImage and destImage are created must match).

sourceImage and destImage can be 2D or 3D image objects allowing us to perform the following actions:

- Copy a 2D image object to a 2D image object.
- Copy a 2D image object to a 2D slice of a 3D image object.
- Copy a 2D slice of a 3D image object to a 2D image object.
- Copy a 3D image object to a 3D image object.

- 135.1.15 EnqueueCopyImageToBuffer(sourceImage as CLMemMBS, destBuffer as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, destOffset as Integer) 21545

135.1.17 EnqueueMapBuffer(buffer as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, offset as Integer, size as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to map a region of the buffer object given by buffer into the host address space and returns a pointer to this mapped region.
Notes:

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapBuffer does not return until the specified region in buffer can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by clEnqueueMapBuffer cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapBuffer.
MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (offset, size) in the buffer object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (offset, size) in the buffer object is being mapped for writing.

buffer: A valid buffer object. The OpenCL context associated with CLCommandQueueMBS and buffer must be the same.
offset, size: The offset in bytes and the size of the region in the buffer object that is being mapped.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in EventWaitList act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.
outEvent: Returns an event object that identifies this particular copy command and can be used toquery or queue a wait for this particular command to complete.

Lasterror is set.

The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in map_flags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

Lasterror is set.

135.1.19 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to map a region of an image object into the host address space and returns a pointer to this mapped region.
Notes:

image: A valid image object. The OpenCL context associated with CLCommandQueueMBS and image must be the same.

BlockingMap: Optional, Indicates if the map operation is blocking or non-blocking. If BlockingMap is true, EnqueueMapImage does not return until the specified region in image can be mapped. If BlockingMap is false i.e. map operation is non-blocking, the pointer to the mapped region returned by EnqueueMapImage cannot be used until the map command has completed. The event argument returns an event object which can be used to query the execution status of the map command. When the map command is completed, the application can access the contents of the mapped region using the pointer returned by EnqueueMapImage.

MapFlags: Is a bit-field and can be set to kMapRead to indicate that the region specified by (origin, region) in the image object is being mapped for reading, and/or kMapWrite to indicate that the region specified by (origin, region) in the image object is being mapped for writing.
origin, region: Define the (x, y, z) offset in pixels and (width, height, depth) in pixels of the 2D or 3D rectangle region that is to be mapped. If image is a 2D image object, the z value given by originZ must be 0 and the depth value given by regionDepth must be 1.

RowPitch: Returns the scan-line pitch in bytes for the mapped region. This must be a non-nil value.
SlicePitch: Returns the size in bytes of each 2D slice for the mapped region. For a 2D image, zero is returned if this argument is not nil. For a 3D image, image_slice_pitch must be a non-nil value.

EventWaitList: Optional, Specify events that need to complete before EnqueueMapImage can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and CLCommandQueueMBS must be the same.

outEvent: Optional, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Lasterror is set.

If the buffer or image object is created with kMemoryUseHostPtr set in mem_flags, the following will be true:

The HostPtr specified in Constructor is guaranteed to contain the latest bits in the region being mapped when the EnqueueMapBuffer or EnqueueMapImage command has completed.
The pointer value returned by EnqueueMapBuffer or EnqueueMapImage will be derived from the HostPtr specified when the buffer or image object is created.
The contents of the regions of a memory object mapped for writing (i.e. kMapWrite is set in MapFlags argument to EnqueueMapBuffer or EnqueueMapImage) are considered to be undefined until this region is unmapped. Reads and writes by a kernel executing on a device to a memory region(s) mapped for writing are undefined.

Multiple command-queues can map a region or overlapping regions of a memory object for reading (i.e. MapFlags = kMapRead). The contents of the regions of a memory object mapped for reading can also be read by kernels executing on a device(s). The behavior of writes by a kernel executing on a device to a mapped region of a memory object is undefined. Mapping (and unmapping) overlapped regions of a buffer or image memory object for writing is undefined.

The behavior of OpenCL function calls that enqueue commands that write or copy to regions of a memory object that are mapped is undefined.

- 135.1.19 EnqueueMapImage(image as CLMemMBS, BlockingMap as boolean, MapFlags as Integer, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, byref RowPitch as Integer, byref SlicePitch as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) as memoryblock 21550

135.1.21 EnqueueMarker(byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a marker command.
Notes:

Enqueues a marker command to the command queue. The marker command returns an event which can be used to queue a wait on this marker event i.e. wait for all commands queued before the marker command to complete.

Lasterror is set.

135.1.22 EnqueueNativeKernel(FunctionPtr as ptr, args as memoryblock, argsSize as Integer, NumberOfMemoryObjects as Integer, MemList as memoryblock, ArgsMemoryLocations as memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a native C/C++ function not compiled using the OpenCL compiler.
Notes:

First a warning: Don't use this with Xojo methods. You can point to a function written in C which you made thread safe.

self: A valid command-queue. A native user function can only be executed on a command-queue created on a device that has kExceNativeKernel capability set in ExecutionCapabilities property.

FunctionPtr: A pointer to a host-callable user function.

args: A pointer to the args list that FunctionPtr should be called with.
argsSize: The size in bytes of the args list that args points to.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

NumberOfMemoryObjects: The number of buffer objects that are passed in args.

MemList: A list of valid buffer objects, if NumberOfMemoryObjects is greater than 0. The buffer object values specified in MemList are memory object handles (CLMemMBS.handle values) or nil.

ArgsMemoryLocations: A pointer to appropriate locations that args points to where memory object handles (CLMemMBS.handle values) are stored. Before the user function is executed, the memory object handles are replaced by pointers to global memory.

EventWaitList: Optionally, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optionally, Returns an event object that identifies this particular kernel execution instance.

The data pointed to by args and argsSize bytes in size will be copied and a pointer to this copied region will be passed to FunctionPtr. The copy needs to be done because the memory objects (CLMemMBS.handle values) that args may contain need to be modified and replaced by appropriate pointers to global memory. When EnqueueNativeKernel returns, the memory region pointed to by args can be reused by the application.

Lasterror is set.

21553

135.1.24 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
GlobalWorkSize: The number of global work-items.
LocalWorkSize: The number of work-items that make up a work-group (also referred to as the size of the work-group) that will execute the kernel specified by kernel.

The work-group size to be used for kernel can also be specified in the program source using the __attribute__((reqd_work_group_size(X, Y, Z)))qualifier. In this case the size of work group specified by local_work_size must match the value specified by the reqd_work_group_size __attribute__ qualifier.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

Work-group instances are executed in parallel across multiple compute units or concurrently on the same compute unit.

Each work-item is uniquely identified by a global identifier. The global ID, which can be read inside the kernel, is computed using the value given by GlobalWorkSize and global_work_offset. In OpenCL 1.0, the starting global ID is always (0, 0, ... 0). In addition, a work-item is also identified within a work-group by a unique local ID. The local ID, which can also be read by the kernel, is computed using the value given by LocalWorkSize. The starting local ID is always (0, 0, ... 0).

Lasterror is set.

135.1.25 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
GlobalWorkSize: The number of global work-items.
LocalWorkSize: The number of work-items that make up a work-group (also referred to as the size of the work-group) that will execute the kernel specified by kernel.

The work-group size to be used for kernel can also be specified in the program source using the __attribute__((reqd_work_group_size(X, Y, Z)))qualifier. In this case the size of work group specified by local_work_size must match the value specified by the reqd_work_group_size __attribute__ qualifier.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

Work-group instances are executed in parallel across multiple compute units or concurrently on the same compute unit.

Each work-item is uniquely identified by a global identifier. The global ID, which can be read inside the kernel, is computed using the value given by GlobalWorkSize and global_work_offset. In OpenCL 1.0, the starting global ID is always (0, 0, ... 0). In addition, a work-item is also identified within a work-group by a unique local ID. The local ID, which can also be read by the kernel, is computed using the value given by LocalWorkSize. The starting local ID is always (0, 0, ... 0).

Lasterror is set.

- 135.1.24 EnqueueNDRangeKernel(kernel as CLKernelMBS, GlobalWorkSize as Integer, LocalWorkSize as Integer) 21556

135.1.26 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to read from a buffer object to host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.

- 135.1.27 EnqueueReadBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memo-

ryblock) 21559

135.1.27 EnqueueReadBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to read from a buffer object to host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingRead: Optional, Indicates if the read operations are blocking or non-blocking. If BlockingRead is true i.e. the read command is blocking, clEnqueueReadBuffer does not return until the buffer data has been read and copied into memory pointed to by ptr.

If BlockingRead is false i.e. the read command is non-blocking, EnqueueReadBuffer queues a non-blocking read command and returns. The contents of the buffer that ptr points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that ptr points to can be used by the application.

offset: The offset in bytes in the buffer object to read from.
size: The size in bytes of data being read.
mem: The pointer to buffer in host memory where data is to be read into.

EventWaitList: Optional, specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueReadBuffer to read a region of the buffer object with the ptr argument value set to mem + offset, where mem is a pointer to the memory region specified when the buffer object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

All commands that use this buffer object have finished execution before the read command begins execution
The buffer object is not mapped
The buffer object is not used by any command-queue until the read command has finished execution

Lasterror is set.
See also:

- 135.1.26 EnqueueReadBuffer(buffer as CLMemMBS, BlockingRead as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21558

135.1.28 EnqueueReadImage(image as CLMemMBS, BlockingRead as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to read from a 2D or 3D image object to host memory.
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

- 135.1.29 EnqueueReadImage(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock) 21561

135.1.29 EnqueueReadImage(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to read from a 2D or 3D image object to host memory..
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingRead: Optional. Indicates if the read operations are blocking or non-blocking.

If BlockingRead is true i.e. the read command is blocking, clEnqueueReadImage does not return until the buffer data has been read and copied into memory pointed to by mem.

If BlockingRead is false i.e. map operation is non-blocking, clEnqueueReadImage queues a non-blocking read command and returns. The contents of the buffer that mem points to cannot be used until the read command has completed. The event argument returns an event object which can be used to query the execution status of the read command. When the read command has completed, the contents of the buffer that mem points to can be used by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to read. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being read. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch: The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

SlicePitch: Size in bytes of the 2D slice of the 3D region of a 3D image being read. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be read from.

EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional, Returns an event object that identifies this particular read command and can be used to query or queue a wait for this particular command to complete. event can be nil in which case it will not be possible for the application to query the status of this command or queue a wait for this command to complete.

Calling EnqueueReadImage to read a region of the image object with the mem argument value set to HostPtr + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where host_ptr is a pointer to the memory region specified when the image object being read is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- All commands that use this image object have finished execution before the read command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueReadImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the read command has finished execution.

Lasterror is set.

- 135.1.28 EnqueueReadImage(image as CLMemMBS, BlockingRead as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21560

135.1.30 EnqueueReadPicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Enqueues a command to read from a 2D or 3D image object to a Xojo picture object.
Example:

```
const size = 500

// create test picture
dim pic1 as Picture = LogoMBS(size)
// create destination picture
dim pic2 as new Picture(size, size, 32)

// get device list
dim devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

// Create context for that device
dim c as new CLContextMBS(device)

// query what format Xojo uses for pictures
dim RowPitch as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
dim m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)
```

```
// create command queue
dim cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)

// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

Notes:

image: Refers to a valid 2D or 3D image object.

origin: Defines the (x, y) offset in pixels in the image from where to read.
region: Defines the (width, heigh) in pixels of the 2D or 3D rectangle being read.

pic: The Xojo picture object to write pixel data to.

This command is always blocking.
Lasterror is set.

135.1.31 EnqueueTask(kernel as CLKernelMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.
Lasterror is set.
See also:

- 135.1.32 EnqueueTask(kernel as CLKernelMBS, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21565

135.1.32 EnqueueTask(kernel as CLKernelMBS, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to execute a kernel on a device.
Notes:

kernel: A valid kernel object. The OpenCL context associated with kernel and command_queue must be the same.
EventWaitList: Optional, Specify events that need to complete before this particular command can be executed. If EventWaitList is not passed or empty, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.
outEvent: Optional, Returns an event object that identifies this particular kernel execution instance. Event objects are unique and can be used to identify a particular kernel execution instance later on.

The kernel is executed using a single work-item.

EnqueueTask is equivalent to calling EnqueueNDRangeKernel with work_dim = 1, global_work_size set to 1, and local_work_size set to 1.
Lasterror is set.
See also:

- 135.1.31 EnqueueTask(kernel as CLKernelMBS) 21564

135.1.33 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to unmap a previously mapped region of a memory object.
Notes:

memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.

- 135.1.34 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21566

135.1.34 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to unmap a previously mapped region of a memory object.
Notes:

memobj: A valid memory object. The OpenCL context associated with CLCommandQueueMBS and memobj must be the same.

mem: The host address returned by a previous call to EnqueueMapBuffer or EnqueueMapImage for memobj. Do not use this memoryblock after it has been unmapped.

EventWaitList: Optionally, Specify events that need to complete before EnqueueUnmapMemObject can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optionally, Returns an event object that identifies this particular copy command and can be used to query or queue a wait for this particular command to complete.

Reads or writes from the host using the pointer returned by EnqueueMapBuffer or EnqueueMapImage are considered to be complete.

EnqueueMapBuffer and EnqueueMapImage increments the mapped count of the memory object. The initial mapped count value of a memory object is zero. Multiple calls to EnqueueMapBuffer or EnqueueMapImage on the same memory object will increment this mapped count by appropriate number of calls. EnqueueUnmapMemObject decrements the mapped count of the memory object.

EnqueueMapBuffer and clEnqueueMapImage act as synchronization points for a region of the memory object being mapped.

- 135.1.33 EnqueueUnmapMemObject(buffer as CLMemMBS, mem as Memoryblock) 21565

135.1.35 EnqueueWaitForEvents(EventWaitList() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a wait for a specific event or a list of events to complete before any future commands queued in the command-queue are executed.
Notes:

EventWaitList: Events specified in EventWaitList act as synchronization points.

The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

Lasterror is set.

135.1.36 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to write to a buffer object from host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.

135.1.37 EnqueueWriteBuffer(buffer as CLMemMBS, offset as Integer, size as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueue commands to write to a buffer object from host memory.
Notes:

buffer: Refers to a valid buffer object.
BlockingWrite: Optional, Indicates if the write operations are blocking or nonblocking.

If blocking_write is true, the OpenCL implementation copies the data referred to by mem and enqueues the write operation in the command-queue. The memory pointed to by mem can be reused by the application after the EnqueueWriteBuffer call returns.

If blocking_write is false, the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

offset: The offset in bytes in the buffer object to write to.
size: The size in bytes of data being written.
mem: The pointer to buffer in host memory where data is to be written from.

EventWaitList: Optional. Specifies events that need to complete before this particular command can be executed. If EventWaitList is empty or not passed, then this particular command does not wait on any event to complete. The events specified in EventWaitList act as synchronization points. The context associated with events in EventWaitList and CLCommandQueueMBS must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteBuffer to update the latest bits in a region of the buffer object with the mem argument value set to host_ptr + offset, where host_ptr is a pointer to the memory region specified when the buffer object being written is created with CL_MEM_USE_HOST_PTR, must meet the following requirements in order to avoid undefined behavior:

The host memory region given by (mem + offset, size) contains the latest bits when the enqueued write command begins execution.
The buffer object is not mapped.
The buffer object is not used by any command-queue until the write command has finished execution.

Lasterror is set.

- 135.1.36 EnqueueWriteBuffer(buffer as CLMemMBS, BlockingWrite as boolean, offset as Integer, size as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

21567

135.1.38 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to write from a 2D or 3D image object to host memory.
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row pitch and slice pitch.
- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

135.1.39 EnqueueWriteImage(image as CLMemMBS,sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Enqueues a command to write from a 2D or 3D image object to host memory.
Notes:

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

If BlockingWrite is true the OpenCL implementation copies the data referred to by mem and enqueues the write command in the command-queue. The memory pointed to by mem can be reused by the application after the clEnqueueWriteImage call returns. If BlockingWrite is false the OpenCL implementation will use mem to perform a nonblocking write. As the write is non-blocking the implementation can return immediately. The memory pointed to by mem cannot be reused by the application after the call returns. The event argument returns an event object which can be used to query the execution status of the write command. When the write command has completed, the memory pointed to by mem can then be reused by the application.

origin: Defines the (x, y, z) offset in pixels in the image from where to write or write. If image is a 2D image object, the z value given by sourceOriginZ must be 0.

region: Defines the (width, height, depth) in pixels of the 2D or 3D rectangle being write or written. If image is a 2D image object, the depth value given by RegionDepth must be 1.

RowPitch
The length of each row in bytes. This value must be greater than or equal to the element size in bytes * width. If RowPitch is set to 0, the appropriate row pitch is calculated based on the size of each element in bytes multiplied by width.

RowPitch: Size in bytes of the 2D slice of the 3D region of a 3D image being written. This must be 0 if image is a 2D image. This value must be greater than or equal to RowPitch * height. If SlicePitch is set to 0, the appropriate slice pitch is calculated based on the RowPitch * height.

mem: The pointer to a buffer in host memory where image data is to be written to.

EventWaitList: Optional. Specify events that need to complete before this particular command can be executed. The events specified in event_wait_list act as synchronization points. The context associated with events in event_wait_list and command_queue must be the same.

outEvent: Optional. Returns an event object that identifies this particular write command and can be used to query or queue a wait for this particular command to complete.

Calling EnqueueWriteImage to update the latest bits in a region of the image object with the mem argument value set to mem + (sourceOriginZ * image slice pitch + sourceOriginY * image row pitch + sourceOriginX * bytes per pixel), where mem is a pointer to the memory region specified when the image object being written is created with kMemoryUseHostPtr, must meet the following requirements in order to avoid undefined behavior:

- The host memory region being written contains the latest bits when the enqueued write command begins execution.
- The RowPitch and SlicePitch argument values in EnqueueWriteImage must be set to the image row

pitch and slice pitch.

- The image object is not mapped.
- The image object is not used by any command-queue until the write command has finished execution.

- 135.1.38 EnqueueWriteImage(image as CLMemMBS, BlockingWrite as boolean, sourceOriginX as Integer, sourceOriginY as Integer, sourceOriginZ as Integer, RegionWidth as Integer, RegionHeight as Integer, RegionDepth as Integer, RowPitch as Integer, SlicePitch as Integer, mem as Memoryblock, EventWaitList() as CLEventMBS, byref outEvent as CLEventMBS) 21570

135.1.40 EnqueueWritePicture(image as CLMemMBS, sourceOriginX as Integer, sourceOriginY as Integer, RegionWidth as Integer, RegionHeight as Integer, pic as picture)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: Desktop only.

Function: Enqueues a command to write from a 2D or 3D image object to a Xojo Picture.
Example:

```
const size = 500

// create test picture
dim pic1 as Picture = LogoMBS(size)
// create destination picture
dim pic2 as new Picture(size, size, 32)

// get device list
dim devices() as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

// Create context for that device
dim c as new CLContextMBS(device)

// query what format Xojo uses for pictures
dim RowPitch as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(pic1, RowPitch)

// create a matching memory object
dim m as new CLMemMBS(c, CLMemMBS.kMemoryReadWrite, format, size, size, RowPitch)

// create command queue
dim cq as new CLCommandQueueMBS(c, device, 0)

// copy picture content into CLMem object
cq.EnqueueWritePicture(m, 0, 0, size, size, pic1)
```

```
// and copy back to second picture
cq.EnqueueReadPicture(m, 0, 0, size, size, pic2)

// finally display it
Backdrop = pic2
```

Notes:

image: Refers to a valid 2D or 3D image object.

BlockingWrite: Optional. Indicates if the write operation is blocking or non-blocking.

origin: Defines the (x, y) offset in pixels in the image from where to write or write.

region: Defines the (width, height) in pixels of the 2D or 3D rectangle being write or written.

pic: The target Xojo picture object. This must match in the image format for the image object and the size you specified in region.

This operation is always performed blocked.
Lasterror is set.

135.1.41 Finish

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Blocks until all previously queued OpenCL commands in a command-queue are issued to the associated device and have completed.
Notes:

Blocks until all previously queued OpenCL commands in command_queue are issued to the associated device and have completed.

Finish does not return until all queued commands in command_queue have been processed and completed. clFinish is also a synchronization point.

Lasterror is set.

135.1.42 Flush

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Issues all previously queued OpenCL commands in a command-queue to the device associated with the command-queue.
Notes:

Issues all previously queued OpenCL commands in command_queue to the device associated with command_queue.

Flush only guarantees that all queued commands to command_queue get issued to the appropriate device. There is no guarantee that they will be complete after Flush returns.

Lasterror is set.

Any blocking commands queued in a command-queue such as EnqueueReadImage or EnqueueReadBuffer with BlockingRead set to true, EnqueueWriteImage or EnqueueWriteBuffer with BlockingWrite set to true, EnqueueMapImage or EnqueueMapBuffer with BlockingMap set to true or WaitForEvents perform an implicit flush of the command-queue.

To use event objects that refer to commands enqueued in a command-queue as event objects to wait on by commands enqueued in a different command-queue, the application must call a Flush or any blocking commands that perform an implicit flush of the command-queue where the commands that refer to these event objects are enqueued.
Lasterror is set.

135.1.43 Properties as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the currently specified properties for the command-queue.
Notes: Lasterror is set.

135.1.44 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the command-queue reference count.
Notes: Lasterror is set.

135.1.45 Properties

135.1.46 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.1.47 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.2 class CLContextMBS

135.2.1 class CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The OpenCL class for a context.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

Notes: Contexts are used by the OpenCL runtime for managing objects such as command-queues, memory, program and kernel objects and for executing kernels on one or more devices specified in the context.

135.2.4 Methods

135.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates an OpenCL context.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
```

```
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)
```

Notes:

Platform: Optional, Specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.
See also:

- 135.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21578
- 135.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21579
- 135.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580
- 135.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580
- 135.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21581

135.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates an OpenCL context.
Notes:

Platform: Optional, specifies the platform to use.
Devices: The devices you want to use. Can be one or several devices. If you specify none, the default one is picked.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Lasterror is set.
See also:

- 135.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21577
- 135.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21579
- 135.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580

- 135.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580
- 135.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21581

135.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Create an OpenCL context from a device type that identifies the specific device(s) to use.
Example:

```
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)
```

Notes:

Platform: Optional, Specifies the platform to use.
DeviceType: A bit-field that identifies the type of device and is described in the table below.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Constants	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

- 135.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21579
- 135.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580
- 135.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21581

135.2.10 Constructor(Platform as CLPlatformMBS, DeviceType as Integer, ErrorHandlerMode as Integer = 0)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Create an OpenCL context from a device type that identifies the specific device(s) to use.
Notes:

Platform: Optional, Specifies the platform to use.
DeviceType: A bit-field that identifies the type of device and is described in the table below.
ErrorHandlerMode: The error handler mode. Check kErrorMode* constants.

Constants	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.
See also:

- 135.2.5 Constructor(Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21577
- 135.2.6 Constructor(Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21578
- 135.2.7 Constructor(DeviceType as Integer, ErrorHandlerMode as Integer = 0) 21579
- 135.2.8 Constructor(Platform as CLPlatformMBS, Device as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580
- 135.2.9 Constructor(Platform as CLPlatformMBS, Devices() as CLDeviceMBS, ErrorHandlerMode as Integer = 0) 21580

135.2.11 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the list of devices in context.
Example:

```
// create context for all devices
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

// and query it for it's devices
for each d as CLDeviceMBS in co.Devices
MsgBox d.Name
next
```

135.2.12 GetSupportedImageFormats(flags as UInt64, type as UInt32) as CLImageFormatMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Get the list of image formats supported by an OpenCL implementation.
Example:

```
dim co as new CLContextMBS(CLDeviceMBS.kDeviceTypeAll)

dim formats(-1) as CLImageFormatMBS = co.GetSupportedImageFormats(CLMemMBS.kMemoryReadWrite, CLMemMBS.kMemoryTypeImage2D)
dim lines(-1) as string

for each f as CLImageFormatMBS in formats
// see constants for what this values mean
lines.Append hex(f.ImageChannelOrder)+" - "+hex(f.ImageChannelDataType)
next

MsgBox Join(lines,EndOfLine)
```

Notes:

self: A valid OpenCL context on which the image object(s) will be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created and is described in the List of supported cl_mem_flags values for clCreateBuffer
type: Describes the image type and must be either kMemoryTypeImage2D or kMemoryTypeImage3D.

Returns an array of imageformat objects.

135.2.13 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the context reference count.
Example:

```
dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeGPU)
dim device as CLDeviceMBS = devices(0) // we use first one

// Create a context
dim context as new CLContextMBS(device, CLContextMBS.kErrorModeLogMessagesToSystemLog)

MsgBox str(context.ReferenceCount) // 1

// Create a command queue
dim queue as new CLCommandQueueMBS(context, device, 0)

MsgBox str(context.ReferenceCount) // 2 as the command queue points to the context, too.
```

135.2.14 Properties

135.2.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.2.16 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.

(Read and Write property)

135.2.17 Constants

135.2.18 kErrorModeIgnore = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the error mode constants.

135.2.19 kErrorModeLogMessagesToStderr = 3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the error mode constants.
Notes: Sends all log messages to the file descriptor stderr.

135.2.20 kErrorModeLogMessagesToStdout = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the error mode constants.
Notes: Sends all log messages to the file descriptor stdout.

135.2.21 kErrorModeLogMessagesToSystemLog = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the error mode constants.
Notes: Fowards on all log messages to the Apple System Logger.

135.3 class CLDeviceMBS

135.3.1 class CLDeviceMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The class for an OpenCL Device.

135.3.2 Methods

135.3.3 AddressBits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The default compute device address space size specified as an unsigned integer value in bits.
Example:

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name+": "+str(p.AddressBits)
next
```

Notes:

Currently supported values are 32 or 64 bits.
Lasterror is set.

135.3.4 Available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if the device is available and false if the device is not available.
Notes: Lasterror is set.

135.3.5 CompilerAvailable as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns false if the implementation does not have a compiler available to compile the program source.
Notes:

Is true if the compiler is available. This can be false for the embededed platform profile only.
Lasterror is set.

135.3.6 DeviceType as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The OpenCL device type.
Notes:

Currently supported values are one of or a combination of: kDeviceTypeCPU, kDeviceTypeGPU, kDeviceTypeAccelerator, or kDeviceTypeDefault.
Lasterror is set.

135.3.7 DeviceVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL version string.
Notes:

Returns the OpenCL version supported by the device. This version string has the following format:

OpenCL<space><major_version.minor_version><space><vendor-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

135.3.8 DriverVersion as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL software driver version string in the form major_number.minor_number.
Notes: Lasterror is set.

135.3.9 EndianLittle as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if the OpenCL device is a little endian device and false otherwise.
Notes: Lasterror is set.

135.3.10 ErrorCorrectionSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if the device implements error correction for the memories, caches, registers etc. in the device.
Notes:

Returns false if the device does not implement error correction. This can be a requirement for certain clients of OpenCL.
Lasterror is set.

135.3.11 ExecutionCapabilities as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the execution capabilities of the device.
Notes:

This is a bit-field that describes one or more of the following values:

kExecKernel - The OpenCL device can execute OpenCL kernels.
kExceNativeKernel - The OpenCL device can execute native kernels.

The mandated minimum capability is kExecKernel.
Lasterror is set.

135.3.12 Extensions as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns a space separated list of extension names.
Example:

```
// show msgbox with all extensions for first device

dim devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)
dim device as CLDeviceMBS = devices(0)

dim extensions(-1) as string = split(device.Extensions," ")

dim lines(-1) as string
```

```
for each extension as string in extensions
lines.append extension
next

MsgBox Join(lines,EndOfLine)
```

Notes:

(the extension names themselves do not contain any spaces).
The list of extension names returned currently can include one or more of the following approved extension names:

cl_khr_fp64
cl_khr_select_fprounding_mode
cl_khr_global_int32_base_atomics
cl_khr_global_int32_extended_atomics
cl_khr_local_int32_base_atomics
cl_khr_local_int32_extended_atomics
cl_khr_int64_base_atomics
cl_khr_int64_extended_atomics
cl_khr_3d_image_writes
cl_khr_byte_addressable_store
cl_khr_fp16

Lasterror is set.

135.3.13 GlobalMemoryCacheLineSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of global memory cache line in bytes.
Notes: Lasterror is set.

135.3.14 GlobalMemoryCacheSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of global memory cache in bytes.
Notes: Lasterror is set.

135.3.15 GlobalMemoryCacheType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Type of global memory cache supported.
Notes:

See kCacheMemType* constants.
Lasterror is set.

135.3.16 GlobalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of global device memory in bytes.
Notes: Lasterror is set.

135.3.17 Image2DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max height of 2D image in pixels.
Notes:

The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

135.3.18 Image2DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max width of 2D image in pixels.
Notes:

The minimum value is 8192 if ImageSupport is true.
Lasterror is set.

135.3.19 Image3DMaxDepth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max depth of 3D image in pixels.
Notes:

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

135.3.20 Image3DMaxHeight as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max height of 3D image in pixels.
Notes:

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

135.3.21 Image3DMaxWidth as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max width of 3D image in pixels.
Notes:

The minimum value is 2048 if ImageSupport is true.
Lasterror is set.

135.3.22 ImageSupport as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns true if images are supported by the OpenCL device and false otherwise.
Notes: Lasterror is set.

135.3.23 LocalMemorySize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Size of local memory arena in bytes.
Notes:

The minimum value is 16 KB.
Lasterror is set.

135.3.24 LocalMemType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Type of local memory supported.
Notes:

This can be set to kMemTypeLocal implying dedicated local memory storage such as SRAM, or kMemTypeGlobal.
Lasterror is set.

135.3.25 MaxClockFrequency as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum configured clock frequency of the device in MHz.
Notes: Lasterror is set.

135.3.26 MaxComputeUnits as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The number of parallel compute cores on the OpenCL device.
Notes:

The minimum value is 1.
Lasterror is set.

135.3.27 MaxConstantArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max number of arguments declared with the __constant qualifier in a kernel.
Notes:

The minimum value is 8.
Lasterror is set.

135.3.28 MaxConstantBufferSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max size in bytes of a constant buffer allocation.
Notes:

The minimum value is 64 KB.
Lasterror is set.

135.3.29 MaxMemoryAllocSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max size of memory object allocation in bytes.
Notes:

The minimum value is max (1/4th of GlobalMemorySize, 128*1024*1024)
Lasterror is set.

135.3.30 MaxParameterSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max size in bytes of the arguments that can be passed to a kernel.
Notes:

The minimum value is 256.
Lasterror is set.

135.3.31 MaxReadImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max number of simultaneous image objects that can be read by a kernel.
Notes:

Lasterror is set.
The minimum value is 128 if ImageSupport is true.

135.3.32 MaxSamplers as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum number of samplers that can be used in a kernel.
Notes:

The minimum value is 16 if ImageSupport is true.
Lasterror is set.

135.3.33 MaxWorkGroupSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum number of work-items in a work-group executing a kernel using the data parallel execution model.
Notes:

(Refer to EnqueueNDRangeKernel). The minimum value is 1.
Lasterror is set.

135.3.34 MaxWorkItemDimensions as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Maximum dimensions that specify the global and local work-item IDs used by the data parallel execution model.
Notes:

(Refer to EnqueueNDRangeKernel). The minimum value is 3.
Lasterror is set.

135.3.35 MaxWriteImageArgs as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Max number of simultaneous image objects that can be written to by a kernel.
Notes:

The minimum value is 8 if ImageSupport is true.
Lasterror is set.

135.3.36 MemoryBaseAddressAlign as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the alignment in bits of the base address of any allocated memory object.
Notes: Lasterror is set.

135.3.37 MinDataTypeAlignSize as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The smallest alignment in bytes which can be used for any data type.
Notes: Lasterror is set.

135.3.38 Name as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Device name string.
Example:

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

Notes: Lasterror is set.

135.3.39 Platform as CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The platform associated with this device.
Notes: Lasterror is set.

135.3.40 PreferredVectorWidthChar as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

135.3.41 PreferredVectorWidthDouble as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.

If the cl_khr_fp64 extension is not supported, this function must return 0.
Lasterror is set.

135.3.42 PreferredVectorWidthFloat as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

135.3.43 PreferredVectorWidthInt as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

135.3.44 PreferredVectorWidthLong as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

135.3.45 PreferredVectorWidthShort as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Preferred native vector width size for built-in scalar types that can be put into vectors.
Notes:

The vector width is defined as the number of scalar elements that can be stored in the vector.
Lasterror is set.

135.3.46 Profile as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL profile string.
Notes:

Returns the profile name supported by the device (see note). The profile name returned can be one of the following strings:

FULL_PROFILE - if the device supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the device supports the OpenCL embedded profile.
Lasterror is set.

135.3.47 ProfilingTimerResolution as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the resolution of device timer. This is measured in nanoseconds.
Notes: Lasterror is set.

135.3.48 QueueProperties as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the command-queue properties supported by the device.
Notes:

See kQueueOutOfOrderExecModeEnable and kQueueProfilingEnable.
Lasterror is set.

135.3.49 SingleFPConfig as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes single precision floating-point capability of the device.
Notes:

The mandated minimum floating-point capability is kFPRoundToNearest+kFPInfNAN.
Lasterror is set.

135.3.50 Vendor as String

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Vendor name string.
Notes: Lasterror is set.

135.3.51 VendorID as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A unique device vendor identifier.
Notes:

An example of a unique device identifier could be the PCIe ID.
Lasterror is set.

135.3.52 Properties

135.3.53 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.3.54 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.3.55 Constants

135.3.56 kCacheMemTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the cache memory type constants.

135.3.57 kCacheMemTypeReadOnlyCache = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the cache memory type constants.
Notes: Read Only Cache.

135.3.58 kCacheMemTypeReadWriteCache = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the cache memory type constants.
Notes: Read/Write Cache.

135.3.59 kDeviceTypeAccelerator = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the device type constants.
Notes: Accelerator = some special acceleration device

135.3.60 kDeviceTypeAll = & Hffffffff

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the device type constants.
Notes: This is the bitmask to catch all possible types.

135.3.61 kDeviceTypeCPU = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the device type constants.
Notes: CPU = your processor

135.3.62 kDeviceTypeDefault = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the device type constants.
Notes: Default device.

135.3.63 kDeviceTypeGPU = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the device type constants.
Notes: GPU = your graphics card

135.3.64 kExceNativeKernel = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the execution capabilities constants.
Notes: The OpenCL device can execute native kernels.

135.3.65 kExecKernel = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the execution capabilities constants.
Notes: The OpenCL device can execute OpenCL kernels.

135.3.66 kFPDenorm = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the floating point capabilities constants.
Notes: denorms are supported

135.3.67 kFPFMA = 32

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the floating point capabilities constants.
Notes: IEEE754-2008 fused multiply-add is supported

135.3.68 kFPInfNAN = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the floating point capabilities constants.
Notes: INF and quiet NaNs are supported

135.3.69 kFPRoundToInf = 16

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the floating point capabilities constants.
Notes: Round to +ve and -ve infinity rounding modes supported

135.3.70 kFPRoundToNearest = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the floating point capabilities constants.
Notes: Round to nearest even rounding mode supported

135.3.71 kFPRoundToZero = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the floating point capabilities constants.
Notes: Round to zero rounding mode supported

135.3.72 kMemTypeGlobal = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the memory type constants.
Notes: Dedicated local memory storage such as SRAM.

135.3.73 kMemTypeLocal = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the memory type constants.

135.3.74 kQueueOutOfOrderExecModeEnable = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the queue properties constants.
Notes: Out of order execution mode enabled.

135.3.75 kQueueProfilingEnable = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the queue properties constants.
Notes: Profiling enabled.

135.4 class CLEventMBS

135.4.1 class CLEventMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The class for an OpenCL event.
Notes: You can chain several operations together inside a command queue. With events you can have an item execute after another item.

135.4.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

- MBS REALbasic Plugins, version 11.1pr5

135.4.4 Methods

135.4.5 CommandExecutionStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the execution status of the command identified by event.
Notes:

See kCommandExecutionStatus* constants.
Lasterror is set.

135.4.6 CommandQueue as CLCommandQueueMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the command-queue associated with event.
Notes: Lasterror is set.

135.4.7 CommandType as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the command associated with event.
Notes:

See kCommand* constants.
Lasterror is set.

135.4.8 ProfilingCommandEnd as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event has finished execution on the device.
Notes: Lasterror is set.

135.4.9 ProfilingCommandQueued as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event is enqueued in a command-queue by the host.
Notes: Lasterror is set.

135.4.10 ProfilingCommandStart as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event starts execution on the device.
Notes: Lasterror is set.

135.4.11 ProfilingCommandSubmit as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: A 64-bit value that describes the current device time counter in nanoseconds when the command identified by event that has been enqueued is submitted by the host to the device associated with the commandqueue.

Notes: Lasterror is set.

135.4.12 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the event reference count.
Notes:

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

135.4.13 Properties

135.4.14 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.4.15 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.4.16 Constants

135.4.17 kCommandAcquireGLObjects = & h11FF

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Acquire GL objects

135.4.18 kCommandCopyBuffer = & h11F5

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Copy Buffer

135.4.19 kCommandCopyBufferToImage = & h11FA

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Copy Buffer to Image

135.4.20 kCommandCopyImage = & h11F8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Copy Image

135.4.21 kCommandCopyImageToBuffer = & h11F9

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Copy Image to Buffer

135.4.22 kCommandExecutionStatusComplete = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command excecution status constants.
Notes: The command has completed.

135.4.23 kCommandExecutionStatusQueued = 3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command excecution status constants.
Notes: command has been enqueued in the command-queue.

135.4.24 kCommandExecutionStatusRunning = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command excecution status constants.
Notes: Device is currently executing this command.

135.4.25 kCommandExecutionStatusSubmitted = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command excecution status constants.
Notes: enqueued command has been submitted by the host to the device associated with the command-queue.

135.4.26 kCommandMapBuffer = & h11FB

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Map Buffer

135.4.27 kCommandMapImage = & h11FC

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Map Image

135.4.28 kCommandMarker = & h11FE

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Marker

135.4.29 kCommandNativeKernel = & h11F2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Execute Native Kernel

135.4.30 kCommandNDRangeKernel = & h11F0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Execute a ND Range Kernel

135.4.31 kCommandReadBuffer = & h11F3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Read Buffer

135.4.32 kCommandReadImage = & h11F6

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Read Image

135.4.33 kCommandReleaseGLObjects = & h1200

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Release GL objects

135.4.34 kCommandTask = & h11F1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Execute task

135.4.35 kCommandUnmapMemObject = & h11FD

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Unmap memory object

135.4.36 kCommandWriteBuffer = & h11F4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Write Buffer

135.4.37 kCommandWriteImage = & h11F7

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the command type constants.
Notes: Write Image

135.5 class CLImageFormatMBS

135.5.1 class CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: the OpenCL class for an image format.

135.5.2 Properties

135.5.3 ImageChannelDataType as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Describes the size of the channel data type.
Notes:

The number of bits per element determined by the ImageChannelDataType and ImageChannelOrder must be a power of two. The list of supported values is described in the table below.

Image Channel Data Type	Description
kChannelTypeSNormInt8	Each channel component is a normalized signed 8-bit integer value.
kChannelTypeSNormInt16	Each channel component is a normalized signed 16-bit integer value.
kChannelTypeUNormInt8	Each channel component is a normalized unsigned 8-bit integer value.
kChannelTypeUNormInt16	Each channel component is a normalized unsigned 16-bit integer value.
kChannelTypeUNormShort565	Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrderRGB.
kChannelTypeUNormShort555	Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrderRGB.
kChannelTypeUNormInt101010	Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB.
kChannelTypeSignedInt8	Each channel component is an unnormalized signed 8-bit integer value.
kChannelTypeSignedInt16	Each channel component is an unnormalized signed 16-bit integer value.
kChannelTypeSignedInt32	Each channel component is an unnormalized signed 32-bit integer value.
kChannelTypeUnsignedInt8	Each channel component is an unnormalized unsigned 8-bit integer value.
kChannelTypeUnsignedInt16	Each channel component is an unnormalized unsigned 16-bit integer value.
kChannelTypeUnsignedInt32	Each channel component is an unnormalized unsigned 32-bit integer value.
kChannelTypeHalfFloat	Each channel component is a 16-bit half-float value.
kChannelTypeFloat	Each channel component is a single precision floating-point value.

(Read and Write property)

135.5.4 ImageChannelOrder as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Specifies the number of channels and the channel layout i.e. the memory layout in which channels are stored in the image.
Notes:

Valid values are described in the table below.

Format	Description
kChannelOrderR, or kChannelOrderA	
kChannelOrderIntensity	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderLuminance	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.
kChannelOrderRG, or kChannelOrderRA	
kChannelOrderRGB	This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.
kChannelOrderRGBA	
kChannelOrderARGB, kChannelOrderBGRA.	This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeSNormInt8, kChannelTypeSignedInt8 or kChannelTypeUnsignedInt8.

(Read and Write property)

135.5.5 Constants

135.5.6 kChannelOrderA = & h10B1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.7 kChannelOrderARGB = & h10B7

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.8 kChannelOrderBGRA = & h10B6

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.9 kChannelOrderIntensity = & h10B8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants
Notes: This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.

135.5.10 kChannelOrderLuminance = & h10B9

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants
Notes: This format can only be used if channel data type = kChannelTypeUNormInt8, kChannelTypeUNormInt16, kChannelTypeSNormInt8, kChannelTypeSNormInt16, kChannelTypeHalfFloat, or kChannelTypeFloat.

135.5.11 kChannelOrderR = & h10B0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.12 kChannelOrderRA = & h10B3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.13 kChannelOrderRG = & h10B2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.14 kChannelOrderRGB = & h10B4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants
Notes: This format can only be used if channel data type = kChannelTypeUNormShort565, kChannelTypeUNormShort555 or kChannelTypeUNormInt101010.

135.5.15 kChannelOrderRGBA = & h10B5

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel order constants

135.5.16 kChannelTypeFloat = & h10DE

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is a single precision floating-point value.

135.5.17 kChannelTypeHalfFloat = & h10DD

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is a 16-bit half-float value.

135.5.18 kChannelTypeSignedInt16 = & h10D8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is an unnormalized signed 16-bit integer value.

135.5.19 kChannelTypeSignedInt32 = & h10D9

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is an unnormalized signed 32-bit integer value.

135.5.20 kChannelTypeSignedInt8 = & h10D7

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is an unnormalized signed 8-bit integer value.

135.5.21 kChannelTypeSNormInt16 = & h10D1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is a normalized signed 16-bit integer value.

135.5.22 kChannelTypeSNormInt8 = & h10D0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is a normalized signed 8-bit integer value.

135.5.23 kChannelTypeUNormInt101010 = & h10D6

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Represents a normalized x-10-10-10 4-channel xRGB image. The channel order must be kChannelOrderRGB.

135.5.24 kChannelTypeUNormInt16 = & h10D3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is a normalized unsigned 16-bit integer value.

135.5.25 kChannelTypeUNormInt8 = & h10D2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is a normalized unsigned 8-bit integer value.

135.5.26 kChannelTypeUNormShort555 = & h10D5

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Represents a normalized x-5-5-5 4-channel xRGB image. The channel order must be kChannelOrder-RGB.

135.5.27 kChannelTypeUNormShort565 = & h10D4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Represents a normalized 5-6-5 3-channel RGB image. The channel order must be kChannelOrder-RGB.

135.5.28 kChannelTypeUnsignedInt16 = & h10DB

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is an unnormalized unsigned 16-bit integer value.

135.5.29 kChannelTypeUnsignedInt32 = & h10DC

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is an unnormalized unsigned 32-bit integer value.

135.5.30 kChannelTypeUnsignedInt8 = & h10DA

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the channel data type constants.
Notes: Each channel component is an unnormalized unsigned 8-bit integer value.

135.6 class CLKernelMBS

135.6.1 class CLKernelMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The class for an OpenCL Kernel.

135.6.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

135.6.3 Blog Entries

135.6.4 Methods

135.6.5 Constructor(Program as CLProgramMBS, KernelName as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a kernal object.
Notes:

Program: A program object with a successfully built executable.
KernelName: A function name in the program declared with the ___kernel qualifier

A kernel is a function declared in a program. A kernel is identified by the ___kernel qualifier applied to any function in a program. A kernel object encapsulates the specific ___kernel function declared in a program and the argument values to be used when executing this ___kernel function.
Lasterror is set.

135.6.6 FunctionName as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the kernel function name.
Notes: Lasterror is set.

135.6.7 GetKernelCompileWorkGroupSize(device as CLDeviceMBS, byref X as Int64, byref Y as Int64, byref Z as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the work-group size specified by the __attribute__((reqd_work_gr oup_size(X, Y, Z))) qualifier.
Notes:

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

If the work-group size is not specified using the above attribute qualifier (0, 0, 0) is returned.
Lasterror is set.

135.6.8 GetKernelLocalMemorySize(device as CLDeviceMBS = nil) as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the amount of local memory in bytes being used by a kernel.
Notes:

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

This includes local memory that may be needed by an implementation to execute the kernel, variables declared inside the kernel with the __local address qualifier and local memory to be allocated for arguments to the kernel declared as pointers with the __local address qualifier and whose size is specified with clSetKernelArg.

If the local memory size, for any pointer argument to the kernel declared with the __local address qualifier, is not specified, its size is assumed to be 0.
Lasterror is set.

135.6.9 GetKernelWorkGroupSize(device as CLDeviceMBS = nil) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: This provides a mechanism for the application to query the work-group size that can be used to execute a kernel on a specific device given by device.
Notes:

device: Identifies a specific device in the list of devices associated with kernel. The list of devices is the list of devices in the OpenCL context that is associated with kernel. If the list of devices associated with kernel is a single device, device can be a nil value.

The OpenCL implementation uses the resource requirements of the kernel (register usage etc.) to determine what this work-group size should be.
Lasterror is set.

135.6.10 NumberOfArguments as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the number of arguments to kernel.
Notes: Lasterror is set.

135.6.11 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the kernel reference count.
Notes:

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

135.6.12 SetKernelArgDouble(index as Integer, value as Double)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.

value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

135.6.13 SetKernelArgFloat(index as Integer, value as Single)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

135.6.14 SetKernelArgInt32(index as Integer, value as Int32)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

135.6.15 SetKernelArgInt64(index as Integer, value as Int64)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.

value: the value.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

135.6.16 SetKernelArgMem(index as Integer, mem as CLMemMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Sets the kernel argument with the given index.
Notes:

index: The argument index. Arguments to the kernel are referred by indices that go from 0 for the leftmost argument to n - 1, where n is the total number of arguments declared by a kernel.
value: the memory object to set for argument.

We have currently setters for Int32, Int64, Float, Double and CLMemMBS. Please email for additional types.
Lasterror is set.

135.6.17 Properties

135.6.18 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the context associated with kernel.
Notes:

Lasterror is set.
(Read and Write property)

135.6.19 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.6.20 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.6.21 Program as CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program object associated with kernel.
Notes:

Lasterror is set.
(Read and Write property)

135.7 class CLMemMBS

135.7.1 class CLMemMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The class for a OpenCL memory block.
Example:

```
const Size = 4096
dim context as CLContextMBS // your context
dim input as new CLMemMBS(context, CLMEMMBS.kMemoryReadOnly, 4096)
```

135.7.2 Blog Entries

135.7.4 Methods

135.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a 3D image object.
Notes:

context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: the image format properties of the image to be allocated.
Width, Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
Depth: The depth of the image in pixels. This must be a value greater than 1.

RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
SlicePitch: The size in bytes of each 2D slice in the 3D image. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to RowPitch * Height if HostPtr is not nil. If HostPtr is not nil and SlicePitch equal to 0, SlicePitch is calculated as RowPitch * Height. If SlicePitch is not 0, it must be a multiple of the RowPitch.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to SlicePitch * image_depth. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent 2D slices. Each 2D slice is a linear sequence of adjacent scanlines. Each scanline is a linear sequence of image elements.

Lasterror is set.

135.7.6 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a 2D image object.
Notes:

context: A valid OpenCL context on which the image object is to be created.
flags: A bit-field that is used to specify allocation and usage information about the image memory object being created. See kMemory* constants.
ImageFormat: The format properties of the image to be allocated.
Width and Height: The width and height of the image in pixels. These must be values greater than or equal to 1.
RowPitch: The scan-line pitch in bytes. This must be 0 if HostPtr is nil and can be either 0 or greater than or equal to Width * size of element in bytes if HostPtr is not nil. If HostPtr is not nil and RowPitch is equal to 0, RowPitch is calculated as Width * size of element in bytes. If RowPitch is not 0, it must be a multiple of the image element size in bytes.
HostPtr: A pointer to the image data that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to RowPitch * Height. The size of each element in bytes must be a power of 2. The image data specified by HostPtr is stored as a linear sequence of adjacent scanlines. Each scanline is stored as a linear sequence of image elements.

Lasterror is set.
See also:

- 135.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 21622

- 135.7.7 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil) 21624

135.7.7 Constructor(Context as CLContextMBS, Flags as UInt64, Size as Integer, HostPtr as Memoryblock = nil)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a new buffer object.
Notes:

context: A valid OpenCL context used to create the buffer object.
flags: A bit-field that is used to specify allocation and usage information such as the memory arena that should be used to allocate the buffer object and how it will be used. The following table describes the possible values for flags:
size: The size in bytes of the buffer memory object to be allocated.
HostPtr: A memoryblock that may already be allocated by the application. The size of the buffer that HostPtr points to must be greater than or equal to the size bytes.

Lasterror is set.
See also:

- 135.7.5 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, Depth as Integer, RowPitch as Integer, SlicePitch as Integer, HostPtr as Memoryblock = nil) 21622

- 135.7.6 Constructor(Context as CLContextMBS, Flags as UInt64, ImageFormat as CLImageFormatMBS, Width as Integer, Height as Integer, RowPitch as Integer, HostPtr as Memoryblock = nil) 21623

135.7.8 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return context specified when memory object is created.
Notes: Lasterror is set.

Flags	Description
kMemoryReadWrite	This flag specifies that the memory object will be read and written by a kernel. This is the default.
kMemoryWriteOnly	This flags specifies that the memory object will be written but not read by a kernel. Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.
kMemoryReadOnly	This flag specifies that the memory object is a read-only memory object when used inside a kernel. Writing to a buffer or image object created with kMemoryReadOnly inside a kernel is undefined.
kMemoryUseHostPtr	This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to use memory referenced by HostPtr as the storage bits for the memory object. OpenCL implementations are allowed to cache the buffer contents pointed to by HostPtr in device memory. This cached copy can be used when kernels are executed on a device. The result of OpenCL commands that operate on multiple buffer objects created with the same HostPtr or overlapping host regions is considered to be undefined.
kMemoryAllocHostPtr	This flag specifies that the application wants the OpenCL implementation to allocate memory from host accessible memory. kMemoryAllocHostPtr and kMemoryUseHostPtr are mutually exclusive.
kMemoryCopyHostPtr	This flag is valid only if HostPtr is not nil. If specified, it indicates that the application wants the OpenCL implementation to allocate memory for the memory object and copy the data from memory referenced by HostPtr. kMemoryCopyHostPtr and kMemoryUseHostPtr are mutually exclusive. kMemoryCopyHostPtr can be used with kMemoryAllocHostPtr to initialize the contents of the cl_mem object allocated using host-accessible (e.g. PCIe) memory.

135.7.9 Flags as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the flags argument value specified with Constructor.
Notes: Lasterror is set.

135.7.10 ImageDepth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return depth of the image in pixels.
Notes:

For a 2D image, depth equals 0.
Lasterror is set.

135.7.11 ImageElementSize as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return size of each element of the image memory object given by image.
Notes:

An element is made up of n channels. The value of n is given with image format descriptor.
Lasterror is set.

135.7.12 ImageFormat as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return image format descriptor.
Notes: Lasterror is set.

135.7.13 ImageHeight as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return height of image in pixels.
Notes: Lasterror is set.

135.7.14 ImageRowPitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return size in bytes of a row of elements of the image object given by image.
Notes: Lasterror is set.

135.7.15 ImageSlicePitch as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return size in bytes of a 2D slice for the 3D image object given by image.
Notes:

For a 2D image object this value will be 0.
Lasterror is set.

135.7.16 ImageWidth as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return width of image in pixels.
Notes: Lasterror is set.

135.7.17 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return memory object reference count.
Notes:

The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.
Lasterror is set.

135.7.18 Size as UInt64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return actual size of memory object in bytes.
Notes: Lasterror is set.

135.7.19 Type as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the memory type.
Notes:

Either normal buffer, image 2D or image 3D.
Lasterror is set.

135.7.20 Properties

135.7.21 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.7.22 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.7.23 Target as Memoryblock

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The reference to the memoryblock if you used kMemoryUseHostPtr to create this memory object.
Notes: (Read and Write property)

135.7.24 Constants

135.7.25 kMapRead = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the mapping mode constants.

135.7.26 kMapWrite = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the mapping mode constants.

135.7.27 kMemoryAllocHostPtr = 16

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the flag constants for creating a memory block.

135.7.28 kMemoryCopyHostPtr = 32

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the flag constants for creating a memory block.

135.7.29 kMemoryReadOnly = 4

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the flag constants for creating a memory block.

135.7.30 kMemoryReadWrite = 1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the flag constants for creating a memory block.

135.7.31 kMemoryTypeBuffer = & h10F0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the memory object types.
Notes: A normal memory buffer.

135.7.32 kMemoryTypeImage2D = & h10F1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the memory object types.
Notes: 2D Image

135.7.33 kMemoryTypeImage3D = & h10F2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the memory object types.
Notes: 3D Image

135.7.34 kMemoryUseHostPtr = 8

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the flag constants for creating a memory block.

135.7.35 kMemoryWriteOnly = 2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the flag constants for creating a memory block.
Notes:

This flags specifies that the memory object will be written but not read by a kernel.

Reading from a buffer or image object created with kMemoryWriteOnly inside a kernel is undefined.

135.8 class CLPlatformMBS

135.8.1 class CLPlatformMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The OpenCL class for a platform.

135.8.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

135.8.4 Methods

135.8.5 DeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries number of devices with given types.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+str(p.DeviceCount(CLDeviceMBS.kDeviceTypeAll))+" devices"
next
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

135.8.6 Devices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries devices with given types.
Example:

```
// check all platforms
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
dim lines(-1) as string

lines.Append p.Name
lines.Append ""

// and show device names
for each d as CLDeviceMBS in p.Devices(CLDeviceMBS.kDeviceTypeAll)
lines.Append d.name
next

MsgBox Join(lines,EndOfLine)
next
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

135.8.7 Extensions as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns a space-separated list of extension names (the extension names themselves do not contain any spaces) supported by the platform.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Extensions
next
```

Notes:

Extensions defined here must be supported by all devices associated with this platform.
Lasterror is set.

135.8.8 Name as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Platform name string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

Notes: Lasterror is set.

135.8.9 Profile as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL profile string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Profile
next
```

Notes:

Returns the profile name supported by the implementation. The profile name returned can be one of the following strings:

FULL_PROFILE - if the implementation supports the OpenCL specification (functionality defined as part of the core specification and does not require any extensions to be supported).

EMBEDDED_PROFILE - if the implementation supports the OpenCL embedded profile. The embedded profile is defined to be a subset for each version of OpenCL.

Lasterror is set.

135.8.10 Vendor as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Platform vendor string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Vendor
next
```

Notes: Lasterror is set.

135.8.11 Version as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: OpenCL version string.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name+": "+p.Version
next
```

Notes:

Returns the OpenCL version supported by the implementation. This version string has the following format:

OpenCL<space><major_version.minor_version><space><platform-specific information>

The major_version.minor_version value returned will be 1.0.
Lasterror is set.

135.8.12 Properties

135.8.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.8.14 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.

Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.9 class CLProgramMBS

135.9.1 class CLProgramMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The OpenCL class for a program.

135.9.2 Blog Entries

- MBS Plugins 11.1 Release notes
- MBS REALbasic Plugins, version 11.1pr5

135.9.3 Blog Entries

- MBS REALbasic Plugins, version 11.1pr5

135.9.4 Methods

135.9.5 Binaries as String()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program binaries for all devices associated with program.
Notes:

For each device in program, the binary returned can be the binary specified for the device when program is created with Constructor or it can be the executable binary generated by BuildProgram. If program is created with Constructor (with Source code), the binary returned is the binary generated by BuildProgram. The bits returned can be an implementation-specific intermediate representation (a.k.a. IR) or device specific executable bits or both. The decision on which information is returned in the binary is up to the OpenCL implementation.

Each entry in this array is used by the implementation as the location in memory where to copy the program binary for a specific device, if there is a binary available.

Lasterror is set.

135.9.6 BinarySizes as UInt64()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns an array that contains the size in bytes of the program binary for each device associated with program.
Notes:

The size of the array is the number of devices associated with program. If a binary is not available for a device(s), a size of zero is returned.

Lasterror is set.

135.9.7 BuildLog(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the build log when BuildProgram was called for device.
Notes:

If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

135.9.8 BuildOptions(device as CLDeviceMBS) as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the build options specified by the options argument in BuildProgram for device.
Notes:

If build status of program for device is kBuildNone, an empty string is returned.
Lasterror is set.

135.9.9 BuildProgram(device as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Builds (compiles and links) a program executable from the program source or binary.
Notes: See other BuildProgram method for details
See also:

- 135.9.10 BuildProgram(devices() as CLDeviceMBS, options as string = "") 21639
- 135.9.11 BuildProgram(options as string = "") 21641

135.9.10 BuildProgram(devices() as CLDeviceMBS, options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Builds (compiles and links) a program executable from the program source or binary.
Notes:

devices	Optional, a list of devices you want to build for. If you specify no device, you build for all devices.
device	Optional, the device you want to build for. If you specify no device, you build for all devices.
options	A string that describes the build options to be used for building the program executable. The list of supported options is described in "Build Options" below.

OpenCL allows program executables to be built using the source or the binary.

The build options are categorized as pre-processor options, options for math intrinsics, options that control optimization and miscellaneous options. This specification defines a standard set of options that must be supported by an OpenCL compiler when building program executables online or offline. These may be extended by a set of vendor- or platform-specific options.

Preprocessor Options

These options control the OpenCL preprocessor which is run on each program source before actual compilation. -D options are processed in the order they are given in the options argument to clBuildProgram.
-D name
Predefine name as a macro, with definition 1.

-D name=definition
The contents of definition are tokenized and processed as if they appeared during translation phase three in a '# define' directive. In particular, the definition will be truncated by embedded newline characters.

-I dir
Add the directory dir to the list of directories to be searched for header files.

Math Intrinsics Options

These options control compiler behavior regarding floating-point arithmetic. These options trade off between speed and correctness.

-cl-single-precision-constant

Treat double precision floating-point constant as single precision constant.

-cl-denorms-are-zero
This option controls how single precision and double precision denormalized numbers are handled. If specified as a build option, the single precision denormalized numbers may be flushed to zero and if the optional extension for double precision is supported, double precision denormalized numbers may also be flushed to zero. This is intended to be a performance hint and the OpenCL compiler can choose not to flush denorms to zero if the device supports single precision (or double precision) denormalized numbers.

This option is ignored for single precision numbers if the device does not support single precision denormalized numbers i.e. kFPDenorm bit is not set in SingleFPConfig.

This option is ignored for double precision numbers if the device does not support double precision or if it does support double precison but CL_FP_DENORM bit is not set in CL_DEVICE_DOUBLE_FP_CONFIG.

This flag only applies for scalar and vector single precision floating-point variables and computations on these floating-point variables inside a program. It does not apply to reading from or writing to image objects.

Optimization Options

These options control various sorts of optimizations. Turning on optimization flags makes the compiler attempt to improve the performance and/or code size at the expense of compilation time and possibly the ability to debug the program.
-cl-opt-disable
This option disables all optimizations. The default is optimizations are enabled.

-cl-strict-aliasing
This option allows the compiler to assume the strictest aliasing rules.

The following options control compiler behavior regarding floating-point arithmetic. These options trade off between performance and correctness and must be specifically enabled. These options are not turned on by default since it can result in incorrect output for programs which depend on an exact implementation of IEEE 754 rules/specifications for math functions.

-cl-mad-enable
Allow a * b + c to be replaced by a mad. The mad computes a * b + c with reduced accuracy. For example, some OpenCL devices implement mad as truncate the result of a * b before adding it to c.

-cl-no-signed-zeros
Allow optimizations for floating-point arithmetic that ignore the signedness of zero. IEEE 754 arithmetic specifies the behavior of distinct +0.0 and -0.0 values, which then prohibits simplification of expressions such

as x+0.0 or 0.0*x (even with -clfinite-math only). This option implies that the sign of a zero result isn't significant.

-cl-unsafe-math-optimizations
Allow optimizations for floating-point arithmetic that (a) assume that arguments and results are valid, (b) may violate IEEE 754 standard and (c) may violate the OpenCL numerical compliance requirements as defined in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option includes the -cl-no-signed-zeros and -cl-mad-enable options.

-cl-finite-math-only
Allow optimizations for floating-point arithmetic that assume that arguments and results are not NaNs or $\pm\infty$. This option may violate the OpenCL numerical compliance requirements defined in in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5.

-cl-fast-relaxed-math
Sets the optimization options -cl-finite-math-only and -cl-unsafe-math-optimizations. This allows optimizations for floating-point arithmetic that may violate the IEEE 754 standard and the OpenCL numerical compliance requirements defined in the specification in section 7.4 for single-precision floating-point, section 9.3.9 for double-precision floating-point, and edge case behavior in section 7.5. This option causes the preprocessor macro __FAST_RELAXED_MATH__ to be defined in the OpenCL program.

Options to Request or Suppress Warnings

Warnings are diagnostic messages that report constructions which are not inherently erroneous but which are risky or suggest there may have been an error. The following languageindependent options do not enable specific warnings but control the kinds of diagnostics produced by the OpenCL compiler.
-w
Inhibit all warning messages.

-Werror
Make all warnings into errors.

Lasterror is set.
See also:

- 135.9.9 BuildProgram(device as CLDeviceMBS, options as string = "") 21638
- 135.9.11 BuildProgram(options as string = "") 21641

135.9.11 BuildProgram(options as string = "")

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Builds (compiles and links) a program executable from the program source or binary.
Notes:

See other BuildProgram method for details
Lasterror is set.
See also:

- 135.9.9 BuildProgram(device as CLDeviceMBS, options as string = "") 21638
- 135.9.10 BuildProgram(devices() as CLDeviceMBS, options as string = "") 21639

135.9.12 BuildStatus(device as CLDeviceMBS) as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the build status of program for a specific device as given by device.
Notes:

See kBuild* constants.
Lasterror is set.

135.9.13 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a program object for a context, and loads specified binary data into the program object.
Notes:

context: Must be a valid OpenCL context.
devices: a list of devices that are in context. The binaries are loaded for devices specified in this list.

The devices associated with the program object will be the list of devices specified by devices. The list of devices specified by devices must be devices associated with context.

binaries: An array of strings containing the program binaries to be loaded for devices specified by devices. For each device given by devices(i), the string with the program binary for that device is given by binaries(i).

The program binaries specified by binaries contain the bits that describe the program executable that will be run on the device(s) associated with context. The program binary can consist of either or both of device-specific executable(s), and/or implementation-specific intermediate representation (IR) which will be converted to the device-specific executable.

sttaus: Returns whether the program binary for each device specified in devices was loaded successfully or

not. It is an array of ubound -1 and is filled by the plugin.

Lasterror is set.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.
See also:

- 135.9.14 Constructor(context as CLContextMBS, line as string) 21643
- 135.9.15 Constructor(context as CLContextMBS, lines() as string) 21644

135.9.14 Constructor(context as CLContextMBS, line as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a program object for a context, and loads the source code specified by the line string into the program object.
Notes:

context: Must be a valid OpenCL context.
line: A string with all the lines of the program.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.
See also:

- 135.9.13 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer) 21642

- 135.9.15 Constructor(context as CLContextMBS, lines() as string) 21644

135.9.15 Constructor(context as CLContextMBS, lines() as string)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates a program object for a context, and loads the source code specified by the text strings in the lines array into the program object.
Notes:

context: Must be a valid OpenCL context.
lines: An array of strings that make up the source code.

The devices associated with the program object are the devices associated with context.

OpenCL allows applications to create a program object using the program source or binary and build appropriate program executables. This allows applications to determine whether they want to use the pre-built offline binary or load and compile the program source and use the executable compiled/linked online as the program executable. This can be very useful as it allows applications to load and build program executables online on its first instance for appropriate OpenCL devices in the system. These executables can now be queried and cached by the application. Future instances of the application launching will no longer need to compile and build the program executables. The cached executables can be read and loaded by the application, which can help significantly reduce the application initialization time.

An OpenCL program consists of a set of kernels that are identified as functions declared with the __kernel qualifier in the program source. OpenCL programs may also contain auxiliary functions and constant data that can be used by __kernel functions. The program executable can be generated online or offline by the OpenCL compiler for the appropriate target device(s).

Lasterror is set.

- 135.9.13 Constructor(context as CLContextMBS, devices() as CLDeviceMBS, binaries() as string, status() as Integer) 21642

- 135.9.14 Constructor(context as CLContextMBS, line as string) 21643

135.9.16 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The context for this program.
Notes: Lasterror is set.

135.9.17 CreateKernelsInProgram(maxKernels as Integer = 100) as CLKernelMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Creates kernel objects for all kernel functions in program.
Notes:

maxKernels: maximum number of kernels to return.

Kernel objects are not created for any ___kernel functions in program that do not have the same function definition across all devices for which a program executable has been successfully built.

Kernel objects can only be created once you have a program object with a valid program source or binary loaded into the program object and the program executable has been successfully built for one or more devices associated with program. No changes to the program executable are allowed while there are kernel objects associated with a program object. This means that calls to BuildProgram return kInvalidOperation (in lasterror) if there are kernel objects attached to a program object. The OpenCL context associated with program will be the context associated with kernel. The list of devices associated with program are the devices associated with kernel. Devices associated with a program object for which a valid program executable has been built can be used to execute kernels declared in the program object.

Lasterror is set.

135.9.18 Devices as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the list of devices associated with the program object.
Notes: This can be the devices associated with context on which the program object has been created or can be a subset of devices that are specified when a progam object is created.

135.9.19 NumDevices as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the number of devices associated with program.
Notes: Lasterror is set.

135.9.20 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program reference count.
Notes: Lasterror is set.

135.9.21 Source as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Return the program source code specified in the Constructor.
Notes: The source string returned is a concatenation of all source strings specified to Constructor.

135.9.22 Properties

135.9.23 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.9.24 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.

(Read and Write property)

135.9.25 Constants

135.9.26 kBuildError = -2

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the build status constants
Notes: The build status returned if the last call to BuildProgram on the specified program object for device generated an error.

135.9.27 kBuildInProgress = -3

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the build status constants
Notes: The build status returned if the last call to BuildProgram on the specified program object for device has not finished.

135.9.28 kBuildNone = -1

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the build status constants
Notes: The build status returned if no build has been performed on the specified program object for device.

135.9.29 kBuildSuccess = 0

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the build status constants
Notes: The build status returned if the last call to BuildProgram on the specified program object for device was successful.

135.10 class CLSamplerMBS

135.10.1 class CLSamplerMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The class for a Sampler.

135.10.4 Methods

135.10.5 AddressingMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the value specified by addressingmode argument to Constructor.

135.10.6 Constructor(Context as CLContextMBS, NormalizedCoords as Boolean, AddressingMode as UInt32, FilterMode as UInt32)

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates a sampler object.
Notes:

context: Must be a valid OpenCL context.

NormalizedCoords: Determines if the image coordinates specified are normalized (if normalized_coords is true) or not (if normalized_coords is false).

AddressingMode: Specifies how out-of-range image coordinates are handled when reading from an image. This can be set to kAddressRepeat, kAddressClampToEdge, kAddressClamp, and kAddressNone.

FilterMode: Specifies the type of filter that must be applied when reading an image. This can be kFilterNearest or kFilterLinear.

Lasterror is set.

A sampler object describes how to sample an image when the image is read in the kernel. The built-in functions to read from an image in a kernel take a sampler as an argument. The sampler arguments to the image read function can be sampler objects created using OpenCL functions and passed as argument values to the kernel or can be samplers declared inside a kernel. In this section we discuss how sampler objects are created using OpenCL functions.

135.10.7 Context as CLContextMBS

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the context specified when the sampler is created.

135.10.8 FilterMode as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the value specified by filterMode argument to Constructor.

135.10.9 NormalizedCoords as Boolean

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the value specified by normalizedCoords argument to Constructor.

135.10.10 ReferenceCount as UInt32

MBS MacFrameworks Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Return the sampler reference count.
Notes: The reference count returned should be considered immediately stale. It is unsuitable for general use in applications. This feature is provided for identifying memory leaks.

135.10.11 Properties

135.10.12 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The internel object reference.
Notes:

Not zero if this object is valid.
(Read and Write property)

135.10.13 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Notes:

See error constants in OpenCLMBS module.
The plugin uses lasterror = -1 for the case a function is not available.
(Read and Write property)

135.10.14 Constants

135.10.15 kAddressClamp = & h1132

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the address modes.

135.10.16 kAddressClampToEdge = & h1131

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the address modes.

135.10.17 kAddressNone = & h1130

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the address modes.

135.10.18 kAddressRepeat = & h1133

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the address modes.

135.10.19 kFilterLinear = & h1141

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the filter mode constants.

135.10.20 kFilterNearest = & h1140

MBS MacFrameworks Plugin, Plugin Version: 11.1.

Function: One of the filter mode constants.

135.11 module OpenCLMBS

135.11.1 module OpenCLMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The module for OpenCL.
Notes:

from wikipedia:

OpenCL (Open Computing Language) is a framework for writing programs that execute across heterogeneous platforms consisting of CPUs, GPUs, and other processors. OpenCL includes a language (based on C99) for writing kernels (functions that execute on OpenCL devices), plus APIs that are used to define and then control the platforms. OpenCL provides parallel computing using task-based and data-based parallelism.

135.11.6 Methods

135.11.7 AllDeviceCount(types as Int64) as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries number of devices with given types.
Example:

```
dim c as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeCPU)
dim g as Integer = OpenCLMBS.AllDeviceCount(CLDeviceMBS.kDeviceTypeGPU)
```

MsgBox str(c)+" CPU and "+str(g)+" GPU"

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

Lasterror is set.

135.11.8 AllDevices(types as Int64) as CLDeviceMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries devices with given types.
Example:

```
dim Devices(-1) as CLDeviceMBS = OpenCLMBS.AllDevices(CLDeviceMBS.kDeviceTypeAll)

for each p as CLDeviceMBS in Devices
MsgBox p.Name
next
```

Notes:

types: A bitfield that identifies the type of OpenCL device. The device_type can be used to query specific OpenCL devices or all OpenCL devices available. The valid values for device_type are specified in the following table.

Lasterror is set.

cl_device_type	Description
kDeviceTypeCPU	An OpenCL device that is the host processor. The host processor runs the OpenCL implementations and is a single or multi-core CPU.
kDeviceTypeGPU	An OpenCL device that is a GPU. By this we mean that the device can also be used to accelerate a 3D API such as OpenGL or DirectX.
kDeviceTypeAccelerator	Dedicated OpenCL accelerators (for example the IBM CELL Blade). These devices communicate with the host processor using a peripheral interconnect such as PCIe.
kDeviceTypeDefault	The default OpenCL device in the system.
kDeviceTypeAll	All OpenCL devices available in the system.

135.11.9 GetExtensionFunctionAddress(name as string) as ptr

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Returns the address of the extension function named by funcname.
Notes:

The function GetExtensionFunctionAddress returns the address of the extension function named by funcname. The pointer returned should be cast to a function pointer type matching the extension function's definition defined in the appropriate extension specification and header file. A return value of nil indicates that the specified function does not exist for the implementation. A non-nil return value for GetExtensionFunctionAddress does not guarantee that an extension function is actually supported. The application must also make a corresponding query using CLPlatformMBS.Extensions or CLDeviceMBS.Extensions to determine if an extension is supported by the OpenCL implementation.

GetExtensionFunctionAddress may not be queried for core (non-extension) functions in OpenCL. For functions that are queryable with clGetExtensionFunctionAddress, implementations may choose to also export those functions statically from the object libraries implementing those functions. However, portable applications cannot rely on this behavior.

Since there is no way to qualify the query with a device, the function pointer returned must work for all implementations of that extension on different devices. The behavior of calling a device extension function on a device not supporting that extension is undefined.

135.11.10 GetPictureImageFormat(pic as picture, byref RowPitch as Integer) as CLImageFormatMBS

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries the image format this picture would need when creating a storage object with CLMemMBS.
Example:

```
dim p as new Picture(100,100,32)
```

```
dim rowbytes as Integer
dim format as CLImageFormatMBS = OpenCLMBS.GetPictureImageFormat(p, rowbytes)

MsgBox hex(format.ImageChannelOrder)+" "+hex(format.ImageChannelDataType)+" "+str(rowbytes)
// shows 10B7 and 10D2 and 416 on Mac OS X Carbon
```

Notes: As Xojo uses 4 bytes per pixel on Mac and Windows, the plugin returns ARGB (or other byte order). The alpha channel is not used as Xojo stores

135.11.11 isAvailable as boolean

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Whether OpenCL is available.
Example:

```
if not OpenCLMBS.isAvailable then
if TargetMachO and TargetX86 then
MsgBox "OpenCL not available. Please install Mac OS X 10.6 to use it."
else
MsgBox "OpenCL not available. You need a Mac with Intel processor running Mac OS X 10.6."
end if
end if
```

Notes: Should return true on Mac OS X 10.6 and false everywhere else.

135.11.12 PlatformCount as Int64

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Queries number of platforms available.
Example:

```
MsgBox str(OpenCLMBS.PlatformCount)
```

Notes:

Typically you have two with modern Macs as you get both CPU and GPU listed.
Lasterror is set.

135.11.13 Platforms as CLPlatformMBS()

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Obtain the list of platforms available.
Example:

```
dim Platforms(-1) as CLPlatformMBS = OpenCLMBS.Platforms

for each p as CLPlatformMBS in Platforms
MsgBox p.Name
next
```

Notes: Lasterror is set.

135.11.14 UnloadCompiler

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Allows the implementation to release the resources allocated by the OpenCL compiler.
Example:

```
OpenCLMBS.UnloadCompiler
MsgBox OpenCLMBS.LastErrorMessage
```

Notes:

This is a hint from the application and does not guarantee that the compiler will not be used in the future or that the compiler will actually be unloaded by the implementation. Calls to BuildProgram after UnloadCompiler will reload the compiler, if necessary, to build the appropriate program executable.
Lasterror is set.

135.11.15 WaitForEvents(events() as CLEventMBS)

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: Waits on the host thread for commands identified by event objects to complete.
Notes:

events: The events specified in event_list act as synchronization points.

Waits on the host thread for commands identified by event objects in event_list to complete. A command is considered complete if its execution status is kCommandExecutionStatusComplete or a negative value.

Lasterror is set.

135.11.16 Properties

135.11.17 LastError as Integer

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The last error code.
Example:

MsgBox str(OpenCLMBS.LastError)

Notes:

All the functions in all the OpenCL classes set this property, too.
(Read only property)

135.11.18 LastErrorMessage as string

MBS MacFrameworks Plugin, Plugin Version: 11.1, Platform: macOS, Targets: All.

Function: The text message for the last error code.
Example:

MsgBox OpenCLMBS.LastErrorMessage

Notes: (Read only property)

135.11.19 Constants

135.11.20 kBuildProgramFailure = -11

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.21 kCompilerNotAvailable = -3

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.22 kDeviceNotAvailable = -2

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.23 kDeviceNotFound = -1

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.24 kImageFormatMismatch = -9

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.25 kImageFormatNotSupported = -10

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.26 kInvalidArgIndex = -49

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.27 kInvalidArgSize = -51

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.28 kInvalidArgValue = -50

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.29 kInvalidBinary = -42

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.30 kInvalidBufferSize = -61

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.31 kInvalidBuildOptions = -43

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.32 kInvalidCommandQueue = -36

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.33 kInvalidContext = -34

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.34 kInvalidDevice = -33

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.35 kInvalidDeviceType = -31

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.36 kInvalidEvent = -58

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.37 kInvalidEventWaitList = -57

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.38 kInvalidGlobalOffset = -56

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.39 kInvalidGlObject = -60

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.40 kInvalidHostPtr = -37

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.41 kInvalidImageFormatDescriptor = -39

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.42 kInvalidImageSize = -40

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.43 kInvalidKernel = -48

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.44 kInvalidKernelArgs = -52

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.45 kInvalidKernelDefinition = -47

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.46 kInvalidKernelName = -46

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.47 kInvalidMemObject = -38

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.48 kInvalidMipLevel = -62

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.49 kInvalidOperation = -59

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.50 kInvalidPlatform = -32

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.51 kInvalidProgram = -44

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.52 kInvalidProgramExecutable = -45

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.53 kInvalidQueueProperties = -35

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.54 kInvalidSampler = -41

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.55 kInvalidValue = -30

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.56 kInvalidWorkDimension = -53

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.57 kInvalidWorkGroupSize = -54

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.58 kInvalidWorkItemSize = -55

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.59 kMapFailure = -12

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.60 kMemCopyOverlap = -8

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.61 kMemObjectAllocationFailure = -4

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.62 kOutOfHostMemory = -6

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.63 kOutOfResources = -5

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.64 kProfilingInfoNotAvailable = -7

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

135.11.65 kSuccess = 0

MBS MacFrameworks Plugin, Plugin Version: 9.6.

Function: One of the constants for OpenCL errors.

Chapter 136

PDFKit

136.1 class CustomPDFViewMBS

136.1.1 class CustomPDFViewMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The class for a custom PDFView.
Notes: Subclass of the PDFViewMBS class.

136.1.2 Blog Entries

- MBS Xojo Plugins, version 17.5pr2
- MBS Xojo / Real Studio Plugins, version 17.0pr1

136.1.4 Methods

136.1.5 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear overlay item for this page.
Notes:

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

136.1.6 ClearOverlays

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

136.1.7 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new custom PDFView object.
See also:

- 136.1.8 Constructor(Handle as Integer) 21668
- 136.1.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21669

136.1.8 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop only.

Function: The constructor.
See also:

- 136.1.7 Constructor 21668
- 136.1.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21669

136.1.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: The constructor for a new custom PDFView object.
See also:

- 136.1.7 Constructor 21668
- 136.1.8 Constructor(Handle as Integer) 21668

136.1.10 Destructor

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: The destructor.

136.1.11 Properties

136.1.12 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Get/Set overlay item.
Notes:

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

136.1.13 Events

136.1.14 acceptsFirstMouse(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: Overridden by subclasses to return true if the receiver should be sent a mouseDown event for an initial mouse-down event, false if not.
Notes:

The receiver can either return a value unconditionally or use the location of event e to determine whether or not it wants the event. The default implementation ignores the event and returns false.

Implement this event in a subclass to allow instances to respond to click-through. This allows the user to click on a view in an inactive window, activating the view with one click, instead of clicking first to make the window active and then clicking the view. Most view objects refuse a click-through attempt, so the event simply activates the window. Many control objects, however, such as instances of NSButton and NSSlider, do accept them, so the user can immediately manipulate the control without having to release the mouse button.

136.1.15 acceptsFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Whether to accept first responder.
Notes: Return true if your control can have the focus and false if not.

136.1.16 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: The draw event called after a page was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.1.17 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: The draw event called after a page annotations were drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.1.18 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The draw event called after something was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.1.19 becomeFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Called when the object gets focus.
Notes: Return true to accept.

136.1.20 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: The draw event called before a page was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.1.21 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: The draw event called before a page annotations were drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.1.22 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The draw event called before a something was drawn.
Notes:

This event may not be called on OS X 10.11 or newer.
On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.1.23 beginGestureWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a touch gesture.
Notes:

e: An event object representing the gesture beginning.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

136.1.24 canBecomeKeyView as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: Returns whether the receiver can become key view.
Notes: Returns true if the receiver can become key view, false otherwise.

136.1.25 Close

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: The event called when the custom NSView is destroyed.

136.1.26 concludeDragOperation(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the dragging operation is complete, signaling the receiver to perform any necessary

clean-up.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

For this method to be invoked, the previous performDragOperation must have returned true.

The destination implements this method to perform any tidying up that it needs to do, such as updating its visual representation now that it has incorporated the dragged data. This message is the last message sent from sender to the destination during a dragging session.

If the sender object's animatesToDestination property was set to true in prepareForDragOperation, then the drag image is still visible. At this point you should draw the final visual representation in the view. When this method returns, the drag image is removed form the screen. If your final visual representation matches the visual representation in the drag, this is a seamless transition.

136.1.27 draggingEnded(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Implement this event to be notified when a drag operation ends in some other destination.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

This method might be used by a destination doing auto-expansion in order to collapse any auto-expands.

136.1.28 draggingEntered(sender as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the dragged image enters destination bounds or frame; delegate returns dragging operation to perform.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NS-DraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

Invoked when a dragged image enters the destination but only if the destination has registered for the paste-

board data type involved in the drag operation. Specifically, this method is invoked when the mouse pointer enters the destination's bounds rectangle (if it is a view object) or its frame rectangle (if it is a window object).

This method must return a value that indicates which dragging operation the destination will perform when the image is released. In deciding which dragging operation to return, the method should evaluate the overlap between both the dragging operations allowed by the source (obtained from sender with the draggingSourceOperationMask method) and the dragging operations and pasteboard data types the destination itself supports.

If none of the operations is appropriate, this method should return NSDragOperationNone (this is the default response if the method is not implemented by the destination). A destination will still receive draggingUpdated and draggingExited even if NSDragOperationNone is returned by this method.

136.1.29 draggingExited(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the dragged image exits the destination's bounds rectangle (in the case of a view object) or its frame rectangle (in the case of a window object).
Notes: sender: The object sending the message; use it to get details about the dragging operation.

136.1.30 draggingSessionEndedAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS, operation as Integer)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the dragging session has completed.
Notes:

session: The dragging session.
screenPoint: The point where the drag ended, in screen coordinates.
operation: The drag operation. See constants for drag operation types.

Available in OS X v10.7 and later.

136.1.31 draggingSessionMovedToPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the drag moves on the screen.

Notes:

session: The dragging session.
screenPoint: The point where the drag moved to, in screen coordinates.

Available in OS X v10.7 and later.

136.1.32 draggingSessionSourceOperationMaskForDraggingContext(session as NSDraggingSessionMBS, context as Integer) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Declares the types of operations the source allows to be performed. (required)
Notes:

session: The dragging session.
context: The dragging context. See NSDraggingContext constants for the supported values.

Return the appropriate dragging operation as defined in constants.

In the future Apple may provide more specific "within" values in the future. To account for this, for unrecognized localities, return the operation mask for the most specific context that you are concerned with.

136.1.33 draggingSessionWillBeginAtPoint(session as NSDraggingSessionMBS, screenPoint as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the drag will begin.
Notes:

session: The dragging session.
screenPoint: The point where the drag will begin, in screen coordinates.

Available in OS X v10.7 and later.

136.1.34 draggingUpdated(sender as NSDraggingInfoMBS) as Integer

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked periodically as the image is held within the destination area, allowing modification of

the dragging operation or mouse-pointer position.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return one (and only one) of the dragging operation constants described in NSDragOperation in the NSDraggingInfo reference. The default return value (if this method is not implemented by the destination) is the value returned by the previous draggingEntered message.

For this to be invoked, the destination must have registered for the pasteboard data type involved in the drag operation. The messages continue until the image is either released or dragged out of the window or view.

This method provides the destination with an opportunity to modify the dragging operation depending on the position of the mouse pointer inside of the destination view or window object. For example, you may have several graphics or areas of text contained within the same view and wish to tailor the dragging operation, or to ignore the drag event completely, depending upon which object is underneath the mouse pointer at the time when the user releases the dragged image and the performDragOperation method is invoked.

