Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.92 OptionDropProprietaryAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option drop-proprietary-attributes.
Notes:

This option specifies if Tidy should strip out proprietary attributes, such as Microsoft data binding attributes. Additionally attributes that aren't permitted in the output version of HTML will be dropped if used with strict-tags-attributes.
(Read and Write property)

180.5.93 OptionDuplicateAttrs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.94 OptionEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.

Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.95 OptionEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Used internally.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.96 OptionEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new empty inline tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Remember to also declare empty tags as either inline or blocklevel. This option is ignored in XML mode.
(Read and Write property)

180.5.97 OptionEncloseBlockText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option enclose-block-text.
Notes:

This option specifies if Tidy should insert a & lt;p& gt; element to enclose any text it finds in any element that allows mixed content for HTML transitional but not HTML strict.
(Read and Write property)

180.5.98 OptionEncloseBodyText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should enclose any text it finds in the body element within a <P>element.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

180.5.99 OptionEncloseText as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option enclose-text.
Notes:

This option specifies if Tidy should enclose any text it finds in the body element within a & lt;p& gt; element. This is useful when you want to take existing HTML and use it with a style sheet.
(Read and Write property)

180.5.100 OptionErrFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the error file Tidy uses for errors and warnings.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Normally errors and warnings are output to "stderr".
(Read and Write property)

180.5.101 OptionErrorFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option error-file.
Notes:

This option specifies the error file Tidy uses for errors and warnings. Normally errors and warnings are output to stderr.
(Read and Write property)

180.5.102 OptionEscapeCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option escape-cdata.
Notes:

This option specifies if Tidy should convert & lt;! [CDATA [ ]] & gt; sections to normal text.
(Read and Write property)

180.5.103 OptionEscapeScripts as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option escape-scripts.
Notes:

This option causes items that look like closing tags, like & lt;/g to be escaped to & lt;\/g. Set this option to 'no' if you do not want this.
(Read and Write property)

180.5.104 OptionFixBackslash as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-backslash.
Notes:

This option specifies if Tidy should replace backslash characters \in URLs with forward slashes /.
(Read and Write property)

180.5.105 OptionFixBadComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-bad-comments.
Notes:

This option specifies if Tidy should replace unexpected hyphens with = characters when it comes across adjacent hyphens.
The default is yes.
This option is provided for users of Cold Fusion which uses the comment syntax: & lt;!— —& gt;.
(Read and Write property)

180.5.106 OptionFixComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should replace unexpected hyphens with "=" characters when it comes across adjacent hyphens.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is yes. This option is provided for users of Cold Fusion which uses the comment syntax: <!——>
(Read and Write property)

180.5.107 OptionFixUri as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option fix-uri.
Notes:

This option specifies if Tidy should check attribute values that carry URIs for illegal characters and if such are found, escape them as HTML4 recommends.
(Read and Write property)

180.5.108 OptionForceOutput as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option force-output.
Notes:

This option specifies if Tidy should produce output even if errors are encountered.
Use this option with care; if Tidy reports an error, this means Tidy was not able to (or is not sure how to) fix the error, so the resulting output may not reflect your intention.
(Read and Write property)

180.5.109 OptionGdoc as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gdoc.
Notes:

This option specifies if Tidy should enable specific behavior for cleaning up HTML exported from Google Docs.

(Read and Write property)

180.5.110 OptionGnuEmacs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gnu-emacs.
Notes:

This option specifies if Tidy should change the format for reporting errors and warnings to a format that is more easily parsed by GNU Emacs.
(Read and Write property)

180.5.111 OptionGnuEmacsFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option gnu-emacs-file.
Notes:

Used internally.
(Read and Write property)

180.5.112 OptionHideComments as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option hide-comments.
Notes:

This option specifies if Tidy should print out comments.
(Read and Write property)

180.5.113 OptionHideEndtags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option hide-endtags.
Notes:

This option is an alias for omit-optional-tags.
(Read and Write property)

180.5.114 OptionHtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate pretty printed output, writing it as HTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.115 OptionInCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the character encoding Tidy uses for the input.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info.
(Read and Write property)

180.5.116 OptionIndent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent.
Notes:

This option specifies if Tidy should indent block-level tags.
If set to auto Tidy will decide whether or not to indent the content of tags such as & lt;title& gt;, & lt;h1& gt;-& lt;h6& gt;, & lt;li& gt;, & lt;td& gt;, or & lt;p& gt; based on the content including a block-level element.
Setting indent to yes can expose layout bugs in some browsers.
Use the option indent-spaces to control the number of spaces or tabs output per level of indent, and indent-with-tabs to specify whether spaces or tabs are used.
(Read and Write property)

180.5.117 OptionIndentAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-attributes.
Notes:

This option specifies if Tidy should begin each attribute on a new line.
(Read and Write property)

180.5.118 OptionIndentCdata as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-cdata.
Notes:

This option specifies if Tidy should indent & lt;! [CDATA [ ]] & gt; sections.
(Read and Write property)

180.5.119 OptionIndentContent as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.120 OptionIndentSpaces as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-spaces.
Notes:

This option specifies the number of spaces or tabs that Tidy uses to indent content when indent is enabled. Note that the default value for this option is dependent upon the value of indent-with-tabs (see also).
(Read and Write property)

180.5.121 OptionIndentWithTabs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option indent-with-tabs.
Notes:

This option specifies if Tidy should indent with tabs instead of spaces, assuming indent is yes.
Set it to yes to indent using tabs instead of the default spaces.
Use the option indent-spaces to control the number of tabs output per level of indent. Note that when indent-with-tabs is enabled the default value of indent-spaces is reset to 1.
Note tab-size controls converting input tabs to spaces. Set it to zero to retain input tabs.
(Read and Write property)

180.5.122 OptionInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. This option is ignored in XML mode.
(Read and Write property)

180.5.123 OptionInputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option input-encoding.
Notes:

This option specifies the character encoding Tidy uses for the input. See char-encoding for more info.
(Read and Write property)

180.5.124 OptionInputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option input-xml.
Notes:

This option specifies if Tidy should use the XML parser rather than the error correcting HTML parser.
(Read and Write property)

180.5.125 OptionJoinClasses as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option join-classes.
Notes:

This option specifies if Tidy should combine class names to generate a single, new class name if multiple class assignments are detected on an element.
(Read and Write property)

180.5.126 OptionJoinStyles as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option join-styles.
Notes:

This option specifies if Tidy should combine styles to generate a single, new style if multiple style values are detected on an element.
(Read and Write property)

180.5.127 OptionKeepFileTimes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is no. Setting the option to yes allows you to tidy files without causing these files to be uploaded to a web server when using a tool such as SiteCopy. Note this feature is not supported on some platforms.
(Read and Write property)

180.5.128 OptionKeepTime as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option keep-time.
Notes:

This option specifies if Tidy should keep the original modification time of files that Tidy modifies in place. Setting the option to yes allows you to tidy files without changing the file modification date, which may be useful with certain tools that use the modification date for things such as automatic server deployment. Note this feature is not supported on some platforms.
(Read and Write property)

180.5.129 OptionLanguage as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option language.
Notes:

Currently not used, but this option specifies the language Tidy would use if it were properly localized. For example: en.

(Read and Write property)

180.5.130 OptionLiteralAttribs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should ensure that whitespace characters within attribute values are passed through unchanged.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.131 OptionLiteralAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option literal-attributes.
Notes:

This option specifies how Tidy deals with whitespace characters within attribute values.
If the value is no Tidy normalizes attribute values by replacing any newline or tab with a single space, and further by replacing any contiguous whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes and ensure that whitespace within attribute values is passed through unchanged, set this option to yes.
(Read and Write property)

180.5.132 OptionLogicalEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option logical-emphasis.
Notes:

This option specifies if Tidy should replace any occurrence of & lt;i& gt; with & lt;em& gt; and any occurrence of & lt;b& gt; with & lt;strong& gt;. Any attributes are preserved unchanged.
This option can be set independently of the clean option.
(Read and Write property)

180.5.133 OptionLowerLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option lower-literals.
Notes:

This option specifies if Tidy should convert the value of an attribute that takes a list of predefined values to lower case.
This is required for XHTML documents.
(Read and Write property)

180.5.134 OptionMakeBare as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip Microsoft specific HTML from Word 2000 documents, and output spaces rather than non-breaking spaces where they exist in the input.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.135 OptionMakeClean as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should strip out surplus presentational tags and attributes replacing them by style rules and structural markup as appropriate.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

It works well on the HTML saved by Microsoft Office products.
(Read and Write property)

180.5.136 OptionMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy won't add a meta element if one is already present.
(Read and Write property)

180.5.137 OptionMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option markup.
Notes:

This option specifies if Tidy should generate a pretty printed version of the markup. Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

180.5.138 OptionMergeDivs as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-divs.
Notes:

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;div& gt; such as & lt;div& gt;& lt;div& gt;...& lt;/div& gt;& lt;/div& gt;.
If set to auto the attributes of the inner & lt;div& gt; are moved to the outer one. Nested & lt;div& gt; with id attributes are not merged.
If set to yes the attributes of the inner & lt;div& gt; are discarded with the exception of class and style.
(Read and Write property)

180.5.139 OptionMergeEmphasis as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-emphasis.
Notes:

This option specifies if Tidy should merge nested & lt;b& gt; and & lt;i& gt; elements; for example, for the case
& lt;b class="rtop-2"& gt;foo & lt;b class="r2-2"& gt;bar& lt;/b& gt; baz& lt;/b& gt;,
Tidy will output & lt;b class="rtop-2"& gt;foo bar baz& lt;/b& gt;.
(Read and Write property)

180.5.140 OptionMergeSpans as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option merge-spans.
Notes:

This option can be used to modify the behavior of clean when set to yes.
This option specifies if Tidy should merge nested & lt;span& gt; such as & lt;span& gt;& lt;span& gt;...& lt;/span& gt;& lt;/span& gt;.
The algorithm is identical to the one used by merge-divs.

(Read and Write property)

180.5.141 OptionNcr as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option ncr.
Notes:

This option specifies if Tidy should allow numeric character references.
(Read and Write property)

180.5.142 OptionNewBlocklevelTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-blocklevel-tags.
Notes:

This option specifies new block-level tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you can't change the content model for elements such as & lt;table& gt;, & lt;ul& gt;, & lt;ol& gt; and & lt;dl& gt;.
This option is ignored in XML mode.
(Read and Write property)

180.5.143 OptionNewEmptyTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-empty-tags.
Notes:

This option specifies new empty inline tags. This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Remember to also declare empty tags as either inline or blocklevel.
This option is ignored in XML mode.
(Read and Write property)

180.5.144 OptionNewInlineTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-inline-tags.
Notes:

This option specifies new non-empty inline tags. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
This option is ignored in XML mode.
(Read and Write property)

180.5.145 OptionNewline as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option newline.
Notes:

The default is appropriate to the current platform.
Genrally CRLF on PC-DOS, Windows and OS/2; CR on Classic Mac OS; and LF everywhere else (Linux, Mac OS X, and Unix).
(Read and Write property)

180.5.146 OptionNewPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option new-pre-tags.
Notes:

This option specifies new tags that are to be processed in exactly the same way as HTML's & lt;pre& gt; element. This option takes a space or comma separated list of tag names.
Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags.
Note you cannot as yet add new CDATA elements.
This option is ignored in XML mode.
(Read and Write property)

180.5.147 OptionNumEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;, & lt;, & gt; and & quot;) in the numeric rather than the named entity form.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Only entities compatible with the DOCTYPE declaration generated are used. Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

180.5.148 OptionNumericEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option numeric-entities.
Notes:

This option specifies if Tidy should output entities other than the built-in HTML entities (& amp;amp;, & amp;lt;, & amp;gt;, and & amp;quot;) in the numeric rather than the named entity form.
Only entities compatible with the DOCTYPE declaration generated are used.
Entities that can be represented in the output encoding are translated correspondingly.
(Read and Write property)

180.5.149 OptionOmitOptionalTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option omit-optional-tags.
Notes:

This option specifies if Tidy should omit optional start tags and end tags when generating output.
Setting this option causes all tags for the & lt;html& gt;, & lt;head& gt;, and & lt;body& gt; elements to be omitted from output, as well as such end tags as & lt;/p& gt;, & lt;/li& gt;, & lt;/dt& gt;, & lt;/dd& gt;, & lt;/option& gt;, & lt;/tr& gt;, & lt;/td& gt;, and & lt;/th& gt;.
This option is ignored for XML output.
(Read and Write property)

180.5.150 OptionOutCharEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the character encoding Tidy uses for the output.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

See char-encoding for more info. May only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).

(Read and Write property)

180.5.151 OptionOutFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the output file Tidy uses for markup.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Normally markup is written to "stdout".
(Read and Write property)

180.5.152 OptionOutputBom as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-bom.
Notes:

This option specifies if Tidy should write a Unicode Byte Order Mark character (BOM; also known as Zero Width No-Break Space; has value of U+FEFF) to the beginning of the output, and only applies to UTF-8 and UTF-16 output encodings.
If set to auto this option causes Tidy to write a BOM to the output only if a BOM was present at the beginning of the input.
A BOM is always written for XML/XHTML output using UTF-16 output encodings.
(Read and Write property)

180.5.153 OptionOutputEncoding as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-encoding.
Notes:

This option specifies the character encoding Tidy uses for the output.
Note that this may only be different from input-encoding for Latin encodings (ascii, latin0, latin1, mac, win1252, ibm858).
See char-encoding for more information
(Read and Write property)

180.5.154 OptionOutputFile as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-file.
Notes:

This option specifies the output file Tidy uses for markup. Normally markup is written to stdout.
(Read and Write property)

180.5.155 OptionOutputHtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-html.
Notes:

This option specifies if Tidy should generate pretty printed output, writing it as HTML.
(Read and Write property)

180.5.156 OptionOutputXhtml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-xhtml.
Notes:

This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML, and will use the corrected value in output regardless of other sources.
For XHTML, entities can be written as named or numeric entities according to the setting of numeric-entities.
The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

180.5.157 OptionOutputXml as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option output-xml.
Notes:

This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by an XML parser.
The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

180.5.158 OptionPreserveEntities as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option preserve-entities.
Notes:

This option specifies if Tidy should preserve well-formed entities as found in the input.
(Read and Write property)

180.5.159 OptionPreTags as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies new tags that are to be processed in exactly the same way as HTML's <PRE>element.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option takes a space or comma separated list of tag names. Unless you declare new tags, Tidy will refuse to generate a tidied file if the input includes previously unknown tags. Note you can not as yet add new CDATA elements (similar to <SCRIPT>). This option is ignored in XML mode.
(Read and Write property)

180.5.160 OptionPunctuationWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option punctuation-wrap.
Notes:

This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
(Read and Write property)

180.5.161 OptionPunctWrap as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap after some Unicode or Chinese punctuation characters.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.162 OptionQuiet as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quiet.
Notes:

This option specifies if Tidy should output the summary of the numbers of errors and warnings, or the welcome or informational messages.
(Read and Write property)

180.5.163 OptionQuoteAmpersand as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-ampersand.
Notes:

This option specifies if Tidy should output unadorned & amp; characters as & amp;amp;.
(Read and Write property)

180.5.164 OptionQuoteMarks as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-marks.
Notes:

This option specifies if Tidy should output & quot; characters as & amp;quot; as is preferred by some editing environments.
The apostrophe character ' is written out as & amp;# 39; since many web browsers don't yet support & amp;apos;.
(Read and Write property)

180.5.165 OptionQuoteNbsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option quote-nbsp.
Notes:

This option specifies if Tidy should output non-breaking space characters as entities, rather than as the Unicode character value 160 (decimal).
(Read and Write property)

180.5.166 OptionRepeatedAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option repeated-attributes.
Notes:

This option specifies if Tidy should keep the first or last attribute, if an attribute is repeated, e.g. has two align attributes.
(Read and Write property)

180.5.167 OptionReplaceColor as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option replace-color.
Notes:

This option specifies if Tidy should replace numeric values in color attributes with HTML/XHTML color names where defined, e.g. replace # ffffff with white.
(Read and Write property)

180.5.168 OptionShowBodyOnly as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-body-only.
Notes:

This option specifies if Tidy should print only the contents of the body tag as an HTML fragment.
If set to auto, this is performed only if the body tag has been inferred.
Useful for incorporating existing whole pages as a portion of another page.
This option has no effect if XML output is requested.
(Read and Write property)

180.5.169 OptionShowErrors as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-errors.
Notes:

This option specifies the number Tidy uses to determine if further errors should be shown. If set to 0, then no errors are shown.

(Read and Write property)

180.5.170 OptionShowInfo as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-info.
Notes:

This option specifies if Tidy should display info-level messages.
(Read and Write property)

180.5.171 OptionShowMarkup as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate a pretty printed version of the markup.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note that Tidy won't generate a pretty printed version if it finds significant errors (see force-output).
(Read and Write property)

180.5.172 OptionShowWarnings as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option show-warnings.
Notes:

This option specifies if Tidy should suppress warnings. This can be useful when a few errors are hidden in a flurry of warnings.
(Read and Write property)

180.5.173 OptionSkipNested as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option skip-nested.
Notes:

This option specifies that Tidy should skip nested tags when parsing script and style data.
(Read and Write property)

180.5.174 OptionSlideStyle as String

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option slide-style.
Notes:

This option has no function and is deprecated.
(Read and Write property)

180.5.175 OptionSortAttributes as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option sort-attributes.
Notes:

This option specifies that Tidy should sort attributes within an element using the specified sort algorithm. If set to alpha, the algorithm is an ascending alphabetic sort.
(Read and Write property)

180.5.176 OptionSplit as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option split.
Notes:

This option has no function and is deprecated.
(Read and Write property)

180.5.177 OptionStrictTagsAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option strict-tags-attributes.
Notes:

This options ensures that tags and attributes are applicable for the version of HTML that Tidy outputs. When set to yes (the default) and the output document type is a strict doctype, then Tidy will report errors. If the output document type is a loose or transitional doctype, then Tidy will report warnings.
Additionally if drop-proprietary-attributes is enabled, then not applicable attributes will be dropped, too.
When set to no, these checks are not performed.
(Read and Write property)

180.5.178 OptionTabSize as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option tab-size.
Notes:

This option specifies the number of columns that Tidy uses between successive tab stops. It is used to map tabs to spaces when reading the input.
(Read and Write property)

180.5.179 OptionTidyMark as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option tidy-mark.
Notes:

This option specifies if Tidy should add a meta element to the document head to indicate that the document has been tidied.
Tidy won't add a meta element if one is already present.
(Read and Write property)

180.5.180 OptionUppercaseAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option uppercase-attributes.
Notes:

This option specifies if Tidy should output attribute names in upper case.
The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.
(Read and Write property)

180.5.181 OptionUpperCaseAttrs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should output attribute names in upper case.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

The default is no, which results in lower case attribute names, except for XML input, where the original case is preserved.

(Read and Write property)

180.5.182 OptionUppercaseTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option uppercase-tags.
Notes:

This option specifies if Tidy should output tag names in upper case.
The default is no which results in lower case tag names, except for XML input where the original case is preserved.
(Read and Write property)

180.5.183 OptionVerticalSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option vertical-space.
Notes:

This option specifies if Tidy should add some extra empty lines for readability.
The default is no.
If set to auto Tidy will eliminate nearly all newline characters.
(Read and Write property)

180.5.184 OptionVertSpace as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add some empty lines for readability.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.185 OptionWord2000 as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option word-2000.
Notes:

This option specifies if Tidy should go to great pains to strip out all the surplus stuff Microsoft Word 2000 inserts when you save Word documents as ”Web pages”. It doesn’t handle embedded images or VML.

You should consider using Word's "Save As: Web Page, Filtered".
(Read and Write property)

180.5.186 OptionWrap as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap.
Notes:

This option specifies the right margin Tidy uses for line wrapping.
Tidy tries to wrap lines so that they do not exceed this length.
Set wrap to 0(zero) if you want to disable line wrapping.
(Read and Write property)

180.5.187 OptionWrapAsp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-asp.
Notes:

This option specifies if Tidy should line wrap text contained within ASP pseudo elements, which look like: & lt;% ... % & gt;.
(Read and Write property)

180.5.188 OptionWrapAttributes as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-attributes.
Notes:

This option specifies if Tidy should line-wrap attribute values, meaning that if the value of an attribute causes a line to exceed the width specified by wrap, Tidy will add one or more line breaks to the value, causing it to be wrapped into multiple lines.
Note that this option can be set independently of wrap-script-literals. By default Tidy replaces any newline or tab with a single space and replaces any sequences of whitespace with a single space.
To force Tidy to preserve the original, literal values of all attributes, and ensure that whitespace characters within attribute values are passed through unchanged, set literal-attributes to yes.
(Read and Write property)

180.5.189 OptionWrapAttVals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap attribute values, for easier editing.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option can be set independently of wrap-script-literals.
(Read and Write property)

180.5.190 OptionWrapJste as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-jste.
Notes:

This option specifies if Tidy should line wrap text contained within JSTE pseudo elements, which look like: & lt;# ... # & gt;.
(Read and Write property)

180.5.191 OptionWrapLen as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies the right margin Tidy uses for line wrapping.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy tries to wrap lines so that they do not exceed this length. Set wrap to zero if you want to disable line wrapping.
(Read and Write property)

180.5.192 OptionWrapPhp as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-php.
Notes:

This option specifies if Tidy should line wrap text contained within PHP pseudo elements, which look like: & lt;?php ... ?& gt;.
(Read and Write property)

180.5.193 OptionWrapScriptlets as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap string literals that appear in script attributes.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

180.5.194 OptionWrapScriptLiterals as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-script-literals.
Notes:

This option specifies if Tidy should line wrap string literals that appear in script attributes.
Tidy wraps long script string literals by inserting a backslash character before the line break.
(Read and Write property)

180.5.195 OptionWrapSection as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should line wrap text contained within <! [...] >section tags.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.196 OptionWrapSections as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option wrap-sections.
Notes:

This option specifies if Tidy should line wrap text contained within & lt;! [...] & gt; section tags.
(Read and Write property)

180.5.197 OptionWriteBack as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The tidy option write-back.
Notes:

This option specifies if Tidy should write back the tidied markup to the same file it read from.
You are advised to keep copies of important files before tidying them, as on rare occasions the result may not be what you expect.
(Read and Write property)

180.5.198 OptionXhtmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should generate pretty printed output, writing it as extensible HTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This option causes Tidy to set the DOCTYPE and default namespace as appropriate to XHTML. If a DOCTYPE or namespace is given they will checked for consistency with the content of the document. In the case of an inconsistency, the corrected values will appear in the output. For XHTML, entities can be written as named or numeric entities according to the setting of the "numeric-entities" option. The original case of tags and attributes will be preserved, regardless of other options.
(Read and Write property)

180.5.199 OptionXmlDecl as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add the XML declaration when outputting XML or XHTML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Note that if the input already includes an <?xml ... ?>declaration then this option will be ignored. If the encoding for the output is different from "ascii", one of the utf encodings or "raw", the declaration is always added as required by the XML standard.
(Read and Write property)

180.5.200 OptionXmlOut as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should pretty print output, writing it as well-formed XML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

Any entities not defined in XML 1.0 will be written as numeric entities to allow them to be parsed by a XML parser. The original case of tags and attributes will be preserved, regardless of other options.