You typically examine the contents of the pasteboard in the draggingEntered method, where this examination is performed only once, rather than in the draggingUpdated method, which is invoked multiple times.

Only one destination at a time receives a sequence of draggingUpdated messages. If the mouse pointer is within the bounds of two overlapping views that are both valid destinations, the uppermost view receives these messages until the image is either released or dragged out.

136.1.35 endGestureWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Informs the receiver that the user has ended a touch gesture.
Notes:

e: An event object representing the gesture end.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

136.1.36 ignoreModifierKeysForDraggingSession(session as NSDraggingSessionMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Returns whether the modifier keys will be ignored for this dragging session.

Notes:

session: The dragging session.

Return true if the modifier keys will be ignored, false otherwise.
Available in OS X v10.7 and later.

136.1.37 isOpaque as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Whether this view is opaque.

136.1.38 keyDown(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the key events.
Notes: Return true if you handled this event.

136.1.39 keyUp(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the key events.
Notes: Return true if you handled this event.

136.1.40 magnifyWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a pinch gesture.
Notes:

e: An event object representing the magnify gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

136.1.41 menuForEvent(e as NSEventMBS, defaultMenu as NSMenuMBS) as NSMenuMBS

MBS MacControls Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Overridden by subclasses to return a context-sensitive pop-up menu for a given mouse-down event.
Notes:

theEvent: An object representing a mouse-down event.
defaultMenu: The menu as constructed by super class.

The receiver can use information in the mouse event, such as its location over a particular element of the receiver, to determine what kind of menu to return. For example, a text object might display a text-editing menu when the cursor lies over text and a menu for changing graphics attributes when the cursor lies over an embedded image.

The default implementation returns the default menu.

136.1.42 mouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.43 mouseDownCanMoveWindow as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: This event is called so you can decide what happens with mouse down.
Notes:

Return true if you do not need to handle a mouse down and it can pass through to superviews; False if you need to handle the mouse down.

This allows iApp-type applications to determine the region by which a window can be moved. By default, this method returns false if the view is opaque; otherwise, it returns true. Subclasses can override this method to return a different value.

136.1.44 mouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.45 mouseEntered(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.46 mouseExited(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.47 mouseMoved(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.48 mouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.49 Open

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: The event called when the custom NSView is created.

136.1.50 otherMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes:

Return true if you handled this event.
Third mouse button.

136.1.51 otherMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes:

Return true if you handled this event.
Third mouse button.

136.1.52 otherMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes:

Return true if you handled this event.
Third mouse button.

136.1.53 performDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked after the released image has been removed from the screen, signaling the receiver to import the pasteboard data.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.

Return if the destination accepts the data, it returns true; otherwise it returns false. The default is to return false.

For this method to be invoked, the previous prepareForDragOperation message must have returned true. The destination should implement this method to do the real work of importing the pasteboard data represented by the image.

If the sender object's animatesToDestination was set to true in prepareForDragOperation, then setup any animation to arrange space for the drag items to animate to. Also at this time, enumerate through the dragging items to set their destination frames and destination images.

136.1.54 prepareForDragOperation(sender as NSDraggingInfoMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the image is released, allowing the receiver to agree to or refuse drag operation.
Notes:

sender: The object sending the message; use it to get details about the dragging operation.
Returns true if the receiver agrees to perform the drag operation and false if not.
This method is invoked only if the most recent draggingEntered or draggingUpdated message returned an acceptable drag-operation value.
If you want the drag items to animate from their current location on screen to their final location in your view, set the sender object's animatesToDestination property to true in your implementation of this method.

136.1.55 pressureChange(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 15.1, Platform: macOS, Targets: .

Function: Informs the current object that a pressure change occurred on a system that supports pressure sensitivity.
Notes:

This method is invoked automatically in response to user actions. event is the event that initiated the change in pressure.
Available in OS X v10.10.3 and later.

136.1.56 resignFirstResponder as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Focus is going away.
Notes: Return true to accept.

136.1.57 rightMouseDown(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.58 rightMouseDragged(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.59 rightMouseUp(e as NSEventMBS, x as Double, y as Double) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: One of the mouse events.
Notes: Return true if you handled this event.

136.1.60 rotateWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a rotation gesture.
Notes:

e: An event object representing the rotate gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

136.1.61 scrollWheel(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.0, Platform: macOS, Targets: .

Function: Informs the subclass that the mouse's scroll wheel has moved.
Notes:

e: An object encapsulating information about the wheel-scrolling event.

The default implementation simply passes this message to the next responder.
Return true to not pass the event.

136.1.62 swipeWithEvent(e as NSEventMBS) as boolean

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: .

Function: Informs the receiver that the user has begun a swipe gesture.
Notes:

e: An event object representing the swipe gesture.
The event will be sent to the view under the touch in the key window.
Available in Mac OS X v10.6 and later.
Return true if you handled this event.

136.1.63 updateDraggingItemsForDrag(sender as NSDraggingInfoMBS)

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Invoked when the dragging images should be changed.
Notes:

sender: The object sending the message; use this object to get details about the dragging operation.

While a destination may change the dragging images at any time, it is recommended to wait until this method is called before updating the dragging images.

This allows the system to delay changing the dragging images until it is likely that the user will drop on this destination. Otherwise, the dragging images will change too often during the drag which would be distracting to the user.

136.1.64 viewDidMoveToWindow

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: Informs the receiver that it has been added to a new view hierarchy.
Notes:

The default implementation does nothing; subclasses can implement this event to perform whatever actions are necessary.

window may return nil when this method is invoked, indicating that the receiver does not currently reside in any window. This occurs when the receiver has just been removed from its superview or when the receiver has just been added to a superview that does not itself have a window. Overrides of this method may choose to ignore such cases if they are not of interest.

136.1.65 wantsPeriodicDraggingUpdates as boolean

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: .

Function: Asks the destination object whether it wants to receive periodic draggingUpdated messages.
Notes:

Return true if the destination wants to receive periodic draggingUpdated messages, false otherwise.

If the destination returns false, these messages are sent only when the mouse moves or a modifier flag changes. Otherwise the destination gets the default behavior, where it receives periodic dragging-updated messages even if nothing changes.

136.2 control DesktopPDFThumbnailViewControlMBS

136.2.1 control DesktopPDFThumbnailViewControlMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFThumbnailView.
Notes:

This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

Does no longer work well with MacOS 10.12 or 10.13 as focus can't be set.

136.2.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

136.2.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

136.2.4 Properties

136.2.5 View as PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

136.2.6 Events

136.2.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

136.2.8 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

136.2.9 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

136.2.10 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

136.2.11 FocusLost

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.

Notes: This only fires if the control itself lost focus and not a sub control.

136.2.12 FocusReceived

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

136.2.13 FrameChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

136.2.14 MenuBarSelected

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

136.2.15 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

136.2.16 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

136.2.17 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

136.2.18 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

136.2.19 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

136.3 control DesktopPDFViewControlMBS

136.3.1 control DesktopPDFViewControlMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFView.
Notes:

This control embeds a special PDFView subclass.
Designed for Xojo 2021r3 and newer.
Please use view property to access the underlaying object and set properties.

136.3.2 Blog Entries

136.3.4 Methods

136.3.5 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Clear overlay item for this page.
Notes:

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

136.3.6 ClearOverlays

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

136.3.7 Properties

136.3.8 View as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

136.3.9 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Get/Set overlay item.
Notes:

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

136.3.10 Events

136.3.11 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The draw event called after something was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.3.12 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The draw event called after a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.3.13 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The draw event called after a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.3.14 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The draw event called before a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.3.15 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The draw event called before a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.3.16 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The draw event called before a something was drawn.

136.3.17 BoundsChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

136.3.18 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

136.3.19 CocoaMouseDown(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes: This is called before MouseDown, but provides the original Cocoa event, so you can query additional properties.

136.3.20 CocoaMouseDrag(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: This is called before MouseDrag, but provides the original Cocoa event, so you can query additional properties.

136.3.21 CocoaMouseUp(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: This is called before MouseUp, but provides the original Cocoa event, so you can query additional properties.

136.3.22 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

136.3.23 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

136.3.24 FocusLost

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

136.3.25 FocusReceived

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

136.3.26 FrameChanged

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

136.3.27 MenuBarSelected

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

136.3.28 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

136.3.29 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

136.3.30 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

136.3.31 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

136.3.32 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Opens a specified page.
Notes: This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

136.3.33 PerformFind

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Performs a find operation.
Notes:

Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

136.3.34 PerformGoToPage

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Performs a go-to operation.
Notes: Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

136.3.35 PerformPrint

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Prints the current document.
Notes: Certain PDFAction's may request that the PDF viewer application Print the current document. This event will be called when the user clicks on an annotation with such an action.

136.3.36 PrintJobTitle as String

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Overrides the job title used when the PDFView is printed.
Notes: Allows to override the job title when PDFView is printed. The default implementation uses the string, if any, associated with the "Title" key from the view's PDFDocumentMBS attribute dictionary. Failing that, it uses the last path component if the PDFDocumentMBS is URL-based.

136.3.37 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

136.3.38 WillChangeScaleFactor(scale as Double) as Double

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Overrides changes to the scale factor.
Notes:

Allows to override changes to the scale factor. The default implementation pins scaling between 0.1 and 10.0.

If you add this event, please return a value, e.g. the passed scale value.

136.3.39 WillClickOnLink(URL as String)

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Handle clicks on URL links in a view.
Notes:

If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

136.4 class PDFActionGoToMBS

136.4.1 class PDFActionGoToMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFActionGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action.
Notes:

A PDFActionGoTo object represents the action of going to a specific location within the PDF document.
Subclass of the PDFActionMBS class.

136.4.2 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

136.4.3 Blog Entries

- MBS REALbasic Plugins, version 10.4pr4

136.4.4 Methods

136.4.5 Constructor(destination as PDFDestinationMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the go-to action.
Notes:

destination: The destination with which to initialize the go-to action.
Available in Mac OS X v10.5 and later.

136.4.6 Properties

136.4.7 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destination associated with the action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.5 class PDFActionMBS

136.5.1 class PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFAction represents an action that is performed when, for example, a PDF annotation is activated or an outline item is clicked.
Notes:

A PDFAction object represents an action associated with a PDF element, such as an annotation or a link, that the viewer application can perform. See the Adobe PDF Specification for more about actions and action types.

PDFAction is an abstract superclass of the following concrete classes:

- PDFActionGoToMBS
- PDFActionNamedMBS
- PDFActionRemoteGoToMBS
- PDFActionResetFormMBS
- PDFActionURLMBS

136.5.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

136.5.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

136.5.4 Methods

136.5.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFActionMBS. But you can still create instances of the subclasses.

This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.
See also:

- 136.5.6 Constructor(Handle as Integer) 21700

136.5.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFAction handle.
Notes:

Please pass in a non zero handle which points to a PDFAction object.
For use with declares.
See also:

- 136.5.5 Constructor 21699

136.5.7 copy as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the action object.

136.5.8 Properties

136.5.9 Handle as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference tot he PDF action object.
Notes: (Read and Write property)

136.5.10 type as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the type of the action.
Notes:

The PDF action type returned by this method may not correspond precisely to the name of a PDFAction subclass. For example, a PDFActionURL object might return "URI" or "Launch," depending on the original

action as defined by the Adobe PDF Specification. In the PDF Kit, these two actions are handled in the single PDFActionURL subclass, and the more familiar term "URL" is used instead.

Available in Mac OS X v10.5 and later.
(Read only property)

136.6 class PDFActionNamedMBS

136.6.1 class PDFActionNamedMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFActionNamed defines methods used to work with actions in PDF documents, some of which are named in the Adobe PDF Specification.
Notes:

A PDFActionNamed object represents an action with a defined name, such as "Go back" or "Zoom in."
Subclass of the PDFActionMBS class.

136.6.2 Methods

136.6.3 Constructor(name as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the PDFActionName object with the specified named action.
Notes: Available in Mac OS X v10.5 and later.

136.6.4 Properties

136.6.5 name as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the named action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.6.6 Constants

136.6.7 kPDFActionNamedFind = 8

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Find action.
Available in Mac OS X v10.5 and later.

136.6.8 kPDFActionNamedFirstPage = 3

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The First Page action.
Available in Mac OS X v10.5 and later.

136.6.9 kPDFActionNamedGoBack = 5

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Go Back action.
Available in Mac OS X v10.5 and later.

136.6.10 kPDFActionNamedGoForward = 6

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Go Forward action.
Available in Mac OS X v10.5 and later.

136.6.11 kPDFActionNamedGoToPage = 7

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Go to Page action.
Available in Mac OS X v10.5 and later.

136.6.12 kPDFActionNamedLastPage = 4

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Last Page action.
Available in Mac OS X v10.5 and later.

136.6.13 kPDFActionNamedNextPage = 1

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Next Page action.
Available in Mac OS X v10.5 and later.

136.6.14 kPDFActionNamedNone = 0

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The action has no name.
Available in Mac OS X v10.5 and later.

136.6.15 kPDFActionNamedPreviousPage = 2

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Previous Page action.
Available in Mac OS X v10.5 and later.

136.6.16 kPDFActionNamedPrint = 9

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Print action.
Available in Mac OS X v10.5 and later.

136.6.17 kPDFActionNamedZoomIn = 10

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Zoom In action.
Available in Mac OS X v10.5 and later.

136.6.18 kPDFActionNamedZoomOut = 11

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the name constants for the action.
Notes:

The Zoom Out action.
Available in Mac OS X v10.5 and later.

136.7 class PDFActionRemoteGoToMBS

136.7.1 class PDFActionRemoteGoToMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFActionRemoteGoTo, a subclass of PDFAction, defines methods for getting and setting the destination of a go-to action that targets another document.
Notes:

Available in Mac OS X v10.5 and later.
Subclass of the PDFActionMBS class.

136.7.2 Methods

136.7.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the remote go-to action with the specified page index, point, and document URL.
Notes:

pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
file: The file of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 136.7.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string) 21706

136.7.4 Constructor(PageIndex as Integer, atPoint as NSPointMBS, url as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the remote go-to action with the specified page index, point, and document URL.
Notes:

pageIndex: The page index of the remote document.
point: The point on the page in the remote document.
url: The URL of the remote PDF document.

The PDFActionRemoteGoTo object uses a zero-based page index, not a PDFPage object. This simplifies the handling of remote destinations for documents that may not be instantiated yet.

Available in Mac OS X v10.5 and later.
See also:

- 136.7.3 Constructor(PageIndex as Integer, atPoint as NSPointMBS, file as folderitem) 21706

136.7.5 Properties

136.7.6 pageIndex as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The zero-based page index referenced by the remote go-to action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.7.7 point as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The point, in page space, on the page referenced by the remote go-to action.
Notes:

The point on the page of the remote document referenced by the action. If either the x value or the y value of the point is kPDFDestinationUnspecifiedValue, no position on the page is specified.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.7.8 URL as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL of the document referenced by the remote go-to action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.8 class PDFActionResetFormMBS

136.8.1 class PDFActionResetFormMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFActionResetForm, a subclass of PDFAction, defines methods for getting and clearing fields in a PDF form.
Notes:

A PDFActionResetForm object represents an action associated with a PDF form.
Subclass of the PDFActionMBS class.

136.8.2 Methods

136.8.3 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a reset form action.
Notes:

Initially, there are no fields and fieldsIncludedAreCleared returns true.

Available in Mac OS X v10.5 and later.

136.8.4 fields as string()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of fields associated with the reset action.
Notes:

An array of strings that corresponds to the fieldNames property of widget annotations (such as PDFAnnotationButtonWidget) on the PDF page. This method can return an empty array.

Available in Mac OS X v10.5 and later.

136.8.5 setFields(fields() as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the array of fields associated with the reset action.
Notes: Available in Mac OS X v10.5 and later.

136.8.6 Properties

136.8.7 fieldsIncludedAreCleared as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the fields associated with the reset action are cleared when the action is performed.
Notes:

If true, the reset action's fields are cleared when the action is performed. If false, the fields are excluded from the reset action; that is, they are not cleared, but all other fields in the document are cleared.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.9 class PDFActionURLMBS

136.9.1 class PDFActionURLMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFActionURL, a subclass of PDFAction, defines methods for getting and setting the URL associated with a URL action.
Notes: Subclass of the PDFActionMBS class.

136.9.2 Methods

136.9.3 Constructor(url as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a URL action with the specified URL.
Notes: Available in Mac OS X v10.5 and later.

136.9.4 Properties

136.9.5 URL as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The URL associated with the URL action.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10 class PDFAnnotationButtonWidgetMBS

136.10.1 class PDFAnnotationButtonWidgetMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for an annotation button widget.
Notes: Subclass of the PDFAnnotationMBS class.

136.10.2 Methods

136.10.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor which creates a new annotation widget.
See also:

- 136.10.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21712

136.10.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor which creates a new annotation widget.
See also:

- 136.10.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21712

136.10.5 Properties

136.10.6 allowsToggleToOff as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a Boolean value indicating whether a radio button behaves in a toggling manner.
Notes:

True if clicking a radio button control that is already in the on state toggles it to the off state; otherwise false.

Available in Mac OS X v10.5 and later.
(Read only property)

136.10.7 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The background color.
Notes: (Read and Write property)

136.10.8 caption as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The text of the label on a push button control.
Notes:

This method applies only to the label drawn on a control of type kPDFWidgetPushButtonControl.
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10.9 controlType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The control type of this widget.
Notes:

Value is one of the following constants:

kPDFWidgetUnknownControl
kPDFWidgetPushButtonControl
kPDFWidgetRadioButtonControl
kPDFWidgetCheckBoxControl
(Read and Write property)

136.10.10 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal name of a field (used for reset-form actions).
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10.11 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font used in the control's label.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10.12 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used in the control's label.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10.13 Highlighted as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value that indicates whether the control is highlighted when it is drawn.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10.14 onStateValue as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string associated with the on state of a radio button or checkbox control.
Notes:

This is a required string for controls of types kPDFWidgetRadioButtonControl and kPDFWidgetCheckBoxControl. The off state is always labeled "Off".

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.10.15 state as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The state value.
Notes: (Read and Write property)

136.10.16 Events

136.10.17 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.10.18 Constants

136.10.19 kPDFWidgetCheckBoxControl = 2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the control types for this widget.

136.10.20 kPDFWidgetMixedState = -1

MBS MacControls Plugin, Plugin Version: 21.1.

Function: One of the state constants.
Notes: The corresponding feature is in mixed state.

136.10.21 kPDFWidgetOffState = 0

MBS MacControls Plugin, Plugin Version: 21.1.

Function: One of the state constants.
Notes: The corresponding feature is in effect nowhere.

136.10.22 kPDFWidgetOnState = 1

MBS MacControls Plugin, Plugin Version: 21.1.

Function: One of the state constants.
Notes: The corresponding feature is in effect everywhere.

136.10.23 kPDFWidgetPushButtonControl = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the control types for this widget.

136.10.24 kPDFWidgetRadioButtonControl = 1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the control types for this widget.

136.10.25 kPDFWidgetUnknownControl = -1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the control types for this widget.

136.10.26 NSOffState = 0

MBS MacControls Plugin, Plugin Version: 12.5.

Function: One of the state constants.
Notes: The corresponding feature is in effect nowhere.

136.10.27 NSOnState = 1

MBS MacControls Plugin, Plugin Version: 12.5.

Function: One of the state constants.
Notes: The corresponding feature is in effect everywhere.

136.11 class PDFAnnotationChoiceWidgetMBS

136.11.1 class PDFAnnotationChoiceWidgetMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A PDFAnnotationChoiceWidget object provides user interactivity on a page of a PDF document, in the form of pop-up menus and lists.
Notes:

PDFAnnotationChoiceWidget inherits general annotation behavior from the PDFAnnotation class. If you use a PDFAnnotationChoiceWidget object, your application must handle hit testing, unless you are simply using PDFView to display content. This is because PDFView automatically handles hit testing for you.
Subclass of the PDFAnnotationMBS class.

136.11.2 Methods

136.11.3 choices as string()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of strings that represent the items available in the list or pop-up menu of the choice widget annotation.
Notes: Available in Mac OS X v10.5 and later.

136.11.4 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a PDF annotation object.
Notes:

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.4 and later.
See also:

- 136.11.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

136.11.5 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a PDF annotation object.
See also:

- 136.11.4 Constructor(left as Double, top as Double, width as Double, height as Double) 21718

136.11.6 setChoices(choices() as string)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the items available in the list or pop-up menu of the choice widget annotation.
Notes:

choices: Send an array of strings, each of which represents an item in the list or pop-up menu of the choice annotation widget.

Available in Mac OS X v10.5 and later.

136.11.7 Properties

136.11.8 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The color of the widget annotation background.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.11.9 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal field name associated with the widget annotation's value.
Notes:

If the widget annotation is backed by PDF form data, it can associate an optional field name with a value or other data.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.11.10 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font used to display the text in the widget annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.11.11 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used to display the text in the widget annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.11.12 isListChoice as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the widget annotation is a list.
Notes:

A choice widget annotation can be either a list or a pop-up menu.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.11.13 stringValue as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The selection in the widget annotation.
Notes:

If the widget annotation object is backed by PDF form data, this method returns the value associated with the appropriate field in the form object, if possible.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.11.14 Events

136.11.15 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.12 class PDFAnnotationCircleMBS

136.12.1 class PDFAnnotationCircleMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for an annotation circle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Subclass of the PDFAnnotationMBS class.

136.12.2 Methods

136.12.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation circle.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

```
o.Launch
```

See also:

- 136.12.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21723

136.12.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation circle.
See also:

- 136.12.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21722

136.12.5 Properties

136.12.6 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fill color used for drawing annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationCircleMBS(100,100,100,100)
a.interiorColor = NSColorMBS.magentaColor

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

136.12.7 Events

136.12.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.13 class PDFAnnotationFreeTextMBS

136.13.1 class PDFAnnotationFreeTextMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a free text annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationFreeTextMBS then
dim ft as PDFAnnotationFreeTextMBS = PDFAnnotationFreeTextMBS(a)
MsgBox ft.contents
end if
next
```

Notes: Subclass of the PDFAnnotationMBS class.

136.13.2 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

136.13.3 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

136.13.4 Methods

136.13.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new free text annotation.
See also:

- 136.13.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

136.13.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new free text annotation.
See also:

- 136.13.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21725

136.13.7 NSCenterTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for center.

136.13.8 NSRightTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for right.

136.13.9 Properties

136.13.10 alignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Alignment of text within annotation bounds.
Example:

```
dim a as PDFAnnotationFreeTextMBS // an annotation

if a.alignment=a.NSLeftTextAlignment then
// left aligned
end if
```

Notes:

Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

136.13.11 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Font associated with the text field.
Notes: (Read and Write property)

136.13.12 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used in the text field of the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.13.13 Events

136.13.14 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.13.15 Constants

136.13.16 NSJustifiedTextAlignment = 3

MBS MacControls Plugin, Plugin Version: 8.0.

Function: The Cocoa text alignment constant for justified.

136.13.17 NSLeftTextAlignment = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: The Cocoa text alignment constant for left.

136.13.18 NSNaturalTextAlignment = 4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: The Cocoa text alignment constant for natural.

136.14 class PDFAnnotationInkMBS

136.14.1 class PDFAnnotationInkMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for an ink annotation.
Notes: Subclass of the PDFAnnotationMBS class.

136.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr4

136.14.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr4

136.14.4 Methods

136.14.5 addBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds a Bezier path to an annotation.

136.14.6 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new ink annotation.
See also:

- 136.14.7 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21729

136.14.7 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new ink annotation.
See also:

- 136.14.6 Constructor(left as Double, top as Double, width as Double, height as Double) 21729

136.14.8 paths as NSBezierPathMBS()

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing the Bezier paths that make up an annotation.
Example:

```
dim a as new PDFAnnotationInkMBS(0, 0, 100, 100)

dim b1 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(10, 10, 10, 10))
a.addBezierPath b1

dim b2 as NSBezierPathMBS = NSBezierPathMBS.bezierPathWithRect(NSMakeRectMBS(50, 50, 20, 30))
a.addBezierPath b2

dim paths() as NSBezierPathMBS = a.paths
break
```

136.14.9 removeBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a Bezier path from an annotation.

136.14.10 Events

136.14.11 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.15 class PDFAnnotationLineMBS

136.15.1 class PDFAnnotationLineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a line annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: Subclass of the PDFAnnotationMBS class.

136.15.2 Methods

136.15.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation line.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
```

See also:

- 136.15.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

136.15.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation line.
See also:

- 136.15.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21731

136.15.5 Properties

136.15.6 endLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Style used for ornaments at the line end.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes: (Read and Write property)

136.15.7 endPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A point specifying the end point for line annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: (Read and Write property)

136.15.8 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The color used to fill the ornament at the ends of the line.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.15.9 startLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Style used for ornaments at the line start.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleSquare
```

Notes: (Read and Write property)

136.15.10 startPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A point specifying the start pointfor line annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show lines on first page
for each a as PDFAnnotationMBS in annotations
if a isa PDFAnnotationLineMBS then
dim l as PDFAnnotationLineMBS = PDFAnnotationLineMBS(a)
MsgBox "Line from "+l.startPoint.String+" to "+l.endPoint.String
end if
next
```

Notes: (Read and Write property)

136.15.11 Events

136.15.12 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.15.13 Constants

136.15.14 kPDFLineStyleCircle = 2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: On of the constants for the styles used for line end caps.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleCircle
```

```
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

136.15.15 kPDFLineStyleClosedArrow = 5

MBS MacControls Plugin, Plugin Version: 8.0.

Function: On of the constants for the styles used for line end caps.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleClosedArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

136.15.16 kPDFLineStyleDiamond = 3

MBS MacControls Plugin, Plugin Version: 8.0.

Function: On of the constants for the styles used for line end caps.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.startLineStyle = a.kPDFLineStyleDiamond
```

136.15.17 kPDFLineStyleNone = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: On of the constants for the styles used for line end caps.

136.15.18 kPDFLineStyleOpenArrow = 4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: On of the constants for the styles used for line end caps.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)

o.Launch
```

136.15.19 kPDFLineStyleSquare = 1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: On of the constants for the styles used for line end caps.
Example:

```
dim a as new PDFAnnotationLineMBS(100,100,100,100)
a.endLineStyle = a.kPDFLineStyleSquare
```

136.16 class PDFAnnotationLinkMBS

136.16.1 class PDFAnnotationLinkMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a link annotation.
Example:

```
// load a PDF
dim sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(sourceFile)

// get 4th page
dim page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
dim dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
dim LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
dim SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
dim destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

Notes: Subclass of the PDFAnnotationMBS class.

136.16.2 Methods

136.16.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation link.

See also:

- 136.16.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21738

136.16.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor for a new annotation link.
See also:

- 136.16.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21737

136.16.5 setHighlighted(value as boolean)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The highlight state dictates how the annotation is drawn.
Notes: If a user has clicked on a "Link" annotation, you should set highlighted to true and redraw it. When the user lets up, set highlighted to false and redraw again.

136.16.6 Properties

136.16.7 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Destination for the link.
Notes: (Read and Write property)

136.16.8 URL as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: URL for the link.
Notes: (Read and Write property)

136.16.9 Events

136.16.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.17 class PDFAnnotationMarkupMBS

136.17.1 class PDFAnnotationMarkupMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a markup annotation.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Subclass of the PDFAnnotationMBS class.

136.17.2 Blog Entries

- MBS Xojo Plugins, version 17.3pr4
- MBS Real Studio Plugins, version 12.5pr5

136.17.3 Blog Entries

136.17.4 Methods

136.17.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new markup annotation.
Example:

```
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
```

See also:

- 136.17.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21741

136.17.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new markup annotation.
See also:

- 136.17.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21740

136.17.7 quadrilateralPoints as NSPointMBS()

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Get the quadrilateral points.
Example:

```
dim m as new PDFAnnotationMarkupMBS(10, 20, 30, 40)
dim points() as NSPointMBS = m.quadrilateralPoints
break // see points in debugger
```

Notes:

Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points. The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

136.17.8 setQuadrilateralPoints(points() as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Set the quadrilateral points.
Notes:

Array of (n * 4) NSPoints defining n quadrilaterals in page space where n is the number of quad points. The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right. Points are specified relative to the annotation's bound's origin.

136.17.9 Properties

136.17.10 markupType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Type of mark-up (highlight, strike-out or underline).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes:

Changing the markup type also changes the annotations type to one of: "Highlight", "Strikeout", or "Underline" (these are three seperate annotation types treated here as three seperate flavors of the one PDFAnnotationMarkup class).
(Read and Write property)

136.17.11 Events

136.17.12 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.

Return true to disable the default drawing from PDFKit.

136.17.13 Constants

136.17.14 kPDFMarkupTypeHighlight = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: A constant for the markup type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeHighlight
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Highlight

136.17.15 kPDFMarkupTypeRedact = 3

MBS MacControls Plugin, Plugin Version: 21.1.

Function: A constant for the markup type.
Notes: Redact

136.17.16 kPDFMarkupTypeStrikeOut = 1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: A constant for the markup type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeStrikeOut
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: StrikeOut

136.17.17 kPDFMarkupTypeUnderline = 2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: A constant for the markup type.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationMarkupMBS(100,100,100,100)
a.markupType = PDFAnnotationMarkupMBS.kPDFMarkupTypeUnderline
page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: Underline

136.18 class PDFAnnotationMBS

136.18.1 class PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: This is the base class for all annotations.
Notes: A PDFAnnotation object by itself is not useful, only the subclasses (like PDFAnnotationCircle, PDFAnnotationText) are interesting. In parsing a PDF however, any unknown or unsupported annotations will be represented as this base class. Its drawRect method merely frames the bounds of the annotation and prints the annotation type (like "TrapNet") within the box.

136.18.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr3
- MBS Real Studio Plugins, version 12.5pr6
- MBS REALbasic Plugins, version 10.4pr4

136.18.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr3
- MBS Real Studio Plugins, version 12.5pr6
- MBS REALbasic Plugins, version 10.4pr4

136.18.4 Methods

136.18.5 addBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Add paths from the annotation.
Notes:

Path points are specified in annotation space.
Used by annotations type(s): /Ink.

136.18.6 choices as string()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The choices are an array of strings indicating the options (items) in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

136.18.7 Constructor

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

This class is the base class for a number of annotations. So this constructor is private to make sure you don't create instances of PDFAnnotationMBS. But you can still create instances of the subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.
See also:

- 136.18.8 Constructor(Handle as Integer) 21746
- 136.18.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21746
- 136.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21747

136.18.8 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFAnnotation handle.
Notes:

Please pass in a non zero handle which points to a PDFAnnotation object.
For use with declares.
See also:

- 136.18.7 Constructor 21746
- 136.18.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21746
- 136.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21747

136.18.9 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation.
Notes: You need to set type once.
See also:

- 136.18.7 Constructor 21746
- 136.18.8 Constructor(Handle as Integer) 21746
- 136.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21747

136.18.10 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation of given type.
See also:

- 136.18.7 Constructor 21746
- 136.18.8 Constructor(Handle as Integer) 21746
- 136.18.9 Constructor(left as Double, top as Double, width as Double, height as Double) 21746

136.18.11 copy as PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the annotation object.
Notes:

For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the annotation.

136.18.12 Destructor

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

136.18.13 drawWithBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the annotation on its associated page.
Notes:

The annotation is drawn relative to the origin of box in page space.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

For additional information see the "Constants" section in the PDFPage class.

Available in Mac OS X v10.4 and later.

136.18.14 lineStyleFromName(Name as String) as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries line style for given name.
Notes:

Method to help with mapping PDFLineStyle to the associated name based on PDF specification
Used by annotations type(s): /Line.

136.18.15 nameForLineStyle(LineStyle as Integer) as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries name for line style.
Notes:

Method to help with mapping PDFLineStyle to the associated name based on PDF specification
Used by annotations type(s): /Line.

136.18.16 paths as NSBezierPathMBS()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Array of NSBezierPathsMBS that comprise the annotation.
Notes:

Paths are specified in annotation space.
Used by annotations type(s): /Ink.

136.18.17 PDFAnnotationHighlightingModeInvert as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the highlighting mode constants.
Notes: Invert

136.18.18 PDFAnnotationHighlightingModeNone as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the highlighting mode constants.
Notes: No

136.18.19 PDFAnnotationHighlightingModeOutline as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the highlighting mode constants.
Notes: Outline

136.18.20 PDFAnnotationHighlightingModePush as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the highlighting mode constants.
Notes: Push

136.18.21 PDFAnnotationKeyAction as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.22 PDFAnnotationKeyAdditionalActions as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.23 PDFAnnotationKeyAppearanceDictionary as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.24 PDFAnnotationKeyAppearanceState as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.25 PDFAnnotationKeyBorder as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.26 PDFAnnotationKeyBorderStyle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.27 PDFAnnotationKeyColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.28 PDFAnnotationKeyContents as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.29 PDFAnnotationKeyDate as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.30 PDFAnnotationKeyDefaultAppearance as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.31 PDFAnnotationKeyDestination as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.32 PDFAnnotationKeyFlags as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.33 PDFAnnotationKeyHighlightingMode as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.34 PDFAnnotationKeyIconName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.35 PDFAnnotationKeyInklist as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.36 PDFAnnotationKeyInteriorColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.37 PDFAnnotationKeyLineEndingStyles as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.38 PDFAnnotationKeyLinePoints as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.39 PDFAnnotationKeyName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.40 PDFAnnotationKeyOpen as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.41 PDFAnnotationKeyPage as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.42 PDFAnnotationKeyParent as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.43 PDFAnnotationKeyPopup as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.44 PDFAnnotationKeyQuadding as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.45 PDFAnnotationKeyQuadPoints as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.46 PDFAnnotationKeyRect as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.47 PDFAnnotationKeySubtype as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.48 PDFAnnotationKeyTextLabel as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the annotation property keys.

136.18.49 PDFAnnotationKeyWidgetAppearanceDictionary as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.50 PDFAnnotationKeyWidgetBackgroundColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.51 PDFAnnotationKeyWidgetBorderColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.52 PDFAnnotationKeyWidgetCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.53 PDFAnnotationKeyWidgetDefaultValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.54 PDFAnnotationKeyWidgetDownCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.55 PDFAnnotationKeyWidgetFieldFlags as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.56 PDFAnnotationKeyWidgetFieldType as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.57 PDFAnnotationKeyWidgetMaxLen as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.58 PDFAnnotationKeyWidgetOptions as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.59 PDFAnnotationKeyWidgetRolloverCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.60 PDFAnnotationKeyWidgetRotation as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.61 PDFAnnotationKeyWidgetTextLabelUI as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.62 PDFAnnotationKeyWidgetValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the key widget property keys.

136.18.63 PDFAnnotationLineEndingStyleCircle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the line ending style constants.
Notes: Circle

136.18.64 PDFAnnotationLineEndingStyleClosedArrow as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the line ending style constants.
Notes: Closed Arrow

136.18.65 PDFAnnotationLineEndingStyleDiamond as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the line ending style constants.
Notes: Diamond

136.18.66 PDFAnnotationLineEndingStyleNone as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the line ending style constants.
Notes: No

136.18.67 PDFAnnotationLineEndingStyleOpenArrow as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the line ending style constants.
Notes: Open Arrow

136.18.68 PDFAnnotationLineEndingStyleSquare as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the line ending style constants.
Notes: Square

136.18.69 PDFAnnotationSubtypeCircle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Circle

136.18.70 PDFAnnotationSubtypeFreeText as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Freetext

136.18.71 PDFAnnotationSubtypeHighlight as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Highlight

136.18.72 PDFAnnotationSubtypeInk as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Ink

136.18.73 PDFAnnotationSubtypeLine as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Line

136.18.74 PDFAnnotationSubtypeLink as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Link

136.18.75 PDFAnnotationSubtypePopup as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Popup

136.18.76 PDFAnnotationSubtypeSquare as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Square

136.18.77 PDFAnnotationSubtypeStamp as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Stamp

136.18.78 PDFAnnotationSubtypeStrikeOut as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Strike out

136.18.79 PDFAnnotationSubtypeText as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Text

136.18.80 PDFAnnotationSubtypeUnderline as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Underline

136.18.81 PDFAnnotationSubtypeWidget as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the subtypes.
Notes: Widget

136.18.82 PDFAnnotationTextIconTypeComment as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: Comment

136.18.83 PDFAnnotationTextIconTypeHelp as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: Help

136.18.84 PDFAnnotationTextIconTypeInsert as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: Insert

136.18.85 PDFAnnotationTextIconTypeKey as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: Key

136.18.86 PDFAnnotationTextIconTypeNewParagraph as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: New Paragraph

136.18.87 PDFAnnotationTextIconTypeNote as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: Note

136.18.88 PDFAnnotationTextIconTypeParagraph as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the icon type constants.
Notes: Paragraph

136.18.89 PDFAnnotationWidgetSubtypeButton as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget subtypes.
Notes: Button

136.18.90 PDFAnnotationWidgetSubtypeChoice as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget subtypes.
Notes: Choice

136.18.91 PDFAnnotationWidgetSubtypeSignature as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget subtypes.
Notes: Signature

136.18.92 PDFAnnotationWidgetSubtypeText as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget subtypes.
Notes: Text

136.18.93 quadrilateralPoints as NSPointMBS()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Array of n * 4 points, packed as NSValue pointValue / CGPointValue, defining n quadrilaterals in page space where n is the number of quad points.
Notes:

The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right.
Points are specified relative to the annotation's bound's origin.

136.18.94 removeAllAppearanceStreams

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: All appearance streams for the target annotation are removed.
Notes:

Without an appearance stream, annotations are drawn strictly according to their parameters (color, border, font, etc.). When a PDF is saved, PDF Kit will always write out an appearance stream(s) for each annotation. If the PDF is reloaded, you will need to remove the appearance streams in order to continue to edit the annotations parameters.

Requires Mac OS X 10.5.

136.18.95 removeBezierPath(path as NSBezierPathMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove paths from the annotation.

136.18.96 removeValueForAnnotationKey(Key as String)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Remove the key-value pair from the annotation dictionary. Returns true on successful removal.

136.18.97 setBooleanValue(Key as String, value as Boolean) as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a boolean value.
Notes: See also setValue.

136.18.98 setChoices(choices() as string)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The choices are an array of strings indicating the options (items) in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

136.18.99 setQuadrilateralPoints(points() as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Array of n * 4 points, packed as NSValue pointValue / CGPointValue, defining n quadrilaterals in page space where n is the number of quad points.
Notes:

The points for each quad are ordered in a 'Z' pattern. That is, the first point should represent the upper left point representing the start of the marked-up text, the next point will be the upper right, the third point will represent the lower left of the text and the last point the lower right.
Points are specified relative to the annotation's bound's origin.

136.18.100 setRectValue(Key as String, value as NSRectMBS) as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a rectangle value.
Notes: See also setValue.

136.18.101 setValue(Key as String, value as Variant) as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Allows you to set a key-value pair in this annotation's dictionary.
Notes: Returns true on successful assignment, false on error. Key must be valid for a PDF annotation's object type, and must have a value that is acceptable for the key type. These values can either be a string, number, array of strings or numbers, or an dictionary of the previously listed types. Some keys expect

a complex type, for example the key "/C" expects a color in the format of an array of 0, 1, 3, or 4 elements, with each element being a floating-point number in the range of 0.0 - 1.0). As a convenience, these kind of keys will directly accept NSColorMBS values. Other convenience functions provide similar support can be found in PDFAnnotationUtilities header file. Note that you can set the environment variable "PDFKIT_LOG_ANNOTATIONS" to log any key-value assignment failures.

136.18.102 setValues(values() as string)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The choices are an array of strings indicating the option's export values in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

136.18.103 valueForAnnotationKey(Key as String) as Variant

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retrieves a deep copy of the key-value pair based on the given key; key can either be from the keys PDFAnnotationKey, or an appropriate string from the PDF specification.

136.18.104 values as string()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The choices are an array of strings indicating the option's export values in either a list or pop-up menu.
Notes: Used by annotations type(s): /Widget (field type(s): /Ch).

136.18.105 Properties

136.18.106 Action as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Optional action performed when a user clicks / taps an annotation.
Notes:

PDF readers ignore actions except for those associated with Link or button Widget annotations.

Available in macOS 10.5 or newer
(Read and Write property)

136.18.107 alignment as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Alignment of text within annotation bounds. Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
Notes:

Used by annotations type(s): /FreeText, /Widget (field type(s): /Tx).
(Read and Write property)

136.18.108 allowsToggleToOff as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: For radio buttons, indicates whether clicking on widget whose state is already On toggles it Off.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

136.18.109 annotationKeyValues as Dictionary

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: List all key-value pairs for this annotation; returns a deep copy of all pairs.
Notes:

Note that this method will not include a copy of the value for /Parent. This is by design as to avoid introducing a memory cycle. If you would like to get the /Parent propery, use valueForAnnotationKey with key

PDFAnnotationKeyParent.
(Read only property)

136.18.110 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Background color characteristics.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

136.18.111 border as PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Optional border or border style that describes how to draw the annoation border (if any).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

136.18.112 bounds as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The bounding box for the annotation in page space.
Notes:

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
(Read and Write property)

136.18.113 buttonWidgetState as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The current state of a button widget annotation.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

136.18.114 buttonWidgetStateString as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string that represents the ON state of a button widget annotation.
Notes:

This should be set when trying to, for example, group together a set of radio buttons with the same field name.
When buttons share the same field name, their individual state strings set them apart from one another.
Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

136.18.115 caption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Label for the button. Applies to kPDFWidgetPushButtonControl only.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

136.18.116 colorValue as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: For many annotations ("Circle", "Square") the stroke color.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationLineMBS(100,100,100,100)

a.colorValue = NSColorMBS.redColor
a.endLineStyle = a.kPDFLineStyleOpenArrow

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes:

Used for other annotations as well.
(Read and Write property)

136.18.117 comb as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to configure combing for PDF text fields.
Notes:

If set, the field is automatically divided into as many equally spaced positions, or combs, as the value of the maximum length of the field. To get the maximum length, use annotaiton key: PDFAnnotationKeyWidgetMaxLen.
Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

136.18.118 contents as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A string of text associated with an annotation.

Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationTextMBS(100,100,100,100)

a.contents="Hello"
a.colorValue = NSColorMBS.redColor

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes:

Often to be displayed in a pop-up when the annotation is clicked on ("FreeText" and "Text" especially).
(Read and Write property)

136.18.119 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Destination for the link. May be nil if no destination associated with link; in this case the URL may be valid.
Notes:

The preferred way though is to use action property.
Used by annotations type(s): /Link.
(Read and Write property)

136.18.120 endLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Style used for ornaments at the lines end (optional, PDF 1.4).
Notes:

Used by annotations type(s): /Line.
(Read and Write property)

136.18.121 endPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Points specifying end points for line annotation (required).
Notes:

Points are specified in annotation space.
Used by annotations type(s): /Line.
(Read and Write property)

136.18.122 fieldName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Widget annotations backed by form data have (internal) field names with which to associate a value or data.
Notes:

Can also be used for ResetForm actions.
Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

136.18.123 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Font and font color associated with the text field.
Notes:

Used by annotations type(s): /FreeText, /Popup, /Widget (field type(s): /Btn, /Ch, and /Tx).
(Read and Write property)

136.18.124 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Width of line used to stroke border.
Notes:

Used by annotations type(s): /FreeText, /Widget (field type(s): /Btn, /Ch, and /Tx).
(Read and Write property)

136.18.125 Handle as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle used internally for the object reference.
Notes: (Read and Write property)

136.18.126 hasAppearanceStream as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if the annotation has an appearance stream.
Notes:

Annotations with appearance streams are drawn using their stream. As a result, setting many parameters (like 'setColor' above), will have no visible effect.
(Read only property)

136.18.127 iconType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The type of icon displayed in the PDF. Supported icons: "Comment", "Key", "Note", "Help", "NewParagraph", "Paragraph" and "Insert".
Notes:

Used by annotations type(s): /Text.
(Read and Write property)

136.18.128 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Interior color of the annotation.
Notes:

Used by annotations type(s): /Circle, /Line, /Square.
(Read and Write property)

136.18.129 isHighlighted as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The highlight state dictates how the annotation is drawn.
Notes:

For example, if a user has clicked on a "Link" annotation, you should set highlighted to YES and redraw it. When the user lets up, set highlighted to false and redraw again.

Available in macOS 10.13 or newer or iOS 11.0 or newer.
(Read and Write property)

136.18.130 isPasswordField as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to determine if a PDF text field is a password field.
Notes:

Used by annotations type(s): /Widget (field type(s): /Tx).
(Read only property)

136.18.131 ListChoice as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: There are two flavors of Choice widget annotations, lists and pop-up menus. This method allow you to differentiate.
Notes:

Used by annotations type(s): /Widget (field type(s): /Ch).
(Read and Write property)

136.18.132 markupType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Type of mark-up (highlight, strike-out or underline). Changing the markup type also changes the annotations type.
Notes:

Used by annotations type(s): /Highlight, /StrikeOut, /Underline.
(Read and Write property)

136.18.133 maximumLength as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Maximum characters allowed (optional, zero indicates no specified maximum).
Notes:

Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

136.18.134 modificationDate as date

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The modification date of the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.18.135 modificationDateTime as DateTime

MBS MacControls Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The modification date of the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.18.136 mouseUpAction as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The action performed when a user releases the mouse button within an annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.18.137 multiline as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to configure multiline PDF text fields.
Notes:

Used by annotations type(s): /Widget (field type(s): /Tx).
(Read and Write property)

136.18.138 Open as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Used to tell if an annotation is open or closed.
Notes:

Used by annotations type(s): /Popup.
(Read and Write property)

136.18.139 page as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the page the annotation is associated with.
Notes: (Read only property)

136.18.140 popup as Variant

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The pop-up annotation associated with an annotation.
Notes:

The variant is a PDFAnnotationPopupMBS.

Pop-up annotations are not used with links or widgets. The bounds and open state of the pop-up annotation indicate the placement and open state of the pop-up window.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.18.141 radiosInUnison as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: For radio buttons, indicates whether a group of radio buttons will turn on and off in unison; that is if one is checked, they are all checked. If clear, the buttons are mutually exclusive.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

136.18.142 ReadOnly as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Determines if a text field should be editable or not.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

136.18.143 shouldDisplay as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies whether it should be drawn to the display or not.
Notes: (Read and Write property)

136.18.144 shouldPrint as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies whether it should be printed or not.
Notes: (Read and Write property)

136.18.145 stampName as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Name of stamp annotation.
Notes:

Standard stamps include names like, "Approved", "Draft", "TopSecret", etc.
The name must be representable as ASCII. Very little is rendered if the annotation has no appearance stream.
Used by annotations type(s): /Stamp

(Read and Write property)

136.18.146 startLineStyle as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Style used for ornaments at the lines start (optional, PDF 1.4).
Notes:

Used by annotations type(s): /Line.
(Read and Write property)

136.18.147 startPoint as NSPointMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Points specifying start points for line annotation (required).
Notes:

Points are specified in annotation space.
Used by annotations type(s): /Line.
(Read and Write property)

136.18.148 toolTip as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String used for tooltips.
Notes:

The base class returns contents, sub-classes may override as appropriate.
(Read only property)

136.18.149 type as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the annotation type (called "Subtype" in the PDF specification since "Annot" is the type).
Example:

```
dim a as new PDFAnnotationTextMBS(100,100,100,100)
MsgBox a.type // Text
```

Notes:

Examples include: "Text", "Link", "Line", etc.
(Read and Write property)

136.18.150 URL as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: URL for the link. May be nil if no URL action associated with link; in this case the destination may be valid.
Notes:

The preferred way though is to via action property.
Used by annotations type(s): /Link.
(Read and Write property)

136.18.151 userName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the user who created the annotation.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.18.152 widgetControlType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The type of button widget control type (radio button, push button, or checkbox).
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn).
(Read and Write property)

136.18.153 widgetDefaultStringValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string value for a widget annotation.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

136.18.154 widgetFieldType as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The specific field type of a widget annotation (button, choice, or text).
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

136.18.155 widgetStringValue as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The string value for a widget annotation.
Notes:

Used by annotations type(s): /Widget (field type(s): /Btn, /Ch, /Tx).
(Read and Write property)

136.19 class PDFAnnotationPopupMBS

136.19.1 class PDFAnnotationPopupMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A PDFAnnotationPopup object provides user interactivity on a PDF page in the form of a pop-up menu.
Notes: Subclass of the PDFAnnotationMBS class.

136.19.2 Methods

136.19.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation popup annotation with the given size.
See also:

- 136.19.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21779

136.19.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation popup annotation with the given size.
See also:

- 136.19.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21779

136.19.5 Properties

136.19.6 isOpen as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether the pop-up is open.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.19.7 Events

136.19.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.20 class PDFAnnotationSquareMBS

136.20.1 class PDFAnnotationSquareMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a square annotation.
Example:

```
// load a PDF
dim sourceFile as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(sourceFile)

// get 4th page
dim page as PDFPageMBS = p.pageAtIndex(3)
// create a destination
dim dest as new PDFDestinationMBS(page, NSMakePointMBS(0,0))

// create the link annotation
dim LinkAnnotation as new PDFAnnotationLinkMBS(100,100,100,100)
LinkAnnotation.destination = dest

// add a color rect so we see the link
dim SquareAnnotation as new PDFAnnotationSquareMBS(100,100,100,100)
SquareAnnotation.colorValue = NSColorMBS.redColor

// add to the first page
p.pageAtIndex(0).addAnnotation(SquareAnnotation)
p.pageAtIndex(0).addAnnotation(LinkAnnotation)

// and write new PDF.
dim destfile as FolderItem = SpecialFolder.Desktop.Child("output.pdf")
call p.write(destfile)
```

Notes: Subclass of the PDFAnnotationMBS class.

136.20.2 Methods

136.20.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a square annotation.

Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

See also:

- 136.20.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21782

136.20.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a square annotation.
See also:

- 136.20.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21781

136.20.5 Properties

136.20.6 interiorColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Fill color used for drawing annotation.
Example:

```
dim a as new PDFAnnotationSquareMBS(100,100,100,100)
a.interiorColor = NSColorMBS.greenColor
```

Notes: (Read and Write property)

136.20.7 Events

136.20.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.21 class PDFAnnotationStampMBS

136.21.1 class PDFAnnotationStampMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: A PDFAnnotationStamp object allows you to display a word or phrase, such as "Confidential," in a PDF page.
Example:

```
// create new document with blank page
dim doc as new PDFDocumentMBS
dim page as new PDFPageMBS
doc.appendPage page

// make new stamp annotation
dim stamp as new PDFAnnotationStampMBS(100, 100, 100, 100)

// Name of stamp annotation.  Standard stamps include names like, "Approved", "Draft", "TopSecret",
etc.
// The name must be representable as ASCII.
// Very little is rendered if the annotation has no appearance stream.
stamp.name = "Approved"

page.addAnnotation stamp

// save to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.Launch
else
MsgBox "write failed"
end if
```

Notes:

A PDFAnnotationStamp object should have an appearance stream associated with it; otherwise, nothing useful is rendered.
Subclass of the PDFAnnotationMBS class.

136.21.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

136.21.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr5

136.21.4 Methods

136.21.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation stamp with the given size.
See also:

- 136.21.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21785

136.21.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new annotation stamp with the given size.
See also:

- 136.21.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21785

136.21.7 Properties

136.21.8 name as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name associated with the stamp annotation.
Notes:

The name must be representable in ASCII. You can set a stamp annotation's name to help you identify it, but that name is not displayed on the PDF page. You must provide the string you want displayed on the page, such as "Draft" or "Top Secret", in the appearance stream for the annotation.

Note that the name value of the stamp annotation is not necessarily identical to the user-visible appearance of the stamp annotation. For example, a stamp annotation that displays "Confidential" on a PDF page may not have a name value of "Confidential".

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.21.9 Events

136.21.10 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.22 class PDFAnnotationTextMBS

136.22.1 class PDFAnnotationTextMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for an annotation text.
Notes: Subclass of the PDFAnnotationMBS class.

136.22.2 Methods

136.22.3 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation text.
See also:

- 136.22.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21787

136.22.4 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation text.
See also:

- 136.22.3 Constructor(left as Double, top as Double, width as Double, height as Double) 21787

136.22.5 Properties

136.22.6 iconType as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The type of icon displayed in the PDF.
Notes:

Supported icons: "Comment", "Key", "Note", "Help", "NewParagraph", "Paragraph" and "Insert".
(Read and Write property)

136.22.7 Events

136.22.8 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.22.9 Constants

136.22.10 kPDFTextAnnotationIconComment=0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.22.11 kPDFTextAnnotationIconHelp=3

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.22.12 kPDFTextAnnotationIconInsert=6

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.22.13 kPDFTextAnnotationIconKey=1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.22.14 kPDFTextAnnotationIconNewParagraph=4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.22.15 kPDFTextAnnotationIconNote=2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.22.16 kPDFTextAnnotationIconParagraph=5

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for use with the icontype property.

136.23 class PDFAnnotationTextWidgetMBS

136.23.1 class PDFAnnotationTextWidgetMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a text widget annotation.
Notes: Subclass of the PDFAnnotationMBS class.

136.23.2 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

136.23.3 Blog Entries

- MBS Xojo Plugins, version 22.1pr3

136.23.4 Methods

136.23.5 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation.
See also:

- 136.23.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil) 21790

136.23.6 Constructor(left as Double, top as Double, width as Double, height as Double, annotationType as String, properties as Dictionary = nil)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new annotation.
See also:

- 136.23.5 Constructor(left as Double, top as Double, width as Double, height as Double) 21790

136.23.7 NSCenterTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for center.

136.23.8 NSRightTextAlignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop only.

Function: The Cocoa text alignment constant for right.

136.23.9 Properties

136.23.10 alignment as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Alignment of text.
Notes:

Supported: NSLeftTextAlignment, NSRightTextAlignment and NSCenterTextAlignment.
(Read and Write property)

136.23.11 attributedStringValue as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Attributed string associated with text field (font / fontColor).
Notes:

Available on Mac OS X 10.8 or newer.
(Read and Write property)

136.23.12 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The background color of the annotation text field.
Notes:

Available in Mac OS X v10.5 and later.

(Read and Write property)

136.23.13 fieldName as string

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal name for the annotation text field.
Notes:

Field names are optional, internal names that identify text fields in a PDF form. You use field names with the PDFActionResetForm action.
Note that multiple PDFAnnotationTextWidget objects with the same field name always have the same text associated with that field name. When text is entered into one of the objects, the text associated with that field name is changed in all objects. If you need to ensure unique text for a PDFAnnotationTextWidget object, you must give it a unique field name.
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.23.14 font as NSFontMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Font associated with the text field.
Notes: (Read and Write property)

136.23.15 fontColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The font color used for the annotation's text field.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.23.16 isMultiline as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Configuring multiline PDF text fields.
Notes: (Read and Write property)

136.23.17 maximumLength as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The maximum number of characters allowed in the annotations string.
Notes:

A value of 0 means that there is no specified maximum.
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.23.18 rotation as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The rotation angle of the annotation text field in degrees.
Notes:

The rotation angle to be applied to the annotation text field, in degrees. The rotation angle must be a positive or negative multiple of 90 (negative angles are converted to their positive equivalents; for example -90 is changed to 270).
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.23.19 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String value associated with text field.
Notes: (Read and Write property)

136.23.20 Events

136.23.21 drawWithBox(box as Integer, g as NSGraphicsMBS) as boolean

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: .

Function: The event called for a custom drawing.
Notes:

You can draw here what the annotation should show.
Return true to disable the default drawing from PDFKit.

136.23.22 Constants

136.23.23 NSJustifiedTextAlignment = 3

MBS MacControls Plugin, Plugin Version: 8.0.

Function: The Cocoa text alignment constant for justified.

136.23.24 NSLeftTextAlignment = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: The Cocoa text alignment constant for left.

136.23.25 NSNaturalTextAlignment = 4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: The Cocoa text alignment constant for natural.

136.24 class PDFAppearanceCharacteristicsMBS

136.24.1 class PDFAppearanceCharacteristicsMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFAppearanceCharacteristics represents a dictionary that is specific to widget annotation types, containing additional information for constructing the annotation's appearance.
Notes: It is designed to be a representation of the /MK appearance characteristics entry in the annotation dictionary. Because the /MK entry is optional, all properties of PDFAppearanceCharacteristics are optional as well.

136.24.4 Methods

136.24.5 Constructor

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
See also:

- 136.24.6 Constructor(Handle as Integer) 21795

136.24.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Handle must point to an existing PDFAppearanceCharacteristics object.
See also:

- 136.24.5 Constructor 21795

136.24.7 copy as PDFAppearanceCharacteristicsMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the object.

136.24.8 PDFAppearanceCharacteristicsKeyBackgroundColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget appearance characteristics keys.

136.24.9 PDFAppearanceCharacteristicsKeyBorderColor as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget appearance characteristics keys.

136.24.10 PDFAppearanceCharacteristicsKeyCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget appearance characteristics keys.

136.24.11 PDFAppearanceCharacteristicsKeyDownCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget appearance characteristics keys.

136.24.12 PDFAppearanceCharacteristicsKeyRolloverCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget appearance characteristics keys.

136.24.13 PDFAppearanceCharacteristicsKeyRotation as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: One of the widget appearance characteristics keys.

136.24.14 Properties

136.24.15 appearanceCharacteristicsKeyValues as Dictionary

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: List all appearance characteristics properties as key-value pairs; returns a deep copy of all pairs.
Notes:

Helpful for debugging.
(Read only property)

136.24.16 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The background color of the widget annotation.
Notes: (Read and Write property)

136.24.17 borderColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The border color of the widget annotation.
Notes: (Read and Write property)

136.24.18 caption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The widget annotation's normal caption, displayed when it is not interacting with the user.
Notes: (Read and Write property)

136.24.19 controlType as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: For button widget annotations, need to specify the control type for PDFAppearanceCharacteristicsMBS as certain attributes, i.e. captions, are only available for certain flavors.
Notes:

Control type does not need to be set for text or choice widget annotations.
(Read and Write property)

136.24.20 downCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The widget's caption displayed when the user holds the mouse button while over the annotation.
Notes:

Applies only to kPDFWidgetPushButtonControl.
(Read and Write property)

136.24.21 Handle as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

136.24.22 rolloverCaption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The widget's caption displayed when the user moves the mouse over the annotation.
Notes:

Applies only to kPDFWidgetPushButtonControl.
(Read and Write property)

136.24.23 rotation as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of *degrees* by which the widget annotation is rotated counterclockwise relative to the page.
Notes:

The value must be a multiple of 90. Default value: 0.
(Read and Write property)

136.25 class PDFBorderMBS

136.25.1 class PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for PDFKit borders.

136.25.4 Methods

136.25.5 Constructor

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Updated for version 21.1 to be public. Used to be private.
See also:

- 136.25.6 Constructor(Handle as Integer) 21800

136.25.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFBorder handle.
Notes:

Please pass in a non zero handle which points to a PDFBorder object.
For use with declares.
See also:

• 136.25.5 Constructor 21800

136.25.7 copy as PDFBorderMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the border object.
Notes: Not available in Mac OS X 10.6.

136.25.8 dashPattern as Double()

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Gets the dash pattern for the border.
Notes: Refer to the description for NSBezierPath for more information.

136.25.9 PDFBorderKeyDashPattern as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Key for the dash pattern property.

136.25.10 PDFBorderKeyLineWidth as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Key for the line width property.

136.25.11 PDFBorderKeyStyle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Key for the style property.

136.25.12 setDashPattern(values() as Double)

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the dash pattern for the border.
Notes: Refer to the description for NSBezierPath for more information.

136.25.13 Properties

136.25.14 borderKeyValues as Dictionary

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: List all border properties as key-value pairs; returns a deep copy of all pairs.
Notes:

Helpful for debugging.
(Read only property)

136.25.15 horizontalCornerRadius as single

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: For rounded-rect borders, the corner radius.
Notes:

Deprecated in Mac OS X 10.7.
(Read and Write property)

136.25.16 lineWidth as Double

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Width of line used to strok border.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.interiorColor = NSColorMBS.greenColor
a.colorValue = NSColorMBS.redColor
a.border.lineWidth=5

page.addAnnotation(a)
```

```
dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes: (Read and Write property)

136.25.17 style as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether border is drawn solid, dashed etc.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

Notes:

Use this constants:

```
kPDFBorderStyleSolid      = 0
kPDFBorderStyleDashed     = 1
kPDFBorderStyleBeveled    = 2
kPDFBorderStyleInset      = 3
kPDFBorderStyleUnderline  = 4
```

(Read and Write property)

136.25.18 verticalCornerRadius as single

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: For rounded-rect borders, the corner radius.
Notes:

Deprecated in Mac OS X 10.7.
(Read and Write property)

136.25.19 Constants

136.25.20 kPDFBorderStyleBeveled = 2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for the border style.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)

a.border.style = PDFBorderMBS.kPDFBorderStyleBeveled

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

136.25.21 kPDFBorderStyleDashed = 1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for the border style.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim page as PDFPageMBS = doc.pageAtIndex(0)
dim a as new PDFAnnotationSquareMBS(100,100,100,100)
```

```
a.border.style = PDFBorderMBS.kPDFBorderStyleDashed

page.addAnnotation(a)

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
o.Launch
```

136.25.22 kPDFBorderStyleInset = 3

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for the border style.

136.25.23 kPDFBorderStyleSolid = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for the border style.

136.25.24 kPDFBorderStyleUnderline = 4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants for the border style.

136.26 class PDFDestinationMBS

136.26.1 class PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a pdf destination.

136.26.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

136.26.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

136.26.4 Methods

136.26.5 compare(dest as PDFDestinationMBS) as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a comparison result that indicates the location of the destination in the document, relative to the current position.
Notes:

A comparison result, indicating the position of the passed-in destination relative to the current position.

If destination is between the receiver's position and the end of the document, compare returns NSOrderedAscending; if it is between the receiver's position and the beginning of the document, compare returns NSOrderedDescending. Otherwise, if destination matches the receiver's position, compare returns NSOrderedSame.

This method ignores the horizontal component of the destination point (the x value). If the destination's vertical component (or y value) is kPDFDestinationUnspecifiedValue, compare treats the destination as if its y value is the top point on the destination page.

An exception is raised if destination does not have a page associated with it or if its page is associated with a document other than the receiver's document.

Available in Mac OS X v10.5 and later.

136.26.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFDestination handle.
Notes:

Please pass in a non zero handle which points to a PDFDestination object.
For use with declares.
See also:

- 136.26.7 Constructor(page as PDFPageMBS, point as NSPointMBS) 21807

136.26.7 Constructor(page as PDFPageMBS, point as NSPointMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes the destination.
Notes:

page: The page of the destination.
point: The point of the destination, in page space.

Specify point in page space. Typically, there's no need to initialize destinations. Instead, you get them from PDFAnnotationLink, PDFOutline, or PDFView objects.

Page space is a 72-dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.
See also:

- 136.26.6 Constructor(Handle as Integer) 21807

136.26.8 copy as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the destination object.

136.26.9 kPDFDestinationUnspecifiedValue as Double

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Value used for unspecified destination.
Example:

MsgBox str(PDFDestinationMBS.kPDFDestinationUnspecifiedValue)

Notes:

Unspecified value used when a destination's actual x or y value is unimportant.
Available in Mac OS X v10.5 and later.

136.26.10 point as NSPointMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the point, in page space, that the destination refers to.
Notes:

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

Available in Mac OS X v10.4 and later.

136.26.11 Properties

136.26.12 Handle as Integer

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

136.26.13 page as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Page the destination refers to (destination page).
Notes: (Read only property)

136.26.14 Zoom as Double

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specify the scale factor the PDF viewer should assume for this destination.
Notes:

kPDFDestinationUnspecifiedValue indicates the scale factor is unaffected.
Available in Mac OS X 10.7 and later.
(Read and Write property)

136.27 class PDFDocumentDelegateMBS

136.27.1 class PDFDocumentDelegateMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class for a document delegate.
Notes: Subclass this class to handle document events.

136.27.2 Events

136.27.3 Close

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: Called when the delegate is destroyed.

136.27.4 didMatchString(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The event for an item found.
Notes: If implemented by the delegate, called for every search instance found during a find. PDFDocument's implentation accumulates each PDFSelection in an array.

136.27.5 documentDidBeginDocumentFind

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The search started on the document.

136.27.6 documentDidBeginPageFind(PageIndex as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The page search started on this page.
Notes: PageIndex is zero based.

136.27.7 documentDidEndDocumentFind

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The search finished on this document.

136.27.8 documentDidEndPageFind(PageIndex as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The page search finished on this page.
Notes: PageIndex is zero based.

136.27.9 documentDidFindMatch(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The search found an item.

136.27.10 documentDidUnlock

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The document has been unlocked.

136.27.11 Open

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: Called when the delegate is installed.

136.28 class PDFDocumentMBS

136.28.1 class PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a PDF document.
Notes:

Basicly this is the code used by Preview.app by Apple.

Destructor is dispatched to main thread to avoid bugs in OS X 10.12.

136.28.6 Methods

136.28.7 appendPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Appends a page to the document.

136.28.8 beginFindString(text as string, options as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Begins a find, searching the document for string.
Notes: Search results are handled via a DidFindMatch event in the delegate. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

136.28.9 beginFindStrings(texts() as string, options as integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Like beginFindString but it accepts an array of strings to search for.

136.28.10 cancelFindString

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Method to cancel a search.
Notes: Can be called from a user method being serviced by a find notification.

136.28.11 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new pdf document in memory.
Example:

```
dim doc as new PDFDocumentMBS // new empty document
dim page as new PDFPageMBS // new empty page

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

dim f as FolderItem=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
end if
```

- 136.28.12 Constructor(data as memoryblock) 21814
- 136.28.13 Constructor(data as String) 21815
- 136.28.14 Constructor(file as folderitem) 21815
- 136.28.15 Constructor(Handle as Integer) 21816

136.28.12 Constructor(data as memoryblock)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new pdf document based on a string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim b as BinaryStream = f.OpenAsBinaryFile(false)
dim s as string = b.Read(b.Length)

dim doc as new PDFDocumentMBS(s)

MsgBox doc.Title
```

- 136.28.11 Constructor 21814
- 136.28.13 Constructor(data as String) 21815
- 136.28.14 Constructor(file as folderitem) 21815
- 136.28.15 Constructor(Handle as Integer) 21816

136.28.13 Constructor(data as String)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new pdf document based on a string.
See also:

- 136.28.11 Constructor 21814
- 136.28.12 Constructor(data as memoryblock) 21814
- 136.28.14 Constructor(file as folderitem) 21815
- 136.28.15 Constructor(Handle as Integer) 21816

136.28.14 Constructor(file as folderitem)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a new pdf document based on a file.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

See also:

- 136.28.11 Constructor 21814
- 136.28.12 Constructor(data as memoryblock) 21814
- 136.28.13 Constructor(data as String) 21815
- 136.28.15 Constructor(Handle as Integer) 21816

136.28.15 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFDocument handle.
Notes:

Please pass in a non zero handle which points to a PDFDocument object.
For use with declares.
See also:

- 136.28.11 Constructor 21814
- 136.28.12 Constructor(data as memoryblock) 21814
- 136.28.13 Constructor(data as String) 21815
- 136.28.14 Constructor(file as folderitem) 21815

136.28.16 copy as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the document object.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(f)

// make a copy
dim c as PDFDocumentMBS = p.copy

// remove second page
c.removePageAtIndex 1

// c has one page less
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

Notes:

For Mac OS X 10.7 and newer this function uses the framework function.
For Mac OS X 10.6 and older this function uses our own copy function to duplicate the document.

136.28.17 dataRepresentation(QuartzFilter as Variant = nil) as memoryblock

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Methods to record the current state of the PDFDocument as data string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

dim o as FolderItem = SpecialFolder.Desktop.Child("out.pdf")
dim b as BinaryStream = o.CreateBinaryFile("")

b.Write doc.dataRepresentation
```

Notes:

Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

Looks like newer macOS versions like 10.14 or later ignore the quartz filter.

136.28.18 exchangePageAtIndexWithPageAtIndex(indexA as Integer, indexB as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Exchanges the two pages with the given index.
Notes: Index is zero based.

136.28.19 findString(text as string, options as Integer) as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Searches entire document for string and returns an array of PDFSelections representing all

instances found.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem
dim sa() as PDFSelectionMBS
dim i,c as Integer
dim s as PDFSelectionMBS

const NSCaseInsensitiveSearch=1

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

if p.pageCount=0 then
MsgBox "Failed to load the PDF."
Return
end if

sa=p.findString("Plugin",NSCaseInsensitiveSearch)

if ubound(sa)<0 then
MsgBox "no item found."
else
MsgBox str(ubound(sa)+1)+" items found."
end if

s=sa(0)
s.extendSelectionAtEnd(50)
s.extendSelectionAtStart(50)

MsgBox s.stringValue // shows a bit more text before and after the location found
```

Notes:

May return an empty array if nothing is found.
Returns nil on any error.

Supported options are:
NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch.

136.28.20 findStringFromSelection(text as string, selection as PDFSelectionMBS, options as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Searches for only the next instance of string beginning after the last character of selection with options (or preceding the first character of the selection if NSBackwardsSearch is specified as a search option).
Notes: Returns next instance as a PDFSelection or nil if the end of the document is reached. Supported options are: NSCaseInsensitiveSearch, NSLiteralSearch, and NSBackwardsSearch. Passing in nil for selection will start the search from the beginning of the document (or end if NSBackwardsSearch is specified).

136.28.21 indexForPage(page as PDFPageMBS) as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a PDFPage, returns the pages index within the document.
Notes: Indicees are zero-based.

136.28.22 insertPage(page as PDFPageMBS, index as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Inserts a page in the pdf on the given index.
Example:

```
dim file1,file2,file3,destfile as FolderItem
dim page1,page2,page3 as PDFPageMBS
dim doc1,doc2 as PDFDocumentMBS
dim img as NSImageMBS
dim doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture
```

```
page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

Notes: Index is zero based.

136.28.23 Keywords as string()

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Array of Strings containing document keywords.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox join(doc.Keywords)
```

136.28.24 outlineItemForSelection(selection as PDFSelectionMBS) as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a PDFSelection, this method returns the child outline item the selection most closely falls beneath.
Notes:

Since a selection may span multiple outline items, only the point representing the first character of the PDFSelection is considered. Typically, outline's indicate things like chapters for the PDF. Therefore, this method would help you identify the chapter the selection falls within.

For some PDFs this method returns nil.

136.28.25 pageAtIndex(index as Integer) as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a PDFPage object representing the page at index.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

Notes: Will raise an exception if index is out of bounds. Indicees are zero-based.

136.28.26 PDFDocumentAuthorAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the name of the author of the document.

136.28.27 PDFDocumentCreationDateAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the document's creation date.

136.28.28 PDFDocumentCreatorAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the name of the application that created the document content.

136.28.29 PDFDocumentDidBeginFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that the beginFindString or findString method begins finding.
Notes:

The notification object is the PDFDocument object itself.
Use with NSNotificationObserverMBS class.

136.28.30 PDFDocumentDidBeginPageFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a find operation begins working on a new page of a document.
Notes:

You can use this notification to update a progress bar.
The notification object is the PDFDocument object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

136.28.31 PDFDocumentDidBeginPageWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation begins working on a page in a document.
Notes:

The notification object is the PDFDocumentMBS object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

136.28.32 PDFDocumentDidBeginWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation begins working on a document.
Notes:

The notification object is the PDFDocumentMBS object itself.

Use with NSNotificationObserverMBS class.

136.28.33 PDFDocumentDidEndFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that the beginFindString or findString method returns.
Notes:

The beginFindString method returns immediately, so this notification is posted when the "find" operation is finished.
You can use this notification to know when to close or hide a progress bar.
The notification object is the PDFDocument object itself.

Use with NSNotificationObserverMBS class.

136.28.34 PDFDocumentDidEndPageFindNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a find operation finishes working on a page in a document.
Notes:

You can use this notification to update a progress bar.
The notification object is the PDFDocument object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

136.28.35 PDFDocumentDidEndPageWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation finishes working on a page in a document.
Notes:

The notification object is the PDFDocumentMBS object itself. To determine the page, use the PDFDocumentPageIndex key to obtain userinfo of type Number.

Use with NSNotificationObserverMBS class.

136.28.36 PDFDocumentDidEndWriteNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a write operation finishes working on a document.
Notes:

The notification object is the PDFDocumentMBS object itself.

Use with NSNotificationObserverMBS class.

136.28.37 PDFDocumentDidFindMatchNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a string match is found in a document.
Notes:

The notification object is the PDFDocumentMBS object itself. To determine the string selection found, use the PDFDocumentFoundSelection key to obtain userinfo of type PDFSelectionMBS.

Use with NSNotificationObserverMBS class.

136.28.38 PDFDocumentDidUnlockNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: A notification that a document unlocks after a unlockWithPassword message.
Notes:

Use with NSNotificationObserverMBS class.
The notification object is the PDFDocument object itself.

136.28.39 PDFDocumentKeywordsAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional array of text strings containing keywords for the document.

136.28.40 PDFDocumentModificationDateAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the document's last-modified date.

136.28.41 PDFDocumentOwnerPasswordOption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the options for writing a PDF.
Notes: A string object for the owner's password which is required for encryption.

136.28.42 PDFDocumentProducerAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the name of the application that produced the PDF data for the document.

136.28.43 PDFDocumentSubjectAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing a description of the subject of the document.

136.28.44 PDFDocumentTitleAttribute as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the property keys.
Notes: An optional text string containing the title of the document.

136.28.45 PDFDocumentUserPasswordOption as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: One of the options for writing a PDF.
Notes: A string for the user's password which is optional for encryption.

136.28.46 PrintOperation(PrintInfo as Variant, AutoRotate as boolean = true, scalingMode as Integer = 0) as Variant

MBS MacControls Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates print operation for PDF document.
Example:

```
// select a PDF
dim f as FolderItem = GetOpenFolderItem("")
if f = nil then Return

// open PDF
dim doc as new PDFDocumentMBS(f)

// define some print setting via PrintInfo
dim PrintInfo as new NSPrintInfoMBS

// start print operation
dim printOperation as NSPrintOperationMBS = doc.PrintOperation(printinfo)

printOperation.showsPrintPanel = true
printOperation.showsProgressPanel = true

call printOperation.runOperation
```

Notes: Returns NSPrintOperationMBS object.

136.28.47 removePageAtIndex(index as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes a page in the pdf on the given index.
Notes: Index is zero based.

136.28.48 selectionForEntireDocument as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a selection representing text for the entire document.

136.28.49 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a selection representing text from page startPage and point StartCharacterIndex to page endPage and to point EndCharacterIndex on that page.
Notes: Start and end page can be the same.
See also:

- 136.28.50 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS 21827

136.28.50 selectionFromPage(StartPage as PDFPageMBS, StartPointX as single, StartPointY as single, EndPage as PDFPageMBS, EndPointX as single, EndPointY as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a selection representing text from page startPage and point startPt to page endPage and to point endPt on that page.
Notes: Points are in page-space and relative to their respective pages. Start and end page can be the same (and are then equivalent to calling selectionFromPointToPoint).
See also:

- 136.28.49 selectionFromPage(StartPage as PDFPageMBS, StartCharacterIndex as Integer, EndPage as PDFPageMBS, EndCharacterIndex as Integer) as PDFSelectionMBS 21827

136.28.51 SetDelegate(d as PDFDocumentDelegateMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: If a PDFDocument has a delegate, delegate methods may be called for this document.

136.28.52 SetKeywords(keywords() as string)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets the array of strings containing document keywords.

136.28.53 unlockWithPassword(password as string) as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Unlocks an encrypted PDF with the given password.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

if doc.unlockWithPassword("mypassword") then
MsgBox "OK"
end if
```

Notes: Means of passing in a password to unlock encrypted PDF's. Calling unlockWithPassword will attempt to unlock the PDF. If successful, a DidUnlockDocument event is sent to the delegate. You cannot "re-lock" a PDF by passing in a bogus password. Returns true if the document is now unlocked, false otherwise (isLocked = false).

136.28.54 write(file as folderitem, QuartzFilter as Variant = nil) as boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Methods to record the current state of the PDFDocument as a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

// modify here

dim o as FolderItem = SpecialFolder.Desktop.Child("testout.pdf")
call doc.write(o)
```

Notes:

Returns true on success and false on failure.

There is a bug known in Mac OS X 10.4 that this function may return true even if the saving failed. So you may prefer to check the file whether it exists after write.

Optional for Mac OS X 10.6, you can pass a QuartzFilterMBS object to use that filter here.

Looks like newer macOS versions like 10.14 or later ignore the quartz filter.

136.28.55 writeWithOptions(file as folderitem, options as dictionary) as boolean

MBS MacControls Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes PDF to file with options.
Notes:

Returns true on success and false on failure.

Some keys to use include:
CGPDFContextMBS.kCGPDFContextUserPassword
CGPDFContextMBS.kCGPDFContextTitle
CGPDFContextMBS.kCGPDFContextSubject
CGPDFContextMBS.kCGPDFContextOwnerPassword
CGPDFContextMBS.kCGPDFContextOutputIntents
CGPDFContextMBS.kCGPDFContextOutputIntent
CGPDFContextMBS.kCGPDFContextKeywords
CGPDFContextMBS.kCGPDFContextEncryptionKeyLength
CGPDFContextMBS.kCGPDFContextCreator
CGPDFContextMBS.kCGPDFContextAuthor
CGPDFContextMBS.kCGPDFContextAllowsPrinting
CGPDFContextMBS.kCGPDFContextAllowsCopying

136.28.56 Properties

136.28.57 allowsCommenting as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether you can create or modify document annotations, including form field entries.
Notes:

Available in macOS 10.13 or newer.
(Read only property)

136.28.58 allowsContentAccessibility as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether you can extract content from the document, but only for

the purpose of accessibility.
Notes:

Available in macOS 10.13 or newer.
(Read only property)

136.28.59 allowsCopying as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether copying is allowed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsCopying)
```

Notes:

Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

136.28.60 allowsDocumentAssembly as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether you can manage a document by inserting, deleting, and rotating pages.
Notes:

Available in macOS 10.13 or newer.
(Read only property)

136.28.61 allowsDocumentChanges as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether you can modify the document contents except for document attributes.
Notes:

Available in macOS 10.13 or newer.

(Read only property)

136.28.62 allowsFormFieldEntry as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: A Boolean value indicating whether you can modify form field entries even if you can't edit document annotations.
Notes:

Available in macOS 10.13 or newer.
(Read only property)

136.28.63 allowsPrinting as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether printing is allowed.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.allowsPrinting)
```

Notes:

Even unlocked, encrypted PDF's may have certain restrictions regarding copying or printing placed upon them.
(Read only property)

136.28.64 Author as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String containing document author.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Author
```

Notes: (Read and Write property)

136.28.65 CreationDate as Date

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Date representing document creation date.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.CreationDate.LongDate
```

Notes: (Read and Write property)

136.28.66 CreationDateTime as DateTime

MBS MacControls Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Date representing document creation date.
Notes: (Read and Write property)

136.28.67 Creator as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String containing name of app that created document content.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Creator
```

Notes: (Read and Write property)

136.28.68 documentRef as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a CGPDFDocumentRef value for this document.
Notes:

This is the CGPDFDocument associated with the PDFDocument object. With this object you can call many CoreGraphics API. May return 0 if the document was not created from an existing PDF file or data.

Use CGPDFDocumentMBS with Constructor taking a handle to call functions on this CGPDFDocument object.
(Read only property)

136.28.69 documentURL as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The document location.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.documentURL
```

Notes:

May return nil if the document was created from data.
(Read only property)

136.28.70 Handle as Integer

MBS MacControls Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference to the PDF Document.
Notes: (Read and Write property)

136.28.71 isEncrypted as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the PDF is encrypted.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
```

```
MsgBox str(doc.isEncrypted)
```

Notes:

With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string.
These are unlocked automatically.
(Read only property)

136.28.72 isFinding as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns true if document is currently searching for a string.
Notes: (Read only property)

136.28.73 isLocked as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the PDF is locked.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.isLocked)
```

Notes:

With the right password, a PDF can be unlocked - nontheless, the PDF still indicates that it is encrypted - just no longer locked. Some PDF's may be encrypted but can be unlocked with the empty string.
These are unlocked automatically.
(Read only property)

136.28.74 majorVersion as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

Notes: (Read only property)

136.28.75 minorVersion as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDF version of the PDF file (example: major version = 1, minor = 4; PDF v1.4).
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(doc.majorVersion)+"."+str(Doc.minorVersion)
```

Notes: (Read only property)

136.28.76 ModificationDate as Date

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Date representing last document modification date.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.ModificationDate.LongDate
```

Notes: (Read and Write property)

136.28.77 ModificationDateTime as DateTime

MBS MacControls Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Date representing last document modification date.
Notes: (Read and Write property)

136.28.78 outlineRoot as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the root outline object for the PDF (or nil if none).
Notes: (Read and Write property)

136.28.79 pageCount as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The number of pages in the document.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox str(Doc.pageCount)
```

Notes: (Read only property)

136.28.80 permissionsStatus as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the permissions status of the PDF document.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

Notes:

You have kPDFDocumentPermissionsNone status for an encrypted document that you have not supplied either a valid user or owner password. For a document with no encryption, you automatically have kPDF-

DocumentPermissionsOwner status.

Requires Mac OS X 10.6.
(Read only property)

136.28.81 Producer as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String containing name of app that produced PDF data.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Producer
```

Notes: (Read and Write property)

136.28.82 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The text of the document.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from PDF Document:"+EndOfLine+EndOfLine+p.stringValue
```

Notes:

Convenience method. Returns a string representing the entire document (each page's string concatenated with line feeds between pages).

If you need to extract the text of a PDF document cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

136.28.83 Subject as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String containing document subject.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Subject
```

Notes: (Read and Write property)

136.28.84 Title as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String containing document title.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
MsgBox doc.Title
```

Notes: (Read and Write property)

136.28.85 documentAttributes as Dictionary

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDF meta data as a Xojo Dictionary object.
Notes:

Returns a dictionary with PDF metadata. Metadata is optional for PDF's and so some of the keys may be missing or the entire dictionary may be empty.

(Read and Write computed property)

136.28.86 Constants

136.28.87 kPDFDocumentPermissionsNone = 0

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the permission status constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

Notes: Document permissions status. For encrypted PDF's, supplying the owner password will enable owner permission status.

136.28.88 kPDFDocumentPermissionsOwner = 2

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the permission status constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

136.28.89 kPDFDocumentPermissionsUser = 1

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the permission status constants.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)

Select case doc.permissionsStatus
case doc.kPDFDocumentPermissionsNone
MsgBox "None"
case doc.kPDFDocumentPermissionsOwner
MsgBox "Owner or no password"
case doc.kPDFDocumentPermissionsUser
MsgBox "User"
end Select
```

136.28.90 kPDFPrintPageScaleDownToFit = 2

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants for printing page-scaling modes.

136.28.91 kPDFPrintPageScaleNone = 0

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants for printing page-scaling modes.

136.28.92 kPDFPrintPageScaleToFit = 1

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants for printing page-scaling modes.

136.28.93 NSBackwardsSearch = 4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the search flag constants.
Notes: Performs searching from the end of the range toward the beginning.

136.28.94 NSCaseInsensitiveSearch = 1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the search flag constants.
Notes: Ignores case distinctions among characters.

136.28.95 NSLiteralSearch = 2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the search flag constants.
Notes: Performs a byte-for-byte comparison. Differing literal sequences (such as composed character sequences) that would otherwise be considered equivalent are considered not to match. Using this option can speed some operations dramatically.

136.29 class PDFOutlineMBS

136.29.1 class PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for a pdf outine object.

136.29.2 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

136.29.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr3

136.29.4 Methods

136.29.5 childAtIndex(index as Integer) as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: PDFOutline child at index.
Notes: Will throw exception if index is out of range.

136.29.6 Constructor

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Initializes a PDFOutline object.
Notes:

If you want the PDFOutline object returned by this method to be the outline root, you must add additional PDFOutline objects to create the outline hierarchy you desire. Then, you must add the root outline object to your PDF document by assigning it to the PDFDocument OutlineRoot.

If you want the PDFOutline object returned by this method to be a child of an existing outline, you must use setLabel: to give it a label and give it either a destination or action using setDestination: or setAction:, respectively. In addition, you must add this outline object to the existing PDFOutline object as a new child, using insertChild.

Available in Mac OS X v10.4 and later.
See also:

- 136.29.7 Constructor(Handle as Integer) 21843

136.29.7 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFOutline handle.
Notes:

Please pass in a non zero handle which points to a PDFOutline object.
For use with declares.
See also:

- 136.29.6 Constructor 21842

136.29.8 insertChild(child as PDFOutlineMBS, index as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Inserts the specified outline object at the specified index.
Notes:

To build a PDF outline hierarchy, use this method to add child outline objects. Before you call this method on a PDFOutline object that already has a parent, you should retain the object and call removeFromParent on it first.

Available in Mac OS X v10.5 and later.

136.29.9 removeFromParent

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Removes the outline object from its parent (does nothing if outline object is the root outline object).
Notes: Available in Mac OS X v10.5 and later.

136.29.10 Properties

136.29.11 action as PDFActionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The action performed when users click the outline.
Notes:

The root outline serves only as a container for the outlines it owns; it does not have an action. Note that a PDFOutline object can have either an action or a destination, not both.

If the PDFOutline object has a destination, instead of an action, action returns a PDFActionGoTo object (this is equivalent to calling destination on the PDFOutline object). For other action types, action returns the appropriate PDF Kit action type object, such as PDFActionURL.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.29.12 destination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destination asscoiated with the outline item.
Notes:

The root PDFOutline has no destination.
(Read and Write property)

136.29.13 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFDocument the outline is asscoiated with.
Notes: (Read only property)

136.29.14 index as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the index of the outline.
Notes:

The index of the outline object is relative to its siblings and from the perspective of the parent of the outline object. The root outline object, and any outline object without a parent, has an index value of 0.

Available in Mac OS X v10.5 and later.
(Read only property)

136.29.15 isOpen as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Whether the outline object is initially disclosed.
Notes:

Calling isOpen on an outline object that has no children always returns false. Calling isOpen on the root outline object always returns true.

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.29.16 label as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The label for the outline.
Notes:

The root PDFOutline has no label and is only a container for children PDFOutlines.
(Read and Write property)

136.29.17 numberOfChildren as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Number of PDFOutline children this PDFOutline has.
Notes: (Read only property)

136.29.18 parent as PDFOutlineMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The parent outline object of the outline.
Notes:

Can be nil for the root object.
Available in Mac OS X v10.5 and later.
(Read only property)

136.30 class PDFPageMBS

136.30.1 class PDFPageMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for a page in a pdf document.
Example:

```
dim file1,file2,file3,destfile as FolderItem
dim page1,page2,page3 as PDFPageMBS
dim doc1,doc2 as PDFDocumentMBS
dim img as NSImageMBS
dim doc as PDFDocumentMBS

file1=SpecialFolder.Desktop.Child("test1.pdf")
file2=SpecialFolder.Desktop.Child("test2.pdf")
file3=SpecialFolder.Desktop.Child("logo.jpg")

doc1=new PDFDocumentMBS(file1)
doc2=new PDFDocumentMBS(file2)

MsgBox str(doc1.pageCount)

img=new NSImageMBS(file3)

Backdrop=img.CopyPicture

page1=new PDFPageMBS(img)
page2=doc1.pageAtIndex(0)
page3=doc2.pageAtIndex(0)

doc=new PDFDocumentMBS
doc.insertPage page1,0
doc.insertPage page2,1
doc.insertPage page3,2

destfile=SpecialFolder.Desktop.Child("test.pdf")
call doc.write(destfile)
```

136.30.6 Methods

136.30.7 addAnnotation(annotation as PDFAnnotationMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Methods allowing annotations to be added.

136.30.8 annotationAtPoint(x as single, y as single) as PDFAnnotationMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Hit-testing method returns the annotation at point (or nil if none).
Notes: The point is in page-space.

136.30.9 annotations as PDFAnnotationMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array containing the page's annotations.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim annotations(-1) as PDFAnnotationMBS = page.annotations

// show a msgbox with the types of all annotations
dim types(-1) as string

for each a as PDFAnnotationMBS in annotations
types.Append a.type
next

MsgBox Join(types)
```

Notes:

The elements of the array will most likely be typed to subclasses of the PDFAnnotation class.

Available in Mac OS X v10.4 and later.

136.30.10 CalcTransformForBox(box as Integer) as Variant

MBS MacControls Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: An utility function to calculate the transform needed to draw into a page.
Notes: Returns NSAffineTransformMBS object.

136.30.11 characterBoundsAtIndex(index as Integer) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the bounds in page-space of the character at index.
Notes: In the unlikely event that more than one character are at the specified point, only the first character encountered is returned.

136.30.12 characterIndexAtPoint(x as single, y as single) as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the index of the character at point (in page space).
Notes: Returns -1 if no character at point.

136.30.13 Constructor

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The constructor to create a custom PDF page.
Example:

```
dim doc as new PDFDocumentMBS
dim page as PDFPageMBS
dim f as FolderItem

page=new MyPDFPageMBS

doc.Creator="Xojo"
doc.Title="Test file"

doc.insertPage page,0

f=SpecialFolder.Desktop.Child("test.pdf")

if doc.write(f) then
f.launch
```

end if

Notes: You draw the content using drawRect event.
See also:

- 136.30.14 Constructor(Handle as Integer) 21851
- 136.30.15 Constructor(image as NSImageMBS) 21851

136.30.14 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFPage handle.
Notes:

Please pass in a non zero handle which points to a PDFPage object.
For use with declares.
See also:

- 136.30.13 Constructor 21850
- 136.30.15 Constructor(image as NSImageMBS) 21851

136.30.15 Constructor(image as NSImageMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a PDFPage for the NSImage passed in.
Notes:

An easy way to create a PDFPage from an image to add to a PDFDocument.

Mac OS X 10.5 only.
See also:

- 136.30.13 Constructor 21850
- 136.30.14 Constructor(Handle as Integer) 21851

136.30.16 copy as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the page object.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.pdf")
dim p as new PDFDocumentMBS(f)

// make a new PDF
dim c as new PDFDocumentMBS

// get first page
dim page as PDFPageMBS = p.pageAtIndex(0)

// add copy of page to new pdf
c.insertPage page.copy, 0

// c now has one page
MsgBox str(p.pageCount)+" "+str(c.pageCount)
```

136.30.17 Destructor

MBS MacControls Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The destructor.

136.30.18 Draw(g as NSGraphicsMBS, box as Integer = 0)

MBS MacControls Plugin, Plugin Version: 12.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws PDF page into graphics environment.
Notes: Use kPDFDisplay*Box constants for box parameter.

136.30.19 drawWithBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the page within the specified box.
Notes: This method takes into account the page rotation and draws clipped to the specified box. If the page is set to display annotations, this method also draws them. This method does not clear the background. To clear the background before drawing, use NSRectFill with NSColor set (typically) to white.

136.30.20 removeAnnotation(annotation as PDFAnnotationMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Methods allowing annotations to be removed.

136.30.21 Render(dpi as Double = 72.0, box as Integer = 0, background as NSColorMBS = nil) as NSImageMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop, Console & Web.

Function: Renders a PDF Page into an image.
Example:

```
dim f as FolderItem = GetFolderItem("Castles.pdf")
dim doc as new PDFDocumentMBS(f)
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim image as NSImageMBS = page.Render

Backdrop = image.CopyPicture
```

Notes:

dpi: The resolution you want to have on the image. Default 72.0. To get a scaled image with factor x, pass 72.0*x.
box: The display box. Use one of the kPDFDisplayBox* constants.
background: optional NSColorMBS object to fill the background before drawing the PDF. This will affect only PDFs with transparent background.

Returns nil on any error.

Version 11.1pr8 adds code here to handle rotation better.
Due to bugs in Apple's PDFKit you may see memory leaks with JPEG data from PDF pages (seen in macOS 10.12).

136.30.22 selectionForLineAtPoint(left as single, top as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a point in page-space, returns a selection representing a whole line at that point.
Notes: May return nil if no character (and by extension no line) under point.

136.30.23 selectionForRange(position as Integer, length as Integer) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a range, returns a selection representing text within that range.
Example:

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

Notes: Will raise an exception if the range length is zero or if the range is outside the range of the characters on the page.

136.30.24 selectionForRect(left as single, top as single, width as single, height as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a rect in page-space, returns a selection representing enclosed text on page.

136.30.25 selectionForWordAtPoint(left as single, top as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a point in page-space, returns a selection representing a whole word at that point.
Notes: May return nil if no character (and by extension no word) under point.

136.30.26 selectionFromPointToPoint(startleft as single, starttop as single, endleft as single, endtop as single) as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a selection representing text between startPt and endPt.
Notes: Point are sorted first top to bottom, left to right.

136.30.27 thumbnailOfSize(size as NSSizeMBS, box as integer) as NSImageMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Convenience function that returns an image of this page, with annotations, that fits the given size.
Notes:

Note that the produced image is "size to fit": it retains the original page aspect-ratio. The size you give may not match the size of the returned image, but the returned image is guaranteed to be equal or less.

Available in macOS 10.13 or newer.

136.30.28 transformContextForBox(box as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Given a display box, will transform the current context to take into account the rotation of the page as well as the origin of the box with repect to the page's base coordinates system.
Notes:

This is a convenient method to call from within drawPage or from within the draw method a PDFAnnotation subclass.

Mac OS X 10.5 only.

136.30.29 transformForBox(box as integer) as variant

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: This transform correctly rotates and offsets based on the given page's rotation property and the display box type.
Notes: Available in macOS 10.13 or newer.

136.30.30 Properties

136.30.31 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String (with linefeeds and in some cases spaces inserted) representing the text on the page.
Notes: (Read only property)

136.30.32 CGPDFPageHandle as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The CoreGraphics PDFPage handle.
Notes: (Read only property)

136.30.33 dataRepresentation as memoryblock

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns PDF data (a proper PDF document) consisting of a single page (this page).
Notes:

Note, external page links are not preserved.
(Read only property)

136.30.34 displaysAnnotations as boolean

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Method to turn on or off the display of annotations when the page is drawn.
Notes: (Read and Write property)

136.30.35 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFDocument the page is associated with.
Notes: (Read only property)

136.30.36 label as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The page label. Usually "1" for the first page, "2" for the second, etc.
Notes: (Read only property)

136.30.37 numberOfCharacters as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Number of characters on the page (including linefeeds and spaces inserted).
Notes: (Read only property)

136.30.38 rotation as Integer

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Rotation on a page.
Notes:

Must be 0, 90, 180 or 270 (negative rotations will be "normalized" to one of 0, 90, 180 or 270).
Some PDF's have an inherent rotation and so rotation may be non-zero when a PDF is first opened.
(Read and Write property)

136.30.39 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String (with linefeeds and in some cases spaces inserted) representing the text on the page.
Example:

```
dim p as PDFDocumentMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.pdf")
p=new PDFDocumentMBS(f)

MsgBox "Text from first page:"+EndOfLine+EndOfLine+p.pageAtIndex(0).stringValue
```

Notes:

If you need to extract the text of a PDF document page cross platform or with more options, you may want to look on the DynaPDF plugin.

It seems like this string value is not always available. It works for PDF Documents created from a disc file, but not for files our test app created on runtime in memory by using PDFDocument constructor and insertpage.
(Read only property)

136.30.40 boundsForBox(box as Integer) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the bounds for the specified PDF display box.
Notes:

The PDFDisplayBox enumeration defines the various box types.

Note that only the media box is required for a PDF. If you request the bounds for the crop box, but the PDF does not include a crop box, the bounds for the media box are returned instead. If you request the bounds for other box types, and the PDF does not includes these types, the bounds for the crop box are returned instead.

The coordinates for the box are in page space, so you might need to transform the points if the page has a rotation on it. Also, note that the bounds boundsForBox returns are intersected with the page's media box.

boundsForBox throws a range exception if box is not in range.
(Read and Write computed property)

136.30.41 Events

136.30.42 drawRect(box as Integer, g as NSGraphicsMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: .

Function: The event called when the PDFPage needs to be drawn.
Example:

```
Sub drawRect(box as Integer, g as NSGraphicsMBS)

if g.Valid then
System.DebugLog "is valid"
else
System.DebugLog "not valid"
end if

g.SetColorRGB 0,1,0

g.drawRect 200,200,200,200

g.SetColorRGB 1,0,0

g.fillRect 100,100,100,100
End Sub
```

Notes:

Do not store the graphics reference as it is only valid in this event.
Use the kPDFDisplayBox* constants for the box value.
You can draw another PDF page here with Draw command.

To avoid drawRect causing StackOverflowException when showing in a control, please have PDF produced as file or MemoryBlock, then read it back to a new PDFDocumentMBS object and show that in a control.

136.30.43 Constants

136.30.44 kPDFDisplayBoxArtBox = 4

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants to use for page boxes.

136.30.45 kPDFDisplayBoxBleedBox = 2

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants to use for page boxes.

136.30.46 kPDFDisplayBoxCropBox = 1

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants to use for page boxes.

136.30.47 kPDFDisplayBoxMediaBox = 0

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants to use for page boxes.

136.30.48 kPDFDisplayBoxTrimBox = 3

MBS MacControls Plugin, Plugin Version: 8.0.

Function: One of the constants to use for page boxes.

136.31 class PDFSelectionMBS

136.31.1 class PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The PDFKit class for selections.
Example:

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

136.31.4 Methods

136.31.5 addSelection(selection as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Add a selection to this selection.
Notes: Selections do not have to be contiguous. If the selection added overlaps with this selection, overlaps are removed.

136.31.6 addSelections(selection() as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Adds the specified array of selections to the receiving selection.
Notes:

This method provides better performance than multiple calls to addSelection if you need to add several selections to an existing selection. This is because the normalization of the selection (the removal of any overlaps between selections) occurs only once, after all selections have been added.
Available in Mac OS X v10.5 and later.

136.31.7 boundsForPage(page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the bounds of the selection on the specified page.
Notes:

The selection rectangle is given in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

136.31.8 Constructor(doc as PDFDocumentMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an empty PDFSelection object.
Notes:

Typically, you don't need to create a PDFSelection object, but you can use an empty PDFSelection object as a container into which you can place selections, using addSelection: and addSelections.
Available in Mac OS X v10.5 and later.
See also:

- 136.31.9 Constructor(Handle as Integer) 21862

136.31.9 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object based on a given PDFSelection handle.
Notes:

Please pass in a non zero handle which points to a PDFSelection object.
For use with declares.
See also:

- 136.31.8 Constructor(doc as PDFDocumentMBS) 21862

136.31.10 copy as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a copy of the selection object.

136.31.11 drawForPage(page as PDFPageMBS, active as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calls drawForPage with a default value for box parameter.
Notes: The default value is kPDFDisplayBoxCropBox. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor.
See also:

- 136.31.12 drawForPage(page as PDFPageMBS, box as Integer, active as boolean) 21863

136.31.12 drawForPage(page as PDFPageMBS, box as Integer, active as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Draws the selection relative to the origin of the specified box in page space.
Notes:

The selection is drawn using the current highlight color. If active is true, drawing uses selectedTextBackgroundColor. If false, it uses secondarySelectedControlColor. Refer to the PDFPage class for the list of available box types.

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
See also:

- 136.31.11 drawForPage(page as PDFPageMBS, active as boolean) 21863

136.31.13 extendSelectionAtEnd(chars as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Extends the selection at either end.
Example:

```
dim s as PDFSelectionMBS // your selection

s.extendSelectionAtEnd(50)
```

Notes: Selections can be extended right off onto neighboring pages even to include the entire PDF document.

136.31.14 extendSelectionAtStart(chars as Integer)

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Extends the selection at either end.
Example:

```
dim s as PDFSelectionMBS // your selection

s.extendSelectionAtStart(50)
```

Notes: Selections can be extended right off onto neighboring pages even to include the entire PDF document.

136.31.15 extendSelectionForLineBoundaries

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Extend to the selection to the beginning and end of the currently selected lines of text.
Notes:

If the current selection is on a single line, then this will extend it to the entire line width. If the selection is across multiple lines, then the first and last lines are expected to wholly contain their respective rows of text.

Available in macOS 10.13 or newer or iOS 11.0 or newer.

136.31.16 numberOfTextRangesOnPage(page as PDFPageMBS) as UInt32

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of contiguous ranges of text on the specified page.
Notes:

Returns zero if page is not in selection.
A typical, simple selection will contain a single range of text.

Available in Mac OS X 10.7 and later.

136.31.17 pages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Array of pages covered by the selection.
Notes:

These are sorted by page index.
Returns nil on any error.

136.31.18 rangeAtIndex(page as PDFPageMBS, index as Integer) as NSRangeMBS

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a range of contiguous text at index on the specified page.
Notes:

A simple selection. A typical, simple selection will contain a single range of text.
Available in Mac OS X 10.7 and later.

136.31.19 selectionsByLine as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns an array of selections, one for each line of text covered by the receiver.
Notes:

If you call this method on a PDFSelection object that represents a paragraph, for example, selectionsByLine returns an array that contains one PDFSelection object for each line of text in the paragraph.
Available in Mac OS X v10.5 and later.

136.31.20 Properties

136.31.21 attributedString as NSAttributedStringMBS

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String representing the text covered by the selection.
Notes:

May contain line-feeds.
(Read only property)

136.31.22 colorValue as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: The color used to draw the selection.
Notes:

Note that when no color has been specified for the PDFSelection objects in a document, the selections are drawn using NSColorMBS.selectedTextBackgroundColor for the active state and NSColorMBS.secondarySelectedControlColor for the inactive state.
(Read and Write property)

136.31.23 Handle as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The handle used internally for the object reference.
Notes: (Read and Write property)

136.31.24 stringValue as string

MBS MacControls Plugin, Plugin Version: 8.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: String representing the text covered by the selection.
Notes:

May contain line-feeds.
(Read only property)

136.32 control PDFThumbnailViewControlMBS

136.32.1 control PDFThumbnailViewControlMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFThumbnailView.
Notes:

This control embeds a special PDFThumbnailView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

Does no longer work well with MacOS 10.12 or 10.13 as focus can't be set.

136.32.2 Blog Entries

- New desktop controls
- MBS Xojo / Real Studio Plugins, version 13.4pr7

136.32.3 Blog Entries

- New desktop controls

136.32.4 Properties

136.32.5 View as PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

136.32.6 Events

136.32.7 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

136.32.8 Close

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

136.32.9 Closing

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

136.32.10 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacControls Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

136.32.11 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

136.32.12 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

136.32.13 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

136.32.14 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

136.32.15 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

136.32.16 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.

In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes: This only fires if the control itself got focus and not a sub control.

136.32.17 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes: This only fires if the control itself lost focus and not a sub control.

136.32.18 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

136.32.19 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

136.32.20 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

136.32.21 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

136.32.22 Open

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

136.32.23 Opening

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

136.32.24 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

136.33 class PDFThumbnailViewMBS

136.33.1 class PDFThumbnailViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: A PDFThumbnailView object contains a set of thumbnails, each of which represents a page in a PDF document.
Notes:

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

136.33.2 Blog Entries

136.33.3 Blog Entries

- MBS Xojo Plugins, version 21.1pr1

136.33.4 Methods

136.33.5 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new PDF thumbnail view with size 100/100 and position 0/0
Example:

```
dim t as new PDFThumbnailViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 136.33.6 Constructor(Handle as Integer) 21873
- 136.33.7 Constructor(left as Double, top as Double, width as Double, height as Double) 21874

136.33.6 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given PDFThumbnailView handle.
Example:

```
dim t as new PDFThumbnailViewMBS(0, 0, 100, 100)
dim v as new PDFThumbnailViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a PDFThumbnailView and the plugin retains this handle.
See also:

- 136.33.5 Constructor 21873
- 136.33.7 Constructor(left as Double, top as Double, width as Double, height as Double) 21874

136.33.7 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Creates a new PDF thumbnail view with the given size and position.
Example:

```
dim x as new PDFThumbnailViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 136.33.5 Constructor 21873
- 136.33.6 Constructor(Handle as Integer) 21873

136.33.8 PDFThumbnailViewDocumentEditedNotification as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: The Notification when PDFDocument is modified.
Notes: Use NSNotificationObserverMBS class to listen for this one.

136.33.9 selectedPages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns an array of PDF pages that correspond to the selected thumbnails in the thumbnail view.
Notes:

If the thumbnail view allows multiple selections (if allowsMultipleSelection returns true), you can use this method to get the PDF pages that correspond to the selected thumbnails.
Available in Mac OS X v10.5 and later.

136.33.10 Properties

136.33.11 allowsDragging as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether users can drag thumbnails within the thumbnail view; that is, re-order pages in the document.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.33.12 allowsMultipleSelection as boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether the thumbnail view allows users to select more than one thumbnail at a time.
Notes:

By default, PDFThumbnailView allows only a single thumbnail to be selected at one time. When this is the case, you can get the PDF page that corresponds to the selected thumbnail using the PDFView method currentPage.

If you use setAllowsMultipleSelection to enable multiple selections, however, you must use selectedPages to get the pages that correspond to the set of selected thumbnails.
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.33.13 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The color used in the background of the thumbnail view.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.33.14 Bezeled as Boolean

MBS MacControls Plugin, Plugin Version: 18.1, Platform: macOS, Targets: Desktop only.

Function: Whether to use bezel for control.
Notes: (Read and Write property)

136.33.15 labelFont as NSFontMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The font used to label the thumbnails.
Notes:

Typically, the label of a thumbnail is the page number of the page it represents.
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.33.16 maximumNumberOfColumns as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the maximum number of columns of thumbnails the thumbnail view can display.
Notes:

The thumbnail displays as many columns of thumbnails as fit in its size.
Available in Mac OS X v10.5 and later.
(Read and Write property)

136.33.17 PDFView as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The PDFView object associated with the thumbnail view.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.33.18 thumbnailSize as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The maximum width and height of the thumbnails in the thumbnail view.
Notes:

Available in Mac OS X v10.5 and later.
(Read and Write property)

136.34 control PDFViewControlMBS

136.34.1 control PDFViewControlMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The Xojo control for a PDFView.
Notes:

This control embeds a special PDFView subclass.
Designed for Xojo 2013r1 and newer. May work on Xojo 2012, but not perfectly.
Please use view property to access the underlaying object and set properties.

136.34.4 Methods

136.34.5 ClearOverlay(page as PDFPageMBS, post as boolean = true)

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear overlay item for this page.
Notes:

Is post = false, than we clear the item for pre page drawing, else for post page drawing.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

136.34.6 ClearOverlays

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Clear all overlays.
Notes: The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.

136.34.7 Properties

136.34.8 View as PDFViewMBS

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

136.34.9 Overlay(page as PDFPageMBS, post as boolean = true) as variant

MBS MacControls Plugin, Plugin Version: 17.5, Platform: macOS, Targets: Desktop only.

Function: Get/Set overlay item.
Notes:

MBS Plugin can draw a picture, NSImageMBS or PDFPageMBS below/over the PDF page.
The plugin does not trigger a redraw, so change takes effect on the next time the page is drawn.
(Read and Write computed property)

136.34.10 Events

136.34.11 AfterDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: The draw event called after something was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.34.12 AfterDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: The draw event called after a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.34.13 AfterDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double)

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: The draw event called after a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.34.14 BeforeDrawPage(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: The draw event called before a page was drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.34.15 BeforeDrawPagePost(graphics as NSGraphicsMBS, page as PDFPageMBS) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: The draw event called before a page annotations were drawn.
Notes: On macOS 10.12.2 or later, this event is called on a non-main thread. In that case the plugin will not call this event.

136.34.16 BeforeDrawRect(graphics as NSGraphicsMBS, x as Double, y as Double, w as Double, h as Double) as boolean

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function: The draw event called before a something was drawn.

136.34.17 BoundsChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

136.34.18 Close

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

136.34.19 Closing

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

136.34.20 CocoaMouseDown(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes: This is called before MouseDown, but provides the original Cocoa event, so you can query additional properties.

136.34.21 CocoaMouseDrag(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes: This is called before MouseDrag, but provides the original Cocoa event, so you can query additional properties.

136.34.22 CocoaMouseUp(e as NSEventMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: This is called before MouseUp, but provides the original Cocoa event, so you can query additional properties.

136.34.23 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS MacControls Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

136.34.24 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

136.34.25 EnableMenuItems

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

136.34.26 FocusLost

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

136.34.27 FocusReceived

Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

136.34.28 FrameChanged

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

136.34.29 GotFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes: This only fires if the control itself got focus and not a sub control.

136.34.30 LostFocus

MBS MacControls Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes: This only fires if the control itself lost focus and not a sub control.

136.34.31 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

136.34.32 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

136.34.33 MouseDrag(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

136.34.34 MouseUp(x as Integer, y as Integer)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

136.34.35 Open

MBS MacControls Plugin, Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

136.34.36 Opening

Plugin Version: 13.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

136.34.37 OpenPDFforRemoteGoToAction(action as PDFActionRemoteGoToMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Opens a specified page.
Notes: This event will be called to handle clicks on annotations containing a PDFActionRemoteGoToMBS action. The action contains a URL and a page index and point. You should open the PDF indicated by the URL and go to the page and point indicated. The easiest way to do the latter is to create a PDFDestinationMBS with the page index and point once a PDFDocumentMBS from the URL is created - then you can call: goToDestination method. The default implementation simply beeps.

136.34.38 PerformFind

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Performs a find operation.
Notes:

Certain PDFAction's may request that the PDF viewer application perform a Find.
The event will be called when the user clicks on an annotation with such an action.

136.34.39 PerformGoToPage

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Performs a go-to operation.
Notes: Certain PDFAction's may request that the PDF viewer application bring up a panel allowing the user to enter a specific page number. The event will be called when the user clicks on an annotation with such an action.

136.34.40 PerformPrint

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Prints the current document.
Notes: Certain PDFAction's may request that the PDF viewer application Print the current document. This event will be called when the user clicks on an annotation with such an action.

136.34.41 PrintJobTitle as String

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Overrides the job title used when the PDFView is printed.
Notes: Allows to override the job title when PDFView is printed. The default implementation uses the string, if any, associated with the "Title" key from the view's PDFDocumentMBS attribute dictionary. Failing that, it uses the last path component if the PDFDocumentMBS is URL-based.

136.34.42 ScaleFactorChanged(NewFactor as Double)

MBS MacControls Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

136.34.43 WillChangeScaleFactor(scale as Double) as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Overrides changes to the scale factor.
Notes:

Allows to override changes to the scale factor. The default implementation pins scaling between 0.1 and 10.0.

If you add this event, please return a value, e.g. the passed scale value.

136.34.44 WillClickOnLink(URL as String)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: .

Function: Handle clicks on URL links in a view.
Notes:

If implemented, this event will be called to handle clicks on URL links within the PDFView.
The default implementation calls openURL on NSWorkspaceMBS class.

136.35 class PDFViewMBS

136.35.1 class PDFViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: A PDFView object encapsulates the functionality of PDF Kit into a single widget that you can add to your application.
Notes:

PDFView may be the only class you need to deal with for adding PDF functionality to your application. It lets you display PDF data and allows users to select content, navigate through a document, set zoom level, and copy textual content to the Pasteboard. PDFView also keeps track of page history.

You can subclass PDFView to create a custom PDF viewer or better use our CustomPDFViewMBS class.

You can also create a custom PDF viewer by using the PDF Kit utility classes directly and not using PDFView at all.

You can embed this view in a CustomNSViewMBS to get more events for mouse and keyboard.
Subclass of the NSViewMBS class.

- MBS REALbasic Plugins, version 10.3pr8
- MBS REALbasic Plugins, version 10.3pr4

136.35.4 Methods

136.35.5 annotationsChangedOnPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Tells the PDF view that an annotation on the specified page has changed.
Notes:

When the PDFView object receives this message, it rescans for tool tips and pop-ups and informs the PDFThumbailView objects so the thumbnail images can be redrawn.
Available in Mac OS X v10.5 and later.

136.35.6 areaOfInterestForMouse(e as NSEventMBS) as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the type of area the mouse cursor is over.
Notes: The PDFAreaOfInterest enumeration defines the various area types. This method is for custom subclasses of the PDFView class. Use it if you override the NSResponder class's mouseMoved: method or related methods.

136.35.7 areaOfInterestForPoint(p as NSPointMBS) as integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Returns type of area (see defines above) mouse is over.

136.35.8 clearSelection

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Clears the selection.
Notes: The view redraws as necessary but does not scroll. This call is equivalent to setting CurrentSelection=nil.

136.35.9 Constructor

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new PDF view with size 100/100 and position 0/0
Example:

```
dim t as new PDFViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 136.35.10 Constructor(Handle as Integer) 21890
- 136.35.11 Constructor(left as Double, top as Double, width as Double, height as Double) 21890

136.35.10 Constructor(Handle as Integer)

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Creates an object based on the given PDFView handle.
Example:

```
dim t as new PDFViewMBS(0, 0, 100, 100)
dim v as new PDFViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a NSButton and the plugin retains this handle.
See also:

- 136.35.9 Constructor 21889
- 136.35.11 Constructor(left as Double, top as Double, width as Double, height as Double) 21890

136.35.11 Constructor(left as Double, top as Double, width as Double, height as Double)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Creates a new PDF view with the given size and position.
Example:

```
dim x as new PDFViewMBS(0, 0, 100, 100)
```

Notes: On success the handle property is not zero.
See also:

- 136.35.9 Constructor 21889
- 136.35.10 Constructor(Handle as Integer) 21890

136.35.12 convertPointFromPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Converts a point from page space to view space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

136.35.13 convertPointToPage(point as NSPointMBS, page as PDFPageMBS) as NSPointMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Converts a point from view space to page space.
Example:

```
// convert point from mouse event to page coordinates
Function MouseDown(x as Integer, y as Integer, Modifiers as Integer) Handles MouseDown as Boolean
Dim a As NSApplicationMBS = NSApplicationMBS.sharedApplication
Dim n As NSEventMBS = a.currentEvent
Dim v As PDFViewMBS = Me.View
Dim w As NSWindowMBS = Self.NSWindowMBS
Dim p As NSPointMBS = n.locationInWindow

System.DebugLog "p: "+str(p.x)+"/"+str(p.y)

Dim doc As PDFDocumentMBS = v.document
Dim page As PDFPageMBS = doc.pageAtIndex(0)
Dim r As NSPointMBS = v.convertPointFromView(p, Nil)

System.DebugLog "r: "+Str(r.x)+"/"+Str(r.y)

Dim d As NSPointMBS = v.convertPointToPage(r, page)

System.DebugLog "d: "+Str(d.x)+"/"+Str(d.y)
End Function
```

Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

136.35.14 convertRectFromPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Converts a rectangle from page space to view space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

136.35.15 convertRectToPage(rect as NSRectMBS, page as PDFPageMBS) as NSRectMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Converts a rectangle from view space to page space.
Notes: Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page. View space is a coordinate system with the origin at the lower-left corner of the current PDF view.

136.35.16 copy

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Copies the text in the selection, if any, to the Pasteboard.

136.35.17 drawPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: For use by subclasses of PDFView for custom rendering of pages.
Notes:

Do not invoke this method, except by invoking it on super from a subclass.

The PDFView class calls drawPage: as necessary for each visible page that requires rendering. In the PDFView class, this method erases page to white, calls page.drawInRect(pageRect,self.displayBox), and then draws the selection, if any.

You can override this method to draw on top of a PDF page or to control how pages are drawn. In these cases, invoke this method on super and then perform custom drawing on top of the PDF page.

136.35.18 drawPagePost(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: For use by subclasses of PDFView for post-page rendering.
Notes:

The default implementation of this method draws the text highlighting (if any) for the page. This method does not apply scaling or rotating to the current context to map to page space; instead, the context is in view-space coordinates (in which the origin is at the lower-left corner of the current PDF view).
Available in Mac OS X v10.5 and later.

136.35.19 goBack

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates back one step in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

136.35.20 goForward

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates forward one step in the page history.
Notes: The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.

136.35.21 goToDestination(page as PDFDestinationMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates to the specified destination.
Notes:

Destinations include a page and a point on the page specified in page space.
Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.

136.35.22 goToFirstPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates to the first page of the document.
Notes: PDF Kit records the move in its page history.

136.35.23 goToLastPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates to the last page of the document.
Notes: PDF Kit records the move in its page history.

136.35.24 goToNextPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates to the next page of the document.
Notes: PDF Kit records the move in its page history.

136.35.25 goToPage(page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Scrolls to the specified page.
Notes: PDF Kit records the move in its page history.

136.35.26 goToPreviousPage

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates to the previous page of the document.
Notes: PDF Kit records the move in its page history.

136.35.27 goToRect(rect as NSRectMBS, page as PDFPageMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Navigates to the specified rectangle on the specified page.
Notes:

If the specified rectangle is already visible, this method does nothing. This allows you to scroll the PDFView object to a specific PDFAnnotation or PDFSelection object, because both of these objects have bounds

methods that return an annotation or selection position in page space.

Note that rect is specified in page-space coordinates. Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
Available in Mac OS X v10.5 and later.

136.35.28 goToSelection(page as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Scrolls to the first character of the specified selection.
Notes: PDF Kit records the move in its page history.

136.35.29 highlightedSelections as PDFSelectionMBS()

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Queries highlighted selections.
Notes: Unlike the user selection (above), these selections do not go away when the user clicks in the PDFView, etc. You must explicitly remove them by passing nil to setHighlightedSelections. These methods allow you to highlight text perhaps to indicate matches from a text search. To avoid confusion you should probably make sure the PDFSelectionMBS passed in are a different color from the user's default text selection color. Commonly used for highlighting search results.

136.35.30 layoutDocumentView

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Performs layout of the inner views.
Notes:

The PDFView actually contains several subviews, such as the document view (where the PDF is actually drawn) and a "matte view" (which may appear as a gray area around the PDF content, depending on the scaling). Changes to the PDF content may require changes to these inner views, so you must call this method explicitly if you use PDF Kit utility classes to add or remove a page, rotate a page, or perform other operations affecting visible layout.

This method is called automatically from PDFView methods that affect the visible layout (such as setDocument, setDisplayBox or zoomIn).

136.35.31 pageForPoint(point as NSPointMBS, nearest as boolean) as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Returns the page containing a point specified in view coordinates.
Notes: Returns nil if there's no page at the specified point and nearest is set to false.

136.35.32 PDFViewAnnotationHitNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes:

Posted when the user clicks on an annotation.

Use the "PDFAnnotationHit" key to obtain userinfo of type PDFAnnotation.

136.35.33 PDFViewAnnotationWillHitNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes:

Posted before the user clicks an annotation.
Available in Mac OS X v10.5 and later.

136.35.34 PDFViewChangedHistoryNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes: Posted when the page history changes.

136.35.35 PDFViewCopyPermissionNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes: Posted when the user attempts to copy to the pasteboard without the appropriate permissions.

136.35.36 PDFViewDisplayBoxChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes:

Posted when the display box has changed.
Available in Mac OS X v10.5 and later.

136.35.37 PDFViewDisplayModeChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes:

Posted when the display mode has changed.
Available in Mac OS X v10.5 and later.

136.35.38 PDFViewDocumentChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes: Posted when a new document is associated with the view.

136.35.39 PDFViewPageChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes: Posted when a new page becomes the current page.

136.35.40 PDFViewPrintPermissionNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes: Posted when the user attempts to print without the appropriate permissions.

136.35.41 PDFViewScaleChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes: Posted when the scale factor changes.

136.35.42 PDFViewSelectionChangedNotification as string

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: One of the notification names used with the PDF view.
Notes:

Posted when the current selection has changed.
Available in Mac OS X v10.5 and later.

136.35.43 PDFViewVisiblePagesChangedNotification as string

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Notification when the scroll view has scrolled into the bounds of a new page.

136.35.44 performAction(action as PDFActionMBS)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Performs the specified action.
Notes: Available in Mac OS X v10.5 and later.

136.35.45 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Print the PDF document.
Notes: If autoRotate is true, will ignore the orientation attribute in printInfo and rather choose the orien-

tation on a page by page basis that best fits the page to the paper size.
See also:

- 136.35.46 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean, pageScaling as Integer) 21899

136.35.46 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean, pageScaling as Integer)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Like the above method but allows an additional parameter to describe page scaling (see PDFDocument.h for types).
Notes: If pageScaling is equal to kPDFPrintPageScaleToFit each page is scaled up or down in order to best fit the paper size. Specifying kPDFPrintPageScaleDownToFit for pageScaling will only scale large pages down to fit the paper, smaller pages will not be scaled up. Passing pageScaling equal to kPDFPrintPageScaleNone is the equivalent of calling printWithInfo above.
See also:

- 136.35.45 printWithInfo(printInfo as NSRectMBS, autoRotate as Boolean) 21898

136.35.47 rowSizeForPage(page as PDFPageMBS) as NSSizeMBS

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Returns the size needed to display a row of the current document page.
Notes: The size is dependent on the current scale factor and display attributes.

136.35.48 scrollSelectionToVisible

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Scrolls the view until the selection is visible.

136.35.49 selectAll

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Selects all text in the document.

136.35.50 setCurrentSelection(selection as PDFSelectionMBS, animate as boolean)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Sets the selection, in an animated way, if desired.
Notes:

This method behaves as setCurrentSelection, but with the addition of animation, if animate is true. The animation serves to draw the user's attention to the new selection, which can be useful when implementing search.
Available in Mac OS X v10.5 and later.

136.35.51 setCursorForAreaOfInterest(area as Integer)

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Sets the type of mouse cursor according to the type of area the mouse cursor is over.
Notes: This method is especially useful for custom subclasses of the PDFView class.

136.35.52 setHighlightedSelections(selections() as PDFSelectionMBS)

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Sets highlighted selections.
Notes: Unlike the user selection (above), these selections do not go away when the user clicks in the PDFView, etc. You must explicitly remove them by passing nil to setHighlightedSelections. These methods allow you to highlight text perhaps to indicate matches from a text search. To avoid confusion you should probably make sure the PDFSelectionMBS passed in are a different color from the user's default text selection color. Commonly used for highlighting search results.

136.35.53 visiblePages as PDFPageMBS()

MBS MacControls Plugin, Plugin Version: 10.3, Platform: macOS, Targets: Desktop only.

Function: Returns an array of PDFPageMBS objects that represent the currently visible pages.
Notes: Available in Mac OS X v10.5 and later.

136.35.54 zoomIn

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Zooms in by increasing the scaling factor.
Notes:

Each invocation of zoomIn muliplies the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

136.35.55 zoomOut

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Zooms out by decreasing the scaling factor.
Notes:

Each invocation of zoomOut divides the scaling factor by the square root of 2.
Available in Mac OS X v10.4 and later.

136.35.56 Properties

136.35.57 acceptsDraggedFiles as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Indicate whether dragging a file into PDFView is allowed.
Notes:

If false (default), dragging events are not supported.
If true, a user can drag and drop a PDF file into the view and have it loaded & set as the visible document (the old document is released).

Available in macOS 10.13 or newer.
(Read and Write property)

136.35.58 allowsDragging as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Determines whether the view can accept new PDF documents dragged into it by the user.
Notes: (Read and Write property)

136.35.59 autoScales as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether autoscaling is set.
Notes: (Read and Write property)

136.35.60 backgroundColor as NSColorMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the view's background color.
Notes:

A view's background is the area displayed to either side of a PDF document's pages. The background also appears between pages when page breaks are enabled. The default color is a 50% gray.
(Read and Write property)

136.35.61 canGoBack as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can navigate to the previous page in the page history.
Notes:

The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.
(Read only property)

136.35.62 canGoForward as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can navigate to the next page in the page history.
Notes:

The page history gets built as your application calls navigation methods such as goToDestination and goToLastPage.
(Read only property)

136.35.63 canGoToFirstPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can navigate to the first page of the document.
Notes:

The return value will be true unless the view is already displaying the first page.
(Read only property)

136.35.64 canGoToLastPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can navigate to the last page of the document.
Notes:

The return value will be true unless the view is already displaying the last page.
(Read only property)

136.35.65 canGoToNextPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can navigate to the next page of the document.
Notes:

The return value will be true unless the view is displaying the last page.
(Read only property)

136.35.66 canGoToPreviousPage as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can navigate to the previous page of the document.
Notes:

The return value will be true unless the view is displaying the first page.
(Read only property)

136.35.67 canZoomIn as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can magnify the view—that is, zoom in.
Notes: (Read only property)

136.35.68 canZoomOut as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a Boolean value indicating whether the user can view an expanded area—that is, zoom out.
Notes: (Read only property)

136.35.69 currentDestination as PDFDestinationMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns a PDFDestination object representing the current page and the current point in the view specified in page space.
Notes:

Page space is a 72 dpi coordinate system with the origin at the lower-left corner of the current page.
(Read only property)

136.35.70 currentPage as PDFPageMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the current page.
Notes:

When there are two pages in the view in a two-up mode, "current page" is the left page. For continuous modes, returns the page crossing a horizontal line halfway between the view's top and bottom bounds.
(Read only property)

136.35.71 currentSelection as PDFSelectionMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the current selection.
Example:

```
dim MyPDFView as PDFViewMBS // your view

dim doc as PDFDocumentMBS = MyPDFView.document
dim page as PDFPageMBS = doc.pageAtIndex(0)
dim sel as PDFSelectionMBS = page.selectionForRange(0,5)
MyPDFView.currentSelection = sel
```

Notes:

Returns NULL if no selection exists.

Note that this method returns the actual instance of the current PDFSelectionMBS object. Therefore, if you want to modify it, you should make a copy of the returned selection and modify that, instead.
(Read and Write property)

136.35.72 displayBox as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The current style of display box.
Notes:

The available values for display boxes are defined in the Constants section in the PDFPageMBS class.
(Read and Write property)

136.35.73 displayDirection as Integer

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Set the layout direction, either vertical or horizontal, for the given display mode.
Notes:

Defaults to vertical layout (kPDFDisplayDirectionVertical).
Available in macOS 10.13 or newer.
(Read and Write property)

136.35.74 displayMode as Integer

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The current display mode.
Notes:

Value can be kPDFDisplaySinglePage, kPDFDisplaySinglePageContinuous, kPDFDisplayTwoUp and kPDFDisplayTwoUpContinuous.
(Read and Write property)

136.35.75 displaysAsBook as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view will display the first page as a book cover (meaningful only when the document is in two-up or two-up continuous display mode).
Notes: (Read and Write property)

136.35.76 displaysPageBreaks as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view is displaying page breaks.
Notes: (Read and Write property)

136.35.77 displaysRTL as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Specifies presentation of pages from right-to-left.
Notes:

Defaults to false.
(Read and Write property)

136.35.78 document as PDFDocumentMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the document associated with a PDFView object.
Notes: (Read and Write property)

136.35.79 documentView as NSViewMBS

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Returns the innermost view used by PDFView or by your PDFView subclass.
Notes:

The innermost view is the one displaying the visible document pages. This method is useful when converting coordinates from one view to another.
(Read only property)

136.35.80 enableDataDetectors as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether data detection is enabled.
Notes:

If enabled, page text will be scanned for URL's as the page becomes visible. Where
// URL's are found, Link annotations are created in place. These are temporary annotations and are not saved.

Requires Mac OS X 10.6.
(Read and Write property)

136.35.81 greekingThreshold as Double

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The greeking threshold to use for displaying text.
Notes:

The default threshold is 3.0.
(Read and Write property)

136.35.82 interpolationQuality as Integer

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The interpolation quality for images drawn into the PDFView context.
Notes:

Available in Mac OS X 10.7 or later.
(Read and Write property)

136.35.83 maxScaleFactor as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Set the maximum scaling factor for the PDF document.
Notes:

Assigning this value will implicitly turn off autoScales, and allows scaleFactor to vary between these min / max scale factors
Available in macOS 10.13 or newer.
(Read and Write property)

136.35.84 minScaleFactor as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Set the minimum scaling factor for the PDF document.
Notes:

Assigning this value will implicitly turn off autoScales, and allows scaleFactor to vary between these min / max scale factors
Available in macOS 10.13 or newer.
(Read and Write property)

136.35.85 pageBreakMargins as NSEdgeInsetsMBS

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: The page break margins.
Notes:

If displaysPageBreaks is enabled, you may customize the spacing between pages by defining margins for the top, bottom, left, and right of each page. Note that pageBreakMargins only allows positive values and will clamp any negative value to 0.0. By default, if displaysPageBreaks is enabled, pageBreakMargins is { 4.75, 4.0, 4.75, 4.0 } (with respect to top, left, bottom, right), otherwise it is { 0.0, 0.0, 0.0, 0.0 }
(Read and Write property)

136.35.86 pageShadowsEnabled as Boolean

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Specifies if shadows should be drawn around page borders in a PDFView.
Notes:

Defaults to true.
Available in macOS 10.14 or newer.
(Read and Write property)

136.35.87 scaleFactor as Double

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: The scale factor for the view.
Notes:

The default value is 1.0, corresponding to actual size.
(Read and Write property)

136.35.88 scaleFactorForSizeToFit as Double

MBS MacControls Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Regardless of current autoScales mode, this returns the "size to fit" scale factor that autoScales would use for scaling the current document and layout.
Notes:

For continuous modes this is a "fit width" scale, for non-continuous modes it is a "best fit" scale.
Available in macOS 10.13 or newer.
(Read only property)

136.35.89 shouldAntiAlias as Boolean

MBS MacControls Plugin, Plugin Version: 9.6, Platform: macOS, Targets: Desktop only.

Function: Whether to use anti-aliasing in the view.
Notes: (Read and Write property)

136.35.90 Constants

136.35.91 kPDFAnnotationArea = 4

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over an annotation.

136.35.92 kPDFControlArea = 16

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a control.

136.35.93 kPDFDisplayDirectionHorizontal = 1

MBS MacControls Plugin, Plugin Version: 21.1.

Function: One of the display direction constants.
Notes: Horizontal

136.35.94 kPDFDisplayDirectionVertical = 0

MBS MacControls Plugin, Plugin Version: 21.1.

Function: One of the display direction constants.
Notes: Vertical

136.35.95 kPDFDisplaySinglePage = 0

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the PDF view display mode constants.
Notes: The document displays one page at a time horizontally and vertically. Vertical and horizontal scrolling apply only to the current page.

136.35.96 kPDFDisplaySinglePageContinuous = 1

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the PDF view display mode constants.
Notes: he document displays in continuous mode vertically, with single-page width horizontally. Vertical scrolling applies to the entire document.

136.35.97 kPDFDisplayTwoUp = 2

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the PDF view display mode constants.
Notes: The document displays two pages side-by-side. Vertical and horizontal scrolling apply only to the pair of displayed pages.

136.35.98 kPDFDisplayTwoUpContinuous = 3

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the PDF view display mode constants.
Notes: The document displays in continuous mode vertically and displays two pages side-by-side horizontally. Vertical scrolling applies to the entire document.

136.35.99 kPDFIconArea = 64

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes:

The mouse is over an icon.
Available in Mac OS X v10.5 and later.

136.35.100 kPDFImageArea = 256

MBS MacControls Plugin, Plugin Version: 21.1.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: Over an image.

136.35.101 kPDFInterpolationQualityHigh = 2

MBS MacControls Plugin, Plugin Version: 11.2.

Function: One of the interpolation quality constants.
Notes: high

136.35.102 kPDFInterpolationQualityLow = 1

MBS MacControls Plugin, Plugin Version: 11.2.

Function: One of the interpolation quality constants.
Notes: low

136.35.103 kPDFInterpolationQualityNone = 0

MBS MacControls Plugin, Plugin Version: 11.2.

Function: One of the interpolation quality constants.

136.35.104 kPDFLinkArea = 8

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a link.

136.35.105 kPDFNoArea = 0

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over an undefined area.

136.35.106 kPDFPageArea = 1

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a page.

136.35.107 kPDFPopupArea = 128

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a popup menu.

136.35.108 kPDFTextArea = 2

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over text.

136.35.109 kPDFTextFieldArea = 32

MBS MacControls Plugin, Plugin Version: 9.6.

Function: One of the constants to apply mouse position over PDF view areas.
Notes: The mouse is over a text field.

Chapter 137

Phidgets

137.1 class OldPhidgetAccelerometerMBS

137.1.1 class OldPhidgetAccelerometerMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget accelerometer.
Notes:

The PhidgetAccelerometer is a component that provides a high-level programmer interface to control a PhidgetAccelerometer device connected through a USB port. The product is available as a dual axis or a 3-axis module. With this component, the programmer can:

- Measure up to 5 Gravity (9.8 m/s2) change per axis, depending on unit purchased.
- Measures both dynamic acceleration (e.g., vibration) and static acceleration (e.g., gravity or tilt) on 2 or 3 axis.

Subclass of the OldPhidgetMBS class.

137.1.2 Methods

137.1.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

137.1.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last acceleration value received from the PhidgetAccelerometer for a particular axis.
Notes: Lasterror is set.

137.1.5 getAccelerationChangeTrigger(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an OnAccelerationChange event is fired.
Notes: Lasterror is set.

137.1.6 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum accleration supported by an axis.
Notes: The Lasterror property is set.

137.1.7 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleraiton supported by an axis.
Notes: The Lasterror property is set.

137.1.8 getAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of acceleration axes supported by this accelerometer.
Notes: The Lasterror property is set.

137.1.9 setAccelerationChangeTrigger(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an AccelerationChange event is fired.
Notes:

If the AccelerationChangeTrigger is set to 0, an event will be triggered for every measurement of acceleration taken.

Lasterror is set.

137.1.10 Events

137.1.11 AccelerationChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for each change on the Acceleration.
Notes:

Index: Index of the Accelerometer posting event
Value: Value of the Accelerometer

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.2 class OldPhidgetAdvancedServoMBS

137.2.1 class OldPhidgetAdvancedServoMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for a phidget advanced servo device.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

137.2.2 Methods

137.2.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

137.2.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the acceleration for the given index.
Notes: The Lasterror property is set.

137.2.5 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum acceleration supported by a motor.
Notes: The Lasterror property is set.

137.2.6 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by a motor.
Notes: The Lasterror property is set.

137.2.7 getCurrent(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current value.
Notes: The Lasterror property is set.

137.2.8 getEngaged(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the engaged state of a motor.
Notes:

This is whether the motor is powered or not.
The Lasterror property is set.

137.2.9 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

137.2.10 getPosition(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of an encoder.
Notes: The Lasterror property is set.

137.2.11 getPositionMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum position that a motor can go to.
Notes: The Lasterror property is set.

137.2.12 getPositionMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

137.2.13 getServoType(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

137.2.14 getSpeedRampingOn(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the speed ramping state for a motor.
Notes:

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

137.2.15 getStopped(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the stopped state of a motor.
Notes:

This is true when the motor is not moving and there are no outstanding commands.
The Lasterror property is set.

137.2.16 getVelocity(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current velocity.
Notes: The Lasterror property is set.

137.2.17 getVelocityLimit(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last set velocity limit for a motor.
Notes: The Lasterror property is set.

137.2.18 getVelocityMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum velocity that can be set for a motor.
Notes: The Lasterror property is set.

137.2.19 getVelocityMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum velocity that can be set for a motor.
Notes: The Lasterror property is set.

137.2.20 setAcceleration(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the acceleration.
Notes: The Lasterror property is set.

137.2.21 setEngaged(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes: The Lasterror property is set.

137.2.22 setPosition(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of a motor.
Notes: The Lasterror property is set.

137.2.23 setPositionMax(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the maximum position that a motor can go to.
Notes: The Lasterror property is set.

137.2.24 setPositionMin(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

137.2.25 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double, velocity_max as Double)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo parameters of a motor.
Notes:

The Lasterror property is set.

index	The motor index.
min_us	The minimum supported PCM in microseconds.
max_us	The maximum supported PCM in microseconds.
degrees	The degrees of rotation defined by the given PCM range.
velocity_max	The maximum velocity in degrees/second.

137.2.26 setServoType(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

137.2.27 setSpeedRampingOn(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the speed ramping state for a motor.
Notes:

This is whether or not velocity and acceleration are used.
The Lasterror property is set.

137.2.28 setVelocityLimit(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the velocity limit for a motor.
Notes: The Lasterror property is set.

137.2.29 Events

137.2.30 CurrentChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The current value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.2.31 PositionChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The position changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.2.32 VelocityChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The velocity changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems

described in the ThreadMBS class documentation.

137.2.33 Constants

137.2.34 PHIDGET_SERVO_DEFAULT = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.35 PHIDGET_SERVO_FIRGELLI_L12_100_100_06_R = 17

MBS Phidgets Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

137.2.36 PHIDGET_SERVO_FIRGELLI_L12_100_50_06_R = 16

MBS Phidgets Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

137.2.37 PHIDGET_SERVO_FIRGELLI_L12_30_50_06_R = 13

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.38 PHIDGET_SERVO_FIRGELLI_L12_50_100_06_R = 14

MBS Phidgets Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

137.2.39 PHIDGET_SERVO_FIRGELLI_L12_50_210_06_R = 15

MBS Phidgets Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

137.2.40 PHIDGET_SERVO_HITEC_805BB = 5

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.41 PHIDGET_SERVO_HITEC_815BB = 12

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.42 PHIDGET_SERVO_HITEC_HS322HD = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.43 PHIDGET_SERVO_HITEC_HS422 = 6

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.44 PHIDGET_SERVO_HITEC_HS485HB = 10

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.45 PHIDGET_SERVO_HITEC_HS5245MG = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.46 PHIDGET_SERVO_HITEC_HS645MG = 11

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.47 PHIDGET_SERVO_HITEC_HS785HB = 9

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.48 PHIDGET_SERVO_HITEC_HSR1425CR = 8

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.49 PHIDGET_SERVO_RAW_us_MODE = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.50 PHIDGET_SERVO_SPRINGRC_SM_S2313M = 18

MBS Phidgets Plugin, Plugin Version: 12.1.

Function: One of the servo type constants.

137.2.51 PHIDGET_SERVO_SPRINGRC_SM_S3317M = 19

MBS Phidgets Plugin, Plugin Version: 13.4.

Function: One of the servo type constants.

137.2.52 PHIDGET_SERVO_SPRINGRC_SM_S3317SR = 20

MBS Phidgets Plugin, Plugin Version: 13.4.

Function: One of the servo type constants.

137.2.53 PHIDGET_SERVO_SPRINGRC_SM_S4303R = 21

MBS Phidgets Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

137.2.54 PHIDGET_SERVO_SPRINGRC_SM_S4315M = 22

MBS Phidgets Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

137.2.55 PHIDGET_SERVO_SPRINGRC_SM_S4315R = 23

MBS Phidgets Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

137.2.56 PHIDGET_SERVO_SPRINGRC_SM_S4505B = 24

MBS Phidgets Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

137.2.57 PHIDGET_SERVO_TOWERPRO_MG90 = 7

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the servo type constants.

137.2.58 PHIDGET_SERVO_USER_DEFINED = 25

MBS Phidgets Plugin, Plugin Version: 20.3.

Function: One of the servo type constants.

137.3 class OldPhidgetAnalogMBS

137.3.1 class OldPhidgetAnalogMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class specific to the Phidget Analog.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

137.3.2 Methods

137.3.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new analog device instance.
Notes: Lasterror is set.

137.3.4 getEnabled(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state for an output.
Notes: Lasterror is set.

137.3.5 getOutputCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of outputs supported by this phidget analog.
Notes: Lasterror is set.

137.3.6 getVoltage(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the currently set voltage for an output, in V.
Notes: Lasterror is set.

137.3.7 getVoltageMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum settable output voltage, in V.
Notes: Lasterror is set.

137.3.8 getVoltageMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum settable output voltage, in V.
Notes: Lasterror is set.

137.3.9 setEnabled(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state for an output.
Notes: Lasterror is set.

137.3.10 setVoltage(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the voltage of an output, in V.
Notes: Lasterror is set.

137.4 class OldPhidgetBridgeMBS

137.4.1 class OldPhidgetBridgeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class specific to the Phidget Bridge.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

137.4.2 Methods

137.4.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance.
Notes: Lasterror is set.

137.4.4 getBridgeMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum value supported by a bridge input, in mV/V. This is affected by Gain.
Notes: Lasterror is set.

137.4.5 getBridgeMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum value supported by a bridge input, in mV/V. This is affected by Gain.
Notes: Lasterror is set.

137.4.6 getBridgeValue(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current value of a bridge input, in mV/V.
Notes: Lasterror is set.

137.4.7 getDataRate as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

137.4.8 getDataRateMax as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the maximum data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

137.4.9 getDataRateMin as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the minimum data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

137.4.10 getEnabled(index as Integer) as Boolean

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state for an input.
Notes: Lasterror is set.

137.4.11 getGain(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the the Gain for an input.
Notes: Lasterror is set.

137.4.12 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of inputs supported by this phidget bridge.
Notes: Lasterror is set.

137.4.13 setDataRate(milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the the data rate for the Phidget Bridge, in milliseconds.
Notes: Lasterror is set.

137.4.14 setEnabled(index as Integer, value as Boolean)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state for an input.
Notes: Lasterror is set.

137.4.15 setGain(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the the Gain for an input.
Notes: Lasterror is set.

137.4.16 Events

137.4.17 BridgeDataReceived(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The bridge data event handler.
Notes: This is called at a set rate as defined by data rate.

137.4.18 Constants

137.4.19 PHIDGET_BRIDGE_GAIN_1 = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 1.

137.4.20 PHIDGET_BRIDGE_GAIN_128 = 6

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 128.

137.4.21 PHIDGET_BRIDGE_GAIN_16 = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 16.

137.4.22 PHIDGET_BRIDGE_GAIN_32 = 4

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 32.

137.4.23 PHIDGET_BRIDGE_GAIN_64 = 5

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 64.

137.4.24 PHIDGET_BRIDGE_GAIN_8 = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Gain of 8.

137.4.25 PHIDGET_BRIDGE_GAIN_UNKNOWN = 7

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the gain constants.
Notes: Unknown Gain.

137.5 class OldPhidgetDictionaryMBS

137.5.1 class OldPhidgetDictionaryMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget Dictionary is a service provided by the Phidget Webservice.
Notes:

The Webservice maintains a centralized dictionary of key-value pairs that can be accessed and changed from any number of clients through the CPhidgetDictionary interface available in phidget21.

Note that the Webservice uses this dictionary to control access to Phidgets through the openRemote and openRemoteIP interfaces, and as such, you should never add or modify a key that starts with /PSK/ or /PCK/, unless you want to explicitly modify Phidget specific data – and this is highly discouraged, as it's very easy to break things. Listening to these keys is fine if so desired.

The intended use for the dictionary is as a central repository for communication and persistent storage of data between several client applications. As an example - a higher level interface exposed by one application – which controls the Phidgets, for others to access – rather then every client talking directly to the Phidgets themselves.

The dictionary makes use of extended regular expressions for key matching. See the end of this document for the rules of regular expressions.

See the Phidget manuals for help on regular expressions.

137.5.2 Methods

137.5.3 addKey(key as string, value as string, persistent as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new key to the Dictionary, or modifies the value of an existing key.
Notes:

The key can only contain numbers, letters, '/', '.', '-', '_', and must begin with a letter, '_' or '/'.
The value can contain any value.
The persistent value controls whether a key will stay in the dictionary after the client that created it disconnects. If persistent == 0, the key is removed when the connection closes. Otherwise the key remains in the dictionary until it is explicitly removed.

Lasterror is set.

137.5.4 Close

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the file handles for this device.
Notes:

You should always call this when finished with a Dictionary.
Lasterror is set.

137.5.5 Constructor

MBS Phidgets Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A dummy constructor doing nothing.
See also:

- 137.5.6 Constructor(pattern as string) 21938

137.5.6 Constructor(pattern as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
Pattern is a regular expression that matches the keys you want to listen for in the keychange event.
See also:

- 137.5.5 Constructor 21938

137.5.7 GetDeviceStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

137.5.8 getServerAddress(byref port as Integer) as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the address and port.
Notes: The Lasterror property is set.

137.5.9 getServerID as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the server ID.
Notes: The Lasterror property is set.

137.5.10 GetServerStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

137.5.11 openRemote(serverID as string, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: The Lasterror property is set.

137.5.12 openRemoteIP(addr as string, port as Integer, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a connection to a remote Phidget Dictionary.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code.

If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.

Lasterror is set.

137.5.13 removeKey(pattern as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a key, or set of keys, from the Dictionary.
Notes:

The key name is a regular expressions pattern, and so care must be taken to only have it match the specific keys you want to remove.
Lasterror is set.

137.5.14 Properties

137.5.15 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal used CPhidgetDictionaryHandle.
Notes: (Read and Write property)

137.5.16 Lasterror as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

137.5.17 Events

137.5.18 Error(errorCode as Integer, errorDescription as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This error event is used for reporting asynchronous errors – mostly related to opening remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.5.19 KeyChanged(key as string, value as string, reason as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: These event will be called on key add, remove, and change.
Notes:

The Lasterror property is set.
It will also fire once to give an initial key value as soon as it is registered, if the key already exists.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

Reason values:

PHIDGET_DICTIONARY_VALUE_CHANGED	1
PHIDGET_DICTIONARY_ENTRY_ADDED	2
PHIDGET_DICTIONARY_ENTRY_REMOVING	3
PHIDGET_DICTIONARY_CURRENT_VALUE	4

137.5.20 ServerConnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.5.21 ServerDisconnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.6 class OldPhidgetEncoderMBS

137.6.1 class OldPhidgetEncoderMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget encoder device.
Notes:

The PhidgetEncoder is a component that provides a high-level programmer interface to control a PhidgetEncoder device connected through a USB port.
With this component, the programmer can:

- Detect changes in position of incremental and absolute encoders.
- Easily track the changes with respect to time.

Subclass of the OldPhidgetMBS class.

137.6.2 Methods

137.6.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

137.6.4 getEnabled(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state of an encoder. This is whether the encoder is powered or not.
Notes: The Lasterror property is set.

137.6.5 getEncoderCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of encoder inputs supported by this board.
Notes: The Lasterror property is set.

137.6.6 getIndexPosition(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries index position.
Notes:

Gets the position of the last index pulse, as referenced to getPosition.
This will return EPHIDGET_UNKNOWN if there hasn't been an index event, or if the encoder doesn't support index.

The Lasterror property is set.

137.6.7 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

137.6.8 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

137.6.9 getPosition(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of an encoder.
Notes: The Lasterror property is set.

137.6.10 setEnabled(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state of an encoder. This is whether the encoder is powered or not.
Notes: The Lasterror property is set.

137.6.11 setPosition(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of an encoder.
Notes: The Lasterror property is set.

137.6.12 Events

137.6.13 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event for a change in the input.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.6.14 PositionChanged(index as Integer, position as Integer, time as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for every position change.
Notes:

Index: Index of the Encoder firing the Event
Position: Position of the Encoder
Time: Time of change

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.7 class OldPhidgetFrequencyCounterMBS

137.7.1 class OldPhidgetFrequencyCounterMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class specific to the Phidget Frequency Counter.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

137.7.2 Methods

137.7.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a new instance.
Notes: Lasterror is set.

137.7.4 getEnabled(index as Integer) as Boolean

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the enabled state for an input.
Notes: Lasterror is set.

137.7.5 getFilter(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the filter type for an input.
Notes: Lasterror is set.

137.7.6 getFrequency(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the measured frequency of an input, in Hz.
Notes: Lasterror is set.

137.7.7 getFrequencyInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of inputs supported by this phidget frequency counter.
Notes: Lasterror is set.

137.7.8 getTimeout(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the timeout value for an input, in microseconds. This controls the lowest measurable frequency.
Notes: Lasterror is set.

137.7.9 getTotalCount(index as Integer) as Int64

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the total number of ticks that have happened since the last reset on this input.
Notes: Lasterror is set.

137.7.10 getTotalTime(index as Integer) as Int64

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the total time that has passed since the last reset on this input, in microseconds.
Notes: Lasterror is set.

137.7.11 reset(index as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets total count and total time for an input.
Notes: Lasterror is set.

137.7.12 setEnabled(index as Integer, value as Boolean)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the enabled state for an input.
Notes: Lasterror is set.

137.7.13 setFilter(index as Integer, filter as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the filter type for an input.
Notes: Lasterror is set.

137.7.14 setTimeout(index as Integer, filter as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the timeout value for an input, in microseconds.
Notes: Lasterror is set.

137.7.15 Events

137.7.16 Counted(index as Integer, time as Integer, counts as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when ticks have been counted on an input, or when the timeout has passed.

137.7.17 Constants

137.7.18 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_LOGIC_LEVEL = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the Filter Type Constants.
Notes: Logic level signal filter.

137.7.19 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_UNKNOWN = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the Filter Type Constants.
Notes: Filter type unknown.

137.7.20 PHIDGET_FREQUENCYCOUNTER_FILTERTYPE_ZERO_CROSSING = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the Filter Type Constants.
Notes: Zero crossing signal filter.

137.8 class OldPhidgetGPGGAMBS

137.8.1 class OldPhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a NMEA GGA Sentence.

137.8.2 Properties

137.8.3 altitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The altitude value.
Notes: (Read only property)

137.8.4 fixQuality as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fix Quality.
Notes: (Read and Write property)

137.8.5 heightOfGeoid as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of GEO ID.
Notes: (Read only property)

137.8.6 horizontalDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The horizontal dilution.
Notes: (Read only property)

137.8.7 latitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The latitude value.
Notes: (Read only property)

137.8.8 longitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The longitude value.
Notes: (Read only property)

137.8.9 numSatellites as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of satellites.
Notes: (Read and Write property)

137.8.10 time as OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read and Write property)

137.9 class OldPhidgetGPGSAMBS

137.9.1 class OldPhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The NMEA GSA Sentence class.

137.9.2 Methods

137.9.3 satUsed(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: IDs of used sats in no real order, 0 means nothing.

137.9.4 Properties

137.9.5 fixType as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The fix type.
Notes: (Read and Write property)

137.9.6 horizDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Horizontal dilution.
Notes: (Read only property)

137.9.7 mode as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode.
Notes: (Read and Write property)

137.9.8 posnDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Position dilution.
Notes: (Read only property)

137.9.9 vertDilution as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Vertical dilution.
Notes: (Read only property)

137.9.10 Constants

137.9.11 kFixType2D = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the Fix Type values.
Notes: 2D

137.9.12 kFixType3D = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the Fix Type values.
Notes: 3D

137.9.13 kFixTypeNo = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the Fix Type values.
Notes: no fix.

137.9.14 kModeAuto = 65

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the mode constants.
Notes: Auto

137.9.15 kModeForced = 77

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the mode constants.
Notes: Forced

137.10 class OldPhidgetGPGSVMBS

137.10.1 class OldPhidgetGPGSVMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The NMEA GSV Sentence class.

137.10.2 Methods

137.10.3 satInfo(index as Integer) as OldPhidgetGPSSatInfoMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query the satellite information with the given index.
Notes: Index from 0 to 11.

137.10.4 Properties

137.10.5 satsInView as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of satellites in view.
Notes: (Read and Write property)

137.11 class OldPhidgetGPRMCMBS

137.11.1 class OldPhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for NMEA RMC Sentence

137.11.2 Properties

137.11.3 date as OldPhidgetGPSDateMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The date value.
Notes: (Read and Write property)

137.11.4 heading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The heading value.
Notes: (Read only property)

137.11.5 latitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The latitude value.
Notes: (Read only property)

137.11.6 longitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The longitude value.
Notes: (Read only property)

137.11.7 magneticVariation as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The magnetic variation.
Notes: (Read only property)

137.11.8 mode as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode value.
Notes: (Read and Write property)

137.11.9 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed in knots.
Notes: (Read only property)

137.11.10 status as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The status value.
Notes: (Read and Write property)

137.11.11 time as OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The time value.
Notes: (Read and Write property)

137.12 class OldPhidgetGPSDateMBS

137.12.1 class OldPhidgetGPSDateMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS Date in UTC.

137.12.2 Properties

137.12.3 Day as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Day of the month (1-31).
Notes: (Read and Write property)

137.12.4 Month as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Month (1-12).
Notes: (Read and Write property)

137.12.5 Year as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Year.
Notes: (Read and Write property)

137.13 class OldPhidgetGPSMBS

137.13.1 class OldPhidgetGPSMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class specific to the Phidget GPS.
Notes:

See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

137.13.2 Methods

137.13.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates an GPS instance.
Notes: Lasterror is set.

137.13.4 getAltitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current altitude, in meters.
Notes: Lasterror is set.

137.13.5 getDate as OldPhidgetGPSDateMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current GPS date, in UTC
Notes: Lasterror is set.

137.13.6 getHeading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current heading, in degrees.
Notes: Lasterror is set.

137.13.7 getLatitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current latitude.
Notes: Lasterror is set.

137.13.8 getLongitude as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current longitude.
Notes: Lasterror is set.

137.13.9 getNMEAData as OldPhidgetNMEADataMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets Raw NMEA Data.
Notes: Lasterror is set.

137.13.10 getPositionFixStatus as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the position fix status.
Notes: Lasterror is set.

137.13.11 getTime as OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current GPS time, in UTC.
Notes: Lasterror is set.

137.13.12 getVelocity as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current velocity, in km/h.
Notes: Lasterror is set.

137.13.13 Events

137.13.14 PositionChanged(latitude as Double, longitude as Double, altitude as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The position change event.
Notes: Called when any of latitude, longitude, or altitude change.

137.13.15 PositionFixStatusChanged(status as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The position fix status change event.
Notes: Called when a position fix is aquired or lost.

137.14 class OldPhidgetGPSSatInfoMBS

137.14.1 class OldPhidgetGPSSatInfoMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for Satellite info - used in GSV sentence.

137.14.2 Properties

137.14.3 Azimuth as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The azimuth value.
Notes: (Read and Write property)

137.14.4 Elevation as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The elevation value.
Notes: (Read and Write property)

137.14.5 ID as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID.
Notes: (Read and Write property)

137.14.6 SNR as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number.
Notes: (Read and Write property)

137.15 class OldPhidgetGPSTimeMBS

137.15.1 class OldPhidgetGPSTimeMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS Time in UTC.

137.15.2 Properties

137.15.3 Hour as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hour value.
Notes: (Read and Write property)

137.15.4 Millisecond as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Milliseconds value.
Notes: (Read and Write property)

137.15.5 Minute as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minutes value.
Notes: (Read and Write property)

137.15.6 Second as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The seconds value.
Notes: (Read and Write property)

137.16 class OldPhidgetGPVTGMBS

137.16.1 class OldPhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for a NMEA VTG Sentence.

137.16.2 Properties

137.16.3 magneticHeading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The magnetic heading.
Notes: (Read only property)

137.16.4 mode as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mode.
Notes: (Read and Write property)

137.16.5 speed as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed in km/hour.
Notes: (Read only property)

137.16.6 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed in knots.
Notes: (Read only property)

137.16.7 trueHeading as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The true heading.
Notes: (Read only property)

137.17 class OldPhidgetInterfaceKitMBS

137.17.1 class OldPhidgetInterfaceKitMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget interface kit.
Notes:

The PhidgetInterfaceKit is a component that provides a high-level programmer interface to control a PhidgetInterfaceKit device connected through a USB port.
With this component, the programmer can:

- Turn particular outputs on and off.
- Get notified of changes of state of the inputs as events.
- Configure events to fire when the analog inputs change.

The PhidgetInterfaceKit devices provide a combination of:

- Digital outputs.
- Digital inputs.
- Analog inputs.

Subclass of the OldPhidgetMBS class.

137.17.2 Methods

137.17.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

137.17.4 getDataRate(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Data Rate for an analog input in milliseconds.
Notes:

The Lasterror property is set.

This is the event rate. Since we're not going to run an extra thread, the accuracy of the data rate is limited by the interrupt endpoint data rate (>=8ms).

137.17.5 getDataRateMax(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum supported data rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

137.17.6 getDataRateMin(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum supported data rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

137.17.7 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

137.17.8 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

137.17.9 getOutputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital outputs supported by this board.
Notes: The Lasterror property is set.

137.17.10 getOutputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital output.
Notes: The Lasterror property is set.

137.17.11 getRatiometric as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the ratiometric state for this board.
Notes: The Lasterror property is set.

137.17.12 getSensorChangeTrigger(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
Notes:

To receive all events, set the SensorChangeTrigger to zero.
The Lasterror property is set.

137.17.13 getSensorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of sensor (analog) inputs supported by this board.
Notes: The Lasterror property is set.

137.17.14 getSensorRawValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the reported actual value of the sensor between 0 - 4095.
Notes:

This is directly proportional to the analog input, ranging from 0-5V (or 0-Vcc if Ratiometric is set to True). Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

137.17.15 getSensorValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last reported sensor value for the given index as a value from 0-1000
Notes:

Note that this value defaults to 65535 for an unitialised state. Applications that do not wish to encounter this value should use ChangeTrigger event handlers as opposed to polling the device for new data.
The Lasterror property is set.

137.17.16 setDataRate(index as Integer, milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Data Rate for an analog input in milliseconds.
Notes: The Lasterror property is set.

137.17.17 setOutputState(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of a digital output.
Notes: The Lasterror property is set.

137.17.18 setRatiometric(value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the ratiometric state for this board.
Notes: The Lasterror property is set.

137.17.19 setSensorChangeTrigger(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an OnSensorChange event is fired.
Notes: Lasterror is set.

137.17.20 Events

137.17.21 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: Called on any input change.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.17.22 OutputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: Returns the number of digital outputs on this particular Phidget device.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.17.23 SensorChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: Called on any sensor change.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.18 class OldPhidgetIRCodeInfoMBS

137.18.1 class OldPhidgetIRCodeInfoMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a code info for the IR receiver/sender.
Notes:

The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
Some values can be set to null to select defaults. See the product manual for more information.

137.18.2 Properties

137.18.3 bitCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bits in the code.
Notes: (Read and Write property)

137.18.4 carrierFrequency as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Carrier frequency in Hz - defaults to 38kHz.
Notes: (Read and Write property)

137.18.5 dutyCycle as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duty Cycle in percent (10-50).
Notes:

Defaults to 33.
(Read and Write property)

137.18.6 encoding as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encoding used to encode the data.
Notes:

See the PHIDGET_IR_ENCODING_* constants.
(Read and Write property)

137.18.7 gap as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gap time in us.
Notes: (Read and Write property)

137.18.8 length as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The length of the code.
Notes:

Constant or Variable length encoding.
See PHIDGET_IR_LENGTH_* constants.
(Read and Write property)

137.18.9 minRepeat as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Minium number of times to repeat a code on transmit.
Notes: (Read and Write property)

137.18.10 trail as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Trail time in us - can be 0 for none.
Notes: (Read and Write property)

137.18.11 header(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The header value.
Notes:

Header pulse and space - can be 0 for none
Index from 0 to 1.
(Read and Write computed property)

137.18.12 one(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The one array.
Notes:

Pulse and Space times to represent a '1' bit, in us
Index from 0 to 1.
(Read and Write computed property)

137.18.13 repeat(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A series or pulse and space times to represent the repeat code.
Notes:

Start and end with pulses and null terminate. Set to 0 for none.
Index from 0 to 25.
(Read and Write computed property)

137.18.14 toggleMask(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bit toggles, which are applied to the code after each transmit.
Notes: (Read and Write computed property)

137.18.15 zero(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: One of the arrays.
Notes:

Index from 0 to 1.
Pulse and Space times to represent a '0' bit, in us.
(Read and Write computed property)

137.18.16 Constants

137.18.17 PHIDGET_IR_ENCODING_BIPHASE = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Bi-Phase, or Manchester encoding.

137.18.18 PHIDGET_IR_ENCODING_PULSE = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Pulse encoding, or Pulse Width Modulation.

137.18.19 PHIDGET_IR_ENCODING_RC5 = 5

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: RC5 - a type of Bi-Phase encoding.

137.18.20 PHIDGET_IR_ENCODING_RC6 = 6

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: RC6 - a type of Bi-Phase encoding.

137.18.21 PHIDGET_IR_ENCODING_SPACE = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Space encoding, or Pulse Distance Modulation.

137.18.22 PHIDGET_IR_ENCODING_UNKNOWN = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the encoding constants.
Notes: Unknown - the default value.

137.18.23 PHIDGET_IR_LENGTH_CONSTANT = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the length constants.
Notes: Constant - the bitstream + gap length is constant.

137.18.24 PHIDGET_IR_LENGTH_UNKNOWN = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the length constants.
Notes: Unknown - the default value.

137.18.25 PHIDGET_IR_LENGTH_VARIABLE = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the length constants.
Notes: Variable - the bitstream has a variable length with a constant gap.

137.19 class OldPhidgetIRMBS

137.19.1 class OldPhidgetIRMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for an IR receiver/sender.
Notes:

Calls specific to the Phidget IR. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

137.19.2 Methods

137.19.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

137.19.4 getLastCode(byref bitCount as Integer) as MemoryBlock

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last code that was received.
Notes:

The Lasterror property is set.

bitCount: set to the bit count of the code.

137.19.5 getLastLearnedCode(byref codeInfo as OldPhidgetIRCodeInfoMBS) as MemoryBlock

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last code that was learned.
Notes: The Lasterror property is set.

137.19.6 getRawData as MemoryBlock

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read any available raw data.
Notes:

This should be polled continuously (every 20ms) to avoid missing data. Read data always starts with a space and ends with a pulse.
The Lasterror property is set.

137.19.7 Transmit(data as MemoryBlock, codeInfo as OldPhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a code according to the settings in a CodeInto object.
Notes:

The Lasterror property is set.

data: The code to send. Data is transmitted MSBit first. MSByte is in array index 0. LSBit is right justified, so MSBit may be in bit positions 0-7 in array index 0 depending on the bit count.
codeInfo: The CodeInfo structure specifying to to send the code. Anything left as null to select default is filled in for the user.

137.19.8 TransmitRaw(data as MemoryBlock, length as Integer, carrierFrequency as Integer, dutyCycle as Integer, gap as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits RAW data as a series of pulses and spaces.
Notes:

The Lasterror property is set.

data: The data to send. The array (Int32) must start and end with a pulse and each element is a positive time in us.
length: The length of the data array. Maximum length is 1024, but streams should be kept much shorter, ie. <100ms between gaps.
carrierFrequency: The Carrier Frequency in Hz. leave as 0 for default.
dutyCycle: The Duty Cycle (10-50). Leave as 0 for default.
gap: The gap time in us. This guarantees a gap time (no transmitting) after the data is sent, but can be set to 0.

137.19.9 TransmitRepeat

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a repeat of the last transmited code.
Notes:

The Lasterror property is set.
Depending of the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

137.19.10 Events

137.19.11 Code(data as memoryblock, bitcount as Integer, repeat as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: A code was received.
Notes:

This is called when a code has been received that could be automatically decoded.
Data is return as an array with MSB in index 0. Bit count and a repeat flag are also returned. (Int32 values)
Repeats are detected as either the same code repeated in <100ms or as a special repeat code.

137.19.12 Learn(data as memoryblock, code as OldPhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: The learn event.
Notes:

This is called when a code has been received for long enough to be learned.
The returned CodeInfo object can be used to retransmit the same code.

137.19.13 RawData(tag as memoryblock)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This is called when raw data has been read from the device.
Notes:

Raw data always starts with a space and ends with a pulse.
tag contains 4 byte integer values.

137.20 class OldPhidgetLEDMBS

137.20.1 class OldPhidgetLEDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget LED device.
Notes:

The PhidgetLED is a component that provides a high-level programmer interface to control a PhidgetLED device connected through a USB port.

With this component, the programmer can:

- Control each led individually, On/Off and Brightness.

Subclass of the OldPhidgetMBS class.

137.20.2 Methods

137.20.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

137.20.4 getCurrentLimit as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current limit.
Notes:

This is for all outputs.
Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

137.20.5 getDiscreteLED(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the brightness of an individual LED.
Notes:

The Lasterror property is set.
Range of brightness is 0-100.

137.20.6 getLEDCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the number of LED positions available in this Phidget.
Notes:

The Lasterror property is set.
This property does not return the number of LEDs actually attached.

137.20.7 getVoltage as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the voltage.
Notes:

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

137.20.8 setCurrentLimit(currentLimit as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current limit.
Notes:

Lasterror is set.
See the PHIDGET_LED_CURRENT_LIMIT_* constants.

137.20.9 setDiscreteLED(index as Integer, Brightness as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the brightness of an individual LED.
Notes:

The Lasterror property is set.
Range of brightness is 0-100.

137.20.10 setVoltage(Voltage as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current voltage.
Notes:

Lasterror is set.
See the PHIDGET_LED_VOLTAGE_* constants.

137.20.11 Constants

137.20.12 PHIDGET_LED_CURRENT_LIMIT_20mA = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 20mA

137.20.13 PHIDGET_LED_CURRENT_LIMIT_40mA = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 40mA

137.20.14 PHIDGET_LED_CURRENT_LIMIT_60mA = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 60mA

137.20.15 PHIDGET_LED_CURRENT_LIMIT_80mA = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the limit constants.
Notes: 80mA

137.20.16 PHIDGET_LED_VOLTAGE_1_7V = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 1.7V

137.20.17 PHIDGET_LED_VOLTAGE_2_75V = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 2.75V

137.20.18 PHIDGET_LED_VOLTAGE_3_9V = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 3.9V

137.20.19 PHIDGET_LED_VOLTAGE_5_0V = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the voltage constants.
Notes: 5.0V

137.21 class OldPhidgetManagerMBS

137.21.1 class OldPhidgetManagerMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget manager is an interface that allows for monitoring of all phidgets connected to a system, without opening them.

137.21.2 Methods

137.21.3 Close

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the file handles for this device. You should always call this when finished with a Manager.
Notes: Lasterror is set.

137.21.4 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

The Lasterror property is set.
On success the handle value is not zero.

137.21.5 Device(index as Integer) as OldPhidgetMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The array of the attached devices.
Notes:

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.

137.21.6 getAttachedDevices

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies the list of attached devices into the Device and Count properties.
Notes: Lasterror is set.

137.21.7 GetDeviceStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

137.21.8 getServerAddress(byref port as Integer) as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the address and port.
Notes: The Lasterror property is set.

137.21.9 getServerID as string

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the server ID.
Notes: The Lasterror property is set.

137.21.10 GetServerStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

137.21.11 Open

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a connection to the local Phidget Manager.
Notes: Lasterror is set.

137.21.12 openRemote(serverID as string, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: Lasterror is set.

137.21.13 openRemoteIP(addr as string, port as Integer, password as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a connection to a remote Phidget Manager.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active.

If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown.

Lasterror is set.

Address is the address of the computer running the Phidget Webservice.
This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice.
If authentication is not active, this can be set to "".

137.21.14 Properties

137.21.15 Count as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of devices.
Notes:

The Lasterror property is set.
You need to call getAttachedDevices before this property is valid.
(Read and Write property)

137.21.16 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal used CPhidgetManagerHandle.
Notes: (Read and Write property)

137.21.17 Lasterror as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code reported.
Notes: (Read and Write property)

137.21.18 Events

137.21.19 Attach(devicehandle as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is attached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.21.20 Detach(devicehandle as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is detached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.21.21 Error(errorCode as Integer, errorDescription as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is used for reporting asynchronous errors – mostly related to opening remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.21.22 ServerConnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.21.23 ServerDisconnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.22 class OldPhidgetMBS

137.22.1 class OldPhidgetMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The base class of all Phidget device classes.
Notes:

Check phidgets.com for information on this devices.
http://www.phidgets.com/

- News from the MBS Xojo Plugins Version 22.1
- Rewritten Phidgets Plugin

137.22.3 Blog Entries

- News from the MBS Xojo Plugins Version 22.1
- Rewritten Phidgets Plugin

137.22.4 Methods

137.22.5 Close

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes the file handles for this device.
Notes:

You can call this while reads and writes are still outstanding; they will fail quickly.
Lasterror is set.
The destructor does a close if you forget it.