(Read and Write property)

180.5.201 OptionXmlPIs as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: One of the options.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.202 OptionXmlSpace as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: This option specifies if Tidy should add xml:space="preserve" to elements such as <PRE>, <STYLE>and <SCRIPT>when generating XML.
Deprecated: This item is deprecated and should no longer be used. **Notes:**

This is needed if the whitespace in such elements is to be parsed appropriately without having access to the DTD.
(Read and Write property)

180.5.203 OptionXmlTags as Boolean

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set this option if the input is xml.
Deprecated: This item is deprecated and should no longer be used. **Notes:** (Read and Write property)

180.5.204 Events

180.5.205 Filter(level as Integer, line as Integer, column as Integer, message as string) as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: The filter called for every error and warning.
Notes:

Callback to filter messages by diagnostic level: info, warning, etc. Just set diagnostic output handler to redirect all diagnostics output.

Return false to proceed with output, true to cancel.

180.5.206 PrettyPrintProgress(line as Integer, column as Integer, destLine as Integer)

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: .

Function: Reports progress on the print process.

180.6 module TidyDupAttrModesMBS

180.6.1 module TidyDupAttrModesMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

180.6.2 Constants

180.6.3 TidyKeepFirst=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.6.4 TidyKeepLast=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.7 class TidyInputMBS

180.7.1 class TidyInputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Delivers raw bytes of input.

180.7.2 Events

180.7.3 EndOfFile as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Return true if all your data is processed.
Notes: Return false if more data is available for the GetByte call.

180.7.4 GetByte as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Read one byte and returns it to the tidy library.

180.7.5 UngetByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Returns a byte to the buffer for later processing.

180.8 class TidyIteratorMBS

180.8.1 class TidyIteratorMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An iterator for various uses.

180.8.2 Properties

180.8.3 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy iterator object.
Notes: (Read only property)

180.9 module TidyLineEndingMBS

180.9.1 module TidyLineEndingMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

180.9.2 Constants

180.9.3 TidyCR=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.9.4 TidyCRLF=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.9.5 TidyLF=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.10 class TidyNodeMBS

180.10.1 class TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A node in the document parse tree.

180.10.2 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

180.10.3 Blog Entries

- MBS REALbasic Plugins, version 10.5pr4

180.10.4 Properties

180.10.5 Child as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The child node of this node.
Example:

```
dim t as TidyDocumentMBS // the tidy document
dim n as TidyNodeMBS
dim c as TidyNodeMBS

// iterating over root and its children (for more children you need recursion)
n=t.Root
while n<>nil
MsgBox n.Text

c=n.Child
while c<>nil
MsgBox c.Text
c=c.NextNode
wend

n=n.NextNode
wend
```

Notes: (Read only property)

180.10.6 Column as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position of this node.
Notes: (Read only property)

180.10.7 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this node.
Notes: (Read only property)

180.10.8 FirstAttribute as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first attribute for this node.
Notes: (Read only property)

180.10.9 GetABBR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ABBR attribute for this node.
Notes: (Read only property)

180.10.10 GetALINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ALINK attribute for this node.
Notes: (Read only property)

180.10.11 GetALT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ALT attribute for this node.
Notes: (Read only property)

180.10.12 GetBGCOLOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first BGCOLOR attribute for this node.
Notes: (Read only property)

180.10.13 GetCHECKED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first CHECKED attribute for this node.
Notes: (Read only property)

180.10.14 GetCOLSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first COLSPAN attribute for this node.
Notes: (Read only property)

180.10.15 GetCONTENT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first CONTENT attribute for this node.
Notes: (Read only property)

180.10.16 GetDATAFLD as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first DATAFLD attribute for this node.
Notes: (Read only property)

180.10.17 GetFOR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first FOR attribute for this node.
Notes: (Read only property)

180.10.18 GetHEIGHT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HEIGHT attribute for this node.
Notes: (Read only property)

180.10.19 GetHREF as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HREF attribute for this node.
Notes: (Read only property)

180.10.20 GetHTTP_EQUIV as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first HTTP_EQUIV attribute for this node.
Notes: (Read only property)

180.10.21 GetID as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ID attribute for this node.
Notes: (Read only property)

180.10.22 GetISMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ISMAP attribute for this node.
Notes: (Read only property)

180.10.23 GetLANG as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LANG attribute for this node.
Notes: (Read only property)

180.10.24 GetLANGUAGE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LANGUAGE attribute for this node.
Notes: (Read only property)

180.10.25 GetLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LINK attribute for this node.
Notes: (Read only property)

180.10.26 GetLONGDESC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first LONGDESC attribute for this node.
Notes: (Read only property)

180.10.27 GetNAME as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first NAME attribute for this node.
Notes: (Read only property)

180.10.28 GetOnBLUR as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnBLUR attribute for this node.
Notes: (Read only property)

180.10.29 GetOnCLICK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnCLICK attribute for this node.
Notes: (Read only property)

180.10.30 GetOnFOCUS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnFOCUS attribute for this node.
Notes: (Read only property)

180.10.31 GetOnKEYDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYDOWN attribute for this node.
Notes: (Read only property)

180.10.32 GetOnKEYPRESS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYPRESS attribute for this node.
Notes: (Read only property)

180.10.33 GetOnKEYUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnKEYUP attribute for this node.
Notes: (Read only property)

180.10.34 GetOnMOUSEDOWN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEDOWN attribute for this node.
Notes: (Read only property)

180.10.35 GetOnMOUSEMOVE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEMOVE attribute for this node.
Notes: (Read only property)

180.10.36 GetOnMOUSEOUT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEOUT attribute for this node.
Notes: (Read only property)

180.10.37 GetOnMOUSEOVER as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEOVER attribute for this node.
Notes: (Read only property)

180.10.38 GetOnMOUSEUP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first OnMOUSEUP attribute for this node.
Notes: (Read only property)

180.10.39 GetREL as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first REL attribute for this node.
Notes: (Read only property)

180.10.40 GetROWSPAN as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first ROWSPAN attribute for this node.
Notes: (Read only property)

180.10.41 GetSELECTED as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SELECTED attribute for this node.
Notes: (Read only property)

180.10.42 GetSRC as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SRC attribute for this node.
Notes: (Read only property)

180.10.43 GetSTYLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first STYLE attribute for this node.
Notes: (Read only property)

180.10.44 GetSUMMARY as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first SUMMARY attribute for this node.
Notes: (Read only property)

180.10.45 GetTARGET as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TARGET attribute for this node.
Notes: (Read only property)

180.10.46 GetTEXT as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TEXT attribute for this node.
Notes: (Read only property)

180.10.47 GetTITLE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TITLE attribute for this node.
Notes: (Read only property)

180.10.48 GetTYPE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first TYPE attribute for this node.
Notes: (Read only property)

180.10.49 GetUSEMAP as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first USEMAP attribute for this node.
Notes: (Read only property)

180.10.50 GetVALUE as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first VALUE attribute for this node.
Notes: (Read only property)

180.10.51 GetVLINK as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first VLINK attribute for this node.
Notes: (Read only property)

180.10.52 GetWIDTH as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first WIDTH attribute for this node.
Notes: (Read only property)

180.10.53 GetXMLNS as TidyAttributeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The first XMLNS attribute for this node.
Notes: (Read only property)

180.10.54 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy node object.
Notes: (Read only property)

180.10.55 HasText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether there is text attached to this node.
Notes:

Returns true if yes.
(Read only property)

180.10.56 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The node ID.
Notes: (Read only property)

180.10.57 IsDATALIST as Boolean

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this node is a data list.
Notes: (Read only property)

180.10.58 IsProperty as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the node is a property.
Notes: (Read only property)

180.10.59 Line as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The position of this node.
Notes: (Read only property)

180.10.60 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of this node.
Notes: (Read only property)

180.10.61 NextNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The next node in the node list of the parent node.
Notes: (Read only property)

180.10.62 NodeIsA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a A node.
Notes: (Read only property)

180.10.63 NodeIsADDRESS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a ADDRESS node.
Notes: (Read only property)

180.10.64 NodeIsAPPLET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a APPLET node.
Notes: (Read only property)

180.10.65 NodeIsAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a AREA node.
Notes: (Read only property)

180.10.66 NodeIsB as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a B node.
Notes: (Read only property)

180.10.67 NodeIsBASE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BASE node.
Notes: (Read only property)

180.10.68 NodeIsBASEFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BASEFONT node.
Notes: (Read only property)

180.10.69 NodeIsBIG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BIG node.
Notes: (Read only property)

180.10.70 NodeIsBLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BLINK node.
Notes: (Read only property)

180.10.71 NodeIsBLOCKQUOTE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BLOCKQUOTE node.
Notes: (Read only property)

180.10.72 NodeIsBODY as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BODY node.
Notes: (Read only property)

180.10.73 NodeIsBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a BR node.
Notes: (Read only property)

180.10.74 NodeIsCAPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a CAPTION node.
Notes: (Read only property)

180.10.75 NodeIsCENTER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a CENTER node.
Notes: (Read only property)

180.10.76 NodeIsCOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a COL node.
Notes: (Read only property)

180.10.77 NodeIsCOLGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a COLGROUP node.
Notes: (Read only property)

180.10.78 NodeIsDD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DD node.
Notes: (Read only property)

180.10.79 NodeIsDIR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DIR node.
Notes: (Read only property)

180.10.80 NodeIsDIV as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DIV node.
Notes: (Read only property)

180.10.81 NodeIsDL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DL node.
Notes: (Read only property)

180.10.82 NodeIsDT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a DT node.
Notes: (Read only property)

180.10.83 NodeIsEM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a EM node.
Notes: (Read only property)

180.10.84 NodeIsEMBED as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a EMBED node.
Notes: (Read only property)

180.10.85 NodeIsFONT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FONT node.
Notes: (Read only property)

180.10.86 NodeIsFORM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FORM node.
Notes: (Read only property)

180.10.87 NodeIsFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FRAME node.
Notes: (Read only property)

180.10.88 NodeIsFRAMESET as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a FRAMESET node.
Notes: (Read only property)

180.10.89 NodeIsH1 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H1 node.
Notes: (Read only property)

180.10.90 NodeIsH2 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H2 node.
Notes: (Read only property)

180.10.91 NodeIsH3 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H3 node.
Notes: (Read only property)

180.10.92 NodeIsH4 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H4 node.
Notes: (Read only property)

180.10.93 NodeIsH5 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H5 node.
Notes: (Read only property)

180.10.94 NodeIsH6 as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a H6 node.
Notes: (Read only property)

180.10.95 NodeIsHEAD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HEAD node.
Notes: (Read only property)

180.10.96 NodeIsHeader as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Header node.
Notes: (Read only property)

180.10.97 NodeIsHR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HR node.
Notes: (Read only property)

180.10.98 NodeIsHTML as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a HTML node.
Notes: (Read only property)

180.10.99 NodeIsI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a I node.
Notes: (Read only property)

180.10.100 NodeIsIFRAME as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a IFRAME node.
Notes: (Read only property)

180.10.101 NodeIsIMG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a IMG node.
Notes: (Read only property)

180.10.102 NodeIsINPUT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a INPUT node.
Notes: (Read only property)

180.10.103 NodeIsISINDEX as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a ISINDEX node.
Notes: (Read only property)

180.10.104 NodeIsLABEL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LABEL node.
Notes: (Read only property)

180.10.105 NodeIsLAYER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LAYER node.
Notes: (Read only property)

180.10.106 NodeIsLI as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LI node.
Notes: (Read only property)

180.10.107 NodeIsLINK as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LINK node.
Notes: (Read only property)

180.10.108 NodeIsLISTING as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a LISTING node.
Notes: (Read only property)

180.10.109 NodeIsMAP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MAP node.
Notes: (Read only property)

180.10.110 NodeIsMARQUEE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MARQUEE node.
Notes: (Read only property)

180.10.111 NodeIsMENU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a MENU node.
Notes: (Read only property)

180.10.112 NodeIsMETA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a META node.
Notes: (Read only property)

180.10.113 NodeIsNOBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOBR node.
Notes: (Read only property)

180.10.114 NodeIsNOFRAMES as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOFRAMES node.
Notes: (Read only property)

180.10.115 NodeIsNOSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a NOSCRIPT node.
Notes: (Read only property)

180.10.116 NodeIsOBJECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OBJECT node.
Notes: (Read only property)

180.10.117 NodeIsOL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OL node.
Notes: (Read only property)

180.10.118 NodeIsOPTGROUP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OPTGROUP node.
Notes: (Read only property)

180.10.119 NodeIsOPTION as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a OPTION node.
Notes: (Read only property)

180.10.120 NodeIsP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a P node.
Notes: (Read only property)

180.10.121 NodeIsPARAM as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a PARAM node.
Notes: (Read only property)

180.10.122 NodeIsPRE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a PRE node.
Notes: (Read only property)

180.10.123 NodeIsQ as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Q node.
Notes: (Read only property)

180.10.124 NodeIsS as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a S node.
Notes: (Read only property)

180.10.125 NodeIsSCRIPT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SCRIPT node.
Notes: (Read only property)

180.10.126 NodeIsSELECT as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SELECT node.
Notes: (Read only property)

180.10.127 NodeIsSMALL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SMALL node.
Notes: (Read only property)

180.10.128 NodeIsSPACER as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SPACER node.
Notes: (Read only property)

180.10.129 NodeIsSPAN as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a SPAN node.
Notes: (Read only property)

180.10.130 NodeIsSTRIKE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STRIKE node.
Notes: (Read only property)

180.10.131 NodeIsSTRONG as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STRONG node.
Notes: (Read only property)

180.10.132 NodeIsSTYLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a STYLE node.
Notes: (Read only property)

180.10.133 NodeIsTABLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TABLE node.
Notes: (Read only property)

180.10.134 NodeIsTD as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TD node.
Notes: (Read only property)

180.10.135 NodeIsText as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a Text node.
Notes: (Read only property)

180.10.136 NodeIsTEXTAREA as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TEXTAREA node.
Notes: (Read only property)

180.10.137 NodeIsTH as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TH node.
Notes: (Read only property)

180.10.138 NodeIsTITLE as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TITLE node.
Notes: (Read only property)

180.10.139 NodeIsTR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a TR node.
Notes: (Read only property)

180.10.140 NodeIsU as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a U node.
Notes: (Read only property)

180.10.141 NodeIsUL as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a UL node.
Notes: (Read only property)

180.10.142 NodeIsWBR as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a WBR node.
Notes: (Read only property)

180.10.143 NodeIsXMP as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether this is a XMP node.
Notes: (Read only property)

180.10.144 Parent as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The parent node of this node.
Notes: (Read only property)

180.10.145 PrevNode as TidyNodeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The previous node in the node list of the parent node.
Notes: (Read only property)

180.10.146 Text as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The text of this node.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim s As TidyNodeMBS=t.Root

MsgBox s.Text
```

Notes:

This text has no encoding defined.
(Read only property)

180.10.147 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The type of this node.
Notes: (Read only property)

180.10.148 Value as string

MBS Tools Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: The decoded value of the node as UTF-8 String.
Example:

```
dim t as new TidyDocumentMBS

call t.ParseString("<p>Hello World</p>") // pass here bad html
call t.CleanAndRepair

dim nodes(-1) as TidyNodeMBS
dim root as TidyNodeMBS = t.Root

// we iterate over all child nodes

nodes.Append root.Child
nodes.Append root.NextNode

while UBound(nodes)>=0
dim n as TidyNodeMBS = nodes.Pop

if n<>Nil then

nodes.Append n.Child // maybe a child?
nodes.Append n.NextNode // maybe a sibiling?

if n.HasText then
MsgBox n.Value // Shows "Hello World"
end if
end if
wend
```

Notes: (Read only property)

180.11 module TidyNodeTypeMBS

180.11.1 module TidyNodeTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

180.11.2 Constants

180.11.3 TidyNodeAsp=10

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.4 TidyNodeCDATA=8

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.5 TidyNodeComment=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.6 TidyNodeDocType=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.7 TidyNodeEnd=6

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.8 TidyNodeJste=11

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.9 TidyNodePhp=12

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.10 TidyNodeProcIns=3

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.11 TidyNodeRoot=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.12 TidyNodeSection=9

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.13 TidyNodeStart=5

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.14 TidyNodeStartEnd=7

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.11.15 TidyNodeText=4

180.13 class TidyOptionMBS

180.13.1 class TidyOptionMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: An option in the tidy preferences.

180.13.2 Methods

180.13.3 Category as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Category of the option.

180.13.4 DefaultBoolean as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for a boolean property.

180.13.5 DefaultInteger as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for an integer property.

180.13.6 DefaultString as String

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The default value for a string property.

180.13.7 Description as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Description of the option.

180.13.8 ID as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get ID of given Option.

180.13.9 IsReadOnly as boolean

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Is Option read-only?

180.13.10 Name as string

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get name of given Option.

180.13.11 Type as Integer

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get datatype of given Option.

180.13.12 Properties

180.13.13 Document as TidyDocumentMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: The document of this option.
Notes: (Read only property)

180.13.14 Handle as Integer

MBS Tools Plugin, Plugin Version: 10.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal reference to the tidy option object.
Notes: (Read only property)

180.14 module TidyOptionTypeMBS

180.14.1 module TidyOptionTypeMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

180.14.2 Constants

180.14.3 TidyBoolean=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.14.4 TidyInteger=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.14.5 TidyString=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.15 class TidyOutputMBS

180.15.1 class TidyOutputMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Accepts raw bytes of output from the tidy library.

180.15.2 Events

180.15.3 WriteByte(value as Integer)

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: .

Function: Adds one byte to the output buffer.

180.16 module TidyReportLevelKeysMBS

180.16.1 module TidyReportLevelKeysMBS

MBS Tools Plugin, Plugin Version: 17.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The module for report level keys.

180.16.2 Constants

180.16.3 TidyAccessString=603

MBS Tools Plugin, Plugin Version: 17.1.

180.19 module TidyTriStateMBS

180.19.1 module TidyTriStateMBS

MBS Tools Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: A module with constants for use with the Tidy classes.

180.19.2 Constants

180.19.3 TidyAutoState=2

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.19.4 TidyNoState=0

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

180.19.5 TidyYesState=1

MBS Tools Plugin, Plugin Version: 5.4.

Function: A constant for use with the Tidy classes.

Chapter 181

TIFF

181.1 Globals

181.1.1 CombineBitCMYKtoRGBMBS(CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, byref output as picture, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 6.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Combines 1bit raw image files to one 8bit RGB tiff.
Example:

```
dim t(4) as FolderItem
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer
dim p as Picture

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
```

```
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0
dM(3)=0.0
dY(3)=0.0
//Pantone, Sonderfarbe, S0
dK(4)=0.00
dC(4)=0.60
dM(4)=0.35
dY(4)=0.15

//Bilder
t(0)=GetFolderItem("test.Cyan.bit")
t(1)=GetFolderItem("test.Magenta.bit")
t(2)=GetFolderItem("test.Yellow.bit")
t(3)=GetFolderItem("test.Black.bit")
t(4)=GetFolderItem("test.S0.bit")

for i=0 to 4
nC(i)=dC(i)*1000.0
nM(i)=dM(i)*1000.0
nY(i)=dY(i)*1000.0
nK(i)=dK(i)*1000.0
next

// Scale 1/n, 1/3, 1/2, 1, 2, 3, n

Title=str(CombineBitCMYKtoRGBMBS(nC,nM,nY,nK, t, 1, 545,567,0,0,545,567,p,0))
Backdrop=p
Width=p.Width
Height=p.Height
```

Notes:

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error. CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

181.1.2 TIFFStringToPictureMBS(data as string) as picture

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff string and returns the RGB image for this tiff file.
Notes:

Returns nil on any error.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

181.1.3 Blog Entries

- Tip of the day: Corrupt pictures

181.1.4 TIFFStringToTiffPictureMBS(data as string) as TiffPictureMBS

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff string and returns a TiffPictureMBS object.
Notes:

if you want to read the picture after this line you need to call ReadBW, ReadRGB or use the Scanline methods.
Returns nil on any error.

181.1.5 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 1bit tiff image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 1bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

181.1.6 CombineBitCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, Files() as FolderItem, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, CacheSizeRead as Integer) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 1bit raw image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 1bit grayscal esource image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
CacheSize can be set to a value greater than 0. And it may make the process faster or slower depending on what you do.

181.1.7 CombineTiffCMYKtoCMYKMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines Grayscale tiff images to one CMYK tiff.
Example:

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
const PHOTOMETRIC_SEPARATED=5

dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan
dK(0)=0.0
dC(0)=1.0
dM(0)=0.0
dY(0)=0.0
//Magenta
dK(1)=0.00
```

```
dC(1)=0.0
dM(1)=1.0
dY(1)=0.0
//Yellow
dK(2)=0.00
dC(2)=0.0
dM(2)=0.0
dY(2)=1.0
//Black
dK(3)=1.00
dC(3)=0.0

Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

Notes:

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

181.1.8 CombineTiffCMYKtoRGBMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines Grayscale tiff images to one RGB tiff.
Example:

```
const PLANARCONFIG_CONTIG=1
const PHOTOMETRIC_RGB=2
const FILLORDER_MSB2LSB=1
```