137.22.6 disableLogging

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables logging on the library.
Notes: The Lasterror property is set.

137.22.7 enableLogging(level as Integer, outputFile as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables logging on the library.
Notes:

The Lasterror property is set.
Data is written to the file specified with the output file path.
Not sure how the path must be specified. This is depending on the library used.

The levels:

PHIDGET_LOG_CRITICAL	1
PHIDGET_LOG_ERROR	2
PHIDGET_LOG_WARNING	3
PHIDGET_LOG_DEBUG	4
PHIDGET_LOG_INFO	5
PHIDGET_LOG_VERBOSE	6

137.22.8 GetDeviceClass as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the class of a Phidget.
Notes: See the PHIDCLASS_* constants.

137.22.9 GetDeviceID as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the device ID of a Phidget.
Notes: See the PHIDID_* constants.

137.22.10 GetDeviceLabel as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Label for the Phidget.
Notes:

The Label is a user programmable serial number stored on the Phidget - it can be used to implement a serial numbering scheme, or describe the functionality of the Phidget in a specific application.

Lasterror is set.

137.22.11 GetDeviceName as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns string describing the name of the Phidget.
Notes:

For example, "Phidget InterfaceKit 8/8/8", "Phidget InterfaceKit 0/0/4", etc.
The Lasterror property is set.

137.22.12 GetDeviceStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the status of the device.
Notes:

Returns:
PHIDGET_ATTACHED 0x1
PHIDGET_NOTATTACHED 0x0

Lasterror is set.

137.22.13 GetDeviceType as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string describing the type of the Phidget.
Notes:

All PhidgetInterfaceKits will return "PhidgetInterfaceKit", PhidgetRFID returns "PhidgetRFID" and so on.

Lasterror is set.

137.22.14 GetDeviceVersion as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string describing the Device Version of the Phidget.
Notes: Lasterror is set.

137.22.15 GetErrorDescription(errorcode as Integer) as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a string describing the ErrorCode passed.
Notes:

Lasterror is set.

The list of the error codes:

0 EPHIDGET_OK
1 EPHIDGET_NOTFOUND
2 EPHIDGET_NOMEMORY
3 EPHIDGET_UNEXPECTED
4 EPHIDGET_INVALIDARG
5 EPHIDGET_NOTATTACHED
6 EPHIDGET_INTERRUPTED
7 EPHIDGET_INVALID
8 EPHIDGET_NETWORK
9 EPHIDGET_UNKNOWNVAL
10 EPHIDGET_BADPASSWORD
11 EPHIDGET_UNSUPPORTED
12 EPHIDGET_DUPLICATE
13 EPHIDGET_TIMEOUT
14 EPHIDGET_OUTOFBOUNDS
15 EPHIDGET_EVENT
16 EPHIDGET_NETWORK_NOTCONNECTED

17 EPHIDGET_WRONGDEVICE

137.22.16 GetLibraryVersion as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: returns a string providing the version number of the API library.
Notes: Lasterror is set.

137.22.17 GetSerialNumber as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the unique serial number of this Phidget.
Notes:

Lasterror is set.
This number is set during manufacturing, and is unique across all Phidgets.

137.22.18 GetServerAddress(byref port as Integer) as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the IP Address and Port of a remote Phidget device.
Notes:

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
Lasterror is set.

137.22.19 GetServerID as string

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the Server ID for a remote Phidget device.
Notes:

This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.

This should only be called on Phidgets that were opened with openRemote or openRemoteIP.
The Lasterror property is set.

137.22.20 GetServerStatus as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an integer indicating the connection status of a Webservice.
Notes:

Returns one of the following values:
1 CONNECTED
0 NOTCONNECTED

Lasterror is set.

137.22.21 Open(serialNumber as Integer = -1)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a connection between an PhidgetMBS object and a physical Phidget.
Example:

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

Notes:

Open is pervasive. What this means is that you can call open on a device before it is plugged in, and keep the device opened across device dis- and re-connections.
Open is Asynchronous. What this means is that open will return immediately - before the device being opened is actually available.
What this means is that you need to either poll getDeviceStatus for an attached status, or handle the attach event, in order to wait for the device to become available before trying to use it.

SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Lasterror is set.

137.22.22 OpenLabel(label as string = "")

MBS Phidgets Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a Phidget by label.
Notes:

Available with phidget library from December 2011.
Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
Lasterror is set.

137.22.23 openLabelRemote(label as string, serverID as string, password as string = "")

MBS Phidgets Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a Phidget remotely by ServerID. Note that this requires Bonjour (mDNS) to be running on both the host and the server.
Notes:

Available with phidget library from December 2011.
label: The label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
serverID: Server ID. Specify "" to open any.
password: The Password. Can be "" if the server is running unsecured.
Lasterror is set.

137.22.24 openLabelRemoteIP(label as string, addr as string, port as Integer, password as string = "")

MBS Phidgets Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens a Phidget remotely by address and port, with optional label.
Notes:

Available with phidget library from December 2011.
Lasterror is set.

label: Label string. Labels can be up to 10 characters (UTF-8 encoding). Specify "" to open any.
address: The Address. This can be a hostname or IP address.

port: The Port number. Default is 5001.
password: The Password. Can be NULL if the server is running unsecured.

137.22.25 openRemote(serial as Integer, serverID as string, password as string = "")

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This method is not yet implemented and will return EPHIDGET_UNSUPPORTED.
Notes: Lasterror is set.

137.22.26 openRemoteIP(serial as Integer, addr as string, port as Integer, password as string = "")

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attempts to open a connection to a Phidget Webservice, and waits for a phidget on that connection.
Notes:

OpenRemoteIP will block until it connects to the server, which means that when it returns with EPHIDGET_OK, this means that the connection is active. If the server is unavailable, this will return an error code. If the connection to a webservice is disrupted while in use, an error event will be thrown, and it is recommended that an error event listener be registered for this reason.
As with the regular open, openRemoteIP is pervasive and asynchronous – so long as the connection to the Webservice remains active.
SerialNumber specifies the desired serial number, allowing the call to open a specific Phidget. Specifying -1 for the serial number will cause it to open the first available device.
Address is the address of the computer running the Phidget Webservice. This can be either an IP address or a hostname.
Port specifies the port of the Webservice on the remote computer.
Password specifies the password, which is required if authentication is active on the Webservice. If authentication is not active, this can be set to "".
Lasterror is set.

137.22.27 PUNK_DBL as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value used for unknown values (Double).

137.22.28 PUNK_FLT as single

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The value used for unknown values (Float).

137.22.29 SetDeviceLabel(label as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a Label – a string up to 10 characters long – to the Phidget associated with this handle.
Notes:

SetDeviceLabel may not be available on all operating systems.
Currently it is available on MacOS X, Linux, and Windows CE.
Calling this on Windows will return EPHIDGET_UNSUPPORTED
Lasterror is set.

137.22.30 waitForAttachment(milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits the given time till a device has been attached.
Example:

```
dim p as new PhidgetInterfaceKitMBS

p.open -1
p.waitForAttachment 0
// use the phidget
```

Notes:

Lasterror is set to EPHIDGET_OK when the device is available, or to EPHIDGET_TIMEOUT if the device is not attached before the timeout expires.
Timeouts below about 300ms cannot be trusted because of initialization time, and sometimes an even larger timeout is required – ie. the first time a device is plugged into a windows machine.
A timeout of 0 is infinite.
This function can be used in conjunction with (or instead of) an attach event handler.

The Lasterror property is set.

137.22.31 Properties

137.22.32 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal used CPhidgetHandle.
Notes: (Read and Write property)

137.22.33 Lasterror as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

(Read and Write property)

137.22.34 Events

137.22.35 Attach

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is attached.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.22.36 Detach

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a device is detached.
Notes:

EPHIDGET_NOTFOUND	1	"A Phidget matching the type and or serial number could not be found." This indicates that a Phidget being searched for (ie. via Open) could not be located.
EPHIDGET_NOMEMORY	2	"Memory could not be allocated." This indicates that there is not enough memory for the Phidgets library to create the object requested.
EPHIDGET_UNEXPECTED	3	"Unexpected Error. Contact Phidgets Inc. for support." Indicates that a serious error has occurred, or a severe bug exists within the library.
EPHIDGET_INVALIDARG	4	"Invalid argument passed to function." An argument is not valid to the requirements of the function. In many cases this refers to an invalid Phidget Handle.
EPHIDGET_NOTATTACHED	5	"Phidget not physically attached." Indicates the function requires an attached Phidget to operate.
EPHIDGET_INTERRUPTED	6	"Read/Write operation was interrupted" An error occurred while attempting to communicate with the Phidget over USB.
EPHIDGET_INVALID	7	"The Error Code is not defined." Indicates that a serious error has occurred, or a severe bug exists within the library.
EPHIDGET_NETWORK	8	"Network Error." Attempting to communicate with the Phidget via the Network has failed.
EPHIDGET_UNKNOWNVAL	9	"Value is Unknown (State not yet received from device)." A query to a value on the Phidget device has failed as the Phidget has not returned data yet.
EPHIDGET_BADPASSWORD	10	"Authorization Failed." The remote access method has failed it's authorization.
EPHIDGET_UNSUPPORTED	11	"Not Supported" This is a bad or unsupported function call.
EPHIDGET_DUPLICATE	12	"Duplicated request" A previous request to the device has already performed this function, and it is not valid to perform twice.
EPHIDGET_TIMEOUT	13	"Given timeout has been exceeded" A synchronous request has failed it's time limits. Usually this is returned when attempting WaitForConnect.
EPHIDGET_OUTOFBOUNDS	14	"Index out of Bounds" An index into the function is above or below the recognized bounds of the device. ie. when accessing a single sensor on a multisensor device.
EPHIDGET_EVENT	15	"A non-null error code was returned from an event handler" An error code was passed to a function handler. Note that correct decoding of the actual error would have to be done within the event handler itself.
EPHIDGET_NETWORK_NOTCONNECTED	16	"A connection to the server does not ex-ist." An attempt to connect to a remotely connected device or service failed due to network connectivity problems.
EPHIDGET_WRONGDEVICE	17	"Function is not applicable for this device." The wrong type of device handle was passed as an argument to a function. (ie. calling CPhidgetWeightSensor_getWeight with an Accelerometer handle)

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.22.37 Error(errorCode as Integer, errorDescription as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function:

This event is used for reporting asynchronous errors - mostly related to opening
remote Phidgets.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.

Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.22.38 ServerConnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is used for opening Phidgets remotely, and is called when a connection to the sever has been made.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.22.39 ServerDisconnect

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is used for opening Phidgets remotely, and is called when a connection to the server has been lost.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.22.40 Wakeup

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the device wakes up.

137.22.41 WillSleep

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the device will go to sleep.

137.22.42 Constants

137.22.43 EPHIDGET_BADPASSWORD=10

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Authorization exception. "No longer used. Replaced by EEPHIDGET_BADPASSWORD"

137.22.44 EPHIDGET_BADVERSION=19

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Version Mismatch. "No longer used. Replaced by EEPHIDGET_BADVERSION"

137.22.45 EPHIDGET_CLOSED=18

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Phidget Closed. "Phidget handle was closed."

137.22.46 EPHIDGET_DUPLICATE=12

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Duplicate request. "Duplicated request."

137.22.47 EPHIDGET_EVENT=15

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Event. "A non-null error code was returned from an event handler." This code is not currently used.

137.22.48 EPHIDGET_INTERRUPTED=6

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Interrupted. "Read/Write operation was interrupted." This code is not currently used.

137.22.49 EPHIDGET_INVALID=7

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Invalid error code. "The Error Code is not defined."

137.22.50 EPHIDGET_INVALIDARG=4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Invalid argument. "Invalid argument passed to function."

137.22.51 EPHIDGET_NETWORK=8

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Network. "Network Error."

137.22.52 EPHIDGET_NETWORK_NOTCONNECTED=16

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Network not connected. "A connection to the server does not exist."

137.22.53 EPHIDGET_NOMEMORY=2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: No memory. "Memory could not be allocated."

137.22.54 EPHIDGET_NOTATTACHED=5

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Phidget not attached. "Phidget not physically attached."

137.22.55 EPHIDGET_NOTFOUND=1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Phidget not found. "A Phidget matching the type and or serial number could not be found."

137.22.56 EPHIDGET_OK=0

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Function completed successfully.

137.22.57 EPHIDGET_OUTOFBOUNDS=14

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Out of bounds. "Index out of Bounds."

137.22.58 EPHIDGET_TIMEOUT=13

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Timeout. "Given timeout has been exceeded."

137.22.59 EPHIDGET_UNEXPECTED=3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Unexpected. "Unexpected Error. Contact Phidgets Inc. for support."

137.22.60 EPHIDGET_UNKNOWNVAL=9

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Value unknown. "Value is Unknown (State not yet received from device, or not yet set by user)."

137.22.61 EPHIDGET_UNSUPPORTED=11

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Unsupported. "Not Supported."

137.22.62 EPHIDGET_WRONGDEVICE=17

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the error constants.
Notes: Wrong device. "Function is not applicable for this device."

137.22.63 PHIDCLASS_ACCELEROMETER = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the HID class constants.

137.22.64 PHIDCLASS_ADVANCEDSERVO = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the HID class constants.

137.22.65 PHIDCLASS_ANALOG = 22

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the HID class constants.

137.22.66 PHIDCLASS_BRIDGE = 23

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the HID class constants.

137.22.67 PHIDCLASS_ENCODER = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the HID class constants.

137.22.68 PHIDCLASS_FREQUENCYCOUNTER = 21

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the HID class constants.

137.22.69 PHIDCLASS_GPS = 5

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the HID class constants.

137.22.70 PHIDCLASS_INTERFACEKIT = 7

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: The value used for unknown values (Boolean).

137.22.201 PUNK_INT = & H7FFFFFFF

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: The value used for unknown values (Integer).

137.22.202 PUNK_INT64 = & h7FFFFFFFFFFFFFFF

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: The value used for unknown values (Int64).

137.22.203 PUNK_SHRT = & h7FFF

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: The value used for unknown values (Short).

137.23 class OldPhidgetMissingFunctionExceptionMBS

137.23.1 class OldPhidgetMissingFunctionExceptionMBS

MBS Phidgets Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class used to report that a given phidget function was not loaded from the library.
Notes:

Check the message property.
Subclass of the RuntimeException class.

137.24 class OldPhidgetMotorControlMBS

137.24.1 class OldPhidgetMotorControlMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget motor control device.
Notes:

The PhidgetMotorControl is a component that provides a high-level programmer interface to control a PhidgetMotorControl device connected through a USB port.

With this component, the programmer can:

- Control direction, and start and stop DC motors.
- Control the velocity and acceleration of each DC motor.
- Read the limit switch.

Subclass of the OldPhidgetMBS class.

137.24.2 Methods

137.24.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

137.24.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current acceleration.
Notes:

Note that this value defaults to 10 upon initialisation.
The Lasterror property is set.

137.24.5 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum acceleration supported by a motor.
Notes: The Lasterror property is set.

137.24.6 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by a motor.
Notes: The Lasterror property is set.

137.24.7 getBackEMF(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Back EMF voltage for a motor.
Notes: Lasterror is set.

137.24.8 getBackEMFSensingState(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Back EMF sensing state for a motor.
Notes: Lasterror is set.

137.24.9 getBraking(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Braking value for a motor.
Notes:

Lasterror is set.
Returns the braking value, in percent.

137.24.10 getCurrent(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: get the current motor current consumption.
Notes: The Lasterror property is set.

137.24.11 getEncoderCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of encoder inputs supported by this board.
Notes: Lasterror is set.

137.24.12 getEncoderPosition(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the position of an encoder. This position starts at 0 every time the phidget is opened.
Notes: Lasterror is set.

137.24.13 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

137.24.14 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

137.24.15 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

137.24.16 getRatiometric as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the ratiometric state.
Notes: Lasterror is set.

137.24.17 getSensorCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of sensor inputs supported by this board.
Notes: Lasterror is set.

137.24.18 getSensorRawValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the raw value of a sensor (12-bit).
Notes: Lasterror is set.

137.24.19 getSensorValue(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the value of a sensor.
Notes: Lasterror is set.

137.24.20 getSupplyVoltage as Double

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the Supply voltage for the motors.
Notes:

This could be higher then the actual supply voltage.
Returns the supply voltage, in volts.
Lasterror is set.

137.24.21 getVelocity(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current velocity of a motor.
Notes: The Lasterror property is set.

137.24.22 setAcceleration(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Motor's Maximum accesleration.
Notes:

Valid values are 0-100.
The Lasterror property is set.

137.24.23 setBackEMFSensingState(index as Integer, EMFState as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Back EMF sensing state for a motor.
Notes: Lasterror is set.

137.24.24 setBraking(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the Braking value for a motor.
Notes:

This is applied when velocity is 0. Default is 0% .
value: The braking value, in percent.
Lasterror is set.

137.24.25 setEncoderPosition(index as Integer, position as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the encoder position.
Notes:

This can be used to set the position to a known value, and should only be called when the encoder is not moving.
Lasterror is set.

137.24.26 setRatiometric(value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the ratiometric state.
Notes:

This control the voltage reference used for sampling the analog sensors.
Lasterror is set.

137.24.27 setVelocity(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the velocity of a motor.
Notes: The Lasterror property is set.

137.24.28 Events

137.24.29 BackEMFUpdated(index as Integer, voltage as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called at a constant rate; every 16ms, when back EMF sensing is enabled for that motor.

137.24.30 CurrentChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The current motor current consumption changed.
Notes:

Index: Index of the Motor firing the Event
Value: Value of the Motor Current

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.24.31 CurrentUpdated(index as Integer, current as Double)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The current update event.
Notes: This is called at a constant rate; every 8ms.

137.24.32 EncoderPositionChanged(index as Integer, time as Integer, positionChange as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The encoder position change event.
Notes: This is called when the encoder position changes.

137.24.33 EncoderPositionUpdated(index as Integer, positionChange as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The encoder position update event.
Notes: This is called at a constant rate; every 8ms, whether the encoder position has changed or not.

137.24.34 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The input value changed.
Notes:

Index: Index of the Input firing the Event
State: State of the Input

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.24.35 SensorUpdated(index as Integer, sensorValue as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The sensor update event.
Notes: This is called at a constant rate; every 8ms.

137.24.36 VelocityChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the velocity changes.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.25 class OldPhidgetNMEADataMBS

137.25.1 class OldPhidgetNMEADataMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA Data Structure. Contains a set of supported NMEA sentences.

137.25.2 Properties

137.25.3 GGA as OldPhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS Fix and position data.
Notes: (Read and Write property)

137.25.4 GSA as OldPhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS DOP and active satellites.
Notes: (Read and Write property)

137.25.5 GSV as OldPhidgetGPGSVMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detailed satellite information.
Notes: (Read and Write property)

137.25.6 RMC as OldPhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Recommended minimum data.
Notes: (Read and Write property)

137.25.7 VTG as OldPhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Heading and Speed over the Ground.
Notes: (Read and Write property)

137.26 class OldPhidgetNotInitialzedExceptionMBS

137.26.1 class OldPhidgetNotInitialzedExceptionMBS

MBS Phidgets Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class used to report that a given phidget object was not initialized properly.
Notes:

Check the message property.
Subclass of the RuntimeException class.

137.27 class OldPhidgetPHSensorMBS

137.27.1 class OldPhidgetPHSensorMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget PH sensor device.
Notes:

The PhidgetPHSensor is a component that provides a high-level programmer interface to control a PhidgetPHSensor device connected through a USB port.

With this component, the programmer can:

- Read the pH of a liquid with a pH sensor.

Subclass of the OldPhidgetMBS class.

137.27.2 Methods

137.27.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

137.27.4 getPH as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current pH.
Notes:

The Lasterror property is set.
Valid range is -10 to 10.
Note that this value defaults to -20. Applications not wishing to encounter this value should use Change

Handlers instead of polling the device for data.

137.27.5 getPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an PHChange event is fired.
Notes: The Lasterror property is set.

137.27.6 getPHMax as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum PH that the sensor could report.
Notes: The Lasterror property is set.

137.27.7 getPHMin as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum PH that the sensor could report.
Notes: The Lasterror property is set.

137.27.8 getPotential as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current potential in volts.
Notes:

The Lasterror property is set.
Range is 0-5v.
2.5v corresponds to a pH of 7.0.

137.27.9 getPotentialMax as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum potential that can be sensed.
Notes: The Lasterror property is set.

137.27.10 getPotentialMin as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum potential that can be sensed.
Notes: The Lasterror property is set.

137.27.11 setPHChangeTrigger(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an OnPHChange event is fired.
Notes: The Lasterror property is set.

137.27.12 setTemperature(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the ambient temperature of the PH sensor for increased accuracy.
Notes:

This value defaults to 20 degrees celcius which is applicable for most applications.
The Lasterror property is set.

137.27.13 Events

137.27.14 PHChanged(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called if the pH changes by more than the PH trigger.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.28 class OldPhidgetRFIDMBS

137.28.1 class OldPhidgetRFIDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget RFID device.
Notes:

The PhidgetRFID is a component that provides a high-level programmer interface to control a PhidgetRFID device connected through a USB port.
With this component, the programmer can:

- Read Radio Frequency Identification tags.

Radio Frequency Identification or RFID, is a non-contact identification technology which uses a reader to read data stored on low cost tags.

The particular instance of the technology we use stores a 40-bit number on the tag. Every tag that is purchased from Phidgets Inc. is guaranteed unique.

When a RFID tag is read, the component returns the unique number contained in the RFID tag.
Subclass of the OldPhidgetMBS class.

137.28.2 Methods

137.28.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

137.28.4 getAntennaOn as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of the antenna.
Notes: The Lasterror property is set.

137.28.5 getLastTag(m as memoryblock) as memoryblock

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stores the last tag in a memoryblock.
Notes:

You need to pass in a memoryblock of the correct size for your tags.
For convenience the memoryblock is returned.

The Lasterror property is set.

137.28.6 getLEDOn as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of the onboard LED.
Notes: The Lasterror property is set.

137.28.7 getOutputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of outputs supported by this board.
Notes: The Lasterror property is set.

137.28.8 getOutputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of an output.
Notes: The Lasterror property is set.

137.28.9 getTagStatus as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the tag present status.
Notes:

This is whether or not a tag is being read by the reader.
The Lasterror property is set.

137.28.10 setAntennaOn(value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of the antenna.
Notes:

Note that the antenna must be enabled before tags will be read.
The Lasterror property is set.

137.28.11 setLEDOn(value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of the onboard LED.
Notes: The Lasterror property is set.

137.28.12 setOutputState(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of an output.
Notes: The Lasterror property is set.

137.28.13 Events

137.28.14 OutputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called if an output changes.
Notes:

Index: Index of the Output firing the Event
Value: State of the Output.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.28.15 Tag(tag as memoryblock)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: An RFID Tag is read.
Notes:

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.28.16 TagLost(tag as memoryblock)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: A RFID Tag is removed from the field.
Notes:

Current plugins expect a maximum tag size of 20 bytes. Not all 20 bytes may be used for the given tag.

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.29 Globals

137.29.1 LoadPhidgetFrameworkMBS(framework as folderitem) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the phidget framework.
Notes:

Returns true on success and false on failure.
Path a folderitem for the phidget.framework in /library/frameworks.
Deprecated in plugin version 10.4.

137.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean

MBS Phidgets Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets shared library.
Notes:

Returns true on success and false on failure.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.
See also:

- 137.29.3 LoadPhidgetLibraryMBS(path as string) as boolean 22058

137.29.3 LoadPhidgetLibraryMBS(path as string) as boolean

MBS Phidgets Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets shared library.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library or a Mac OS X framework from the given path.

137.29.4 Blog Entries

- MBS REALbasic Plugins, version 10.4pr3

See also:

- 137.29.2 LoadPhidgetLibraryMBS(file as folderitem) as boolean 22058

137.29.5 LoadPhidgetLinuxLibraryMBS(path as string) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the phidget library.
Notes:

Returns true on success and false on failure.
Pass in the path to a .so file.
Deprecated in plugin version 10.4.

137.29.6 LoadPhidgetWindowsDLLMBS(dllpath as string) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the windows dll.
Notes:

Returns true on success and false on failure.
Path can be an absolute, a relative or just a file name.
Deprecated in plugin version 10.4.

137.30 class OldPhidgetServoMBS

137.30.1 class OldPhidgetServoMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget servo device.
Notes:

The PhidgetServo is a component that provides a high-level programmer interface to control a PhidgetServo device connected through a USB port.

With this component, the programmer can:

- Set the desired position for a servo motor, ranging from 0 to 180 degrees.

Subclass of the OldPhidgetMBS class.

137.30.2 Methods

137.30.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

137.30.4 getEngaged(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

The Lasterror property is set.

index: The motor index.

137.30.5 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller
Notes: The Lasterror property is set.

137.30.6 getPosition(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.30.7 getPositionMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum position that a motor can be set to.
Notes:

index: The motor index.

The Lasterror property is set.

137.30.8 getPositionMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can be set to.
Notes:

index: The motor index.

The Lasterror property is set.

137.30.9 getServoType(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

137.30.10 setEngaged(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.

The Lasterror property is set.

137.30.11 setPosition(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of a motor.
Notes:

The Lasterror property is set.

index: The motor index.
position: The motor position.

137.30.12 setServoParameters(index as Integer, min_us as Double, max_us as Double, degrees as Double)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo parameters of a motor.
Notes:

The Lasterror property is set.

index	The motor index.
min_us	The minimum supported PCM in microseconds.
max_us	The maximum supported PCM in microseconds.
degrees	The degrees of rotation defined by the given PCM range.

137.30.13 setServoType(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the servo type of a motor.
Notes:

The Lasterror property is set.
For the value, check the PHIDGET_SERVO_* constants.

137.30.14 Events

137.30.15 MotorPositionChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called if the motor position is changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.31 class OldPhidgetSpatialEventDataMBS

137.31.1 class OldPhidgetSpatialEventDataMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for event data on a spatial device.
Notes: Timestamped position data returned by the PhidgetSpatialMBS.SpatialData event.

137.31.2 Properties

137.31.3 TimestampMicroseconds as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The microseconds part of the Hardware timestamp.
Notes: (Read and Write property)

137.31.4 TimestampSeconds as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The seconds part of the Hardware timestamp.
Notes: (Read and Write property)

137.31.5 acceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Acceleration data for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

137.31.6 angularRate(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Angular rate data (Gyroscope) for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

137.31.7 magneticField(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Magnetic field data (Compass) for up to 3 axes.
Notes:

Index from 0 to 2.
(Read and Write computed property)

137.32 class OldPhidgetSpatialMBS

137.32.1 class OldPhidgetSpatialMBS

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class to control the spatial phidget device.
Notes:

Calls specific to the Phidget Spatial. See the product manual for more specific API details, supported functionality, units, etc.
Subclass of the OldPhidgetMBS class.

137.32.2 Methods

137.32.3 Constructor

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

137.32.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current acceleration of an axis.
Notes:

index: The acceleration index.
Returns the acceleration in gs.
Lasterror is set.

137.32.5 getAccelerationAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of acceleration axes supplied by this board.

137.32.6 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum accleration supported by an axis.
Notes:

index: The acceleration index.
Lasterror is set.

137.32.7 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by an axis.
Notes: index: The acceleration index.

137.32.8 getAngularRate(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current angular rate of an axis.
Notes:

Returns the angular rate in degrees/second.
index: The angular rate index.
Lasterror is set.

137.32.9 getAngularRateMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum angular rate supported by an axis.
Notes:

index: The angular rate index.

Lasterror is set.

137.32.10 getAngularRateMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum angular rate supported by an axis.
Notes:

index: The angular rate index.
Lasterror is set.

137.32.11 getCompassAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of compass axes supplied by this board.
Notes: Lasterror is set.

137.32.12 getDataRate as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the data rate in milliseconds.
Notes: Lasterror is set.

137.32.13 getDataRateMax as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum supported data rate in milliseconds.
Notes: Lasterror is set.

137.32.14 getDataRateMin as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum supported data rate in milliseconds.
Notes: Lasterror is set.

137.32.15 getGyroAxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of gyroscope axes supplied by this board.
Notes: Lasterror is set.

137.32.16 getMagneticField(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current magnetic field stregth of an axis.
Notes:

index: The magnetic field index.
Returns the magnetic field strength in Gauss.
Lasterror is set.

137.32.17 getMagneticFieldMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum magnetic field stregth supported by an axis.
Notes:

index: The magnetic field index.
Lasterror is set.

137.32.18 getMagneticFieldMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum magnetic field stregth supported by an axis.
Notes:

index: The magnetic field index.
Lasterror is set.

137.32.19 resetCompassCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the compass correction factors.
Notes:

Magnetic field data will be presented directly as reported by the sensor.
Lasterror is set.

137.32.20 setCompassCorrectionParameters(magField as Double, offset0 as Double, offset1 as Double, offset2 as Double, gain0 as Double, gain1 as Double, gain2 as Double, T0 as Double, T1 as Double, T2 as Double, T3 as Double, T4 as Double, T5 as Double)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the compass correction factors. This can be used to correcting any sensor errors, including hard and soft iron offsets and sensor error factors.
Notes:

Lasterror is set.

magField: Local magnetic field strength.
offset0: Axis 0 offset correction.
offset1: Axis 1 offset correction.
offset2: Axis 2 offset correction.
gain0: Axis 0 gain correction.
gain1: Axis 1 gain correction.
gain2: Axis 2 gain correction.
T0: Non-orthogonality correction factor 0.
T1: Non-orthogonality correction factor 1.

T2: Non-orthogonality correction factor 2.
T3: Non-orthogonality correction factor 3.
T4: Non-orthogonality correction factor 4.
T5: Non-orthogonality correction factor 5.

137.32.21 setDataRate(milliseconds as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the data rate in milliseconds.
Notes:

Lasterror is set.
Note that data at rates faster then 8ms will be delivered to events as an array of data.

137.32.22 zeroGyro

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Zeroes the gyroscope.
Notes:

This takes about two seconds and the gyro zxes will report 0 during the process.
This should only be called when the board is not moving.

Lasterror is set.

137.32.23 Events

137.32.24 SpatialData(data() as OldPhidgetSpatialEventDataMBS, dataCount as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when new data has been received.
Notes:

This is called at getDataRate, up to 8ms, for faster then 8ms data, multiple sets of data are supplied in a single event.
Lasterror is set.

137.33 class OldPhidgetStepperMBS

137.33.1 class OldPhidgetStepperMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class for a phidget stepper device.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

137.33.2 Methods

137.33.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

137.33.4 getAcceleration(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the acceleration value.
Notes: The Lasterror property is set.

137.33.5 getAccelerationMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum acceleration supported by a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.6 getAccelerationMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum acceleration supported by a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.7 getCurrent(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current value.
Notes: The Lasterror property is set.

137.33.8 getCurrentLimit(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can go to.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.9 getCurrentMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum current limit.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.10 getCurrentMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum current limit.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.11 getCurrentPosition(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current position of a motor.
Notes: The Lasterror property is set.

137.33.12 getEngaged(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.13 getInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of digital inputs supported by this board.
Notes: The Lasterror property is set.

137.33.14 getInputState(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of a digital input.
Notes: The Lasterror property is set.

137.33.15 getMotorCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of motors supported by this controller.
Notes: The Lasterror property is set.

137.33.16 getPositionMax(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum velocity that can be set for a motor.
Notes: The Lasterror property is set.

137.33.17 getPositionMin(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum position that a motor can go to.
Notes: The Lasterror property is set.

137.33.18 getStopped(index as Integer) as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the stopped state of a motor. This is true when the motor is not moving and there are no outstanding commands.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.19 getTargetPosition(index as Integer) as int64

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last set target position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.20 getVelocity(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current velocity of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.21 getVelocityLimit(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the last set velocity limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.22 getVelocityMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum velocity that can be set for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.23 getVelocityMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum velocity that can be set for a motor.
Notes: The Lasterror property is set.

137.33.24 setAcceleration(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the acceleration.
Notes: The Lasterror property is set.

137.33.25 setCurrentLimit(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.26 setCurrentPosition(index as Integer, value as int64)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the current position of a motor.
Notes:

This will not move the motor, just update the position value.

index: The motor index.
value: The position.

The Lasterror property is set.

137.33.27 setEngaged(index as Integer, value as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the engaged state of a motor. This is whether the motor is powered or not.
Notes:

index: The motor index.
value: The engaged state. Possible values are true and false.

The Lasterror property is set.

137.33.28 setTargetPosition(index as Integer, value as int64)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the target position of a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.29 setVelocityLimit(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the velocity limit for a motor.
Notes:

index: The motor index.

The Lasterror property is set.

137.33.30 Events

137.33.31 CurrentChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The current value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.33.32 InputChanged(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The input value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.33.33 ServoChanged(index as Integer, value as int64)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The servo value changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.33.34 VelocityChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the velocity changes.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.34 class OldPhidgetTemperatureSensorMBS

137.34.1 class OldPhidgetTemperatureSensorMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget temperature sensor.
Notes:

The PhidgetTemperatureSensor is a component that provides a high-level programmer interface to control a PhidgetTemperatureSensor device connected through a USB port.

With this component, the programmer can:

- Read the temperature of Thermocouple device.
- Read cold junction temperature.
- Get notification of temperature change.

Subclass of the OldPhidgetMBS class.

137.34.2 Methods

137.34.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

137.34.4 getAmbientTemperature as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the ambient (board) temperature.
Notes: The Lasterror property is set.

137.34.5 getAmbientTemperatureMax as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum temperature that the ambient onboard temperature sensor can measure.
Notes: The Lasterror property is set.

137.34.6 getAmbientTemperatureMin as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum temperature that the ambient onboard temperature sensor can measure.
Notes: The Lasterror property is set.

137.34.7 getPotential(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the potential value for the temperature sender with the given index.
Notes: The Lasterror property is set.

137.34.8 getPotentialMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum potential that a thermocouple input can measure.
Notes: The Lasterror property is set.

137.34.9 getPotentialMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum potential that a thermocouple input can measure.
Notes: The Lasterror property is set.

137.34.10 getTemperature(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current temperature in Celsius or Fahrenheit (depending on UseImperial property).
Notes:

Index = 0 returns the temperature of the cold junction.
Index = 1 returns the temperatrue of the thermocouple.

Note that this value defaults to -500. Applications that do not wish to see this value should use Change Handlers instead of polling the device for data.

The Lasterror property is set.

137.34.11 getTemperatureChangeTrigger(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
Notes: The Lasterror property is set.

137.34.12 getTemperatureInputCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of thermocouple inputs supported by this board.
Notes: The Lasterror property is set.

137.34.13 getTemperatureMax(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum temperature that can be measured by a thermocouple input. This depends on the type of thermocouple attached.
Notes: The Lasterror property is set.

137.34.14 getTemperatureMin(index as Integer) as Double

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the minimum temperature that can be measured by a thermocouple input.
Notes:

This depends on the type of thermocouple attached.
The Lasterror property is set.

137.34.15 getThermocoupleType(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the type of thermocouple set to be at a thermocouple input. By default this is K-Type.
Notes:

The Lasterror property is set.
type: The thermocouple type.

137.34.16 setTemperatureChangeTrigger(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Specifies the amount of change that should exist between the last reported value and the current value before an TemperatureChange event is fired.
Notes: The Lasterror property is set.

137.34.17 setThermocoupleType(index as Integer, value as Integer)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the type of thermocouple plugged into a thermocouple input. By default this is K-Type.
Example:

```
dim t as OldPhidgetTemperatureSensorMBS

const PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1 // K-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2 // J-Type thermocouple
const PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3 // E-Type thermocouple
```

```
const PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4 // T-Type thermocouple

t.setThermocoupleType 0, PHIDGET_TEMPERATURE_SENSOR_T_TYPE
```

Notes: The Lasterror property is set.

137.34.18 Events

137.34.19 TemperatureChanged(index as Integer, value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The temperatur changed.
Notes:

Index: Index of the Temperature Sensor firing the Event
Value: Value of the Temperature Sensor

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.34.20 Constants

137.34.21 PHIDGET_TEMPERATURE_SENSOR_E_TYPE = 3

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: E-Type thermocouple

137.34.22 PHIDGET_TEMPERATURE_SENSOR_J_TYPE = 2

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: J-Type thermocouple

137.34.23 PHIDGET_TEMPERATURE_SENSOR_K_TYPE = 1

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: K-Type thermocouple

137.34.24 PHIDGET_TEMPERATURE_SENSOR_T_TYPE = 4

MBS Phidgets Plugin, Plugin Version: 11.0.

Function: One of the sensor type constants.
Notes: T-Type thermocouple

137.35 class OldPhidgetTextLCDMBS

137.35.1 class OldPhidgetTextLCDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the phidget text LCD.
Notes:

The PhidgetTextLCD is a component that provides a high-level programmer interface to control a PhidgetTextLCD device connected through a USB port.

With this component, the programmer can:

- Display text on a PhidgetTextLCD module.

Subclass of the OldPhidgetMBS class.

137.35.2 Methods

137.35.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
Lasterror is set.

137.35.4 getBacklight as boolean

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the state of the backlight.
Notes: The Lasterror property is set.

137.35.5 getBrightness as Integer

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the brightness of the backlight. Not supported on all TextLCDs
Notes:

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

137.35.6 getColumnCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of columns per supported by this display.
Notes: The Lasterror property is set.

137.35.7 getContrast as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the contrast value from 0-255.
Notes:

Note that this defaults to 0.
The Lasterror property is set.

137.35.8 getCursorBlink as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines if the cursor's blinking is on or off.
Notes:

Note that this defaults to False.
The Lasterror property is set.

137.35.9 getCursorOn as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines if the cursor is on or off.
Notes:

Note that this defaults to False.
The Lasterror property is set.

137.35.10 getRowCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of rows supported by this display.
Notes: The Lasterror property is set.

137.35.11 getScreen as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the active screen.
Notes: Lasterror is set.

137.35.12 getScreenCount as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of Display supported by this TextLCD.
Notes: Lasterror is set.

137.35.13 getScreenSize as Integer

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the screen size.
Notes:

See PHIDGET_TEXTLCD_SCREEN_* constants.
Lasterror is set.

137.35.14 initialize

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the active screen.
Notes:

Only supported on the TextLCD adapter.
This should be called if a screen is attached after power up, or to clear the screen after setting the size.
Lasterror is set.

137.35.15 setBacklight(backlightState as boolean)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state of the backlight.
Notes: The Lasterror property is set.

137.35.16 setBrightness(Brightness as Integer)

MBS Phidgets Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the brightness of the backlight. Not supported on all TextLCDs
Notes:

The backlight brightness has a range of 0 to 255.
The Lasterror property is set.

137.35.17 setContrast(Contrast as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the contrast from 0-255.
Notes: The Lasterror property is set.

137.35.18 setCursorBlink(CursorBlink as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the cursor's blinking on or off.
Notes: The Lasterror property is set.

137.35.19 setCursorOn(CursorOn as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the cursor on or off.
Notes:

This cursor is displayed at the last location that was changed.

The Lasterror property is set.

137.35.20 setCustomCharacter(index as Integer, val1 as Integer, val2 as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets a custom character.
Notes:

With existing hardware, there is space for 8 custom characters : Index can range from 8 to 15.
Each character is described by a set of integers.
For more information, have a look at the TextLCD example in the examples.zip for Phidget21.

The Lasterror property is set.

137.35.21 setDisplayCharacter(index as Integer, column as Integer, character as Integer)

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets a single character on the display.
Notes:

index: The row index.
column: The column index.
character: The character to display.

The Lasterror property is set.

137.35.22 setDisplayString(row as Integer, displayString as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the text to display on a particular row of the display.
Notes:

Row: Row to set on display
DisplayString: String to set on display. The text will be clipped at the right edge of the display.
The Lasterror property is set.

137.35.23 setScreen(screenIndex as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the active screen.
Notes:

This is the screen that all subsequent API calls will apply to.
Lasterror is set.

137.35.24 setScreenSize(screenSize as Integer)

MBS Phidgets Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the active screen size. Only supported on the TextLCD Adapter.
Notes: Lasterror is set.

137.35.25 Constants

137.35.26 PHIDGET_TEXTLCD_SCREEN_1x16 = 4

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 16 column screen

137.35.27 PHIDGET_TEXTLCD_SCREEN_1x40 = 10

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 40 column screen

137.35.28 PHIDGET_TEXTLCD_SCREEN_1x8 = 2

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 1 row, 8 column screen

137.35.29 PHIDGET_TEXTLCD_SCREEN_2x16 = 5

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 16 column screen

137.35.30 PHIDGET_TEXTLCD_SCREEN_2x20 = 7

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 20 column screen

137.35.31 PHIDGET_TEXTLCD_SCREEN_2x24 = 9

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 24 column screen

137.35.32 PHIDGET_TEXTLCD_SCREEN_2x40 = 11

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 40 column screen

137.35.33 PHIDGET_TEXTLCD_SCREEN_2x8 = 3

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 2 row, 8 column screen

137.35.34 PHIDGET_TEXTLCD_SCREEN_4x16 = 6

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 16 column screen

137.35.35 PHIDGET_TEXTLCD_SCREEN_4x20 = 8

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 20 column screen

137.35.36 PHIDGET_TEXTLCD_SCREEN_4x40 = 12

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: 4 row, 40 column screen (special case, requires both screen connections)

137.35.37 PHIDGET_TEXTLCD_SCREEN_NONE = 1

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: no screen attached

137.35.38 PHIDGET_TEXTLCD_SCREEN_UNKNOWN = 13

MBS Phidgets Plugin, Plugin Version: 11.1.

Function: One of the screen size constants for the Phidget TextLCD Adapter.
Notes: Unknown

137.36 class OldPhidgetTextLEDMBS

137.36.1 class OldPhidgetTextLEDMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget text LED.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

137.36.2 Methods

137.36.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: On success the handle value is not zero.

137.36.4 getBrightness as Integer

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current brightness.
Notes: The Lasterror property is set.

137.36.5 getColumnCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of columns per supported by this display.
Notes: The Lasterror property is set.

137.36.6 getRowCount as Integer

MBS Phidgets Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of rows supported by this display.
Notes: The Lasterror property is set.

137.36.7 setBrightness(Brightness as Integer)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the brightness.
Notes: The Lasterror property is set.

137.36.8 setDisplayString(row as Integer, displayString as string)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the display string for the given row.
Notes: The Lasterror property is set.

137.37 class OldPhidgetWeightSensorMBS

137.37.1 class OldPhidgetWeightSensorMBS

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a phidget weight sensor.
Notes:

On the time the plugin was written the phidget documentation did not include this class so the documentation here is limited.
Subclass of the OldPhidgetMBS class.

137.37.2 Methods

137.37.3 Constructor

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

On success the handle value is not zero.
The Lasterror property is set.

137.37.4 getWeight as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns the current weight.
Notes: The Lasterror property is set.

137.37.5 getWeightChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.

Notes: The Lasterror property is set.

137.37.6 setWeightChangeTrigger(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the amount of change that should exist between the last reported value and the current value before an WeightChange event is fired.
Notes: The Lasterror property is set.

137.37.7 Events

137.37.8 WeightChanged(value as Double)

MBS Phidgets Plugin, Plugin Version: 7.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The weight changed.
Notes:

With plugin version 8.5 and newer this event is executed on the main thread of your application to avoid crashes with Xojo. Events are buffered until you the main thread has time available.
Older plugins execute the event on the thread where the event was created which may lead into problems described in the ThreadMBS class documentation.

137.38 class PhidgetAccelerometerMBS

137.38.1 class PhidgetAccelerometerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Accelerometer class is used to gather acceleration data from Phidget accelerometer boards.
Notes:

Phidget accelerometers usually have multiple sensors, each oriented in a different axis, so multiple dimensions of acceleration can be recorded.

If the Phidget you're using also has a gyroscope and a magnetometer, you may want to use the Spatial class in order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

137.38.2 Methods

137.38.3 Acceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent acceleration value that the channel has reported.

137.38.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.38.5 MaxAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the AccelerationChange event will report.

137.38.6 MinAcceleration as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the AccelerationChange event will report.

137.38.7 Properties

137.38.8 AccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a AccelerationChange event until the acceleration value has changed by the amount specified by the AccelerationChangeTrigger.
Notes:

Setting the AccelerationChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.38.9 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of axes the channel can measure acceleration on.
Notes: (Read only property)

137.38.10 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another AccelerationChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between AccelerationChange events can also affected by the AccelerationChangeTrigger.

Unit: milliseconds (ms)

(Read and Write property)

137.38.11 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether self-heating temperature stabilization is enabled.
Notes:

Set to true to enable the temperature stabilization feature of this device. This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

137.38.12 MaxAccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that AccelerationChangeTrigger can be set to.
Notes: (Read only property)

137.38.13 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.38.14 MinAccelerationChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that AccelerationChangeTrigger can be set to.
Notes: (Read only property)

137.38.15 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.38.16 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent timestamp value that the channel has reported.
Notes:

This is an extremely accurate time measurement streamed from the device.
If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

137.38.17 Events

137.38.18 AccelerationChanged(acceleration() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent acceleration values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a AccelerationChangeTrigger has been set to a non-zero value, the AccelerationChange event will not occur until the acceleration has changed by at least the AccelerationChangeTrigger value.

acceleration: The acceleration values.
timestamp: The timestamp value.

137.39 class PhidgetBLDCMotorMBS

137.39.1 class PhidgetBLDCMotorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The BLDC Motor class controls the power applied to attached brushless DC motors to affect its speed and direction.
Notes:

It can also contain various other control and monitoring functions that aid in the control of brushless DC motors.
Subclass of the PhidgetMBS class.

137.39.2 Methods

137.39.3 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds an offset (positive or negative) to the current position.
Notes: This can be especially useful for zeroing position.

137.39.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.39.5 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the

channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For BLDC Motor channels, this will set the Target Velocity to 0. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.39.6 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.39.7 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target velocity asynchronously.
Notes:

The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a

direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.

Calls setTargetVelocityAsyncCompleted event later.

137.39.8 Properties

137.39.9 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's Velocity.
Notes:

The acceleration is bounded by MinAccleration and MaxAcceleration.
Unit: duty cycle per second (duty cycle/s)
(Read and Write property)

137.39.10 BrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent braking strength value that the controller has reported.
Notes: (Read only property)

137.39.11 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another update event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
Unit: milliseconds (ms)
(Read and Write property)

137.39.12 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes:

Unit: duty cycle per second (duty cycle/s)
(Read only property)

137.39.13 MaxBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetBrakingStrength can be set to.
Notes: (Read only property)

137.39.14 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.39.15 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.39.16 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of Position.
Notes: (Read only property)

137.39.17 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of StallVelocity.
Notes: (Read only property)

137.39.18 MaxVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetVelocity can be set to.
Notes:

TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.
(Read only property)

137.39.19 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes:

Unit: duty cycle per second (duty cycle/s)
(Read only property)

137.39.20 MinBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetBrakingStrength can be set to.
Notes: (Read only property)

137.39.21 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.39.22 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.39.23 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of Position.
Notes: (Read only property)

137.39.24 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of StallVelocity.
Notes: (Read only property)

137.39.25 MinVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetVelocity can be set to.
Notes:

Set the TargetVelocity to MinVelocity to stop the motor. See TargetBrakingStrength for more information on stopping the motor.
TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.
(Read only property)

137.39.26 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value that the controller has reported.
Notes:

Position values are calculated using Hall Effect sensors mounted on the motor, therefore, the resolution of position depends on the motor you are using.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.

(Read only property)

137.39.27 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Change the units of your parameters so that your application is more intuitive.
Notes:

Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.
(Read and Write property)

137.39.28 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The stall velocity.
Notes:

Before reading this description, it is important to note the difference between the units of StallVelocity and Velocity.

- Velocity is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
- StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will then monitor the motor's velocity, as well as the Velocity, and prevent a 'dangerous stall' from occuring. If the controller detects a dangerous stall, it will immediately reduce the Velocity (i.e. average voltage) to 0 and an error will be reported to your program.

- A 'dangerous stall' will occur faster when the Velocity is higher (i.e. when the average voltage across the motor is higher)
- A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger .

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

137.39.29 TargetBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The braking value.
Notes:

When a motor is not being actively driven forward or reverse, you can choose if the motor will be allowed to freely turn, or will resist being turned.
A low TargetBrakingStrength value corresponds to free wheeling, this will have the following effects:
The motor will continue to rotate after the controller is no longer driving the motor (i.e. Velocity is 0), due to inertia.
The motor shaft will provide little resistance to being turned when it is stopped.
A higher TargetBrakingStrength value will resist being turned, this will have the following effects:
The motor will more stop more quickly if it is in motion and braking has been requested. It will fight against the rotation of the shaft.

Braking mode is enabled by setting the Velocity to MinVelocity

(Read and Write property)

137.39.30 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The average voltage across the motor is based on the TargetVelocity value.
Notes:

At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.
(Read and Write property)

137.39.31 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes: (Read only property)

137.39.32 Events

137.39.33 BrakingStrengthChanged(brakingStrength as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent braking strength value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

Regardless of the DataInterval, this event will occur only when the braking strength value has changed from the previous value reported.
Braking mode is enabled by setting the Velocity to MinVelocity.

137.39.34 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Regardless of the DataInterval, this event will occur only when the position value has changed from the previous value reported.
Notes:

Position values are calculated using Hall Effect sensors mounted on the motor, therefore, the resolution of position depends on the motor you are using.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees. For more information on how to apply the RescaleFactor to your application, see your controller's User Guide.

137.39.35 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Event called when setTargetVelocityAsync finished.

137.39.36 VelocityUpdated(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent velocity value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date access to all properties.

137.40 class PhidgetCapacitiveTouchMBS

137.40.1 class PhidgetCapacitiveTouchMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Capacitive Touch class gathers input data from capacitive buttons and sliders on Phidget boards.
Notes: Subclass of the PhidgetMBS class.

137.40.2 Methods

137.40.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.40.4 Properties

137.40.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another Touch event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between Touch events can also affected by the TouchValueChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.40.6 IsTouched as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent touch state that the channel has reported.
Notes:

This will be false or true.
false is not touched
true is touched
(Read only property)

137.40.7 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.40.8 MaxSensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Sensitivity can be set to.
Notes: (Read only property)

137.40.9 MaxTouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the Touch event will report.
Notes: (Read only property)

137.40.10 MaxTouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TouchValueChangeTrigger can be set to.
Notes: (Read only property)

137.40.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.40.12 MinSensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Sensitivity can be set to.
Notes: (Read only property)

137.40.13 MinTouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the Touch event will report.
Notes: (Read only property)

137.40.14 MinTouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TouchValueChangeTrigger can be set to.
Notes: (Read only property)

137.40.15 Sensitivity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines the sensitivity of all capacitive regions on the device.
Notes:

Higher values result in greater touch sensitivity.
The sensitivity value is bounded by MinSensitivity and MaxSensitivity.
(Read and Write property)

137.40.16 TouchValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent touch value that the channel has reported.
Notes:

This will be 0 or 1 for button-type inputs, or a ratio between 0-1 for axis-type inputs.
This value is bounded by MinTouchValue and MaxTouchValue.
The value is not reset when the touch ends.
(Read only property)

137.40.17 TouchValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a Touch event until the touch value has changed by the amount specified by the TouchValueChangeTrigger.
Notes:

Setting the TouchValueChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.40.18 Events

137.40.19 Touched(touchValue as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent touch value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a TouchValueChangeTrigger has been set to a non-zero value, the Touch event will not occur until the

touch value has changed by at least the TouchValueChangeTrigger value.

touchValue:Value of the touch input axis.

137.40.20 TouchEnded

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The channel will report a TouchEnd event to signify that it is no longer detecting a touch.

137.41 class PhidgetCurrentInputMBS

137.41.1 class PhidgetCurrentInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Current Input class is used to measure current flowing through the Phidget from outside sources..
Notes:

This class may be used on a simple current sensor, or sometimes on a more complex Phidget that measures the amount of current flowing through an attached device, such as a motor controller, for diagnostic or control purposes.
Subclass of the PhidgetMBS class.

137.41.2 Methods

137.41.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.41.4 Properties

137.41.5 Current as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent current value that the channel has reported.
Notes:

This value will always be between MinCurrent and MaxCurrent.
In amperes.
(Read only property)

137.41.6 CurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a CurrentChange event until the current value has changed by the amount specified by the CurrentChangeTrigger.
Notes:

Setting the CurrentChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
in amperes.
(Read and Write property)

137.41.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another CurrentChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between CurrentChange events can also affected by the CurrentChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.41.8 MaxCurrent as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the CurrentChange event will report.
Notes: (Read only property)

137.41.9 MaxCurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentChangeTrigger can be set to.

Notes: (Read only property)

137.41.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.41.11 MinCurrent as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the CurrentChange event will report.
Notes: (Read only property)

137.41.12 MinCurrentChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentChangeTrigger can be set to.
Notes: (Read only property)

137.41.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.41.14 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes:

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to kPowerSupplyOff to turn off the supply to save power.
(Read and Write property)

137.41.15 Events

137.41.16 CurrentChanged(current as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent current value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a CurrentChangeTrigger has been set to a non-zero value, the CurrentChange event will not occur until the current value has changed by at least the CurrentChangeTrigger value.

137.42 class PhidgetDCMotorMBS

137.42.1 class PhidgetDCMotorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DC Motor class controls the power applied to attached DC motors to affect its speed and direction.
Notes:

It can also contain various other control and monitoring functions that aid in the control of DC motors.
Subclass of the PhidgetMBS class.

137.42.2 Methods

137.42.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.42.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe

again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For DC Motor channels, this will set the Target Velocity to 0. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.42.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.42.6 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target velocity asynchronously.
Notes:

The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller controls velocity by rapidly switching the power on/off (i.e. changing the duty cycle) in order to manipulate the voltage across the motor.

Calls setTargetVelocityAsyncCompleted event later when done.

137.42.7 Properties

137.42.8 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's Velocity.
Notes:

The acceleration is bounded by MinAccleration and MaxAcceleration.

Unit: duty cycle per second (duty cycle/s)
(Read and Write property)

137.42.9 BackEMF as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent BackEMF value that the controller has reported.
Notes: (Read only property)

137.42.10 BackEMFSensingState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When BackEMFSensingState is enabled, the controller will measure and report the BackEMF.
Notes:

The motor will coast (freewheel) 5% of the time while the back EMF is being measured (800s every 16ms). Therefore, at a DutyCycle of 100% , the motor will only be driven for 95% of the time.
(Read and Write property)

137.42.11 BrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent braking strength value that the controller has reported.
Notes:

See TargetBrakingStrength for details.
(Read only property)

137.42.12 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The controller will limit the current through the motor to the CurrentLimit value.
Notes:

Unit: amperes (A)
(Read and Write property)

137.42.13 CurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current regulator gain.
Notes:

Depending on power supply voltage and motor coil inductance, current through the motor can change relatively slowly or extremely rapidly. A physically larger DC Motor will typically have a lower inductance, requiring a higher current regulator gain. A higher power supply voltage will result in motor current changing more rapidly, requiring a higher current regulator gain. If the current regulator gain is too small, spikes in current will occur, causing large variations in torque, and possibly damaging the motor controller. If the current regulator gain is too high, the current will jitter, causing the motor to sound 'rough', especially when changing directions.

As a rule of thumb, we recommend setting this value as follows:
(Read and Write property)

137.42.14 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another VelocityUpdate/BrakingStrengthChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
Note: BrakingStrengthChange events will only fire if a change in braking has occurred.

Unit: milliseconds (ms)
(Read and Write property)

137.42.15 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes:

Unit: duty cycle per second (duty cycle/s)
(Read only property)

137.42.16 MaxBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetBrakingStrength can be set to.
Notes:

See TargetBrakingStrength for details.
(Read only property)

137.42.17 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentLimit can be set to.
Notes:

Unit: amperes (A)
(Read only property)

137.42.18 MaxCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentRegulatorGain can be set to.
Notes: (Read only property)

137.42.19 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.42.20 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

in milliseconds.
(Read only property)

137.42.21 MaxVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetVelocity can be set to.
Notes:

TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.

Unit: duty cycle (duty cycle)
(Read only property)

137.42.22 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes:

Unit: duty cycle per second (duty cycle/s)
(Read only property)

137.42.23 MinBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetBrakingStrength can be set to.
Notes:

See TargetBrakingStrength for details.
(Read only property)

137.42.24 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentLimit can be set to.
Notes:

Unit: amperes (A)
(Read only property)

137.42.25 MinCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentRegulatorGain can be set to.
Notes: (Read only property)

137.42.26 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.42.27 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

in milliseconds.
(Read only property)

137.42.28 MinVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetVelocity can be set to
Notes:

Set the TargetVelocity to MinVelocity to stop the motor. See TargetBrakingStrength for more information on stopping the motor.
TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.

Unit: duty cycle (duty cycle)
(Read only property)

137.42.29 TargetBrakingStrength as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This setting allows you to choose how hard the motor will resist being turned when it is not

being driven forward or reverse (Velocity = 0).
Notes:

The TargetBrakingStrength sets the relative amount of electrical braking to be applied to the DC motor, with MinBrakingStrength corresponding to no braking (free-wheeling), and MaxBrakingStrength indicating full braking.

A low TargetBrakingStrength value corresponds to free-wheeling. This means:
The motor will continue to rotate after the controller is no longer driving the motor (Velocity = 0), due to its momentum.
The motor shaft will provide little resistance to being turned when it is stopped.
As TargetBrakingStrength increases, this will engage electrical braking of the DC motor. This means:
The motor will stop more quickly if it is in motion when braking is requested.
The motor shaft will resist rotation by oustide forces.
Braking will be added gradually, according to the Acceleration setting, once the motor controller's Velocity reaches 0.0
Braking will be immediately stopped when a new (non-zero) TargetVelocity is set, and the motor will accelerate to the requested velocity.
Braking mode is enabled by setting the Velocity to 0.0
(Read and Write property)

137.42.30 TargetVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target velocity.
Notes:

The average voltage across the motor is based on the TargetVelocity value.
At a constant load, increasing the target velocity will increase the speed of the motor.
TargetVelocity is bounded by -1×MaxVelocity and MaxVelocity, where a sign change (±) is indicitave of a direction change.
Setting TargetVelocity to MinVelocity will stop the motor. See TargetBrakingStrength for more information on stopping the motor.
The units of TargetVelocity and Acceleration refer to 'duty cycle'. This is because the controller controls velocity by rapidly switching the power on/off (i.e. changing the duty cycle) in order to manipulate the voltage across the motor.
(Read and Write property)

137.42.31 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes:

Unit: duty cycle (duty cycle)
(Read only property)

137.42.32 Events

137.42.33 BackEMFChanged(backEMF as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent back emf value will be reported in this event.
Notes: backEMF: The back EMF voltage from the motor

137.42.34 BrakingStrengthChanged(brakingStrength as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the motor braking strength changes.
Notes:

brakingStrength:The most recent braking strength value will be reported in this event.
This event will occur only when the value of braking strength has changed
See TargetBrakingStrength for details about what this number represents.

137.42.35 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when setTargetVelocityAsync completed.

137.42.36 VelocityUpdated(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs at a rate defined by the DataInterval.
Notes: velocity:The most recent velocity value will be reported in this event.

137.43 class PhidgetDictionaryMBS

137.43.1 class PhidgetDictionaryMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Dictionaries are useful for passing information between multiple programs using Phidgets. #
Notes:

A common example would be to have one program controlling your application that receives commands sent via a Phidget dictionary from a web interface, as outlined in many of our articles.

Keys can be thought of as being similar to variable names, with their values as their associated value. Phidget dictionaries contain groups of related key-value pairs, and are stored on a central Phigdet Network Server. Dictionaries, and the key-value pairs within may be accessed from programs that have access to the Phigdet Network Server.

The Dictionary API supports connecting to a dictionary on the server, managing key-value pairs, and monitoring changes made to the dictionary.

More information on Phidget Dictionaries can be found on the Phidget Dictionary support page.
Subclass of the PhidgetMBS class.

137.43.2 Methods

137.43.3 add(key as String, value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a new key value pair to the dictionary.
Notes: It is an error if the key already exits.

137.43.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: creates an instance of a Phidget channel.

137.43.5 Keys as String()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries all keys in a dictionary.
Notes:

The list might not contain all of the keys in the dictionary if it is modified while you query keys.
Keys added during the scan may be missed, and keys deleted during the scan may be included.

137.43.6 remove(key as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes the key from the dictionary.

137.43.7 removeAll

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes every key from the dictionary.

137.43.8 update(key as String, value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Updates a key value pair in the dictionary.
Notes: It is an error if the key does not exist.

137.43.9 validDictionaryKey(key as String) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks whether this is a valid key to use.
Notes: Returns true on success or false on failure.

137.43.10 Properties

137.43.11 Value(key as String) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set or get the value associated with the given key from the dictionary.
Notes: (Read and Write computed property)

137.43.12 Events

137.43.13 Added(Key as String, Value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a new key value pair is added to the dictionary.
Notes:

key: The key that was added
value: The value of the new key

137.43.14 Removed(Key as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a key is removed from the dictionary.

137.43.15 Updated(Key as String, Value as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a change is made to a key value pair in the dictionary.

137.44 class PhidgetDigitalInputMBS

137.44.1 class PhidgetDigitalInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Digital Input class is used to monitor the state of Phidget digital inputs.
Notes:

Use digital inputs to monitor the state of buttons, switches, or switch-to-ground sensors.
Subclass of the PhidgetMBS class.

137.44.2 Methods

137.44.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.44.4 Properties

137.44.5 InputMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input polarity mode for your channel.
Notes:

See your device's User Guide for more information about what value to chooose for the InputMode.
(Read and Write property)

137.44.6 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes:

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to kPowerSupplyOff to turn off the supply to save power.
(Read and Write property)

137.44.7 State as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent state value that the channel has reported.
Notes: (Read only property)

137.44.8 Events

137.44.9 StateChanged(state as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event will occur when the state of the digital input has changed.
Notes: The value will either be 0 or 1 (true or false).

137.44.10 Constants

137.44.11 kInputModeNPN = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the input modes.
Notes: For interfacing NPN digital sensors.

137.44.12 kInputModePNP = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the input modes.
Notes: For interfacing PNP digital sensors.

137.44.13 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 12 volts.

137.44.14 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 24 volts.

137.44.15 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: Switch the sensor power supply off.

137.45 class PhidgetDigitalOutputMBS

137.45.1 class PhidgetDigitalOutputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Digital Output class is used to control digital logic outputs and LED outputs on Phidgets boards.
Notes: Subclass of the PhidgetMBS class.

137.45.2 Methods

137.45.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.45.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Digital Output

channels, this will set the output state to FALSE. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.45.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.45.6 setDutyCycleAsync(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the duty cycle asynchronously.
Notes:

The DutyCycle represents the fraction of time the output is on (high).
This will override the State setting on the channel.
A DutyCycle of 1.0 translates to a high output, a DutyCycle of 0 translates to a low output.
This is equivalent to setting a State of TRUE and FALSE respectively.
A DutyCycle of 0.5 translates to an output that is high half the time, which results in an average output voltage of (output voltage x 0.5)
You can use the DutyCycle to create a dimming effect on LEDs.
If the DigitalOutput channel you are using does not support PWM, then this value may only be set to 1.0 or 0.0
You can check if your device supports PWM by checking the ChannelSubclass property, viewable by selecting Phidget API above. Your DigitalOutput channel supports PWM if it is any subclass other than NONE.

calls setDutyCycleAsyncCompleted later.

137.45.7 setLEDCurrentLimitAsync(LEDCurrentLimit as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
Notes:

Reference the data sheet of the LED you are using before setting this value.

Calls setLEDCurrentLimitAsyncCompleted event later.

137.45.8 setStateAsync(state as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the state asynchronously.
Notes:

The State will dictate whether the output is constantly high (true) or low (false).
This will override any DutyCycle that may have been set on the channel.
Setting the State to true is the same as setting DutyCycle to 1.0, and setting the State to false is the same as setting a DutyCycle of 0.0.

Calls setStateAsyncCompleted event later.

137.45.9 Properties

137.45.10 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DutyCycle represents the fraction of time the output is on (high).
Notes:

A DutyCycle of 1.0 translates to a high output, a DutyCycle of 0 translates to a low output.
A DutyCycle of 0.5 translates to an output that is high half the time, which results in an average output voltage of (output voltage x 0.5)
You can use the DutyCycle to create a dimming effect on LEDs.

Unit: duty cycle (duty cycle)

(Read and Write property)

137.45.11 Frequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Frequency parameter sets the PWM frequency for all frequency-settable PWM outputs on the board.
Notes:

in hertz (Hz)
(Read and Write property)

137.45.12 LEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
Notes:

Reference the data sheet of the LED you are using before setting this value.
n amperes.
(Read and Write property)

137.45.13 LEDForwardVoltage as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LEDCurrentLimit is the maximum amount of current that the controller will provide to the output.
Notes:

Reference the data sheet of the LED you are using before setting this value.
(Read and Write property)

137.45.14 MaxDutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DutyCycle can be set to.
Notes:

Unit: duty cycle (duty cycle)
(Read only property)

137.45.15 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

in milliseconds.
(Read only property)

137.45.16 MaxFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DutyCycle can be set to.
Notes:

in hertz (Hz)
(Read only property)

137.45.17 MaxLEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that LEDCurrentLimit can be set to.
Notes:

in amperes.
(Read only property)

137.45.18 MinDutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DutyCycle can be set to.
Notes:

Unit: duty cycle (duty cycle)
(Read only property)

137.45.19 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

in milliseconds.
(Read only property)

137.45.20 MinFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DutyCycle can be set to.
Notes:

in hertz (Hz)
(Read only property)

137.45.21 MinLEDCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that LEDCurrentLimit can be set to.
Notes:

in amperes.
(Read only property)

137.45.22 State as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The State will indicate whether the output is high (true) or low (false).
Notes:

If a DutyCycle has been set, the state will return as true if the DutyCycle is above 0.5, or false otherwise. (Read and Write property)

137.45.23 Events

137.45.24 setDutyCycleAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when setDutyCycleAsync is done.

137.45.25 setLEDCurrentLimitAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when setLEDCurrentLimitAsync completed.

137.45.26 setStateAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when setStateAsync completed.

137.45.27 Constants

137.45.28 kLEDForwardVoltage_1_7V = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 1.7V

137.45.29 kLEDForwardVoltage_2_75V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 2.75V

137.45.30 kLEDForwardVoltage_3_2V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 3.2V

137.45.31 kLEDForwardVoltage_3_9V = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 3.9V

137.45.32 kLEDForwardVoltage_4_0V = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 4.0V

137.45.33 kLEDForwardVoltage_4_8V = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 4.8V

137.45.34 kLEDForwardVoltage_5_0V = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 5.0V

137.45.35 kLEDForwardVoltage_5_6V = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the forward voltage setting of the LED.
Notes: 5.6V

137.46 class PhidgetDistanceSensorMBS

137.46.1 class PhidgetDistanceSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Distance Sensor class gathers data from the distance sensor on a Phidget board.
Notes:

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.46.2 Methods

137.46.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.46.4 SonarReflectionsAmplitudes as UInt32()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent reflection values that the channel has reported.
Notes: The amplitude values are relative amplitudes of the reflections that are normalized to an arbitrary scale.

137.46.5 SonarReflectionsDistances as UInt32()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent reflection values that the channel has reported.
Notes:

The distance values will always be between MinDistance and MaxDistance.
The closest reflection will be placed at index 0 of the distances array, and the furthest reflection at index 7

137.46.6 Properties

137.46.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger.

Unit: milliseconds (ms)
(Read and Write property)

137.46.8 Distance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent distance value that the channel has reported.
Notes:

This value will always be between MinDistance and MaxDistance.
in milliseconds.
(Read only property)

137.46.9 DistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue an event until the distance value has changed by the amount specified by the DistanceChangeTrigger.
Notes:

Setting the DistanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.

in milliseconds.
(Read and Write property)

137.46.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.46.11 MaxDistance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum distance that a event will report.
Notes:

in milliseconds.
(Read only property)

137.46.12 MaxDistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DistanceChangeTrigger can be set to.
Notes:

in milliseconds.
(Read only property)

137.46.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.46.14 MinDistance as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum distance that a event will report.
Notes:

in milliseconds.
(Read only property)

137.46.15 MinDistanceChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DistanceChangeTrigger can be set to.
Notes:

in milliseconds.
(Read only property)

137.46.16 SonarQuietMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When set to true, the device will operate more quietly.
Notes:

The measurable range is reduced when operating in quiet mode.
(Read and Write property)

137.46.17 Events

137.46.18 DistanceChanged(distance as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent distance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a DistanceChangeTrigger has been set to a non-zero value, the DistanceChange event will not occur until the distance has changed by at least the DistanceChangeTrigger value.

137.46.19 SonarReflectionsUpdated(distances() as UInt32, amplitudes() as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent reflections the channel has detected will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a DistanceChangeTrigger has been set to a non-zero value, the SonarReflectionsUpdate event will not occur until the distance has changed by at least the DistanceChangeTrigger value.
The closest reflection will be placed at index 0 of the distances array, and the furthest reflection at index 7.
If you are only interested in the closest reflection, you can simply use the DistanceChange event.
The values reported as amplitudes are relative amplitudes of the reflections that are normalized to an arbitrary scale.

distances: The reflection values
amplitudes: The amplitude values
count: The number of reflections detected

137.47 class PhidgetEncoderMBS

137.47.1 class PhidgetEncoderMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Encoder class is used to read position data from quadrature encoders in order to track linear or rotary movement.
Notes:

If the device supports an index pin as a reference point, you can also access it through this class.
Subclass of the PhidgetMBS class.

137.47.2 Methods

137.47.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.47.4 Properties

137.47.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another PositionChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PositionChange events can also affected by the PositionChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.47.6 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The enabled state of the encoder.
Notes: (Read and Write property)

137.47.7 IndexPosition as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position of the index channel calculated by the Phidgets library.
Notes:

The index channel will usually pulse once per rotation.
Setting the encoder position will move the index position the same amount so their relative position stays the same.
Index position is tracked locally as the last position at which the index was triggered. Setting position will only affect the local copy of the index position value. This means that index positions seen by multiple network applications may not agree.
(Read only property)

137.47.8 IOMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The encoder interface mode. Match the mode to the type of encoder you have attached.
Notes:

It is recommended to only change this when the encoder disabled in order to avoid unexpected results.
(Read and Write property)

137.47.9 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)

(Read only property)

137.47.10 MaxPositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that PositionChangeTrigger can be set to.
Notes: (Read only property)

137.47.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.47.12 MinPositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that PositionChangeTrigger can be set to.
Notes: (Read only property)

137.47.13 Position as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value calculated by the Phidgets library.
Notes:

Position counts quadrature edges within a quadrature cycle. This means there are four counts per full quadrature cycle.
Position is tracked locally as the total position change from the time the channel is opened. Setting position will only affect the local copy of the position value. This means that positions seen by multiple network applications may not agree.

(Read and Write property)

137.47.14 PositionChangeTrigger as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a PositionChange event until the position value has changed by the amount specified by the PositionChangeTrigger.
Notes:

Setting the PositionChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.47.15 Events

137.47.16 PositionChanged(positionChange as Integer, timeChange as double, indexTriggered as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a PositionChangeTrigger has been set to a non-zero value, the PositionChange event will not occur until the position has changed by at least the PositionChangeTrigger value.

positionChange: The amount the position changed since the last change event
timeChange: The time elapsed since the last change event in milliseconds
indexTriggered: True if the index was passed since the last change event

137.47.17 Constants

137.47.18 kEncoderIOModeCollector10K = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface mode constants.
Notes: Line Driver 10K, 10kΩ pull-down resistors will be applied to the input lines.

137.47.19 kEncoderIOModeCollector2K2 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface mode constants.
Notes: Open Collector 2.2K, 2.2kΩ pull-up resistors will be applied to the input lines.

137.47.20 kEncoderIOModeLineDriver10K = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface mode constants.
Notes: Open Collector 10K, 10kΩ pull-up resistors will be applied to the input lines.

137.47.21 kEncoderIOModeLineDriver2K2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface mode constants.
Notes: Line Driver 2.2K, 2.2kΩ pull-down resistors will be applied to the input lines.

137.47.22 kEncoderIOModePushPull = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface mode constants.
Notes: Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

137.48 class PhidgetErrorExceptionMBS

137.48.1 class PhidgetErrorExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The error exception.
Notes:

Whenever a Phidget function returns an error, we raise an exception and put the error number into the exceptions.
Subclass of the RuntimeException class.

137.48.2 Blog Entries

- Rewritten Phidgets Plugin

137.48.3 Blog Entries

- Rewritten Phidgets Plugin

137.49 class PhidgetFrequencyCounterMBS

137.49.1 class PhidgetFrequencyCounterMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Frequency Counter class is used to measure the frequency of pulses in an electronic signal, or to count the pulses in the signal.
Notes:

Such signals can come from other electronics, or certain sensors that have a pulse output.
Subclass of the PhidgetMBS class.

137.49.2 Blog Entries

- New Phidgets supported

137.49.4 Methods

137.49.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.49.6 reset

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the Count and TimeElapsed.
Notes: For best results, reset should be called when the channel is disabled.

137.49.7 Properties

137.49.8 Count as Int64

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent count value the channel has reported.
Notes:

The count represents the total number of pulses since the the channel was opened, or last reset.
(Read only property)

137.49.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another CountChange/FrequencyChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

137.49.10 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables or disables the channel.
Notes:

When a channel is disabled, it will not longer register counts, therefore the TimeElapsed and Count will not be updated until the channel is re-enabled.
(Read and Write property)

137.49.11 FilterType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines the signal type that the channel responds to.
Notes:

The filter type is chosen based on the type of input signal. See the PhidgetFrequencyCounter_FilterType entry under Enumerations for more information.
(Read and Write property)

137.49.12 Frequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent frequency value that the channel has reported.
Notes:

This value will always be between 0 Hz and MaxFrequency.
in Hertz.
(Read only property)

137.49.13 FrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The frequency at which zero hertz is assumed.
Notes:

This means any frequency at or below the FrequencyCutoff value will be reported as 0 Hz.
This property is stored locally, so other users who have this Phidget open over a network connection won't see the effects of your selected cutoff.
(Read and Write property)

137.49.14 InputMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input polarity mode for your channel.
Notes:

See your device's User Guide for more information about what value to chooose for the InputMode
(Read and Write property)

137.49.15 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.49.16 MaxFrequency as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the FrequencyChange event will report.
Notes: (Read only property)

137.49.17 MaxFrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that FrequencyCutoff can be set to.
Notes: (Read only property)

137.49.18 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.49.19 MinFrequencyCutoff as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that FrequencyCutoff can be set to.
Notes: (Read only property)

137.49.20 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes:

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to POWER_SUPPLY_OFF to turn off the supply to save power.
(Read and Write property)

137.49.21 TimeElapsed as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The amount of time the frequency counter has been enabled for.
Notes:

This property complements Count, the total number of pulses detected since the channel was opened, or last reset.
(Read only property)

137.49.22 Events

137.49.23 CountChanged(counts as UInt64, timeChange as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

counts: The pulse count of the signal
timeChange: The change in elapsed time since the last change

137.49.24 FrequencyChanged(frequency as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent frequency value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: frequency: The calculated frequency of the signal.

137.49.25 Constants

137.49.26 kFilterTypeLogicLevel = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the filter types.
Notes: Logic level

137.49.27 kFilterTypeZeroCrossing = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the filter types.
Notes: Zero crossing

137.49.28 kInputModeNPN = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the input modes.
Notes: For interfacing NPN digital sensors.

137.49.29 kInputModePNP = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the input modes.
Notes: For interfacing PNP digital sensors.

137.49.30 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 12 volts

137.49.31 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 24 volts

137.49.32 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: Switch the sensor power supply off.

137.50 class PhidgetGPGGAMBS

137.50.1 class PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GGA Sentence.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.50.4 Methods

137.50.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.50.6 Properties

137.50.7 altitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mean sea level altitude.
Notes: (Read and Write property)

137.50.8 fixQuality as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: GPS quality indicator.
Notes: (Read and Write property)

137.50.9 heightOfGeoid as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Geoidal separation.
Notes: (Read and Write property)

137.50.10 horizontalDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Horizontal dilution of precision.
Notes: (Read and Write property)

137.50.11 latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Latitude.
Notes: (Read and Write property)

137.50.12 longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Longitude.
Notes: (Read and Write property)

137.50.13 numSatellites as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of satellites in use.
Notes: (Read and Write property)

137.51 class PhidgetGPGSAMBS

137.51.1 class PhidgetGPGSAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GSA sentence
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.51.4 Methods

137.51.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.51.6 Properties

137.51.7 fixType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Fix type.
Notes:

1 = no fix, 2 = 2D, 3 = 3D.
(Read and Write property)

137.51.8 horizDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Horizontal dilution of precision.
Notes: (Read and Write property)

137.51.9 mode as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manual/Automatic mode.
Notes:

A = auto, M = manual.
(Read and Write property)

137.51.10 posnDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Position dilution of precision.
Notes: (Read and Write property)

137.51.11 vertDilution as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Vertical dilution of precision.
Notes: (Read and Write property)

137.51.12 satUsed(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Satellite IDs.
Notes:

Index in range of 0 to 11.
(Read and Write computed property)

137.52 class PhidgetGPRMCMBS

137.52.1 class PhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA RMC sentence.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.52.4 Methods

137.52.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.52.6 Properties

137.52.7 heading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Heading over ground in degrees.
Notes: (Read and Write property)

137.52.8 latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Latitude.
Notes: (Read and Write property)

137.52.9 longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Longitude.
Notes: (Read and Write property)

137.52.10 magneticVariation as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Magnetic variation.
Notes: (Read and Write property)

137.52.11 mode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mode indicator.
Notes: (Read and Write property)

137.52.12 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Speed over ground in knots.
Notes: (Read and Write property)

137.52.13 status as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Status of the data
Notes: (Read and Write property)

137.53 class PhidgetGPSMBS

137.53.1 class PhidgetGPSMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The GPS class is used to configure and gather data from Phidgets GPS sensors, and gives you access to variables from GPS data packets.
Notes: Subclass of the PhidgetMBS class.

137.53.2 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6

137.53.3 Blog Entries

- MBS Real Studio Plugins, version 12.0pr6
- MBS Plugins 11.1 Release notes
- MBS Real Studio Plugins, version 11.1pr8
- New Phidgets supported

137.53.4 Methods

137.53.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.53.6 NMEAData as PhidgetGPSNMEAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the NMEA data structure.

137.53.7 Properties

137.53.8 Altitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The altitude above mean sea level in meters.
Notes: (Read only property)

137.53.9 Date as Date

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The UTC date of the last received position.
Notes:

Returns time and date as date object.
(Read only property)

137.53.10 DateTime as DateTime

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The UTC date of the last received position.
Notes:

Returns time and date as datetime object.
(Read only property)

137.53.11 Heading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current true course over ground of the GPS.
Notes:

Heading over ground in degrees.
(Read only property)

137.53.12 Latitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The latitude of the GPS in degrees.
Notes: (Read only property)

137.53.13 Longitude as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The longitude of the GPS.
Notes: (Read only property)

137.53.14 PositionFixState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The status of the position fix.
Notes:

True if a fix is available and latitude, longitude, and altitude can be read. False if the fix is not available.
(Read only property)

137.53.15 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current speed over ground of the GPS.
Notes: (Read only property)

137.53.16 Events

137.53.17 HeadingChanged(heading as double, velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when a heading change occurs.
Notes:

heading: The current heading.
velocity: The current velocity.

137.53.18 PositionChanged(latitude as double, longitude as double, altitude as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent values the channel has measured will be reported in this event, which occurs when the GPS position changes.
Notes:

latitude: The current latitude.
longitude: The current longitude.
altitude: The current altitude.

137.53.19 PositionFixStateChanged(positionFixState as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a position fix is obtained or lost.
Notes:

positionFixState:The state of the position fix.
True indicates a fix is obtained. False indicates no fix found.

137.54 class PhidgetGPSNMEAMBS

137.54.1 class PhidgetGPSNMEAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The NMEA Data structure.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.54.2 Methods

137.54.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.54.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.54.5 Properties

137.54.6 GGA as PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GGA Sentence.
Notes: (Read and Write property)

137.54.7 GSA as PhidgetGPGGAMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA GSA Sentence.
Notes: (Read and Write property)

137.54.8 RMC as PhidgetGPRMCMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA RMC Sentence.
Notes: (Read and Write property)

137.54.9 VTG as PhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA VTG Sentence.
Notes: (Read and Write property)

137.55 class PhidgetGPVTGMBS

137.55.1 class PhidgetGPVTGMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: NMEA VTG sentence.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.55.2 Blog Entries

137.55.4 Methods

137.55.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.55.6 Properties

137.55.7 magneticHeading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Magnetic heading.
Notes: (Read and Write property)

137.55.8 mode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Mode indicator.
Notes: (Read and Write property)

137.55.9 speed as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Speed over ground in km/h.
Notes: (Read and Write property)

137.55.10 speedKnots as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Speed over ground in knots.
Notes: (Read and Write property)

137.55.11 trueHeading as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True heading over ground.
Notes: (Read and Write property)

137.56 class PhidgetGyroscopeMBS

137.56.1 class PhidgetGyroscopeMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Gyroscope class reports rotational data from the Phidget containing a gyroscope chip for use in your code.
Notes:

Phidget gyroscopes usually have multiple sensors, each oriented in a different axis, so multiple dimensions of heading can be recorded.

If the Phidget you're using also has an accelerometer and a magnetometer, you may want to use the Spatial classin order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

137.56.2 Methods

137.56.3 AngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent angular rate value that the channel has reported.
Notes: This value will always be between MinAngularRate and MaxAngularRate.

137.56.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.56.5 MaxAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the AngularRateUpdate event will report.

137.56.6 MinAngularRate as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the AngularRateUpdate event will report.

137.56.7 zero

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-zeros the gyroscope in 1-2 seconds.
Notes:

The device must be stationary when zeroing.
The angular rate will be reported as 0.0°/s while zeroing.
Zeroing the gyroscope is a method of compensating for the drift that is inherent to all gyroscopes. See your device's User Guide for more information on dealing with drift.

137.56.8 Properties

137.56.9 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of axes the channel can measure angular rate on.
Notes:

See your device's User Guide for more information about the number of axes and their orientation.
(Read only property)

137.56.10 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another AngularRateUpdate event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
Unit: milliseconds (ms)

(Read and Write property)

137.56.11 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set to true to enable the temperature stabilization feature of this device.
Notes:

This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)

HeatingEnabled: Whether self-heating temperature stabilization is enabled
(Read and Write property)

137.56.12 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.56.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.56.14 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent timestamp value that the channel has reported.
Notes:

This is an extremely accurate time measurement streamed from the device.
If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

137.56.15 Events

137.56.16 AngularRateUpdated(angularRate() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent angular rate and timestamp values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

angularRate: The angular rate values
timestamp: The timestamp value

137.57 class PhidgetHubMBS

137.57.1 class PhidgetHubMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hub class allows you to control power to VINT hub ports.
Notes: Subclass of the PhidgetMBS class.

137.57.2 Methods

137.57.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.57.4 setPortPower(Port as Integer, State as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Controls power to the VINT Hub Ports.
Notes:

port: The Hub port
state: The power state

137.58 class PhidgetHumiditySensorMBS

137.58.1 class PhidgetHumiditySensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Humidity Sensor class gathers relative humidity data from the Phidget and makes it available to your code.
Notes:

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.58.2 Methods

137.58.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.58.4 Properties

137.58.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another HumidityChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between HumidityChange events can also affected by the HumidityChangeTrigger.
Unit: milliseconds (ms)
(Read and Write property)

137.58.6 Humidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent humidity value that the channel has reported.
Notes:

This value will always be between MinHumidity and MaxHumidity.
(Read only property)

137.58.7 HumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a HumidityChange event until the humidity value has changed by the amount specified by the HumidityChangeTrigger.
Notes:

Setting the HumidityChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
(Read and Write property)

137.58.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.58.9 MaxHumidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that the HumidityChange event will report.
Notes: (Read only property)

137.58.10 MaxHumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that HumidityChangeTrigger can be set to.
Notes: (Read only property)

137.58.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.58.12 MinHumidity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that the HumidityChange event will report.
Notes: (Read only property)

137.58.13 MinHumidityChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that HumidityChangeTrigger can be set to.
Notes: (Read only property)

137.58.14 Events

137.58.15 HumidityChanged(humidity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent humidity value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a HumidityChangeTrigger has been set to a non-zero value, the HumidityChange event will not occur until the humidity has changed by at least the HumidityChangeTrigger value.

humidity: The ambient relative humidity

137.59 class PhidgetIRCodeInfoMBS

137.59.1 class PhidgetIRCodeInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The PhidgetIR CodeInfo structure contains all information needed to transmit a code, apart from the actual code data.
Notes: Some values can be set to null to select defaults.

137.59.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

137.59.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

137.59.4 Properties

137.59.5 bitCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bits in the code.
Notes: (Read only property)

137.59.6 carrierFrequency as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Carrier frequency in Hz - defaults to 38kHz
Notes: (Read only property)

137.59.7 dutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Duty Cycle in percent (0.1-0.5).
Notes:

Defaults to 0.33

Unit: duty cycle (duty cycle)
(Read and Write property)

137.59.8 encoding as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Encoding technique used to encode the data.
Notes: (Read only property)

137.59.9 gap as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gap time in microseconds.
Notes: (Read only property)

137.59.10 length as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Constant or Variable length encoding.
Notes: (Read only property)

137.59.11 minRepeat as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Minium number of times to repeat a code on transmit.
Notes: (Read only property)

137.59.12 trail as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Trail time in microseconds.
Notes:

Can be zero for no trail.
(Read only property)

137.59.13 header(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Header pulse and space.
Notes:

Can be zero for no header.
Index in range of 0 to 1.
(Read and Write computed property)

137.59.14 one(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pulse and Space times to represent a '1' bit, in microseconds
Notes:

Index in range of 0 to 1.
(Read and Write computed property)

137.59.15 repeat(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A series or pulse and space times to represent the repeat code.
Notes:

Start and end with pulses and null terminate. Set to 0 for none.
Index in range of 0 to 25.

(Read and Write computed property)

137.59.16 toggleMask(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bit toggles, which are applied to the code after each transmit.
Notes:

index from 0 to 32.
(Read and Write computed property)

137.59.17 zero(index as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pulse and Space times to represent a '0' bit, in microseconds
Notes:

Index in range of 0 to 1.
(Read and Write computed property)

137.59.18 Constants

137.59.19 kEncodingBiPhase = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the encoding technique used.
Notes: Bi-Phase, or Manchester encoding

137.59.20 kEncodingPulse = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the encoding technique used.
Notes: Pulse encoding, or Pulse Width Modulation

137.59.21 kEncodingRC5 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the encoding technique used.
Notes: RC5 - a type of Bi-Phase encoding

137.59.22 kEncodingRC6 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the encoding technique used.
Notes: RC6 - a type of Bi-Phase encoding

137.59.23 kEncodingSpace = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the encoding technique used.
Notes: Space encoding, or Pulse Distance Modulation

137.59.24 kEncodingUnknown = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the encoding technique used.
Notes: Unknown - the default value

137.59.25 kLengthConstant = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the length type of the bitstream and gaps.
Notes: Constant - the bitstream and gap length is constant

137.59.26 kLengthUnknown = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the length type of the bitstream and gaps.
Notes: Unknown - the default value

137.59.27 kLengthVariable = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the length type of the bitstream and gaps.
Notes: Variable - the bitstream has a variable length with a constant gap

137.60 class PhidgetIRMBS

137.60.1 class PhidgetIRMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Infrared Remote class lets you read and transmit command codes from infrared remotes that the majority of household appliances use.
Notes:

You can use this class to construct and transmit commands from scratch, or learn and retransmit codes from the remote controller of your appliance.
Subclass of the PhidgetMBS class.

137.60.2 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

137.60.3 Blog Entries

- MBS REALbasic Plugins, version 10.6pr7

137.60.4 Methods

137.60.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.60.6 getLastCode(byref bitCount as UInt32) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last code the channel has received.
Notes: The code is represented by a hexadecimal string (array of bytes).

137.60.7 getLastLearnedCode(byref codeInfo as PhidgetIRCodeInfoMBS) as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last code the channel has learned.
Notes:

The code is represented by a hexadecimal string (array of bytes).
The codeInfo structure holds data that describes the learned code.

137.60.8 transmit(code as String, codeInfo as PhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a code
Notes:

code data is transmitted MSBit first.
MSByte is in array index 0 of code
LSBit is right justified, therefore, MSBit may be in bit position 0-7 (of array index 0) depending on the bit count.

code:code data
codeInfo:contains the data for characterizing the code.

137.60.9 transmitRaw(data as MemoryBlock, carrierFrequency as UInt32, dutyCycle as double, gap as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits raw data as a series of pulses and spaces.
Notes:

data: data to send.
dataLen: length of the data array
carrierFrequency: carrier frequency in Hz
dutyCycle: the duty cycle
gap: the gap time.

data must start and end with a pulse.
Each element is a positive time in s

dataLength has a maximum length of 200, however, streams should be kept must shorter than this (less than 100ms between gaps).
dataLength must be an odd number
Leave carrierFrequency as 0 for default.
carrierFrequency has a range of 10kHz - 1MHz
Leave dutyCycle as 0 for default
dutyCycle can have a value between 0.1 and 0.5
Specifying a gap will guarantee a gap time (no transmitting) after data is sent.
gap time is in s
gap time can be set to 0

137.60.10 transmitRepeat

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Transmits a repeat of the last transmited code.
Notes: Depending on the CodeInfo structure, this may be a retransmission of the code itself, or there may be a special repeat code.

137.60.11 Events

137.60.12 CodeReceived(code as string, bitCount as Integer, isRepeat as Boolean)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is fired every time a code is received and correctly decoded.
Notes:

code: The code string
bitCount: The length of the received code in bits
isRepeat: true if a repeat is detected

The code is represented by a hexadecimal string (array of bytes) with a length of 1/4 of bitCount.
The MSBit is considered to be the first bit received and will be in array index 0 of code
Repeat will be true if a repeat is detected (either timing wise or via a repeat code)
False repeasts can happen if two separate button presses happen close together

137.60.13 Learned(code as string, codeInfo as PhidgetIRCodeInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event fires when a button has been held down long enough for the channel to have learned the CodeInfo values.
Notes: A code is usually learned after 1 second, or after 4 repeats.

137.60.14 RawDataReceived(data as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event will fire every time the channel gets more data.
Notes: This will happen at most once every 8ms.

137.61 class PhidgetLCDMBS

137.61.1 class PhidgetLCDMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The LCD class allows you to control various liquid crystal displays.
Notes:

It offers control of displayed text as well as screen settings and custom character creation.
Subclass of the PhidgetMBS class.

137.61.2 Methods

137.61.3 Clear

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all pixels in the current frame buffer.
Notes: Changes made to the frame buffer must be flushed to the LCD screen using flush.

137.61.4 ClearAsync

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears all pixels in the current frame buffer.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

Calls ClearAsyncCompleted event later.

137.61.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.61.6 copy(sourceFramebuffer as Integer, destFramebuffer as Integer, sourceX1 as Integer, sourceY1 as Integer, sourceX2 as Integer, sourceY2 as Integer, destX as Integer, destY as Integer, inverted as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies all pixels from a specified rectangular region to another.
Notes:

sourceFramebuffer: Index number of the frame buffer containing the source rectangle
destFramebuffer: Index number of the frame buffer containing the destination rectangle
sourceX1: X coordinate of upper left corner of source rectangle
sourceY1: Y coordinate of upper left corner of source rectangle
sourceX2: X coordinate of bottom right corner of source rectangle
sourceY2: Y coordinate of bottom right corner of source rectangle
destX: X coordinate of upper left corner of destination rectangle
destY: Y coordinate of upper left corner of destination rectangle
inverted: If true, copied pixels are inverted

137.61.7 copyAsync(sourceFramebuffer as Integer, destFramebuffer as Integer, sourceX1 as Integer, sourceY1 as Integer, sourceX2 as Integer, sourceY2 as Integer, destX as Integer, destY as Integer, inverted as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies all pixels from a specified rectangular region to another.
Notes:

sourceFramebuffer: Index number of the frame buffer containing the source rectangle
destFramebuffer: Index number of the frame buffer containing the destination rectangle
sourceX1: X coordinate of upper left corner of source rectangle
sourceY1: Y coordinate of upper left corner of source rectangle
sourceX2: X coordinate of bottom right corner of source rectangle
sourceY2: Y coordinate of bottom right corner of source rectangle
destX: X coordinate of upper left corner of destination rectangle
destY: Y coordinate of upper left corner of destination rectangle
inverted: If true, copied pixels are inverted

Calls copyAsyncCompleted event later.

137.61.8 drawLine(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a straight line in the current frame buffer between two specified points.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: X coordinate of the first point
y1: Y coordinate of the first point
x2: X coordinate of the second point
y2: Y coordinate of the second point

137.61.9 drawLineAsync(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a straight line in the current frame buffer between two specified points.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: X coordinate of the first point
y1: Y coordinate of the first point
x2: X coordinate of the second point
y2: Y coordinate of the second point

CallsdrawLineAsyncCompleted event later.

137.61.10 drawPixel(x as Integer, y as Integer, pixelState as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws, erases, or inverts a single specified pixel.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x: The X coordinate of the pixel

y: The Y coordinate of the pixel
pixelState: The new state of the pixel.

137.61.11 drawPixelAsync(x as Integer, y as Integer, pixelState as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws, erases, or inverts a single specified pixel.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x: The X coordinate of the pixel
y: The Y coordinate of the pixel
pixelState: The new state of the pixel.

Calls drawPixelAsyncCompleted event later.

137.61.12 drawRect(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer, filled as Integer, inverted as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a rectangle in the current frame buffer using the specified points.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: The X coordinate of the top-left corner of the rectangle
y1: The Y coordinate of the top-left corner of the rectangle
x2: The X coordinate of the bottom-right corner of the rectangle
y2: The Y coordinate of the bottom-right corner of the rectangle
filled: If true, the rectangle will be solid. If false, just a single pixel outline.
inverted: If true, clears the region instead of drawing

137.61.13 drawRectAsync(x1 as Integer, y1 as Integer, x2 as Integer, y2 as Integer, filled as Integer, inverted as Integer = 0)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a rectangle in the current frame buffer using the specified points.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

x1: The X coordinate of the top-left corner of the rectangle
y1: The Y coordinate of the top-left corner of the rectangle
x2: The X coordinate of the bottom-right corner of the rectangle
y2: The Y coordinate of the bottom-right corner of the rectangle
filled: If true, the rectangle will be solid. If false, just a single pixel outline.
inverted: If true, clears the region instead of drawing

Calls drawRectAsyncCompleted event later.

137.61.14 Flush

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Flushes the buffered LCD contents to the LCD screen.

137.61.15 FlushAsync

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Flushes the buffered LCD contents to the LCD screen.
Notes: Calls FlushAsyncCompleted event later.

137.61.16 getFontSize(Font as Integer, byref Width as Integer, byref Height as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the size of the specified font.

Notes:

font: The specified font
width: The width of the font
height: The height of the font

137.61.17 Initialize

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initializes the Text LCD display.

137.61.18 MaxCharacters(font as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum number of characters that can fit on the frame buffer for the specified font.
Notes:

font: The specified font
maxCharacters: The maximum number of characters for the font

137.61.19 saveFrameBuffer(frameBuffer as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes the specified frame buffer to flash memory
Notes: Use sparingly. The flash memory is only designed to be written to 10,000 times before it may become unusable. This method can only be called one time each time the channel is opened.

137.61.20 saveFrameBufferAsync(frameBuffer as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes the specified frame buffer to flash memory
Notes:

Use sparingly. The flash memory is only designed to be written to 10,000 times before it may become unusable. This method can only be called one time each time the channel is opened.

Calls saveFrameBufferAsyncCompleted event later.

137.61.21 setCharacterBitmap(Font as Integer, Character as String, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a bitmap and select a character to represent it.
Notes:

Now, when you use the specific character, the bitmap will show in it's place.

font: The font the character belongs to
character: The character to be changed, in a null-terminated string.
bitmap: Bitmap array as Memoryblock.

137.61.22 setCharacterBitmapAsync(Font as Integer, Character as String, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a bitmap and select a character to represent it.
Notes:

Now, when you use the specific character, the bitmap will show in it's place.

font: The font the character belongs to
character: The character to be changed, in a null-terminated string.
bitmap: Bitmap array as Memoryblock.

Calls setCharacterBitmapAsyncCompleted event later.

137.61.23 setFontSize(Font as Integer, Width as Integer, Height as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the size of the specified font.

Notes:

font: The specified font
width: The width of the font
height: The height of the font

137.61.24 writeBitmap(xPosition as Integer, yPosition as Integer, xSize as Integer, ySize as Integer, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a bitmap to the current frame buffer at the given location.
Notes:

Each byte in the array represents one pixel in row-major order.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

xPosition: The X coordinate of the bitmap
yPosition: The Y coordinate of the bitmap
xSize: The length of each row in the bitmap
ySize: The number of rows in the bitmap
bitmap: The bitmap to be drawn

137.61.25 writeBitmapAsync(xPosition as Integer, yPosition as Integer, xSize as Integer, ySize as Integer, Bitmap as MemoryBlock)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Draws a bitmap to the current frame buffer at the given location.
Notes:

Each byte in the array represents one pixel in row-major order.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

xPosition: The X coordinate of the bitmap
yPosition: The Y coordinate of the bitmap
xSize: The length of each row in the bitmap
ySize: The number of rows in the bitmap
bitmap: The bitmap to be drawn

Calls writeTextAsyncCompleted event later.

137.61.26 writeText(Font as Integer, xPosition as Integer, yPosition as Integer, Text as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes text to the current frame buffer at the specified location.
Notes:

Changes made to the frame buffer must be flushed to the LCD screen using flush.

font: The font of the text
xPosition: The X position of the start of the text string
yPosition: The Y position of the start of the text string
text: The text to be written

137.61.27 writeTextAsync(Font as Integer, xPosition as Integer, yPosition as Integer, Text as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write text asynchronously.
Notes:

Writes text to the current frame buffer at the specified location.
Changes made to the frame buffer must be flushed to the LCD screen using flush.

font: The font of the text
xPosition: The X position of the start of the text string
yPosition: The Y position of the start of the text string
text: The text to be written

Calls writeTextAsyncCompleted event later.

137.61.28 Properties

137.61.29 Backlight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Backlight affects the brightness of the LCD screen.

Notes:

Backlight is bounded by MinBackLight and MaxBacklight.
(Read and Write property)

137.61.30 Contrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Contrast level of the text or graphic pixels.
Notes:

A higher contrast will make the image darker.
Contrast is bounded by MinContrast and MaxContrast.
(Read and Write property)

137.61.31 CursorBlink as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When CursorBlink is true, the device will cause the cursor to periodically blink.
Notes: (Read and Write property)

137.61.32 CursorOn as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When CursorOn is true, the device will underline to the cursor position.
Notes: (Read and Write property)

137.61.33 FrameBuffer as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The frame buffer that is currently being used.
Notes:

Commands sent to the device are performed on this buffer.

(Read and Write property)

137.61.34 Height as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of the LCD screen attached to the channel.
Notes: (Read only property)

137.61.35 MaxBacklight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Backlight can be set to.
Notes: (Read only property)

137.61.36 MaxContrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Contrast can be set to.
Notes: (Read only property)

137.61.37 MinBacklight as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Backlight can be set to.
Notes: (Read only property)

137.61.38 MinContrast as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Contrast can be set to.
Notes: (Read only property)

137.61.39 ScreenSize as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The size of the LCD screen attached to the channel.
Notes: (Read and Write property)

137.61.40 Sleeping as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The on/off state of Sleeping.
Notes:

Putting the device to sleep turns off the display and backlight in order to save power.
The device will still take commands while asleep, and will wake up if the screen is flushed, or if the contrast or backlight are changed.
When the device wakes up, it will return to its last known state, taking into account any changes that happened while asleep.
(Read and Write property)

137.61.41 Width as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width of the LCD screen attached to the channel.
Notes: (Read only property)

137.61.42 Events

137.61.43 clearAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when clearAsync completes.

137.61.44 copyAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when copyAsync completes.

137.61.45 drawLineAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when drawLineAsync completes.

137.61.46 drawPixelAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when drawPixelAsync completes.

137.61.47 drawRectAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when drawRectAsync completes.

137.61.48 flushAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when flushAsync completes.

137.61.49 saveFrameBufferAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when saveFrameBufferAsync completes.

137.61.50 setCharacterBitmapAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when setCharacterBitmapAsync completes.

137.61.51 writeBitmapAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when writeBitmapAsync completes.

137.61.52 writeTextAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when writeTextAsync completes.

137.61.53 Constants

137.61.54 kFont5x8 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fonts.
Notes: 5px by 8px font

137.61.55 kFont6x10 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fonts.
Notes: 6px by 10px font

137.61.56 kFont6x12 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fonts.
Notes: 6px by 12px font

137.61.57 kFontUser1 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fonts.
Notes: User-defined font # 1

137.61.58 kFontUser2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fonts.
Notes: User-defined font # 2

137.61.59 kPixelStateInvert = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the pixel state.
Notes: Invert the pixel state

137.61.60 kPixelStateOff = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the pixel state.
Notes: Pixel off state

137.61.61 kPixelStateOn = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the pixel state.
Notes: Pixel on state

137.61.62 kScreenSize1x16 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 1x16, One row, 16 column text screen

137.61.63 kScreenSize1x40 = & ha

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 1x40, One row, 40 column text screen

137.61.64 kScreenSize1x8 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 1x8, One row, eight column text screen

137.61.65 kScreenSize2x16 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 2x16, Two row, 16 column text screen

137.61.66 kScreenSize2x20 = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 2x20, Two row, 20 column text screen

137.61.67 kScreenSize2x24 = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 2x24, Two row, 24 column text screen

137.61.68 kScreenSize2x40 = & hb

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 2x40, Two row, 40 column text screen

137.61.69 kScreenSize2x8 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 2x8, Two row, eight column text screen

137.61.70 kScreenSize4x16 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 4x16, Four row, 16 column text screen

137.61.71 kScreenSize4x20 = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 4x20, Four row, 20 column text screen.

137.61.72 kScreenSize4x40 = & hc

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 4x40, Four row, 40 column text screen

137.61.73 kScreenSize64x128 = & hd

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: 64x128, 64px by 128px graphic screen

137.61.74 kScreenSizeNone = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the screen sizes.
Notes: No Screen, Screen size unknown.

137.62 class PhidgetLightSensorMBS

137.62.1 class PhidgetLightSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Light Sensor class gathers data from the light sensor on a Phidget board.
Notes:

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.62.2 Methods

137.62.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.62.4 Properties

137.62.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another IlluminanceChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between IlluminanceChange events can also affected by the IlluminanceChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.62.6 Illuminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent illuminance value that the channel has reported.
Notes:

This value will always be between MinIlluminance and MaxIlluminance.
(Read only property)

137.62.7 IlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a IlluminanceChange event until the illuminance value has changed by the amount specified by the IlluminanceChangeTrigger.
Notes:

Setting the IlluminanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
(Read and Write property)

137.62.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.62.9 MaxIlluminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the IlluminanceChange event will report.
Notes: (Read only property)

137.62.10 MaxIlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that IlluminanceChangeTrigger can be set to.
Notes:

In lux.
(Read only property)

137.62.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.62.12 MinIlluminance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the IlluminanceChange event will report.
Notes: (Read only property)

137.62.13 MinIlluminanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that IlluminanceChangeTrigger can be set to.
Notes: (Read only property)

137.62.14 Events

137.62.15 IlluminanceChanged(illuminance as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent illuminance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a IlluminanceChangeTrigger has been set to a non-zero value, the IlluminanceChange event will not occur until the illuminance has changed by at least the IlluminanceChangeTrigger value.

illuminance: The current illuminance

137.63 class PhidgetLogMBS

137.63.1 class PhidgetLogMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class hosting the log facilities.

137.63.2 Methods

137.63.3 addSource(source as String, LogLevel as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds a source to the Phidget logging system.
Notes:

This is useful for declaring a source and setting its log level before sending any messages.

source: The source name
level: The log level of the source

137.63.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.63.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.63.6 disable

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables logging within the Phidget library.

137.63.7 disableNetwork

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disable networking.

137.63.8 disableRotating

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables automatic rotation of the log file.

137.63.9 enable(LogLevel as Integer, destination as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables logging within the Phidget library.
Notes:

LogLevel: The logging level
destination: The log file path, or "" for STDOUT

137.63.10 enableNetwork(address as string, port as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable networking.

137.63.11 enableRotating

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables automatic rotation of the log file (the default).

137.63.12 getRotating(byref size as UInt64, byref keepCount as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the current log rotation parameters.
Notes:

size: The file size above which the log file should be rotated.
keepCount: The number of log files that will be kept after rotation.

137.63.13 Log(LogLevel as Integer, Message as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a message to the Phidget library log.
See also:

- 137.63.14 Log(LogLevel as Integer, Source as String, Message as String) 22226

137.63.14 Log(LogLevel as Integer, Source as String, Message as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a message to the Phidget library log.
See also:

- 137.63.13 Log(LogLevel as Integer, Message as String) 22226

137.63.15 rotate

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manually rotate the log file.
Notes: This will only have an effect if automatic rotation is disabled and the log file is larger than the specified maximum file size.

137.63.16 setRotating(size as UInt64, keepCount as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets log rotation parameters.
Notes:

size: The file size above which the file should be rotated in bytes. Min: 32768 (32 KiB) Def: 10485760 (10 MiB)
keepCount: The number of log files that should be kept after rotation. Min: 0 Def: 1 Max: 64

137.63.17 Sources as String()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries current list of log sources.

137.63.18 Properties

137.63.19 isRotating as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determines if the library is automatically rotating the log file.
Notes: (Read only property)

137.63.20 Level as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the log level for the phidget22 source..
Notes: (Read and Write property)

137.63.21 SourceLevel(source as String) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the log level of the specified log source.
Notes: (Read and Write computed property)

137.63.22 Constants

137.63.23 LogLevelCritical = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the log level constants.
Notes: Critical

137.63.24 LogLevelDebug = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the log level constants.
Notes: Debug

137.63.25 LogLevelError = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the log level constants.
Notes: Errors

137.63.26 LogLevelInfo = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the log level constants.
Notes: Information

137.63.27 LogLevelVerbose = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the log level constants.
Notes: Verbose

137.63.28 LogLevelWarning = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the log level constants.
Notes: Warnings

137.64 class PhidgetMagnetometerMBS

137.64.1 class PhidgetMagnetometerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Magnetometer class gathers magnetic compass data from Phidget boards.
Notes:

Phidget magnetometers usually have multiple sensors, each oriented in a different axis, so multiple dimensions of compass bearing can be recorded.

If the Phidget you're using also has a gyroscope and an accelerometer, you may want to use the Spatial class in order to get all of the data at the same time, in a single event.
Subclass of the PhidgetMBS class.

137.64.2 Methods

137.64.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.64.4 MagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent field strength value that the channel has reported.
Notes: This value will always be between MinMagneticField and MaxMagneticField.

137.64.5 MaxMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the MagneticFieldChange event will report.Any readings outside this range will result in a Saturation event.
Notes: This check is done after calibration values have been applied, which will affect your magnetometer's

range accordingly.

137.64.6 MinMagneticField as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the MagneticFieldChange event will report.Any readings outside this range will result in a Saturation event.
Notes: This check is done after calibration values have been applied, which will affect your magnetometer's range accordingly.

137.64.7 resetCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the CompassCorrectionParameters to their default values.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

137.64.8 saveCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Saves the CalibrationParameters.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

137.64.9 setCorrectionParameters(magneticField as double, offset0 as double, offset1 as double, offset2 as double, gain0 as double, gain1 as double, gain2 as double, T0 as double, T1 as double, T2 as double, T3 as double, T4 as double, T5 as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calibrate your device for the environment it will be used in.
Notes:

Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the CompassCorrectionParameters for your specific situation. See your device's User Guide for more information.

magneticField: Ambient magnetic field value.
offset0: Provided by calibration program.
offset1: Provided by calibration program.
offset2: Provided by calibration program.
gain0: Provided by calibration program.
gain1: Provided by calibration program.
gain2: Provided by calibration program.
T0: Provided by calibration program.
T1: Provided by calibration program.
T2: Provided by calibration program.
T3: Provided by calibration program.
T4: Provided by calibration program.
T5: Provided by calibration program.

137.64.10 Properties

137.64.11 AxisCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of axes the channel can measure field strength on.
Notes:

See your device's User Guide for more information about the number of axes and their orientation.
(Read only property)

137.64.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another MagneticFieldChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between MagneticFieldChange events can also affected by the MagneticFieldChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.64.13 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether self-heating temperature stabilization is enabled.
Notes:

Set to true to enable the temperature stabilization feature of this device. This enables onboard heating elements to bring the board up to a known temperature to minimize ambient temerature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

137.64.14 MagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a MagneticFieldChange event until the field strength value has changed by the amount specified by the MagneticFieldChangeTrigger.
Notes:

Setting the MagneticFieldChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.64.15 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.64.16 MaxMagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that MagneticFieldChangeTrigger can be set to.
Notes: (Read only property)

137.64.17 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.64.18 MinMagneticFieldChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that MagneticFieldChangeTrigger can be set to.
Notes: (Read only property)

137.64.19 Timestamp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent timestamp value that the channel has reported. This is an extremely accurate time measurement streamed from the device.
Notes:

If your application requires a time measurement, you should use this value over a local software timestamp.
(Read only property)

137.64.20 Events

137.64.21 MagneticFieldChanged(magneticField() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent magnetic field values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a MagneticFieldChangeTrigger has been set to a non-zero value, the MagneticFieldChange event will not occur until the field strength has changed by at least the MagneticFieldChangeTrigger value.

magneticField: The magnetic field values. Index from 0 to 2.
timestamp: The timestamp value

137.65 class PhidgetManagerMBS

137.65.1 class PhidgetManagerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget Manager allows tracking of which Phidgets are available to be controlled from the current program.
Notes:

This is useful for listing all available Phidgets so you can select which ones to use at runtime.

You do not need to use a Phidget Manager if you know what Phidgets will be required for your application in advance.

Phidget channels that become available will each send an Attach event, and Phidgets that are removed from the system will send corresponding Detach events. If you are using a Phidget Manager, your program is responsible for keeping track of available Phidgets using these events.

Please use LoadLibrary shared method in PhidgetManagerMBS class to load Phidgets library before using the classes.

137.65.3 Blog Entries

- MBS Xojo Plugins, version 22.1pr4
- MBS REALbasic Plugins, version 11.1pr4

137.65.4 Methods

137.65.5 Close

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes a Phidget Manager that has been opened.

137.65.6 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.65.7 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.65.8 LoadLibrary(file as FolderItem) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets library from given location.
Notes:

Returns true on success or false on failure.
See LibraryLoadError property for error message.
See also:

- 137.65.9 LoadLibrary(path as String) as Boolean 22237

137.65.9 LoadLibrary(path as String) as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the Phidgets library from given file path.
Example:

```
// where is the library?

# If TargetWindows
Const path = "Phidget22.dll"
# Else TargetMacOS Then
Const path = "/Library/Frameworks/Phidget22.framework"
# EndIf

If PhidgetManagerMBS.LoadLibrary(path) Then
```

```
MessageBox "OK"

Else

MessageBox PhidgetManagerMBS.LibraryLoadError
Return

End If
```

Notes:

Returns true on success or false on failure.
See LibraryLoadError property for error message.
See also:

- 137.65.8 LoadLibrary(file as FolderItem) as Boolean 22237

137.65.10 Open

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens the Phidget Manager.
Notes: Be sure to register Attach and Detach event handlers for the Manager before opening it, to ensure you program doesn't miss the events reported for devices already connected to your system.

137.65.11 Properties

137.65.12 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

137.65.13 LibraryLoaded as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether the phidgets library was loaded.

Notes: (Read only property)

137.65.14 LibraryLoadError as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message from LoadLibrary call.
Notes: (Read only property)

137.65.15 Events

137.65.16 Attached(phid as PhidgetMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a channel is attached.
Notes: Phidget channels you get from the manager are informational only, you can read information about them such as serial number, class, name, etc. but they are not opened. In order to interact with one, you must create and open a Phidget object of the correct type.

137.65.17 Detached(phid as PhidgetMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a channel is detached.
Notes: Phidget channels you get from the manager are informational only, you can read information about them such as serial number, class, name, etc. but they are not opened. In order to interact with one, you must create and open a Phidget object of the correct type.

137.65.18 Error(errorCode as Integer, errorString as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: An error occurred.

137.66 class PhidgetMBS

137.66.1 class PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The core Phidget class deals with functionality common to all Phidgets, such as opening and closing them, or setting Attach, Detach and Event handlers.
Notes:

This class is also used to specify the associations between the Phidget software objects and their corresponding physical devices, and makes it possible to determine which Phidget is which in cases where it might otherwise be ambiguous.

This class contains various functions such as Release, Retain, and getParent designed to be used with the Phidget Manager. These specialized functions may be safely ignored if your application does not require a Manager. You can check the Manager API for more information.

All errors are reported as exceptions.
And MBS Plugin schedules all events to raise on main thread, so you can easily update GUI.

Please use LoadLibrary shared method in PhidgetManagerMBS class to load Phidgets library before using the classes
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.66.2 Methods

137.66.3 ChildDevices as PhidgetMBS()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries child devices for hub.

137.66.4 close

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes a Phidget channel that has been opened.
Notes: Close will release the channel on the Phidget device, and should be called prior to delete.

137.66.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.
Notes:

Overwritten by subclasses.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

137.66.6 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.66.7 DeviceChannelCount(ChannelClass as Integer) as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of channels of the specified channel class on the device.
Notes: Pass kChannelClassNothing to get the total number of channels.

137.66.8 open

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens the Phidget channel.
Notes:

The specific channel to be opened can be specified by setting any of the following properties:

DeviceSerialNumber
DeviceLabel
Channel
HubPort
IsHubPortDevice
ServerName

IsLocal
IsRemote

Open will return immediately, with the attachment process proceeding asynchronously. Use the Attach event or Attached property to determine when the channel is ready to use.

137.66.9 openWaitForAttachment(timeoutMs as UInt32 = 1000)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Opens the Phidget channel and waits a defined amount of time for the device to attach.
Notes:

The specific channel to be opened can be specified by setting any of the following properties:

DeviceSerialNumber
DeviceLabel
Channel
HubPort
IsHubPortDevice
ServerName
IsLocal
IsRemote

OpenWaitForAttachment() will block until the channel is attached or a timeout occurs. A timeout value of 0 will wait forever.

137.66.10 Poll

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Checks for pending events to dispatch.
Notes:

Our plugin dispatches events in two ways. If the event is raised on main thread, it will be raised directly. But if it arrives on other threads, it's queued and then dispatched via a timer on the main thread when there is idle time.
This poll method allows you to dispatch queued events now.

137.66.11 resetLibrary

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Closes all channels, and stops all threads.
Notes:

The library is reset to a newly loaded state. All channel handles have been freed.
This function is intended for use in special cases where the library cannot be unloaded between program runs, such as LabVIEW and Unity Editor.

137.66.12 writeDeviceLabel(deviceLabel as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes a label to the device in the form of a string in the device flash memory.
Notes:

This label can then be used to identify the device, and will persist across power cycles.

The label can be at most 10 UTF-16 code units. Most unicode characters take up a single code unit, but some, such as emoji, can take several.

Some older devices can not have their labels set from Windows. For these devices the label should be set from Linux or macOS.

Note: You should be careful when writing labels in your code, because the label is stored in flash which can only be re-written around 10,000 times before it will no longer write. If your program is complex, be sure to test it thoroughly before using WriteLabel to avoid accidentally burning out the flash.

137.66.13 Properties

137.66.14 Attached as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the attached status of channel.
Notes:

A Phidget is attached after it has been opened and the Phidget library finds and connects to the corresponding hardware device.

Most API calls are only valid on attached Phidgets.
(Read only property)
See also:

- 137.66.50 Attached 22253

137.66.15 Channel as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel index of the channel on the device.
Notes:

Specifies the channel index to be opened. The default channel is 0. Set to kChannelAny to open any channel on the specified device.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.16 ChannelClass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the channel class of the channel.
Notes: (Read only property)

137.66.17 ChannelClassName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the channel class the channel belongs to.
Notes: (Read only property)

137.66.18 ChannelName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the channel's name.
Notes:

This name serves as a description of the specific nature of the channel.
(Read only property)

137.66.19 ChannelSubclass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the subclass for this channel.
Notes:

Allows for identifying channels with specific characteristics without needing to know the exact device and channel index.
(Read only property)

137.66.20 ClientVersionMajor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The major version of the client.
Notes: (Read only property)

137.66.21 ClientVersionMinor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minor version of the client.
Notes: (Read only property)

137.66.22 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another change event.
Notes:

Unit: milliseconds (ms)
(Read and Write property)

137.66.23 DeviceClass as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the device class for the Phidget which this channel is a part of.
Notes: (Read only property)

137.66.24 DeviceClassName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the device class for the Phidget which this channel is a part of.
Notes: (Read only property)

137.66.25 DeviceID as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the DeviceID for the Phidget which this channel is a part of.
Notes: (Read only property)

137.66.26 DeviceLabel as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device channel.
Notes:

Gets the label of the Phidget which this channel is a part of. A device label is a custom string used to more easily identify a Phidget. Labels are written to a Phidget using writeDeviceLabel(), or by right-clicking the device and setting a label in the Phidget Control Panel for Windows.

Specifies the label of the Phidget to be opened. Leave un-set to open any label. A device label is a custom string used to more easily identify a Phidget. Labels are written to a Phidget using Phidget_writ-

eDeviceLabel(), or by right-clicking the device and setting a label in the Phidget Control Panel for Windows.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.27 DeviceName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the Phidget which this channel is a part of.
Notes: (Read only property)

137.66.28 DeviceSerialNumber as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The serial number of the Phidget which this channel is a part of.
Notes:

If the channel is part of a VINT device, this will be the serial number of the VINT Hub the device is attached to.

Specifies the serial number of the Phidget to be opened. Leave un-set, or set to kSerialNumberAny to open any serial number.
If the channel is part of a VINT device, this will be the serial number of the VINT Hub the device is attached to.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.29 DeviceSKU as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the SKU (part number) of the Phidget which this channel is a part of.
Notes: (Read only property)

137.66.30 DeviceVersion as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the firmware version of the Phidget which this channel is a part of.
Notes: (Read only property)

137.66.31 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

137.66.32 Hub as PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the hub that this channel is attached to.
Notes: (Read only property)

137.66.33 HubPort as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the hub port index of the VINT Hub port that the channel is attached to.
Notes:

Specifies the hub port index of the VINT Hub port to open this channel on. Leave un-set, or set to kHubPortAny to open the channel on any VINT Hub port

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.34 HubPortCount as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the number of VINT ports present on the VINT Hub that the channel is attached to.
Notes: (Read only property)

137.66.35 IsChannel as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True if the handle is for a channel.
Notes:

Returns true if the PhidgetHandle is for a channel. Mostly for use alongside Phidget_getParent() to distinguish channel handles from device handles.
(Read only property)

137.66.36 IsHubPortDevice as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this channel is a VINT Hub port channel, or part of a VINT device attached to a hub port.
Notes:

Specifies whether this channel should be opened on a VINT Hub port directly, or on a VINT device attached to a hub port.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.37 IsLocal as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True when this channel is attached directly on the local machine, or false otherwise.
Notes:

Set to True if the channel is to be opened locally, and not over a network. If both this and IsRemote are set to False (the default), the channel will be opened either locally or remotely, on whichever matching channel is found first.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.38 IsRemote as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: True when this channel is attached via a Phidget network server, or false otherwise.
Notes:

Set to True if the channel is to be opened remotely, rather than locally. If both this and IsLocal are set to False (the default), the channel will be opened either locally or remotely, on whichever matching channel is found first.

In order for your program to have access to remote Phidgets, you must use the Networking API to EnableServerDiscovery or AddServer.

If setting this property, it must be set before the channel is opened. The behaviour of setting this property while the channel is open is undefined.
(Read and Write property)

137.66.39 LibraryVersion as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the version of the Phidget library being used by the program in human readable form.
Notes: (Read only property)

137.66.40 LibraryVersionNumber as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the version of the Phidget library being used by the program as a version number string.
Notes: (Read only property)

137.66.41 MeshMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The mesh mode.
Notes: (Read and Write property)

137.66.42 Parent as PhidgetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the handle of the parent device of the given Phidget handle.
Notes:

For example, this would refer to the device the channel is a part of, or the Hub that a device is plugged into.

This is useful when used alongside a Phidget Manager to create device trees like the one in the Phidget Control Panel.

Phidget_release() must be called on the handle returned by this function to release the reference created by this call.

This can be used to travel up the device tree and get device information at each step.
The root device will return a null handle
Parent handles always refer to devices. See IsChannel()
(Read only property)

137.66.43 ServerHostname as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the hostname of the Phidget network server for network attached Phidgets.
Notes:

Fails if the channel is not connected to a Phidget network server.
(Read only property)

137.66.44 ServerName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the name of the Phidget network server the channel is attached to, if any.
Notes:

Fails if the channel is not connected to a Phidget network server.
(Read and Write property)

137.66.45 ServerPeerName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the peer name of the channel's server.
Notes:

Gets the peer name (address and port) of the Phidget server for network attached Phidgets, formatted as: address:port
Fails if the channel is not connected to a Phidget network server.
(Read only property)

137.66.46 ServerUniqueName as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the unique name for the server the channel is attached to, if any.
Notes:

This is either a unique mDNS name, or the name specified in addServer
Fails if the channel is not connected to a Phidget network server.
(Read only property)

137.66.47 ServerVersionMajor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The major version of the server.
Notes: (Read only property)

137.66.48 ServerVersionMinor as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minor version of the server.
Notes: (Read only property)

137.66.49 Events

137.66.50 Attached

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the channel is attached to a physical channel on a Phidget.
Notes: This event is the recommended place to configuration properties of the channel such as the data interval or change trigger.
See also:

- 137.66.14 Attached as Boolean 22243

137.66.51 Detached

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the channel is detached from a Phidget device channel.
Notes: This typically occurs when the Phidget device is removed from the system.

137.66.52 Error(errorCode as Integer, errorString as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when an error condition has been detected.
Notes: See the documentation for your specific channel class to see what error events it might throw.

137.66.53 PropertyChanged(propertyName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when a property is changed externally from the user channel, usually from a network client attached to the same channel.

137.66.54 Constants

137.66.55 kChannelAny = -1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: The constant for any channel.
Notes: Pass to Channel to open any channel.

137.66.56 kChannelClassAccelerometer = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Accelerometer channel

137.66.57 kChannelClassBLDCMotor = & H23

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: BLDC motor channel

137.66.58 kChannelClassCapacitiveTouch = & He

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Capacitive Touch channel

137.66.59 kChannelClassCurrentinput = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Current input channel

137.66.60 kChannelClassCurrentoutput = & H26

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Current output channel

137.66.61 kChannelClassDataAdapter = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Data Adapter

137.66.62 kChannelClassDcmotor = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: DC motor channel

137.66.63 kChannelClassDictionary = & H24

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Dictionary

137.66.64 kChannelClassDigitalInput = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Digital input channel

137.66.65 kChannelClassDigitalOutput = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Digital output channel

137.66.66 kChannelClassDistanceSensor = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Distance sensor channel

137.66.67 kChannelClassEncoder = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Encoder channel

137.66.68 kChannelClassFirmwareUpgrade = & H20

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Firmware Upgrade

137.66.69 kChannelClassFrequencyCounter = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Frequency counter channel

137.66.70 kChannelClassGeneric = & H21

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Generic channel

137.66.71 kChannelClassGps = & Ha

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: GPS channel

137.66.72 kChannelClassGyroscope = & Hc

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Gyroscope channel

137.66.73 kChannelClassHub = & Hd

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: VINT Hub channel

137.66.74 kChannelClassHumiditySensor = & Hf

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Humidity sensor channel

137.66.75 kChannelClassIR = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: IR channel

137.66.76 kChannelClassLcd = & Hb

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: LCD channel

137.66.77 kChannelClassLightSensor = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Light sensor channel

137.66.78 kChannelClassMagnetometer = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Magnetometer channel

137.66.79 kChannelClassMeshdongle = & H13

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Mesh Dongle

137.66.80 kChannelClassMotorPositionController = & H22

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Motor position control channel.

137.66.81 kChannelClassNothing = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Unknown

137.66.82 kChannelClassPhSensor = & H25

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: pH sensor channel

137.66.83 kChannelClassPowerguard = & H14

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Power guard channel

137.66.84 kChannelClassPressureSensor = & H15

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Pressure sensor channel

137.66.85 kChannelClassRCServo = & H16

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: RC Servo channel

137.66.86 kChannelClassResistanceInput = & H17

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Resistance input channel

137.66.87 kChannelClassRFID = & H18

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: RFID channel

137.66.88 kChannelClassSoundSensor = & H19

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Sound sensor channel

137.66.89 kChannelClassSpatial = & H1A

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Spatial channel

137.66.90 kChannelClassStepper = & H1B

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Stepper channel

137.66.91 kChannelClassTemperatureSensor = & H1C

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Temperature sensor channel

137.66.92 kChannelClassVoltageInput = & H1D

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Voltage input channel

137.66.93 kChannelClassVoltageOutput = & H1E

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Voltage output channel

137.66.94 kChannelClassVoltageRatioInput = & H1F

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel classes.
Notes: Voltage ratio input channel

137.66.95 kChannelSubClassDigitaloutputDutyCycle = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Digital output duty cycle

137.66.96 kChannelSubClassDigitaloutputFrequency = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Digital output frequency

137.66.97 kChannelSubClassDigitaloutputLedDriver = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Digital output LED driver

137.66.98 kChannelSubClassEncoderModeSettable = & H60

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Encoder IO mode settable

137.66.99 kChannelSubClassLCDGraphic = & H50

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Graphic LCD

137.66.100 kChannelSubClassLCDText = & H51

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Text LCD

137.66.101 kChannelSubClassNone = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: No subclass

137.66.102 kChannelSubClassSpatialAhrs = & H70

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Spatial AHRS/IMU

137.66.103 kChannelSubClassTemperaturesensorRtd = & H20

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Temperature sensor RTD

137.66.104 kChannelSubClassTemperaturesensorThermocouple = & H21

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Temperature sensor thermocouple

137.66.105 kChannelSubClassVoltageInputSensorPort = & H30

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Voltage sensor port

137.66.106 kChannelSubClassVoltageRatioInputBridge = & H41

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Voltage ratio bridge input

137.66.107 kChannelSubClassVoltageRatioInputSensorPort = & H40

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the channel subclasses.
Notes: Voltage ratio sensor port

137.66.108 kDeviceClassAccelerometer = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetAccelerometer device

137.66.109 kDeviceClassAdvancedServo = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetAdvancedServo device

137.66.110 kDeviceClassAnalog = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetAnalog device

137.66.111 kDeviceClassBridge = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetBridge device

137.66.112 kDeviceClassDataAdapter = & H19

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetDataAdapter device

137.66.113 kDeviceClassDictionary = & H18

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: Dictionary device

137.66.114 kDeviceClassEncoder = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetEncoder device

137.66.115 kDeviceClassFirmwareUpgrade = & H17

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: Firmware Upgrade

137.66.116 kDeviceClassFrequencyCounter = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetFrequencyCounter device

137.66.117 kDeviceClassGeneric = & H16

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: Generic class.

137.66.118 kDeviceClassGPS = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetGPS device

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: Unknown device.

137.66.126 kDeviceClassPhsensor = & He

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetPHSensor device

137.66.127 kDeviceClassRFID = & Hf

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetRFID device

137.66.128 kDeviceClassServo = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetServo device

137.66.129 kDeviceClassSpatial = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetSpatial device

137.66.130 kDeviceClassStepper = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetStepper device

137.66.131 kDeviceClassTemperatureSensor = & H13

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetTemperatureSensor device

137.66.132 kDeviceClassTextLCD = & H14

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: PhidgetTextLCD device

137.66.133 kDeviceClassVint = & H15

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device classes.
Notes: Phidget VINT Hub device

137.66.134 kError2Big = & H36

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.135 kErrorAccess = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Access (Permission) Issue: Access to the resource (file) is denied. This can happen when enabling logging.

137.66.136 kErrorAgain = & H16

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.137 kErrorBadPassword = & H25

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.138 kErrorBadVersion = & H37

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.139 kErrorBusy = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Resource Busy: Specified resource is in use. This error code is not normally used.

137.66.140 kErrorClosed = & H38

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Closed: Channel was closed. This can happen if a channel is closed while openWaitForAttachment is waiting.

137.66.141 kErrorConnRef = & H23

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.142 kErrorConnReset = & H2E

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.143 kErrorDuplicate = & H1B

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Duplicate: Duplicated request. Can happen with some Net API calls, such as trying to add the same server twice.

137.66.144 kErrorEof = & H1F

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.145 kErrorEventBadConnection = & H1011

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.146 kErrorEventBadPower = & H1008

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.147 kErrorEventBadVersion = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

Function: One of the error constants.

137.66.149 kErrorEventDispatch = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.150 kErrorEventEnergyDump = & H100E

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.151 kErrorEventFailSafe = & H100C

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.152 kErrorEventFailure = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.153 kErrorEventInvalidState = & H1010

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.154 kErrorEventMotorStall = & H100F

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.155 kErrorEventNetwork = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.156 kErrorEventOk = & H1000

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.157 kErrorEventOutOfRange = & H1007

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.158 kErrorEventOverCurrent = & H1006

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.159 kErrorEventOverrun = & H1002

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.160 kErrorEventOverTemp = & H1005

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.161 kErrorEventOverVoltage = & H100B

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.162 kErrorEventPacketLost = & H1003

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.163 kErrorEventSaturation = & H1009

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.164 kErrorEventVoltageError = & H100D

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.165 kErrorEventWrap = & H1004

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.166 kErrorExist = & Ha

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.167 kErrorFailSafe = & H3B

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.168 kErrorFault = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.169 kErrorFBig = & H11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.170 kErrorHostUnreach = & H30

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.171 kErrorInterrupted = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Op Interrupted: The operation was interrupted; either from an error, or because the device was closed.

137.66.172 kErrorInvalid = & Hd

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Invalid: Invalid or malformed command. This can be caused by sending a command to a device which is not supported in it's current configuration.

137.66.173 kErrorInvalidArg = & H15

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Invalid Argument: One or more of the parameters passed to the function is not accepted by the channel in its current configuration. This may also be an indication that a NULL pointer was passed where a valid pointer is required.

137.66.174 kErrorInvalidPacket = & H35

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.175 kErrorIO = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.176 kErrorIsdir = & Hc

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.177 kErrorKeepAlive = & H3A

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.178 kErrorMFile = & Hf

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.179 kErrorNetUnavail = & H2D

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.180 kErrorNFile = & He

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.181 kErrorNoDev = & H28

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.182 kErrorNoEnt = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: No Such Entity: The specified entity does not exist. This is usually a result of Net or Log API calls.

137.66.183 kErrorNoMemory = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.184 kErrorNoSpc = & H10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Not enough space: The provided buffer argument size is too small.

137.66.185 kErrorNotAttached = & H34

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Device not Attached: This can happen for a number of common reasons. Be sure you are opening the channel before trying to use it. If you are opening the channel, the program may not be waiting for the channel to be attached. If possible use openWaitForAttachment. Otherwise, be sure to check the Attached property of the channel before trying to use it.

137.66.186 kErrorNotConfigured = & H39

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Not Configured: Device is not configured enough for this API call. Have a look at the must-set properties for this device and make sure to configure them first.

137.66.187 kErrorNotDir = & Hb

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.188 kErrorNotEmpty = & H1A

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.189 kErrorOk = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Success: Call succeeded.

137.66.190 kErrorPerm = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.191 kErrorPipe = & H29

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.192 kErrorResolv = & H2C

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.193 kErrorRo = & H13

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.194 kErrorRofs = & H12

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.

137.66.195 kErrorTimeOut = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Timed Out: Call has timed out. This can happen for a number of common reasons: Check that the Phidget you are trying to open is plugged in, and that the addressing parameters have been specified correctly. Check that the Phidget is not already open in another program, such as the Phidget Control Panel, or another program you are developing. If your Phidget has a plug or terminal block for external power, ensure it is plugged in and powered. If you are using remote Phidgets, ensure that your computer can access the remote Phidgets using the Phidget Control Panel. If you are using remote Phidgets, ensure you have enabled Server Discovery or added the server corresponding to the Phidget you are trying to open. If you are using Network Server Discovery, try extending the timeout to allow more time for the server to be discovered.

137.66.196 kErrorUnexpected = & H1C

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Unexpected Error: Something unexpected has occured. Enable library logging and have a look at the log, or contact Phidgets support.

137.66.197 kErrorUnknownVal = & H33

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Unknown or Invalid Value: The value is unknown. This can happen right after attach, when the value has not yet been recieved from the Phidget. This can also happen if a device has not yet been configured / enabled. Some properties can only be read back after being set.

137.66.198 kErrorUnsupported = & H14

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Operation Not Supported: This API call is not supported. For Class APIs this means that this API is not supported by this device. This can also mean the API is not supported on this OS, or OS configuration.

137.66.199 kErrorWrongDevice = & H32

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the error constants.
Notes: Wrong Device: A Phidget channel object of the wrong channel class was passed into this API call.

137.66.200 kHubPortAny = -1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: The constant for any port.
Notes: Pass to HubPort to open any hub port.

137.66.201 kID1000 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetServo 1-Motor (1000)

137.66.202 kID1001 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetServo 4-Motor (1001)

137.66.203 kID1002 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetAnalog 4-Output (1002)

137.66.204 kID1008 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetAccelerometer 2-Axis (1008)

137.66.205 kID1010_1013_1018_1019 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetInterfaceKit 8/8/8 (1010, 1013, 1018, 1019)

137.66.206 kID1011 = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetInterfaceKit 2/2/2 (1011)

137.66.207 kID1012 = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetInterfaceKit 0/16/16 (1012)

137.66.208 kID1014 = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetInterfaceKit 0/0/4 (1014)

137.66.209 kID1015 = & ha

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetLinearTouch (1015)

137.66.210 kID1016 = & hb

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetCircularTouch (1016)

137.66.211 kID1017 = & hc

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetInterfaceKit 0/0/8 (1017)

137.66.212 kID1023 = & hd

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetRFID (1023)

137.66.213 kID1024 = & he

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetRFID Read-Write (1024)

137.66.214 kID1030 = & hf

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetLED-64 (1030)

137.66.215 kID1031 = & h10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetLED-64 Advanced (1031)

137.66.216 kID1032 = & h11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetLED-64 Advanced (1032)

137.66.217 kID1040 = & h12

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetGPS (1040)

137.66.218 kID1041 = & h13

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetSpatial 0/0/3 Basic (1041)

137.66.219 kID1042 = & h14

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetSpatial 3/3/3 Basic (1042)

137.66.220 kID1043 = & h15

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetSpatial Precision 0/0/3 High Resolution (1043)

137.66.221 kID1044 = & h16

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetSpatial Precision 3/3/3 High Resolution (1044)

137.66.222 kID1045 = & h17

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTemperatureSensor IR (1045)

137.66.223 kID1046 = & h18

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetBridge 4-Input (1046)

137.66.224 kID1047 = & h19

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetEncoder HighSpeed 4-Input (1047)

137.66.225 kID1048 = & h1a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTemperatureSensor 4-input (1048)

137.66.226 kID1049 = & h1b

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetSpatial 0/0/3 (1049)

137.66.227 kID1051 = & h1c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTemperatureSensor 1-Input (1051)

137.66.228 kID1052 = & h1d

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetEncoder Mechanical (1052)

137.66.229 kID1053 = & h1e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetAccelerometer 2-Axis (1053)

137.66.230 kID1054 = & h1f

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetFrequencyCounter (1054)

137.66.231 kID1055 = & h20

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetIR (1055)

137.66.232 kID1056 = & h21

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetSpatial 3/3/3 (1056)

137.66.233 kID1057 = & h22

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetEncoder HighSpeed (1057)

137.66.234 kID1058 = & h23

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetPHSensor (1058)

137.66.235 kID1059 = & h24

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetAccelerometer 3-Axis (1059)

137.66.236 kID1060 = & h25

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetMotorControl LV (1060)

137.66.237 kID1061 = & h26

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetAdvancedServo 8-Motor (1061)

137.66.238 kID1062 = & h27

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetStepper Unipolar 4-Motor (1062)

137.66.239 kID1063 = & h28

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetStepper Bipolar 1-Motor (1063)

137.66.240 kID1064 = & h29

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetMotorControl HC (1064)

137.66.241 kID1065 = & h2a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetMotorControl 1-Motor (1065)

137.66.242 kID1066 = & h2b

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetAdvancedServo 1-Motor (1066)

137.66.243 kID1067 = & h2c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetStepper Bipolar HC (1067)

137.66.244 kID1202_1203 = & h2d

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTextLCD 20x2 with PhidgetInterfaceKit 8/8/8 (1201, 1202, 1203)

137.66.245 kID1204 = & h2e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTextLCD Adapter (1204)

137.66.246 kID1215_1218 = & h2f

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTextLCD 20x2 (1215/1216/1217/1218)

137.66.247 kID1219_1222 = & h30

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: PhidgetTextLCD 20x2 with PhidgetInterfaceKit 0/8/8 (1219, 1220, 1221, 1222)

137.66.248 kIDADP1000 = & h31

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: pH Adapter

137.66.249 kIDADP1001 = & h84

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: RS232 Adapter

137.66.250 kIDADPRS485_422 = & h85

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: RS485/422 Prototype

137.66.251 kIDADPSerial = & h86

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Serial Prototype

137.66.252 kIDCURLOOP = & h7a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 4-20mA Output

137.66.253 kIDDAQ1000 = & h33

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Analog Input Module x8

137.66.254 kIDDAQ1200 = & h34

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Digital Input 4

137.66.255 kIDDAQ1300 = & h35

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Digital Input 4 Isolated

137.66.256 kIDDAQ1301 = & h36

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Digital Input 16

137.66.257 kIDDAQ1400 = & h37

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Versatile Input

137.66.258 kIDDAQ1500 = & h38

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Bridge

137.66.259 kIDDCC1000 = & h39

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: DC Motor Controller with PID

137.66.260 kIDDCC1001 = & h6e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Small DC Motor Controller

137.66.261 kIDDCC1002 = & h75

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 4A Small DC Motor Controller

137.66.262 kIDDCC1003 = & h78

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 2 Channel DC Motor Controller

137.66.263 kIDDCC1004 = & h80

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: DC Motor Controller 12A

137.66.264 kIDDCC1005 = & h81

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: DC Motor Controller High Current

137.66.265 kIDDCC1100 = & h6c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: BLDC Motor Controller

137.66.266 kIDDICTIONARY = & h6f

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Dictionary

137.66.267 kIDDigitalInputPort = & h5f

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Hub Port in Digital Input mode

137.66.268 kIDDigitalOutputPort = & h60

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Hub Port in Digital Output mode

137.66.269 kIDDST1000 = & h3a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 200mm Distance Sensor

137.66.270 kIDDST1001 = & h79

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 650mm distance sensor

137.66.271 kIDDST1002 = & h7e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 1200mm distance sensor

137.66.272 kIDDST1200 = & h3b

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Sonar Distance Sensor

137.66.273 kIDENC1000 = & h3c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Encoder

137.66.274 kIDFirmwareUpgradeSPI = & h68

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Phidget SPI device under firmware upgrade

137.66.275 kIDFirmwareUpgradeSTM32F0 = & h66

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: VINT Device in firmware upgrade mode, STM32F0 Proc.

137.66.276 kIDFirmwareUpgradeSTM32G0 = & h8f

MBS Phidgets Plugin, Plugin Version: 22.1.

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: 30A Current Sensor

137.66.334 kIDVINTACCEL = & h8a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: VINT Accelerometer

137.66.335 kIDVoltageInputPort = & h61

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Hub Port in Voltage Input mode

137.66.336 kIDVoltageRatioPort = & h62

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the device IDs.
Notes: Hub Port in Voltage Ratio Input mode

137.66.337 kIRMaxCodeBitCount = & h80

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for IR sender/receiver.

137.66.338 kIRMaxCodeStrLength = & h21

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for IR sender/receiver.

137.66.339 kIRRawDataLongSpace = & hffffffff

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for IR sender/receiver.

137.66.340 kLabelAny = ""

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: The constant to pick any label.
Notes: Pass to DeviceLabel to open any label.

137.66.341 kMeshModeRouter = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the mesh mode constants.
Notes: Router mode

137.66.342 kMeshModeSleepyEndDevice = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the mesh mode constants.
Notes: Sleepy end device mode

137.66.343 kSerialNumberAny = -1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: The constant for any serial number.
Notes: Pass to DeviceSerialNumber to open any serial number.

137.66.344 kServerAuthRequired = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: A flag constant for server.

137.66.345 kTimeoutDefault = 300000000

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constant for timeouts.
Notes: Pass to OpenWaitForAttachment() for the default timeout.

137.66.346 kTimeoutInfinite = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constant for timeouts.
Notes: Pass to OpenWaitForAttachment() for an infinite timeout.

137.67 class PhidgetMissingFunctionExceptionMBS

137.67.1 class PhidgetMissingFunctionExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception to report a missing function.
Notes:

This exception type is raised when a library function should be called, but is not available.
Subclass of the RuntimeException class.

137.68 class PhidgetMotorPositionControllerMBS

137.68.1 class PhidgetMotorPositionControllerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Motor Position Controller class controlls the position, velocity and acceleration of the attached motor.
Notes:

It also contains various other control and monitoring functions that aid in the control of the motor.

For specifics on how to use this class, we recommend watching our video on the Phidget Motor Position Controller class.
Subclass of the PhidgetMBS class.

137.68.2 Methods

137.68.3 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds an offset (positive or negative) to the current position.
Notes: Useful for zeroing position.

137.68.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.68.5 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Motor Position Controller channels, this will disengage the controller. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.68.6 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.68.7 setTargetVelocityAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target velocity asynchronously.
Notes: Calls setTargetVelocityAsyncCompleted later.

137.68.8 Properties

137.68.9 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's velocity.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

137.68.10 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Motor current limit
Notes:

The controller will limit the current through the motor to this value.

Unit: amperes (A)
(Read and Write property)

137.68.11 CurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current Regulator Gain.
Notes:

Depending on power supply voltage and motor coil inductance, current through the motor can change relatively slowly or extremely rapidly. A physically larger DC Motor will typically have a lower inductance, requiring a higher current regulator gain. A higher power supply voltage will result in motor current changing more rapidly, requiring a higher current regulator gain. If the current regulator gain is too small, spikes in current will occur, causing large variations in torque, and possibly damaging the motor controller. If the current regulator gain is too high, the current will jitter, causing the motor to sound 'rough', especially when changing directions. Each DC Motor we sell specifies a suitable current regulator gain.
(Read and Write property)

137.68.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another CurrentChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between CurrentChange events can also affected by the CurrentChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.68.13 DeadBand as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Depending on your system, it may not be possible to bring the position error (TargetPosition - Position) to zero.
Notes:

A small error can lead to the motor continually 'hunting' for a target position, which can cause unwanted effects. By setting a non-zero DeadBand, the position controller will relax control of the motor within the deadband, preventing the 'hunting' behavior.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

137.68.14 DutyCycle as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent duty cycle value that the controller has reported.
Notes:

This value will be between -1 and 1 where a sign change (±) is indicitave of a direction change.
Note that DutyCycle is merely an indication of the average voltage across the motor. At a constant load, an increase in DutyCycle indicates an increase in motor speed.
The units of DutyCycle refer to 'duty cycle'. This is because the controller must rapidly switch the power on/off (i.e. change the duty cycle) in order to manipulate the voltage across the motor.

Unit: duty cycle (duty cycle)
(Read only property)

137.68.15 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When engaged, a motor has the ability to be positioned. When disengaged, no commands are sent to the motor.
Notes:

This function is useful for completely relaxing a motor once it has reached the target position.
(Read and Write property)

137.68.16 FanMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FanMode dictates the operating condition of the fan.
Notes:

Choose between on, off, or automatic (based on temperature).
If the FanMode is set to automatic, the fan will turn on when the temperature reaches 70°C and it will remain on until the temperature falls below 55°C.
If the FanMode is off, the controller will still turn on the fan if the temperature reaches 85°C and it will remain on until it falls below 70°C.
(Read and Write property)

137.68.17 IOMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The encoder interface mode. Match the mode to the type of encoder you have attached.
Notes:

It is recommended to only change this when the encoder disabled in order to avoid unexpected results.
(Read and Write property)

137.68.18 Kd as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Derivative gain constant.
Notes:

A higher Kd will help reduce oscillations.
(Read and Write property)

137.68.19 Ki as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Integral gain constant.
Notes:

The integral term will help eliminate steady-state error.
(Read and Write property)

137.68.20 Kp as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Proportional gain constant.
Notes:

A small Kp value will result in a less responsive controller, however, if Kp is too high, the system can become unstable.
(Read and Write property)

137.68.21 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.

(Read only property)

137.68.22 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum current limit that can be set for the device.
Notes:

Unit: amperes (A)
(Read only property)

137.68.23 MaxCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum current regulator gain for the device.
Notes: (Read only property)

137.68.24 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.68.25 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.68.26 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetPosition can be set to.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

137.68.27 MaxStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The upper bound of StallVelocity.
Notes: (Read only property)

137.68.28 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VelocityLimit can be set to.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

137.68.29 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

137.68.30 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum current limit that can be set for the device.
Notes:

Unit: amperes (A)
(Read only property)

137.68.31 MinCurrentRegulatorGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum current regulator gain for the device.
Notes: (Read only property)

137.68.32 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.68.33 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.68.34 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetPosition can be set to.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

137.68.35 MinStallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The lower bound of StallVelocity.
Notes: (Read only property)

137.68.36 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VelocityLimit can be set to.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

137.68.37 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value that the controller has reported.
Notes:

This value will always be between MinPosition and MaxPosition.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read only property)

137.68.38 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Change the units of your parameters so that your application is more intuitive.
Notes:

Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

137.68.39 StallVelocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Before reading this description, it is important to note the difference between the units of StallVelocity and Velocity.
Notes:

Velocity is a number between -1 and 1 with units of 'duty cycle'. It simply represents the average voltage across the motor.
StallVelocity represents a real velocity (e.g. m/s, RPM, etc.) and the units are determined by the RescaleFactor. With a RescaleFactor of 1, the default units would be in commutations per second.

If the load on your motor is large, your motor may begin rotating more slowly, or even fully stall. Depending on the voltage across your motor, this may result in a large amount of current through both the controller and the motor. In order to prevent damage in these situations, you can use the StallVelocity property.

The StallVelocity should be set to the lowest velocity you would expect from your motor. The controller will then monitor the motor's velocity, as well as the Velocity, and prevent a 'dangerous stall' from occuring. If the controller detects a dangerous stall, it will immediately disengage the motor (i.e. Engaged will be set to false) and an error will be reported to your program.

A 'dangerous stall' will occur faster when the Velocity is higher (i.e. when the average voltage across the motor is higher)
A 'dangerous stall' will occur faster as (StallVelocity - motor velocity) becomes larger.

Setting StallVelocity to 0 will turn off stall protection functionality.
(Read and Write property)

137.68.40 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the controller is configured and the TargetPosition is set, the motor will try to reach the TargetPostiion.
Notes:

If the DeadBand is non-zero, the final position of the motor may not match the TargetPosition
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

137.68.41 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the motor velocity will be limited by this value.
Notes:

VelocityLimit is bounded by MinVelocityLimit and MaxVelocityLimit.
Units for Position, VelocityLimit, Acceleration, and DeadBand can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
(Read and Write property)

137.68.42 Events

137.68.43 DutyCycleUpdated(dutyCycle as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent duty cycle value will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: This event will always occur when the DataInterval elapses. You can depend on this event for constant timing when implementing control loops in code. This is the last event to fire, giving you up-to-date access to all properties.

137.68.44 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent position value will be reported in this event, which occurs when the DataInterval

has elapsed.
Notes:

Regardless of the DataInterval, this event will occur only when the position value has changed from the previous value reported.
Units for Position can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.

position: The position value

137.68.45 setTargetVelocityAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Called by setTargetVelocityAsync when completed.

137.68.46 Constants

137.68.47 kEncoderIOModeCollector10K = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface modes.
Notes: Open Collector 10K, 10kΩ pull-up resistors will be applied to the input lines.

137.68.48 kEncoderIOModeCollector2K2 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface modes.
Notes: Open Collector 2.2K, 2.2kΩ pull-up resistors will be applied to the input lines.

137.68.49 kEncoderIOModeLineDriver10K = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface modes.
Notes: Line Driver 10K, 10kΩ pull-down resistors will be applied to the input lines.

137.68.50 kEncoderIOModeLineDriver2K2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface modes.
Notes: Line Driver 2.2K, 2.2kΩ pull-down resistors will be applied to the input lines.

137.68.51 kEncoderIOModePushPull = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the encoder interface modes.
Notes: Push-Pull, No additional pull-up or pull-down resistors will be applied to the input lines.

137.68.52 kFanModeAuto = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fan modes.
Notes: The fan will be automatically controlled based on temperature.

137.68.53 kFanModeOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fan modes.
Notes: Turns the fan off.

137.68.54 kFanModeOn = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the fan modes.
Notes: Turns the fan on.

137.69 class PhidgetNetMBS

137.69.1 class PhidgetNetMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for managing servers.
Notes:

The Phidget NET class controls all network functionality of a Phidget program, and allows for the use of remote Phidgets in your program. It can be used to enable automated Phidget server discovery over the local network, and to connect to or reject specific servers.

For basic use of the Net class, the only functions you need to worry about are EnableServerDiscovery and AddServer. In most cases, you can use EnableServerDiscovery with server type DEVICEREMOTE to automatically connect to Phidget servers on your local network. You can use AddServer to connect to servers that aren't discoverable on your local network.

To connect to a password-protected discoverable server on your local network, you can use SetServerPassword to specify the password to connect to that server.

If for some reason you need to prevent your program from discovering a non-password-protected server on your local network, you can call DisableServer directly after calling EnableServerDiscovery.

You must enable server discovery or add at least one server before setting other properties of this class, such as disabling servers, or setting server passwords. Similarly, server discovery must remain enabled, or at least one server must remain added, to maintain memory of those preferences.

137.69.2 Methods

137.69.3 addServer(serverName as String, address as String, port as Integer, password as String, Flags as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers a server that the client (your program) will try to connect to.
Notes:

The client will continually try to connect to the server, increasing the time between each attempt to a maximum interval of 16 seconds.

This call is intended for use when server discovery is not enabled, or to connect to a server that is not discoverable.

The server name used by this function does not have to match the name of the server running on the host machine. Only the address, port, and password need to match.

This call will fail if a server with the same name has already been discovered.

This call will fail if SetServerPassword() has already been called with the same server name, as SetServerPassword() registers the server entry anticipating the discovery of the server.

137.69.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.69.5 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.69.6 disableServer(serverName as String, flags as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Prevents attempts to automatically connect to a server.
Notes: By default the client (your program) will continually attempt to connect to added or discovered servers.This call will disable those attempts, but will not close an already established connection.

137.69.7 disableServerDiscovery(serverType as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Disables the dynamic discovery of servers that publish their identity.
Notes: DisableServerDiscovery() does not disconnect already established connections.

137.69.8 enableServer(serverName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables attempts to connect to a discovered server, if attempts were previously disabled by DisableServer().
Notes:

All servers are enabled by default.

This call will fail if the server was not previously added, disabled or discovered.

137.69.9 enableServerDiscovery(serverType as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the dynamic discovery of servers that publish their identity to the network.
Notes:

Currently Multicast DNS is used to discover and publish Phidget servers.
To connect to remote Phidgets, call this function with server type DEVICEREMOTE.

EnableServerDiscovery must be called once for each server type your program requires. Multiple calls for the same server type are ignored

This call will fail with the error code EPHIDGET_UNSUPPORTED if your computer does not have the required mDNS support. We recommend using Bonjour Print Services on Windows and Mac, or Avahi on Linux.

137.69.10 removeAllServers

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes all servers.

137.69.11 removeServer(serverName as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Removes a registration for a server that the client (your program) is trying to connect to.
Notes:

If the client is currently connected to the server, the connection will be closed.

If the server was discovered (not added by AddServer()), the connection may be reestablished if and when the server is rediscovered. DisableServer() should be used to prevent the reconnection of a discovered server

137.69.12 setServerPassword(serverName as String, password as String)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the password that will be used to attempt to connect to the server.
Notes:

If the server has not already been added or discovered, a placeholder server entry will be registered to use this password on the server once it is discovered.

serverName: The name of the server
password: The password to use for the server (empty string if no password)

137.69.13 Events

137.69.14 ServerAdded(server as PhidgetServerMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Subscribe to this event if you would like to know when a server has been added.

137.69.15 ServerRemoved(server as PhidgetServerMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Subscribe to this event if you would like to know when a server has been removed.

137.70 class PhidgetNotInitialzedExceptionMBS

137.70.1 class PhidgetNotInitialzedExceptionMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception to report an access of a not initialized object.
Notes:

We raise this exception if handle is zero, so the object was not properly initialized.
Subclass of the RuntimeException class.

137.71 class PhidgetPHSensorMBS

137.71.1 class PhidgetPHSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The PH Sensor class gathers data from a pH sensor type Phidget board.
Notes:

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.71.2 Methods

137.71.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.71.4 Properties

137.71.5 CorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set this property to the measured temperature of the solution to correct the slope of the pH conversion for temperature.
Notes:

Unit: degrees celsius (°C)
(Read and Write property)

137.71.6 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another PHChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PHChange events can also affected by the PHChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.71.7 MaxCorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CorrectionTemperature can be set to.
Notes:

Unit: degrees celsius (°C)
(Read only property)

137.71.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.71.9 MaxPH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the PHChange event will report.
Notes: (Read only property)

137.71.10 MaxPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that PHChangeTrigger can be set to.
Notes:

Unit: pH (pH)
(Read only property)

137.71.11 MinCorrectionTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CorrectionTemperature can be set to.
Notes:

Unit: degrees celsius (°C)
(Read only property)

137.71.12 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.71.13 MinPH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the PHChange event will report.
Notes: (Read only property)

137.71.14 MinPHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that PHChangeTrigger can be set to.
Notes:

Unit: pH (pH)
(Read only property)

137.71.15 PH as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent pH value that the channel has reported.
Notes:

This value will always be between MinPH and MaxPH.
(Read only property)

137.71.16 PHChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a PHChange event until the pH value has changed by the amount specified by the PHChangeTrigger.
Notes:

Setting the PHChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
Unit: pH (pH)
(Read and Write property)

137.71.17 Events

137.71.18 PHChanged(PH as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent pH value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.

Notes:

If a PHChangeTrigger has been set to a non-zero value, the PHChange event will not occur until the pH has changed by at least the PHChangeTrigger value.

PH: The current pH.

137.72 class PhidgetPowerGuardMBS

137.72.1 class PhidgetPowerGuardMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Power Guard class controls the safety features and thresholds of a programmable power guard Phidget board.
Notes: Subclass of the PhidgetMBS class.

137.72.2 Methods

137.72.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.72.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For PowerGuard

channels, this will disable the output. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.72.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.72.6 Properties

137.72.7 FanMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The FanMode dictates the operating condition of the fan.
Notes:

Choose between on, off, or automatic (based on temperature).
If the FanMode is set to automatic, the fan will turn on when the temperature reaches 70°C and it will remain on until the temperature falls below 55°C.
If the FanMode is off, the device will still turn on the fan if the temperature reaches 85°C and it will remain on until it falls below 70°C.
(Read and Write property)

137.72.8 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.72.9 MaxOverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that OverVoltage can be set to.
Notes:

Unit: volts (V)
(Read only property)

137.72.10 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.72.11 MinOverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that OverVoltage can be set to.
Notes:

Unit: volts (V)
(Read only property)

137.72.12 OverVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device constantly monitors the output voltage, and if it exceeds the OverVoltage value, it will disconnect the input from the output.
Notes:

This functionality is critical for protecting power supplies from regenerated voltage coming from motors. Many power supplies assume that a higher than output expected voltage is related to an internal failure to

the power supply, and will permanently disable themselves to protect the system. A typical safe value is to set OverVoltage to 1-2 volts higher than the output voltage of the supply. For instance, a 12V supply would be protected by setting OverVoltage to 13V.
The device will connect the input to the output again when the voltage drops to (OverVoltage - 1V)
Unit: volts (V)
(Read and Write property)

137.72.13 PowerEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When PowerEnabled is true, the device will connect the input to the output and begin monitoring.
Notes:

The output voltage is constantly monitored and will be automatically disconnected from the input when the output exceeds the OverVoltage value.
PowerEnabled allows the device to operate as a Solid State Relay, powering on or off all devices connected to the output.
(Read and Write property)

137.72.14 Constants

137.72.15 kFanModeAuto = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the operating condition of the fan.
Notes: The fan will be automatically controlled based on temperature.

137.72.16 kFanModeOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the operating condition of the fan.
Notes: Turns the fan off.

137.72.17 kFanModeOn = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the operating condition of the fan.
Notes: Turns the fan on.

137.73 class PhidgetPressureSensorMBS

137.73.1 class PhidgetPressureSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Pressure Sensor class gathers data from the pressure sensor on a Phidget board.
Notes:

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.73.2 Methods

137.73.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.73.4 Properties

137.73.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another PressureChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between PressureChange events can also affected by the PressureChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.73.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.73.7 MaxPressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the PressureChange event will report.
Notes:

Unit: kilopascals (kPa)
(Read only property)

137.73.8 MaxPressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that PressureChangeTrigger can be set to.
Notes:

Unit: kilopascals (kPa)
(Read only property)

137.73.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.73.10 MinPressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the PressureChange event will report.
Notes:

Unit: kilopascals (kPa)
(Read only property)

137.73.11 MinPressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that PressureChangeTrigger can be set to.
Notes:

Unit: kilopascals (kPa)
(Read only property)

137.73.12 Pressure as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent pressure value that the channel has reported.
Notes:

This value will always be between MinPressure and MaxPressure.
Unit: kilopascals (kPa)
(Read only property)

137.73.13 PressureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a PressureChange event until the pressure value has changed by the amount specified by the PressureChangeTrigger.
Notes:

Setting the PressureChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.

Unit: kilopascals (kPa)
(Read and Write property)

137.73.14 Events

137.73.15 PressureChanged(pressure as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent pressure value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a PressureChangeTrigger has been set to a non-zero value, the PressureChange event will not occur until the pressure has changed by at least the PressureChangeTrigger value.

137.74 class PhidgetRCServoMBS

137.74.1 class PhidgetRCServoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RC Servo class controls the signal being sent to the servo motors from the Phidget controller in order to control their position.
Notes:

This class provides control of the position, velocity, acceleration, and supply voltage of the attached servo. Subclass of the PhidgetMBS class.

137.74.2 Methods

137.74.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.74.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe

again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For RC Servo channels, this will disengage the controller. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.74.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.74.6 setTargetPositionAsync(targetPosition as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the target position asynchronously.
Notes: Calls the setTargetPositionAsyncCompleted event later.

137.74.7 Properties

137.74.8 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function:

When changing velocity, the RC servo motor will accelerate/decelerate at this rate.
The acceleration is bounded by MaxAcceleration and MinAcceleration.
Notes:

Using the default settings this acceleration will correspond acceleration of servo arm in degrees/s2, for many standard RC servos.
SpeedRampingState controls whether or not the acceleration value is actually applied when trying to reach a target position.
There is a practical limit on how fast your RC servo motor can accelerate. This is based on the load and physical design of the motor.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

137.74.9 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another PositionChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

137.74.10 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Phidget return code.
Notes:

When engaged, a RC servo motor has the ability to be positioned. When disengaged, no commands are sent to the RC servo motor.

There is no position feedback to the controller, so the RC servo motor will immediately snap to the TargetPosition after being engaged from a disengaged state.
This property is useful for relaxing a servo once it has reached a given position.
If you are concerned about tracking position accurately, you should not disengage the motor while IsMoving is true.

(Read and Write property)

137.74.11 IsMoving as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: IsMoving returns true if the RC servo motor is currently in motion.
Notes:

The controller cannot know if the RC servo motor is physically moving. When <code >IsMoving is false, it simply means there are no commands in the pipeline to the RC servo motor.
(Read only property)

137.74.12 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum acceleration that Acceleration can be set to.
Notes:

This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.13 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.74.14 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.74.15 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum position TargetPosition can be set to.
Notes:

The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

137.74.16 MaxPulseWidth as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MaxPulseWidth represents the maximum pulse width that your RC servo motor specifies.
Notes:

This value can be found in the data sheet of most RC servo motors.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

137.74.17 MaxPulseWidthLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum pulse width that MaxPulseWidth can be set to.
Notes:

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.18 MaxTorque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Torque can be set to.
Notes:

Torque is a ratio of the maximum available torque, therefore the minimum torque is a unitless constant.
(Read only property)

137.74.19 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum velocity VelocityLimit can be set to.
Notes:

This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.
See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.20 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes:

This value depends on MinPosition/MaxPosition and MinPulseWidth/MaxPulseWidth.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.21 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.74.22 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes: (Read only property)

137.74.23 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum position that TargetPosition can be set to.
Notes:

The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

137.74.24 MinPulseWidth as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The MinPulseWidth represents the minimum pulse width that your RC servo motor specifies.
Notes:

This value can be found in the data sheet of most RC servo motors.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

137.74.25 MinPulseWidthLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum pulse width that MinPulseWidth can be set to.
Notes:

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.26 MinTorque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Torque can be set to.
Notes:

Torque is a ratio of the maximum available torque, therefore the minimum torque is a unitless constant.
(Read only property)

137.74.27 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum velocity VelocityLimit can be set to.
Notes:

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.28 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position of the RC servo motor that the controller has reported.
Notes:

This value will always be between MinPosition and MaxPosition.
Using the default settings this position will correspond to the rotation of the servo arm in degrees, for many standard RC servos.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.29 SpeedRampingState as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The speed ramping state value
Notes:

When speed ramping state is enabled, the controller will take the Acceleration and Velocity properties into account when moving the RC servo motor, usually resulting in smooth motion. If speed ramping state is not enabled, the controller will simply set the RC servo motor to the requested position.
(Read and Write property)

137.74.30 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The target position.
Notes:

If the RC servo motor is configured and TargetPosition is set, the controller will continuously try to reach targeted position.

The target position is bounded by MinPosition and MaxPosition.
Using the default settings this position will correspond to the rotation of the servo arm in degrees, for many standard RC servos.
If the RC servo motor is not engaged, then the position cannot be read.
The position can still be set while the RC servo motor is not engaged. Once engaged, the RC servo motor will snap to position, assuming it is not there already.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

Position and Pulse Width

An RC servo motor's position is controlled using a type of Pulse Width Modulation, sending voltage pulses of a given time span, or Pulse Width to the servo.
The servo translates the Pulse Width of the control signal to a corresponding position of the servo arm.
Knowing this, a servo's range of motion can be thought of in terms of a MinPulseWidth and a MaxPulseWidth corresponding to range of pulse widths that produce the servo arm's full range of movement.
In Phidget22, you can adjust the MinPulseWidth and MaxPulseWidth stored by the library to match the desired range of movement you expect from your servo.
Since directly setting the timing of RC servo pulse widths is not very intuitive for most purpses, we map these pulse widths to a user-defied Minimum and Maximum Position.This allows you to define the servo's position in terms best suited to your application, such as degrees, fractions of a rotation, or even some measure of speed for a continuous-rotation servo.
By setting the servo's Target Position to MaxPosition, the controller will send pulses of MaxPulseWidth to the servo.
Similarly, MinPosition will send pulses of MinPulseWidth to the servo
MaxPosition can be set smaller than MinPosition to invert movement of the servo, if it helps your application.
Setting a TargetPosition will transate the position between MinPosition and MaxPosition to a corresponding Pulse Width between MinPulseWidth and MaxPulseWidth, in turn sending the servo arm to the desired position.
Setting VelocityLimit and Acceleration for your servo will limit the rate of change of the servo's position in terms of one UserUnit per second (or /s2). Here, a UserUnit is whatever distance is maked by the change of the TargetPosition by 1.0

Adjusting the Servo's Limits

To tune your program to a specific servo:
First adjust the servo's range of motion by setting the MaxPulseWidth and MinPulseWidth. You can use the default values for these (or the ones on your servo's datasheet) as a starting point.
Send the servo to MaxPosition and MinPosition to check the results. Repeat steps 1 and 2 as nessesarry.
Set the MaxPosition and MinPosition to match whatever numbers you find best suited to your application.
(Read and Write property)

137.74.31 Torque as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Torque is a ratio of the maximum available torque.
Notes:

The torque is bounded by MinTorque and MaxTorque
Increasing the torque will increase the speed and power consumption of the RC servo motor.
(Read and Write property)

137.74.32 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The velocity that the RC servo motor is being driven at.
Notes:

A negative value means the RC servo motor is moving towards a lower position.
The velocity range of the RC servo motor will be from -VelocityLimit to VelocityLimit, depending on direction.
This is not the actual physical velocity of the RC servo motor.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read only property)

137.74.33 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the RC servo motor velocity will be limited by this value.
Notes:

The velocity limit is bounded by MinVelocityLimit and MaxVelocityLimit.
Using the default settings this velocity will correspond to the maximum speed of rotation of servo arm in degrees/s, for many standard RC servos.
SpeedRampingState controls whether or not the velocity limit value is actually applied when trying to reach a target position.

The velocity range of the RC servo motor will be from -VelocityLimit to VelocityLimit, depending on direction.
Note that when this value is set to 0, the RC servo motor will not move.
There is a practical limit on how fast your servo can rotate, based on the physical design of the motor.
The units for Position,Velocity, and Acceleration are configured by scaling the internal timing (set with MinPulseWidth and MaxPulseWidth) to a user specified range with MinPosition and MaxPosition.

See TargetPosition for a deeper explanation of how the settings of your RC Servo controller interact to move your servo.
(Read and Write property)

137.74.34 Voltage as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The supply voltage for the RC servo motor.
Notes:

If your controller supports multiple RC servo motors, every motor will have the same supply voltage. It is not possible to set individual supply voltages.
(Read and Write property)

137.74.35 Events

137.74.36 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: An event that occurs when the position changes on a RC servo motor.
Notes: position: The position value

137.74.37 setTargetPositionAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when setTargetPositionAsync completes.