```
dim u,v,ot,t(4) as TiffPictureMBS
dim f as FolderItem
dim pnach as Picture
dim dC(4), dM(4), dY(4), dK(4) as Double
dim nC(4), nM(4), nY(4), nK(4) as Integer
dim i as Integer

//Cyan

ot.Close
end if

//Neues Bild anzeigen
pnach=f.OpenAsPicture
if pnach<>Nil then
Window1.Width=pNach.Width
Window1.Height=pNach.Height
Window1.Backdrop=pNach
end if
```

Notes:

All arrays have the same size specifying for each 8bit grayscal esource image the colors to be used in the final image.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.

181.1.9 CombineTiff1BitCMYKtoTiffMBS(dest as TiffPictureMBS, TiffData as TiffPictureMBS, scalex as Double, scaley as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines a one bit gray tiff image to one 1 bit gray tiff.
Notes:

Basicly only scales the data.
Result image is written to the current tiffpicture. Error code is returned which is 0 for no error.
You need to set yourself all needed tiffpicture parameters for the output image and you must create it before.
The plugin sets width and height for the output tiff.

181.1.10 CombineTiff8BitCMYKtoTiffMBS(dest as TiffPictureMBS, CyanChannel() as Integer, MagentaChannel() as Integer, YellowChannel() as Integer, BlackChannel() as Integer, TiffData() as TiffPictureMBS, scale as Double, width as Integer, height as Integer, X1 as Integer, Y1 as Integer, X2 as Integer, Y2 as Integer, ditherMode as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 12.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Combines 8bit tiff image files to one CMYK tiff.
Notes:

All arrays have the same size specifying for each 8bit grayscale source image the colors to be used in the final image.
Result image is written to the output picture which is created. Error code is returned which is 0 for no error.
Compression can be set before data is written to current tiff which is for output. The tiff object for output must be perfectly setup before using this function.

181.1.11 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.3pr11

181.2 class TiffPictureMBS

181.2.1 class TiffPictureMBS

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: A class for a Tiff picture.
Example:

```
Dim p As Picture = LogoMBS(500)

// save tiff file

Dim t As New TiffPictureMBS
Dim file4 As FolderItem = SpecialFolder.Desktop.Child("test4.tif")

t.Pict = p

If t.Create(file4) Then
If t.WriteRGB Then
t.Close
// ok
Else
Break
End If
Else
Break
End If
```

Notes: Bases on libtiff.

181.2.6 Methods

181.2.7 AddCustomTag(Tag as Integer, FieldReadCount as Integer, FieldWriteCount as Integer, FieldType as Integer, FieldBit as Integer, OkToChange as Integer, PassCount as Integer, FieldName as string) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Adds a custom tag.
Example:

```
const TIFFTAG_ASCIITAG = 40666
const TIFFTAG_LONGTAG = 40667
const TIFFTAG_SHORTTAG = 40668
const TIFFTAG_RATIONALTAG = 40669
const TIFFTAG_FLOATTAG = 40670
const TIFFTAG_DOUBLETAG = 40671
const TIFFTAG_BYTE = 40672
```

```
const TIFFTAG_SOFTWARE=305

const TIFF_BYTE=1
const TIFF_ASCII=2
const TIFF_SHORT=3 // integer 16 bit signed
const TIFF_LONG=4 // integer 32 bit
const TIFF_FLOAT=11
const TIFF_DOUBLE=12

const FIELD_CUSTOM = 65

dim t as new TiffPictureMBS

// open tiff

if not t.AddCustomTag(TIFFTAG_ASCIITAG, -1, -1, TIFF_ASCII, FIELD_CUSTOM, 1, 0, "MyString")
then
MsgBox "AddCustomTag failed1."
end if
```

Notes: See tiff documentation for details.

181.2.8 AddImage as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file and starts a new one.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim p as Picture

f=SpecialFolder.Desktop.Child("test.tif")
t=new TiffPictureMBS
if t.Create(f) then

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
if t.AddImage then
p=New Picture(100,100,32)
```

```
p.Graphics.ForeColor=rgb(0,0,255)
p.Graphics.FillOval 0,0,100,100
t.Pict=p
if t.WriteRGB then
MsgBox "Written multi picture tiff."
end if
end if
end if
end if
```

Notes:

Returns true on success and false on any error.

Calls TIFFWriteDirectory internally.

181.2.9 close

MBS Images Plugin, Plugin Version: 3.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Closes the Tiff handle.
Notes:

In 5.1 and older the destructor.
In 5.2 and later only closes the tiff handle so you can still read the pictures, the output or input buffer.

181.2.10 CombinePictureWithMask as picture

MBS Images Plugin, Plugin Version: 6.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a new picture which is created using the picture and it's mask.
Example:

```
dim t as TiffPictureMBS
' ...
canvas1.backdrop=t.CombinePictureWithMask
```

181.2.11 Create(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes: Returns true on success.
See also:

- 181.2.12 Create(file as folderitem, endian as Integer) as boolean 25930
- 181.2.13 Create(Path as String, endian as integer = 0) as boolean 25931

181.2.12 Create(file as folderitem, endian as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")

If t.Create(f, 0) Then
If t.WriteRGB Then
t.Close

// open in viewer
```

```
f.Launch
End If
End If
```

Notes:

Returns true on success.

Endian settings:

0	Default (System)
1	BigEndian (Mac)
2	LittleEndian (Win)

See also:

- 181.2.11 Create(file as folderitem) as boolean 25929
- 181.2.13 Create(Path as String, endian as integer = 0) as boolean 25931

181.2.13 Create(Path as String, endian as integer = 0) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new empty tiff file.
Example:

```
Dim t As New TiffPictureMBS
t.Pict = LogoMBS(500)

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim p as string = f.NativePath

If t.Create(p) Then
If t.WriteRGB Then
t.Close

// open in viewer
f.Launch
End If
End If
```

Notes:

Returns true on success.

Endian settings:

0	Default (System)
1	BigEndian (Mac)
2	LittleEndian (Win)

See also:

- 181.2.11 Create(file as folderitem) as boolean 25929
- 181.2.12 Create(file as folderitem, endian as Integer) as boolean 25930

181.2.14 CreateString(Size as Integer) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string based tiff writer.
Example:

```
Function PictureToTiffStringMBS(pic as picture) As string
dim t as TiffPictureMBS

t=new TiffPictureMBS
if t.CreateString(& h100000) then
t.Pict=pic
if t.WriteRGB then
t.Close
Return t.OutputBuffer
end if
end if
End Function
```

Notes:

Same as the Create() function, but memory based. You can now use functions like Scanline(), WriteSW() or WriteRGB() to put the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.

The size parameter you pass in is a guess for the initial size of the memory block used. If more data is written, the memory block is resized, but it is quite slow to resize a memoryblock, so make a good guess!

You can and should use this function to write yourself a PictureToTiffString function. The plugin can not well make such a function as there are thousands of possible parameters combination you may want to use. (compared to the JPEG library where you only have the compression level parameter.)
See also:

- 181.2.15 CreateString(Size as Integer, Mode as string) as boolean 25933

181.2.15 CreateString(Size as Integer, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Creates a new string based tiff writer.
Notes:

Same as the other CreateString method, but you can pass a mode string to the library.

mode="wb" for big endian and mode="wl" for little endian.
See also:

- 181.2.14 CreateString(Size as Integer) as boolean 25932

181.2.16 Flush as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Flush causes any pending writes for the specified file (including writes for the current directory) to be done.
Notes: In normal operation this call is never needed - the library automatically does any flushing required.

181.2.17 FlushData as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: FlushData flushes any pending image data for the specified file to be written out; directory-related data are not flushed.
Notes: In normal operation this call is never needed Å | the library automatically does any flushing required.

181.2.18 GetColorMap(byref red as memoryblock, byref green as memoryblock, byref blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries the color map for a paletten image.
Notes:

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

181.2.19 GetColorProfile as string

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the color profile data stored in the tiff file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string
dim p as LCMS2ProfileMBS

f=SpecialFolder.Desktop.Child("horsehead_steinberg_big.tif")

t=f.OpenAsTiffMBS

s=t.GetColorProfile

p = LCMS2ProfileMBS.OpenProfileFromString(s)

MsgBox p.Name
```

Notes: Returns "" on any error.

181.2.20 GetData(Tag as Integer) as string

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the string stored for this tag.

181.2.21 GetField(Tag as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
The memoryblock you pass in must be big enough to hold whatever data the library stores there.

181.2.22 GetFieldByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.23 GetFieldCount(Tag as Integer, byref count as Integer, mem as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
'TIFF Tag ImageID
'

'IFD Image
'Code 32781 (hex 0x800D)
'Name ImageID
'Type ASCII
'Count N
'Default None
'Description
'

'OPI-related.
'

'ImageID is the full pathname of the original, high-resolution image, or any other identifying string that uniquely identifies the original image.
'
```

```
'The high-resolution image is not required to be in TIFF format. It can be in any format that an OPI Consumer wishes to support.

DIm tiffImport As TiffPictureMBS
Dim xx as string

tiffImport = New TiffPictureMBS
Call tiffImport.Open(SpecialFolder.Desktop.Child("test.tif"))

// the memoryblock is a storage for the data. In this case a pointer to the CString
dim m as MemoryBlock=NewMemoryBlock(4)
dim count as Integer

if tiffImport.GetFieldCount(32781, count, m) then
MsgBox str(count)
MsgBox m.Ptr(0).CString(0)
end if

tiffImport.close
```

Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.24 GetFieldDefaultedByte(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

181.2.25 GetFieldDefaultedDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

181.2.26 GetFieldDefaultedInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

181.2.27 GetFieldDefaultedShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

181.2.28 GetFieldDefaultedSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

181.2.29 GetFieldDefaultedString(Tag as Integer, byref value as String) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("ChristianSchmitz.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldDefaultedString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

GetFieldDefaulted* is identical to GetField*, except that if a tag is not defined in the current directory and it has a default value, then the default value is returned.

181.2.30 GetFieldDouble(Tag as Integer, byref value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.31 GetFieldInteger(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.32 GetFieldMemory(Tag as Integer, byref ItemCount as Integer) as memoryblock

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

This is the special version using memoryblock so you can use it for reading values with a count value.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.33 GetFieldShort(Tag as Integer, byref value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.

Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.34 GetFieldSingle(Tag as Integer, byref value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.35 GetFieldString(Tag as Integer, byref value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the value associated with the given tag id.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")
t=f.OpenAsTiffMBS

const TIFFTAG_SOFTWARE=305

if t.GetFieldString(TIFFTAG_SOFTWARE, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_HOSTCOMPUTER=316

if t.GetFieldString(TIFFTAG_HOSTCOMPUTER, s) then
MsgBox "TIFFTAG_SOFTWARE"+EndOfLine+s
end if

const TIFFTAG_IMAGEDESCRIPTION=270

if t.GetFieldString(TIFFTAG_IMAGEDESCRIPTION, s) then
MsgBox "TIFFTAG_IMAGEDESCRIPTION"+EndOfLine+s
end if
```

```
const TIFFTAG_MAKE=271

if t.GetFieldString(TIFFTAG_MAKE, s) then
MsgBox "TIFFTAG_MAKE"+EndOfLine+s
end if

const TIFFTAG_ARTIST=315

if t.GetFieldString(TIFFTAG_ARTIST, s) then
MsgBox "TIFFTAG_ARTIST"+EndOfLine+s
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success. May return a default value.
Please make sure to use the correct setter depending on data type associated with the tag.
The string is returned with ascii encoding. You may need to define a different encoding is this is not correct.

181.2.36 GetXMP as string

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the xmp metadata package stored in the tiff file.
Example:

```
dim f as FolderItem
dim t as TiffPictureMBS
dim s as string

f=SpecialFolder.Desktop.Child("test.tif")

t=f.OpenAsTiffMBS

s=t.GetXMP

MsgBox left(s,500)
```

Notes: Returns "" on any error.

181.2.37 ImageCount as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of images in the TIFF file.
Notes: Returns 0 on any error.

181.2.38 ImageIndex as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current image index.
Notes: 0 based.

181.2.39 IsLastImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the current picture is the last picture.
Notes: Useful if you walk through all pictures using NextImage.

181.2.40 MirrorVertical(output as TiffPictureMBS) as boolean

MBS Images Plugin, Plugin Version: 7.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Mirrors the current picture to another tiff object.
Notes:

You may be able to pass the current tiff file as the output one if you have it open for read and write.
Returns true on success and false on failure.
Works for any color depth or color mode.

181.2.41 NextImage as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads the next image in the TIFF file.
Notes: Returns true on success and false on any error.
See also:

- 181.2.42 NextImage(HeaderOnly as boolean) as boolean

181.2.42 NextImage(HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the next image.
Notes: If HeaderOnly is false the current picture is read into the pict& mask properties.
See also:

- 181.2.41 NextImage as boolean 25942

181.2.43 Open(file as folderitem) as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for readonly access.
Notes:

You need to use the ReadRGB method or the Scanline property to get data from this file.
Returns true on success.
See also:

- 181.2.44 Open(file as folderitem, Mode as string) as boolean 25943
- 181.2.45 Open(Path as String, Mode as string) as boolean 25944

181.2.44 Open(file as folderitem, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for read/write access.
Example:

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

Notes:

Same as the other Open method, but you can pass a mode string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 181.2.43 Open(file as folderitem) as boolean 25943
- 181.2.45 Open(Path as String, Mode as string) as boolean 25944

181.2.45 Open(Path as String, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 19.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff file for read/write access.
Example:

```
Dim t As New TiffPictureMBS

// try with path
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim p As String = f.NativePath

If t.Open(p, "r") Then

If t.ReadRGB Then

window1.Backdrop = t.Pict

End If
End If
```

Notes:

Same as the other Open method, but you can pass a mode and path as string to the library.

The open mode parameter can include the following flags in addition to the "r" (Read), "w" (Write), and "a" (Append) flags. Note however that option flags must follow the read-write-append specification.

See also:

- 181.2.43 Open(file as folderitem) as boolean 25943

• 181.2.44 Open(file as folderitem, Mode as string) as boolean 25943

181.2.46 OpenString(data as string) as boolean

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff image located in a binary string.
Example:

```
Function TiffStringToPicture(data as string) As picture
dim t as MyTiffPictureMBS

t=new MyTiffPictureMBS

if t.OpenString(data) then
if t.ReadRGB then
return t.Pict
// you could add the mask here.
end if
end if

Return nil // failed
End Function
```

Notes:

Same as the Open() function, but memory based. You can now use functions like Scanline(), ReadSW() or ReadRGB() to get the picture data.

Returns true on success.
The Warning and Error events may show you reasons why it does not work.
The string you pass is saved in the data property of the class for later use.

You can and should use this function to write yourself a TiffStringToPicture function.
See also:

• 181.2.47 OpenString(data as string, Mode as string) as boolean 25945

181.2.47 OpenString(data as string, Mode as string) as boolean

MBS Images Plugin, Plugin Version: 5.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Opens a tiff image located in a binary string.
Notes: Same as the other OpenString method, but you can pass a mode string to the library.
See also:

- 181.2.46 OpenString(data as string) as boolean 25945

181.2.48 RawStripSize(strip as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a raw strip (i.e. not decoded).

181.2.49 ReadBW as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode.
Example:

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

Notes:

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 181.2.50 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 25947

181.2.50 ReadBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode.
Example:

```
dim f as FolderItem
dim p as Picture
dim t as TiffPictureMBS

f=SpecialFolder.Desktop.Child("Multipage fax.tif")
t=f.OpenAsTiffMBS(true)

if t.ReadBW(0,0,t.width/2,t.height/2) then
title=str(t.ImageCount)

p=t.pict
Title=str(p.Depth)
Canvas1.Backdrop=p
end if
```

Notes:

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 181.2.49 ReadBW as boolean 25946

181.2.51 ReadEncodedStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read and decode a strip of data from an open TIFF file.
Notes:

Read the specified strip of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of strip is a ”raw strip number”. That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.
The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

181.2.52 ReadEncodedTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Read and decode a tile of data from an open TIFF file.
Notes:

Read the specified tile of data and place up to size bytes of decompressed information in the (user supplied) data buffer.

The value of tile is a ”raw tile number”. That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should be at least as large as the value returned by TileSize.

The library attempts to hide bit- and byte-ordering differences between the image and the native machine by converting data to the native machine order. Bit reversal is done if the FillOrder tag is opposite to the native machine bit order. 16- and 32-bit samples are automatically byte-swapped if the file was written with a byte order opposite to the native machine byte order,

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns −1 if an error was encountered.

181.2.53 ReadPreviewBW as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode as a preview.
Notes:

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 181.2.54 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean 25949

181.2.54 ReadPreviewBW(left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture in BW mode as a preview.
Notes:

This method is faster than ReadBW, because it reads only every 8th line and every 8th pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success and false on any error.
Only if the current picture is a 1bit black& white picture, a new picture is created in the pict property and the data is copied inside.

Data in the TIFF file must be in 1 bit BW mode. Else use ReadRGB which does a lot of converting.

This method uses the YieldTicks property and may yield time to other threads.
See also:

- 181.2.53 ReadPreviewBW as boolean 25948

181.2.55 ReadPreviewRGB(ReduceFactor as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a CMYK or RGB picture and stores it in the pict and name properties.
Notes:

This method is faster than ReadRGB, because it reads only every ReduceFactorth line and every ReduceFactorth pixel in each row. So the picture you get is much smaller, but may be enough for a preview.

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

181.2.56 ReadRawStrip(strip as UInt32, byref data as Memoryblock) as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the undecoded contents of a strip of data from an open TIFF file.
Notes:

Read the contents of the specified strip into the (user supplied) data buffer. Note that the value of strip is a "raw strip number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). To read a full strip of data the data buffer should typically be at least as large as the number returned by StripSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedStrip returns -1 if an error was encountered.

181.2.57 ReadRawTile(tile as UInt32, byref data as Memoryblock) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return an undecoded tile of data from an open TIFF file.
Notes:

Read the contents of the specified tile into the (user supplied) data buffer. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data is organized in separate planes (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number. To read a full tile of data the data buffer should typically be at least as large as the value returned by TileSize.

Returns the actual number of bytes of data that were placed in buf is returned; ReadEncodedTile returns -1 if an error was encountered.

181.2.58 ReadRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads a CMYK or RGB picture and stores it in the pict and name properties.
Notes:

Returns true on success.
ReadRGB does converting on the picture data if needed so you can read CMYK, RGB, BW and other image data using this function.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.
See also:

- 181.2.59 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock 25951

181.2.59 ReadRGB(byref ErrorMessage as string, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 9.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image into a memoryblock as RGB.
Notes:

The Scanline() array gives you the raw uncompressed data. But this method decodes the data into a RGBA image.

The Memoryblock has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns nil. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).
See also:

- 181.2.58 ReadRGB as boolean 25951

181.2.60 ReadRGBMemoryBegin(byref ErrorMessage as string) as boolean

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Starts a RGBA reader for the given TIFF picture.
Notes:

Like ReadRGB, but with ReadRGBMemoryBegin, ReadRGBMemoryEnd and ReadRGBMemoryStep you can read the RGBA data in portions.

The Memoryblock returned by ReadRGBMemoryStep has the size of 4*width*height. Each pixel has one byte for red, one byte for green, one byte for blue and one byte for alpha. If no alpha is in the file, all pixels have the same alpha of 255.

If the decompression fails the function returns false. (e.g. out of memory).
If the decoding fails, you also get an error message.

This function works with most Tiff formats, but has problems with some like 16 bit CMYK.

181.2.61 ReadRGBMemoryEnd

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Cleans up the internal data structures created by ReadRGBMemoryBegin.

181.2.62 ReadRGBMemoryStep(x as Integer, y as Integer, width as Integer, height as Integer, Dest as MemoryBlock = nil) as memoryblock

MBS Images Plugin, Plugin Version: 10.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the image into a memoryblock as RGBA.
Example:

```
dim t as new TiffPictureMBS
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim e as string

if t.Open(f) then
if t.ReadRGBMemoryBegin(e) then

dim w as Integer = t.Width
dim h as Integer = t.Height

dim p as new PictureMBS(w, h, PictureMBS.ImageFormatRGB)

for y as Integer = 0 to h-1 step 100
```

```
dim m as MemoryBlock = t.ReadRGBMemoryStep(0, y, w, 100)

for i as Integer = 0 to 99
p.RowInFormat(i+y, PictureMBS.ImageFormatRGBA)=m
next

next

t.ReadRGBMemoryEnd
Backdrop = p.copypicture(0,0,1000,1000) // display a portion
end if

end if
```

Notes:

As you see in the example, you can use this method to easily read huge TIFF files into a PictureMBS object.

If the decompression fails the function returns nil. (e.g. out of memory).
Please make sure that the range in x and y, width and height is right.

If dest is not nil and big enough, the plugin will use it and return it on success. This can avoid additional memory allocations which can cost CPU time (especially to clear the bytes).

181.2.63 ReadWithLUT(ColorLookupTable() as color) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture with a Color Lookup Table.
Notes:

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 181.2.64 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

181.2.64 ReadWithLUT(ColorLookupTable() as color, left as Integer, top as Integer, width as Integer, height as Integer) as boolean

MBS Images Plugin, Plugin Version: 9.8, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads the current picture with a Color Lookup Table.
Notes:

Returns true on success and false on any error.
Works with 8, 16 amd 32 bits per sample. And with 1 or 3 samples per pixels (Gray or RGB). The lookup table has 256 entries for 8 bit and 65536 entries for 16/32 bit.
This method uses the YieldTicks property and may yield time to other threads.
See also:

- 181.2.63 ReadWithLUT(ColorLookupTable() as color) as boolean 25953

181.2.65 RewriteDirectory as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file replacing the old data.
Notes:

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as SaveImage.

181.2.66 SaveImage as boolean

MBS Images Plugin, Plugin Version: 7.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes existing picture and header information to file replacing the old data.
Notes:

Returns true on success and false on any error.
As the data is added to the file and just the reference to the old data is deleted, the filesize will grow.

Calls TIFFReWriteDirectory internally. Same as RewriteDirectory.

181.2.67 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean

MBS Images Plugin, Plugin Version: 11.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reads an image scanline in a memoryblock.
Notes:

Returns false on any error.
Thee Memoryblock must be big enough. The BytesPerRow functions returns the number of bytes needed.
The first scanline has the index of 0.
This is the fastest way to read scanlines. You provide the memoryblock and you can reuse it for all calls to this method for one tiff.
See also:

- 181.2.142 Scanline(index as Integer, sample as Integer = 0) as memoryblock 25987

181.2.68 ScanlinesScaled(index as integer, count as integer, sample as integer = 0, scaleFactor as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get image scanlines scaled down as one memoryblock.
Notes:

Returns nil on any error.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If scaleFactor is >1, we scale down and return scaleFactor rows reduced to one row.

This scaling down is to quicker get preview pictures.

181.2.69 SetColorMap(red as memoryblock, green as memoryblock, blue as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 9.6, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color map for a paletten image.
Notes:

The memoryblock must be 2^bitspersample * 2 bytes big.
Returns true on success and false on failure.

181.2.70 SetColorProfile(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the color profile for this tiff file.
Example:

```
Dim p As New Picture(100,100,32)

Dim ImageFile As FolderItem = SpecialFolder.Desktop.Child("test.tif")
Dim ProfileFile As FolderItem = SpecialFolder.Desktop.Child("Generic RGB Profile.icc")

Dim t As New TiffPictureMBS
t.Pict = p

Dim ProfileStream As BinaryStream = BinaryStream.Open(ProfileFile)
Dim ProfileData As String = ProfileStream.Read(ProfileStream.Length)

If t.Create(ImageFile) Then
// set profile before writing
If t.SetColorProfile(ProfileData) Then
// now write picture
If t.WriteRGB Then
t.Close

ImageFile.Launch
Else
Break
End If
Else
Break
End If
Else
Break
End If
```

Notes: Returns true on success and false on failure.

181.2.71 SetData(Tag as Integer, data as string) as boolean

MBS Images Plugin, Plugin Version: 8.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes the string for this tag.

181.2.72 SetFieldByte(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.73 SetFieldDouble(Tag as Integer, value as Double) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.74 SetFieldInteger(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem

const TIFFTAG_IMAGELENGTH=257 // integer
const TIFFTAG_IMAGEWIDTH=256 // integer

f=GetTemporaryFolderItem
t=new TiffPictureMBS

if t.Create(f) then

if t.SetFieldInteger(TIFFTAG_IMAGELENGTH,100) then
if t.Height=100 then
MsgBox "ok"
end if
end if

end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.75 SetFieldMemory(Tag as Integer, ItemCount as Integer, data as memoryblock) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

This is the special version of the setter which passes a memoryblock and a count value so you can set an array using this method.

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.76 SetFieldShort(Tag as Integer, value as Integer) as boolean

MBS Images Plugin, Plugin Version: 7.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.77 SetFieldSingle(Tag as Integer, value as Single) as boolean

MBS Images Plugin, Plugin Version: 8.7, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the tiff data field with the given tag to the given value.
Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.

181.2.78 SetFieldString(Tag as Integer, value as string) as boolean

MBS Images Plugin, Plugin Version: 8.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets one of the fields to the value of the string.
Example:

```
dim m,p as Picture
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics
dim s as string

// make pictures
p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

// save
f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then

const TIFFTAG_SOFTWARE=305

s="Example Software"
call t.SetFieldString TIFFTAG_SOFTWARE,s

const TIFFTAG_HOSTCOMPUTER=316

s="Example HostComputer"
call t.SetFieldString TIFFTAG_HOSTCOMPUTER,s
```

```
const TIFFTAG_IMAGEDESCRIPTION=270

s="Example ImageDescription"
call t.SetFieldString TIFFTAG_IMAGEDESCRIPTION,s

const TIFFTAG_MAKE=271

s="Example Make"
call t.SetFieldString TIFFTAG_MAKE,s

const TIFFTAG_ARTIST=315

s="Example Artist"
call t.SetFieldString TIFFTAG_ARTIST,s

t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes:

Please look for Tag values in the tiff specification.
Returns true on success.
Please make sure to use the correct setter depending on data type associated with the tag.
You have to pass in the string with the correct encoding.

181.2.79 SetImageIndex(index as Integer) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current image index and reads the new image.
Example:

```
dim t as TiffPictureMBS // your tiff picture

if t.SetImageIndex(1) then
Canvas1.Backdrop=t.pict
end if
```

Notes:

Reads automatically a RGB picture for you, so the pict property is filled on success.
Returns true on success.
Index is zero based.
See also:

- 181.2.80 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean 25961

181.2.80 SetImageIndex(index as Integer, HeaderOnly as boolean) as boolean

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the current image index.
Notes:

If HeaderOnly is false the current picture is read into the pict& mask properties.
Returns true on success.
See also:

- 181.2.79 SetImageIndex(index as Integer) as boolean 25960

181.2.81 SetXMP(ProfileData as String) as boolean

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Sets the xmp metadata package for this tiff file.
Notes: Returns true on success and false on failure.

181.2.82 VStripSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a strip with nrows rows of data.

181.2.83 VTileSize(nrows as UInt32) as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes in a row-aligned tile with nrows of data.

181.2.84 WriteBW as boolean

MBS Images Plugin, Plugin Version: 5.4, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a black & white image.
Example:

```
dim p as Picture
dim f as FolderItem
dim t as TiffPictureMBS

p=New Picture(100,100,32)
p.Graphics.ForeColor=rgb(0,0,0)
p.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS

if t.Create(f) then
t.Pict=p
if t.WriteBW then
MsgBox "ok"
end if
end if

Backdrop=p
```

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 1
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

181.2.85 WriteEncodedStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compress and write a strip of data to an open TIFF file.
Notes:

Compress size bytes of raw data from buf and write the result to the specified strip; replacing any previously written data. Note that the value of strip is a "raw strip number." That is, the caller must take into account whether or not the data are organized in separate planes (PlanarConfiguration=2).

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteEncodedStrip.

Returns −1 is returned if an error was encountered. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

181.2.86 WriteEncodedTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Compress and write a tile of data to an open TIFF file.
Notes:

Compress size bytes of raw data from buf and append the result to the end of the specified tile. Note that the value of tile is a "raw tile number". That is, the caller must take into account whether or not the data are organized in separate places (PlanarConfiguration=2). ComputeTile automatically does this when converting an (x,y,z,sample) coordinate quadruple to a tile number.

The library writes encoded data using the native machine byte order. Correctly implemented TIFF readers are expected to do any necessary byte-swapping to correctly process image data with BitsPerSample greater than 8.

Returns −1 is returned if an error was encountered. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

181.2.87 WriteGray as boolean

MBS Images Plugin, Plugin Version: 7.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a grayscale image with 256 colors.
Example:

```
dim t as TiffPictureMBS
dim f as FolderItem

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
if t.Create(f) then
t.Pict=LogoMBS(500)
call t.WriteGray
t.Close
end if
```

Notes:

Uses the pictures in the pict property to write a picture.
Currently masks are not supported.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_MINISBLACK
BitsPerSample = 8
SamplesPerPixel = 1
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72
Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.
Version 13.1 of our plugins writes a 16 bit Gray image if you set BitsPerSample to 16 before calling this method.

181.2.88 WriteRawStrip(strip as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a strip of raw data to an open TIFF file.
Notes:

Append size bytes of raw data to the specified strip.

The strip number must be valid according to the current settings of the ImageLength and RowsPerStrip tags. An image may be dynamically grown by increasing the value of ImageLength prior to each call to WriteRawStrip.

Returns -1 is returned if an error occurred. Otherwise, the value of size is returned.

If size is zero, we use the size of memoryblock.

181.2.89 WriteRawTile(tile as UInt32, data as Memoryblock, size as Integer = 0) as Integer

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Write a tile of raw data to an open TIFF file
Notes:

Append size bytes of raw data to the specified tile.
Returns −1 is returned if an error occurred. Otherwise, the value of size is returned.
If size is zero, we use the size of memoryblock.

181.2.90 WriteRGB as boolean

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Writes a RGB image.
Example:

```
dim m,p as Picture
```

```
dim f as FolderItem
dim t as TiffPictureMBS
dim g as Graphics

p=New Picture(100,100,32)
m=New Picture(100,100,32)

p.Graphics.ForeColor=Rgb(0,255,0) // fill green
p.Graphics.Fillrect 0,0,100,100

p.Graphics.ForeColor=Rgb(255,0,0) // fill red
p.Graphics.FillOval 0,0,100,100

m.Graphics.ForeColor=Rgb(0,0,0) // fill black (invisible so green not seen)
m.Graphics.Fillrect 0,0,100,100

m.Graphics.ForeColor=Rgb(255,255,255) // fill white (Visible)
m.Graphics.FillOval 0,0,100,100

f=SpecialFolder.Desktop.Child("test.tif")

t=new TiffPictureMBS
t.Pict=p
t.Mask=m

if t.Create(f) then
if t.WriteRGB then
t.Close
MsgBox "Ok"
f.Launch
end if
end if
```

Notes:

Uses the pictures in the mask and pict properties to write a picture.
If mask is set, the picture is saved with an alpha channel.

The following settings are made before the image data is written:
PlanarConfig = PLANARCONFIG_CONTIG
Photometric = PHOTOMETRIC_RGB
BitsPerSample = 8
SamplesPerPixel = 3
FillOrder = FILLORDER_MSB2LSB
VerticalResolution = 72
HorizontalResolution = 72

Orientation = ORIENTATION_TOPLEFT
ResolutionUnit = RESUNIT_INCH
Compression = COMPRESSION_NONE

You may change settings before or later. For example if you set Compression before it should be used for writing image data to the file.
Returns true on success.

This method uses the YieldTicks property and may yield time to other threads.

181.2.91 Properties

181.2.92 BitsPerSample as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The count of bits for each pixel component.
Notes:

Should normally by 8 for RGB images.
(Read and Write property)

181.2.93 BytesPerRow as Int64

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The number of bytes needed for each row in a scan line.
Notes:

0 on any error.
(Read only property)

181.2.94 Compression as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The compression used.
Notes:

some constants:

The data for this property is stored in the Tiff file.

(Read and Write property)

181.2.95 Copyright as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The copyright notice of this image.
Example:

```
dim file as folderitem = SpecialFolder.desktop.child("test.tif")
dim st as new MyTiff

// open for appending
if not st.Open(file,"r+") then
MsgBox "Open Tiff failed!"
else
// change one setting
st.Copyright = "Hello World"

// and save
call st.SaveImage
st.Close
end if
```

Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.96 CurrentDirOffset as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries current directory offset.
Notes: (Read only property)

181.2.97 CurrentRow as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current row, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

181.2.98 CurrentStrip as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current strip, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

181.2.99 CurrentTile as Integer

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Return the current tile, respectively, that is being read or written.
Notes:

These values are updated each time a read or write is done.
(Read only property)

181.2.100 DateTime as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Date and time of the TIFF file.
Notes:

Check some TIFF files for the format used.

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.101 DocumentName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the document.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.102 ExtraSamples as MemoryBlock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The settings for the extra samples.
Notes:

A memoryblock filled with an array of shorts (16bit integers).

constants:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.103 FillOrder as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The fill order of the bits in a byte.
Notes:

constants:

(MSB = Most significant bit, LSB = Least significant bit)

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.104 height as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The height of the picture.
Notes: (Read and Write property)

181.2.105 HorizontalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The x Offset of this image in the drawing area.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.106 HorizontalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The horizontal resolution used.
Notes:

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.107 HostComputer as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Name of the machine where the tiff file was created.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

l When creating a new file force information be written with Little-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

b When creating a new file force information be written with Big-Endian byte order (but see below). By default the library will create new files using the native CPU byte order.

L Force image data that is read or written to be treated with bits filled from Least Significant Bit (LSB) to Most Significant Bit (MSB). Note that this is the opposite to the way the library has worked from its inception.

B Force image data that is read or written to be treated with bits filled from Most Significant Bit (MSB) to Least Significant Bit (LSB); this is the default.

H Force image data that is read or written to be treated with bits filled in the same order as the native CPU.

M Enable the use of memory-mapped files for images opened read-only. If the underlying system does not support memory-mapped files or if the specific image being opened cannot be memory-mapped then the library will fallback to using the normal system interface for reading information. By default the library will attempt to use memory-mapped files.

m Disable the use of memory-mapped files.

C Enable the use of ”strip chopping” when reading images that are comprised of a single strip or tile of uncompressed data. Strip chopping is a mechanism by which the library will automatically convert the single-strip image to multiple strips, each of which has about 8 Kilobytes of data. This facility can be useful in reducing the amount of memory used to read an image because the library normally reads each strip in its entirety. Strip chopping does however alter the apparent contents of the image because when an image is divided into multiple strips it looks as though the underlying file contains multiple separate strips. Finally, note that default handling of strip chopping is a compile-time configuration parameter. The default behaviour, for backwards compatibility, is to enable strip chopping.

c Disable the use of strip chopping when reading images.

181.2.108 ImageDescription as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Information about the image.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.109 InputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The string passed for OpenString.
Notes:

Used for the read requests from the Tiff library.
(Read only property)

181.2.110 IsBigEndian as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether file is big endian.
Notes: (Read only property)

181.2.111 IsByteSwapped as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether bytes are swapped.
Notes:

Returns true if the image data was in a different byte-order than the host machine. Zero is returned if the TIFF file and local host byte-orders are the same.
Note that ReadTile(), ReadStrip() and ReadScanline() functions already normally perform byte swapping to local host order if needed.
(Read only property)

181.2.112 IsMSB2LSB as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns true if the image data is being returned with bit 0 as the most significant bit.
Notes: (Read only property)

181.2.113 IsTiled as Boolean

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns a non-zero value if the image data has a tiled organization.
Notes:

Zero is returned if the image data is organized in strips.
(Read only property)

181.2.114 IsUpSampled as Boolean

MBS Images Plugin, Plugin Version: 18.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether data is upsampled.
Notes:

Returns a non-zero value if image data returned through the read interface routines is being up-sampled. This can be useful to applications that want to calculate I/O buffer sizes to reflect this usage (though the usual strip and tile size routines already do this).
(Read only property)

181.2.115 JPEGQuality as Integer

MBS Images Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The JPEG quality.
Example:

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS

if pic <>nil then
```

```
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.RowsPerStrip = 1
t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

Notes:

Default is 75.
(Read and Write property)

181.2.116 Make as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanner manufacturer name.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.117 mask as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The mask of the picture.
Notes:

May be nil.
(Read and Write property)

181.2.118 Model as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Scanner model name/number.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.119 NumberOfStrips as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of strips in the image.
Notes: (Read only property)

181.2.120 NumberOfTiles as UInt32

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of tiles in the image.
Notes: (Read only property)

181.2.121 Orientation as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The orientation of this image.
Example:

```
// creates a tif file with a horizontal flipped image
// red rectangle is on the left in the image data, but with orientation tag it should be displayed on the right
```

```
side.
// Mac OS X Preview.app shows it correctly.

dim p as Picture
dim t as TiffPictureMBS
dim f as FolderItem

const ORIENTATION_TOPLEFT = 1 //* row 0 top, col 0 lhs */
const ORIENTATION_TOPRIGHT = 2 //* row 0 top, col 0 rhs */
const ORIENTATION_BOTRIGHT = 3 //* row 0 bottom, col 0 rhs */
const ORIENTATION_BOTLEFT = 4 //* row 0 bottom, col 0 lhs */
const ORIENTATION_LEFTTOP = 5 //* row 0 lhs, col 0 top */
const ORIENTATION_RIGHTTOP = 6 //* row 0 rhs, col 0 top */
const ORIENTATION_RIGHTBOT = 7 //* row 0 rhs, col 0 bottom */
const ORIENTATION_LEFTBOT = 8 //* row 0 lhs, col 0 bottom */

p=New Picture(150,100,32)

p.Graphics.ForeColor=rgb(255,0,0)
p.Graphics.FillRect 0,0,10,10

t=new TiffPictureMBS
f=SpecialFolder.Desktop.Child("test.tif")

if t.Create(f) then
t.Pict=p

t.Orientation=ORIENTATION_TOPRIGHT
if t.WriteRGB then
end if
t.Orientation=ORIENTATION_TOPRIGHT

t.Close
end if
```

Notes:

Orientation:

The orientation of the image with respect to the rows and columns.
Tag = 274 (112.H)
Type = SHORT
N = 1
1 = The 0th row represents the visual top of the image, and the 0th column represents the visual left-hand side.
2 = The 0th row represents the visual top of the image, and the 0th column represents the visual right-hand

side.
3 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual right-hand side.
4 = The 0th row represents the visual bottom of the image, and the 0th column represents the visual left-hand side.
5 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual top.
6 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual top.
7 = The 0th row represents the visual right-hand side of the image, and the 0th column represents the visual bottom.
8 = The 0th row represents the visual left-hand side of the image, and the 0th column represents the visual bottom.

Default is 1.
Support for orientations other than 1 is not a Baseline TIFF requirement.
(This text was sent in by David Austin)
(Read and Write property)

181.2.122 OutputBuffer as String

MBS Images Plugin, Plugin Version: 5.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current output data from the CreateString function.
Notes:

Between CreateString and Close the plugin will record all the output data and you can get a copy using this property.
(Read only property)

181.2.123 PageName as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The name of the current page.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.124 Photometric as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: A property of the TIFF image.
Example:

```
// read and write a BW fax tiff with compression

dim d as new OpenDialog()
dim f as FolderItem = GetFolderItem("myfax.tiff")
if f = nil then
return
end if

dim tiff as new TiffPictureMBS()
if not tiff.Open(f) then
MsgBox("Error while opening.")
return
end if

if not tiff.ReadBW() then
MsgBox("Error reading.")
end if

dim tiff2 as TiffPictureMBS = new TiffPictureMBS()

dim f2 as FolderItem = SpecialFolder.Desktop.Child("Copy.tiff")
if not tiff2.Create(f2) then
MsgBox("Error creating file.")
end if

const COMPRESSION_CCITTFAX3=3
const WhiteIsZero=0
const BlackIsZero=1

tiff2.Pict = tiff.pict
tiff2.Photometric=WhiteIsZero
tiff2.Compression=COMPRESSION_CCITTFAX3
if not tiff2.WriteBW() then
MsgBox("Error writing.") // Error
end if

tiff2.Close()
```

Notes:

PhotometricInterpretation:
The color space of the image data.
Tag = 262 (106.H)
Type = SHORT

N = 1

0 = WhiteIsZero. For bilevel and grayscale images: 0 is imaged as white. 2**BitsPerSample-1 is imaged as black. This is the normal value for Compression=2.

1 = BlackIsZero. For bilevel and grayscale images: 0 is imaged as black. 2**BitsPerSample-1 is imaged as white. If this value is specified for Compression=2, the image should display and print reversed.

2 = RGB. In the RGB model, a color is described as a combination of the three primary colors of light (red, green, and blue) in particular concentrations. For each of the three components, 0 represents minimum intensity, and 2**BitsPerSample - 1 represents maximum intensity. Thus an RGB value of (0,0,0) represents black, and (255,255,255) represents white, assuming 8-bit components. For PlanarConfiguration = 1, the components are stored in the indicated order: first Red, then Green, then Blue. For PlanarConfiguration = 2, the StripOffsets for the component planes are stored in the indicated order: first the Red component plane StripOffsets, then the Green plane StripOffsets, then the Blue plane StripOffsets.

3= Palette color. In this model, a color is described with a single component. The value of the component is used as an index into the red, green and blue curves in the ColorMap field to retrieve an RGB triplet that defines the color. When PhotometricInterpretation=3 is used, ColorMap must be present and SamplesPerPixel must be 1.

4 = Transparency Mask. This means that the image is used to define an irregularly shaped region of another image in the same TIFF file. SamplesPerPixel and BitsPerSample must be 1. PackBits compression is recommended. The 1-bits define the interior of the region; the 0-bits define the exterior of the region. A reader application can use the mask to determine which parts of the image to display. Main image pixels that correspond to 1-bits in the transparency mask are imaged to the screen or printer, but main image pixels that correspond to 0-bits in the mask are not displayed or printed. The image mask is typically at a higher resolution than the main image, if the main image is grayscale or color so that the edges can be sharp.

There is no default for PhotometricInterpretation, and it is required. Do not rely on applications defaulting to what you want.

For more details see:
http://partners.adobe.com/asn/developer/pdfs/tn/TIFF6.pdf
(Read and Write property)

181.2.125 pict as picture

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The picture data of the picture.

Notes: (Read and Write property)

181.2.126 PlanarConfig as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The storage organization used.
Notes:

Value is 1 for a single image plane and 2 for separated planes.

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.127 RasterScanlineSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the raster scanline size.
Notes:

Returns the size in bytes of a complete decoded and packed raster scanline.
Note that this value may be different from the value returned by ScanlineSize if data is stored as separate planes.
(Read only property)

181.2.128 ResolutionUnit as Integer

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: Which unit is used for the Resolution values.
Notes:

constants:

RESUNIT_NONE	1	no meaningful units
RESUNIT_INCH	2	english
RESUNIT_CENTIMETER	3	metric

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.129 RowsPerStrip as Integer

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: A property of the TIFF image.
Notes:

Should be same as the height for our uses. (with one strip)
(Read and Write property)

181.2.130 SampleFormat as Integer

MBS Images Plugin, Plugin Version: 15.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The data sample format.
Notes:

Value is 1 for unsigned integer, 2 for signed integer, 3 for IEEE floating point, 4 for untyped data (e.g. JPEG compressed), 5 for complex signed int and 6 for complex IEEE floating point.
(Read and Write property)

181.2.131 SamplesPerPixel as Integer

MBS Images Plugin, Plugin Version: 3.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The count of components used for each pixel.
Notes:

SamplesPerPixel= 1=Grayscale, 3=RGB, 4=CMYK, ...
Photometric= 0 or 1=Grayscale depending on white point, 2=RGB, 5=CMYK, ...