137.74.38 TargetPositionReached(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the RC servo motor has reached the TargetPosition.
Notes: The controller cannot know if the RC servo motor has physically reached the target position. When TargetPosition is reached, it simply means the controller pulse width output is matching its target.

137.74.39 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: An event that occurs when the velocity changes on a RC servo motor.
Notes: velocity: The velocity value

137.74.40 Constants

137.74.41 kVoltage5V = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for voltage supplied to all attached servos.
Notes: Run all servos on 5V DC

137.74.42 kVoltage6V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for voltage supplied to all attached servos.
Notes: Run all servos on 6V DC

137.74.43 kVoltage7_4V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for voltage supplied to all attached servos.
Notes: Run all servos on 7.4V DC

137.75 class PhidgetResistanceInputMBS

137.75.1 class PhidgetResistanceInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Resistance Input class measures the resistance of a circuit connected to the Phidget, which is used to read resistance-based sensors such as platinum RTDs.
Notes: Subclass of the PhidgetMBS class.

137.75.2 Methods

137.75.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.75.4 Properties

137.75.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another ResistanceChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between ResistanceChange events can also affected by the ResistanceChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.75.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.75.7 MaxResistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the ResistanceChange event will report.
Notes:

Unit: ohms (Ω)
(Read only property)

137.75.8 MaxResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that ResistanceChangeTrigger can be set to.
Notes:

Unit: ohms (Ω)
(Read only property)

137.75.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.75.10 MinResistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the ResistanceChange event will report.
Notes:

When the device is also being used as a TemperatureSensor the MinResistance and MaxResistance will not represent the true input range. This is a side effect of increasing accuracy on the temperature channel.
Unit: ohms (Ω)
(Read only property)

137.75.11 MinResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that the ResistanceChangeTrigger can be set to.
Notes:

Unit: ohms (Ω)
(Read only property)

137.75.12 Resistance as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent resistance value that the channel has reported.
Notes:

This value will always be between MinResistance and MaxResistance.
The Resistance value will change when the device is also being used as a temperature sensor. This is a side effect of increasing accuracy on the temperature channel.
Unit: ohms (Ω)
(Read only property)

137.75.13 ResistanceChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a ResistanceChange event until the resistance value has changed by the amount specified by the ResistanceChangeTrigger.
Notes:

Setting the ResistanceChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering

Unit: ohms (Ω)
(Read and Write property)

137.75.14 RTDWireSetup as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Select the RTD wiring configuration.
Notes:

More information about RTD wiring can be found in the user guide.
(Read and Write property)

137.75.15 Events

137.75.16 ResistanceChanged(resistance as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent resistance value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a ResistanceChangeTrigger has been set to a non-zero value, the ResistanceChange event will not occur until the resistance has changed by at least the ResistanceChangeTrigger value.

resistance: The resistance value

137.75.17 Constants

137.75.18 RTD_WIRE_SETUP_2WIRE = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD wiring configuration constants.
Notes: Configures the device to make resistance calculations based on a 2-wire RTD setup.

137.75.19 RTD_WIRE_SETUP_3WIRE = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD wiring configuration constants.
Notes: Configures the device to make resistance calculations based on a 3-wire RTD setup.

137.75.20 RTD_WIRE_SETUP_4WIRE = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD wiring configuration constants.
Notes: Configures the device to make resistance calculations based on a 4-wire RTD setup.

137.76 class PhidgetRFIDMBS

137.76.1 class PhidgetRFIDMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RFID class provides methods for Phidget RFID boards to read and write (if writing is supported) to RFID tags.
Notes: Subclass of the PhidgetMBS class.

137.76.2 Methods

137.76.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.76.4 LastTag(byref tagString as String, byref protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets the most recently read tag's data, even if that tag is no longer within read range.
Notes:

Only valid after at least one tag has been read.

tagString: The data stored on the most recently read tag
protocol: Protocol of the most recently read tag

137.76.5 Write(tagString as String, protocol as Integer, lockTag as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Writes data to the tag being currently read by the reader.
Notes:

You cannot write to a read-only or locked tag.

tagString: The data to write to the tag
protocol: The communication protocol to use
lockTag: If true, permanently locks the tag so that it cannot be re-written after this write.

137.76.6 Properties

137.76.7 AntennaEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The on/off state of the antenna.
Notes:

You can turn the antenna off to save power.
You must turn the antenna on in order to detect and read RFID tags.
(Read and Write property)

137.76.8 TagPresent as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This property is true if a compatibile RFID tag is being read by the reader.
Notes:

TagPresent will remain true until the tag is out of range and can no longer be read.
(Read only property)

137.76.9 Events

137.76.10 TagFound(tag as String, protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when an RFID tag is read.
Notes:

Tag: Data from the tag
Protocol: Communication protocol of the tag

137.76.11 TagLost(tag as String, protocol as Integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when an RFID tag that was being read is removed from the read range.
Notes:

Tag: Data from the lost tag
Protocol: Communication protocol of the lost tag

137.76.12 Constants

137.76.13 kProtocolEM4100 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the protocol constants.
Notes: EM4100

137.76.14 kProtocolISO11785_FDX_B = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the protocol constants.
Notes: ISO11785 FDX B

137.76.15 kProtocolPhidgets = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the protocol constants.
Notes: PhidgetTAG

137.77 class PhidgetServerMBS

137.77.1 class PhidgetServerMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class to describe a known server.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.77.2 Methods

137.77.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.77.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.77.5 Properties

137.77.6 Address as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The address of the server.
Notes: (Read only property)

137.77.7 Flags as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Flags describing the server state.
Notes:

Flag is 1, if the server requires a password to authenticate.
(Read only property)

137.77.8 Handle as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

137.77.9 Host as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The hostname of the server.
Notes: (Read only property)

137.77.10 Name as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the server.
Notes: (Read only property)

137.77.11 Port as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The port number of the server.
Notes: (Read only property)

137.77.12 ServerType as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Name of the server type.
Notes: (Read only property)

137.77.13 Type as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The server type.
Notes: (Read only property)

137.78 class PhidgetSoundSensorMBS

137.78.1 class PhidgetSoundSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Sound Sensor class gathers data from the sound sensor on a Phidget board.
Notes:

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.78.2 Methods

137.78.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.78.4 Octaves as Double()

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unweighted value of each frequency band.
Notes:

The following frequency bands are represented:
octaves [0] = 31.5 Hz
octaves [1] = 63 Hz
octaves [2] = 125 Hz
octaves [3] = 250 Hz
octaves [4] = 500 Hz
octaves [5] = 1 kHz
octaves [6] = 2 kHz
octaves [7] = 4 kHz
octaves [8] = 8 kHz
octaves [9] = 16 kHz

137.78.5 Properties

137.78.6 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another SPLChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between SPLChange events can also affected by the SPLChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.78.7 dB as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent dB SPL value that has been calculated.
Notes:

This value is bounded by MaxdB.
(Read only property)

137.78.8 dBA as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent dBA SPL value that has been calculated.
Notes:

The dBA SPL value is calculated by applying a A-weighted filter to the Octaves data.
(Read only property)

137.78.9 dBC as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent dBC SPL value that has been calculated.
Notes:

The dBC SPL value is calculated by applying a C-weighted filter to the Octaves data.
(Read only property)

137.78.10 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.78.11 MaxdB as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the SPLChange event will report.
Notes: (Read only property)

137.78.12 MaxSPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that SPLChangeTrigger can be set to.
Notes: (Read only property)

137.78.13 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)

(Read only property)

137.78.14 MinSPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that SPLChangeTrigger can be set to.
Notes: (Read only property)

137.78.15 NoiseFloor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum SPL value that the channel can accurately measure.
Notes:

Input SPLs below this level will not produce an output from the microphone.
(Read only property)

137.78.16 SPLChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a SPLChange event until the dB value has changed by the amount specified by the SPLChangeTrigger.
Notes:

Setting the SPLChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.78.17 SPLRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When selecting a range, first decide how sensitive you want the microphone to be.
Notes:

Select a smaller range when you want more sensitivity from the microphone.
If a Saturation event occurrs, increase the range.
(Read and Write property)

137.78.18 Events

137.78.19 SPLChanged(dB as Double, dBA as Double, dBC as Double, octaves() as Double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent SPL values the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a SPLChangeTrigger has been set to a non-zero value, the SPLChange event will not occur until the dB SPL value has changed by at least the SPLChangeTrigger value.
The dB SPL value is calculated from the Octaves data.
The dBA SPL value is calculated by applying a A-weighted filter to the Octaves data.
The dBC SPL value is calculated by applying a C-weighted filter to the Octaves data.
The following frequency bands are represented:

octaves [0] = 31.5 Hz
octaves [1] = 63 Hz
octaves [2] = 125 Hz
octaves [3] = 250 Hz
octaves [4] = 500 Hz
octaves [5] = 1 kHz
octaves [6] = 2 kHz
octaves [7] = 4 kHz
octaves [8] = 8 kHz
octaves [9] = 16 kHz

dB: The dB SPL value.
dBA: The dBA SPL value.
dBC: The dBC SPL value.
Octaves: The dB SPL value for each band.

137.78.20 Constants

137.78.21 SPLRange102dB = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the sound sensor.
Notes: Range 102dB

137.78.22 SPLRange82dB = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the sound sensor.
Notes: Range 82dB

137.79 class PhidgetSpatialMBS

137.79.1 class PhidgetSpatialMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Spatial class simultaneously gathers data from the acceleromter, gyroscope and magnetometer on a Phidget board.
Notes:

You can also use the individual classes for these sensors if you want to handle the data in separate events.
Subclass of the PhidgetMBS class.

137.79.4 Methods

137.79.5 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.79.6 resetMagnetometerCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the MagnetometerCorrectionParameters to their default values.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be

calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

137.79.7 saveMagnetometerCorrectionParameters

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Saves the MagnetometerCorrectionParameters.
Notes: Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

137.79.8 setAHRSParameters(angularVelocityThreshold as double, AngularVelocityDeltaThreshold as double, accelerationThreshold as double, magTime as double, accelTime as double, biasTime as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calibrate your device for the environment it will be used in.
Notes:

Setting these parameters will allow you to tune the AHRS algorithm on the device to your specific application.

angularVelocityThreshold: The maximum angular velocity reading where the device is assumed to be "at rest"
AngularVelocityDeltaThreshold: The acceptable amount of change in angular velocity between measurements before movement is assumed.
accelerationThreshold: The maximum acceleration applied to the device (minus gravity) where it is assumed to be "at rest". This is also the maximum acceleration allowable before the device stops correcting to the acceleration vector.
magTime: The time it will take to correct the heading 95% of the way to aligning with the compass (in seconds),up to 15 degrees of error. Beyond 15 degrees, this is the time it will take for the bearing to move 45 degrees towards the compass reading. Remember you can zero the algorithm at any time to instantly realign the spatial with acceleration and magnetic field vectors regardless of magnitude.
accelTime: The time it will take to correct the pitch and roll 95% of the way to aligning with the accelerometer (in seconds).
biasTime: The time it will take to have the gyro biases settle to within 95% of the measured steady state (in seconds).

137.79.9 setMagnetometerCorrectionParameters(magneticField as double, offset0 as double, offset1 as double, offset2 as double, gain0 as double, gain1 as double, gain2 as double, T0 as double, T1 as double, T2 as double, T3 as double, T4 as double, T5 as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calibrate your device for the environment it will be used in.
Notes:

Due to physical location, hard and soft iron offsets, and even bias errors, your device should be calibrated. We have created a calibration program that will provide you with the MagnetometerCorrectionParameters for your specific situation. See your device's User Guide for more information.

magneticField: Ambient magnetic field value.
offset0: Provided by calibration program.
offset1: Provided by calibration program.
offset2: Provided by calibration program.
gain0: Provided by calibration program.
gain1: Provided by calibration program.
gain2: Provided by calibration program.
T0: Provided by calibration program.
T1: Provided by calibration program.
T2: Provided by calibration program.
T3: Provided by calibration program.
T4: Provided by calibration program.
T5: Provided by calibration program.

137.79.10 zeroAlgorithm

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Zeros the AHRS algorithm.

137.79.11 zeroGyro

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-zeros the gyroscope in 1-2 seconds.
Notes:

The device must be stationary when zeroing.

The angular rate will be reported as 0.0°/s while zeroing.
Zeroing the gyroscope is a method of compensating for the drift that is inherent to all gyroscopes. See your device's User Guide for more information on dealing with drift.

137.79.12 Properties

137.79.13 Algorithm as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Selects the IMU/AHRS algorithm.
Notes: (Read and Write property)

137.79.14 AlgorithmMagnetometerGain as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The gain for the magnetometer in the AHRS algorithm.
Notes:

Lower gains reduce sensor noise while slowing response time.
(Read and Write property)

137.79.15 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another SpatialData event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

137.79.16 HeatingEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether self-heating temperature stabilization is enabled.
Notes:

Set to true to enable the temperature stabilization feature of this device.
This enables on-board heating elements to bring the board up to a known temperature to minimize ambient temperature effects on the sensor's reading. You can leave this setting false to conserve power consumption.This property is shared by any and all spatial-related objects on this device (Accelerometer, Gyroscope, Magnetometer, Spatial)
(Read and Write property)

137.79.17 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.79.18 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.79.19 Events

137.79.20 AlgorithmData(quaternion() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent IMU/AHRS Quaternion will be reported in this event, which occurs when the

DataInterval has elapsed.
Notes:

quaternion: The quaternion value - [x, y, z, w]
timestamp: The timestamp value

137.79.21 SpatialData(acceleration() as double, angularRate() as double, magneticField() as double, timestamp as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent values that your channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

acceleration: The acceleration vaulues
angularRate: The angular rate values
magneticField: The field strength values
timestamp: The timestamp value

137.79.22 Constants

137.79.23 kFilterTypeLogicLevel = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the filter types.
Notes: Logic level

137.79.24 kFilterTypeZeroCrossing = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the filter types.
Notes: Zero crossing

137.79.25 kInputModeNPN = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the input modes.
Notes: For interfacing NPN digital sensors.

137.79.26 kInputModePNP = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the input modes.
Notes: For interfacing PNP digital sensors.

137.79.27 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 12 volts

137.79.28 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 24 volts

137.79.29 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: Switch the sensor power supply off.

137.79.30 kSpatialAlgorithmAHRS = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the spatial algorithm.
Notes: AHRS algorithm, incorporating magnetometer data for yaw correction.

137.79.31 kSpatialAlgorithmIMU = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the spatial algorithm.
Notes: IMU algorithm, using gyro and accelerometer, but not magnetometer.

137.79.32 kSpatialAlgorithmNone = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the spatial algorithm.
Notes: No AHRS algorithm is used.

137.80 class PhidgetStepperMBS

137.80.1 class PhidgetStepperMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Stepper class powers and controls the stepper motor connected to the Phidget controller, allowing you to change the position, velocity, acceleration, and current limit.
Notes: Subclass of the PhidgetMBS class.

137.80.2 Methods

137.80.3 addPositionOffset(positionOffset as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Adds an offset (positive or negative) to the current position and target position.
Notes: This is especially useful for zeroing position.

137.80.4 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.80.5 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe

timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Stepper channels, this will disengage the motor. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.80.6 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set. See EnableFailsafe for details.
Notes: This function will fail if no failsafe timer has been set for the channel.

137.80.7 setTargetPositionAsync(targetPosition as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets target position asynchronously.
Notes:

If the controller is configured and the TargetPosition is set, the Stepper motor will move towards the TargetPosition at the specified Acceleration and Velocity.

TargetPosition is only used when the ControlMode is set to step mode.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.

Calls setTargetPositionAsyncCompleted event later when done.

137.80.8 Properties

137.80.9 Acceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate at which the controller can change the motor's Velocity.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
Changing the acceleration value while the stepper is in motion (especially at speeds higher than 1000 1/16th steps/s) can cause unpredictable results due to the inability of the processor tocalculate a new acceleration curve quickly enough. Generally you should wait until the motor is stationary until calling this function.
(Read and Write property)

137.80.10 ControlMode as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Use step mode when you want to set a TargetPosition for the Stepper motor.
Notes:

Use run mode when you simply want the Stepper motor to rotate continuously in a specific direction.Changing the control mode while the motor is running will result in the following behaviour:
Step ->Run : The motor will keep moving in the direction it's currently going, and will accelerate to max velocity.
Run ->Step : The motor will set the target position to infinity in the direction it's currently going, at the current velocity.
(Read and Write property)

137.80.11 CurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The current through the motor will be limited by the CurrentLimit.
Notes:

See your Stepper motor's data sheet for more information about what value the CurrentLimit should be.

Unit: amperes (A)
(Read and Write property)

137.80.12 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the controller will fire another PositionChange/VelocityChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.

Unit: milliseconds (ms)
(Read and Write property)

137.80.13 Engaged as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When this property is true, the controller will supply power to the motor coils.
Notes:

The controller must be Engaged in order to move the Stepper motor, or have it hold position.
(Read and Write property)

137.80.14 HoldingCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The HoldingCurrentLimit will activate when the TargetPosition has been reached.
Notes:

It will limit current through the motor.
When the motor is not stopped, the current through the motor is limited by the CurrentLimit.

If no HoldingCurrentLimit is specified, the CurrentLimit value will persist when the motor is stopped.
Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.
(Read and Write property)

137.80.15 IsMoving as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: IsMoving returns true while the controller is sending commands to the motor.
Notes:

Note: there is no feedback to the controller, so it does not know whether the motor shaft is actually moving or not.
(Read only property)

137.80.16 MaxAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Acceleration can be set to.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.17 MaxCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that CurrentLimit and HoldingCurrentLimit can be set to.
Notes:

Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.

Unit: amperes (A)
(Read only property)

137.80.18 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.80.19 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

in milliseconds.
(Read only property)

137.80.20 MaxPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TargetPosition can be set to.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.21 MaxVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VelocityLimit can be set to.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.

The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.22 MinAcceleration as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Acceleration can be set to.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.23 MinCurrentLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that CurrentLimit and HoldingCurrentLimit can be set to.
Notes:

Reference your controller's User Guide for more information about how the HoldingCurrentLimit and CurrentLimit can be used in your application.

Unit: amperes (A)
(Read only property)

137.80.24 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.80.25 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

in milliseconds.
(Read only property)

137.80.26 MinPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TargetPosition can be set to.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.27 MinVelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VelocityLimit can be set to.
Notes:

Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.28 Position as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent position value that the controller has reported.
Notes:

This value will always be between MinPosition and MaxPosition.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.29 RescaleFactor as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Applies a factor to the [user units] per step to all movement parameters to make the units in your application is more intuitive.
Notes:

For example, starting from position 0 and setting a new position with a rescale factor, the stepper will move Position / RescaleFactor steps.
In this way, units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor. The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

137.80.30 TargetPosition as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: If the controller is configured and the TargetPosition is set, the Stepper motor will move towards the TargetPosition at the specified Acceleration and Velocity.
Notes:

TargetPosition is only used when the ControlMode is set to step mode.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

137.80.31 Velocity as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent velocity value that the controller has reported.
Notes:

This value is bounded by MinVelocityLimit and MaxVelocityLimit.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read only property)

137.80.32 VelocityLimit as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: When moving, the Stepper motor velocity will be limited by this value.
Notes:

The VelocityLimit is bounded by MinVelocityLimit and MaxVelocityLimit.
When in step mode, the MinVelocityLimit has a value of 0. This is because the sign (±) of the TargetPosition will indicate the direction.
When in run mode, the MinVelocityLimit has a value of -MaxVelocityLimit. This is because there is no target position, so the direction is defined by the sign (±) of the VelocityLimit.
Units for Position, Velocity, and Acceleration can be set by the user through the RescaleFactor.The RescaleFactor allows you to use more intuitive units such as rotations, or degrees.
The default units for this motor controller are 1/16steps per count.
(Read and Write property)

137.80.33 Events

137.80.34 PositionChanged(position as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the controller updates the stepper motor position.
Notes: This event will still fire even if the motor is blocked from physically moving or misses steps.

137.80.35 setTargetPositionAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when target position is set asynchronously.

137.80.36 Stopped

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the motor controller stops.
Notes: The motor may still be physically moving if the inertia is great enough to make it misstep.

137.80.37 VelocityChanged(velocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Occurs when the stepper motor velocity changes.
Notes: velocity: Velocity of the stepper. Sign indicates direction.

137.80.38 Constants

137.80.39 kControlModeRun = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the control mode constants.
Notes: Control the motor by selecting a target velocity (sign indicates direction). The motor will rotate continously in the chosen direction.

137.80.40 kControlModeStep = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the control mode constants.
Notes: Control the motor by setting a target position.

137.81 class PhidgetTemperatureSensorMBS

137.81.1 class PhidgetTemperatureSensorMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Temperature Sensor class gathers data from the temperature sensor on a Phidget board. #
Notes:

This includes on-board ambient temperature sensors, connected thermocouples or platinum RTDs, and IR temperature sensors. This class is also used to measure the temperature on some high-power Phidget boards such as motor controllers for safety reasons.

If you're using a simple 0-5V sensor that does not have its own firmware, use the VoltageInput or VoltageRatioInput class instead, as specified for your device.
Subclass of the PhidgetMBS class.

137.81.2 Methods

137.81.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.81.4 Properties

137.81.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another TemperatureChange event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between TemperatureChange events can also affected by the TemperatureChangeTrigger.

Unit: milliseconds (ms)
(Read and Write property)

137.81.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.81.7 MaxTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the TemperatureChange event will report.
Notes:

In degrees celsius.
(Read only property)

137.81.8 MaxTemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that TemperatureChangeTrigger can be set to.
Notes: (Read only property)

137.81.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.81.10 MinTemperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the TemperatureChange event will report.
Notes:

In degrees celsius.
(Read only property)

137.81.11 MinTemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that TemperatureChangeTrigger can be set to.
Notes: (Read only property)

137.81.12 RTDType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTDType must correspond to the RTD type you are using in your application.
Notes:

If you are unsure which RTDType to use, visit your device's User Guide for more information.
(Read and Write property)

137.81.13 RTDWireSetup as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The RTDWireSetup must correspond to the wire configuration you are using in your application.
Notes:

If you are unsure which RTDWireSetup to use, visit your device's User Guide for more information.
(Read and Write property)

137.81.14 Temperature as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent temperature value that the channel has reported.
Notes:

This value will always be between MinTemperature and MaxTemperature.
in degrees celsius.
(Read only property)

137.81.15 TemperatureChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a TemperatureChange event until the temperature value has changed by the amount specified by the TemperatureChangeTrigger.
Notes:

Setting the TemperatureChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
In degrees celsius.
(Read and Write property)

137.81.16 ThermocoupleType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ThermocoupleType must correspond to the thermocouple type you are using in your application.
Notes:

If you are unsure which ThermocoupleType to use, visit the Thermocouple Primer for more information.
(Read and Write property)

137.81.17 Events

137.81.18 TemperatureChanged(temperature as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent temperature value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes: If a TemperatureChangeTrigger has been set to a non-zero value, the TemperatureChange event will not occur until the temperature has changed by at least the TemperatureChangeTrigger value.

137.81.19 Constants

137.81.20 kRTDTypePT1000_3850 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD sensor types.
Notes: Configures the RTD type as a PT1000 with a 3850ppm curve.

137.81.21 kRTDTypePT1000_3920 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD sensor types.
Notes: Configures the RTD type as a PT100 with a 3920ppm curve.

137.81.22 kRTDTypePT100_3850 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD sensor types.
Notes: Configures the RTD type as a PT100 with a 3850ppm curve.

137.81.23 kRTDTypePT100_3920 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD sensor types.
Notes: Configures the RTD type as a PT100 with a 3920ppm curve.

137.81.24 kRTDWireSetup2Wire = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD wiring configuration constants.
Notes: Configures the device to make resistance calculations based on a 2-wire RTD setup.

137.81.25 kRTDWireSetup3Wire = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD wiring configuration constants.
Notes: Configures the device to make resistance calculations based on a 3-wire RTD setup.

137.81.26 kRTDWireSetup4Wire = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the RTD wiring configuration constants.
Notes: Configures the device to make resistance calculations based on a 4-wire RTD setup.

137.81.27 kThermoCoupleTypeE = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the thermocouple type constants.
Notes: Configures the thermocouple input as a E-Type thermocouple.

137.81.28 kThermoCoupleTypeJ = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the thermocouple type constants.
Notes: Configures the thermocouple input as a J-Type thermocouple.

137.81.29 kThermoCoupleTypeK = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the thermocouple type constants.
Notes: Configures the thermocouple input as a K-Type thermocouple.

137.81.30 kThermoCoupleTypeT = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the thermocouple type constants.
Notes: Configures the thermocouple input as a T-Type thermocouple.

137.82 class PhidgetUnitInfoMBS

137.82.1 class PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name, symbol, and Phidgets enumeration of the units of the sensor value calculated from the analog sensor's measurements.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

137.82.2 Methods

137.82.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

137.82.4 Destructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

137.82.5 Properties

137.82.6 Name as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name.
Notes: (Read only property)

137.82.7 Symbol as String

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The symbol.
Notes: (Read only property)

137.82.8 Unit as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unit.
Notes: (Read only property)

137.82.9 Constants

137.82.10 kUnitAmpere = 10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Ampere

137.82.11 kUnitBoolean = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Boolean

137.82.12 kUnitCentimeter = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Centimeter

137.82.13 kUnitDecibel = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Decibel

137.82.14 kUnitDegreeCelcius = 13

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Degree Celcius

137.82.15 kUnitGauss = 15

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Gauss

137.82.16 kUnitGram = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: gram

137.82.17 kUnitKilogram = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Kilogram

137.82.18 kUnitKiloPascal = 11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Kilo Pascal

137.82.19 kUnitLux = 14

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Lux

137.82.20 kUnitMeter = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Meter

137.82.21 kUnitMilliampere = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Milliampere

137.82.22 kUnitMillimeter = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Millimeter

137.82.23 kUnitNone = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Unitless

137.82.24 kUnitPercent = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Percent

137.82.25 kUnitPH = 16

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: pH

137.82.26 kUnitVolt = 12

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Volt

137.82.27 kUnitWatt = 17

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the unit constants.
Notes: Watt

137.83 class PhidgetVoltageInputMBS

137.83.1 class PhidgetVoltageInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Voltage Input class measures the voltage across the input of a Phidget with a voltage input.
Notes:

This may be a sensor designed to measure voltage directly, or it could be an input designed to interface with 0-5V sensors.

For 0-5V sensors, this class supports conversion to sensor data with units specific to the Phidget sensor being used, to make reading these sensors easy.
Subclass of the PhidgetMBS class.

137.83.2 Methods

137.83.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.83.4 Properties

137.83.5 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger values.

Unit: milliseconds (ms)
(Read and Write property)

137.83.6 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.83.7 MaxVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the VoltageChange event will report.
Notes:

In volts.
(Read only property)

137.83.8 MaxVoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VoltageChangeTrigger can be set to.
Notes:

In volts.
(Read only property)

137.83.9 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.83.10 MinVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the VoltageChange event will report.
Notes:

In volts.
(Read only property)

137.83.11 MinVoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VoltageChangeTrigger can be set to.
Notes:

In volts.
(Read only property)

137.83.12 PowerSupply as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose the power supply voltage.
Notes:

Set this to the voltage specified in the attached sensor's data sheet to power it.
Set to POWER_SUPPLY_OFF to turn off the supply to save power.
(Read and Write property)

137.83.13 SensorType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: We sell a variety of analog sensors that do not have their own API, they simply output a voltage that can be converted to a digital value using a specific formula.
Notes:

By matching the SensorType to your analog sensor, the correct formula will automatically be applied to data when you get the SensorValue or subscribe to the SensorChange event.

- The SensorChange event has its own change trigger associated with it: SensorValueChangeTrigger.
- Any data from getting the SensorValue or subscribing to the SensorChange event will have a SensorUnit associated with it.

Note: Unlike other properties such as DeviceSerialNumber or Channel, SensorType is set after the device is opened, not before.
(Read and Write property)

137.83.14 SensorUnit as PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unit of measurement that applies to the sensor values of the SensorType that has been selected.
Notes:

Helps keep track of the type of information being calculated from the voltage input.
(Read only property)

137.83.15 SensorValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent sensor value that the channel has reported.
Notes:

Use SensorUnit to get the measurement units that are associated with the SensorValue.
(Read only property)

137.83.16 SensorValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a SensorChange event until the sensor value has changed by the amount specified by the SensorValueChangeTrigger.
Notes:

Setting the SensorChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.83.17 Voltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent voltage value that the channel has reported.
Notes:

This value will always be between MinVoltage and MaxVoltage.
In volts.
(Read only property)

137.83.18 VoltageChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a VoltageChange event until the voltage value has changed by the amount specified by the VoltageChangeTrigger.
Notes:

Setting the VoltageChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering.
In volts.
(Read and Write property)

137.83.19 VoltageRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The voltage range you choose should allow you to measure the full range of your input signal.
Notes:

A larger VoltageRange equates to less resolution.
If a Saturation event occurs, increase the voltage range.
(Read and Write property)

137.83.20 Events

137.83.21 SensorChanged(sensorValue as double, sensorUnit as PhidgetUnitInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent sensor value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a SensorValueChangeTrigger has been set to a non-zero value, the SensorChange event will not occur until the sensor value has changed by at least the SensorValueChangeTrigger value.
This event only fires when SensorType is not set to kSensorTypeVoltage.

137.83.22 VoltageChanged(voltage as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent voltage value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a VoltageChangeTrigger has been set to a non-zero value, the VoltageChange event will not occur until the voltage has changed by at least the VoltageChangeTrigger value.
If SensorType is supported and set to anything other then kSensorTypeVoltage, this event will not fire.
In volts.

137.83.23 Constants

137.83.24 kPowerSupply12V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 12 volts

137.83.25 kPowerSupply24V = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: The sensor is provided with 24 volts

137.83.26 kPowerSupplyOff = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the power supply.
Notes: Switch the sensor power supply off.

137.83.27 kSensorType1114 = & h2b84

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1114 - Temperature Sensor

137.83.28 kSensorType1117 = & h2ba2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1117 - Voltage Sensor

137.83.29 kSensorType1123 = & h2bde

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1123 - Precision Voltage Sensor

137.83.30 kSensorType1127 = & h2c06

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1127 - Precision Light Sensor

137.83.31 kSensorType1130ORP = & h2c26

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1130 - ORP Adapter

137.83.32 kSensorType1130PH = & h2c25

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1130 - pH Adapter

137.83.33 kSensorType1132 = & h2c38

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1132 - 4-20mA Adapter

137.83.34 kSensorType1133 = & h2c42

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1133 - Sound Sensor

137.83.35 kSensorType1135 = & h2c56

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1135 - Precision Voltage Sensor

137.83.36 kSensorType1142 = & h2c9c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1142 - Light Sensor 1000 lux

137.83.37 kSensorType1143 = & h2ca6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 1143 - Light Sensor 70000 lux

137.83.38 kSensorType3500 = & h88b8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3500 - AC Current Sensor 10Amp

137.83.39 kSensorType3501 = & h88c2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3501 - AC Current Sensor 25Amp

137.83.40 kSensorType3502 = & h88cc

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3502 - AC Current Sensor 50Amp

137.83.41 kSensorType3503 = & h88d6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3503 - AC Current Sensor 100Amp

137.83.42 kSensorType3507 = & h88fe

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3507 - AC Voltage Sensor 0-250V (50Hz)

137.83.43 kSensorType3508 = & h8908

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3508 - AC Voltage Sensor 0-250V (60Hz)

137.83.44 kSensorType3509 = & h8912

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3509 - DC Voltage Sensor 0-200V

137.83.45 kSensorType3510 = & h891c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3510 - DC Voltage Sensor 0-75V

137.83.46 kSensorType3511 = & h8926

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3511 - DC Current Sensor 0-10mA

137.83.47 kSensorType3512 = & h8930

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3512 - DC Current Sensor 0-100mA

137.83.48 kSensorType3513 = & h893a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3513 - DC Current Sensor 0-1A

137.83.49 kSensorType3514 = & h8944

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3514 - AC Active Power Sensor 0-250V*0-30A (50Hz)

137.83.50 kSensorType3515 = & h894e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3515 - AC Active Power Sensor 0-250V*0-30A (60Hz)

137.83.51 kSensorType3516 = & h8958

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3516 - AC Active Power Sensor 0-250V*0-5A (50Hz)

137.83.52 kSensorType3517 = & h8962

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3517 - AC Active Power Sensor 0-250V*0-5A (60Hz)

137.83.53 kSensorType3518 = & h896c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3518 - AC Active Power Sensor 0-110V*0-5A (60Hz)

137.83.54 kSensorType3519 = & h8976

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3519 - AC Active Power Sensor 0-110V*0-15A (60Hz)

137.83.55 kSensorType3584 = & h8c00

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3584 - 0-50A DC Current Transducer

137.83.56 kSensorType3585 = & h8c0a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3585 - 0-100A DC Current Transducer

137.83.57 kSensorType3586 = & h8c14

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3586 - 0-250A DC Current Transducer

137.83.58 kSensorType3587 = & h8c1e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3587 - +-50A DC Current Transducer

137.83.59 kSensorType3588 = & h8c28

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3588 - +-100A DC Current Transducer

137.83.60 kSensorType3589 = & h8c32

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: 3589 - +-250A DC Current Transducer

137.83.61 kSensorTypeMOT2002High = & h4e36

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: MOT2002 - Motion Sensor High Sensitivity

137.83.62 kSensorTypeMOT2002Low = & h4e34

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: MOT2002 - Motion Sensor Low Sensitivity

137.83.63 kSensorTypeMOT2002Med = & h4e35

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: MOT2002 - Motion Sensor Medium Sensitivity

137.83.64 kSensorTypeVCP4114 = & ha0b4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: VCP4114 - +-25A DC Current Transducer

137.83.65 kSensorTypeVoltage = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the sensor types.
Notes: Generic voltage sensor, Default. Configures the channel to be a generic voltage sensor. Unit is volts.

137.83.66 kVoltageRange1000mV = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±1000mV DC

137.83.67 kVoltageRange10mV = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±10mV DC

137.83.68 kVoltageRange15V = 9

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±15V DC

137.83.69 kVoltageRange200mV = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±200mV DC

137.83.70 kVoltageRange2V = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±2V DC

137.83.71 kVoltageRange312_5mV = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±312.5mV DC

137.83.72 kVoltageRange400mV = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±400mV DC

137.83.73 kVoltageRange40mV = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±40mV DC

137.83.74 kVoltageRange40V = 10

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±40V DC

137.83.75 kVoltageRange5V = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Range ±5V DC

137.83.76 kVoltageRangeAUTO = 11

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the measurement range of the voltage input.
Notes: Auto-range mode changes based on the present voltage measurements.

137.84 class PhidgetVoltageOutputMBS

137.84.1 class PhidgetVoltageOutputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Voltage Output class controls the variable DC voltage output on a Phidget board.
Notes:

This class provides settings for the output voltage as well as various safety controls.
Subclass of the PhidgetMBS class.

137.84.2 Methods

137.84.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.84.4 enableFailsafe(failsafeTime as UInt32)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enables the failsafe feature for the channel, with a given failsafe time.
Notes:

The failsafe feature is intended for use in applications where it is important for the channel to enter a known safe state if the program controlling it locks up or crashes. If you do not enable the failsafe feature, the channel will carry out whatever instructions it was last given until it is explicitly told to stop.

Enabling the failsafe feature starts a recurring failsafe timer for the channel. Once the failsafe timer is enabled, it must be reset within the specified time or the channel will enter a failsafe state. The failsafe timer may be reset either by calling this function again, or using the ResetFailsafe function. Resetting the failsafe timer will reload the timer with the specified failsafe time, starting when the message to reset the timer is received by the Phidget.

For example: if the failsafe is enabled with a failsafe time of 1000ms, you will have 1000ms to reset the failsafe timer. Every time the failsafe timer is reset, you will have 1000ms from that time to reset the failsafe again.

If the failsafe timer is not reset before it runs out, the channel will enter a failsafe state. For Voltage Output channels, this will set the output voltage to 0V. Once the channel enters the failsafe state, it will reject any further input until the channel is reopened.

To prevent the channel from falsely entering the failsafe state, we recommend resetting the failsafe timer as frequently as is practical for your applicaiton. A good rule of thumb is to not let more than a third of the failsafe time pass before resetting the timer.

Once the failsafe timer has been set, it cannot be disabled by any means other than closing and reopening the channel.

137.84.5 resetFailsafe

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Resets the failsafe timer, if one has been set.
Notes:

See EnableFailsafe for details.
This function will fail if no failsafe timer has been set for the channel.

137.84.6 setVoltageAsync(targetVelocity as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the voltage value that the channel will output.
Notes:

The Voltage value is bounded by MinVoltage and MaxVoltage.
The voltage value will not be output until Enabled is set to true.

Run asynchronously in the background and calls setVoltageAsyncCompleted event when done.

137.84.7 Properties

137.84.8 Enabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable the output voltage by setting Enabled to true.
Notes:

Disable the output by seting Enabled to false to save power.
(Read and Write property)

137.84.9 MaxFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

In milliseconds.
(Read only property)

137.84.10 MaxVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that Voltage can be set to.
Notes:

In volts.
(Read only property)

137.84.11 MinFailsafeTime as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that failsafeTime can be set to when calling EnableFailsafe.
Notes:

In milliseconds.
(Read only property)

137.84.12 MinVoltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that Voltage can be set to.
Notes:

In volts.
(Read only property)

137.84.13 Voltage as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The voltage value that the channel will output.
Notes:

The Voltage value is bounded by MinVoltage and MaxVoltage.
The voltage value will not be output until Enabled is set to true.
(Read and Write property)

137.84.14 VoltageOutputRange as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose a VoltageOutputRange that best suits your application.
Notes:

Changing the VoltageOutputRange will also affect the MinVoltage and MaxVoltage values.
(Read and Write property)

137.84.15 Events

137.84.16 setVoltageAsyncCompleted(ReturnCode as integer)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called by setVoltageAsync.

137.84.17 Constants

137.84.18 kVoltageOutputRange10V = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the output voltage range.
Notes: ±10V DC

137.84.19 kVoltageOutputRange5V = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the constants for the output voltage range.
Notes: 0-5V DC

137.85 class PhidgetVoltageRatioInputMBS

137.85.1 class PhidgetVoltageRatioInputMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Voltage Ratio Input class is used for measuring the ratio between the voltage supplied to and the voltage returned from an attached sensor or device.
Notes:

This is useful for interfacing with ratiometric sensors or wheatstone bridge based sensors.

For ratiometric sensors, this class supports conversion to sensor data with units specific to the Phidget sensor being used, to make reading these sensors easy.
Subclass of the PhidgetMBS class.

137.85.2 Methods

137.85.3 Constructor

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.

137.85.4 Properties

137.85.5 BridgeEnabled as Boolean

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable power to and data from the input by setting BridgeEnabled to true.
Notes: (Read and Write property)

137.85.6 BridgeGain as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Choose a BridgeGain that best suits your application.
Notes:

For more information about the range and accuracy of each BridgeGain to decide which best suits your application, see your device's User Guide.
(Read and Write property)

137.85.7 DataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The DataInterval is the time that must elapse before the channel will fire another event.
Notes:

The data interval is bounded by MinDataInterval and MaxDataInterval.
The timing between events can also affected by the change trigger.

Unit: milliseconds (ms)
(Read and Write property)

137.85.8 MaxDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.85.9 MaxVoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value the VoltageRatioChange event will report.
Notes: (Read only property)

137.85.10 MaxVoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The maximum value that VoltageRatioChangeTrigger can be set to.
Notes: (Read only property)

137.85.11 MinDataInterval as UInt32

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that DataInterval can be set to.
Notes:

Unit: milliseconds (ms)
(Read only property)

137.85.12 MinVoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value the VoltageRatioChange event will report.
Notes: (Read only property)

137.85.13 MinVoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The minimum value that VoltageRatioChangeTrigger can be set to.
Notes: (Read only property)

137.85.14 SensorType as Integer

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries sensor type.
Notes:

We sell a variety of analog sensors that do not have their own API, they simply output a voltage that can be converted to a digital value using a specific formula. By matching the SensorType to your analog sensor, the correct formula will automatically be applied to data when you get the SensorValue or subscribe to the SensorChange event.

The SensorChange event has its own change trigger associated with it: SensorValueChangeTrigger.

Any data from getting the SensorValue or subscribing to the SensorChange event will have a SensorUnit associated with it.

Note: Unlike other properties such as DeviceSerialNumber or Channel, SensorType is set after the device is opened, not before.
(Read and Write property)

137.85.15 SensorUnit as PhidgetUnitInfoMBS

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The unit of measurement that applies to the sensor values of the SensorType that has been selected.
Notes:

Helps keep track of the type of information being calculated from the voltage ratio input.
(Read only property)

137.85.16 SensorValue as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent sensor value that the channel has reported.
Notes:

Use SensorUnit to get the measurement units that are associated with the SensorValue.
(Read only property)

137.85.17 SensorValueChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a SensorChange event until the sensor value has changed by the amount specified by the SensorValueChangeTrigger.
Notes:

Setting the SensorChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.85.18 VoltageRatio as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The most recent voltage ratio value that the channel has reported.
Notes:

This value will always be between MinVoltageRatio and MaxVoltageRatio.
(Read only property)

137.85.19 VoltageRatioChangeTrigger as Double

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The channel will not issue a VoltageRatioChange event until the voltage ratio value has changed by the amount specified by the VoltageRatioChangeTrigger.
Notes:

Setting the VoltageRatioChangeTrigger to 0 will result in the channel firing events every DataInterval. This is useful for applications that implement their own data filtering
(Read and Write property)

137.85.20 Events

137.85.21 SensorChanged(sensorValue as double, sensorUnit as PhidgetUnitInfoMBS)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent sensor value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a SensorValueChangeTrigger has been set to a non-zero value, the SensorChange event will not occur until

the sensor value has changed by at least the SensorValueChangeTrigger value.
This event only fires when SensorType is not set to SENSOR_TYPE_VOLTAGERATIO

sensorValue: The sensor value
sensorUnit: The sensor unit information corresponding to the SensorValue.
Helps keep track of the type of information being calculated from the voltage ratio input.

137.85.22 VoltageRatioChanged(voltageRatio as double)

MBS Phidgets Plugin, Plugin Version: 22.1, Platforms: macOS, Linux, Windows, Targets: .

Function: The most recent voltage ratio value the channel has measured will be reported in this event, which occurs when the DataInterval has elapsed.
Notes:

If a VoltageRatioChangeTrigger has been set to a non-zero value, the VoltageRatioChange event will not occur until the voltage has changed by at least the VoltageRatioChangeTrigger value.
If SensorType is supported and set to anything other then SENSOR_TYPE_VOLTAGERATIO, this event will not fire.

137.85.23 Constants

137.85.24 kBridgeGain1 = 1

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 1x Amplification

137.85.25 kBridgeGain128 = 8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 128x Amplification

137.85.26 kBridgeGain16 = 5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 16x Amplification

137.85.27 kBridgeGain2 = 2

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 2x Amplification

137.85.28 kBridgeGain32 = 6

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 32x Amplification

137.85.29 kBridgeGain4 = 3

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 4x Amplification

137.85.30 kBridgeGain64 = 7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 64x Amplification

137.85.31 kBridgeGain8 = 4

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the bridge gain amplification constants.
Notes: 8x Amplification

137.85.32 kSensorType1101_Sharp_2D120X = & h2b03

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1101 - IR Distance Adapter, with Sharp Distance Sensor 2D120X (4-30cm)

137.85.33 kSensorType1101_Sharp_2Y0A02 = & h2b05

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1101 - IR Distance Adapter, with Sharp Distance Sensor 2Y0A02 (20-150cm)

137.85.34 kSensorType1101_Sharp_2Y0A21 = & h2b04

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1101 - IR Distance Adapter, with Sharp Distance Sensor 2Y0A21 (10-80cm)

137.85.35 kSensorType1102 = & h2b0c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1102 - IR Reflective Sensor 5mm

137.85.36 kSensorType1103 = & h2b16

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1103 - IR Reflective Sensor 10cm

137.85.37 kSensorType1104 = & h2b20

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1104 - Vibration Sensor

137.85.38 kSensorType1105 = & h2b2a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1105 - Light Sensor

137.85.39 kSensorType1106 = & h2b34

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1106 - Force Sensor

137.85.40 kSensorType1107 = & h2b3e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1107 - Humidity Sensor

137.85.41 kSensorType1108 = & h2b48

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1108 - Magnetic Sensor

137.85.42 kSensorType1109 = & h2b52

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1109 - Rotation Sensor

137.85.43 kSensorType1110 = & h2b5c

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1110 - Touch Sensor

137.85.44 kSensorType1111 = & h2b66

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1111 - Motion Sensor

137.85.45 kSensorType1112 = & h2b70

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1112 - Slider 60

137.85.46 kSensorType1113 = & h2b7a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1113 - Mini Joy Stick Sensor

137.85.47 kSensorType1115 = & h2b8e

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1115 - Pressure Sensor

137.85.48 kSensorType1116 = & h2b98

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1116 - Multi-turn Rotation Sensor

137.85.49 kSensorType1118_AC = & h2bad

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1118 - 50Amp Current Sensor AC

137.85.50 kSensorType1118_DC = & h2bae

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1118 - 50Amp Current Sensor DC

137.85.51 kSensorType1119_AC = & h2bb7

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1119 - 20Amp Current Sensor AC

137.85.52 kSensorType1119_DC = & h2bb8

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1119 - 20Amp Current Sensor DC

137.85.53 kSensorType1120 = & h2bc0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1120 - FlexiForce Adapter

137.85.54 kSensorType1121 = & h2bca

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1121 - Voltage Divider

137.85.55 kSensorType1122_AC = & h2bd5

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 1122 - 30 Amp Current Sensor AC

137.85.56 kSensorType1122_DC = & h2bd6

MBS Phidgets Plugin, Plugin Version: 22.1.

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 3123 - Compression Load Cell (0-45.3 kg)

137.85.76 kSensorType3130 = & h7a44

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 3130 - Relative Humidity Sensor

137.85.77 kSensorType3520 = & h8980

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 3520 - Sharp Distance Sensor (4-30cm)

137.85.78 kSensorType3521 = & h898a

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 3521 - Sharp Distance Sensor (10-80cm)

137.85.79 kSensorType3522 = & h8994

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: 3522 - Sharp Distance Sensor (20-150cm)

137.85.80 kSensorTypeVoltageRatio = 0

MBS Phidgets Plugin, Plugin Version: 22.1.

Function: One of the sensor type constants.
Notes: Generic ratiometric sensor, Default. Configures the channel to be a generic ratiometric sensor. Unit is volts/volt.

Chapter 138

Photos

138.1 control DesktopPHLivePhotoControlMBS

138.1.1 control DesktopPHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A view that displays a Live Photo—a picture that also includes motion and sound from the moments just before and after its capture.
Notes:

Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app—see the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer—for example, to install it on a different view for proper event handling in your app's view hierarchy—use the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

138.1.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5

- New desktop controls

138.1.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

138.1.4 Methods

138.1.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this control is available.

138.1.6 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Begins playback of Live Photo content in the view.
Notes:

style: An option for how much of the Live Photo's motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate—for example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

138.1.7 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 138.1.8 stopPlayback(animated as boolean)

138.1.8 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 138.1.7 stopPlayback 22442

138.1.9 Properties

138.1.10 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The audio gain to apply to the Live Photo's movie content during playback.
Notes:

Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.
(Read and Write property)

138.1.11 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The content mode.
Notes: (Read and Write property)

138.1.12 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The Live Photo displayed in the view.
Notes: (Read and Write property)

138.1.13 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A view for displaying Live Photo status.
Notes:

The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don't need to do anything with view's content—instead, this property provides access to the badge view so you can change where it appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.
(Read only property)

138.1.14 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view plays the audio content of its Live Photo.
Notes:

The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

138.1.15 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

138.1.16 Events

138.1.17 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

138.1.18 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

138.1.19 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

138.1.20 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

138.1.21 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Notifies the delegate that Live Photo playback has ended.
Notes: playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

138.1.22 FocusLost

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

138.1.23 FocusReceived

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

138.1.24 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

138.1.25 MenuBarSelected

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

138.1.26 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

138.1.27 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

138.1.28 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

138.1.29 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

138.1.30 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

138.1.31 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Notifies the control that Live Photo playback is about to begin.
Notes: playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly

previewed.

138.1.32 Constants

138.1.33 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One of the content mode constants.
Notes: Aspect Fill.

138.1.34 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One of the content mode constants.
Notes: Aspect Fit.

138.1.35 PlaybackStyleFull = 1

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One of the playback styles.
Notes: Plays back the entire motion and sound content of the Live Photo, including transition effects at the start and end.

138.1.36 PlaybackStyleHint = 2

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One of the playback styles.
Notes: Plays back only a brief section of the motion content of the Live Photo, without sound.

138.1.37 PlaybackStyleUndefined = 0

MBS Mac64bit Plugin, Plugin Version: 21.5.

Function: One of the playback styles.
Notes: This value is invalid for use.

138.2 class PHAdjustmentDataMBS

138.2.1 class PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of the edits made to an asset's photo, video, or Live Photo content, which allows your app to reconstruct or revert the effects of prior editing sessions.
Notes:

When a user edits an asset, Photos saves a PHAdjustmentData object along with the modified image or video data. This object provides an application-defined "recipe" you can use to reconstruct the edit. For example, if your app applies filters to a photo, you might might create adjustment data that identifies which filters the user picked, the parameters for each, and the order to apply the filters in. Later, the user can resume working with those filters and parameters by using your app or another app that understands your adjustment data format. When iCloud Photos is enabled, a user can revert or resume edits made on a different device.

You work with adjustment data when editing an asset, using either the requestContentEditingInputWithOptions method or a photo extension view controller that implements the PHContentEditingController protocol.

- When you begin an edit (through a PHContentEditingInputMBS object), examine the editing input's adjustmentData property to decide whether the last edit made to the asset is compatible with your app. If so, you can allow the user to resume working with that edit. If not, you can make further edits to the last saved version of the photo.

- When you commit an edit (through a PHContentEditingOutputMBS object), provide a new adjustment whose data represents the changes your app made.

For each asset, Photos stores only one PHAdjustmentDataMBS object, representing the most recent edit made to the asset's content.

138.2.2 Methods

138.2.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

138.2.4 Constructor(formatIdentifier as string, formatVersion as string, data as Memoryblock)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Initializes an adjustment object with the specified format and data.
Notes:

formatIdentifier: A string that uniquely identifies the format of the adjustment data.
formatVersion: A version number for the adjustment data format.
data: A serialized form of whatever information is needed to reconstruct the adjustment.

Returns an initialized adjustment object.

To uniquely identify the adjustments your app makes, use the the formatIdentifier and formatVersion parameters. These parameters help you determine whether and how to interpret the adjustment data when working with an edited asset later. For best results, use reverse-DNS-style identifiers and monotonically increasing version numbers.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.

Use the data parameter to store whatever information is useful to your app for reconstructing an edit. For example, if your app applies Core Image filters to photos, you can use this parameter to store a serialized property list that describes the filters and their parameters.

Because Photos limits the size of adjustment data, you should keep your edit information short and descriptive. Don't use image data to describe an edit—instead, save only the minimal information that is needed to recreate the edit.
Your app must provide a non-empty Memoryblock for the data parameter. If you cannot provide relevant data to describe an edit, you may pass data that encodes an NSUUID object.

138.2.5 Properties

138.2.6 data as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Data that contains the information necessary to reconstruct the adjustment.
Notes:

Use this property to resume working with the last edit that was made to an asset. For example, if your app applies Core Image filters to photos, this property may hold a serialized property list that describes the filters and their parameters. Use the formatIdentifier and formatVersion properties to determine whether

the adjustment data saved with an asset is in a format that your app can understand.
(Read only property)

138.2.7 formatIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string uniquely identifying the format of the adjustment data.
Notes:

Set this identifier when you create an adjustment object with the constructor. For best results, identify your organization or product using a reverse-DNS-style name, such as com.example.myApp.

Read this property, and the formatVersion property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
(Read only property)

138.2.8 formatVersion as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A version number for the adjustment data format.
Notes:

Set this identifier when creating an adjustment object with the constructor.
Read this property, and the formatIdentifier property, to determine whether the adjustment data saved with an asset was created by your app or is otherwise compatible with your app.
For example, in the first version of your app, you might save adjustment data using the identifier com.example.myApp and version 1.0. If a later version of your app adds incompatible information to the adjustment data, you can use the same identifier and increase the version number to 2.0.
(Read only property)

138.2.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.3 class PHAssetChangeRequestMBS

138.3.1 class PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change block.
Notes:

You use the PHAssetChangeRequest class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset's content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request's properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset's state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.

138.3.2 Methods

138.3.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.3.4 changeRequestForAsset(asset as PHAssetMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset.
Notes:

asset: The asset to be modified.

Returns an asset change request.

Before editing an asset, use its canPerformEditOperation method to see if the asset allows editing.

After you create a change request within a photo library change block, propose changes to the original asset's properties by setting the corresponding properties of the change request. After Photos runs your change block, the asset's properties reflect your changes. For details on change blocks, see PHPhotoLibraryMBS.

To edit an asset's image or video content, first begin a content editing session with the asset's requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.

138.3.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.3.6 creationRequestForAssetFromImage(image as NSImageMBS) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new image asset to the Photos library.
Notes:

image: An image.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.
To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

138.3.7 creationRequestForAssetFromImageAtFile(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new image asset to the Photos library, using the image file at the specified URL.
Notes:

file: A URL for an image file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

138.3.8 creationRequestForAssetFromVideoAtFileURL(file as FolderItem) as PHAssetChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new video asset to the Photos library, using the video file at the specified URL.
Notes:

file: A folderitem for a video file.

Returns an asset creation request.

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

138.3.9 deleteAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests that the specified assets be deleted.
Notes:

assets: An array of PHAssetMBS objects to be deleted.

Call this method within a photo library change block to delete assets. For details on change blocks, see PHPhotoLibraryMBS.

138.3.10 revertAssetContentToOriginal

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Request to revert any edits made to the asset's content.
Notes:

When an asset has been edited, Photos stores multiple versions of the asset: the original version of the asset as it was first captured or imported, and the input and output of the most recent edit. (You work with asset versions when requesting to edit an asset's content—see PHContentEditingInputRequestOptions.) Call this method to revert to the original version of the asset, discarding all edits.

This request fails if original content for the asset is not available on the current device (for example, if iCloud Photo Library is enabled and the user has edited the asset on a different device). Use PHAssetResourceManagerMBS to ensure that original asset content is downloaded to the current device before making this request.

138.3.11 Properties

138.3.12 contentEditingOutput as PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The output of an asset content editing session.
Notes:

To edit an asset's image or video content, you must first begin a content editing session with the asset's requestContentEditingInputWithOptions method. You commit a content edit by setting the contentEditingOutput property of a change request within a change block. For more information about asset content editing, see PHAssetMBS.
(Read and Write property)

138.3.13 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset claims to have been originally created.
Notes:

Set this property to change the creation date of an asset.
(Read and Write property)

138.3.14 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset claims to have been originally created.
Notes:

Set this property to change the creation date of an asset.
(Read and Write property)

138.3.15 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is marked as one of the user's favorites.
Notes: (Read and Write property)

138.3.16 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is hidden in collections.
Notes:

Hidden assets do not appear in the Moments interface in the Photos app.
(Read and Write property)

138.3.17 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information saved with the asset.
Notes:

Typically, an asset's location metadata identifies the place where the asset was captured. Use this property to provide a different location.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read and Write property)

138.3.18 placeholderForCreatedAsset as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the asset that the change request creates.
Notes:

Use this property if you need to reference the asset created by a change request within the same change block.
(Read only property)

138.4 class PHAssetCollectionChangeRequestMBS

138.4.1 class PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, or modify a Photos asset collection, for use in a photo library change block.
Notes:

You use the PHAssetCollectionChangeRequestMBS class to request changes for PHAssetCollectionMBS objects. To make changes to asset collections (such as user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForAssetCollectionWithTitle: method to create a new asset collection.
- Call the deleteAssetCollections: method to delete existing asset collections.
- Call the changeRequestForAssetCollection: or changeRequestForAssetCollection:assets: method to modify a collection's metadata or list of member assets.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you're requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying an asset collection works like a mutable version of the asset collection object. Use the change request's properties and instance methods to request changes to the asset collection itself.

After Photos runs the change block and calls your completion handler, the asset collection's state reflects the changes you requested in the block.
If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

138.4.2 Methods

138.4.3 addAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified asset to the asset collection.
Notes:

asset: The PHAsset object to be added to the asset collection.

If you created the change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

138.4.4 addAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified assets to the asset collection.
Notes:

assets: An array of PHAsset objects to be added to the asset collection.

If you created the change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method, Photos inserts the new assets after the existing assets in the collection. Otherwise, the arrangement of the new assets relative to others in the collection is undefined.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

138.4.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.4.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset collection.
Notes:

assetCollection: The asset collection to be modified.

Returns an asset collection change request.

After you create a change request within a photo library change block, propose changes to the collection's title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when modifying an asset collection's metadata or when adding or removing assets without regard to their arrangement. To work with indexes in the list of member assets, use the changeRequestForAssetCollection method instead.
See also:

- 138.4.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS 22460

138.4.7 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS, assets as PHFetchResultMBS) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified asset collection, with a fetch result for tracking changes.
Notes:

assetCollection: The asset collection to be modified.
assets: A fetch result listing the assets in the collection.

Returns an asset collection change request.

After you create a change request within a photo library change block, you propose changes to the collection's title or list of member assets with the properties and instance methods of the change request. After Photos runs your change block, the asset collection reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange assets at specified indexes in the asset collection's list of member assets. By passing in a fetch result reflecting what your app sees as the current state of the collection's membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don't need to work with indexes in the list of member assets, you can use the changeRequestForAssetCollection method instead.
See also:

- 138.4.6 changeRequestForAssetCollection(assetCollection as PHAssetCollectionMBS) as PHAssetCollectionChangeRequestMBS 22459

138.4.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.4.9 creationRequestForAssetCollectionWithTitle(title as string) as PHAssetCollectionChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new asset collection to the Photos library.
Notes:

image: A name for the new asset collection.

Returns an asset collection creation request.

Call this method within a photo library change block to create a new asset collection. For details on change blocks, see PHPhotoLibraryMBS.
To add assets to the newly created asset collection or change its title, use the methods listed in Modifying Asset Collections. To reference the newly created asset collection later in the same change block or after the change block completes, use the placeholderForCreatedAssetCollection property to retrieve a placeholder object.

138.4.10 deleteAssetCollections(Collections() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests that the specified asset collections be deleted.
Notes:

assetCollections: An array of PHAssetCollectionMBS objects to be deleted.

Call this method within a photo library change block to delete asset collections. For details on change blocks, see PHPhotoLibraryMBS.

138.4.11 insertAsset(asset as PHAssetMBS, index as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Insert the specified asset into the collection at the specified indexes.

Notes:

asset: A PHAssetMBS object to be inserted into the asset collection.
index: The index at which the asset should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

138.4.12 insertAssets(assets() as PHAssetMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts the specified assets into the collection at the specified indexes.
Notes:

assets: An array of PHAssetMBS objects to be inserted into the asset collection.
indexes: The indexes at which the assets should be inserted. The count of locations in this index set must equal the count of assets.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before inserting assets.

For a detailed discussion of how the index set you specify maps to insertions in the list of assets, see the similar NSMutableArray method insertObjects.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

138.4.13 moveAsset(fromIndex as Integer, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Move the asset at the specified index in the asset collection to a new index.
Notes:

fromIndex: The indexes of the asset to be moved in the asset collection.
toIndex: The index at which to place the moved asset, relative to the collection's ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before rearranging assets.

138.4.14 moveAssets(fromIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Moves the assets at the specified indexes in the asset collection to a new index.
Notes:

fromIndexes: The indexes of the assets to be moved in the asset collection.
toIndex: The index at which to place the moved assets, relative to the collection's ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before rearranging assets.

138.4.15 removeAsset(asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified asset from the asset collection.
Notes:

asset: A PHAssetMBS object to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier

property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 138.4.16 removeAsset(AtIndex as Integer) 22464

138.4.16 removeAsset(AtIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the asset at the specified index from the asset collection.
Notes:

index: The index of the asset to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAsset-Collection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 138.4.15 removeAsset(asset as PHAssetMBS) 22463

138.4.17 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified assets from the asset collection.
Notes:

assets: An array of PHAssetMBS objects to be removed from the asset collection.

This method removes assets from the collection based on their identity (determined by the localIdentifier property of each asset). To remove objects at specified indexes, use the removeAssets method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets:title: method) do not support adding or removing content.
See also:

- 138.4.18 removeAssets(AtIndexes as NSIndexSetMBS) 22465

138.4.18 removeAssets(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the assets at the specified indexes from the asset collection.
Notes:

indexes: The indexes of the assets to be removed from the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAsset-Collection method before removing assets. To remove objects based on their identities (without regard to their indexes in the collection), use the removeAssets: method.

Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.
See also:

- 138.4.17 removeAssets(assets() as PHAssetMBS) 22464

138.4.19 replaceAsset(AtIndex as Integer, asset as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the asset at the specified index in the asset collection with the specified asset.
Notes:

index: The index of the asset to be replaced in the asset collection.
asset: A PHAssetMBS object to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAsset-Collection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAsset-CollectionWithAssets method) do not support adding or removing content.

138.4.20 replaceAssets(AtIndexes as NSIndexSetMBS, assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the assets at the specified indexes in the asset collection with the specified assets.
Notes:

indexes: The indexes of the assets to be replaced in the asset collection.
assets: An array of PHAssetMBS objects to be inserted into (or moved within) the asset collection.

To ensure that the index set you specify is valid even if the asset collection has changed since you fetched it, create a change request with a snapshot of the asset collection's contents using the changeRequestForAssetCollection method before rearranging assets.

Assets from My Photo Stream or iCloud Shared Albums and assets synced to the device through iTunes cannot be added to collections. Transient asset collections (such as those created with the transientAssetCollectionWithAssets method) do not support adding or removing content.

138.4.21 Properties

138.4.22 placeholderForCreatedAssetCollection as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the asset collection that the change request creates.
Notes:

Use this property if you need to reference the asset collection created by a change request within the same change block.
(Read only property)

138.4.23 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The displayed name of the asset collection.
Notes:

Set this property to change the asset collection's title.
(Read and Write property)

138.5 class PHAssetCollectionMBS

138.5.1 class PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A representation of a Photos asset grouping, such as a moment, user-created album, or smart album.
Notes:

In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of an asset collection, fetch them with a PHAsset class method such as fetchAssetsInAssetCollection. To find asset collections, use one of the methods listed in Fetching Asset Collections.

Important
Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Asset Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS.requestAuthorization method to prompt the user at a time of your choosing.)

Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and collection lists, asset collections are immutable. To create, rename, or delete asset collections, or to add, remove, or rearrange members in an asset collection, create a PHAssetCollectionChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

138.5.2 Blog Entries

- Show Live Photos in your Xojo application

138.5.3 Blog Entries

- Show Live Photos in your Xojo application

138.5.4 Methods

138.5.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.5.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.5.7 fetchAssetCollectionsContainingAsset(asset as PHAssetMBS, type as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections of the specified type containing the specified asset.
Notes:

asset: A Photos asset.
type: An asset collection type, such as an album or a moment. See Type constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

138.5.8 fetchAssetCollectionsWithALAssetGroupURLs(assetGroupURLs() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections using URLs provided by the Assets Library framework.
Notes:

assetGroupURLs: An array of URLs, each an asset group URL that was previously retrieved from an ALAssetsGroupMBS object.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use

default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

The Assets Library framework is deprecated in iOS 8.0 and later, replaced by the Photos framework. Use this method if your app has previously stored URLs from ALAssetsGroupMBS objects and you need to retrieve the corresponding Photos framework objects.

138.5.9 fetchAssetCollectionsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections with the specified unique identifiers.
Notes:

identifiers: An array of strings, each the localIdentifier string of an asset collection.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

138.5.10 fetchAssetCollectionsWithType(type as Integer, subType as integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves asset collections of the specified type and subtype.
Notes:

type: A type of asset collection, such as an album or a moment. See Type constants.
subtype: A subtype of asset collection. See Subtype constants.
options: Options that specify a filter predicate and sort order for the fetched asset collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAssetCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all asset collections with the specified type and subtype. To retrieve a more specific set of asset collections, provide a PHFetchOptionsMBS object containing

a filter predicate.

138.5.11 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The names of locations grouped by the collection (an array of strings).
Notes: This property applies only to asset collections whose type is PHAssetCollectionTypeMoment. The Photos app automatically creates moments to group assets by time and location. A moment might group assets captured in multiple locations, so this array can contain multiple names. For other asset collection types, this property's value is nil.

138.5.12 transientAssetCollectionWithAssetFetchResult(fetchResult as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary asset collection containing the assets from the specified fetch result.
Notes:

fetchResult: A fetch result containing one or more PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

138.5.13 transientAssetCollectionWithAssets(assets() as PHAssetMBS, title as string) as PHAssetCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary asset collection containing the specified assets.
Notes:

assets: An array of PHAssetMBS objects.
title: A name for the new temporary asset collection.

Returns a new asset collection.

Transient asset collections are not saved to local storage or iCloud and do not appear in the Photos app or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection and want to display an arbitrary set of assets.

138.5.14 Properties

138.5.15 approximateLocation as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A location representing those of all assets in the collection.
Notes:

The Photos app automatically creates moments to group assets by time and location. A moment can contain photos from several locations in close proximity. In such cases, this property describes the general area containing the locations of all assets in the moment.
This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

138.5.16 assetCollectionSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtype of the asset collection.
Notes:

Use subtypes to make minor distinctions between collections of the same type. For albums, for example, you might distinguish user-created albums from those synced from iPhoto. See Subtype constants for possible values.
(Read only property)

138.5.17 assetCollectionType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset collection, such as an album or a moment.
Notes: (Read only property)

138.5.18 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The latest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.
(Read only property)

138.5.19 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The latest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.
(Read only property)

138.5.20 estimatedAssetCount as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The estimated number of assets in the asset collection.
Notes:

This count may not match the current number of assets in the collection. To get the most recent count, fetch the collection's assets with the fetchAssetsInAssetCollection method and read the count property of the fetch result.
If asset count information is not available for the collection, this property's value is NSNotFound.
(Read only property)

138.5.21 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The earliest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.

(Read only property)

138.5.22 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The earliest creation date among all assets in the asset collection.
Notes:

This property applies only to asset collections whose type is TypeMoment. For other asset collection types, this property's value is nil.
(Read only property)

138.5.23 Constants

138.5.24 SubtypeAlbumCloudShared = 101

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An iCloud Shared Photo Stream.

138.5.25 SubtypeAlbumImported = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An album imported from a camera or external storage.

138.5.26 SubtypeAlbumMyPhotoStream = 100

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: The user's personal iCloud Photo Stream.

138.5.27 SubtypeAlbumRegular = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An album created in the Photos app.

138.5.28 SubtypeAlbumSyncedAlbum = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An album synced to the device from iPhoto.

138.5.29 SubtypeAlbumSyncedEvent = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: An Event synced to the device from iPhoto.

138.5.30 SubtypeAlbumSyncedFaces = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A Faces group synced to the device from iPhoto.

138.5.31 SubtypeAny = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A bit mask representing all possible subtypes.

138.5.32 SubtypeSmartAlbumAllHidden = 205

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all assets hidden from the Moments view in the Photos app.

138.5.33 SubtypeSmartAlbumAnimated = 214

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all image animation assets.

138.5.34 SubtypeSmartAlbumBursts = 207

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all burst photo sequences in the photo library.

138.5.35 SubtypeSmartAlbumDepthEffect = 212

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all images captured using the Depth Effect camera mode on compatible devices.

138.5.36 SubtypeSmartAlbumFavorites = 203

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all assets that the user has marked as favorites.

138.5.37 SubtypeSmartAlbumGeneric = 200

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album of no more specific subtype.

138.5.38 SubtypeSmartAlbumLivePhotos = 213

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all Live Photo assets.

138.5.39 SubtypeSmartAlbumLongExposures = 215

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all Live Photo assets where the Long Exposure variation is enabled.

138.5.40 SubtypeSmartAlbumPanoramas = 201

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all panorama photos in the photo library.

138.5.41 SubtypeSmartAlbumRecentlyAdded = 206

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups assets that were recently added to the photo library.

138.5.42 SubtypeSmartAlbumScreenshots = 211

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all images captured using the device's screenshot function.

138.5.43 SubtypeSmartAlbumSelfPortraits = 210

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all photos and videos captured using the device's front-facing camera.

138.5.44 SubtypeSmartAlbumSlomoVideos = 208

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all Slow-Mo videos in the photo library.

138.5.45 SubtypeSmartAlbumTimelapses = 204

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all time-lapse videos in the photo library.

138.5.46 SubtypeSmartAlbumUnableToUpload = 216

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: Unable to upload album.

138.5.47 SubtypeSmartAlbumUserLibrary = 209

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all assets that originate in the user's own library (as opposed to assets from iCloud Shared Albums).

138.5.48 SubtypeSmartAlbumVideos = 202

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the subtypes constants.
Notes: A smart album that groups all video assets in the photo library.

138.5.49 TypeAlbum = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the asset collection types.
Notes: An album in the Photos app.

138.5.50 TypeMoment= 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the asset collection types.
Notes: A moment in the Photos app. Deprecated by Apple.

138.5.51 TypeSmartAlbum = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the asset collection types.
Notes: A smart album whose contents update dynamically.

138.6 class PHAssetCreationRequestMBS

138.6.1 class PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create a new Photos asset from underlying data resources, for use in a photo library change block.
Notes:

A PHAssetCreationRequestMBS object, used within a photo library change block, constructs a new photo or video asset from data resources, and adds it to the Photos library. This class works in terms of the raw data resources that together form an asset, so you can use it together with the PHAssetResource class to perform a complete copy (or backup and restore) of an asset's underlying resources. To instead simply create a new asset from an image object, image file, or video file, see the superclass PHAssetChangeRequestMBS.

To create a new asset from data resources, first start a change block using the shared PHPhotoLibraryMBS method performChanges or performChangesAndWait. Then, within the change block:

1. Within the change block, create a new asset creation request with the creationRequestForAsset method.
2. Add image, video, or data resources using the methods listed in Providing Data Resources for the New Asset.
3. (Optional.) Set metadata for the new asset using methods and properties of the superclass PHAssetChangeRequestMBS.

After Photos runs the change block and calls your completion handler, the new asset is created in the Photos library.
If you instantiate or use this class outside a photo library change block, Photos throws an exception. For details on change blocks, see PHPhotoLibrary.
Subclass of the PHAssetChangeRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.6.2 Methods

138.6.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the specified data.
Notes:

type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.

options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.

- 138.6.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 22480

138.6.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the specified data.
Notes:

type: The role of this data resource in constructing an asset. For details, see type constants.
data: The data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS class.

Photos imports the asset resource data only when it executes the PHPhotoLibraryMBS change block in which you create a PHAssetCreationRequest object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.

- 138.6.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil) 22480

138.6.5 addResource(type as Integer, file as FolderItem, options as PHAssetResourceCreationOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Adds a data resource to the asset being created, using the file at the specified URL.
Notes:

type: The role of this data resource in constructing an asset. For details, see type constants.
file: The URL to a local file containing data for the asset resource.
options: Options affecting how Photos constructs the asset resource and incorporates its data into the Photos library. For details, see PHAssetResourceCreationOptionsMBS.

Photos imports the asset resource data only when it executes the PHPhotoLibrary change block in which you create a PHAssetCreationRequestMBS object and call this method. If you attempt to create an asset with invalid data or an invalid combination of resources, Photos reports an error in the completion handler of your PHPhotoLibraryMBS call.
See also:

- 138.6.3 addResource(type as Integer, data as MemoryBlock, options as PHAssetResourceCreationOptionsMBS = nil) 22479
- 138.6.4 addResource(type as Integer, data as String, options as PHAssetResourceCreationOptionsMBS = nil) 22480

138.6.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.6.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.6.8 creationRequestForAsset as PHAssetCreationRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new asset to the Photos library using asset resources.
Notes:

Call this method within a photo library change block to create a new asset. For details on change blocks, see PHPhotoLibraryMBS. After calling this method, and before returning from the change block use the methods listed in Providing Data Resources for the New Asset to specify one or more data resources for the asset.

To set metadata properties of the newly created asset, use the corresponding properties of the change request (provided by the superclass PHAssetChangeRequestMBS and listed in Modifying Assets). To reference the newly created asset later in the same change block or after the change block completes, use the placeholderForCreatedAsset property to retrieve a placeholder object.

138.6.9 supportsAssetResourceTypes(types() as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns a Boolean value indicating whether Photos supports creating an asset with the specified combination of resource types.
Notes:

types: An array of numbers, each the raw value of a PHAssetResourceType identifier.
Return true if Photos supports the specified combination of resource types; otherwise, false.

When you request creation of an asset from resource data, Photos does not validate that the resources can construct a complete asset until the complete PHPhotoLibrary performChanges change block executes. (If an asset cannot be constructed from the provided resources, Photos calls the completionHandler you provide in that method with an error describing the failure.) To perform preflight validation before executing an asset creation request, use this method to verify that the set of resource types from which you want to create an asset are correct.

This method verifies only that the collection of asset resource types is valid (for example, ensuring that you do not attempt to construct a photo asset without image data), so it is still possible for an asset creation request to fail if the data itself is incomplete or invalid. However, calling by using this method you can avoid some kinds of asset creation failure before performing the expensive operation of reading (and potentially downloading or transmitting) asset resource data.

138.6.10 Constants

138.6.11 TypeAdjustmentBasePairedVideo = 11

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes:

The resource provides an unaltered version of the video data for a Live Photo asset for use in reconstructing recent edits.
Requires MacOS 10.15 or newer.

138.6.12 TypeAdjustmentBasePhoto = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides an unaltered version of its photo asset for use in for use in reconstructing recent edits.

138.6.13 TypeAdjustmentBaseVideo = 12

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes:

The resource provides an unaltered version of the video data for video asset for use in reconstructing recent edits.
Requires MacOS 10.15 or newer.

138.6.14 TypeAdjustmentData = 7

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides data for use in reconstructing recent edits to its asset.

138.6.15 TypeAlternatePhoto = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides photo data that is not the primary form of its asset.

138.6.16 TypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides original audio data for its asset.

138.6.17 TypeFullSizePairedVideo = 10

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes:

The resource provides the current video data component of a Live Photo asset.
Requires MacOS 10.15 or newer.

138.6.18 TypeFullSizePhoto = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides photo data at the highest available size and quality for its asset.

138.6.19 TypeFullSizeVideo = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides video data at the highest available size and quality for its asset.

138.6.20 TypePairedVideo = 9

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides the original video data component of a Live Photo asset.

138.6.21 TypePhoto = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides original photo data for its asset.

138.6.22 TypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the relationship of an asset resource to its owning asset; used by the type property.
Notes: The resource provides original video data for its asset.

138.7 class PHAssetMBS

138.7.1 class PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The class representating of an image, video, or Live Photo in the Photos library.
Notes:

You fetch assets to begin working with them. Use the class methods listed in Fetching Assets to retrieve one or more PHAsset instances representing the assets you want to display or edit.

Assets contain only metadata. The underlying image or video data for any given asset might not be stored on the local device. However, depending on how you plan to use this data, you may not need to download all of it. If you need to populate a collection view with thumbnail images, the Photos framework can manage downloading, generating, and caching thumbnails for each asset. For details, see PHImageManagerMBS.

Asset objects are immutable. To edit an asset's metadata (such as marking it as a favorite photo), create a PHAssetChangeRequestMBS object within a photo library change block. For more details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHObjectMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.7.2 Blog Entries

- Show Live Photos in your Xojo application

138.7.3 Blog Entries

- Show Live Photos in your Xojo application

138.7.4 Methods

138.7.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.7.6 cancelContentEditingInputRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels a request for editing the asset's content.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you request asset editing information with the requestContentEditingInputWithOptions method, the asset returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelContentEditingInputRequest method.

138.7.7 canPerformEditOperation(editOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the asset supports the specified editing operation.
Notes:

editOperation: The operation to be tested.

Returns true if the asset supports the the specified editing operation; otherwise, false.

If an asset supports editing, you can create a PHAssetChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

138.7.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.7.9 fetchAssets(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves all assets matching the specified options.
Notes:

options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

138.7.10 fetchAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets from the specified asset collection.
Notes:

assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets in the specified collection. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

138.7.11 fetchAssetsWithBurstIdentifier(burstIdentifier as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified burst photo sequence identifier.
Notes:

burstIdentifier: A burst identifier string, as provided by the burstIdentifier property of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

A burst photo sequence, as seen in the Photos app, corresponds to a group of Photos assets that share the same burstIdentifier string.

By default, the returned PHFetchResultMBS object contains only the representative asset and any user-picked photos from the burst sequence. To retrieve all photos in the burst sequence, provide a PHFetchOptionsMBS object containing a filter predicate.

138.7.12 fetchAssetsWithLocalIdentifiers(identifiers() as String, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified local-device-specific unique identifiers.
Notes:

identifiers: An array of strings, each the localIdentifier string of an asset.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

138.7.13 fetchAssetsWithMediaType(mediaType as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets with the specified media type.
Notes:

mediaType: A media type, such as image or video. See type constants.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all assets with the specified type. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object containing a filter predicate.

By default, fetch results do not include photos synced to the device through iTunes or stored in iCloud Shared Albums. To change this behavior, use the includeAssetSourceTypes property in the options parameter.

138.7.14 fetchKeyAssetsInAssetCollection(assetCollection as PHAssetCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves assets marked as key assets in the specified asset collection.
Notes:

assetCollection: The asset collection from which to fetch assets.
options: Options that specify a filter predicate and sort order for the fetched assets, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHAsset objects, or an empty fetch result or nil if no objects match the request.

Most asset collections contain a key asset, which the Photos app displays as a proxy for the collection. Different types of asset collections have different ways of specifying one or more key assets. For example, in the Camera Roll collection, the most recently captured photo or video is the key asset.

This method returns nil if the assetCollection parameter references a transient asset collection (such as one created with the transientAssetCollectionWithAssets method).

138.7.15 PHContentEditingInputCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes:

A Boolean value indicating whether the image request was canceled. (boolean)

If you call the cancelContentEditingInputRequest method to cancel a request, Photos calls your result handler delegate with the value true for this key.

138.7.16 PHContentEditingInputErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes:

An error that occurred while attempting to load the asset data, NSErrorMBS.

Photos provides an error object for this key if it cannot provide asset data for your handler block's contentEditingInput parameter. Examine the error object for information about the cause of the error.

138.7.17 PHContentEditingInputResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys indicating the status of an asset content editing request.
Notes:

A Boolean value indicating whether the asset data is stored on the local device or must be downloaded from iCloud.

If true, no asset data was provided because the asset data must be downloaded from iCloud. To do this, submit another request, specifying true for the networkAccessAllowed option.

138.7.18 requestContentEditingInputWithOptions(options as PHContentEditingInputRequestOptionsMBS, CompletionDelegate as RequestContentEditingInputWithOptionsCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests asset information for beginning a content editing session.
Notes:

options: Options affecting how Photos handles an edit session request.

Returns a numeric identifier for the request. Pass this identifier to the cancelContentEditingInputRequest method if you need to cancel the request before it completes.

When you call this method, Photos downloads the asset's image or video data (if necessary) and prepares it for editing, then calls your completionHandler ddelegate to provide a PHContentEditingInputMBS object you use for editing.

To complete the edit, create a PHContentEditingOutputMBS object from the editing input to provide the edited asset data. Then, commit the edit by posting a change block to the shared PHPhotoLibrary object. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output you created.

138.7.19 Properties

138.7.20 burstIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier shared by photo assets from the same burst sequence.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. The Photos framework identifies a burst sequence as a group of assets sharing the same burst identifier string.
(Read only property)

138.7.21 burstSelectionTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The selection type of the asset in a burst photo sequence.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites. See PHAssetBurstSelectionType for possible values.

Because an asset may have more than one selection type, you use bit masks to identify an asset.
(Read only property)

138.7.22 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset was originally created.
Notes: (Read only property)

138.7.23 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset was originally created.
Notes: (Read only property)

138.7.24 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The duration, in seconds, of the video asset.
Notes:

For photo assets, the duration is always zero.
(Read only property)

138.7.25 Favorite as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the user has marked the asset as a favorite.
Notes: (Read only property)

138.7.26 Hidden as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the user has hidden the asset.
Notes:

Hidden assets do not appear in the Moments interface in the Photos app and are not returned when fetching the contents of a moment collection.
(Read only property)

138.7.27 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information saved with the asset.
Notes:

Typically, an asset's location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

138.7.28 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtypes of the asset, identifying special kinds of assets such as panoramic photo or high-framerate video.
Notes:

See subtype constants for possible values.
Because an asset may have more than one subtype, you use these values as bit masks to identify an asset.
(Read only property)

138.7.29 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset, such as video or audio.
Notes:

See Type constants.
(Read only property)

138.7.30 modificationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time at which the asset was last modified.
Notes:

Photos updates the modification date when an asset's image or video content or metadata changes.
(Read only property)

138.7.31 modificationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The date and time at which the asset was last modified.
Notes:

Photos updates the modification date when an asset's image or video content or metadata changes.
(Read only property)

138.7.32 pixelHeight as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The height, in pixels, of the asset's image or video data.
Notes:

If the asset's content has been edited, this property describes the size of the current version of the asset.
(Read only property)

138.7.33 pixelWidth as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The width, in pixels, of the asset's image or video data.
Notes:

If the asset's content has been edited, this property describes the size of the current version of the asset.
(Read only property)

138.7.34 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The playback style for the asset.
Notes: (Read only property)

138.7.35 RepresentsBurst as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset is the representative photo from a burst photo sequence.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together. One asset represents the entire sequence in displayed collections.
(Read only property)

138.7.36 sourceType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The means by which the asset entered the user's Photos library.
Notes:

Assets from some sources can be edited, deleted, or added to collections; assets from other sources do not support these operations. For details, see SourceType constants.
(Read only property)

138.7.37 Constants

138.7.38 BurstSelectionTypeAutoPick = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
Notes: Photos has automatically identified the asset as a potential user favorite.

138.7.39 BurstSelectionTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
Notes: The asset is not marked as a favorite member of its burst sequence or is not a member of a burst sequence.

138.7.40 BurstSelectionTypeUserPick = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants Bit mask values indicating whether and how an asset is marked as a favorite member of a burst photo sequence.
Notes: The user has marked the asset as a favorite member of its burst sequence.

138.7.41 EditOperationContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for edit operations.
Notes: The asset's photo or video content can be edited.

138.7.42 EditOperationDelete = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for edit operations.
Notes: The asset can be deleted from the photo library.

138.7.43 EditOperationProperties = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for edit operations.
Notes: The asset's metadata properties can be edited.

138.7.44 MediaSubtypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset has no subtype.
This is the default subtype for most photo and video assets.

138.7.45 MediaSubtypePhotoDepthEffect = 16

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a photo captured with the Camera app's Portrait mode depth effect.

138.7.46 MediaSubtypePhotoHDR = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a High Dynamic Range photo.

138.7.47 MediaSubtypePhotoLive = 8

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset is a Live Photo that includes movement and sounds from the moments just before and after its capture.
To display a Live Photo asset with its associated video content, retrieve a PHLivePhotoMBS object using the PHImageManagerMBS class and assign it to a PHLivePhotoViewMBS object.

138.7.48 MediaSubtypePhotoPanorama = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a large-format panorama photo.

138.7.49 MediaSubtypePhotoScreenshot = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is an image captured with the device's screenshot feature.

138.7.50 MediaSubtypeVideoHighFrameRate = & h20000

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset is a high-frame-rate video.

High-frame-rate videos are created by the Slow-Mo feature in the Camera app on an iOS device.

138.7.51 MediaSubtypeVideoStreamed = & h10000

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes:

The asset is a video whose contents are always streamed over a network connection.
This subtype identifies video assets that are never stored on the local device, such as shared videos in a subscribed iCloud Photo Stream.

138.7.52 MediaSubtypeVideoTimelapse = & h40000

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying specific variations of asset media, such as panorama or screenshot photos and time lapse or high frame rate video.
Notes: The asset is a time-lapse video.

138.7.53 MediaTypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is an audio file.

138.7.54 MediaTypeImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a photo or other static image.

138.7.55 MediaTypeUnknown = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset's type is unknown.

138.7.56 MediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a video file.

138.7.57 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a still image.

138.7.58 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as an animated image.

138.7.59 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a Live Photo.

138.7.60 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset has an unsupported or undefined media playback type.

138.7.61 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a video.

138.7.62 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a looping video.

138.7.63 SourceTypeCloudShared = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes:

The asset originates from an iCloud Shared Album.
Assets from shared albums cannot be edited and do not appear in Moments collections.

138.7.64 SourceTypeiTunesSynced = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes:

The asset originates from a Mac or PC and is present on the device through iTunes sync.
iTunes-synced assets cannot be edited or deleted.

138.7.65 SourceTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes: Source information is not available for the asset.

138.7.66 SourceTypeUserLibrary = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for source types.
Notes:

The asset is part of the user's main Photos library.

The main library contains both assets that originate on the device (such as photos and videos captured with the Camera app or screenshots) and assets synchronized through iCloud Photo Library or My Photo Stream. These assets appear in Moments collections and can be edited or deleted.

138.7.67 Delegates

138.7.68 RequestContentEditingInputWithOptionsCompletedMBS(Asset as PHAssetMBS, Options as PHContentEditingInputRequestOptionsMBS, tag as variant, contentEditingInput as PHContentEditingInputMBS, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls when the requested asset editing information is ready.
Notes:

contentEditingInput: An object that describes the asset for editing and provides methods for loading the image or video content to be edited.
info: A dictionary providing information about the status of the request. See Editing Request Info Keys for possible keys and values.

138.8 class PHAssetResourceCreationOptionsMBS

138.8.1 class PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the creation of a new Photos asset from underlying resources.
Notes: You use this class when creating an asset for addition to the Photos library with a PHAssetCreationRequestMBS object.

138.8.2 Methods

138.8.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.8.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.8.5 copy as PHAssetResourceCreationOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Copies the options object.

138.8.6 Properties

138.8.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.8.8 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The filename for the asset resource being created.
Notes:

You can use this property to track the original name of the file from which you import an asset resource even if you use the addResourceWithType method to create a resource from data instead of from a file. After creating the asset, this information is available in the originalFilename property of the corresponding PHAssetResourceMBS object.

If you do not specify a value for this property and are using the addResourceWithType method to create a resource, Photos infers the filename from that method's fileURL parameter. Otherwise, Photos automatically generates a filename.
(Read and Write property)

138.8.9 shouldMoveFile as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether Photos moves or duplicates files when creating an asset resource.
Notes:

This property applies only when creating an asset resource with the addResourceWithType method. If this value is true, Photos moves the specified file into the Photos library to create the asset resource, removing the original file after the asset has been successfully created. When using this option, Photos does not make an intermediary copy of the resource data, so no additional storage space is required.

If this value is false (the default), Photos copies the contents of the original file into the Photos library.

Attempting to move a file that is currently open or has hard links fails.
(Read and Write property)

138.8.10 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the resource.
Notes:

If you do not specify a value for this property, Photos infers the data type from the type value you specify when adding the resource to a creation request.

For details in uniform type identifiers, see Uniform Type Identifiers Overview.
(Read and Write property)

138.9 class PHAssetResourceManagerMBS

138.9.1 class PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A resource manager for the data storage underlying a Photos asset.
Notes:

An asset can have multiple underlying data resources—for example, both original and edited versions—each of which is represented by a PHAssetResourceMBS object. Unlike the PHImageManagerMBS class, which provides and caches the primary representations of assets as thumbnails, image objects, or video objects, the asset resource manager provides direct access to these underlying data resources.

Available in MacOS 10.15 or newer.

138.9.2 Methods

138.9.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.9.4 cancelDataRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for asset resource data using the requestDataForAssetResource method, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelDataRequest method.

138.9.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.9.6 defaultManager as PHAssetResourceManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the shared asset resource manager object.
Notes: This method always returns the same asset resource manager object, which is shared for all uses in your app.

138.9.7 requestDataForAssetResource(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, DataReceivedHandler as RequestDataForAssetResourceDataReceivedMBS, CompleteHandler as RequestDataForAssetResourceCompletedMBS, tag as variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the underlying data for the specified asset resource, to be delivered asynchronously.
Notes:

resource: The asset resource for which to request data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelDataRequest: method.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos calls your handler block at least once, progressively providing chunks of data. After reading all of the data, Photos calls your completionHandler block to indicate that the data is complete. (At this point, the complete data for the asset is the concatenation of the data parameters from all calls to your handler block.) If Photos cannot finish reading or downloading asset resource data, it calls your completionHandler block with a description of the error. Photos can also call the completionHandler block with a non-nil error when the data is complete if the user cancels downloading.

138.9.8 writeDataForAssetResource(resource as PHAssetResourceMBS, file as FolderItem, options as PHAssetResourceRequestOptionsMBS, CompleteHandler as WriteDataForAssetResourceCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the underlying data for the specified asset resource, to be asynchronously written to a local file.
Notes:

resource: The asset resource for which to request data.
fileURL: A URL identifying the local filename at which to write the asset resource's data.
options: Options specifying how Photos should handle the request and notify your app of progress. For details, see PHAssetResourceRequestOptionsMBS.

When you call this method, Photos begins asynchronously reading the underlying data for the asset resource. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

While reading (or downloading) asset resource data, Photos progressively writes the data into the specified file. After writing all of the data, or if an error prevents reading all of the data, Photos calls your delegate.

138.9.9 Properties

138.9.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.9.11 Constants

138.9.12 PHInvalidAssetResourceDataRequestID = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: The invalid request ID.

138.9.13 Delegates

138.9.14 RequestDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that photos calls after the request has been fulfilled or has failed.
Notes: error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

138.9.15 RequestDataForAssetResourceDataReceivedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, Data as MemoryBlock, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls to provide the requested data.
Notes: data: The requested asset resource data.

138.9.16 WriteDataForAssetResourceCompletedMBS(resource as PHAssetResourceMBS, options as PHAssetResourceRequestOptionsMBS, File as FolderItem, Error as NSErrorMBS, Tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that photos calls after the request has been fulfilled or has failed.
Notes: error: If the request has failed, an NSErrorMBS object describing the failure; otherwise nil.

138.10 class PHAssetResourceMBS

138.10.1 class PHAssetResourceMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An underlying data resource associated with a photo, video, or Live Photo asset in the Photos library.
Notes:

Each PHAssetMBS object references one or more resources. Use these objects to work with those resources directly, like when backing up or restoring assets.

- A photo asset can contain both JPEG and RAW files representing the same photo.
- A Live Photo asset contains both still photo and video resources.
- An edited asset contains resources representing asset content before and after the edit, as well as a resource corresponding to the PHAdjustmentDataMBS object that describes the edit.

To work with the data contained in an asset resource, fetch it using the PHAssetResourceManagerMBS class. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.10.2 Methods

138.10.3 assetResourcesForAsset(asset as PHAssetMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the list of data resources associated with an asset.
Notes:

asset: A photo or video asset in the Photos library.

Returns the asset's resources.

Asset resource objects describe the data files that an asset represents. An asset can contain multiple resources—for example, an edited photo asset contains resources for both the original and edited images, as well as for the PHAdjustmentDataMBS object describing the edit. To work with one of these files, fetch the underlying data using the PHAssetResourceManagerMBS class.

138.10.4 assetResourcesForLivePhoto(livePhoto as PHLivePhotoMBS) as PHAssetResourceMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the list of data resources associated with a Live Photo object.
Notes:

livePhoto: A Live Photo object.

Returns the underlying resources that constitute the Live Photo.

A Live Photo is a picture, taken with a compatible device, that includes movement and sound from the moments just before and after its capture. A PHLivePhoto object represents the displayable combination of image, motion, and sound data. You can obtain such objects from the Photos library using the PHImageManagerMBS class or construct them from asset resources exported from a Photos library using the PHLivePhotoMBS class.

Use this method to export the underlying resources that constitute a Live Photo. For example, a social networking app can retrieve those data files and upload them to a server. Then, on another user's device, the app downloads those data files and uses the PHLivePhoto class to re-create a Live Photo object for display using the PHLivePhotoViewMBS class.

138.10.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.10.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.10.7 Properties

138.10.8 assetLocalIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unique identifier for the asset object this resource is associated with.
Notes:

This property's value corresponds to the localIdentifier property of the PHAssetMBS object that owns this asset resource. If you've obtained an asset resource without a reference to its owning asset, use the fetchAssetsWithLocalIdentifiers method with this identifier to retrieve the correct PHAssetMBS object.
(Read only property)

138.10.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.10.10 originalFilename as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The original filename of the asset resource from when it was created or imported.
Notes: (Read only property)

138.10.11 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The relationship of this asset resource to its owning asset.
Notes:

An asset can contain multiple resources, and different resources contribute to the asset in different ways. For details and examples, see resource types.
(Read only property)

138.10.12 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the asset resource's image or video data.
Notes:

For more information, see Uniform Type Identifiers Overview in Apple's documentation.
(Read only property)

138.11 class PHAssetResourceRequestOptionsMBS

138.11.1 class PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of underlying asset data that you request from the asset resource manager.
Notes:

You use this class when requesting the underlying data for photo, video, and Live Photo asset resources from a PHAssetResourceManagerMBS object.

Requires MacOS 10.15 or newer.

138.11.2 Methods

138.11.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.11.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.11.5 copy as PHAssetResourceRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request options.

138.11.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

138.11.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the asset resource data.
Notes: If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

138.11.8 Properties

138.11.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.11.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested asset resource data from iCloud.
Notes:

If true, and the requested resource data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download's progress, use the progressHandler property to provide a block that Photos calls periodically while downloading the resource data. If false (the default), and the resource data is not on the local device, Photos calls the completionHandler block you provided in your request, with an NSErrorMBS object indicating that the resource requires network access.
(Read and Write property)

138.11.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the asset resource data.
Notes:

If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.
(Read and Write property)

138.11.12 Delegates

138.11.13 ProgressHandlerMBS(progress as double, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset resource data from iCloud. Used by the progressHandler property.
Notes:

If you request an asset resource whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.

138.12 class PHCachingImageManagerMBS

138.12.1 class PHCachingImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that facilitates retrieving or generating preview thumbnails, optimized for batch preloading large numbers of assets.
Notes:

For quick performance when you are working with many assets, a caching image manager can prepare asset images in the background in order to eliminate delays when you later request individual images. For example, use a caching image manager when you want to populate a collection view or similar UI with thumbnails of photo or video assets.

Much of the key functionality of the PHCachingImageManager class is defined by its superclass, PHImageManagerMBS. For details, see PHImageManagerMBS.

To use a caching image manager:
1. Create a PHCachingImageManager instance. (This step replaces using the shared PHImageManager instance.)
2. Use PHAsset class methods to fetch the assets you're interested in.
3. To prepare images for those assets, call the startCachingImagesForAssets:targetSize:contentMode:options: method with the target size, content mode, and options you plan to use when later requesting images for each individual asset.
4. When you need an image for an individual asset, call the requestImageForAsset:targetSize:contentMode:options:resultHandler: method, and pass the same parameters you used when preparing that asset.

If the image you request is among those already prepared, the PHCachingImageManager object immediately returns that image. Otherwise, Photos prepares the image on demand and caches it for later use.
Subclass of the PHImageManagerMBS class.

138.12.2 Methods

138.12.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.12.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.12.5 startCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function:

Prepares image representations of the specified assets for later use.

Notes:

assets: An array of PHAssetMBS objects for which to prepare image representations.
targetSize: The size of the images to be prepared.
contentMode: An option for how to fit the images to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested images, and notify your app of progress or errors. For details, see PHImageRequestOptions.

When you call this method, Photos begins to fetch image data and generates thumbnail images on a background thread. At any time afterward, you can use the requestImageForAsset:targetSize method to request individual images from the cache. If Photos has finished preparing a requested image, that method provides the image immediately.

Photos caches images with the exact target size, content mode, and options you specify in this method. If you later request an image with, for example, a different target size than you passed when calling this method, Photos cannot make use of the cache and so it must fetch or generate a new image.

138.12.6 stopCachingImagesForAllAssets

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels all image preparation that is currently in progress.

138.12.7 stopCachingImagesForAssets(assets() as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels image preparation for the specified assets and options.
Notes:

assets: The array of specific PHAssetMBS objects for which image preparation is in progress but is no longer needed.
targetSize: The target size with which you requested image preparation.
contentMode: The content mode with which you requested image preparation.
options: The options with which you requested image preparation.

This method cancels image preparation for the specified assets with the specified options. Use it when image preparation that might be in progress is no longer needed. For example, if you prepare images for a collection view filled with photo thumbnails and then the user chooses a different thumbnail size for your collection view, call this method to cancel generating thumbnail images at the old size.

138.12.8 Properties

138.12.9 allowsCachingHighQualityImages as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the image manager prepares high-quality images.
Notes:

If true (the default), the image manager prepares images at high quality. This option produces better images, at a high performance cost.
For faster performance when preparing large numbers of images—such as while the user is scrolling quickly through a collection of thumbnails—set this property to false.
(Read and Write property)

138.13 class PHChangeMBS

138.13.1 class PHChangeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of a change that occurred in the photo library.
Notes:

Photos provides PHChangeMBS objects to notify your app of changes to the assets and collections managed by the Photos app. To receive change information, implement the DidChange event in your PHPhotoLibraryMBS subclass.

After Photos provides you with a change object, you use its methods to get a change details object. Call the changeDetailsForObject or changeDetailsForFetchResult method, passing an asset or collection object you've previously fetched or a fetch result containing several such objects. The resulting PHObjectChangeDetailsMBS or PHFetchResultChangeDetailsMBS object describes any changes that have happened to the object or fetch result since you last fetched it.

138.13.2 Methods

138.13.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.13.4 changeDetailsForFetchResult(FetchResult as PHFetchResultMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns detailed change information for a fetch result.
Notes:

object: A fetch result.

Returns a change details object, or nil if there have been no changes affecting the fetch result's contents.

When Photos calls your change observer's photoLibraryDidChange method, call the changeDetailsForObject method to get detailed change information about the results of a fetch you've previously performed. If there have been any changes in the Photos library affecting the fetch, the resulting PHFetchResultChangeDe-

tailsMBS object tells you if any contents in the fetch result have been added, removed, or changed since you fetched it. If there have been no changes since you performed the fetch, this method returns nil.

Typically, if your app displays the members of a collection (such as an album or moment), you use a method such as fetchAssetsInAssetCollection to retrieve those members and then keep the resulting PHFetchResultMBS object. You can then pass that fetch result to this method to learn about changes to the collection, such as whether new members have been added to it (and which indexes to insert them at in your UI).

To find out about changes to an object's properties, such as a collection's title or an asset's metadata, use the changeDetailsForObject: method.

138.13.5 changeDetailsForObject(PHObject as PHObjectMBS) as PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns detailed change information for the specified asset or collection.
Notes:

object: A PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS object.

Returns a change details object, or nil if there have been no changes to the specified asset or collection.

When Photos calls your change observer's photoLibraryDidChange: method, call the changeDetailsForObject method to get detailed change information about an asset or collection you've previously fetched. If the asset or collection has changed since you last fetched it, the resulting PHObjectChangeDetailsMBS object describes the changes. If there are no changes between the fetched object and the current state of the asset or collection it represents in the Photos library, this method returns nil.
For an asset collection or collection list, this method and the PHObjectChangeDetailsMBS object it returns describe changes only to the collection's properties. If you are instead interested in changes to the collection's membership, use the changeDetailsForFetchResult method.

138.13.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.13.7 Properties

138.13.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.14 class PHChangeRequestMBS

138.14.1 class PHChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, change metadata for, or edit the content of a Photos asset, for use in a photo library change delegate.
Notes:

You use the PHAssetChangeRequestMBS class to request changes for PHAssetMBS objects. To make changes to assets in the Photos library, create a change request by using the appropriate class method for the change you want to perform.

- Call one of the methods listed in Adding New Assets to create a new asset from an image or video file.
- Call the deleteAssets: method to delete existing assets.
- Call the changeRequestForAsset: method to modify an asset's content or metadata.

A change request for creating or modifying an asset works like a mutable version of the asset object. Use the change request's properties to request changes to the corresponding properties of the asset itself.

After Photos runs the change block and calls your completion handler, the asset's state reflects the changes that you requested in the block.

If you create or use a change request object outside a photo library change block, Photos raises an Objective-C exception. For details on change blocks, see PHPhotoLibraryMBS.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.14.2 Methods

138.14.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.14.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.14.5 Properties

138.14.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.15 class PHCloudIdentifierMBS

138.15.1 class PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A cloud identifier for a Photos project extension.
Notes: The user can choose to store Photos project extensions in iCloud. The cloud identifier uniquely references project extensions in the cloud by string serialization. When a project's global identifier can't be determined from its local identifier, the notFoundIdentifier identifier is provided in that array slot.

138.15.2 Methods

138.15.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.15.4 Constructor(stringValue as String)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Deserializes a cloud identifier from its string value.

138.15.5 notFoundIdentifier as PHCloudIdentifierMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The global identifier used in an array slot for items that couldn't be found.

138.15.6 Properties

138.15.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.15.8 stringValue as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A string version of the cloud identifier to use in serialization.
Notes: (Read only property)

138.16 class PHCollectionListChangeRequestMBS

138.16.1 class PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A request to create, delete, or modify a Photos collection list, for use in a photo library change block.
Notes:

You use the PHCollectionListChangeRequest class to request changes for PHCollectionList objects. To make changes to collection lists (such as folders containing user-created albums) in the Photos library, create a change request using the appropriate class method for the change you want to perform.

- Call the creationRequestForCollectionListWithTitle method to create a new asset collection.
- Call the deleteCollectionLists: method to delete existing asset collections.
- Call the changeRequestForCollectionList: or changeRequestForCollectionList method to modify a collection's metadata or its list of child collections.

Before creating a change request, use the canPerformEditOperation: method to verify that the collection allows the edit operation you're requesting. If you attempt to perform an unsupported edit operation, Photos throws an exception.
A change request for creating or modifying a collection list works like a mutable version of the collection list object. Use the change request's properties and instance methods to request changes to the collection list itself.

After Photos runs the change delegate and calls your completion handler, the collection list's state reflects the changes you requested in the delegate.

If you create or use a change request object outside a photo library change delegate, Photos raises an Objective-C exception. For details on change delegates, see PHPhotoLibraryMBS.
Subclass of the PHChangeRequestMBS class.

138.16.2 Methods

138.16.3 addChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Add the specified collections as children of the collection list.
Notes:

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be added to the collection list.

If you created the change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method, Photos inserts the new children after the existing child collections in the collection list. Otherwise, the arrangement of the new children relative to others in the collection is undefined.

138.16.4 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.16.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified collection list.
Notes:

collectionList: The collection list to be modified.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection's title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.
Use this method when modifying a collection list's metadata or when adding or removing child collections without regard to their arrangement. To work with indexes in the list of child collections, use the changeRequestForCollectionList method instead.
See also:

- 138.16.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS 22528

138.16.6 changeRequestForCollectionList(collectionList as PHCollectionListMBS, childCollections as PHFetchResultMBS) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for modifying the specified collection list, with a fetch result for tracking changes.
Notes:

collectionList: The collection list to be modified.
childCollections: A fetch result listing the child collections in the collection.

Returns a collection list change request.

After you create a change request within a photo library change block, propose changes to the collection's title or list of child collections with the properties and instance methods of the change request. After Photos runs your change block, the collection list reflects your changes. For details on change blocks, see PHPhotoLibraryMBS.

Use this method when you need to insert, remove, or rearrange collections at specified indexes in the collection list. By passing in a fetch result reflecting what your app sees as the current state of the collection's membership, the Photos framework can ensure that the indexes you specify are valid even if the collection has changed since you last fetched it. If you don't need to work with indexes in the list of child collections, you can use the changeRequestForCollectionList method instead.
See also:

- 138.16.5 changeRequestForCollectionList(collectionList as PHCollectionListMBS) as PHCollectionListChangeRequestMBS 22527

138.16.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.16.8 creationRequestForCollectionListWithTitle(title as string) as PHCollectionListChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a request for adding a new collection list to the Photos library.
Notes:

title: A name for the new collection list.

Returns a collection list creation request.

Call this method within a photo library change block to create a new collection list. For details on change blocks, see PHPhotoLibraryMBS.
To add collections to the newly created collection list or to change its title, use the methods listed in Modifying Collection Lists. To reference the newly created collection collection list later in the same change delegate or after the change delegate completes, use the placeholderForCreatedCollectionListMBS property to retrieve a placeholder object.

138.16.9 deleteCollectionLists(collectionLists() as PHCollectionListMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests to delete the specified asset collections.
Notes:

collectionLists: An array of PHCollectionListMBS objects to be deleted.

Call this method within a photo library change block to delete collection lists. For details on change blocks, see PHPhotoLibraryMBS.

Deleting a collection list also deletes any child collections it contains. To preserve those collections, remove them from the collection list (with the removeChildCollections or removeChildCollectionsAtIndexes method) before deleting it. Deleting a collection list does not delete assets contained in its child collections.

138.16.10 insertChildCollections(collections() as PHCollectionMBS, indexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Inserts the specified collections into the collection list at the specified indexes.
Notes:

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into the collection list.
indexes: The indexes at which the collections should be inserted. The count of locations in this index set must equal the count of collections.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollec-

tionList method before inserting child collections.
For a detailed discussion of how the index set you specify maps to insertions in the collection list, see the similar NSMutableArray method insertObjects.

138.16.11 moveChildCollections(AtIndexes as NSIndexSetMBS, toIndex as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Moves the child collections at the specified indexes in the collection list to a new index.
Notes:

indexes: The indexes of the child collections to be moved in the collection list.
toIndex: The index at which to place the moved child collections, relative to the collection list's ordering after removing the items at indexes.

When you call this method, Photos first removes the items in the indexes parameter from the collection, and then inserts them at the location specified by the toIndex parameter.
To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method before rearranging child collections.

138.16.12 removeChildCollections(AtIndexes as NSIndexSetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the child collections at the specified indexes from the collection list.
Notes:

indexes: The indexes of the child collections to be removed from the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method before removing child collections. To remove objects based on their identities (without regard to their indexes in the collection), use the removeChildCollections method.
See also:

- 138.16.13 removeChildCollections(collections() as PHCollectionMBS) 22530

138.16.13 removeChildCollections(collections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Removes the specified child collections from the collection list.
Notes:

collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be removed from the collection list.

This method removes child collections from the collection list based on their identity (determined by the localIdentifier property of each collection). To remove objects at specified indexes, use the removeChildCollections method.
See also:

- 138.16.12 removeChildCollections(AtIndexes as NSIndexSetMBS) 22530

138.16.14 replaceChildCollections(AtIndexes as NSIndexSetMBS, ChildCollections() as PHCollectionMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Replaces the child collections at the specified indexes in the collection list with the specified collections.
Notes:

indexes: The indexes of the child collections to be replaced in the collection list.
collections: An array of PHCollectionMBS objects (asset collections or other collection lists) to be inserted into (or moved within) the collection list.

To ensure that the index set you specify is valid even if the collection list has changed since you fetched it, create a change request with a snapshot of the collection list's contents using the changeRequestForCollectionList method before rearranging child collections.

138.16.15 Properties

138.16.16 placeholderForCreatedCollectionList as PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A placeholder object for the collection list that the change request creates.
Notes:

Use this property if you need to reference the collection created by a change request within the same change block. For details on change blocks, see PHPhotoLibraryMBS.
(Read only property)

138.16.17 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The displayed name of the collection list.
Notes:

Set this property to change the collection list's title.
(Read and Write property)

138.17 class PHCollectionListMBS

138.17.1 class PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A group containing Photos asset collections, such as Moments, Years, or folders of user-created albums.
Notes:

In the Photos framework, collection objects (including asset collections) do not directly reference their member objects, and there are no other objects that directly reference collection objects. To retrieve the members of a collection list, fetch them with a PHCollectionMBS class method such as fetchCollectionsInCollectionList. To find objects at the root of the collection list hierarchy (such as album folders with no parent folders), use the fetchTopLevelUserCollectionsWithOptions method.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collection Lists, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization: method to prompt the user at a time of your choosing.)

Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.

Like assets and asset collections, collection lists are immutable. To create, rename, or delete collection lists, or to add, remove, or rearrange members in a collection list, create a PHCollectionListChangeRequestMBS object within a photo library change block. For details on using change requests and change blocks to update the photo library, see PHPhotoLibraryMBS.
Subclass of the PHCollectionMBS class.

138.17.2 Methods

138.17.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.17.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.17.5 fetchCollectionListsContainingCollection(collection as PHCollectionMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists that contain the specified collection.
Notes:

collection: An asset collection or another collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS class.

Returns a fetch result that contains the requested PHCollectionList objects, or an empty fetch result if no objects match the request.

Different kinds of collections have different containment possibilities. For example, an asset collection whose type is TypeAlbum may be contained in a folder, or have no containing collection list. A folder, in turn, may be contained in another folder. An asset collection whose type is TypeMoment is always contained by two collection lists: a moment cluster and a moment year.

138.17.6 fetchCollectionListsWithLocalIdentifiers(identifiers() as string, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists with the specified local-device-specific unique identifiers.
Notes:

identifiers: An array of strings, each the localIdentifier string of a collection list.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

138.17.7 fetchCollectionListsWithType(collectionListType as Integer, subtype as Integer, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collection lists of the specified type.
Notes:

collectionListType: A type of collection list. See PHCollectionListType.
subtype: A subtype of collection list. See PHCollectionListSubtype.
options: Options that specify a filter predicate and sort order for the fetched collection lists, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionListMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResult object contains all collection lists with the specified type and subtype. To retrieve a more specific set of collection lists, provide a PHFetchOptionsMBS object containing a filter predicate.

138.17.8 localizedLocationNames as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The names of locations grouped by the collection (an array of strings).
Notes: For a collection list representing a group of moments, as seen in the Collections view in the Photos app, this property lists the location names associated with each moment in the group. For other types of collection list, this property's value is nil.

138.17.9 transientCollectionListWithCollections(collections() as PHCollectionMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary collection list that contains the specified asset collections.
Notes:

collections: An array of PHAssetCollectionMBS objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

138.17.10 transientCollectionListWithCollectionsFetchResult(fetchResult as PHFetchResultMBS, title as String) as PHCollectionListMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a temporary collection list containing the asset collections in the specified fetch result.
Notes:

fetchResult: A fetch result that contains one or more PHAssetCollection objects.
title: A name for the new temporary collection list.

Returns a new collection list.

Transient collection lists are not saved to local storage or iCloud and do not appear in the Photos application or other apps using the Photos framework. A transient collection can be useful if you've designed a UI for displaying the contents of a collection list and want to display an arbitrary set of collections.

138.17.11 Properties

138.17.12 collectionListSubtype as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of asset collection grouping the collection list represents.
Notes:

Use subtypes to make minor distinctions between collection lists of the same type, such as moment clusters and moment years. See Subtype constants.
(Read only property)

138.17.13 collectionListType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of asset collection group that the collection list represents.
Notes:

A collection list may represent an upper level of the Moments hierarchy shown in the Photos app, a folder that contains albums, or a smart folder synced from iPhoto.

(Read only property)

138.17.14 endDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The latest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

138.17.15 endDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The latest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

138.17.16 startDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The earliest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

138.17.17 startDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop & iOS.

Function: The earliest creation date among all assets in the collection list.
Notes:

This property applies only to collection lists whose type is TypeMomentList. For other collection list types, this property's value is nil.
(Read only property)

138.17.18 Constants

138.17.19 SubtypeAny = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: Use this value to fetch collection lists of all possible subtypes.

138.17.20 SubtypeMomentListCluster = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a moment cluster, grouping several related moments.

138.17.21 SubtypeMomentListYear = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a moment year, grouping all moments from one or more calendar years.

138.17.22 SubtypeRegularFolder = 100

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a folder containing albums or other folders.

138.17.23 SubtypeSmartFolderEvents = 200

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a smart folder containing one or more Events synced from iPhoto.

138.17.24 SubtypeSmartFolderFaces = 201

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for the major distinctions between kinds of collection list.
Notes: The collection list is a smart folder containing one or more Faces synced from iPhoto.

138.17.25 TypeFolder = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for major distinctions between kinds of collection list,
Notes: A folder containing asset collections of type PHAssetCollectionTypeAlbum or PHAssetCollection-TypeSmartAlbum.

138.17.26 TypeMomentList = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for major distinctions between kinds of collection list,
Notes:

A group of asset collections of type PHAssetCollectionTypeMoment.
Moment lists include both moment clusters and moment years. Moment clusters appear as "Collections" in the Photos app, grouping individual moments. Years group all moments containing assets created in the same calendar year.

138.17.27 TypeSmartFolder = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for major distinctions between kinds of collection list,
Notes: A smart folder synced to the device.

138.18 class PHCollectionMBS

138.18.1 class PHCollectionMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for Photos asset collections and collection lists.
Notes:

You do not create or work with instances of this class directly. Instead, use one of its two concrete subclasses, PHAssetCollectionMBS or PHCollectionListMBS.

- A PHAssetCollectionMBS object represents a collection of photo or video assets, such as an album, moment, or Shared Photo Stream.
- A PHCollectionListMBS object represents a collection that contains other collections, such as a a folder containing albums or the set of all moments in a calendar year.

Accessing or modifying the Photos library requires explicit authorization from the user. The first time you call one of the methods listed in Fetching Collections, Photos automatically prompts the user for authorization. (Alternatively, you can use the PHPhotoLibraryMBS requestAuthorization method to prompt the user at a time of your choosing.)

Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10.0 will crash if this key is not present.
Subclass of the PHObjectMBS class.

138.18.2 Methods

138.18.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.18.4 canPerformEditOperation(anOperation as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the collection supports the specified editing operation.
Notes:

anOperation: A bit mask of editing operations to be tested.

Returns true if the asset supports the specified editing operation; otherwise, false.

If an asset collection or collection list supports editing, you can create a PHAssetCollectionChangeRequestMBS or PHCollectionListChangeRequestMBS object inside a PHPhotoLibraryMBS change block to submit a change.

138.18.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.18.6 fetchCollectionsInCollectionList(collectionList as PHCollectionListMBS, options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collections from the specified collection list.
Notes:

collectionList: The collection list from which to fetch collections.
options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollectionMBS objects, or an empty fetch result if no objects match the request.

By default, the returned PHFetchResultMBS object contains all collections in the specified collection list. To retrieve a more specific set of assets, provide a PHFetchOptionsMBS object that contains a filter predicate.

138.18.7 fetchTopLevelUserCollections(options as PHFetchOptionsMBS = nil) as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves collections from the root of the photo library's hierarchy of user-created albums and folders.
Notes:

options: Options that specify a filter predicate and sort order for the fetched collections, or nil to use default options. For details, see PHFetchOptionsMBS.

Returns a fetch result that contains the requested PHCollection objects, or an empty fetch result if no objects match the request.

138.18.8 Properties

138.18.9 canContainAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the collection can contain assets.
Notes:

If this value is true, the collection is a PHAssetCollection object; otherwise, false. For details on asset collections, see PHAssetCollectionMBS.
(Read only property)

138.18.10 canContainCollections as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the collection can contain other collections.
Notes:

If this value is true, the collection is a PHCollectionList object; otherwise, false. For details on collection lists, see PHCollectionListMBS.
(Read only property)

138.18.11 localizedTitle as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The localized name of the collection.
Notes:

This property's value can be either a user-supplied name for a user-created collection, or the localized name of a collection built into the Photos app.
(Read only property)

138.18.12 Constants

138.18.13 EditOperationAddContent = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports adding items that already exist elsewhere in the photo library.

138.18.14 EditOperationCreateContent = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports creating new items.

138.18.15 EditOperationDelete = 6

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection itself can be deleted.

138.18.16 EditOperationDeleteContent = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports deleting the items it contains.

138.18.17 EditOperationRearrangeContent = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.

Notes: The collection supports reordering the arrangement of items it contains.

138.18.18 EditOperationRemoveContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection supports removing the items it contains.

138.18.19 EditOperationRename = 7

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for possible actions that a collection can support, used by the canPerformEditOperation method.
Notes: The collection itself can be renamed.

138.19 class PHContentEditingInputMBS

138.19.1 class PHContentEditingInputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container that provides information about and access to the image, video, or Live Photo content of an asset to be edited.
Notes:

To edit an asset's photo or video content:

1. Fetch a PHAsset object that represents the photo or video to be edited.
2. Call the asset's requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutputMBS object. For photo- or video-only assets, use the editing output's properties to provide edited asset data. For Live Photo assets, create a PHLivePhotoEditingContextMBS object to edit the Live Photo content.
5. Use a photo library change block to commit the edit. In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created. For more details, see PHPhotoLibraryMBS.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAsset object, you implement methods in the PHContentEditingControllerMBS protocol. Photos provides a PHContentEditingInputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

138.19.2 Methods

138.19.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.11 or newer.

138.19.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.19.5 Properties

138.19.6 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that describes the most recent edit to the asset's content.
Notes:

Adjustment data describes the "recipe" for the last edit made to an asset's photo or video content. For example, a photo editing app can use this property to read information about a set of filters applied to a photo. With this information, your app can later allow a user to change the filter parameters.
(Read only property)

138.19.7 audiovisualAsset as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The video asset, as an AVAssetMBS object.
Notes:

This object provides access to the video asset as a collection of tracks and metadata. For details on working with AVAssetMBS objects.

We pass result, the AVAssetMBS object, as variant to avoid plugin dependencies.
(Read only property)

138.19.8 creationDate as Date

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The date and time when the asset was originally created.
Notes: (Read only property)

138.19.9 creationDateTime as DateTime

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date and time when the asset was originally created.
Notes: (Read only property)

138.19.10 displaySizeImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An image of the asset's contents, appropriately sized for display.
Notes:

This property does not provide the full-sized image for a photo asset but rather a scaled-down image appropriate for use in a photo editing user interface. To load the full-sized asset image, use the fullSizeImageURL property.
(Read only property)

138.19.11 fullSizeImageOrientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The Exif display orientation of the full-size image file.
Notes:

This property's value is a raw numeric value describing the encoded image orientation according to the TIFF and Exif specifications. To more easily work with such values, convert this value to the CGImagePropertyOrientation type.
(Read only property)

138.19.12 fullSizeImageURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The URL to a file that contains the full-sized image data.
Notes:

Typically, your app or extension does not need to load a full-sized image for use in an editing UI. Instead, use the displaySizeImage property to retrieve an image suitable for screen display. You can then load the full-sized image on a background queue so that it will be ready by the time the user finishes editing the display-size image. At that time, apply the user's adjustments to the full-sized image and then use the PHContentEditingOutputMBS class to commit the edit to the photo library.
(Read only property)

138.19.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.19.14 livePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unedited Live Photo content of the editing input.
Notes:

To edit the video and photo content of the Live Photo, create a PHLivePhotoEditingContextMBS object using this PHContentEditingInputMBS object.
If the editing input does not represent a Live Photo, this property's value is nil, indicating that you cannot use this PHContentEditingInputMBS object to create a Live Photo editing context.
(Read only property)

138.19.15 location as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The location information that was saved with the asset.
Notes:

Typically, an asset's location metadata identifies the place where the asset was captured.

We pass result, the CLLocationMBS object, as variant to avoid plugin dependencies.
(Read only property)

138.19.16 mediaSubtypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The subtypes of the asset, identifying special kinds of assets such as a panoramic photo or a high-frame-rate video.
Notes:

See MediaSubtype* constants for possible values.
Because an asset can have more than one subtype, use these values as bit masks to identify an asset.
(Read only property)

138.19.17 mediaType as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of the asset, such as video or audio.
Notes:

See MediaType* constants.
(Read only property)

138.19.18 playbackStyle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The playback style for the asset.
Notes: (Read only property)

138.19.19 uniformTypeIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The uniform type identifier for the asset's image or video data.
Notes: (Read only property)

138.19.20 Constants

138.19.21 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a still image.

138.19.22 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as an animated image.

138.19.23 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a Live Photo.

138.19.24 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset has an unsupported or undefined media playback type.

138.19.25 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a video.

138.19.26 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a looping video.

138.20 class PHContentEditingInputRequestOptionsMBS

138.20.1 class PHContentEditingInputRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of image or video data when you request to edit the content of a Photos asset.
Notes:

You use the PHContentEditingInputRequestOptionsMBS class with the requestContentEditingInputWithOptions method for editing the contents of a PHAssetMBS object.
This class does not affect photo editing extensions.

138.20.2 Methods

138.20.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.20.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.20.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

138.20.6 SetCanHandleAdjustmentData(CanHandleAdjustmentData as CanHandleAdjustmentDataMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets delegate to be called when Photos needs to determine whether your app can continue previous edits made to an asset.
Notes: When an asset is edited, Photos stores a PHAdjustmentDataMBS object provided by the app or extension that edited the asset. This object provides all information necessary to reconstruct the edited asset using the original asset data. When your app requests to edit an asset, Photos calls this block to inquire whether your app can handle the asset's past adjustments.

138.20.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate Photos calls periodically while downloading the asset.
Notes: If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.

138.20.8 Properties

138.20.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.20.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested asset from iCloud if needed.
Notes:

If true (the default), Photos downloads the asset requested for editing if it is not stored on the local device. To be notified of the download's progress, use the PHContentEditingInputRequestOptionsMBS property to provide a delegate that Photos calls periodically while downloading the asset.
(Read and Write property)

138.20.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate Photos calls periodically while downloading the asset.
Notes:

If you request an asset whose data is not on the local device, and have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling the download.
(Read and Write property)

138.20.12 Delegates

138.20.13 CanHandleAdjustmentDataMBS(adjustmentData as PHAdjustmentDataMBS, tag as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate takes the following parameter.
Notes:

adjustmentData: A PHAdjustmentDataMBS object you can use to determine whether your app can work with past edits made to the asset. Typically, you make this decision based on the adjustment data's formatIdentifier and formatVersion properties.

If your method returns true, Photos provides the original asset data for editing. Your app uses the adjustment data to alter, add to, or reapply previous edits. (For example, an adjustment data may describe filters applied to a photo. Your app reapplies those filters and allows the user to change filter parameters, add new filters, or remove filters.)
If your method returns false, Photos provides the most recent asset data—the rendered output of all previous edits—for editing.

138.20.14 ProgressHandlerMBS(progress as double, byref stop as boolean, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate takes the following parameters.
Notes:

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
stop: Set stop to true inside the block to cancel the download.

138.21 class PHContentEditingOutputMBS

138.21.1 class PHContentEditingOutputMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container to which you provide the results of editing the photo, video, or Live Photo content of a Photos asset.
Notes:

To edit an asset's photo or video content:

1. Fetch a PHAssetMBS object that represents the photo or video to be edited.
2. Call the asset's requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object. This object provides information about the asset, the asset data to be edited, and a preview image for display.
3. Apply your edits to the asset. To allow a user to continue working with the edit later (for example, to adjust the parameters of a photo filter), create a PHAdjustmentDataMBS object describing the changes.
4. Initialize a PHContentEditingOutput object. For photo- or video-only assets, provide the edited content with the renderedContentURL property. For Live Photo assets, create a PHLivePhotoEditingContext object to edit the Live Photo content and pass your content editing output to the saveLivePhotoToOutput method. For all asset types, provide your adjustment data with the adjustmentData property of the content editing output.
5. Use a photo library change block to commit the edit. (For details, see PHPhotoLibraryMBS.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.

Each PHPhotoLibraryperformChanges call prompts the user for permission to edit the contents of the photo library—to edit multiple assets in one batch, create multiple PHAssetChangeRequest objects within the same change block, each with its own corresponding PHContentEditingOutput object.

You can also edit assets from photo editing extensions. In this case, instead of working with a PHAssetMBS object, you implement methods in the PHContentEditingController protocol. Photos provides a PHContentEditingOutputMBS object when your extension begins editing. When editing is complete, Photos requests a PHContentEditingOutputMBS object that contains the edited asset content.

Requires MacOS 10.11 or newer.

138.21.2 Methods

138.21.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.

Notes: Should return true on MacOS 10.11 or newer.

138.21.4 Constructor(contentEditingInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an editing output from the specified editing input.
Notes:

contentEditingInput: An object providing information about the asset to be edited.

Returns an initialized content editing output.

To complete the edit, use the renderedContentURL property to provide the edited asset content. Then, use the PHAssetChangeRequestMBS class or PHContentEditingController protocol to commit the edit to storage.
See also:

- 138.21.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS) 22555

138.21.5 Constructor(placeholderForCreatedAsset as PHObjectPlaceholderMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an editing output for use in adding a new asset to the photo library.
Notes:

placeholderForCreatedAsset: A placeholder object that ties the editing output to a PHAssetChangeRequest object for creating a new asset.

Returns an initialized content editing output.

Use this method if you want to add a new asset to the Photos library with edited content, as opposed to editing the content of an asset after adding it to the library. For example, you might use this option if your app applies filters to photos it captures with the device camera—instead of saving only the filtered image to the Photos library, your app can save both the filtered and the original image, allowing the user to revert to the original image or apply different filters later.
See also:

- 138.21.4 Constructor(contentEditingInput as PHContentEditingInputMBS) 22555

138.21.6 Properties

138.21.7 adjustmentData as PHAdjustmentDataMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object describing the changes made to the asset.
Notes:

You use adjustment data to describe the "recipe" for an edit that later edits can make use of. For example, a photo editing app can use this property to save information about the filters applied to a photo. Later, the same app (or another app that understands its adjustment data format) can load the filter information, change the filter parameters, and reapply the filters to the original photo.

If you write new asset content to the URL specified by the renderedContentURL property, you must also provide a new, distinct PHAdjustmentDataMBS object describing your edit. Passing a preexisting adjustment data object (that describes an earlier edit) results in undefined behavior.
(Read only property)

138.21.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.21.9 renderedContentURL as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The URL at which to write a file containing edited asset content.
Notes:

Read this property to find a URL for writing edited asset content. Then, if editing a photo asset, write the altered photo image to a file in JPEG format at this URL. If editing a video asset, export the video to a QuickTime (.mov) file at this URL.

Edited asset content must incorporate (or "bake in") the intended orientation of the asset. That is, the orientation metadata (if any) that you write in the output image or video file must declare the "up" orientation, and the image or video data must appear right-side up when presented without orientation metadata.

For Live Photo content, you don't write output to this URL. Instead, pass the editing output object to the saveLivePhotoToOutput method.

(Read only property)

138.22 class PHFetchOptionsMBS

138.22.1 class PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options that affect the filtering, sorting, and management of results that Photos returns when you fetch asset or collection objects.
Notes:

Using class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to fetch assets or collections produces a PHFetchResultMBS object containing the requested objects. The options you specify control which objects the fetch result includes, how those objects are arranged in the fetch result, and how Photos should notify your app of changes to the fetch result.

Photos supports only a restricted set of keys for the predicate and sortDescriptors properties. The set of available keys depends on which class you're using to fetch assets or collections—see Table 1 for the list of keys supported by each class.

Supported predicate and sort descriptor keys

Class for Fetch Method	Supported Keys
PHAsset	SELF, localIdentifier, creationDate, modificationDate, mediaType, mediaSubtypes, duration, pixelWidth, pixelHeight, favorite (or isFavorite), hidden (or isHidden), burstIdentifier
PHAssetCollection	SELF, localIdentifier, localizedTitle (or title), startDate, endDate, estimatedAssetCount
PHCollectionList	SELF, localIdentifier, localizedTitle (or title), startDate, endDate
PHCollection (can fetch a mix of PHCollectionList and PHAssetCollection objects)	SELF, localIdentifier, localizedTitle (or title), startDate, endDate

Available in MacOS 10.13 or newer.

138.22.2 Methods

138.22.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.22.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.22.5 copy as PHFetchOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

138.22.6 setSortDescriptors(sortDescriptors() as NSSortDescriptorMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the list of sort descriptors, specifying an order for the fetched objects.

138.22.7 sortDescriptors as NSSortDescriptorMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A list of sort descriptors, specifying an order for the fetched objects.

138.22.8 Properties

138.22.9 fetchLimit as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The maximum number of objects to include in the fetch result.
Notes:

With the default fetch limit of zero, Photos returns all requested assets or collections in a fetch result. Change this value to fetch more efficiently in situations where a potentially very large result is not needed. For example, to fetch only the most recently captured asset, call the fetchAssetsWithOptions method, using the sortDescriptors property to sort in descending date order, and setting a fetch limit of one.
(Read and Write property)

138.22.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.22.11 includeAllBurstAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the fetch result includes all assets from burst photo sequences.
Notes:

When the user takes a sequence of photos in burst mode with the Camera app (on supported devices), the Photos app user interface groups the resulting assets together and allows the user to select favorite members of the sequence. Photos also automatically marks members of the sequence as potential user favorites.

If the value is false (the default), fetches that include burst photo sequences return only the user-picked members and representative asset of each sequence. If the value is true, such fetches include all assets in each sequence.
(Read and Write property)

138.22.12 includeAssetSourceTypes as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The set of source types for which to include assets in the fetch result.
Notes:

Asset source types identify the means by which an asset enters the Photos library, and affect the possible actions you can perform on an asset. For example, assets synced from iTunes cannot be edited or deleted.

The SourceType type is an option set—to include multiple source types in the same query, combine type constants with the bitwise OR operator. See SourceType constants in PHAssetMBS class.
(Read and Write property)

138.22.13 includeHiddenAssets as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether the fetch result includes assets marked as hidden.
Notes:

If the value is false (the default), fetches exclude assets whose hidden property is true. If the value is true, fetches include all assets regardless of their hidden state.

(Read and Write property)

138.22.14 predicate as NSPredicateMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A predicate that specifies which properties to select results by and that also specifies any constraints on selection.
Notes:

Construct a predicate with the properties of the class of objects that you want to fetch
(Read and Write property)

138.22.15 wantsIncrementalChangeDetails as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether your app receives detailed change information for the objects in the fetch result.
Notes:

If you have registered a change observer with the shared PHPhotoLibraryMBS object, fetching assets or collections automatically registers your observer to receive information about later changes to the fetch result and about the objects it contains. For a fetch result, change information (a PHFetchResultChangeDetailsMBS object) can include a detailed list of incremental differences from the previous state of the fetch result, such as new photos captured since the original fetch.

If true (the default), Photos sends detailed incremental changes when such information is available. If false, Photos tells your app only when the fetch result has changed (in which case you can perform the fetch again to receive updated results).
(Read and Write property)

138.23 class PHFetchResultChangeDetailsMBS

138.23.1 class PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of changes that occurred in the set of asset or collection objects listed in a fetch result.
Notes: A PHFetchResultChangeDetailsMBS object provides detailed information about the differences between two fetch results—one that you previously obtained and an updated one that would result if you performed the same fetch again. The change details object provides information useful for updating a UI that lists the contents of a fetch result, such as the indexes of added, removed, and rearranged objects.

138.23.2 Methods

138.23.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.23.4 changeDetailsFromFetchResult(fromResult as PHFetchResultMBS, toFetchResult as PHFetchResultMBS, changedObjects() as PHObjectMBS) as PHFetchResultChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a change details object that summarizes the differences between two fetch results.
Notes:

fromResult: A fetch result to be treated as the "before" state in the resulting change details object.
toResult: A fetch result to be treated as the "after" state in the resulting change details object.
changedObjects: An collection of objects to manually note as changed between the two fetch results.

Typically, you use the PHChangeMBS class to retrieve PHFetchResultChangeDetailsMBS objects describing any changes that have occurred since you performed a fetch, but you can also use this method to get a change details object that summarizes the difference between two arbitrary PHFetchResultMBS objects. In this case, Photos cannot automatically determine when the same objects are present in both fetch results but those objects' content has changed, so the changedIndexes and changedObjects properties are empty.

However, you can use the changedObjects parameter to manually note objects as changed. For example, consider a view controller that maintains a base fetch result representing a list of albums, and a transient

collection that filters the list according to the user's search terms.

138.23.5 changedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The objects in the fetch result whose content or metadata have been updated.
Notes:

An array of PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects.
If the hasIncrementalChanges property's value is false, this property's value is nil.

138.23.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.23.7 enumerateMoves(theDelegate as enumerateMovesHandlerMBS, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Runs the specified block for each case where an object has moved from one index to another in the fetch result.
Notes: The toIndex parameter in the handler block is relative to the state of the fetch result after you've applied the changes described by the removedIndexes, insertedIndexes and changedIndexes properties. Therefore, if you use this method to update a collection view or similar user interface displaying the contents of the fetch result, update your UI to reflect insertions, removals, and changes before you process moves.

138.23.8 insertedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The new items that have been inserted in the fetch result.
Notes:

This array can contain PHAssetMBS, PHAssetCollectionMBS or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property's value is false, this property's value is nil.

138.23.9 removedObjects() as PHObjectMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The items that have been removed from the fetch result.
Notes:

This array can contain PHAssetMBS, PHAssetCollectionMBS, or PHCollectionListMBS objects, or some combination thereof.
If the hasIncrementalChanges property's value is false, this property's value is nil.

138.23.10 Properties

138.23.11 changedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes of objects in the fetch result whose content or metadata have been updated.
Notes:

Use this index set to update elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you've applied the changes described by the removedIndexes and insertedIndexes properties; when updating your app's interface, apply changes after removals and insertions and before moves.

If the hasIncrementalChanges property's value is false, this property's value is nil.
(Read only property)

138.23.12 fetchResultAfterChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The current fetch result, incorporating recent changes.
Notes:

You can use this object to inspect the current state of the fetched objects even if the hasIncrementalChanges property's value is false. Using this fetch result is equivalent to performing once more the same fetch that returned the original fetch result.
(Read only property)

138.23.13 fetchResultBeforeChanges as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The original fetch result, without recent changes.
Notes:

This property's value is the same object you passed to the changeDetailsForFetchResult method to request change details.
(Read only property)

138.23.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.23.15 hasIncrementalChanges as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether changes to the fetch result can be described incrementally.
Notes:

If this value is true, use the insertedIndexes, removedIndexes, and changedIndexes properties (or the insertedObjects, removedObjects, and changedObjects properties) to find out which objects in the fetch result have been added, removed, or updated. You can also use the hasMoves property and enumerateMoves method to find out which objects in the fetch result have been rearranged. These properties can be useful for updating a collection view or similar interface that displays the fetch result's contents.

If this value is false, the fetch result is too different from its original state for incremental change information to be meaningful. Use the fetchResultAfterChanges property to get the fetch result's current membership. (If displaying the fetch result's contents, reload your user interface to match the new fetch result.)
(Read only property)

138.23.16 hasMoves as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether objects have been rearranged in the fetch result.
Notes:

If this value is true, use the enumerateMoves method to find out which elements have been moved and what their new indexes are.
(Read only property)

138.23.17 insertedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes where new objects have been inserted in the fetch result.
Notes:

Use this index set can to insert elements in a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property) after you've applied the changes described by the removedIndexes property; when updating your app's interface, apply insertions after removals and before changes and moves.

If the hasIncrementalChanges property's value is false, this property's value is nil.
(Read only property)

138.23.18 removedIndexes as NSIndexSetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The indexes from which objects have been removed from the fetch result.
Notes:

Use this index set to remove elements from a collection view or similar user interface that displays the contents of the fetch result. These indexes are relative to the original fetch result (the fetchResultBeforeChanges property); when updating your app's interface, apply removals before insertions, changes, and moves.
If the hasIncrementalChanges property's value is false, this property's value is nil.
(Read only property)

138.23.19 Delegates

138.23.20 enumerateMovesHandlerMBS(fromIndex as Integer, toIndex as Integer, tag as variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls to provide details about which objects in the fetch result have moved to which indexes.
Notes:

fromIndex: The index of an object in the original fetch result.
toIndex: The index to which the object has moved in the new fetch result.

138.24 class PHFetchResultMBS

138.24.1 class PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An ordered list of assets or collections returned from a Photos fetch method.
Notes:

When you use class methods on the PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, and PHCollectionListMBS classes to retrieve objects, Photos provides the resulting objects in a fetch result. You access the contents of a fetch result with various methods. Unlike an array, however, a PHFetchResult object dynamically loads its contents from the Photos library as needed, providing optimal performance even when handling a large number of results.

A fetch result provides thread-safe access to its contents. After a fetch, the fetch result's count value is constant, and all objects in the fetch result keep the same localIdentifier value. (To get updated content for a fetch, register a change observer with the shared PHPhotoLibraryMBS object.)

A fetch result caches its contents, keeping a batch of objects around the most recently accessed index. Because objects outside of the batch are no longer cached, accessing these objects results in refetching those objects. This process can result in changes to values previously read from those objects.

138.24.4 Methods

138.24.5 allObjects as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Queries all objects as array.

138.24.6 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.24.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.24.8 containsObject(anObject as Variant) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns whether the specified object is present in the fetch result.
Notes:

anObject: An object.

Returns true if anObject is present in the fetch result, otherwise false.

This method determines whether anObject is present in the fetch result by sending an isEqual: message to each of the fetch result's objects (and passing anObject as the parameter to each isEqual message).

138.24.9 copy as PHFetchResultMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the result set.

138.24.10 countOfAssetsWithMediaType(MediaType as Integer) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the number of assets in the fetch result of a specified type.
Notes:

mediaType: The type of assets to count, such as image or video. See MediaType constants.

Returns the number of assets in the fetch result of the specified type.

The first time you call this method, Photos enumerates the contents of the fetch result to count those of the specified type, then caches the result. Subsequent calls with the same mediaType parameter return the cached value.
This method counts only the PHAssetMBS objects in a fetch result. If a fetch result contains only PHAssetCollectionMBS or PHCollectionListMBS objects, the return value is 0.

138.24.11 indexOfObject(anObject as Variant) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the lowest index whose corresponding object in the fetch result is equal to the specified object.
Notes:

anObject: An object.

Returns the lowest index whose corresponding object in the fetch result is equal to anObject, or NSNotFound if no such object is in the fetch result.

Starting at index 0, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
See also:

- 138.24.12 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer 22569

138.24.12 indexOfObject(anObject as Variant, range as NSRangeMBS) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the lowest index within the specified range whose corresponding object in the fetch result is equal to the specified object.
Notes:

anObject: An object.
range: The range of indexes in the fetch result within which to search for anObject.

Returns the lowest index within range whose corresponding object in the fetch result is equal to anObject,

or NSNotFound if no such object is in the fetch result.

Starting at range.location, this method sends an isEqual message to each object in the fetch result until it finds a match or reaches the end of the fetch result. This method passes the anObject parameter to each isEqual message.
Raises an exception (NSExceptionMBS class) if the range parameter represents a range that doesn't exist in the fetch result.
See also:

- 138.24.11 indexOfObject(anObject as Variant) as Integer 22569

138.24.13 objectAtIndex(index as Integer) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the object located at the specified index.
Notes:

index: An index within the bounds of the fetch result.

Returns the object located at index in the fetch result.

Raises an exception (NSExceptionMBS class) if index is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

138.24.14 objectsAtIndexes(indexes as NSIndexSetMBS) as Variant()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an array containing the objects in the fetch result at the indexes in the specified index set.
Notes:

indexes: An index set containing indexes within the bounds of the fetch result.

Returns an array containing the objects in the fetch result at the indexes specified by indexes.

The ordering of the returned array follows the index set. That is, in the returned array, an object with a higher index in the index set comes after any object with a smaller index in the index set.
Raises an exception (NSExceptionMBS) if any index in the index set is beyond the end of the fetch result (that is, greater than or equal to the value of the count property).

138.24.15 Properties

138.24.16 count as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The number of objects in the fetch result.
Notes: (Read only property)

138.24.17 firstObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The first object in the fetch result.
Notes:

You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

138.24.18 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.24.19 lastObject as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The last object in the fetch result.
Notes:

You specify the ordering of a fetch result in the PHFetchOptionsMBS object you pass to a fetch method.
Returns nil if the fetch result is empty.
(Read only property)

138.24.20 Constants

138.24.21 EditOperationContent = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
Notes:

The asset's photo or video content can be edited.
To begin the process of editing an asset, use the requestContentEditingInputWithOptions method.

138.24.22 EditOperationDelete = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
Notes:

The asset can be deleted from the photo library.
To delete one or more assets, create a change request with the deleteAssets method inside a PHPhotoLibrary change block.

138.24.23 EditOperationProperties = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifying possible actions an asset can support, used by the canPerformEditOperation method.
Notes:

The asset's metadata properties can be edited.
To change an asset's properties, create a change request with the changeRequestForAsset method inside a PHPhotoLibraryMBS change block.

138.24.24 MediaTypeAudio = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is an audio file.

138.24.25 MediaTypeImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a photo or other static image.

138.24.26 MediaTypeUnknown = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset's type is unknown.

138.24.27 MediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants identifying the general type of an asset, such as image or video.
Notes: The asset is a video file.

138.24.28 PlaybackStyleImage = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a still image.

138.24.29 PlaybackStyleImageAnimated = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as an animated image.

138.24.30 PlaybackStyleLivePhoto = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a Live Photo.

138.24.31 PlaybackStyleUnsupported = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset has an unsupported or undefined media playback type.

138.24.32 PlaybackStyleVideo = 4

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a video.

138.24.33 PlaybackStyleVideoLooping = 5

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants of asset playback styles that dictate how to present an asset to the user.
Notes: The asset should be displayed as a looping video.

138.25 class PHImageManagerMBS

138.25.1 class PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that facilitates retrieving or generating preview thumbnails and asset data.
Notes:

Use these methods to fetch full-size photo assets or thumbnail images, or to retrieve AVFoundation objects for playing, exporting, and manipulating video assets.

To load image or video data:
1. Use the PHAsset class to fetch the asset you're interested in.
2. Call the defaultManager method to retrieve the shared image manager object.
3. Use one of the methods listed in Requesting Images and Requesting Video Objects to load the asset's image or video data.

The image manager caches the asset images and data it provides, so later requests for the same assets with similar parameters will return results more quickly.

If you need to load image data for many assets together, use the PHCachingImageManagerMBS class to "preheat" the cache by loading images you expect to need soon. For example, when populating a collection view with photo asset thumbnails, you can cache images ahead of the current scroll position.

Available in MacOS 10.13 or later.

138.25.2 Blog Entries

- Show Live Photos in your Xojo application

138.25.3 Blog Entries

- Show Live Photos in your Xojo application

138.25.4 Methods

138.25.5 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.25.6 cancelImageRequest(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you perform an asynchronous request for image data using the requestImageForAsset method, or for a video object using one of the methods listed in Requesting Video Objects, the image manager returns a numeric identifier for the request. To cancel the request before it completes, provide this identifier when calling the cancelImageRequest method.

138.25.7 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.25.8 defaultManager as PHImageManagerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the shared image manager object.
Notes: This method always returns the same image manager object, which is shared for all uses in your app.

138.25.9 MaximumSize as CGSizeMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A special value for requesting original image data or the largest rendered image available.
Notes: When you use the PHImageManagerMaximumSize option, Photos provides the largest image available for the asset without scaling or cropping. (That is, it ignores the resizeMode option.)

138.25.10 PHImageCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value indicates whether the image request was canceled.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value.If you call the cancelImageRequest method to cancel a request, Photos calls your result handler block with the value true for this key.

138.25.11 PHImageErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value is an error that occurred when Photos attempted to load the image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an NSErrorMBS object.Photos provides an error object for this key if it cannot provide an image for your handler block's result parameter. Examine the error object for information about the cause of the error.

138.25.12 PHImageResultIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value indicates whether the result image is a low-quality substitute for the requested image.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is a Boolean value. If true, the result parameter of your resultHandler block contains a low-quality image because Photos could not yet provide a higher-quality image. Depending on your settings in the PHImageRequestOptions object that you provided with the request, Photos may call your result handler delegate again to provide a higher-quality image.

138.25.13 PHImageResultIsInCloudKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value indicates whether photo asset data is stored on the local device or must be downloaded from iCloud.

This key provides information about an image loading result in the resultHandler delegate for methods listed in Requesting Images. The corresponding value is a Boolean value.

If true, no image was provided, because the asset data must be downloaded from iCloud. To download the data, submit another request, and specify true for the networkAccessAllowed option.

138.25.14 PHImageResultRequestIDKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary.
Notes:

A key whose value is a unique identifier for the image request.

This key provides information about an image loading result in the resultHandler block for methods listed in Requesting Images. The corresponding value is an integer value. This identifier matches that returned when making a request. You can use it with the cancelImageRequest method to cancel requests with pending results that are no longer needed.

138.25.15 RequestAVAssetForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestAVAssetForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests AVFoundation objects representing the video asset's content and state, to be loaded asynchronously.
Notes:

asset: The video asset for which video objects are to be loaded.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates AVFoundation objects. It then calls your resultHandler block to provide the requested video.

Use this method when you want to work with the arrangement of audio and video tracks that an asset contains. If you plan to use the asset only for playback, call the requestPlayerItemForVideo method. If you plan to export the asset data, call the requestExportSessionForVideo method.

138.25.16 RequestExportSessionForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as String, CompletionHandler as RequestExportSessionForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an export session for writing the video asset's data to a file, to be loaded asynchronously.
Notes:

asset: The video asset for which an export session is to be created.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.
exportPreset: The export preset name for exporting the asset. For available presets, see AVAssetExportSessionMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates an export session. It then calls your resultHandler delegate to provide the requested video.
For additional export options, use the requestAVAssetForVideo method and then create AVAssetReader and AVAssetWriterMBS objects to transcode and output the video asset's data.

138.25.17 RequestImageDataAndOrientationForAsset(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the largest represented image as data bytes and EXIF orientation for the specified asset.
Notes:

asset: The asset for which to load image data.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors.

If PHImageRequestOptionsMBS.VersionCurrent is requested and the asset has adjustments, the largest rendered image data is returned. In all other cases, the original image data is returned.
For further details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads the largest available representation of the image asset, then calls your resultHandler block to provide the requested data. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread, you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler. This method ignores the deliveryMode option—Photos calls your result handler block exactly once.

If the version option is set to PHImageRequestOptionsMBS.VersionCurrent, Photos provides rendered image data, including the results of any edits that have been made to the asset content. Otherwise, Photos provides the originally captured image data for the asset.

138.25.18 RequestImageForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, CompletionHandler as RequestImageForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an image representation for the specified asset.
Notes:

asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos loads or generates an image of the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size—either because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network.

By default, this method executes asynchronously. If you call it from a background thread you may change the synchronous property of the options parameter to true to block the calling thread until either the requested image is ready or an error occurs, at which time Photos calls your result handler.

For an asynchronous request, Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler's info parameter indicates when Photos is providing a temporary low-quality image.

You can use this method for both photo and video assets — for a video asset, an image request provides a thumbnail image or poster frame.

138.25.19 RequestImageForAssetSync(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHImageRequestOptionsMBS, byref Info as Dictionary) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests an image representation for the specified asset synchronously.
Notes:

asset: The asset whose image data is to be loaded.
targetSize: The target size of image to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHImageRequestOptionsMBS class.

Returns the image.

138.25.20 RequestLivePhotoForAsset(asset as PHAssetMBS, targetSize as CGSizeMBS, contentMode as Integer, options as PHLivePhotoRequestOptionsMBS, CompletionHandler as RequestLivePhotoForAssetCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a Live Photo representation for the specified asset.
Notes:

asset: The asset whose Live Photo data is to be loaded.
targetSize: The target size of Live Photo to be returned.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHImageContentMode.
options: Options specifying how Photos should handle the request, format the requested image, and notify your app of progress or errors. For details, see PHLivePhotoRequestOptionsMBS class.

Returns a numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

A Live Photo is a picture, taken with a supported device, that includes movement and sound from the moments just before and after its capture. Much like how a UIImage object represents a ready-to-use form of an image, a PHLivePhotoMBS object represents a Live Photo whose image, motion, and sound data are prepared for display. Use this method to request an asset's Live Photo form; after Photos calls your resultHandler delegate to provide the Live Photo, you can display it using the PHLivePhotoViewMBS class.

Use this method only when you plan to display the motion and sound content associated with a Live Photo. In contexts where you need only a still image for a Live Photo asset—for example, when loading thumbnails to display in a photo chooser interface—use the requestImageForAsset method instead.

When you call this method, Photos loads or generates a PHLivePhotoMBS object for the asset at, or near, the size you specify. Next, it calls your resultHandler block to provide the requested image. To serve your request more quickly, Photos may provide an image that is slightly larger than the target size—either because such an image is already cached or because it can be generated more efficiently. Depending on the options you specify and the current state of the asset, Photos may download asset data from the network. This method always executes asynchronously.

Photos may call your result handler block more than once. Photos first calls the block to provide a low-quality image suitable for displaying temporarily while it prepares a high-quality image. (If low-quality image data is immediately available, the first call may occur before the method returns.) When the high-quality image is ready, Photos calls your result handler again to provide it. If the image manager has already cached the requested image at full quality, Photos calls your result handler only once. The PHImageResultIsDegradedKey key in the result handler's info parameter indicates when Photos is providing a temporary low-quality image.

138.25.21 RequestPlayerItemForVideo(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, CompletionHandler as RequestPlayerItemForVideoCompletedMBS, tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a representation of the video asset for playback, to be loaded asynchronously.
Notes:

asset: The video asset to be played back.
options: Options specifying how Photos should handle the request and notify your app of progress or errors. For details, see PHVideoRequestOptionsMBS.

A numeric identifier for the request. If you need to cancel the request before it completes, pass this identifier to the cancelImageRequest method.

When you call this method, Photos downloads the video data (if necessary) and creates a player item. It then calls your resultHandler block to provide the requested video.

Use this method when you want to simply play back the video asset as it currently exists. For more detailed options or to work with the asset's audio and video tracks, use the requestAVAssetForVideo method instead.

138.25.22 Properties

138.25.23 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.25.24 Constants

138.25.25 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Scales the image so that it completely fills the target size.

138.25.26 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Scales the image so that its larger dimension fits the target size.

138.25.27 ContentModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes:

Fits the image to the requested size using the default option, PHImageContentModeAspectFit.

Use this content mode when requesting a full-sized image using the PHImageManagerMBS.MaximumSize value for the target size. In this case, the image manager does not scale or crop the image.

138.25.28 PHInvalidImageRequestID = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: A special value provided for asynchronous image requests that cannot be canceled.

138.25.29 Delegates

138.25.30 RequestAVAssetForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, AVAsset as Variant, AVAudioMix as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls after loading the asset's data.
Notes:

asset: An object that provides access to the video asset as a collection of tracks and metadata. For details on working with AVAsset objects, see AVFoundation Programming Guide.
audioMix: Use this object to rearrange the asset's audio tracks, edit additional audio into the mix, or configure an AVAssetReaderOutput object for exporting the asset's audio data. If nil, the asset uses a default audio mix.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for

possible keys and values.

We pass AVAsset, the AVAssetMBS object, as variant to avoid plugin dependencies.
Same for AVAudioMix with AVAudioMixMBS object.

138.25.31 RequestExportSessionForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, exportPreset as string, exportSession as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate that Photos calls after loading the asset's data and preparing the export session.
Notes:

exportSession: An AVAssetExportSessionMBS object that you can use for writing the video asset's data to a file.
info: A dictionary that provides information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass AVAsset, the AVAssetExportSessionMBS object, as variant to avoid plugin dependencies.

138.25.32 RequestImageDataAndOrientationForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, imageData as MemoryBlock, dataUTI as String, orientation as Integer, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate called, exactly once, when image loading is complete, providing the requested image or information about the status of the request.
Notes:

imageData: The requested image.
dataUTI: The uniform type identifier for the image.
orientation: The EXIF orientation for the image, as a CGImagePropertyOrientation.
info: A dictionary providing information about the status of the request.

138.25.33 RequestImageForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, result as NSImageMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
Notes:

result: The requested image.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

138.25.34 RequestLivePhotoForAssetCompletedMBS(asset as PHAssetMBS, options as PHImageRequestOptionsMBS, livePhoto as PHLivePhotoMBS, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate to be called when image loading is complete, providing the requested image or information about the status of the request.
Notes:

result: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

138.25.35 RequestPlayerItemForVideoCompletedMBS(asset as PHAssetMBS, options as PHVideoRequestOptionsMBS, playerItem as Variant, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A delegate Photos calls after loading the asset's data and preparing the player item.
Notes:

playerItem: An AVPlayerItemMBS object that you can use for playing back the video asset.
info: A dictionary providing information about the status of the request. See Image Result Info Keys for possible keys and values.

We pass playerItem, the AVPlayerItemMBS object, as variant to avoid plugin dependencies.

138.26 class PHImageRequestOptionsMBS

138.26.1 class PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of still image representations of Photos assets you request from an image manager.
Notes: Available on macOS 10.13 or newer.

138.26.2 Methods

138.26.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.26.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.26.5 copy as PHImageRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the request.

138.26.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

138.26.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the image.
Notes: If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

138.26.8 Properties

138.26.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The requested image quality and delivery priority.
Notes:

Use this property to tell Photos to provide an image quickly (possibly sacrificing image quality), to provide a high-quality image (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

138.26.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.26.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested image from iCloud.
Notes:

If true, and the requested image is not stored on the local device, Photos downloads the image from iCloud. To be notified of the download's progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the image. If false (the default), and the image is not on the local device, the PHImageResultIsInCloudKey value in the result handler's info dictionary indicates that the image is not available unless you enable network access.

(Read and Write property)

138.26.12 normalizedCropRect as CGRectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A rectangle for requesting a cropped version of the original image.
Notes:

To request a cropped image, specify the crop rectangle in a unit coordinate space relative to the image. In this coordinate system, the point { 0.0,0.0 } refers to the upper left corner of the image, and the point { 1.0,1.0 } refers to the opposite corner regardless of the image's aspect ratio.
This property defaults to zero rectangle, which specifies no cropping.
If you specify a crop rectangle, you must also specify the PHImageRequestOptionsResizeModeExact option for the resizeMode property.
(Read and Write property)

138.26.13 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the image.
Notes:

If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

138.26.14 ResizeMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mode that specifies how to resize the requested image.
Notes:

Use this property to choose how to fit the image to the target size you specified when requesting image data.
See PHImageRequestOptionsResizeMode.
(Read and Write property)

138.26.15 Synchronous as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether Photos processes the image request synchronously.
Notes:

If false (the default), the requestImageForAsset method returns immediately. Depending on the deliveryMode property, Photos may call your resultHandler delegate before the method returns, at some later time, or both.
If true, the requestImageForAsset method blocks the calling thread until image data is ready or an error occurs. Photos calls your result handler delegate exactly once.

Perform synchronous requests from a background thread only.
(Read and Write property)

138.26.16 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the image to be requested.
Notes:

Use this property to request a version of the image with or without adjustments, or to request high-quality original data (for example, a RAW file) if such is available. See Version constants.
(Read and Write property)

138.26.17 Constants

138.26.18 DeliveryModeFastFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos provides only a fast-loading image, possibly sacrificing image quality.

138.26.19 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.

Notes: Photos provides only the highest-quality image available, regardless of how much time it takes to load.

138.26.20 DeliveryModeOpportunistic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos automatically provides one or more results in order to balance image quality and responsiveness.

138.26.21 ResizeModeExact = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.
Notes:

Photos resizes the image to match the target size exactly.
Resizing to exactly match a target size is less efficient than using the fast resizing option.
You must choose this option if you use the normalizedCropRect property to request a cropped image.

138.26.22 ResizeModeFast = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.
Notes:

Photos efficiently resizes the image to a size similar to, or slightly larger than, the target size.
With this option, Photos can use image subsampling to quickly provide an image at a size roughly matching the target size.

138.26.23 ResizeModeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for how to resize the requested image to fit a target size, used by the resizeMode property.

Notes: Photos does not resize the image asset.

138.26.24 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for requesting an image asset with or without adjustments, used by the version property.
Notes: Request the most recent version of the image asset (the one that reflects all edits).

138.26.25 VersionOriginal = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for requesting an image asset with or without adjustments, used by the version property.
Notes: Request the original, highest-fidelity version of the image asset.

138.26.26 VersionUnadjusted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for requesting an image asset with or without adjustments, used by the version property.
Notes: Request a version of the image asset without adjustments.

138.26.27 Delegates

138.26.28 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset data from iCloud. Used by the progressHandler property.
Notes:

If you request an image whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and to allow you to cancel the download.

Photos calls this block in an arbitrary serial queue. Dispatch to the main thread if your handler needs to update the user interface.

The method takes the following parameters:
progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the block.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request's deliveryMode property.

If the method call is asynchronously dispatched to main thread, the stop property does not work.

138.27 control PHLivePhotoControlMBS

138.27.1 control PHLivePhotoControlMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A view that displays a Live Photo—a picture that also includes motion and sound from the moments just before and after its capture.
Notes:

Use a Live Photo view to display the photo and control playback of its motion and sound content.

In macOS, Live Photo objects are available only when editing Live Photo content in a photo editing extension that runs in the Photos app—see the PHContentEditingInputMBS class to access Live Photo content in an editing session.

By default, a Live Photo view uses its own gesture recognizer to allow the user to play the motion and sound content of a Live Photo with the same interactions and visual effects seen in the Photos app. To customize this gesture recognizer—for example, to install it on a different view for proper event handling in your app's view hierarchy—use the playbackGestureRecognizer property.

To animate the view briefly to hint that a picture is a Live Photo, use the startPlayback method with the PlaybackStyleHint option.

138.27.6 Methods

138.27.7 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Whether this control is available.

138.27.8 startPlayback(style as integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Begins playback of Live Photo content in the view.
Notes:

style: An option for how much of the Live Photo's motion and sound content to play. See PHLivePhotoViewPlaybackStyle.

Use the style parameter to choose whether to play the full motion and sound content of the Live Photo or only a brief section.

Typically, an app does not need to directly control playback, because a Live Photo view provides interactive playback control. Use this method only when non-interactive playback is appropriate—for example, to briefly animate the content to indicate that a view contains a Live Photo rather than a still image.

138.27.9 stopPlayback

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 138.27.10 stopPlayback(animated as boolean) 22595

138.27.10 stopPlayback(animated as boolean)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Ends playback of Live Photo content in the view.
See also:

- 138.27.9 stopPlayback 22595

138.27.11 Properties

138.27.12 audioVolume as Single

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The audio gain to apply to the Live Photo's movie content during playback.
Notes:

Values for this property must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) plays audio content from the Live Photo at full volume (relative to the system volume). A value of 0.0 is equivalent to setting the muted property to true.
(Read and Write property)

138.27.13 ContentMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The content mode.
Notes: (Read and Write property)

138.27.14 LivePhoto as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The Live Photo displayed in the view.
Notes: (Read and Write property)

138.27.15 livePhotoBadgeView as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A view for displaying Live Photo status.
Notes:

The PHLivePhotoViewMBS uses this subview to display icons indicating the existence or status of Live Photo content. Photos manages the content displayed in the badge view, so you don't need to do anything with view's content—instead, this property provides access to the badge view so you can change where it

appears in your view hierarchy if needed. For example, if you display a Live Photo view within a scroll view, you can move the badge view so that its position remains constant while the scroll view scrolls.
(Read only property)

138.27.16 muted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether the view plays the audio content of its Live Photo.
Notes:

The default value is false, indicating that the view plays audio content along with the motion content of its Live Photo. Change this value to true to play motion content but not audio content.
(Read and Write property)

138.27.17 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The view used in the control.
Notes:

Use this object to set more options on the control.
(Read only property)

138.27.18 Events

138.27.19 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

138.27.20 Close

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

138.27.21 Closing

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

138.27.22 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

138.27.23 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

138.27.24 didEndPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Notifies the delegate that Live Photo playback has ended.
Notes: playbackStyle: The style of playback, indicating whether the content was played in full or briefly previewed.

138.27.25 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

138.27.26 FocusLost

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

138.27.27 FocusReceived

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

138.27.28 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

138.27.29 GotFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes: This only fires if the control itself got focus and not a sub control.

138.27.30 LostFocus

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes: This only fires if the control itself lost focus and not a sub control.

138.27.31 MenuBarSelected

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

138.27.32 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

138.27.33 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

138.27.34 MouseUp(x As Integer, y As Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

138.27.35 Open

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

138.27.36 Opening

Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

138.27.37 ScaleFactorChanged(NewFactor as double)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

138.27.38 willBeginPlaybackWithStyle(playbackStyle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: Notifies the control that Live Photo playback is about to begin.
Notes: playbackStyle: The style of playback, indicating whether the content is to be played in full or briefly previewed.

138.27.39 Constants

138.27.40 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Aspect Fill.

138.27.41 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the content mode constants.
Notes: Aspect Fit.

138.27.42 PlaybackStyleFull = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the playback styles.
Notes: Plays back the entire motion and sound content of the Live Photo, including transition effects at the start and end.

138.27.43 PlaybackStyleHint = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the playback styles.
Notes: Plays back only a brief section of the motion content of the Live Photo, without sound.

138.27.44 PlaybackStyleUndefined = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the playback styles.
Notes: This value is invalid for use.

138.28 class PHLivePhotoEditingContextMBS

138.28.1 class PHLivePhotoEditingContextMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An editing session for modifying the photo, video, and audio content of a Live Photo.
Notes:

A Live Photo is a picture, captured by a supported iOS device, that includes motion and sound from the moments just before and after it was taken. Editing the content of a Live Photo works much like editing other asset types:

1. In an app using the Photos framework, fetch a PHAsset object that represents the Live Photo to edit, and use that object's requestContentEditingInputWithOptions method to retrieve a PHContentEditingInputMBS object.
In a photo editing extension that runs within the Photos app, your extension's main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.
2. Create a Live Photo editing context with the initWithLivePhotoEditingInput initializer.
You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.
3. Use the frameProcessor property to define a block to be used in processing the Live Photo's visual content. Photos will call this block repeatedly to process each frame of the Live Photo's video and still photo content.
4. Create a PHContentEditingOutputMBS object to store the results of your edit, then call the saveLivePhotoToOutput:options to process the Live Photo and save it to your editing output object. This method applies your frameProcessor to each frame.
Note
You can also use the prepareLivePhotoForPlaybackWithTargetSize method to process a preview-quality version of the Live Photo to display in your app's UI during editing.
5. To allow a user to continue working with the edit later (for example, to adjust the parameters of a filter), create a PHAdjustmentDataMBS object describing your changes, and store it in the adjustmentData property of your editing output.
6. In an app using the Photos framework, use a photo library change block to commit the edit. (For details, see PHPhotoLibrary.) In the block, create a PHAssetChangeRequestMBS object and set its contentEditingOutput property to the editing output that you created.
In a photo editing extension, provide the PHContentEditingOutputMBS object that you created in your main view controller's finishContentEditing method.

When you use either of the methods listed in Processing an Editing Context's Live Photo, Photos calls your frameProcessor delegate repeatedly to process each frame of the Live Photo's video and still photo content. In that block, a PHLivePhotoFrameMBS object provides the Live Photo's existing content as a CIImageMBS object. You use Core Image to modify the image, then provide the result of your edits by returning a CIImageMBS object representing the result of processing the input image.

Core Image provides several ways to process the Live Photo's visual content. You can use the built-in filters

listed in Core Image Filter Reference or create CIFilterMBS subclasses using custom graphics kernel code. Or, to use other image processing technologies, you can directly access and modify image content in pixel buffers, Metal textures, or IOSurfaceRef objects with a custom CIImageProcessorKernel subclass.

138.28.2 Methods

138.28.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

138.28.4 cancel

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Aborts any Live Photo processing in progress.
Notes: This method applies only after you've begun processing a Live Photo for display or output with the initWithLivePhotoEditingInput or saveLivePhotoToOutput method. After you call this method, Photos calls your completion handler and provides an error with the PHLivePhotoEditingErrorCodeAborted error code.

138.28.5 Constructor(livePhotoInput as PHContentEditingInputMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a Live Photo editing context for the specified editing input.
Notes:

livePhotoInput: A content editing input object representing the Live Photo for which to perform editing.

Returns a new Live Photo editing context, or nil if the provided content editing input does not represent a Live Photo.

In an app using the Photos framework, you obtain a PHContentEditingInputMBS object by calling requestContentEditingInputWithOptions method of a PHAssetMBS object that you've previously fetched.
In a photo editing extension that runs within the Photos app, your extension's main view controller (which adopts the PHContentEditingController protocol) receives a PHContentEditingInputMBS object when the user chooses to edit a Live Photo with your extension.

You can create a Live Photo editing context only from PHContentEditingInputMBS object that represents a Live Photo. Use the livePhoto property of the editing input to verify that it has live Photo content.

138.28.6 PHLivePhotoShouldRenderAtPlaybackTime as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Specifies whether processing should occur during or before playback.
Notes:

The value for this key is an NSNumber object with a Boolean value. With the default value of false, Photos always renders your edits immediately when you call the Constructor, calling your frameProcessor block for each frame in the Live Photo's video and still photo content.

When you specify a value of true, Photos can defer rendering until playback time, calling your frameProcessor block only for photo and video frames that need to be displayed. However, in this case Photos may still choose to pre-render your edits if needed.

This option does not apply when rendering for output with the saveLivePhotoToOutput method.

138.28.7 prepareLivePhotoForPlayback(targetSize as CGSizeMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Processes a Live Photo with your edits for viewing.
Notes:

targetSize: The size of the view in which you plan to preview the edited Live Photo output.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method to generate preview versions of the edited Live Photo—for example, to display in your editing UI.

138.28.8 saveLivePhotoToOutput(ContentEditingOutput as PHContentEditingOutputMBS, options as Dictionary = nil, completionHandler as PrepareLivePhotoForPlaybackCompletedMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Processes and saves a full-quality Live Photo as the output of your editing session.
Notes:

output: The photo editing output to receive the rendered Live Photo, created from the same PHContentEditingInputMBS object you used to begin this Live Photo editing context.
options: Options that affect Live Photo rendering. See Live Photo Processing Options.

Use this method when you have finished an editing session and need to provide rendered output in a PHContentEditingOutputMBS object. Unlike when rendering output for a photo or video asset, you don't need to provide rendered output using the renderedContentURL property of the editing output object. Instead, create a PHContentEditingOutputMBS object using the Constructor initializer, passing the same PHContentEditingInputMBS object you used in the FrameProcessing delegate initializer to start this Live Photo editing context. Then pass that editing output object to this method, and Photos renders the Live Photo and provides it to the editing output.

Don't forget to describe your edits in a PHAdjustmentDataMBS object and provide that to the adjustmentData property of your content editing output. Providing adjustment data allows your app (or photo editing extension) to non-destructively resume working with an edit later, whether on the same device or on another Mac or iOS device using iCloud Photo Library.

After this method's completion handler signals successful rendering, you use the content editing output to complete the edit. In an app using the Photos framework, create a PHAssetChangeRequestMBS object inside a changes, and set its contentEditingOutput property to your editing output. In a photo editing extension running in the Photos app, your main view controller provides content editing output when requested by the finishContentEditing method.