For other formats see:
http://partners.adobe.com/asn/developer/pdfs/tn/TIFF6.pdf
(Read and Write property)

181.2.132 Software as String

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The software name used to make this image.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.133 StripSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the equivalent size for a strip of data as it would be returned in a call to ReadEncodedStrip or as it would be expected in a call to WriteEncodedStrip.
Notes: (Read only property)

181.2.134 TileRowSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the number of bytes of a row of data in a tile.
Notes: (Read only property)

181.2.135 TileSize as UInt64

MBS Images Plugin, Plugin Version: 13.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Returns the equivalent size for a tile of data as it would be returned in a call to ReadTile or as it would be expected in a call to WriteTile.
Notes: (Read only property)

181.2.136 Version as Integer

MBS Images Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the Tiff library used.
Notes:

Updated to 3.7.1 in plugin version 5.0.
(Read only property)

181.2.137 VersionString as String

MBS Images Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: All.

Function: The version of the Tiff library used.
Example:

```
dim z as new TiffPictureMBS

MsgBox z.VersionString

// shows for example:
// LIBTIFF, Version 3.9.4
// Copyright (c) 1988-1996 Sam Leffler
// Copyright (c) 1991-1996 Silicon Graphics, Inc.
```

Notes: (Read only property)

181.2.138 VerticalPosition as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The y Offset of this image in the drawing area.
Notes:

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.139 VerticalResolution as Single

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: The vertical resolution used.
Notes:

Value depends on ResolutionUnit value.

The data for this property is stored in the Tiff file.
(Read and Write property)

181.2.140 width as Integer

MBS Images Plugin, Platforms: macOS, Linux, Windows, Targets: All.

Function: The width of the picture.
Notes: (Read and Write property)

181.2.141 YieldTicks as Integer

MBS Images Plugin, Plugin Version: 7.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: How much time is given back to Xojo for other ticks.
Example:

```
dim t as new TiffPictureMBS
t.YieldTicks=6 // only use 1/10th of a second
```

Notes:

If value is greater than zero, the application will yield to another RB thread after the given number of ticks have passed. 60 ticks are one second. Using a small value can slow down processing a lot while a big value keeps your application not responding to mouse clicks.
If you use this property with e.g. 6 as the value, you may also want to use this method in a thread so you can handle mouse events or let Xojo redraw a progressbar.
(Read and Write property)

181.2.142 Scanline(index as Integer, sample as Integer = 0) as memoryblock

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: All.

Function: An image scanline.
Notes:

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0.
(Read and Write computed property)
See also:

- 181.2.67 Scanline(mem as Ptr, index as Integer, sample as Integer = 0) as boolean 25954

181.2.143 Scanlines(index as Integer, count as Integer, sample as Integer = 0, lineStepScanlines as Integer = 1, lineStepReturn as Integer = 1) as memoryblock

MBS Images Plugin, Plugin Version: 4.3, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set image scanlines as one memoryblock.
Notes:

Returns nil on any error.
If you set the value, make sure the Memoryblock is big enough. The BytesPerRow functions returns the number of bytes needed.

The data for this property is stored in the Tiff file.
The first scanline has the index of 0. Count is the number of scanlines you want to read/write.

If lineStepScanlines is >1, we skip scan lines so we read less data.
If lineStepReturn is >1, we return only every nth row.

If rows can be read with skipping, you should try lineStepScanlines = 2 or more for skipping lines.
If that doesn't work due to tiled data, you can use lineStepReturn = 2 or more.
This skipping is to quicker get preview pictures.
(Read and Write computed property)

181.2.144 Events

181.2.145 Error(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: .

Function: An event called whenever an error is to be reported.

181.2.146 Progress(line as Integer, total as Integer)

MBS Images Plugin, Plugin Version: 6.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Reports changes in progress.
Notes: Used in CombineBitCMYKtoCMYK, CombineTiffCMYKtoRGB and CombineTiffCMYKtoCMYK methods.

181.2.147 Warning(libModule as string, message as string)

MBS Images Plugin, Plugin Version: 4.2, Platforms: macOS, Linux, Windows, Targets: .

Function: An event called whenever a warning is to be reported.

181.2.148 Constants

181.2.149 kCompressionAdobeDeflate = 8

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Deflate compression, as recognized by Adobe

181.2.150 kCompressionCCITTFAX3 = 3

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT Group 3 fax encoding

181.2.151 kCompressionCCITTFAX4 = 4

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT Group 4 fax encoding

181.2.152 kCompressionCCITTRLE = 2

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT modified Huffman RLE

181.2.153 kCompressionCCITTRLEW = 32771

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.

181.2.154 kCompressionCCITT_T4 = 3

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT T.4 (TIFF 6 name)

181.2.155 kCompressionCCITT_T6 = 4

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: CCITT T.6 (TIFF 6 name)

181.2.156 kCompressionDCS = 32947

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Kodak DCS encoding

181.2.157 kCompressionDeflate = 32946

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Deflate compression

181.2.158 kCompressionIT8BL = 32898

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 Binary line art

181.2.159 kCompressionIT8CTPAD = 32895

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 CT w/padding

181.2.160 kCompressionIT8LW = 32896

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 Linework RLE

181.2.161 kCompressionIT8MP = 32897

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: IT8 Monochrome picture

181.2.162 kCompressionJBIG = 34661

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: ISO JBIG

181.2.163 kCompressionJP2000 = 34712

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Leadtools JPEG2000

181.2.164 kCompressionJPEG = 7

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Example:

```
dim logo as Picture = LogoMBS(500)
dim pic as new PictureMBS(logo)

// save tiff with jpeg compression
dim f as FolderItem = SpecialFolder.Desktop.Child("test.tif")
dim t as TiffPictureMBS
```

```
if pic <>nil then
t = new TiffPictureMBS

if t.Create(F) then

t.Height = pic.Height
t.Width = pic.Width

t.PlanarConfig = t.kPlanarConfigContig
t.Photometric = t.kPhotometricRGB
t.BitsPerSample = 8
t.SamplesPerPixel = 3
t.FillOrder = t.kFillOrderMSB2LSB
t.Orientation = t.kOrientationTopLeft
t.ResolutionUnit = t.kResUnitInch
t.VerticalResolution = 72.0
t.HorizontalResolution = 72.0
t.Compression = t.kCompressionJPEG
t.RowsPerStrip = 32 // 8 works also, but not 1
t.JPEGQuality = 75

// copy lines
for i as Integer = 0 to t.Height - 1
t.Scanline(i) = pic.RowInFormat(i, PictureMBS.ImageFormatRGB)
next

t.Close
end if
end if
```

Notes: JPEG DCT compression

181.2.165 kCompressionLZMA = 34925

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: LZMA2

181.2.166 kCompressionLZW = 5

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: Lempel-Ziv & Welch

181.2.167 kCompressionNeXT = 32766

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: NeXT 2-bit RLE

181.2.168 kCompressionNone = 1

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: No compression.

181.2.169 kCompressionOJPEG = 6

MBS Images Plugin, Plugin Version: 13.0.

Function: One of the compression constants.
Notes: !6.0 JPEG

Chapter 182

Timecode

182.1 class LTCDecoderMBS

182.1.1 class LTCDecoderMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for the timecode decoder.

182.1.2 Methods

182.1.3 Constructor(apv as Integer, queueSize as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Create a new LTC decoder.
Notes:

apv: audio-frames per video frame. This is just used for initial settings, the speed is tracked dynamically. setting this in the right ballpark is needed to properly decode the first LTC frame in a sequence.
queueSize: length of the internal queue to store decoded frames to SMPTEDecoderWrite.

Raises an out of memory exception if initialization fails.

182.1.4 Destructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

182.1.5 FlushQueue

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Remove all LTC frames from the internal queue.

182.1.6 Read as LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decoded LTC frames are placed in a queue.
Notes: This function retrieves a frame from the queue, and stores it a new LTCFrameMBS object.
See also:

- 182.1.7 Read(frame as LTCFrameMBS) as Boolean 26002

182.1.7 Read(frame as LTCFrameMBS) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decoded LTC frames are placed in a queue.
Notes:

This function retrieves a frame from the queue, and stores it the given LTCFrameMBS object.
You should prefer this method and reuse frame objects.
See also:

- 182.1.6 Read as LTCFrameMBS 26002

182.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 4.

posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26003
- 182.1.10 WriteSingle(data as String, posinfo as UInt64 = 0) 26003

182.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0) 26002
- 182.1.10 WriteSingle(data as String, posinfo as UInt64 = 0) 26003

182.1.10 WriteSingle(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts floating point audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 4.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.8 WriteSingle(data as MemoryBlock, posinfo as UInt64 = 0) 26002
- 182.1.9 WriteSingle(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26003

182.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26004
- 182.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0) 26004

182.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26004
- 182.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0) 26004

182.1.13 WriteSInt16(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts SInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.11 WriteSInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26004
- 182.1.12 WriteSInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26004

182.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.size by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26005
- 182.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0) 26006

182.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26005
- 182.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0) 26006

182.1.16 WriteUInt16(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Wrapper around WriteUInt8 that accepts UInt16 audio samples.
Note: internally libltc uses 8 bit only.

Data: Buffer with data
size: number of samples to parse. Calculated from data.lenb by dividing by 2.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.14 WriteUInt16(data as MemoryBlock, posinfo as UInt64 = 0) 26005
- 182.1.15 WriteUInt16(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26005

182.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse. Taken from data.size.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26006
- 182.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0) 26007

182.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0) 26006
- 182.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0) 26007

182.1.19 WriteUInt8(data as String, posinfo as UInt64 = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Feed the LTC decoder with new audio samples.
Notes:

Parse raw audio for LTC timestamps. Once a complete LTC frame has been decoded it is pushed into a queue (see Read function).

Data: Buffer with data
Count: number of samples to parse. Taken from data.lenb.
posinfo: (optional, recommended) sample-offset in the audio-stream.
See also:

- 182.1.17 WriteUInt8(data as MemoryBlock, posinfo as UInt64 = 0) 26006
- 182.1.18 WriteUInt8(data as Ptr, Count as Integer, posinfo as UInt64 = 0) 26006

182.1.20 Properties

182.1.21 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.1.22 QueueLength as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Count number of LTC frames currently in the queue.
Notes:

Returns number of queued frames.
(Read only property)

182.2 class LTCEncoderMBS

182.2.1 class LTCEncoderMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The timecode encoder.

182.2.2 Methods

182.2.3 Constructor(SampleRate as Double, FPS as Double, TVStandard as Integer, Flags as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Allocate and initialize LTC audio encoder.
Notes:

EncoderReinit internally see, see notes there.

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)
TVStandard: the TV standard to use for Binary Group Flag bit position
flags: binary combination of flags like LTC_NO_PARITY and LTC_BGF_DONT_TOUCH.

182.2.4 CopyBuffer as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the accumulated encoded audio to the given sample-buffer and flush the internal buffer.
Notes:

Allocates new MemoryBlock and puts bytes inside.
Returns nil if there is no data.

182.2.5 CopyBufferString as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Copy the accumulated encoded audio to the given sample-buffer and flush the internal buffer.
Notes: Allocates new memory for string and puts bytes inside.

182.2.6 DecrementTimecode as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Move the encoder to the previous timecode frame.
Notes: This is useful for encoding reverse LTC.

182.2.7 Destructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The destructor.

182.2.8 EncodeByte(byte as UInt8, speed as Double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Generate LTC audio for given byte of the LTC-frame and place it into the internal buffer.
Notes:

see also GetBuffer and BufferPtr

LTC has 10 bytes per frame: 0 <= bytecnt <10 use TimeCode property to set the current frame before Encoding.

The default output signal is @ -3dBFS (38..218 at 8 bit unsigned). see also SetVolume

if speed is <0, the bits are encoded in reverse.
slowdown >10.0 requires custom buffer sizes; see \ref SetBufferSize.

byte: byte of the LTC-frame to encode 0..9
speed: vari-speed, <1.0 faster, >1.0 slower ; must be != 0

Returns true on success, -1 if byte is invalid or buffer overflow (speed >10.0)

182.2.9 EncodeFrame

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encode a full LTC frame at fixed speed.
Notes:

This is equivalent to calling EncodeByte 10 times for bytes 0..9 with speed 1.0.

Note: The internal buffer must be empty before calling this function.
Otherwise it may overflow. This is usually the case if it is read with GetBuffer after calling this function.

The default internal buffersize is exactly one full LTC frame at speed 1.0.
See also:

- 182.2.10 EncodeFrame(Speed as Double) 26011

182.2.10 EncodeFrame(Speed as Double)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Encode a full LTC frame at fixed speed.
Notes:

This is equivalent to calling EncodeByte 10 times for bytes 0..9 with given speed.
Speed should be around 1.0 for normal speed.

Note: The internal buffer must be empty before calling this function.
Otherwise it may overflow. This is usually the case if it is read with GetBuffer after calling this function.

The default internal buffersize is exactly one full LTC frame at speed 1.0.
See also:

- 182.2.9 EncodeFrame 26010

182.2.11 EncoderReinit(SampleRate as Double, FPS as Double, TVStandard as Integer, Flags as Integer) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Change the encoder settings without re-allocating any library internal data structure (realtime safe).
Notes:

Changing the fps and or sample-rate implies a buffer flush, and biphase state reset.

This call will fail if the internal buffer is too small to hold one full LTC frame. Use SetBufferSize to prepare an internal buffer large enough to accommodate all SampleRate, fps combinations that you would like to re-init to.

The LTC frame payload data is not modified by this call, however, the flag-bits of the LTC-Frame are updated:
If fps equals to 29.97 or 30000.0/1001.0, the LTCFrame's 'dfbit' bit is set to 1 to indicate drop-frame timecode.

Unless the LTC_BGF_DONT_TOUCH flag is set the BGF1 is set or cleared depending on LTC_TC_CLOCK and BGF0,2 according to LTC_USE_DATE and the given standard.
ColFrame is cleared and the parity recomputed (unless LTC_NO_PARITY is given).

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)
TVStandard: the TV standard to use for Binary Group Flag bit position
Flags: binary combination of flags.

Returns 0 on success.

182.2.12 FlushBuffer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset the write-pointer of the encoder-buffer.

182.2.13 GetBuffer(byref size as Integer, flush as boolean) as Ptr

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a pointer to the accumulated encoded audio-data.
Notes:

size: if set, the number of valid bytes in the buffer is stored in the buffer.
Flush: call FlushBuffer - reset the buffer write-pointer.

Returns pointer to encoder-buffer.

182.2.14 IncrementTimecode as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Move the encoder to the next timecode frame.

182.2.15 Reset

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Resets ecoder state.
Notes: Flushes buffer, reset biphase state.

182.2.16 SetBufferSize(SampleRate as Double, FPS as Double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Configure a custom size for the internal buffer.
Notes:

This is needed if you are planning to call EncoderReinit or if you want to keep more than one LTC frame's worth of data in the library's internal buffer.

The buffer-size is (1 + sample_rate / fps) bytes. resizing the internal buffer will flush all existing data in it - alike \ref FlushBuffer.

SampleRate: audio sample rate (eg. 48000)
FPS: video-frames per second (e.g. 25.0)

Returns 0 on success, -1 if allocation fails (which makes the encoder unusable, call discard the object or realloc the buffer)

182.2.17 SetFilter(RiseTime as Double)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set encoder signal rise-time / signal filtering.
Notes:

LTC signal should have a rise time of 40us +/- 10 us. by default the encoder honors this and low-pass filters the output depending on the sample-rate.

If you want a perfect square wave, set 'rise_time' to 0.

Note EncoderReinit resets the filter-time-constant to use the default 40us for the given sample-rate, overriding any value previously set with SetFilter.

RiseTime the signal rise-time in us (10^(-6) sec), set to 0 for perfect square wave, default 40.0

182.2.18 SetVolume(dBFS as double) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the volume of the generated LTC signal.
Notes:

Typically LTC is sent at 0dBu ; in EBU callibrated systems that corresponds to -18dBFS. - by default libltc creates -3dBFS

since libltc generated 8bit audio-data, the minimum dBFS is about -42dB which corresponds to 1 bit.

0dB corresponds to a signal range of 127
1..255 with 128 at the center.

dBFS: the volume in dB full-scale (<= 0.0)

Returns true on success, false if the value was out of range

182.2.19 Properties

182.2.20 BufferPtr as Ptr

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Retrieve a pointer to the accumulated encoded audio-data.
Notes: (Read only property)

182.2.21 BufferSize as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Query the length of the internal buffer.
Notes:

It is allocated to hold audio-frames for exactly one LTC frame for the given sample-rate and frame-rate. ie. (1 + sample-rate / fps) bytes

Note this returns the total size of the buffer, not the used/free part. See also BufferPtr.

Returns size of the allocated internal buffer.
(Read only property)

182.2.22 Filter as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current filter setting.
Notes: (Read and Write property)

182.2.23 Flags as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The flags used to create the encoder.
Notes: (Read only property)

182.2.24 FPS as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The FPS setting.
Notes: (Read only property)

182.2.25 Frame as LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Low-level access to the internal LTCFrame data.
Notes:

Note: be careful to about dfbit flag in LTCFrameMBS object, the encoder sets this [only] upon initialization.
(Read and Write property)

182.2.26 Handle as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

182.2.27 SampleRate as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The current sample rate.
Notes: (Read only property)

182.2.28 Standard as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The TV Standard.
Notes: (Read only property)

182.2.29 TimeCode as LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set the SMPTETimecode for the encoder LTC-frame.
Notes:

The next call to EncodeByte or EncodeFrame will encode this time to LTC audio-samples.
Internally this call uses TimeToFrame because the LTCEncoder operates on LTCframes only.
(Read and Write property)

182.2.30 UserBits as UInt32

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set a 32-bits unsigned integer from the user-data bits.
Notes:

It is written LSB first continiously int the eight user fields.
(Read and Write property)

182.3 class LTCFrameExtMBS

182.3.1 class LTCFrameExtMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Extended LTC frame - includes audio-sample position offsets, volume, etc.
Notes:

Note: For TV systems, the sample in the LTC audio data stream where the LTC Frame starts is not necessarily at the same time as the video-frame which is described by the LTC Frame.

offStart denotes the time of the first transition of bit 0 in the LTC frame.

For 525/60 Television systems, the first transition shall occur at the beginning of line 5 of the frame with which it is associated. The tolerance is ± 1.5 lines.

For 625/50 systems, the first transition shall occur at the beginning of line 2 ± 1.5 lines of the frame with which it is associated.

Only for 1125/60 systems, the first transition occurs exactly at the vertical sync timing reference of the frame. ± 1 line.
Subclass of the LTCFrameMBS class.

182.3.2 Properties

182.3.3 OffEnd as Int64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: OffEnd the sample in the stream corresponding to the end of the LTC frame.
Notes: (Read and Write property)

182.3.4 OffStart as Int64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: OffStart the approximate sample in the stream corresponding to the start of the LTC frame.
Notes: (Read and Write property)

182.3.5 Reverse as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: If non-zero, a reverse played LTC frame was detected.
Notes:

Since the frame was reversed, it started at offEnd and finishes as offStart (offEnd >offStart). (Note: in reverse playback the (reversed) sync-word of the next/previous frame is detected, this offset is corrected).
(Read and Write property)

182.3.6 SampleMax as UInt8

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The maximum input sample signal for this frame (0..255).
Notes: (Read and Write property)

182.3.7 SampleMin as UInt8

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minimum input sample signal for this frame (0..255).
Notes: (Read and Write property)

182.3.8 Volume as Double

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The volume of the input signal in dbFS.
Notes: (Read and Write property)

182.3.9 biphaseTics(index as Integer) as Single

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Detailed timing info.
Notes:

Phase of the LTC signal; the time between each bit in the LTC-frame in audio-frames. Summing all 80 values in the array will yield audio-frames/LTC-frame = (offEnd - offStart + 1).
Range of index is 0 to 79.

(Read and Write computed property)

182.4 class LTCFrameMBS

182.4.1 class LTCFrameMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor for a new empty frame.

182.4.2 Methods

182.4.3 Clone as LTCFrameExtMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Clones the frame.
Notes:

Returns always LTCFrameExtMBS object.
Extended fields may not be set if LTCFrameMBS is cloned.

182.4.4 Constructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new frame.
Notes: Internally calls Reset to set soem default values.
See also:

- 182.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0) 26020
- 182.4.6 Constructor(other as LTCFrameMBS) 26021

182.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translate SMPTETimecode into its binary LTC representation and set the LTC frame's parity bit accordingly.
Notes:

InputTimecode: timecode input
TVStandard: the TV standard to use for parity bit assignment

Flags: flags binary combination of flag values - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.
If LTC_USE_DATE is given, user-fields in LTCFrame will be set from the date in SMPTETimecode, otherwise the user-bits are not modified. All non-timecode fields remain untouched - except for the parity bit unless LTC_NO_PARITY is given.
See also:

- 182.4.4 Constructor 26020
- 182.4.6 Constructor(other as LTCFrameMBS) 26021

182.4.6 Constructor(other as LTCFrameMBS)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Initializes a frame with copying data from existing frame.
See also:

- 182.4.4 Constructor 26020
- 182.4.5 Constructor(InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0) 26020

182.4.7 FrameAlignment(samples_per_frame as Double, TVStandard as Integer) as UInt64

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: LTCFrame sample alignment offset.
Notes:

There is a relative offset of the LTC-Frame start and the TV-frame.
The first bit of a LTC frame corresponds to a specific line in the actual video frame. When decoding this offset needs to be subtracted from the LTC-frame's audio-sample-time to match the TV-frame's start position.

For film frames or HDV the offset is zero.

samples_per_frame: audio-samples per timecode-frame (eg. 1920 = 48000/25)
TVStandard: the TV standard

Returns the offset in samples.

182.4.8 FrameDecrement(fps as integer, TVStandard as integer, Flags as integer = 0) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Decrement the timecode by one Frame (1/framerate seconds) and set the Frame's parity bit accordingly (see SetParity)
Notes:

fps: integer framerate (for drop-frame-timecode set frame->dfbit and round-up the fps).
TVStandard: the TV standard to use for parity bit assignment. If set to 1 the 25fps standard is enabled and LTC Frame bit 59 instead of 27 is used for the parity. It only has only has effect flag bit 4 (LTC_NO_PARITY) is cleared.
Flags: binary combination of flags - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.

If the bit 0 is set (1) interpret user-data as date and decrement date if timecode wraps at 24h.
(Note: leap-years are taken into account, but since the year is two-digit only, the 100,400yr rules are ignored. "00" is assumed to be year 2000 which was a leap year.) bit 3 (8) indicates that the parity bit should not be touched.

Returns true if timecode was wrapped around at 23:59:59:ff, false otherwise.

182.4.9 FrameIncrement(fps as integer, TVStandard as integer, Flags as integer = 0) as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Increment the timecode by one Frame (1/framerate seconds) and set the Frame's parity bit accordingly (see SetParity)
Notes:

fps integer framerate (for drop-frame-timecode set frame->dfbit and round-up the fps).
TVStandard: the TV standard to use for parity bit assignment. If set to 1 the 25fps standard is enabled and LTC Frame bit 59 instead of 27 is used for the parity. It only has only has effect flag bit 4 (LTC_NO_PARITY) is cleared.
flags: binary combination of LTC_BG_FLAGS - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.

If the bit 0 (1) is set (1) interpret user-data as date and increment date if timecode wraps after 24h.
(Note: leap-years are taken into account, but since the year is two-digit only, the 100,400yr rules are ignored. "00" is assumed to be year 2000 which was a leap year.)

Returns true if timecode was wrapped around after 23:59:59:ff, false otherwise

182.4.10 ParseBCGFlags(TVStandard as Integer) as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Parse Binary Group Flags into standard independent format.
Notes:

bit 0 (1) - BGF 0,
bit 1 (2) - BGF 1,
bit 2 (4) - BGF 2

TVStandard: the TV standard to use – see LTCFrameMBS class for BGF assignment.
Returns LTC Binary Group Flags.

182.4.11 Reset

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Reset all values of a LTC FRAME to zero, except for the sync-word (0x3FFD) at the end.
Notes:

The sync word is set according to architecture (big/little endian).
Also set the Frame's parity bit accordingly (see SetParity)

182.4.12 SetParity(TVStandard as Integer)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Set the parity of the LTC frame.
Notes:

Bi-Phase Mark Phase Correction bit (bit 27 - or 59) may be set or cleared so that that every 80-bit word contains an even number of zeroes. This means that the phase in every Sync Word will be the same.

This is merely cosmetic; the motivation to keep the polarity of the waveform constant is to make finding the Sync Word visibly (on a scope) easier.

There is usually no need to call this function directly. The encoder utility functions TimeToFrame, FrameIncrement and FrameDecrement include a call to it.

Standard: If 1 (aka LTC_TV_625_50) , the 25fps mode (bit 59 - aka binary_group_flag_bit2) is used, otherwise the 30fps, 24fps mode (bit 27 – biphase_mark_phase_correction) is set or cleared.

182.4.13 Properties

182.4.14 BinaryGroupFlagBit0 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicate user-data char encoding, see table above - bit 43.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

182.4.15 BinaryGroupFlagBit1 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicate timecode is local time wall-clock, see table above - bit 58.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

182.4.16 BinaryGroupFlagBit2 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicate user-data char encoding (or parity with 25fps), see table above - bit 59.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

182.4.17 BiphaseMarkPhaseCorrection as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The Bi-Phase Mark Phase Correction Bit.
Notes:

The Bi-Phase Mark Phase Correction Bit (Bit 27 or 59) may be set or cleared so that that every 80-bit word contains an even number of zeroes. This means that the phase of the pulse train in every Sync Word will be the same.
(Read and Write property)

182.4.18 ColFrame as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Colour-frame: timecode intentionally synchronized to a colour TV field sequence
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

182.4.19 Data as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The raw frame data as memoryblock.
Notes:

When setting you can either pass 368 or 364 bytes (LTCFrameExt) or 10 bytes (LTCFrame)
(Read and Write property)

182.4.20 DFBit as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: indicated drop-frame timecode.
Notes:

1 bit value, so only 0 or 1.
(Read and Write property)

182.4.21 Frames as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set frames field.
Notes:

Computed by the MBS Plugin for you as a convenience from both frames_tens and frames_unit.
(Read and Write property)

182.4.22 FrameTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE framenumber BCD tens 0..3.
Notes: (Read and Write property)

182.4.23 FrameUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE framenumber BCD unit 0..9.
Notes: (Read and Write property)

182.4.24 Hours as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set hours field.
Notes:

Computed by the MBS Plugin for you as a convenience from both hours_tens and hours_unit.
(Read and Write property)

182.4.25 HoursTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE hours BCD tens 0..2.
Notes: (Read and Write property)

182.4.26 HoursUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE hours BCD unit 0..9.
Notes: (Read and Write property)

182.4.27 Mins as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set minutes field.
Notes:

Computed by the MBS Plugin for you as a convenience from both minutes_tens and minutes_unit.
(Read and Write property)

182.4.28 MinsTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE minutes BCD tens 0..6.
Notes: (Read and Write property)

182.4.29 MinsUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE minutes BCD unit 0..9.
Notes: (Read and Write property)

182.4.30 Secs as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set seconds field.
Notes:

Computed by the MBS Plugin for you as a convenience from both seconds_tens and seconds_unit.
(Read and Write property)

182.4.31 SecsTens as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE seconds BCD tens 0..6
Notes: (Read and Write property)

182.4.32 SecsUnits as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: SMPTE seconds BCD unit 0..9
Notes: (Read and Write property)

182.4.33 SyncWord as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The sync word file.
Notes: (Read and Write property)

182.4.34 TimeCode as LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert binary LTCFrame into a SMPTETimecode.
Notes: (Read only property)

182.4.35 User1 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.36 User2 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.37 User3 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.38 User4 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.39 User5 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.40 User6 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.41 User7 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.42 User8 as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: User defined bits.
Notes:

You can set them as you like, but be aware you only have 4 bits here (value 0 to 15).
Usually set as a block of 32-bit using UserBits property in encoder.
(Read and Write property)

182.4.43 UserBits as UInt32

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Queries all user bits as one 32-bit value.
Notes: (Read only property)

182.5 module LTCMBS

182.5.1 module LTCMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The central module for global LTC methods.
Notes:

This plugin part can load libltc, a library to encode and decode linear timecode.

Linear (or Longitudinal) Timecode (LTC) is an encoding of timecode data as a Manchester-Biphase encoded audio signal.
The audio signal is commonly recorded on a VTR track or other storage media.

libltc facilitates decoding and encoding of LTC from/to timecode, including SMPTE date support.

see
https://github.com/x42/libltc

182.5.2 Blog Entries

182.5.6 Methods

182.5.7 FrameToTime(OutputTimecode as LTCSMPTETimecodeMBS, InputFrame as LTCFrameMBS, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Convert binary LTCFrame into a SMPTETimecode.
Notes:

Binary combination of flags - here only LTC_USE_DATE is relevant.
if LTC_USE_DATE is set, the user-fields in LTCFrame will be parsed into the date variable of SMPTETimecode. otherwise the date information in the SMPTETimecode is set to zero.

182.5.8 LoadLibrary(file as folderitem) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads LTC library from a file.
Notes:

Please get a libltc.dll/so/dylib for your platform and tell the plugin where to load it here.

Returns true on success and false on failure.
See LibraryLoadErrorMessage and LibraryLoadError in case of error.
See also:

- 182.5.9 LoadLibrary(path as string) as boolean 26032

182.5.9 LoadLibrary(path as string) as boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Loads LTC library from a file path.
Notes:

Please get a libltc.dll/so/dylib for your platform and tell the plugin where to load it here.

Returns true on success and false on failure.
See LibraryLoadErrorMessage and LibraryLoadError in case of error.
See also:

- 182.5.8 LoadLibrary(file as folderitem) as boolean 26032

182.5.10 TimeToFrame(OutputFrame as LTCFrameMBS, InputTimecode as LTCSMPTETimecodeMBS, TVStandard as Integer, Flags as Integer = 0)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Translate SMPTETimecode into its binary LTC representation and set the LTC frame's parity bit accordingly.
Notes:

OutputFrame: the frame to be set
InputTimecode: timecode input
TVStandard: the TV standard to use for parity bit assignment
Flags: flags binary combination of flag values - here only LTC_USE_DATE and LTC_NO_PARITY are relevant.
If LTC_USE_DATE is given, user-fields in LTCFrame will be set from the date in SMPTETimecode, otherwise the user-bits are not modified. All non-timecode fields remain untouched - except for the parity bit unless LTC_NO_PARITY is given.

182.5.11 Properties

182.5.12 LibraryLoaded as Boolean

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Whether the library is loaded.
Notes: (Read only property)

182.5.13 LibraryLoadError as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The load error code.
Notes: (Read only property)

182.5.14 LibraryLoadErrorMessage as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The load error message.
Notes: (Read only property)

182.5.15 Constants

182.5.16 LTC_BGF_DONT_TOUCH = 4

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the encoder flags.
Notes: Encoder init or re-init does not touch the BGF bits (initial values after initialization is zero)

182.5.17 LTC_FRAME_BIT_COUNT = 80

MBS Tools Plugin, Plugin Version: 20.1.

Function: The bit count for a raw 80 bit LTC frame

182.5.18 LTC_NO_PARITY = 8

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the encoder flags.
Notes: Parity bit is left untouched when setting or in/decrementing the encoder frame-number

182.5.19 LTC_TC_CLOCK = 2

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the frame <>timecode conversion flags.
Notes: The Timecode is wall-clock aka freerun. This also sets BGF1 (unless LTC_BGF_DONT_TOUCH is given)

182.5.20 LTC_TV_1125_60 = 2

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 30fps

182.5.21 LTC_TV_525_60 = 0

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 30fps

182.5.22 LTC_TV_625_50 = 1

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 25fps

182.5.23 LTC_TV_FILM_24 = 3

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the TV standards, which defines the assignment of the binary-group-flag bits.
Notes: 24fps

182.5.24 LTC_USE_DATE = 1

MBS Tools Plugin, Plugin Version: 20.1.

Function: One of the frame <>timecode conversion flags.
Notes: LTCFrame <>SMPTETimecode converter and LTCFrame increment/decrement use date, also set BGF2 to '1' when encoder is initialized or re-initialized (unless LTC_BGF_DONT_TOUCH is given)

182.6 class LTCSMPTETimecodeMBS

182.6.1 class LTCSMPTETimecodeMBS

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The class for a human readable time representation, decimal values.

182.6.2 Methods

182.6.3 Constructor

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The constructor to create a new empty timecode.
See also:

- 182.6.4 Constructor(other as LTCSMPTETimecodeMBS) 26036

182.6.4 Constructor(other as LTCSMPTETimecodeMBS)

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Constructors a new time object with copying given values.
See also:

- 182.6.3 Constructor 26036

182.6.5 Properties

182.6.6 Data as MemoryBlock

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: Gets or sets data of this smtp timecode with a memoryblock.
Notes: (Read and Write property)

182.6.7 Date as Date

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get or set time stamp via date.
Notes:

When setting we take the year mod 100 to fill years field and frame field is set to zero.

When querying we return year + 2000 if year <67 and otherwise year + 1900, so we can have a year range of 1967 to 2066.
(Read and Write property)

182.6.8 DateTime as DateTime

MBS Tools Plugin, Plugin Version: 20.5, Platforms: macOS, Linux, Windows, Targets: All.

Function: Get or set time stamp via date.
Notes:

When setting we take the year mod 100 to fill years field and frame field is set to zero.

When querying we return year + 2000 if year <67 and otherwise year + 1900, so we can have a year range of 1967 to 2066.
(Read and Write property)

182.6.9 Days as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The days field.
Notes:

day of month 1..31
(Read and Write property)

182.6.10 Frame as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The frame field.
Notes:

sub-second frame 0..(FPS - 1)
(Read and Write property)

182.6.11 Hours as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The hours field.
Notes:

hour 0..23
(Read and Write property)

182.6.12 Mins as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The minutes field.
Notes:

minute 0..60
(Read and Write property)

182.6.13 Months as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The month field.
Notes:

valid months are 1..12
(Read and Write property)

182.6.14 Secs as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The seconds field.
Notes:

second 0..60
(Read and Write property)

182.6.15 TimeZone as String

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The time zone field.
Notes:

the timezone is maximum 5 characters: "+HHMM" textual representation
(Read and Write property)

182.6.16 Years as Integer

MBS Tools Plugin, Plugin Version: 20.1, Platforms: macOS, Linux, Windows, Targets: All.

Function: The years field.
Notes:

LTC-date uses 2-digit year 00.99.
(Read and Write property)

Chapter 183

TimeZone

183.1 class TimeZoneMBS

183.1.1 class TimeZoneMBS

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Allows you to access information about the current time zone.
Example:

```
dim t as new TimeZoneMBS
MsgBox str(t.GmtDeltaTotalseconds)
```

Deprecated: This item is deprecated and should no longer be used. You can use TimeZone instead. **Notes:** on Mac OS Cocoa applications, better use newer NSTimezoneMBS class.

183.1.2 Blog Entries

183.1.3 Blog Entries

- MBS Xojo Plugins, version 20.2pr7
- MBS Xojo / Real Studio Plugins, version 14.2pr5

183.1.4 Properties

183.1.5 DaylightName as String

MBS Util Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A description for daylight saving time.
Example:

```
dim t as new TimeZoneMBS
MsgBox t.DaylightName
```

Notes:

For example, "PDT" could indicate Pacific Daylight Time. This string can be empty.
e.g. "Mitteleuropäische Sommerzeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

183.1.6 GmtDeltaHours as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in hours.
Example:

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

Notes:

On Windows this information is not available.
(Read only property)

183.1.7 GmtDeltaMinutes as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in minutes.

Example:

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

Notes:

On Windows this information is not available.
(Read only property)

183.1.8 GmtDeltaSeconds as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in seconds.
Example:

```
dim t as TimeZoneMBS

t=new TimeZoneMBS

msgbox format(t.GmtDeltaHours,"+00")+ ":" +format(t.GmtDeltaminutes,"00")+ ":" +format(t.GmtDeltaseconds,"00")
```

Notes: (Read only property)

183.1.9 GmtDeltaTotalseconds as Integer

MBS Util Plugin, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: Returns the GMT offset in seconds.
Example:

```
dim t as new TimeZoneMBS

MsgBox str(t.GmtDeltaTotalseconds)
```

Notes: (Read only property)

183.1.10 Latitude as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the latitude of the current position on earth.
Example:

```
dim longdeg,longmin as Integer
dim t as TimeZoneMBS

t=new TimeZoneMBS

longdeg=floor(t.longitude*90)
longmin=floor((t.longitude*90-longdeg)*60)

statictext1.text=format(longdeg,"0")+"°"
statictext2.text=format(longmin,"0")+"'"
```

Notes:

On Windows this information is not available.
(Read only property)

183.1.11 Longitude as Double

MBS Util Plugin, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the longitude of the current position on earth.
Example:

```
dim latdeg,latmin as Integer
dim t as TimeZoneMBS

t=new TimeZoneMBS

latdeg=floor(t.latitude*90)
latmin=floor((t.latitude*90-latdeg)*60)

statictext1.text=format(latdeg,"0")+"°"
statictext2.text=format(latmin,"0")+"'"
```

Notes:

On Windows this information is not available.
(Read only property)

183.1.12 StandardName as String

MBS Util Plugin, Plugin Version: 14.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A description for standard time.
Example:

```
dim t as new TimeZoneMBS
MsgBox t.StandardName
```

Notes:

For example, "EST" could indicate Eastern Standard Time. This string can be empty.
e.g. "Mitteleuropäische Zeit"
On Mac, please use NSTimeZoneMBS class.
(Read only property)

Chapter 184

TouchBar

184.1 class LAContextMBS

184.1.1 class LAContextMBS

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: The class for local authentication via password or TouchID.

- Presentation from London conference about MBS Plugins.

184.1.8 Methods

184.1.9 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Whether the class is available.
Notes: Returns true on OS X 10.10 and newer in 64-bit application.

184.1.10 canEvaluatePolicy(Policy as Integer, byref Error as NSErrorMBS) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Determines if a particular policy can be evaluated.
Example:

```
try
dim e as NSErrorMBS

if lc.canEvaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, e) then
List.AddRow "Can authenticate with biometrics."
else
List.AddRow "Can't authenticate with biometrics."
end if
if e <>nil then
```

```
List.AddRow "Error: "+e.LocalizedDescription
end if

catch ex as NSExceptionMBS

List.AddRow "Exception: "+ex.Message

end try
```

Notes:

Policies can have certain requirements which, when not satisfied, would always cause the policy evaluation to fail. Examples can be a passcode set or a fingerprint enrolled with Touch ID. This method allows easy checking for such conditions.

Applications should consume the returned value immediately and avoid relying on it for an extensive period of time. At least, it is guaranteed to stay valid until the application enters background.

policy: Policy for which the preflight check should be run.

error: contains error information if policy evaluation is not possible.

Returns true if the policy can be evaluated, false otherwise.

184.1.11 Constructor

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: The constructor.

184.1.12 evaluatePolicy(Policy as Integer, localizedReason as String, Tag as Variant = nil)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Evaluates the specified policy.
Example:

```
dim lc as LAContextMBS // your context

try
```

```
lc.evaluatePolicy(lc.PolicyDeviceOwnerAuthenticationWithBiometrics, "We need to test.")

catch ex as NSExceptionMBS

List.AddRow "Exception: "+ex.Message

end try
```

Notes:

Policy evaluation may involve prompting user for various kinds of interaction or authentication. Actual behavior is dependent on evaluated policy, device type, and can be affected by installed configuration profiles.

Be sure to keep a strong reference to the context while the evaluation is in progress. Otherwise, an evaluation would be canceled when the context is being deallocated.

The method does not block. Instead the event is called asynchronously when evaluation finishes.

Implications of successful policy evaluation are policy specific. In general, this
operation is not idempotent. Policy evaluation may fail for various reasons, including
user cancel, system cancel and others, see error codes.

policy: Policy to be evaluated.
localizedReason: Application reason for authentication. This string must be provided in correct localization and should be short and clear. It will be eventually displayed in the authentication dialog subtitle. A name of the calling application will be already displayed in title, so it should not be duplicated here.

184.1.13 invalidate

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Invalidates the context.
Notes:

The context is invalidated automatically when it is (auto)released. This method allows invalidating it manually while it is still in scope.

Invalidation terminates any existing policy evaluation and the respective call will fail with LAErrorAppCancel. After the context has been invalidated, it can not be used for policy evaluation and an attempt to do so will fail with LAErrorInvalidContext.

Invalidating a context that has been already invalidated has no effect.

184.1.14 isCredentialSet(CredentialType as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Reveals if credential was set with this context.
Notes:

type: Type of credential we are asking for.

Return true on success, false otherwise.

184.1.15 setCredential(credential as MemoryBlock, Type as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Sets a credential to this context.
Notes:

Some policies allow to bind application-provided credential with them.
This method allows credential to be passed to the right context.

credential: Credential to be used with subsequent calls. Setting this parameter to nil will remove any existing credential of the specified type.

Type: Type of the provided credential.

Return true if the credential was set successfully, false otherwise.

184.1.16 TouchIDAuthenticationMaximumAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: The maximum value for LAContext touchIDAuthenticationAllowableReuseDuration property.
Notes: Returns -1 if value is not available.

184.1.17 Properties

184.1.18 biometryType as Integer

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: All.

Function: Indicates the type of the biometry supported by the device.
Notes:

This property is set when canEvaluatePolicy has been called for a biometric policy.
The default value is BiometryTypeNone.
(Read only property)

184.1.19 evaluatedPolicyDomainState as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Contains policy domain state.
Notes:

This property is set only when evaluatePolicy is called and succesful Touch ID authentication was performed, or when canEvaluatePolicy succeeds for a biometric policy. It stays nil for all other cases. If finger database was modified (fingers were removed or added), evaluatedPolicyDomainState data will change. Nature of such database changes cannot be determined but comparing data of evaluatedPolicyDomainState after different evaluatePolicy will reveal the fact database was changed between calls.
(Read only property)

184.1.20 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: The internal object handle.
Notes: (Read and Write property)

184.1.21 interactionNotAllowed as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Allows running authentication in non-interactive mode.
Notes:

If the context is used in a keychain query by the means of kSecUseAuthenticationContext, then setting this property to YES has the same effect as passing kSecUseNoAuthenticationUI in the query, i.e. the keychain

call will eventually fail with errSecInteractionNotAllowed instead of displaying the authentication UI.

If this property is used with a LocalAuthentication evaluation, it will eventually fail with kErrorNotInteractive instead of displaying the authentication UI.
(Read and Write property)

184.1.22 localizedCancelTitle as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Cancel button title.
Notes:

Allows cancel button title customization. A default title "Cancel" is used when this property is set to empty string.
Requires MacOS 10.13 or newer.
(Read and Write property)

184.1.23 localizedFallbackTitle as String

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Fallback button title.
Example:

```
dim lc as new MyLAContextMBS
lc.localizedFallbackTitle = "Just a test"
```

Notes:

Allows fallback button title customization. A default title "Enter Password" is used when this property is left nil. If set to empty string, the button will be hidden.
(Read and Write property)

184.1.24 localizedReason as String

MBS Mac64bit Plugin, Plugin Version: 18.4, Platform: macOS, Targets: All.

Function: Allows setting the default localized authentication reason on context.
Notes:

A localized string from this property is displayed in the authentication UI if the caller didn't specify its

own authentication reason (e.g. a keychain operation with kSecUseAuthenticationContext). This property is ignored if the authentication reason was provided by caller.
Requires MacOS 10.13 or newer.
(Read and Write property)

184.1.25 touchIDAuthenticationAllowableReuseDuration as Double

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: All.

Function: Time interval for accepting a successful Touch ID unlock from the past.
Notes:

This property can be set with a time interval in seconds. If the device was successfully unlocked by Touch ID within this time interval, then Touch ID authentication on this context will succeed automatically and the reply block will be called without prompting user for Touch ID.

The default value is 0, meaning that no previous TouchID authentication can be reused.

The maximum supported interval is 5 minutes and setting the value beyond 5 minutes does not increase the accepted interval.
(Read and Write property)

184.1.26 Events

184.1.27 evaluatePolicyResult(Success as Boolean, error as NSErrorMBS, Policy as Integer, localizedReason as String, tag as Variant)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: The event called for the result of evaluatePolicy method.
Notes:

success: Reply parameter that is true if the policy has been evaluated successfully or false if the evaluation failed.

error: Reply parameter that is nil if the policy has been evaluated successfully, or it contains error information about the evaluation failure.