138.28.9 SetFrameProcessor(FrameProcessor as FrameProcessorMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets a delegate to be called by Photos for processing each frame of the Live Photo's visual content.
Notes:

Use this property to define the image processing to be performed on each frame of the Live Photo. Setting this property does not begin processing; instead, after you call one of the methods listed in Processing an Editing Context's Live Photo, Photos executes your block repeatedly to process each frame of the Live Photo's video and still photo content.

In your frame processor block, use the image property of the provided PHLivePhotoFrameMBS object to access the image to be processed, and return a CIImageMBS object representing the result of your processing. For example, the following code sets up a processor block to apply a simple sepia-tone filter, then calls the saveLivePhotoToOutput method to begin processing the Live Photo for output.

138.28.10 Properties

138.28.11 audioVolume as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The audio gain to apply to the processed Live Photo.
Notes:

Values must be between 0.0 and 1.0, inclusive. A value of 1.0 (the default) leaves the audio content of the Live Photo unchanged. A value of 0.0 mutes all audio in the output Live Photo.
Setting this property does not process the Live Photo content; instead, it sets the audio gain to be applied when you later process the Live Photo using one of the methods listed in Processing an Editing Context's Live Photo.
(Read and Write property)

138.28.12 duration as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The duration, in seconds, of the Live Photo.
Notes: (Read only property)

138.28.13 fullSizeImage as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The unedited still photo content of the Live Photo.
Notes:

Value is CIImageMBS.
Use this property to display the unedited Live Photo's photo content, or to provide still-image previews in your editing UI.

For the best interactive editing performance, use a Metal, OpenGL, or OpenGL ES view and corresponding Core Image context to render editing results. See Processing Images in Core Image Programming Guide for details and examples.

This image does not reflect the Live Photo's orientation metadata. Adjust your rendering based on the orientation property to ensure that the image appears to the user in the correct orientation.
(Read only property)

138.28.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.28.15 orientation as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The image orientation of the Live Photo.
Notes:

This fullSizeImage object does not reflect the Live Photo's orientation metadata. Use this property when displaying that image to ensure that it appears to the user in the correct orientation.
(Read only property)

138.28.16 photoTime as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The offset, in seconds, from the beginning of the Live Photo's duration to the time corresponding to its still photo.
Notes:

To create time-based effects in your frameProcessor block, use this property together with the duration property.
(Read only property)

138.28.17 Delegates

138.28.18 FrameProcessorMBS(frame as PHLivePhotoFrameMBS, byref error as NSErrorMBS, tag as Variant) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate for a block Photos calls to process Live Photo frames.
Notes:

Result of delegate method must be a CIImageMBS object.

To apply edits to a Live Photo, define a block with this signature and assign it to the frameProcessor property of a Live Photo editing context. Then call the initWithLivePhotoEditingInput: to prepare a preview-quality version of your edits for display, or the saveLivePhotoToOutput method to produce full-quality final output. When you call one of those methods, Photos calls your frame processor block repeatedly—processing each frame of the Live Photo's video content as well as its still photo content—to render the output.

This delegates takes the following parameters:

frame: A PHLivePhotoFrameMBS object describing the frame image to be processed.
error: If your delegate cannot successfully process the frame, set this to an error object describing the failure.

Your block should return a CIImageMBS object representing the result of your edits, or nil to indicate that your image processing has failed and the Live Photo edit should be aborted. Use the frame parameter's image property to access the image to be edited.

138.28.19 PrepareLivePhotoForPlaybackCompletedMBS(options as Dictionary, livePhoto as PHLivePhotoMBS, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls on the main queue after processing is complete.
Notes:

livePhoto: The rendered Live Photo, suitable for displaying in a PHLivePhotoViewMBS object.
error: If preparing the edited Live Photo for display succeeds, this parameter is nil. If processing fails, the livePhoto parameter is nil, and this parameter contains an error object describing the failure.

138.28.20 SaveLivePhotoToOutputCompletedMBS(output as PHContentEditingOutputMBS, options as Dictionary, success as Boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls on the main queue after rendering is complete.
Notes:

success: True if rendering succeeds; otherwise false.
error: If rendering succeeds, this parameter is nil. If rendering fails, this parameter contains an error object describing the failure.

138.29 class PHLivePhotoFrameMBS

138.29.1 class PHLivePhotoFrameMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A container that provides image content for a single frame of a Live Photo in an editing context.
Notes:

You don't create classes that implement this protocol. Instead, you provide a frameProcessor block when editing a Live Photo with the PHLivePhotoEditingContextMBS class. When you process your edits for output or display, Photos calls your block repeatedly to process each frame of the Live Photo's video and still photo content. On each call, Photos provides the frame's image content and associated information in an object that adopts this protocol. In that block, you use that object's image property to access the image to be edited, then perform your edits and return another CIImageMBS object representing the result of processing the input image.

Requires macOS 10.12 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.29.2 Methods

138.29.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

138.29.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.29.5 Properties

138.29.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.29.7 Image as Variant

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The image content of the frame to be processed.
Notes:

Value is CIImageMBS object.
Core Image provides several ways to perform your adjustments to this image:

- Create a single CIFilterMBS object, or a chain of filters. Set this image as the kCIInputImageKey parameter of the first filter in the chain, and use the last filter's outputImage property to access the result. Each CIFilter object can be a built-in filter or a custom filter subclass that you create.
- Use the imageByApplyingFilter method to conveniently apply one of the many built-in Core Image filters.
- Access pixel buffers directly and apply custom image processing using a custom CIImageProcessorKernelMBS subclass.

In all cases, you obtain another CIImageMBS object representing the result of your adjustments. Return that image from your frameProcessor block. (See the frameProcessor description for example code.)
(Read only property)

138.29.8 renderScale as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The scale factor of the frame image relative to the Live Photo's photo content.
Notes:

Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo's video content and to process the Live Photo's still photo content. Video frames can be a different size than still photo content—use this value to scale any of your image processing parameters that depend on the image's size.
(Read only property)

138.29.9 time as Double

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The time offset, in seconds, of this frame relative to the start of the Live Photo.
Notes:

You can use this value to vary your image processing over time, creating animated effects.
(Read only property)

138.29.10 Type as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The type of image content in this frame.
Notes:

Photos calls your frameProcessor block repeatedly, both to process each frame of the Live Photo's video content and to process the Live Photo's still photo content. Use this property to distinguish photo content from video frames—for example, to add a watermark only to still photo content.
(Read only property)

138.29.11 Constants

138.29.12 TypePhoto = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifiers for the type of frame image to be processed. Used with the type property.
Notes: The image is a still photo.

138.29.13 TypeVideo = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the identifiers for the type of frame image to be processed. Used with the type property.
Notes: The image is a single frame from the Live Photo's video content.

138.30 class PHLivePhotoMBS

138.30.1 class PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A displayable representation of a Live Photo—a picture that includes motion and sound from the moments just before and after its capture.
Notes:

In macOS, you can use this class to display edits in progress for Live Photo content in a photo editing extension.

For guidance on how to integrate Live Photos with your app's user experience, see Live Photos in iOS Human Interface Guidelines.

The PHLivePhotoMBS class serves in much the same role for Live Photos as the NSImageMBS class serves for static images. A NSImageMBS object represents not the data file an image is loaded from, but instead a ready-to-use image that can be displayed in a view—similarly, a PHLivePhotoMBS object represents a Live Photo ready to display with motion and sound using a PHLivePhotoViewMBS object, not an entry in the Photos library or the data resources that constitute a Live Photo. (To work with Live Photos as elements of the Photos library, use the PHAsset class. To work with the data files that constitute a Live Photo, use the PHAssetResourceMBS class.)
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.30.2 Methods

138.30.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.12 or newer.

138.30.4 cancelLivePhotoRequestWithRequestID(requestID as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Cancels an asynchronous request.
Notes:

requestID: The numeric identifier of the request to be canceled.

When you use the requestLivePhotoWithResourceFileURLs method to asynchronously load a Live Photo from resource files, the method returns a numeric identifier for the request. To cancel the request before it completes, provide the identifier when calling the cancelLivePhotoRequestWithRequestID method.

138.30.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.30.6 copy as PHLivePhotoMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

138.30.7 PHLivePhotoInfoCancelledKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes: A Boolean value indicating whether the Live Photo loading request was canceled.

138.30.8 PHLivePhotoInfoErrorKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes: An error that occurred while attempting to load the requested Live Photo.

138.30.9 PHLivePhotoInfoIsDegradedKey as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the keys for the info dictionary in RequestLivePhotoWithResourceFileURLsMBS delegate.
Notes:

A Boolean value indicating whether the result Live Photo is a low-quality substitute for the requested Live Photo.

If true, the result parameter of your resultHandler block contains a still or low-quality Live Photo, and Photos will call your result delegate method again to provide the full motion and sound content of the Live Photo. If false, Photos has provided all possible data and will not call your result handler again.

138.30.10 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously loads a Live Photo from the specified resource files.
Notes:

fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.
contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 138.30.11 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 22616

138.30.11 requestLivePhotoWithResourceFileURLs(fileURLs() as String, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously loads a Live Photo from the specified resource files.
Notes:

fileURLs: An array of Folderitems containing the resource URLs that constitute a Live Photo, as obtained using the PHAssetResource class.
image: A static image to represent the Live Photo before its full content has been loaded and validated.
targetSize: The target size of Live Photo to be returned. Pass zero size to obtain the requested Live Photo at its original size.

contentMode: An option for how to fit the image to the aspect ratio of the requested size. For details, see PHLivePhotoMBS class.
See also:

- 138.30.10 requestLivePhotoWithResourceFileURLs(Files() as FolderItem, placeholderImage as NSImageMBS = nil, targetSize as CGSizeMBS, contentMode as Integer, theDelegate as RequestLivePhotoWithResourceFileURLsMBS, Tag as Variant = nil) as Integer 22616

138.30.12 Properties

138.30.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.30.14 Height as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in pixels, of the Live Photo.
Notes: (Read only property)

138.30.15 Width as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The size, in pixels, of the Live Photo.
Notes: (Read only property)

138.30.16 Constants

138.30.17 ContentModeAspectFill = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for ContentMode property.
Notes: Scales the image so that it completely fills the target size.

138.30.18 ContentModeAspectFit = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for ContentMode property.
Notes: Scales the image so that its larger dimension fits the target size.

138.30.19 ContentModeDefault = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the constants for ContentMode property.
Notes: Fits the image to the requested size using the default option, ContentModeAspectFit.

138.30.20 RequestIDInvalid = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: The value for an invalid request ID.

138.30.21 Delegates

138.30.22 RequestLivePhotoWithResourceFileURLsMBS(LivePhoto as PHLivePhotoMBS, placeholderImage as NSImageMBS, targetSize as CGSizeMBS, contentMode as Integer, tag as variant, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The method called when live photo is loaded.
Notes:

LivePhoto: The requested Live Photo object.
info: A dictionary providing information about the status of the request. See PHLivePhotoMBS class for possible keys and values.

Method may be called twice if there is a low res and high res version.

138.31 class PHLivePhotoRequestOptionsMBS

138.31.1 class PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of Live Photo assets you request from an image manager.
Notes:

A Live Photo is a picture that includes movement and sound from the moments just before and after its capture.
Available in MacOS 10.15 or newer.

138.31.2 Methods

138.31.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.31.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.31.5 copy as PHLivePhotoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the options object.

138.31.6 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

138.31.7 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate which Photos calls periodically while downloading the Live Photo.
Notes: If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.

138.31.8 Properties

138.31.9 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The requested Live Photo quality and delivery priority.
Notes:

Use this property to tell Photos to provide a Live Photo quickly (possibly sacrificing image quality), to provide a high-quality Live Photo (possibly sacrificing speed), or to provide both automatically if needed. See DeliveryMode constants.
(Read and Write property)

138.31.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.31.11 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested Live Photo data from iCloud.
Notes:

If true, and the requested Live Photo data is not stored on the local device, Photos downloads that data from iCloud. To be notified of the download's progress, use the progressHandler property to provide a block that Photos calls periodically while downloading. If false (the default), and the Live Photo data is not on the local device, the PHImageResultIsInCloudKey value in the result handler's info dictionary indicates that the data is not available unless you enable network access.

(Read and Write property)

138.31.12 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate which Photos calls periodically while downloading the Live Photo.
Notes:

If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the PHLivePhotoRequestOptionsMBS property, Photos calls your block periodically to report progress and to allow you to cancel the download.
(Read and Write property)

138.31.13 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the Live Photo to be requested.
Notes:

Use this property to request a version of the Live Photo with or without adjustments. See Version constants.
(Read and Write property)

138.31.14 Constants

138.31.15 DeliveryModeFastFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos provides only a fast-loading image, possibly sacrificing image quality.

138.31.16 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos provides only the highest-quality image available, regardless of how much time it takes to

load.

138.31.17 DeliveryModeOpportunistic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested image data, used by the deliveryMode property.
Notes: Photos automatically provides one or more results in order to balance image quality and responsiveness.

138.31.18 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the version constants.
Notes: Request the most recent version of the image asset (the one that reflects all edits).

138.31.19 VersionOriginal = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the version constants.
Notes: Request the original, highest-fidelity version of the image asset.

138.31.20 VersionUnadjusted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the version constants.
Notes: Request a version of the image asset without adjustments.

138.31.21 Delegates

138.31.22 ProgressHandlerMBS(progress as double, error as NSErrorMBS, byref stop as boolean, info as Dictionary, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls periodically while downloading the Live Photo..
Notes:

If you request a Live Photo whose data is not on the local device, and you have enabled downloading with the progressHandler property in PHLivePhotoRequestOptionsMBS class, Photos calls your block periodically to report progress and to allow you to cancel the download.

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates that the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the image, or nil if no errors have occurred.
stop: A Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the image request. See Image Result Info Keys for possible keys and values. For example, a true value for the key PHImageResultIsDegradedKey indicates that Photos may send the full-quality version of the image later, depending on the value of the image request's deliveryMode property.

If this method is dispatched asynchronously to the main thread, the stop property doesn't work.

138.32 class PHObjectChangeDetailsMBS

138.32.1 class PHObjectChangeDetailsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A description of changes that occurred in an asset or collection object.
Notes:

A PHObjectChangeDetailsMBS object provides detailed information about differences between two states of an asset or collection object—one that you previously obtained and an updated state that would result if you fetched that entity again. You observe changes via events in PHPhotoLibraryMBS object. When Photos notifies your observer of a change, you get change details by passing the object you're interested in to the changeDetailsForObject method.

For an asset collection or collection list, a PHObjectChangeDetailsMBS object describe changes only to the collection's properties. If you are instead interested in changes to the collection's membership, fetch the collection's contents and use the changeDetailsForFetchResult: method to track changes to the fetch result.

Needs macOS 10.13 or newer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.32.2 Methods

138.32.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.32.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.32.5 Properties

138.32.6 assetContentChanged as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the asset's photo or video content has changed.
Notes:

If this value true, you can use the PHImageManagerMBS class to retrieve updated content.
This value is false if the asset has not changed or if the change details do not refer to a PHAssetMBS object.
(Read only property)

138.32.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.32.8 objectAfterChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that reflects the current state of the asset or collection it represents.
Notes:

Read this object's properties to retrieve updated metadata for the asset or collection. Using this object is equivalent to repeating the same fetch that returned the original object.
(Read only property)

138.32.9 objectBeforeChanges as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: An object that reflects the original state of the asset or collection it represents.
Notes:

This property's value is the same object you passed to the changeDetailsForObject to request change details.
(Read only property)

138.32.10 objectWasDeleted as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that indicates whether the object has been deleted from the Photos library.
Notes:

If this value is true, the asset or collection has been permanently deleted from the Photos library.

To instead track the removal of assets from collections (or collections from collection lists), fetch the collection's contents and use the changeDetailsForFetchResult method to track changes to the fetch result.
(Read only property)

138.33 class PHObjectMBS

138.33.1 class PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The abstract superclass for Photos model objects (assets and collections).
Notes:

You do not create or use instances of this class directly. Instead, work with instances of its concrete subclasses — PHAssetMBS, PHAssetCollectionMBS, PHCollectionListMBS, and PHObjectPlaceholderMBS.

Because the PHObjectMBS class implements the isEqual and hash methods in terms of its localIdentifier property, you can use techniques that depend on these methods to keep track of asset and collection objects. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.33.2 Methods

138.33.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.33.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.33.5 copy as PHObjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the object.

138.33.6 Properties

138.33.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.33.8 localIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A unique string that persistently identifies the object.
Notes:

Use this string to find the object by using the fetchAssetsWithLocalIdentifiers, fetchAssetCollectionsWithLocalIdentifiers, or fetchCollectionListsWithLocalIdentifiers method.
(Read only property)

138.34 class PHObjectPlaceholderMBS

138.34.1 class PHObjectPlaceholderMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A read-only proxy representing a Photos asset or collection object yet to be created by a change request.
Notes:

You obtain object placeholders when you use change requests to create assets, collections, or collection lists. After the change request completes, you can use the object placeholder to fetch the newly created object. You can also use an object placeholder to make additional change requests involving the object to be created. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

138.34.2 Methods

138.34.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.34.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

138.34.5 Properties

138.34.6 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.35 class PHPhotoLibraryMBS

138.35.1 class PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A shared object that manages access and changes to the user's shared photo library.
Notes:

The shared PHPhotoLibraryMBS object represents the entire set of assets and collections managed by the Photos app, including both assets stored on the local device and (if enabled) those stored in iCloud Photos. You use this object for the following tasks:

- Getting or verifying the user's permission for your app to access Photos content.
- Making changes to assets and collections; for example, editing asset metadata or content, inserting new assets, or rearranging the members of a collection.
- Registering for update messages sent when changes are made to the library.

Requires MacOS 10.13 or newer.

138.35.2 Blog Entries

- Show Live Photos in your Xojo application

138.35.3 Videos

- XDC 2020 MBS Plugins Presentation

138.35.4 Blog Entries

- Show Live Photos in your Xojo application

138.35.5 Videos

- XDC 2020 MBS Plugins Presentation

138.35.6 Methods

138.35.7 authorizationStatus as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Returns information about your app's authorization to access the user's photo library.
Notes:

Returns the current authorization status.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization.

Important
Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Tip
Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

If this method returns PHAuthorizationStatusNotDetermined, you can call the requestAuthorization method to prompt the user for photo library access permission.

138.35.8 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.35.9 cloudIdentifiersForLocalIdentifiers(localIdentifiers() as String) as PHCloudIdentifierMBS()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Queries cloud identifiers for local identifiers.

138.35.10 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.35.11 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

138.35.12 localIdentifiersForCloudIdentifiers(cloudIdentifiers() as PHCloudIdentifierMBS) as String()

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Queries local identifiers for cloud identifiers.

138.35.13 performChanges(ChangeBlock as ChangeBlockMBS, CompletionHandler as ChangeCompletionHandlerMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Asynchronously runs a block that requests changes to be performed in the photo library.
Notes: We call back to main thread for delegates, so please keep main thread available.

138.35.14 PHLocalIdentifierNotFound as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: One of the error constants.
Notes: The local identifier was not found.

138.35.15 PHPhotosErrorDomain as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The error domain for Photos errors.

138.35.16 requestAuthorization(CompletionHandler as RequestAuthorizationCompletedMBS, tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Requests the user's permission, if needed, to access the photo library.
Notes:

CompletionHandler: Photos calls this delegate upon determining your app's authorization to access the photo library.

Accessing the photo library always requires explicit permission from the user. The first time your app uses PHAssetMBS, PHCollectionMBS, PHAssetCollectionMBS, or PHCollectionListMBS methods to fetch content from the library, or uses one of the methods listed in Applying Changes to the Photo Library to request changes to library content, Photos automatically and asynchronously prompts the user to request authorization. Alternatively, you can call this method to prompt the user at a time of your choosing.

Important:
Your app's Info.plist file must provide a value for the NSPhotoLibraryUsageDescription key that explains to the user why your app is requesting Photos access. Apps linked on or after iOS 10 will crash if this key is not present.

After the user grants permission, the system remembers the choice for future use in your app, but the user can change this choice at any time using the Settings app. If the user has denied your app photo library access, not yet responded to the permission prompt, or cannot grant access due to restrictions, any attempts to fetch photo library content will return empty PHFetchResultMBS objects, and any attempts to perform changes to the photo library will fail.

Use the DidChange event to observe photo library changes before fetching content. After the user grants access to the photo library for your app, Photos sends change messages for any empty fetch results you retrieved beforehand, notifying you that library content for those fetches is now available.

This method always returns immediately. If the user has previously granted or denied photo library access permission, it executes the delegate when called; otherwise, it displays an alert and executes the block only after the user has responded to the alert.

138.35.17 sharedPhotoLibrary as PHPhotoLibraryMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Retrieves the shared photo library object.
Notes: The singleton photo library object.

138.35.18 Properties

138.35.19 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.35.20 unavailabilityReason as NSErrorMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The error object to give reason for unavailability.
Notes: (Read only property)

138.35.21 Events

138.35.22 DidBecomeUnavailable

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function: The Photos library did become unavailable.

138.35.23 DidChange(changes as PHChangeMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: .

Function:

Tells you that a set of changes has occurred in the Photos library.
Required.
Notes:

change: An object representing the changes.

Use the provided PHChangeMBS object to find out which, if any, of the albums or collections you're interested in have changed and get detailed change information. Call the change object's changeDetailsForObject method to get information about changes to an asset's contents or metadata properties or about a collection's metadata properties. Call the change object's changeDetailsForFetchResult to get information about changes to a collection's list of members (or to any other fetch result).

138.35.24 Constants

138.35.25 PHAuthorizationStatusAuthorized = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: The user has explicitly granted your app access to the photo library.

138.35.26 PHAuthorizationStatusDenied = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: The user has explicitly denied your app access to the photo library.

138.35.27 PHAuthorizationStatusNotDetermined = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: Explicit user permission is required for photo library access, but the user has not yet granted or denied such permission.

138.35.28 PHAuthorizationStatusRestricted = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the status constants.
Notes: Your app is not authorized to access the photo library, and the user cannot grant such permission.

138.35.29 PHPhotosErrorInvalid = -1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Invalid error?

138.35.30 PHPhotosErrorLibraryVolumeOffline = 3114

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Library volume offline.

138.35.31 PHPhotosErrorRelinquishingLibraryBundleToWriter = 3142

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Relinquishing library bundle to writer

138.35.32 PHPhotosErrorSwitchingSystemPhotoLibrary = 3143

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: Failed to switch system photo library.

138.35.33 PHPhotosErrorUserCancelled = 3072

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the error constants.
Notes: The user cancelled.

138.35.34 Delegates

138.35.35 ChangeBlockMBS(tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that requests changes to be performed.
Notes: This delegate takes no parameters and has no return value.

138.35.36 ChangeCompletionHandlerMBS(success as boolean, error as NSErrorMBS, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A delegate that Photos calls after the change block completes and Photos performs the requested changes.
Notes:

success: True if Photos successfully applied the changes requested in the block; otherwise, false.
error: If an error occurs, an NSError object describing the error; otherwise, nil.

138.36 class PHProjectChangeRequestMBS

138.36.1 class PHProjectChangeRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A request to change asset data in a Photos project extension.
Notes:

Make a project change request to alter a project's title or metadata. Respond to project change requests by updating your user interface as assets are added, modified, or removed.

Available in macOS 10.13 or newer.
Subclass of the PHChangeRequestMBS class.

138.36.2 Methods

138.36.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.36.4 Constructor(project as PHProjectMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Creates a change request around the specified project.
Notes: project: The project being changed in the request.

138.36.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The destructor.

138.36.6 removeAssets(assets() as PHAssetMBS)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Removes the specified assets from the project.
Notes: assets: A collection of PHAssets to be removed from the project.

138.36.7 Properties

138.36.8 keyAsset as PHAssetMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Sets the key asset representing the project.
Notes:

Setting a key asset has been deprecated in macOS 10.14. Use ProjectPreviewImage to provide a rendered preview image instead of designating a key asset.
(Read and Write property)

138.36.9 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Compressed project-specific data to use in the change request.
Notes:

The total size of stored data is limited to 1 MB; attempting to store more data will result in an error. Don't include rasterized images that can be locally cached. Limit stored data to compressed project-specific data.
(Read and Write property)

138.36.10 projectPreviewImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The project preview in Photos.
Notes:

When setting, please pass a rendered project preview with dimensions of 1024 x 1024.

PhotoKit requires that you set a project preview in the following situations:

- Whenever the project changes in a way that requires a new preview.
- During or after execution of the beginProjectWithExtensionContext protocol method.
- During or after execution of the resumeProjectWithExtensionContext protocol method.

(Read and Write property)

138.36.11 title as String

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The title of the change request.
Notes: (Read and Write property)

138.37 class PHProjectMBS

138.37.1 class PHProjectMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A representation of a Photos app project extension.
Notes:

This class represents the project when extended from macOS Photos. Projects can have the following types:

- Book
- Calendar
- Card
- Prints
- Slideshow
- Wall decor

Users create projects by selecting one or more assets, right-clicking the selection, and grouping the assets, much like an album collection. Your app treats the project as a separate entity, represented as a PHProject. Subclass of the PHAssetCollectionMBS class.

138.37.2 Methods

138.37.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.13 or newer.

138.37.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: The constructor.

138.37.5 Properties

138.37.6 hasProjectPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: A property that indicates whether a project preview was previously set.
Notes:

To set the preview, use ProjectPreviewImage property.
(Read only property)

138.37.7 projectExtensionData as Memoryblock

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop only.

Function: Data associated with the project extension.
Notes: (Read only property)

138.38 class PHVideoRequestOptionsMBS

138.38.1 class PHVideoRequestOptionsMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A set of options affecting the delivery of video asset data that you request from an image manager.
Notes: Available on MacOS 10.15 or newer.

138.38.2 Methods

138.38.3 available as boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether class is available.
Notes: Should return true on MacOS 10.15 or newer.

138.38.4 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.

138.38.5 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

138.38.6 SetProgressHandler(ProgressHandler as ProgressHandlerMBS, tag as variant = nil)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the delegate that Photos calls periodically while downloading the video.
Notes: If you request a video whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.

138.38.7 Properties

138.38.8 DeliveryMode as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A mode specifying the requested video quality and delivery priority.
Notes:

Use this property to tell Photos to provide a video quickly (possibly sacrificing image quality) or to provide a high-quality video (possibly sacrificing speed). This option applies only when requesting the current version of the video (that is, only when the version property is VersionCurrent).
The default option is DeliveryModeAutomatic. See DeliveryMode.
(Read and Write property)

138.38.9 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read and Write property)

138.38.10 NetworkAccessAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that specifies whether Photos can download the requested video from iCloud.
Notes:

If true, and the requested video is not stored on the local device, Photos downloads the video from iCloud. To be notified of the download's progress, use the progressHandler property to provide a delegate that Photos calls periodically while downloading the video. If false (the default), and the video is not on the local device, the PHImageResultIsInCloudKey value in the result handler's info dictionary indicates that the video is not available unless you enable network access.
(Read and Write property)

138.38.11 ProgressHandler as ProgressHandlerMBS

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls periodically while downloading the video.
Notes:

If you request a video whose data is not on the local device, and you have enabled downloading with the

networkAccessAllowed property, Photos calls your delegate periodically to report progress and to allow you to cancel the download.
(Read and Write property)

138.38.12 Version as Integer

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The version of the video to request.
Notes:

If a video asset has been edited, use this property to request a video with or without adjustments.
The default option is VersionCurrent. See Version constants.
(Read and Write property)

138.38.13 Constants

138.38.14 DeliveryModeAutomatic = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos automatically determines which quality of video data to provide based on the request and current conditions.

138.38.15 DeliveryModeFastFormat = 3

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos provides whatever quality of video can be most quickly loaded.

138.38.16 DeliveryModeHighQualityFormat = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos provides only the highest quality video available.

138.38.17 DeliveryModeMediumQualityFormat = 2

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for delivering requested video data, used by the deliveryMode property.
Notes: Photos provides a video of moderate quality unless a higher quality version is locally cached.

138.38.18 VersionCurrent = 0

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for requesting a video asset with or without adjustments, used by the version property.
Notes:

Request the most recent version of the video asset, reflecting all edits.
The resulting video is the rendered output from all previously made adjustments.

138.38.19 VersionOriginal = 1

MBS Mac64bit Plugin, Plugin Version: 20.2.

Function: One of the option constants for requesting a video asset with or without adjustments, used by the version property.
Notes:

Request a version of the video asset without adjustments.
The resulting video is the originally captured or imported version of the asset, regardless of any edits that have been made.

138.38.20 Delegates

138.38.21 ProgressHandlerMBS(progress as double, tag as Variant, error as NSErrorMBS, byref stop as Boolean, info as Dictionary)

MBS Mac64bit Plugin, Plugin Version: 20.2, Platform: macOS, Targets: Desktop & iOS.

Function: The delegate that Photos calls while downloading asset data from iCloud.
Notes:

If you request a video asset whose data is not on the local device, and you have enabled downloading with the networkAccessAllowed property, Photos calls your block periodically to report progress and allow canceling

the download.

The method takes the following parameters:

progress: A floating-point value indicating the progress of the download. A value of 0.0 indicates the download has just started, and a value of 1.0 indicates the download is complete.
error: An NSErrorMBS object describing an error that occurred when attempting to download the video, or nil if no errors have occurred.
stop: A pointer to a Boolean value. To cancel the download, set stop to true inside the method.
info: A dictionary providing additional information about the status of the video request. See Image Result Info Keys for possible keys and values.

If the event is dispatched asynchronously to main thread, the stop property will not work.

Chapter 139

PHP

139.1 class PHPMBS

139.1.1 class PHPMBS

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for the PHP library.
Notes:

For Linux and Mac OS X the PHP library is included in the plugin.
Plugin version 15.3 is built for PHP 5.6.12.

- 13.6, page 10: News

139.1.6 Methods

139.1.7 CallbackArgumentCount as Integer

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of arguments to the callback event.
Notes: Returns 0 on any error.

139.1.8 CallbackArgumentDouble(index as Integer) as Double

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the parameter with the given index to double and returns it.
Notes: Returns 0 on any error.

139.1.9 CallbackArgumentInteger(index as Integer) as Integer

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the parameter with the given index to integer and returns it.
Notes: Returns 0 on any error.

139.1.10 CallbackArgumentString(index as Integer) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Converts the parameter with the given index to string and returns it.
Notes: Returns an empty string on any error.

139.1.11 Constructor

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes the PHP engine.
Example:

```
const path="php.dll"
call PHPMBS.LoadLibrary(path) // load the dll
dim p as new PHPMBS // initialize

if p.inited then // worked?
msgbox "ok"
end if
```

Notes: In older plugins this work was done by the method Init.

139.1.12 Execute(code as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs php code.
Example:

```
dim p as PHPMBS

p=new PHPMBS
MsgBox p.Execute("echo ""Hello"";")
```

Notes: Same as run, but does not call the write event, but return the whole output as one big string.

139.1.13 existsVariable(name as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Checks whether variable exists or not.
Notes: getVariable returns "" for variables which don't exist, but your variable may just be an empty string so this function lets you know whether the variable actually exists.

139.1.14 getVariable(name as string) as string

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns value of the variable with the given name.
Notes: Returns an empty string if the variable name is wrong.

139.1.15 LoadExtension(Path as string) as boolean

MBS Tools Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads an extension.
Notes:

Returns true on success.
Will write errors to stderr which you see in console apps.

139.1.16 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the PHP shared library.
Notes:

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 139.1.17 LoadLibrary(path as string) as boolean 22652

139.1.17 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the PHP shared library.
Notes:

Loads a Windows DLL, a Linux shared library, a Mac OS X shared library from the given path.
Returns true on success and false on any error.
It may be possible that your PHP library is not compatible with this way of loading which results in crashes.
See also:

- 139.1.16 LoadLibrary(file as folderitem) as boolean 22652

139.1.18 Run(code as string) as boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Runs PHP code.
Example:

```
dim php as PHPMBS // your php object

if php.run("echo 1+2;") then
// ok
else
// failed
end if
```

Notes:

Returns true on success.
Returns false on any compilation error or the library is not loaded/available.

You need to wrap your code into exception handlers as the plugin will ignore all exceptions and if you want to find errors, you need to catch them yourself.

139.1.19 setVariable(name as string, value as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the variable with the given name to the given value.

139.1.20 Properties

139.1.21 Inited as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the PHP library has been initialized.
Notes:

Returns true on success.
(Read only property)

139.1.22 LastErrorFile as String

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error file name.
Notes: (Read and Write property)

139.1.23 LastErrorLine as Integer

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error line.
Notes: (Read and Write property)

139.1.24 LastErrorMessage as String

MBS Tools Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last error message.
Notes: (Read and Write property)

139.1.25 LastExitStatus as Integer

MBS Tools Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The last exit status.
Notes: (Read and Write property)

139.1.26 Loaded as Boolean

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the PHP library has been loaded.
Notes:

Returns true on success.
(Read only property)

139.1.27 UseUTF8 as Boolean

MBS Tools Plugin, Plugin Version: 17.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to use UTF-8 text encoding.
Notes:

By default we use ISO Latin1 encoding.
But you can ask for passing UTF-8 to/from PHP.

If enabled and a text is passed back from PHP which is not valid UTF-8, we still returned it marked as Latin1.
(Read and Write property)

139.1.28 INI as String

MBS Tools Plugin, Plugin Version: 16.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The PHP Ini to use.
Notes:

Must be called before initialization.

Default is:
html_errors=0
register_argc_argv=1
implicit_flush=1
output_buffering=0
max_execution_time=0
max_input_time=-1
(Read and Write computed property)

139.1.29 Events

139.1.30 Callback(ArgumentCount as Integer) as Variant

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called when you call the php function callXojo()
Notes:

Return a variant with double, float, string or integer value.
Parameters are available using CallbackArgument* functions.

139.1.31 LogMessage(message as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

Function: A message for the log file.
Notes: Normally written by apache to the log files.

139.1.32 Write(data as string)

MBS Tools Plugin, Plugin Version: 12.4, Platforms: macOS, Linux, Windows, Targets: .

Function: PHP wants to write some data.
Notes:

This text is normally the result, e.g. the content of the website the php code produces.

If php.ini file is used, you need to disable the output_buffering option to have this callback working.

Chapter 140

Pictures Import and Export

140.1 Globals

140.1.1 BitRotateMBS(Degree as Integer, InputData as Ptr, OutputData as Ptr, Width as Integer, Height as Integer, InputRowBytes as Integer = -1, OutputRowBytes as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 18.4, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Rotates 1bit image in memory.
Notes:

Degree can be -360, -270, -180, -90, 0, 90, 180 or 270 to rotate counter clockwise.
InputData points to an 1bit image with given width and height. InputRowBytes if defined tells how many bytes per row are used in the input image. If <= 0, we calculate it. OutputRowBytes defines row bytes for output image, which is different for 90/270 rotation.
Returns true on success or false on failure.
The function is optimized for 180 degree to be quicker if image size is multiply of 8.
For 90 and 270 degree, there is an optimization if width and height are a multiply of 8.

140.1.2 Blog Entries

- 16.6, page 11: News

140.1.4 BMPStringtoPictureMBS(data as string) as picture

MBS Picture Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a BMP picture from a string.
Example:

```
dim p as Picture = LogoMBS(500)
dim s as string = p.BMPDataMBS
dim q as Picture = BMPStringtoPictureMBS(s)
window1.Backdrop = q
```

Notes:

This function is endian safe and supports 1, 4, 8, 16, 24, 32 bit BMP images.
For 32bit images the alpha value is ignored.
Returns nil on any error.
Only uncompressed BMP files are supported.

140.1.5 Blog Entries

- MBS Real Studio Plugins, version 12.5pr13
- MBS REALbasic Plugins, version 10.6pr9

140.1.6 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.1, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Splits a one bit CMYK file into different files.
Notes:

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on

what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

Errorcodes:

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

See also:

- 140.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer 22659

140.1.7 Split1BitFileMBS(f as folderitem, fc as folderitem, fm as folderitem, fy as folderitem, fk as folderitem, width as Integer, height as Integer, CallbackTarget as object, CacheSizeRead as Integer, CacheSizeWrite as Integer, ReadLines as Integer, WriteLines as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.3, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Splits a one bit CMYK file into different files.
Notes:

Source file has 1 bit for each channel.
Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

CallbackTarget can be nil or must be an object with a method with the following declaration: "Progress(RowIndex as Integer, RowCount as Integer)"

ReadLines and WriteLines define how many rows to read in one I/O operation.

Errorcodes:

1	not used
2	Failed to open f
3	Failed to open fc
4	Failed to open fm
5	Failed to open fy
6	Failed to open fk
7	Width<1
8	Height<1
9	Allocating read buffer failed
10	Allocating write buffer failed for c
11	Allocating write buffer failed for m
12	Allocating write buffer failed for y
13	Allocating write buffer failed for k
14	Read failed
15	Write failed for c
16	Write failed for m
17	Write failed for y
18	Write failed for k

140.2 class PNGOptimizerMBS

140.2.1 class PNGOptimizerMBS

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: This class is a wrapper for the OptiPNG command line tool.
Example:

```
dim p as Picture = LogoMBS(500)

dim fi as FolderItem = SpecialFolder.Desktop.Child("test unoptimized.png")
if not fi.SaveAsPNGMBS(p,0) then
MsgBox "Failed to save PNG file."
Return
end if

dim fo as FolderItem = SpecialFolder.Desktop.Child("test optimized.png")
fo.Delete // delete if existed before

dim o as new PNGOptimizerMBS

o.YieldTicks=10 // give time for other threads
o.InputFile=fi
o.OutputFile=fo

if o.Optimize then
MsgBox "OK: Saved "+str(o.BytesSaved)
fo.Launch
else
MsgBox "failed"
end if
```

Notes:

OptiPNG: Advanced PNG optimization program.
http://optipng.sourceforge.net/

Copyright (C) 2001-2008 Cosmin Truta.
OptiPNG is open-source software, and is distributed under the same licensing and warranty terms as libpng.

PNG optimization is described in detail in the PNG-Tech article "A guide to PNG optimization"
http://www.cs.toronto.edu/
textasciitilde cosmin/pngtech/optipng.html

The idea of running multiple compression trials with different PNG filters and zlib parameters is inspired from the pngcrush program by Glenn Randers-Pehrson.
The idea of performing lossless image reductions is inspired from the pngrewrite program by Jason Summers.

140.2.2 Blog Entries

- MBS Xojo Plugins, version 18.3pr3
- MBS REALbasic Plugins, version 10.4pr3

140.2.3 Blog Entries

- MBS Xojo Plugins, version 18.3pr3
- MBS REALbasic Plugins, version 10.4pr3

140.2.4 Methods

140.2.5 Optimize as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The main optimization function.
Notes: Returns true on success and false on failure.

140.2.6 Properties

140.2.7 BytesSaved as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: After the optimization this property shows how many bytes were saved.
Notes: (Read and Write property)

140.2.8 Debug as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enables debug output.
Notes: (Read and Write property)

140.2.9 Fix as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enable error recovery.
Notes: (Read and Write property)

140.2.10 Force as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Enforce writing of a new output file.
Notes:

If the input image has a digital signature, the library will not optimize the file unless force=true.
(Read and Write property)

140.2.11 full as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to produce a full report on IDAT (might reduce speed).
Notes: (Read and Write property)

140.2.12 InputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The file to process.
Notes: (Read and Write property)

140.2.13 interlace as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace type (0-1).
Notes:

Set by default to -1 for undefined.
(Read and Write property)

140.2.14 KeepBackup as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to keep a backup of the modified files.
Notes:

If the file exists and KeepBackup=false an error is reported. If you set KeepBackup=True the old file is renamed.
(Read and Write property)

140.2.15 NoBitDepthReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not do a bit depth reduction.
Notes:

Reducing the bit depth of the image data can reduce the file size.
(Read and Write property)

140.2.16 NoColorTypeReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not do a color type reduction.
Notes:

If your PNG file has only 256 colors in use, the optimizer can use a color palette to save space.
(Read and Write property)

140.2.17 NoIDATRecompression as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not recompress the image data.
Notes: (Read and Write property)

140.2.18 NoPaletteReduction as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to not reduce the palette.
Notes:

If not all colors are used, the palette can be reduced in its size.
(Read and Write property)

140.2.19 OptimizationLevel as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The optimization level.
Notes:

A value between 0 and 7.
Default is 2.
(Read and Write property)

140.2.20 OutputFile as FolderItem

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: The output file.
Notes: (Read and Write property)

140.2.21 Overwrite as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Overwrite existing files.
Notes: (Read and Write property)

140.2.22 Preserve as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to preserve file attributes if possible.
Notes: (Read and Write property)

140.2.23 Quiet as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run in quiet mode.
Notes: (Read and Write property)

140.2.24 simulate as Boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the optimization runs only in simulation mode.
Notes:

No file is written in simulation mode.
(Read and Write property)

140.2.25 Snip as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cut one image out of multi-image or animation files.
Notes: (Read and Write property)

140.2.26 StripAll as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Strip metadata objects .
Notes: (Read and Write property)

140.2.27 Verbose as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Run in verbose mode / show copyright and version info.
Notes: (Read and Write property)

140.2.28 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim p as new PNGOptimizerMBS
p.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

140.2.29 Events

140.2.30 Log(message as string)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event to output a message to the log file.
Notes: You may want to show that to your advantaged users.

140.2.31 Panic(message as string)

MBS Images Plugin, Plugin Version: 10.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Called if something really bad happend and the app needs to quit.

140.2.32 Progress(index as Integer, count as Integer)

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: The event called for reporting ongoing process in the trials.
Notes: The library will try several PNG settings and report progress so you can update a progress bar.

140.2.33 ProgressBegin

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called before the library starts to optimize.
Notes: You may want to show a progress dialog here.

140.2.34 ProgressEnd

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called after the library finished.
Notes: You may want to hide your progress dialog here.

Chapter 141

PNG

141.1 Globals

141.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes:

If the picture has no mask, no alpha channel is written to the file.
Returns "" on any error.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 141.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22670

- 141.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22670

- 141.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22671

141.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a palette based RGB picture as a PNG file.
Notes:

If the picture has no mask, no alpha channel is written to the file.
Colors must be an array with 256 values defining the palette.

Returns true on success and false on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 141.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22669
- 141.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22670
- 141.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22671

141.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes:

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma
See also:

- 141.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22669
- 141.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22670
- 141.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22671

141.1.4 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Saves a picture to a PNG string.
Notes:

Returns "" on any error.

It uses the mask passed. If nil, no alpha channel is written to the file.
The mask from the picture is ignored.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

If Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

141.1.5 Blog Entries

- Inside REAL Studio Web Edition

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

See also:

- 141.1.1 PictureToPNGStringMBS(pic as picture, gamma as single = 0.0) as string 22669
- 141.1.2 PictureToPNGStringMBS(pic as picture, gamma as single, Interlace as Boolean, FilterType as Integer) as string 22670
- 141.1.3 PictureToPNGStringMBS(pic as picture, mask as picture, gamma as single = 0.0) as string 22670

141.1.6 PNGStringToPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads PNG data from a string variable.
Notes:

If the picture has an alpah channel the returned picture will have a mask.

Returns picture on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

141.1.7 Blog Entries

- MBS Xojo Plugins, version 18.4pr1

141.1.8 PNGStringToPNGPictureMBS(data as string, gamma as single = 0.0, AllowDamaged as boolean = false) as PNGPictureMBS

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads PNG data from a string variable.
Notes:

Returns PNGPictureMBS object on success and nil on failure.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

AllowDamaged: Whether to allow damaged PNG files to return a part of the image as picture.

141.2 class PNGpictureMBS

141.2.1 class PNGpictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a PNG picture.
Notes: Based on LibPNG.

141.2.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr11
- MBS Real Studio Plugins, version 12.5pr8
- MBS Real Studio Plugins, version 11.3pr1

141.2.3 Blog Entries

141.2.4 Methods

141.2.5 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 4.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new picture which is created using the picture and it's mask.
Example:

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

141.2.6 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.
Notes: Please ask if you need a newer version.

141.2.7 Properties

141.2.8 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: (Read and Write property)

141.2.9 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes:

May be nil.
(Read and Write property)

141.2.10 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture data of the picture.
Notes:

If this image is all black, you may use a different gamma setting.
(Read and Write property)

141.2.11 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: (Read and Write property)

141.2.12 Constants

141.2.13 kDefaultGamma = 0

MBS Images Plugin, Plugin Version: 11.3.

Function: The default gamma constant.
Notes: Pass this value to get the default gamma.

141.2.14 kDefaultNoGamma = -1

MBS Images Plugin, Plugin Version: 20.3.

Function: The no gamma constant.
Notes: Pass this value to not do any gamma correction.

141.3 class PNGReaderMBS

141.3.1 class PNGReaderMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for reading PNG files.
Example:

```
dim Current as PictureMBS // global
dim f as FolderItem

f=GetopenFolderItem(FileTypes.Png)

if f<>Nil then
Current=nil

dim p as new PNGReaderMBS

if p.OpenFile(f) then
if p.ApplyOptions(0) then

Current=new PictureMBS(p.Width,p.Height,PictureMBS.ImageFormatRGB)

dim i,c as Integer

c=p.Height-1
for i=0 to c
Current.RowInFormat(i, PictureMBS.ImageFormatRGBA)=p.ReadRow
next

end if
end if
end if
```

Notes:

Use this class to read PNG files row by row as memoryblock.

Based on LibPNG.

141.3.6 Methods

141.3.7 ApplyOptions(gamma as double = 0.0, ScreenGamma as double = -1.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Applies various options.
Notes:

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Added ScreenGamma parameter in plugin version 15.2. If you set both gamma and Screengamma to a value >0.0, the plugin will use those gamma values. If both are equal, no gamma correction is made.

16-bit images are always reduced to 8-bit images.

Returns true on success and false on failure. Calls ReadHeader method if needed.

141.3.8 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines the pict and the mask property to a picture with mask.

141.3.9 Open(file as folderitem, data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens either the data string or the file.
Notes: Returns true on success.

141.3.10 OpenData(data as string) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a PNG file from the data string.
Notes: Returns true on success.

141.3.11 OpenFile(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file.
Example:

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")

If p.OpenFile(f) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 141.3.12 OpenFile(Path as String) as boolean 22679

141.3.12 OpenFile(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a file.
Example:

```
Dim p As New PNGReaderMBS
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = f.NativePath

If p.OpenFile(path) Then
If p.ApplyOptions Then
If p.ReadPicture Then
window1.Backdrop = p.Pict
End If
end if
End If
```

Notes: Returns true on success.
See also:

- 141.3.11 OpenFile(file as folderitem) as boolean 22679

141.3.13 OpenSpecialData(data as string) as boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Same as OpenData but with special handling of the png data.
Example:

```
dim f as FolderItem = getfolderitem("mbs.png")
dim b as BinaryStream = f.OpenAsBinaryFile(false) // BinaryStream.Open(f) in newer RB versions
dim s as string = b.Read(B.Length)

dim p as new PNGReaderMBS
if p.OpenSpecialData(s) then
if p.ApplyOptions(0) then
if p.ReadPicture then
Backdrop = p.Pict
Title = "OK"
else
Title = "Failed to read picture."
end if
else
Title = "Failed to apply options."
end if
else
Title = "Failed to open picture."
end if
```

Deprecated: This item is deprecated and should no longer be used. **Notes:**

This function can be used to read PNG files made for the Apple iPhone. The PNG is converted from the Apple format to the normal PNG format and passed to OpenData. In the SourceData property you can get the modified PNG data. Still this modified PNG data has the channels swapped, so you should read the image with the pict property.

On Mac OS X 10.8, the NSImage class also reads iOS optimized PNG files.

Deprecated as it does not read all files and we can't fix this old code. Please use a command line tool to convert instead.

141.3.14 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.

141.3.15 ReadEXIF(byref exif as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the EXIF data block.
Notes: Returns true on success or false on failure.

141.3.16 ReadHeader as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads header of PNG.
Notes:

This reads header and fill properties Width, Height, ColorType, OriginalColorType, InterlaceType and BitDepth.
Returns true on success and false on failure.

141.3.17 ReadICCProfile(byref name as string, byref compression as Integer, byref profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the ICC Profile from the PNG file.
Notes:

Name is the profile name, compression the method used to compress the profile data and profile a string with the content of the profile as binary data.
Returns true on success.

141.3.18 ReadPicture as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the picture into the pict and mask properties.
Notes: Returns true on success.

141.3.19 ReadRow as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row as a memoryblock.
Example:

```
dim fSource as FolderItem = SpecialFolder.Desktop.Child("test.png") // some png with alpha
dim oPNGInput as new PNGReaderMBS

If oPNGInput.OpenFile(fSource) Then
If oPNGInput.ApplyOptions(0) Then

dim imgSource as New PictureMBS(oPNGInput.Width, oPNGInput.Height, PictureMBS.ImageFormatRGBA)

' Read row by row the file and puts it in a PictureMBS instance

dim nMax as Integer = oPNGInput.Height - 1
For nInd as Integer = 0 To nMax
imgSource.RowInFormat(nInd, PictureMBS.ImageFormatRGBA, true) = oPNGInput.ReadRow()
Next

' show only alpha/mask channel
Backdrop=imgSource.AlphaChannel.CopyPicture

' show Picture without mask
Backdrop=imgSource.CopyPicture

' show picture with mask
Backdrop=imgSource.CopyPictureWithMask

End If
End If
```

Notes:

Returns nil on any error.
Format is RGBA as in the example with 4 bytes per pixel.
See also:

- 141.3.20 ReadRow(mem as memoryblock) as boolean

141.3.20 ReadRow(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 11.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is RGBA as in the example with 4 bytes per pixel.
Make sure the memoryblock is big enough. Else you risk a crash.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.
See also:

- 141.3.19 ReadRow as memoryblock 22682

141.3.21 ReadRowAlphaOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is alpha channel as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.
The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.

ReadRow with reusing memoryblock is faster than allocating a new one for each row.

141.3.22 ReadRowMaskOnly(mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 14.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next row into the given memoryblock.
Notes:

Returns false on any error and true on success.
Format is mask (inverse alpha) as in the example with one byte per pixel.
Make sure the memoryblock has size from RowBytes property. Else you risk a crash.

The data in memoryblock is width bytes long, 1/4 of the size of the memoryblock.

See also PNGReaderMBS.RowBytes.
ReadRow with reusing memoryblock is faster than allocating a new one for each row.

141.3.23 ReadsRGBTag(byref file_srgb_intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the sRGB tag.
Notes: Returns true if the value was read into the given variable.

141.3.24 RowBytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The length of each row in bytes.

141.3.25 Properties

141.3.26 AllowDamaged as Boolean

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to return picture for files with damaged content.
Notes:

e.g. a half downloaded PNG file can still be processed and may give you a preview for the file.
(Read and Write property)

141.3.27 BitDepth as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bit depth of the PNG file.
Notes:

The original value from file headers, not updated by ApplyOptions, even if we convert e.g. 1 bit to gray for you.
(Read and Write property)

141.3.28 ChunkCacheMax as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum cache size for caching chunks.
Notes:

The PNG specification sets no limit on the number of ancillary chunks allowed in a PNG datastream. By default, libpng imposes a limit of a total of 1000 sPLT, tEXt, iTXt, zTXt, and unknown chunks to be stored. You can change the limit on the total number of such hunks that will be stored, with this property, where & h7fffffff means unlimited.
(Read and Write property)

141.3.29 ChunkMallocMax as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum allocation size for one chunk.
Example:

```
dim png as new PNGReaderMBS
png.chunkMallocMax=32 * 1024 * 1024
```

Notes:

Libpng imposes a limit of 8 Megabytes (8,000,000 bytes) on the amount of memory that a compressed chunk other than IDAT can occupy, when decompressed.
You can query or change this limit with with this property.
Any chunks that would cause either of these limits to be exceeded will be ignored.
(Read and Write property)

141.3.30 ColorType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color type of the PNG file.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

141.3.31 CompressionBufferSize as UInt64

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The zlib compression buffer size.
Notes:

You can change the zlib compression buffer size to be used while reading compressed data with this property where the default size is 8192 bytes. Note that the buffer size is changed immediately and the buffer is reallocated immediately, instead of setting a flag to be acted upon later.
(Read and Write property)

141.3.32 ExpandGrayToRGB as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether grayscale images are expanded to RGB.
Notes:

Set before ApplyOptions if you need this option.
Default is true.

Shall set transformations such that the grayscale image is converted to 24-bit RGB.

see png_set_gray_to_rgb function in libpng documentation.
(Read and Write property)

141.3.33 HasTransparency as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether a transparency block is included for palette images (tRNS).
Notes:

Set by ReadHeader or ApplyOptions.
(Read only property)

141.3.34 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture in pixels.
Notes: (Read and Write property)

141.3.35 InterlaceType as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The interlace setting.
Notes: (Read and Write property)

141.3.36 Interlacing as Integer

MBS Images Plugin, Plugin Version: 9.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the png file is interlaced.
Notes:

Value is 1 if not interlaced and 7 if interlaced.
(Read and Write property)

141.3.37 InvertAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether alpha values should be inverted.
Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_invert_alpha function in libpng documentation.
(Read and Write property)

141.3.38 Mask as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes: (Read and Write property)

141.3.39 OriginalColorType as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The original color type of the PNG file.
Notes:

The value is a combination of this constants:

```
PNG_COLOR_MASK_PALETTE   = 1
PNG_COLOR_MASK_COLOR     = 2
PNG_COLOR_MASK_ALPHA     = 4
```

The PNG library will convert on reading every row into 32bit RGBA, so don't worry about this.

The OriginalColorType property is the color type of the file. ColorType property reports what ApplyOptions changed it to, so you know what ReadRow will put in the MemoryBlock.
(Read and Write property)

141.3.40 Pict as Picture

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture read.
Notes: (Read and Write property)

141.3.41 RGBToGray as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to convert RGB to grayscale.
Example:

```
dim png as PNGReaderMBS
```

```
// ask for gray only
png.RGBToGray = True

// avoid extra filler bytes for missing alpha channel
png.UseFiller = false
```

Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_rgb_to_gray function in libpng documentation.
(Read and Write property)

141.3.42 RGBToGrayErrorAction as Integer

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Error handling option for Reduce RGB to grayscale.
Notes:

Can be 1 for none, 2 for warn or 3 for error.
Default is 1.
(Read and Write property)

141.3.43 RGBToGrayGreen as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green coefficient to use for RGB to Gray conversion.
Notes:

Default is -1 for default coefficients.
(Read and Write property)

141.3.44 RGBToGrayRed as Double

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The green coefficient to use for RGB to Gray conversion.
Notes:

Default is -1 for default coefficients.
(Read and Write property)

141.3.45 SourceData as String

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source data used in Open functions.
Example:

```
dim p as PNGReaderMBS // your reader

// write data to file
dim fo as FolderItem = SpecialFolder.Desktop.Child("mbsout.png")
dim bo as BinaryStream = fo.CreateBinaryFile("") // BinaryStream.Create(fo,true) in newer RB Versions

bo.Write p.SourceData
```

Notes:

If you used OpenSpecialData, the data here is the PNG without the Apple modifications, but still with swapped colors.
This property is set by the OpenSpecialData, Open and OpenData functions.
(Read and Write property)

141.3.46 SourceFile as FolderItem

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The folderitem passed to the Open functions.
Notes:

This property is set by the Open and OpenFile functions.
(Read and Write property)

141.3.47 SourcePath as String

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The source file path.
Notes: (Read and Write property)

141.3.48 StripAlpha as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to strip alpha.
Notes:

Set before ApplyOptions if you need this option.
Default is false.

see png_set_strip_alpha function in libpng documentation.
(Read and Write property)

141.3.49 SwapRB as Boolean

MBS Images Plugin, Plugin Version: 10.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether to swap red and blue channels.
Example:

```
dim p as new PNGReaderMBS
p.SwapRB = true
```

Notes:

The PNG files for the iPhone have swapped channels so the iPhone does not need to swap them for display.
One of the tricks Apple uses for making the iPhone faster.
This flag is set to true by OpenSpecialData.
(Read and Write property)

141.3.50 UseFiller as Boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether filler byte is used for RGB.
Notes:

Set by ApplyOptions if needed.
Defines whether RGB is extended to 4 bytes with an extra filler byte if needed.

see png_set_filler function in libpng documentation.
(Read and Write property)

141.3.51 UserHeightMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height maximum.
Notes:

The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

141.3.52 UserWidthMaximum as UInt32

MBS Images Plugin, Plugin Version: 20.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width maximum.
Notes:

The PNG specification allows the width and height of an image to be as large as 2^31-1 (0x7fffffff), or about 2.147 billion rows and columns.
For safety, libpng imposes a default limit of 1 million rows and columns.
Larger images will be rejected immediately with a png_error() call. If you wish to change these limits, you can use this property to set your own limits (libpng may reject some very wide images anyway because of potential buffer overflow conditions).
(Read and Write property)

141.3.53 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture in pixels.
Notes: (Read and Write property)

141.3.54 Events

141.3.55 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has an error message for you.

Notes: Processing will stop soon.

141.3.56 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has a warning for you.

141.4 class PNGWriterMBS

141.4.1 class PNGWriterMBS

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class to write a PNG file.
Example:

```
dim Current as PictureMBS // your picture
dim f as FolderItem

f=GetsaveFolderItem(FileTypes.Png,"test.png")

if f<>Nil then
const PNG_COLOR_MASK_PALETTE = 1
const PNG_COLOR_MASK_COLOR = 2
const PNG_COLOR_MASK_ALPHA = 4

dim p as new PNGWriterMBS

p.Width=Current.Width
p.Height=Current.Height
p.Type=PNG_COLOR_MASK_COLOR
p.bpc=3
p.Rowbytes=p.Width*p.bpc

if p.OpenWriteDestination(f) then
if p.SetHeader(false, -1) then
if p.SetGamma(0) then
if p.WriteInfo then
dim i,c as Integer

c=p.Height-1
for i=0 to c
p.WriteRow current.RowInFormat(i, Current.ImageFormatRGB)
next

if p.WriteEnd then
MsgBox "OK"
end if
end if
end if
end if
end if
end if
```

Notes:

You can use this class to write PNG files by row.

Based on LibPNG.

141.4.6 Methods

141.4.7 CloseDestination

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the file.

141.4.8 Finish as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes the PNG file and returns the PNG file content as string.
Notes: Returns "" on any error.

141.4.9 OpenWriteDestination(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the file to write.
Example:

```
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(f) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass nil for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 141.4.10 OpenWriteDestination(Path as String) as boolean 22696

141.4.10 OpenWriteDestination(Path as String) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens the file to write.
Example:

```
Dim file As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim path As String = file.NativePath

Dim p As New PNGWriterMBS
Dim pic As Picture = LogoMBS(500)

If p.OpenWriteDestination(path) Then
If p.SetRGBPicture(pic) Then
If p.SetHeader(False, -1) Then
If p.SetGamma(0) Then
If p.WriteInfo Then
If p.WriteRows Then
If p.WriteEnd Then
MsgBox "OK"
End If
End If
End If
End If
End If
End If
End If
```

Notes: If you pass "" for the file, the data is collected in memory and you can get it on the end using the Finish method.
See also:

- 141.4.9 OpenWriteDestination(file as folderitem) as boolean 22696

141.4.11 PNGLibVersion as string

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the PNG library compiled into the plugin.

141.4.12 SetAlphaData(alphas() as Integer, colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the alpha data and the color palette.
Notes:

The array can have up to 256 colors.

The color and the alpha arrays must have the same size.
Returns true on success.

141.4.13 SetAlphas as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the alpha data to the file.
Notes:

You must call SetAlphaData before.
Returns true on success.

141.4.14 SetEXIF(EXIFData as string) as boolean

MBS Images Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the EXIF data block.
Notes: Returns true on success or false on failure.

141.4.15 SetGamma(gamma as Double = 0.0) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the gamma value and other options for the PNG file.
Notes:

Returns on success.

The gamma parameter defines what gamma correction is applied:
positive value: use the value as the gamma correction
zero: use default value (or value saved in file itself)
negative value: do not correct gamma

Default for Mac is 1.8 and for Windows 2.2.
If you use SRGB, the Gamma must be 2.2.

141.4.16 SetGrayPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers for writing a Grayscale image file.
Notes:

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

141.4.17 SetHeader(Interlace as boolean = false, Filter as Integer = -1, Compression as Integer = -1) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Defines the header options for the PNG file.
Notes:

Interlace is true the Adam7 interlacing is used.
FilterType specifies the filter:

```
const PNG_NO_FILTERS      = 0
const PNG_FILTER_NONE     = 8
const PNG_FILTER_SUB      = 16
const PNG_FILTER_UP       = 32
const PNG_FILTER_AVG      = 64
const PNG_FILTER_PAETH    = 128
const PNG_FILTER_ALL      = 248
```

Compression can be between 0 (none) to 9 (max). Default is 6. Value -1 means the plugin will not change from default of PNG library. Normally you have no better compression for setting higher than 6, but only burn more CPU power.

141.4.18 SetICCProfile(name as string, CompressionType as Integer, Profile as string) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a ICC Profile to the PNG.
Notes:

Name is the profile name as an ASCII string.
CompressionType is always 0 (PNG_COMPRESSION_TYPE_BASE).

141.4.19 SetPalette as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the palette data.
Notes: Returns true on success.

141.4.20 SetPaletteData(colors() as color) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color palette.
Notes:

The array can have up to 256 colors.
Returns true on success.

141.4.21 SetPalettePicture(pict as picture) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers.
Notes:

You need to define the color palette before calling this method.

This method sets width, height, type and bpc properties.
Returns true on success.

141.4.22 SetResolution(ResolutionHorizontal as Integer, ResolutionVertical as Integer, Unit as Integer) as boolean

MBS Images Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the resolution of the PNG.
Notes:

Unit is ResolutionUnknown, ResolutionMeter or ResolutionDPI.
Internally the PNG saves only in dots per meter, so the plugin converts DPI to DPM for you.

141.4.23 SetRGBPicture(pict as picture, mask as picture = nil) as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copies a picture into the internal buffers.
Example:

```
// Write a RGBA PNG file
dim current as Picture = LogoMBS(500)

// create a mask
dim g as Graphics = current.Mask.Graphics
g.ForeColor = & cFFFFFF
g.FillRect 0,0,500,500
g.ForeColor = & c000000
g.FillOval 0,0,500,500

// show in window
window1.Backdrop = current

// and write to file
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current, current.mask) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
end if
end if
end if
end if
end if
end if
```

Notes:

This method sets width, height, type and bpc properties.
Returns true on success.

Mask can be nil.

141.4.24 SetRows(rows() as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 12.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Uses the given memoryblocks for row data.
Notes:

The memory is not copied, so keep the array alive!
This method sets height. You need to set width, bpc, type and rowbytes.
Returns true on success.

141.4.25 SetsRGB(intent as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the sRGB intent.
Notes:

Possible values:

```
const PNG_sRGB_INTENT_PERCEPTUAL   = 0
const PNG_sRGB_INTENT_RELATIVE     = 1
const PNG_sRGB_INTENT_SATURATION   = 2
const PNG_sRGB_INTENT_ABSOLUTE     = 3
```

141.4.26 WriteEnd as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Finishes the writing.
Notes:

Returns true on success.

Do not call if you use WriteRows.

141.4.27 WriteInfo as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the PNG file header.
Notes:

Returns true on success.

Do not call if you use WriteRows.

141.4.28 WriteRow(row as memoryblock)

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes one row of image data.
Notes:

The data must be in the RGBA format with one byte per value.
(4 bytes per Pixel)

Returns true on success.

Do not call if you use WriteRows.

141.4.29 WriteRows as boolean

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the picture from memory to the file.
Example:

```
// Write a RGB PNG file
dim current as Picture = LogoMBS(500)
dim f as FolderItem = SpecialFolder.Desktop.Child("test.png")

dim p as new PNGWriterMBS

if p.OpenWriteDestination(f) then // open file
if p.SetRGBPicture(current) then // set picture to write
if p.SetHeader(false, -1) then // setup file header
if p.SetGamma(0) then // and default gamma
if p.WriteInfo then // write file header
if p.WriteRows then // write pixels
if p.WriteEnd then // and write file end
p = nil // cleanup
f.Launch
end if
```

```
end if
end if
end if
end if
end if
end if
```

Notes: If you call this method, you need to call SetRGBPicture or SetPalettePicture before and you can't call WriteInfo, WriteRow and WriteEnd.

141.4.30 Properties

141.4.31 bpc as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per pixel.
Notes:

Should be 3 for RGB, 1 for palette pictures and 4 for RGB with Alpha.
(Read and Write property)

141.4.32 Height as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture to write.
Notes: (Read and Write property)

141.4.33 Rowbytes as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The bytes per row.
Notes: (Read and Write property)

141.4.34 Type as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The color type.
Notes:

The value is a combination of this constants:

PNG_COLOR_MASK_PALETTE	= 1
PNG_COLOR_MASK_COLOR	= 2
PNG_COLOR_MASK_ALPHA	= 4

(Read and Write property)

141.4.35 Width as Integer

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture to write.
Notes: (Read and Write property)

141.4.36 Events

141.4.37 Error(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has an error message for you.
Notes: Processing will stop soon.

141.4.38 Warning(msg as string)

MBS Images Plugin, Plugin Version: 11.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The PNG library has a warning for you.

141.4.39 Constants

141.4.40 ResolutionDPI = 2

MBS Images Plugin, Plugin Version: 10.1.

Function: One of the resolution unit type constants.
Notes: The unit for points per inch.

141.4.41 ResolutionMeter = 1

MBS Images Plugin, Plugin Version: 10.1.

Function: One of the resolution unit type constants.
Notes: The unit for points per meter.

141.4.42 ResolutionUnknown = 0

MBS Images Plugin, Plugin Version: 10.1.

Function: One of the resolution unit type constants.

141.4.43 TypeGray = 0

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: Gray

141.4.44 TypeGrayA = 4

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: Gray with Alpha

141.4.45 TypePalette = 1

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: Palette

141.4.46 TypeRGB = 2

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: RGB

141.4.47 TypeRGBA = 6

MBS Images Plugin, Plugin Version: 12.5.

Function: One of the type constants.
Notes: RGB with Alpha.

Chapter 142

Power

142.1 class IOPMAssertionMBS

142.1.1 class IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for PowerManagement assertions.
Notes: You use this class to block a Mac from sleeping display, disk or whole machine.

142.1.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

142.1.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr9

142.1.4 Methods

142.1.5 AssertionsByProcess as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a dictionary listing all assertions, grouped by their owning process.
Notes:

Notes: One process may have multiple assertions. Several processes may have asserted the same assertion

to different levels.

On success, this returns a dictionary of assertions per process. At the top level, keys to the Dictionary are pids stored as Integer. The value associated with each pid is an array of active assertions. Each entry in the array is an assertion represented as a Dictionary. See the keys kIOPMAssertionTypeKey and kIOPMAssertionLevelKey.

142.1.6 AssertionsStatus as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns a list of available assertions and their system-wide levels.
Notes:

The system-wide level is the maximum of all individual assertions' levels.

On success, this returns a Dictionary of all assertions currently available.
The keys in the dictionary are the assertion types, and the value of each is a CFNumber that represents the aggregate level for that assertion.

142.1.7 Constructor(type as string, level as Integer, name as string)

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Calls internally CreateWithName function.

142.1.8 CreateWithDescription(AssertionType as string, Name as string, Details as string = "", HumanReadableReason as string = "", LocalizationBundlePath as string = "", Timeout as Double = 0, TimeoutAction as string = "") as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an IOPMAssertion.
Notes:

This is the preferred API to call to create an assertion. It allows the caller to specify the Name, Details, and HumanReadableReason at creation time. There are other keys that can further describe an assertion, but most developers don't need to use them. Use SetProperty or CreateWithProperties if you need to specify properties that aren't available here.

AssertionType: An assertion type constant. Caller must specify this argument.
Name: A String value to correspond to key kIOPMAssertionNameKey. Caller must specify this argument.
Details: A String value to correspond to key kIOPMAssertionDetailsKey. Caller my pass "", but it helps power users and administrators identify the reasons for this assertion.
HumanReadableReason: A String value to correspond to key kIOPMAssertionHumanReadableReasonKey. Caller may pass "", but if it's specified OS X may display it to users to describe the active assertions on their system.
LocalizationBundlePath: A String value to correspond to key kIOPMAssertionLocalizationBundlePathKey. This bundle path should include a localization for the string HumanReadableReason. Caller may pass "", but this argument is required if caller specifies HumanReadableReason.
Timeout: Specifies a timeout for this assertion. Pass 0 for no timeout.
TimeoutAction: Specifies a timeout action. Caller my pass "". If a timeout is specified but a TimeoutAction is not, the default timeout action is kIOPMAssertionTimeoutActionTurnOff.

On success this function returns a new assertion.

142.1.9 CreateWithHandle(Handle as Integer) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a new object with retaining given handle.

142.1.10 CreateWithName(type as string, level as Integer, name as string) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Dynamically requests a system behavior from the power management system.
Notes:

Create is deprecated in favor of CreateWithProperties. Please use that version of this API instead.

No special privileges are necessary to make this call - any process may activate a power assertion. Caller must specify an AssertionName - "" is not a valid input.

Type	The String assertion type to request from the PM system.
Level	Pass kIOPMAssertionLevelOn or kIOPMAssertionLevelOff.
Name	A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.

On success, returns an IOPMAssertionMBS object.

142.1.11 CreateWithProperties(AssertionProperties as Dictionary) as IOPMAssertionMBS

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates an IOPMAssertion with more flexibility than CreateWithDescription.
Notes:

AssertionProperties: Dictionary providing the properties of the assertion that need to be created.
On successful return, returns the assertion.

Create a new PM assertion - the caller must specify the type of assertion, initial level, and its properties as IOPMAssertionDictionaryKeys keys in the AssertionProperties dictionary. The following keys are recommend and/or required to be specified in the AssertionProperties dictionary argument.

- Required kIOPMAssertionTypeKey define the assertion type.
- Required kIOPMAssertionValueKey define an inital value.
- Required kIOPMAssertionNameKey Caller must describe the name for the activity that requires the change in behavior provided by the assertion.
- Optional kIOPMAssertionDetailsKey Caller may describe context-specific data about the assertion.
- Optional kIOPMAssertionHumanReadableReasonKey Caller may describe the reason for creating the assertion in a localizable String. This should be a human readable phrase that describes the actions the calling process is taking while the assertion is held, like "Downloading TV episodes", or "Compiling Projects"
- Optional kIOPMAssertionLocalizationBundlePathKey Caller may provide its bundle's path, where OS X can localize for GUI display the String specified by kIOPMAssertionHumanReadableReasonKey.
- Optional kIOPMAssertionPlugInIDKey if the caller is a plugin with a different identity than the process it's loaded in.
- Optional kIOPMAssertionFrameworkIDKey if the caller is a framework acting on behalf of a process.
- Optional The caller may specify a timeout.

142.1.12 DeclareUserActivity(AssertionName as string, userType as Integer, byref AssertionID as Integer) as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Declares that the user is active on the system.
Notes:

This causes the display to power on and postpone display sleep up to the user's display sleep Energy Saver settings. If you prefer to hold the display awake for a longer period and you know how long you'd like to hold it, consider taking assertion kIOPMAssertionTypePreventUserIdleDisplaySleep using CreateWithDescription instead.

No special privileges are necessary to make this call - any process may call this API. Caller must specify an AssertionName.

AssertionName: A string that describes the name of the caller and the activity being handled by this assertion (e.g. "Mail Compacting Mailboxes"). Name may be no longer than 128 characters.
userType: This parameter specifies if the active user is located locally in front of the system or connected to the system over the network. Various components of the system are maintained at different power levels depending on user location.

On Success, unique id will be returned in this parameter. Caller may call this function again with the unique id retured previously to report continous user activity. The unique id returned by this function may change on each call depending on how frequently this function call is repeated and the current display sleep timer value. If you make this call more than once, track the returned value for assertionID, and pass it in as an argument on each call.

Returns kIOReturnSuccess (0) on success, any other return indicates PM could not successfully activate the specified assertion.

142.1.13 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Copies details about an IOPMAssertion.
Notes: Returns a dictionary describing an IOPMAssertion's specifications and current state.

142.1.14 SetProperty(key as string, value as Variant) as boolean

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sets a property in the assertion.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
```

```
if a.SetProperty(IOPMAssertionMBS.kIOPMAssertionNameKey, "test") then
MsgBox a.name
end if
```

Notes:

Only the process that created an assertion may change its properties.
key: The string key to modify.
Value: The property to set. It must be a number or string, as specified by the property key named in key.
Returns false on any error and true on success.

142.1.15 Properties

142.1.16 Details as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The details for this assertion.
Notes:

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

142.1.17 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle to the assertion.
Notes:

Zero is not a valid ID.
(Read only property)

142.1.18 HumanReadableReason as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Optional valie that provides a localizable string for OS X to display PM Assertions in the GUI.
Notes:

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.
(Read and Write property)

142.1.19 Level as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The assertion level.
Notes: (Read and Write property)

142.1.20 LocalizationBundlePath as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Refers to a string, identifying the path to the caller's bundle, which contains localization info.
Notes: (Read and Write property)

142.1.21 Name as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The name of the assertion.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

Notes:

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)
(Read and Write property)

142.1.22 RetainCount as Integer

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The retain count of the object.
Notes: (Read only property)

142.1.23 Timeout as Double

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies an outer bound, in seconds, that this assertion should be asserted.
Notes:

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.
(Read and Write property)

142.1.24 TimeoutAction as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Specifies the action to take upon timeout expiration.
Notes:

Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey.
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff.
(Read and Write property)

142.1.25 Type as String

MBS MacOSX Plugin, Plugin Version: 13.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The assertion type.
Notes:

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.
(Read and Write property)

142.1.26 Constants

142.1.27 kIOPMAssertionDetailsKey = "Details"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

You may provide extra, contextual information about an assertion for admins and for debugging in this key. Setting this key in an assertion dictionary is optional.

Please name your assertion something unique with kIOPMAssertionNameKey first.
If you have more data to describe this assertion, put it here as a String.

Example: OS X creates an assertion named com.apple.powermanagement.tty to prevent sleep for remote-logged in users. To identify the cause for these assertions, OS X sets kIOPMAssertionDetailsKey to the String device path of the active remote session(s), e.g. "/dev/ttys000" or "/dev/ttys004"

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Optional kIOPMAssertionNameKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

142.1.28 kIOPMAssertionFrameworkIDKey = "FrameworkBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.

142.1.29 kIOPMAssertionHumanReadableReasonKey = "HumanReadableReason"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

Optional key that provides a localizable string for OS X to display PM Assertions in the GUI.

The caller should specify this string in CreateWithProperties.
If present, OS X may display this string, localized to the user's language, to explain changes in system behavior caused by the assertion.

If set, the caller must also specify a bundle path for the key kIOPMAssertionLocalizationBundlePathKey.
The bundle at that path should contain localization info for the specified string.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

Describe your assertion as thoroughly as possible. See these other keys that can you can set to add explanation to an assertion:

- Required kIOPMAssertionNameKey
- Optional kIOPMAssertionDetailsKey

142.1.30 kIOPMAssertionLevelKey = "AssertLevel"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

The Dictionary key for assertion level in an assertion info dictionary.

The value for this key will be an integer with value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn. The level reflects the assertion's level set at creation, or adjusted via IOPMAssertionSetLevel.

142.1.31 kIOPMAssertionLevelOff = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Level for a disabled assertion, passed as an argument to Create.

142.1.32 kIOPMAssertionLevelOn = 255

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: Level for an enabled assertion, passed as an argument to Create.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
MsgBox a.Name
```

142.1.33 kIOPMAssertionLocalizationBundlePathKey = "BundlePath"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes: Refers to a string, identifying the path to the caller's bundle, which contains localization info.

142.1.34 kIOPMAssertionNameKey = "AssertName"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionNameKey)
MsgBox v
```

Notes:

The Dictionary key for assertion name. Setting this key is required when you're creating an assertion.

kIOPMAssertionNameKey describes the the activity the assertion is protecting. The creator should specify a String value for this key in the dictionary passed to CreateWithProperties.

The assertion name is separate from the assertion type's behavior - specify a String like "Checking mail" or "Compiling" that describes the task that this assertion protects.

The String you associate with this key does not have to be localizable (OS X will not attempt to localize it.)

Describe your assertion as thoroughly as possible. See these other keys that can you can also set to add explanation to an assertion:

- Optional kIOPMAssertionDetailsKey
- Optional kIOPMAssertionHumanReadableReasonKey
- Optional kIOPMAssertionLocalizationBundlePathKey

142.1.35 kIOPMAssertionPlugInIDKey = "PlugInBundleID"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.

142.1.36 kIOPMAssertionRetainCountKey = "RetainCount"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes: The retain count of the object.

142.1.37 kIOPMAssertionTimeoutActionKey = "TimeoutAction"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

Specifies the action to take upon timeout expiration.
Specifying the timeout action only has meaning if you also specify an kIOPMAssertionTimeoutKey
If the caller does not specify a timeout action, the default action is kIOPMAssertionTimeoutActionTurnOff

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

142.1.38 kIOPMAssertionTimeoutActionLog = "TimeoutActionLog"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When this timeout action is specified, PM will log the timeout event but will not turn off or affect the setting of the assertion in any way.

142.1.39 kIOPMAssertionTimeoutActionRelease = "TimeoutActionRelease"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When a timeout expires with this action, Power Management will log the timeout event, and will release the assertion.

142.1.40 kIOPMAssertionTimeoutActionTurnOff = "TimeoutActionTurnOff"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the values for kIOPMAssertionTimeoutActionKey.
Notes: When a timeout expires with this action, Power Management will log the timeout event, and will set the assertion's level to kIOPMAssertionLevelOff.

142.1.41 kIOPMAssertionTimeoutKey = "TimeoutSeconds"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Notes:

Specifies an outer bound, in seconds, that this assertion should be asserted.

If your application hangs, or is unable to complete its assertion task in a reasonable amount of time, specifying a timeout allows PM to disable your assertion so the system can resume normal activity.
Once a timeout with the kIOPMAssertionTimeoutActionTurnOff assertion fires, the level will be set to kIOPMAssertionTimeoutActionTurnOff. The assertion may be re-armed by calling IOPMAssertionSetLevel.

This key may be specified in the dictionary passed to CreateWithProperties.
This key may be present in the dictionary returned from Properties.

142.1.42 kIOPMAssertionTypeKey = "AssertType"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the keys for the properties dictionary.
Example:

```
dim t as string = IOPMAssertionMBS.kIOPMAssertionTypePreventUserIdleDisplaySleep
dim l as Integer = IOPMAssertionMBS.kIOPMAssertionLevelOn
dim a as IOPMAssertionMBS = IOPMAssertionMBS.CreateWithName(t, l, "Working")
dim d as Dictionary = a.Properties
dim v as String = d.Value(IOPMAssertionMBS.kIOPMAssertionTypeKey)
MsgBox v
```

Notes:

The dictionary key for assertion type in an assertion info dictionary.

The value for this key will be a CFStringRef, with the value of the assertion type specified at creation time. Note that OS X may substitute a support assertion type string if the caller specifies a deprecated assertion type; in that case the value for this key could differ from the caller-provided assertion type.

142.1.43 kIOPMAssertionTypePreventSystemSleep = "PreventSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevents the system from sleeping and allows the system to reside in Dark Wake for an arbitrary length of time.

When asserted and set to level kIOPMAssertionLevelOn, the system will prefer to enter the Dark Wake state, or remain in Dark Wake if already there, rather than go to sleep.

Assertions are just suggestions to the OS, and the OS can only honor them to the best of its ability. In the case of low power or a thermal emergency, the system may sleep anyway despite the assertion.

An assertion must publish the AssertionType in its assertion properties dictionary.
The AssertionType should be a key in the properties dictionary, with a value of a CFNumber containing the kCFNumberIntegerType value kIOPMAssertionLevelOff or kIOPMAssertionLevelOn.

142.1.44 kIOPMAssertionTypePreventUserIdleDisplaySleep = "PreventUserIdleDisplaySleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevents the display from dimming automatically.

When asserted and set to level kIOPMAssertionLevelOn, will prevent the display from turning off due to a period of idle user activity. Note that the display may still sleep from other reasons, like a user closing a portable's lid or the machine sleeping. If the display is already off, this assertion does not light up the display. If display needs to be turned on, then consider calling function IOPMAssertionDeclareUserActivity.
While the display is prevented from dimming, the system cannot go into idle sleep.
This assertion has no effect if the system is in Dark Wake.

142.1.45 kIOPMAssertionTypePreventUserIdleSystemSleep = "PreventUserIdleSystemSleep"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevents the system from sleeping automatically due to a lack of user activity.
When asserted and set to level kIOPMAssertionLevelOn, will prevent the system from sleeping due to a period of idle user activity.

The display may dim and idle sleep while kIOPMAssertionTypePreventUserIdleSystemSleep is enabled, but the system may not idle sleep. The system may still sleep for lid close, Apple menu, low battery, or other sleep reasons.

This assertion has no effect if the system is in Dark Wake.

142.1.46 kIOPMAssertPreventDiskIdle = "PreventDiskIdle"

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the assertion types.
Notes:

Prevent attached disks from idling into lower power states.

When asserted and set to level kIOPMAssertionLevelOn, will prevent attached disks and optical media from idling into lower power states.
Apps who rely on real-time access to disks should create this assertion to avoid latencies caused by disks changing power states. For example, audio and video performance or recording apps may benefit from this assertion. Most Apps should not take this assertion; preventing disk idle consumes battery life, and most apps don't require the low latency disk access that this provides.
This assertion doesn't increase a disk's power state (it just prevents that device from idling). After creating this assertion, the caller should perform disk I/O on the necessary drives to ensure that they're in a usable power state.
The system may still sleep while this assertion is active. Callers should also take kIOPMAssertionTypePreventUserIdleSystemSleep if necessary, to prevent idle system sleep.

142.1.47 kIOPMUserActiveLocal = 0

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the user activity constants.
Notes: User is local on the system

142.1.48 kIOPMUserActiveRemote = 1

MBS MacOSX Plugin, Plugin Version: 13.2.

Function: One of the user activity constants.
Notes: Remote User connected to the system.

142.2 class IOPMMBS

142.2.1 class IOPMMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The Mac OS X class which can control the energy settings.
Example:

```
dim p as new IOPMMBS

Listbox1.AddRow "EthernetWakeOnLANSettings: "+str(p.EthernetWakeOnLANSettings)
Listbox1.AddRow "GeneralAggressiveness: "+str(p.GeneralAggressiveness)
Listbox1.AddRow "MinutesToDim: "+str(p.MinutesToDim)
Listbox1.AddRow "MinutesToSleep: "+str(p.MinutesToSleep)
Listbox1.AddRow "MinutesToSpinDown: "+str(p.MinutesToSpinDown)
Listbox1.AddRow "MotionSensor: "+str(p.MotionSensor)
Listbox1.AddRow "PowerSource: "+str(p.PowerSource)
Listbox1.AddRow "SetProcessorSpeed: "+str(p.SetProcessorSpeed)
```

Notes: The functions and properties are not described from Apple.

142.2.2 Properties

142.2.3 Handle as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal reference for the power manager.
Notes:

If this value is zero, the properties will not work.
(Read and Write property)

142.2.4 EthernetWakeOnLANSettings as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The setting for whether ethernet wake on LAN.
Notes:

Value is 1 if you enable this option in the energy system control panel and 0 if you disable it.
(Read and Write computed property)

142.2.5 GeneralAggressiveness as Integer

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop, Console & Web.

Function: The general aggressiveness.
Notes: (Read and Write computed property)

142.2.6 MinutesToDim as Integer