Typical error codes returned by this call are:
ErrorUserFallback if user tapped the fallback button
ErrorUserCancel if user has tapped the Cancel button
ErrorSystemCancel if some system event interrupted the evaluation (e.g. Home button pressed).

184.1.28 Constants

184.1.29 BiometryTypeFaceID = 2

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the biometry type constants.
Notes: The device supports Face ID.

184.1.30 BiometryTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the biometry type constants.
Notes: The device does not support biometry.

184.1.31 BiometryTypeTouchID = 1

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the biometry type constants.
Notes: The device supports Touch ID.

184.1.32 CredentialTypeApplicationPassword = 0

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One oft he credential types.
Notes: The credential type for an application password.

184.1.33 CredentialTypeSmartCardPIN = 1

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One oft he credential types.
Notes:

Smart card PIN provided by application.

If not set, LocalAuthentication will ask users for the smart card PIN when necessary. Applications can provide the PIN using setCredential method. In such case, LocalAuthentication will not show the smart

card PIN user interface.
When entered from the LocalAuthentication user interface, the PIN is stored as UTF-8 encoded string.

184.1.34 kErrorAppCancel = -9

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled by application (e.g. invalidate was called while authentication was in progress).

184.1.35 kErrorAuthenticationFailed = -1

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was not successful, because user failed to provide valid credentials.

184.1.36 kErrorBiometryLockout = -8

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes.
Notes: Authentication was not successful, because there were too many failed Biometry attempts and Biometry is now locked. Passcode is required to unlock Biometry, e.g. evaluating PolicyDeviceOwner-AuthenticationWithBiometrics will ask for passcode as a prerequisite.

184.1.37 kErrorBiometryNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes.
Notes: Authentication could not start, because Biometry is not available on the device.

184.1.38 kErrorBiometryNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 18.4.

Function: One of the error codes.
Notes: Authentication could not start, because Biometry has no enrolled fingers.

184.1.39 kErrorInvalidContext = -10

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: LAContext passed to this call has been previously invalidated.

184.1.40 kErrorPasscodeNotSet = -5

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication could not start, because passcode is not set on the device.

184.1.41 kErrorSystemCancel = -4

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled by system (e.g. another application went to foreground).

184.1.42 kErrorTouchIDLockout = -8

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was not successful, because there were too many failed Touch ID attempts and Touch ID is now locked. Passcode is required to unlock Touch ID, e.g. evaluating PolicyDeviceOwnerAuthenticationWithBiometrics will ask for passcode as a prerequisite.

184.1.43 kErrorTouchIDNotAvailable = -6

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication could not start, because Touch ID is not available on the device.

184.1.44 kErrorTouchIDNotEnrolled = -7

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication could not start, because Touch ID has no enrolled fingers.

184.1.45 kErrorUserCancel = -2

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled by user (e.g. tapped Cancel button).

184.1.46 kErrorUserFallback = -3

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the error codes.
Notes: Authentication was canceled, because the user tapped the fallback button (Enter Password).

184.1.47 kLAErrorDomain = "com.apple.LocalAuthentication"

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: The error domain for Local Authentication.

184.1.48 PolicyDeviceOwnerAuthentication = 2

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the policy constants.
Notes:

Device owner is going to be authenticated by biometry or user password.

Touch ID or user password authentication is required. If Touch ID is not available, not enrolled or locked out, then the user is asked for password right away.

Touch ID authentication dialog behaves similarly as the one used by PolicyDeviceOwnerAuthenticationWithBiometrics. However, the "Use Password.." button does not end the authentication. Instead, it switches the

authentication mechanism to user password.

184.1.49 PolicyDeviceOwnerAuthenticationWithBiometrics = 1

MBS Mac64bit Plugin, Plugin Version: 17.0.

Function: One of the policy constants.
Notes: The policy for owner authentication with biometrics.

184.1.50 PolicyDeviceOwnerAuthenticationWithBiometricsOrWatch = 4

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: One of the policy constants.
Notes:

Device owner is going to be authenticated by biometry or Watch.

Watch or biometric authentication is required. If no nearby paired watch device can be found, it behaves as PolicyDeviceOwnerAuthenticationWithBiometrics. Similarly, if biometry is unavailable it behaves as PolicyDeviceOwnerAuthenticationWithWatch.

Watch authentication dialog looks and behaves similarly to biometric variant. When both mechanisms are available, user is asked to use biometry and watch authentication will run in parallel.

184.1.51 PolicyDeviceOwnerAuthenticationWithWatch = 3

MBS Mac64bit Plugin, Plugin Version: 21.0.

Function: Device owner is going to be authenticated by Watch.
Notes:

Watch authentication is required. If no nearby paired watch device can be found, kErrorWatchNotAvailable is returned.

Watch authentication dialog looks and behaves similarly to the biometric variant. Users can confirm authentication by double-clicking the side button on their watch.

184.2 class NSColorPickerTouchBarItemMBS

184.2.1 class NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a color picker.
Notes: Subclass of the NSTouchBarItemMBS class.

184.2.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.2.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.2.5 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.2.6 Methods

184.2.7 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the standard color picker icon that invokes the color picker.
Example:

```
dim t as NSColorPickerTouchBarItemMBS = NSColorPickerTouchBarItemMBS.colorPicker("test")
t.customizationLabel = "Drawing Color"
```

Notes: You may want to use AddHandler method to add an event handler to this object.
See also:

- 184.2.8 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS 26061

184.2.8 colorPicker(identifier as string, buttonImage as NSImageMBS) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the provided image that invokes the color picker.
Notes: You may want to use AddHandler method to add an event handler to this object.
See also:

- 184.2.7 colorPicker(identifier as string) as NSColorPickerTouchBarItemMBS 26060

184.2.9 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes: This instantiates a new touch bar item with the specified initializer.

184.2.10 strokeColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the standard stroke color picker icon that invokes the color picker.
Notes:

You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking stroke colors.

184.2.11 textColorPicker(identifier as string) as NSColorPickerTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Creates a bar item containing a button with the standard text color picker icon that invokes the color picker.
Notes:

You may want to use AddHandler method to add an event handler to this object.
Should be used when the item is used for picking text colors.

184.2.12 Properties

184.2.13 color as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The selected color of the picker.
Notes: (Read and Write property)

184.2.14 colorList as NSColorListMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The color list displayed in the list color picker.
Notes:

Defaults to the standard system color list. Setting a custom color list will disable the additional tints/shades that appear on long-press.
(Read and Write property)

184.2.15 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Example:

```
dim t as new NSColorPickerTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes:

The default value is empty string.
(Read and Write property)

184.2.16 enabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Enables or disabled the color picker.
Notes:

If it is currently being shown in a popover, it will be dismissed.
(Read and Write property)

184.2.17 showsAlpha as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether or not the picker should allow picking a color with non-1.0 alpha.
Notes:

Defaults to "not NSColor.ignoresAlpha".
(Read and Write property)

184.2.18 Events

184.2.19 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The color picker changed color.

184.3 class NSCustomTouchBarItemMBS

184.3.1 class NSCustomTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a custom view.
Notes: Subclass of the NSTouchBarItemMBS class.

184.3.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.3.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.3.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.3.5 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.3.6 Methods

184.3.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "My Test"
```

Notes: This instantiates a new touch bar item with the specified initializer.

184.3.8 Properties

184.3.9 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Example:

```
dim t as new NSCustomTouchBarItemMBS("test")
t.customizationLabel = "Drawing Color"
```

Notes:

The default value is empty string.
(Read and Write property)

184.3.10 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A view to be displayed in the touch bar in the location corresponding to this item.
Notes:

By default, the getter for this property will return this item's view controller's view. If this property is set explicitly, the view controller will be set to nil.
(Read and Write property)

184.3.11 viewController as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A view controller whose view is to be displayed in the touch bar in the location corresponding to this item.
Notes:

By default, this property is nil.
When set, this item's view property will automatically return the view associated with this view controller.
(Read and Write property)

184.4 class NSGroupTouchBarItemMBS

184.4.1 class NSGroupTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a group.
Notes: Subclass of the NSTouchBarItemMBS class.

184.4.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.4.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.4.4 Methods

184.4.5 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as new NSGroupTouchBarItemMBS("test")
t.customizationLabel = "My Group"
```

Notes: This instantiates a new touch bar item with the specified initializer.

184.4.6 groupItemWithIdentifier(identifier as string, items() as NSTouchBarItemMBS) as NSGroupTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Returns an autoreleased NSGroupTouchBarItem with a groupTouchBar built from the given items array.
Example:

```
dim t as NSGroupTouchBarItemMBS = NSGroupTouchBarItemMBS.groupItemWithIdentifier("test")
t.customizationLabel = "My Group"
```

Notes: Customization is not enabled by default when creating a NSGroupTouchBarItem this way.

184.4.7 Properties

184.4.8 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read and Write property)

184.4.9 groupTouchBar as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A touch bar, presented seamlessly as part of the touch bar this item is hosted in.
Notes:

This touch bar may have its own principal item, and can be customized (or not) per the normal touch bar customization rules.
By default this is an empty touch bar that cannot be customized.
(Read and Write property)

184.5 class NSPopoverTouchBarItemMBS

184.5.1 class NSPopoverTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a popover.
Notes: Subclass of the NSTouchBarItemMBS class.

184.5.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.5.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.5.4 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.5.5 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.5.6 Methods

184.5.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Notes: This instantiates a new touch bar item with the specified initializer.

184.5.8 dismissPopover

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: This method will restore the previously visible main touch bar.
Notes: This method can be invoked explicitly to order out a popover if interacting with an item inside it

should close it.

184.5.9 showPopover

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Replaces the main touch bar with this item's popover touch bar.
Notes: If this item is not visible, this method will have no effect. If this item ceases to be visible, the popover touch bar will automatically be ordered out.

184.5.10 Properties

184.5.11 collapsedRepresentation as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The view displayed when the item is in its hosted touch bar.
Notes:

By default, this is an NSButton whose target is this popover item, whose action is showPopover, and whose image and title are bound to this item's collapsedRepresentationImage and collapsedRepresentationLabel respectively.
(Read and Write property)

184.5.12 collapsedRepresentationImage as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The image displayed by the button used by default for the default collapsed representation.
Notes:

If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect.
(Read and Write property)

184.5.13 collapsedRepresentationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string displayed by the button used by default for the default collapsed representation.
Notes:

If the collapsedRepresentation button has been replaced by a different view, this property may not have any effect. This property is archived.
(Read and Write property)

184.5.14 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read and Write property)

184.5.15 popoverTouchBar as NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The touch bar displayed when this item is "popped."
Notes:

By default this is an empty touch bar that cannot be customized. This property is archived.
(Read and Write property)

184.5.16 pressAndHoldTouchBar as NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A touchbar to be used exclusively for press-and-hold popovers.
Notes:

This touch bar can be the same as the one used for "popoverTouchBar" property, but does not have to be. When non-nil this touch bar will be displayed while the user holds their finger down on the collapsed representation and released when the user raises their finger. This tracking behavior is automatic, but popovers with custom collapsed representations will still need to send showPopover to start tracking.
(Read and Write property)

184.5.17 showsCloseButton as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: When true, automatically displays a close button in the popover.
Notes:

When false it is the responsibility of the client to dismiss the popover.
(Read and Write property)

184.6 class NSSliderTouchBarItemMBS

184.6.1 class NSSliderTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar item showing a slider.
Notes: Subclass of the NSTouchBarItemMBS class.

184.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.5pr5

184.6.3 Xojo Developer Magazine

- 15.5, page 35: Touché, Using Apple's Touch Bar with Xojo by Marc Zeedar

184.6.6 Methods

184.6.7 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.customizationLabel = "My Slider"
```

Notes: This instantiates a new touch bar item with the specified initializer.

184.6.8 Properties

184.6.9 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read and Write property)

184.6.10 label as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The text label displayed along with the slider.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.label = "Pen Size"
```

Notes:

If set to nil, the label will not have space reserved in the item.
(Read and Write property)

184.6.11 maxValue as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The maximum value of the slider.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

Notes: (Read and Write property)

184.6.12 minValue as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The minimum value of the slider.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

Notes: (Read and Write property)

184.6.13 slider as NSSliderMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The slider displayed by the bar item.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.minValue = 0.0
t.maxValue = 1.0
t.value = 0.5
```

Notes:

It is automatically created, but can be set to a custom subclass.
Value, minValue, maxValue, etc can all be read and set through the slider.
(Read and Write property)

184.6.14 value as Double

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The current value of the slider.
Notes: (Read and Write property)

184.6.15 Events

184.6.16 Action

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The slider changed.

184.7 class NSTouchBarItemMBS

184.7.1 class NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a touch bar item.

184.7.7 Videos

- TouchBar with MBS Xojo Plugin

184.7.8 Methods

184.7.9 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Example:

```
if NSTouchBarItemMBS.Available then
MsgBox "This Mac may have a TouchBar or not."
else
MsgBox "This Mac is too old for a TouchBar."
end if
```

Notes: Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

184.7.10 Constructor(identifier as string)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The designated initializer.
Notes: This instantiates a new touch bar item with the specified initializer.

184.7.11 NSTouchBarItemIdentifierFixedSpaceLarge as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of an item appropriate for use as a large space in the touch bar.
Example:

```
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceLarge)
```

Notes: Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

184.7.12 NSTouchBarItemIdentifierFixedSpaceSmall as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of an item appropriate for use as a small space in the touch bar.
Example:

```
// create fixed space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFixedSpaceSmall)
```

Notes: Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate

that space for you.

184.7.13 NSTouchBarItemIdentifierFlexibleSpace as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of an item appropriate for use as a flexible space in the touch bar.
Example:

```
// create flexible space item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierFlexibleSpace)
```

Notes: Generally, you can use this identifier in a touch bar's itemIdentifiers array, and it will instantiate that space for you.

184.7.14 NSTouchBarItemIdentifierOtherItemsProxy as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of the special "other items proxy."
Example:

```
// create proxy item
dim t as new NSTouchBarItemMBS(NSTouchBarItemMBS.NSTouchBarItemIdentifierOtherItemsProxy)
```

Notes:

Generally, you can use this identifier in a touch bar's itemIdentifiers array, and a special proxy item will be instantiated for you. When the touch bar containing this item is visible, touch bars provided by items closer to the first responder will be nested inside the space denoted for this item. Space items on either side of this item will be automatically massaged to handle cases where the touch bar containing this identifier is itself the bar closest to the first responder (or closer bars are empty.)
Note that a touch bar lacking this item identifier will be replaced in its entirety by touch bars closer to the first responder.

184.7.15 Properties

184.7.16 customizationLabel as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The localized string labelling this item during user customization.
Notes:

The default value is empty string.
(Read only property)

184.7.17 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

184.7.18 identifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The identifier of this item.
Notes:

Apart from spaces, item identifiers should be globally unique.
(Read only property)

184.7.19 view as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Intended for subclassing.
Notes:

By default, this method returns this item's view controller's view.
(Read only property)

184.7.20 viewController as NSViewControllerMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Intended for subclassing.
Notes:

By default, this method returns nil.
(Read only property)

184.7.21 visibilityPriority as Single

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: If there are more items in the touch bar than can be displayed, some will be hidden.
Example:

```
dim t as NSSliderTouchBarItemMBS = new NSSliderTouchBarItemMBS("test")
t.visibilityPriority = t.PriorityLow
```

Notes:

Items with high visibility priority will be hidden after items with low visibility priority.
(Read and Write property)

184.7.22 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: When true, this item is attached to a visible touch bar, and is being displayed.
Notes:

Note that some types of items are never considered visible, for example spaces, other items proxys, and groups.
This property is key value observable.
(Read only property)

184.7.23 Events

184.7.24 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the item is hidden.

184.7.25 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the item is shown.

184.7.26 Constants

184.7.27 PriorityHigh = 1000

MBS Mac64bit Plugin, Plugin Version: 16.5.

Function: One of the values for visibilityPriority property.
Notes: nItems with high visibility priority will be hidden after items with low visibility priority.one

184.7.28 PriorityLow = -1000

MBS Mac64bit Plugin, Plugin Version: 16.5.

Function: One of the values for visibilityPriority property.
Notes: nItems with high visibility priority will be hidden after items with low visibility priority.one

184.7.29 PriorityNormal = 0

MBS Mac64bit Plugin, Plugin Version: 16.5.

Function: One of the values for visibilityPriority property.
Notes: nItems with high visibility priority will be hidden after items with low visibility priority.one

184.8 class NSTouchBarMBS

184.8.1 class NSTouchBarMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The class for a TouchBar on a new MacBook Pro.

184.8.8 Methods

184.8.9 AssignToApp

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the main TouchBar for the whole app.

184.8.10 AssignToWindow(window as DesktopWindow)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the given window.
Notes: The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 184.8.11 AssignToWindow(window as NSWindowMBS) 26083
- 184.8.12 AssignToWindow(window as window) 26083

184.8.11 AssignToWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the given window.
Notes: The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 184.8.10 AssignToWindow(window as DesktopWindow) 26083
- 184.8.12 AssignToWindow(window as window) 26083

184.8.12 AssignToWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Assigns the TouchBar to be the given window.
Notes: The TouchBar on MacBook Pro will show this entries, if the given window is the front window.
See also:

- 184.8.10 AssignToWindow(window as DesktopWindow) 26083
- 184.8.11 AssignToWindow(window as NSWindowMBS) 26083

184.8.13 Available as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Example:

```
if NSTouchBarMBS.Available then
MsgBox "This Mac may have a TouchBar or not."
else
MsgBox "This Mac is too old for a TouchBar."
end if
```

Notes: Returns true on macOS 10.12.1 and newer, if the version with TouchBar support is installed.

184.8.14 Constructor

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The constructor.

184.8.15 customizationAllowedItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The items that are presented in the customization palette for the user to add to the touch bar.
Notes: These items will be presented to the user in the order specified in this array.

184.8.16 customizationRequiredItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Some items are too important to be removed.
Notes: The corresponding item identifiers should be listed here. During customization the user will be prevented from removing these items from the touch bar.

184.8.17 defaultItemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: An array of identifiers specifying the items in this touch bar.
Notes:

When constructing the instantiated items array, the identifiers in this array will be fed through the itemForIdentifier method.
Item identifiers should be globally unique, excepting NSTouchBarItemIdentifierFixedSpaceSmall, NSTouchBarItemIdentifierFixedSpaceLarge, NSTouchBarItemIdentifierFlexibleSpace, and NSTouchBarItemIdentifierOtherItemsProxy.

This array also corresponds to the item ordering for the receiver in the "default set" in the customization palette.

184.8.18 itemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Returns an instantiated NSTouchBarItem for the given identifier.
Notes:

Items are resolved from the following locations, in order:

- items already in the instantiated items array
- items in the defaultTouchBarItems set
- items returned from the delegate's -touchBar:makeItemForIdentifier: method
- some special identifiers are handled automatically

NSTouchBarItemIdentifierFixedSpaceSmall ->NSTouchBar will automatically create a standard small space
NSTouchBarItemIdentifierFixedSpaceLarge ->NSTouchBar will automatically create a standard large space
NSTouchBarItemIdentifierFlexibleSpace ->NSTouchBar will automatically create a standard flexible space
NSTouchBarItemIdentifierOtherItemsProxy ->NSTouchBar will automatically create a special item that acts as a proxy for the items of touch bars closer to the first responder.

184.8.19 itemIdentifiers as String()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The resolved array of item identifiers. If the bar has not been customized this will match the defaultItemIdentifiers.

184.8.20 RemoveTouchBarFromApp

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Removes TouchBar for app.

184.8.21 RemoveTouchBarFromWindow(window as NSWindowMBS)

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Removes TouchBar for window.
See also:

- 184.8.22 RemoveTouchBarFromWindow(window as window) 26086

184.8.22 RemoveTouchBarFromWindow(window as window)

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Removes TouchBar for window.
See also:

- 184.8.21 RemoveTouchBarFromWindow(window as NSWindowMBS) 26086

184.8.23 setCustomizationAllowedItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the items that are presented in the customization palette for the user to add to the touch bar.
Notes: These items will be presented to the user in the order specified in this array.

184.8.24 setCustomizationRequiredItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the items are too important to be removed.
Notes: The corresponding item identifiers should be listed here. During customization the user will be prevented from removing these items from the touch bar.

184.8.25 setDefaultItemIdentifiers(Identifiers() as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the array of identifiers specifying the items in this touch bar.

184.8.26 setTemplateItems(Identifiers() as NSTouchBarItemMBS)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Sets the template item identifiers.
Notes:

Items in this set are the first step in resolving instantiated items from their identifiers.
If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

184.8.27 templateItems as NSTouchBarItemMBS()

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Items in this set are the first step in resolving instantiated items from their identifiers.
Notes: If an item identifier is specified in the itemIdentifiers array, and an item with that identifier is in this set, it will be added to the items array in the corresponding location.

184.8.28 toggleTouchBarCustomizationPalette

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Show or dismiss the customization palette for the currently displayed touch bars.
Notes: NSApplication validates this selector against whether the current touch bars are customizable and, if configured on a menu item, will standardize and localize the title. If the current system does not have touch bar support, the menu item will be automatically hidden.

184.8.29 Properties

184.8.30 automaticCustomizeTouchBarMenuItemEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Whether or not a menu item to customize the touch bar can be automatically added to the main menu.

Notes:

It will only actually be added when a touch bar hardware or simulator is present. Defaults to false. Setting this property to True is the recommended way to add the customization menu item. But if non-standard placement of the menu item is needed, creating a menu item with an action of toggleTouchBarCustomizationPalette can be used instead.
(Read and Write property)

184.8.31 customizationIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A string uniquely identifying this bar for customization purposes.
Notes:

All bars with this identifier will have their items coordinated automatically during customization or instantiation.
Touch bars lacking a customizationIdentifier are not customizable.
(Read and Write property)

184.8.32 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

184.8.33 principalItemIdentifier as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Specifying a principal item identifier communicates that the item with that identifier has special significance to this touch bar.
Notes:

Currently, that item will be placed in the center of the resolved touch row. Note that multiple visible bars may each specify a principal item identifier - but only one of them can have the request honored.
(Read and Write property)

184.8.34 visible as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: When true, the touch bar is attached to an eligible touch bar provider, and its items are displayable, assuming adequate space.
Notes: (Read only property)

184.8.35 Events

184.8.36 DidEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization did start.

184.8.37 DidExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization did exit.

184.8.38 Hidden

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the bar is hidden.

184.8.39 makeItemForIdentifier(identifier as string) as NSTouchBarItemMBS

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: When constructing the items array, this event will be invoked to construct a touch bar item if that item cannot be found in the defaultItems set.

184.8.40 Shown

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: The event called when the bar is shown.

184.8.41 WillEnterCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization will start soon.

184.8.42 WillExitCustomization

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The customization will exit soon.

Chapter 185

Twain

185.1 class TwainIdentityMBS

185.1.1 class TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Provides identification information about a TWAIN entity.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

185.1.2 Methods

185.1.3 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

185.1.4 Properties

185.1.5 Id as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: A unique, internal identifier for the TWAIN entity.
Notes:

This field is only filled by the Source Manager. Neither an application nor a Source should fill this field. The Source uses the contents of this field to "identify" which application is invoking the operation sent to the Source.
(Read and Write property)

185.1.6 Manufacturer as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: String identifying the manufacturer of the application or Source. e.g. "Aldus".
Notes: (Read and Write property)

185.1.7 ProductFamily as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Tells an application that performs device-specific operations which product family the Source supports.
Notes:

This is useful when a new Source has been released and the application doesn't know about the particular Source but still wants to perform Custom operations with it. e.g. "ScanMan".
(Read and Write property)

185.1.8 ProductName as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: A string uniquely identifying the Source.
Notes:

This is the string that will be displayed to the user at Source select-time. This string must uniquely identify your Source for the user, and should identify the application unambiguously for Sources that care. e.g. "ScanJet IIc".
(Read and Write property)

185.1.9 ProtocolMajor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Major number of latest TWAIN version that this element supports.
Notes: (Read and Write property)

185.1.10 ProtocolMinor as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Minor number of latest TWAIN version that this element supports.
Notes: (Read and Write property)

185.1.11 SupportedGroups as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Supported grosups.
Notes:

The application will normally set this field to specify which Data Group(s) it wants the Source Manager to sort Sources by when presenting the Select Source dialog, or returning a list of available Sources. The application sets this prior to invoking a SelectDS operation.

- The application may also set this field to specify which Data Group(s) it wants the Source to be able to acquire and transfer. The application must do this prior to sending the Source its EnableDS operation.
- The Source must set this field to specify which Data Group(s) it can acquire. It will do this in response to a OpenDS.
- Beginning with TWAIN 2.0 the Source Manager reserves the most significant two byes in the SupportedGroups for the Data Flags (& h0001000 to & hFFFF0000).

DF_DSM2– identifies the Source Manager as TWAIN 2.0 compliant DF_APP2 – is set by an Application that is TWAIN 2.0 compliant DF_DS2– is set by a Source that is TWAIN 2.0 compliant
(Read and Write property)

185.1.12 Version as TwainVersionMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The version information.
Notes: (Read and Write property)

185.2 class TwainImageInfoMBS

185.2.1 class TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Describes the "real" image data, that is, the complete image being transferred between the Source and application.
Notes:

The Source may transfer the data in a different format–the information may be transferred in "strips" or "tiles" in either compressed or uncompressed form. See the TW_IMAGEMEMXFER structure for more information.
The term "sample" is referred to a number of times in this structure. It holds the same meaning as in the TIFF specification. A sample is a contiguous body of image data that can be categorized by the channel or "ink color" it was captured to describe. In an R-G-B (Red-Green-Blue) image, such as on your TV or computer's CRT, each color channel is composed of a specific color. There are 3 samples in an R-G-B; Red, Green, and Blue. A C-Y-M-K image has 4 samples. A Grayscale or Black and White image has a single sample.
Note: The value -1 in ImageWidth and ImageLength are special cases. It is possible for a Sourcetonot-knoweitheritsWidthorLength. Applicationsneedtoconsiderthiswhen allocating memory or otherwise dealing with the size of the Image.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

185.2.2 Methods

185.2.3 BitsPerSample(index as Integer) as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: For each sample, the number of bits of information.
Notes:

24-bit R-G-B will typically have 8 bits of information in each sample (8+8+8). Some 8-bit color is sampled at 3 bits Red, 3 bits Green, and 2 bits Blue. Such a scheme would put 3, 3, and 2 into the first 3 elements of this array. The supplied array allows up to 8 samples. Samples are not limited to 8 bits. However, both the application and Source must simultaneously support sample sizes greater than 8 bits per color.

Index from 0 to 7.

185.2.4 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

185.2.5 Properties

185.2.6 BitsPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The number of bits in each image pixel (or bit depth).
Notes:

This value is invariant across the image. 24-bit R-G-B has BitsPerPixel = 24. 40-bit C-M-Y-K has BitsPerPixel=40. 8-bit Grayscale has BitsPerPixel = 8. Black and White has BitsPerPixel = 1.
(Read and Write property)

185.2.7 Compression as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The compression method used to process the data being transferred.
Notes:

Default is no compression.
(plugin currently only supports no compression)
(Read and Write property)

185.2.8 ImageLength as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: How tall/long, in pixels, the image to be transferred is.
Notes:

If the Source doesn't know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn't support undefined image size)
(Read and Write property)

185.2.9 ImageWidth as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: How wide, in pixels, the entire image to be transferred is.
Notes:

If the Source doesn't know, set this field to -1 (hand scanners may do this).
-1 can only be used if the application has set ICAP_UNDEFINEDIMAGESIZE to TRUE.
(the plugin doesn't support undefined image size)
(Read and Write property)

185.2.10 PixelType as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: This is the highest categorization for how the data being transferred should be interpreted by the application.
Notes:

This is how the application can tell if the data is Black and White, Grayscale, or Color. Currently, the only color type defined is "tri-stimulus", or color described by three characteristics. Most popular color description methods use tri- stimulus descriptors. For simplicity, the constant used to identify tri-stimulus color is called TWPT_RBG, for R-G-B color. There is no default for this value. Fill this field with the appropriate TWPT_xxxx constant.

The plugin does currently only support RGB, GRAY, BW and PALETTE.
(Read and Write property)

185.2.11 Planar as Boolean

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Whether image is planar.
Notes:

If SamplesPerPixel >1, indicates whether the samples follow one another on a pixel-by-pixel basis (R-G-B-R-G-B-R-G-B...) as is common with a one-pass scanner or all the pixels for each sample are grouped together (complete group of R, complete group of G, complete group of B) as is common with a three-pass scanner. If the pixel-by-pixel method (also known as "chunky") is used, the Source should set Planar = false. If the grouped method (also called "planar") is used, the Source should set Planar = true.
(Read and Write property)

185.2.12 RowBytes as Integer

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: All.

Function: The number of bytes in a row.
Notes:

This is not exactly the value as you may expect as Twain needs some rounding.
(Read and Write property)

185.2.13 SamplesPerPixel as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The number of samples being returned.
Notes:

For R-G-B, this field would be set to 3. For C-M-Y-K, 4. For Grayscale or Black and White, 1.
(Read and Write property)

185.2.14 XResolution as Double

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Horizontal resolution.
Notes:

In pixels per inch.
(Read and Write property)

185.2.15 YResolution as Double

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: Vertical resolution.
Notes:

In pixels per inch.
(Read and Write property)

185.3 class TwainImageLayoutMBS

185.3.1 class TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The class for an image layout.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

185.3.2 Blog Entries

- MBS Real Studio Plugins, version 13.1pr4

185.3.3 Blog Entries

- MBS Real Studio Plugins, version 13.1pr4

185.3.4 Methods

185.3.5 Constructor

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

185.3.6 Properties

185.3.7 Bottom as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The bottom coordinate of the item.
Notes: (Read and Write property)

185.3.8 DocumentNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The document number.
Notes: (Read and Write property)

185.3.9 FrameNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The frame number.
Notes: (Read and Write property)

185.3.10 Height as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The height of the item.
Notes: (Read only property)

185.3.11 Left as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The left coordinate of the item.
Notes: (Read and Write property)

185.3.12 PageNumber as Integer

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The page number.
Notes: (Read and Write property)

185.3.13 Right as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The right coordinate of the item.
Notes: (Read and Write property)

185.3.14 Top as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The top coordinate of the item.
Notes: (Read and Write property)

185.3.15 Width as Double

MBS Picture Plugin, Plugin Version: 13.1, Platforms: macOS, Windows, Targets: All.

Function: The width of the item.
Notes: (Read only property)

185.4 class TwainMBS

185.4.1 class TwainMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The plugin class for scanning with TWAIN compatible scanners.
Notes:

Use is like this:

- Declare subclass of TwainMBS so you can get events.
- Create new instance of your subclass and store object in some window/app/module property.
- For Windows call InstallEvent.
- To scan, call Acquire method.
- If driver runs synchronously, a modal window shows and you get back a picture object right away when scanning is done.
- If driver runs asynchronously, it shows a non modal window and you receive events.
- In TransferReady event you can call TransferImage method. In example a timer is triggered so this runs in the window.
- To cleanup, use DisableDS and CloseDS methods.
- We recommend only to have one instance of the TwainMBS object.

When Xojo or Xojo is used (32 bit), we can of course only see and use devices with 32 bit drivers.
Once Xojo will be ported to 64bit, we can only talk to 64bit drivers.

For 64-bit on Windows you can find 64-bit TwainDSM.dll here:
https://github.com/twain/twain-dsm

185.4.4 Methods

185.4.5 Acquire(modal as boolean = false, showUI as boolean = true) as picture

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Acquires a new picture.
Notes:

Lasterror is set.
Plugin asks for asynchronously operation, so this function returns nil and success in lasterror.
If data source must be used with modal UI, this function returns with picture.

Modal can be true to ask for modal dialog. Seems to be only supported on Mac.

185.4.6 AllDevices as TwainIdentityMBS()

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Returns array with all devices.
Example:

```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices

if device.ProductName = NameToFind then
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <>0 then
MsgBox "Failed to select "+device.ProductName
else
'MsgBox "OK"
exit
end if
end if
next

if not found then
MsgBox "No scanner found named: "+NameToFind
end if
```

185.4.7 AppIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries app identity.
Notes: That's the identity the plugin used to register with twain library.

185.4.8 CanBW as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether device supports black and white pixel type.
Notes: Lasterror is set.

185.4.9 CanGray as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether device supports gray pixel type.
Notes: Lasterror is set.

185.4.10 CanPalette as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether current device supports palette pixel type.
Notes: Lasterror is set.

185.4.11 CanRGB as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether current device supports RGB pixel type.
Notes: Lasterror is set.

185.4.12 CloseDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Close data source.
Notes: Lasterror is set.

185.4.13 CloseDSM

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Closes the data source manager.
Notes: Lasterror is set.

185.4.14 Constructor(Country as Integer, Language as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Initializes Twain engine with given localization.
Notes: Lasterror is set.

185.4.15 DisableDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Diables data source.
Notes: Lasterror is set.

185.4.16 DontUnload

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Informs the plugin to not unload the twain library.
Notes: This avoids a crash for some people.

185.4.17 DSIdentity as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries the details on the data source.
Notes: Lasterror is set.

185.4.18 GetEnumerationCapability(ID as Integer, byref ItemType as Integer, byref Count as Integer, byref CurrentIndex as Integer, byref DefaultIndex as Integer) as Integer()

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries an enum capability.
Example:

```
dim t as TwainMBS // your twain object

// check supported sizes

const ICAP_SUPPORTEDSIZES = &h1122
```

```
dim type5 as Integer
dim EnumCount as Integer = 0
dim EnumItemType as Integer = 0
dim EnumCurrentIndex as Integer = 0
dim EnumDefaultIndex as Integer = 0
dim EnumValues() as Integer = t.GetEnumerationCapability(ICAP_SUPPORTEDSIZES, EnumItemType,
EnumCount, EnumCurrentIndex, EnumDefaultIndex)
dim e5 as Integer = t.Lasterror
dim c5 as Integer = t.ConditionCode
```

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer enum types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

185.4.19 GetIntegerCapability(ID as Integer, byref Type as Integer) as Integer

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries an integer capability.
Example:

```
dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <>0 then
MsgBox "Failed to open device: "+str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode
```

```
// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
// not supported!
Break
end if
```

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
This should work fine for all integer types like boolean, 8, 16 or 32 bit integers.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

185.4.20 ImageInfo as TwainImageInfoMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries information about current image.
Notes: Lasterror is set.

185.4.21 IsDSEnabled as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether data source is enabled.

185.4.22 OpenDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens the data source.

185.4.23 OpenDSM

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Opens Data source Manager.
Notes: Lasterror is set.

185.4.24 ProcessEvents

MBS Picture Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

Function: Process events in plugin.
Notes:

Only for Windows needed for some Twain drivers. You call it after you run Acquire to let the plugin wait for the events to start the transfer.
When transfer is ready or dialog is cancelled, this method ends.
On Mac OS X or Linux this method does nothing so it's no problem calling it.

185.4.25 SelectDS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Queries dialog to ask the user to select a data source.
Notes: Lasterror is set.
See also:

- 185.4.26 SelectDS(device as TwainIdentityMBS) 26108

185.4.26 SelectDS(device as TwainIdentityMBS)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Selects the given device without dialog.
Example:

```
dim twain as TwainMBS // your twain object
dim devices() as TwainIdentityMBS = twain.AllDevices
```

```
dim found as Boolean
dim NameToFind as string = "MyScanner123"

for each device as TwainIdentityMBS in devices

if device.ProductName = NameToFind then
found = true

// lets use this one
twain.SelectDS(device)

if twain.Lasterror <>0 then
MsgBox "Failed to select "+device.ProductName
else
'MsgBox "OK"
exit
end if
end if
next

if not found then
MsgBox "No scanner found named: "+NameToFind
end if
```

Notes: Lasterror is set.
See also:

- 185.4.25 SelectDS 26108

185.4.27 SetBoolCapability(ID as Integer, Value as Boolean)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with boolean.
Example:

```
dim t as TwainMBS // your twain object

t.OpenDS

if t.Lasterror <>0 then
MsgBox "Failed to open device: "+str(t.Lasterror)
Return
end if

const CAP_FEEDERENABLED = & h1002
```

```
const CAP_FEEDERLOADED = & h1003
const TWRC_FAILURE = 1
const TWCC_CAPUNSUPPORTED = 13

// query before
dim type1 as Integer
dim n1 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type1)
dim e1 as Integer = t.Lasterror
dim c1 as Integer = t.ConditionCode

// set on
t.SetBoolCapability CAP_FEEDERENABLED, true
dim e2 as Integer = t.Lasterror
dim c2 as Integer = t.ConditionCode

// query after
dim type3 as Integer
dim n3 as Integer = t.GetIntegerCapability(CAP_FEEDERENABLED, type3)
dim e3 as Integer = t.Lasterror
dim c3 as Integer = t.ConditionCode

// now query loaded?
dim type4 as Integer
dim n4 as Integer = t.GetIntegerCapability(CAP_FEEDERLOADED, type4)
dim e4 as Integer = t.Lasterror
dim c4 as Integer = t.ConditionCode

if e4 = TWRC_FAILURE AND c4 = TWCC_CAPUNSUPPORTED then
// not supported!
Break
end if
```

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a boolean.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

185.4.28 SetFloatCapability(ID as Integer, Value as Double)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with floating point value.

Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a floating point value (FIX32).
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

185.4.29 SetInt32Capability(ID as Integer, Value as Int32)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with 32 bit integer.
Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 32 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

185.4.30 SetUInt16Capability(ID as Integer, Value as UInt16)

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Sets a capability with 16 bit integer.
Notes:

Please review Twain Documentation for details.
Please open data source before via OpenDS method.
You may see problems if you use this method on a capability which is not a 16 bit integer.
Sets lasterror and condition code.
(if lasterror is 1 and condition code is 13, the capability is not supported)

185.4.31 SupportsMemoryTransfer as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether the twain data source supports memory transfers.
Notes: As our plugin uses only memory transfers, the source must support this in order to work with our plugin.

185.4.32 TransferImage as picture

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Transfers an image.
Notes:

Lasterror is set.
Image data is converted to a normal RGB picture.
Can return nil on any error.
The events TransferStarted, TransferEnded and TransferProgress are called when a transfer is running.

185.4.33 Properties

185.4.34 AutoFeed as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether plugin should auto feed (if feeder is enabled).
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto feed. If the scanner does not support auto feeding, the scanner will ignore this setting.
(Read and Write property)

185.4.35 AutomaticBorderDetection as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether plugin should enable automatic border detection.
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable auto border detection. If the scanner does not support this feature, the scanner will ignore this setting.
0 = off, 1 = on, -1 = default/undefined.
(Read and Write property)

185.4.36 AutomaticBrightness as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Enables or disables the Source's Auto-brightness function (if any).
Notes:

The plugin will apply this setting on the next scan.
Value is 0 to disable, 1 to enable or -1 if undefined/default.
(Read and Write property)

185.4.37 AutomaticRotate as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to enable automatic rotation when next scan starts.
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable automatic rotation. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

185.4.38 Brightness as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: The brightness setting to use.
Notes:

The plugin will apply this setting on the next scan.
Source should normalize the values into the range. Make sure that a '0' value is available as the Current Value when the Source starts up. If the Source's ± range is asymmetric about the '0' value, set range maxima to ±1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

185.4.39 ConditionCode as Integer

MBS Picture Plugin, Plugin Version: 14.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: The condition code.
Notes:

If error code in Lasterror is 1, this Condition value is set.
(-1 if unknown)

Possible codes:

TWCC_SUCCESS	0	Success
TWCC_BUMMER	1	Failure due to unknown causes
TWCC_LOWMEMORY	2	Not enough memory to perform operation
TWCC_NODS	3	No Data Source
TWCC_MAXCONNECTIONS	4	DS is connected to max possible applications
TWCC_OPERATIONERROR	5	DS or DSM reported error, application shouldn't
TWCC_BADCAP	6	Unknown capability
TWCC_BADPROTOCOL	9	Unrecognized MSG DG DAT combination
TWCC_BADVALUE	10	Data parameter out of range
TWCC_SEQERROR	11	DG DAT MSG out of expected sequence
TWCC_BADDEST	12	Unknown destination Application/Source in DSM_Entry
TWCC_CAPUNSUPPORTED	13	Capability not supported by source
TWCC_CAPBADOPERATION	14	Operation not supported by capability
TWCC_CAPSEQERROR	15	Capability has dependancy on other capability
TWCC_DENIED	16	File System operation is denied (file is protected)
TWCC_FILEEXISTS	17	Operation failed because file already exists.
TWCC_FILENOTFOUND	18	File not found
TWCC_NOTEMPTY	19	Operation failed because directory is not empty
TWCC_PAPERJAM	20	The feeder is jammed
TWCC_PAPERDOUBLEFEED	21	The feeder detected multiple pages
TWCC_FILEWRITEERROR	22	Error writing the file (meant for things like disk full conditions)
TWCC_CHECKDEVICEONLINE	23	The device went offline prior to or during this operation

(Read and Write property)

185.4.40 Contrast as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: The contrast setting to use.
Notes:

The plugin will apply this setting on the next scan.
Scale the values available internally into a homogeneous range between -1000 and 1000. Make sure that a '0' value is available as the Current value when the Source starts up. If the Source's ± range is asymmetric about the '0' value, set range maxima to ±1000 and scale homogeneously from the '0' value in each direction. This will yield a positive range whose step size differs from the negative range's step size.
(Read and Write property)

185.4.41 DiscardBlankPages as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to have the scanner ask to discard blank pages.
Notes:

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable blank pages discarding. If the scanner does not support this feature, the scanner will ignore this setting.
(Read and Write property)

185.4.42 Duplex as Integer

MBS Picture Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to enable duplex when next scan starts.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable duplex.
If the scanner does not support duplex, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)

185.4.43 FeederEnabled as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to enable feeder when next scan starts.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder.
If the scanner does not support the feeder, the scanner will ignore this setting.
Value is -1 if not set, 0 to disable and 1 to enable.
(Read and Write property)

185.4.44 Gamma as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Gamma correction value for the image data.
Notes:

The plugin will apply this setting on the next scan.
Default value 2.2. The setting is -10000 if not set.
(Read and Write property)

185.4.45 Highlight as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Specifies which value in an image should be interpreted as the lightest highlight.
Notes:

The plugin will apply this setting on the next scan.
All values lighter than this value will be clipped to this value. Whether lighter values are smaller or larger can be determined by examining the Current value of PixelFlavor.
If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
Value can be between 0 and 255.

Value can be between 0 and 255.
Plugin uses value -10000 for undefined/default.
(Read and Write property)

185.4.46 Lasterror as Integer

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

185.4.47 Orientation as Integer

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The orientation for the scanner.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to enable/disable feeder.
If the scanner does not support the feeder, the scanner will ignore this setting.

Value can be:

(Read and Write property)

0	0 degree
1	90 degree
2	180 degree
3	270 degree
0	Portrait
3	Landscape

185.4.48 Parent as Variant

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The parent window.
Notes:

Can reference a Window or DesktopWindow object.
(Read and Write property)

185.4.49 PendingTransferCount as Integer

MBS Picture Plugin, Plugin Version: 13.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: How many pages are pending.
Notes:

So when you transfer you can make a loop and run until PendingTransferCount is zero.
PendingTransferCount may be -1 or 65535 for unknown number of pages.
(Read and Write property)

185.4.50 PixelType as Integer

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: The pixel type requested.
Notes:

Value can be 0 for BW, 1 for Gray, 2 for RGB, 3 for Palette.
The plugin can request als CMY (4), CMYK (5), YUV (6), YUVK (7) and CIEXYZ (8), but can't currently decode those.

Value is -1 if you didn't set it before.
This value is stored and next time you call Acquire the plugin will ask the scanner to use the given pixel type. If the scanner does not support this feature, the scanner will ignore this setting.

(Read and Write property)

185.4.51 ProvideSliceData as Boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to pass Memoryblock with data with Progress event for new rows arrived.
Notes: (Read and Write property)

185.4.52 ProvideSlicePicture as Boolean

MBS Picture Plugin, Plugin Version: 12.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether to pass picture with Progress event for new rows arrived.
Notes: (Read and Write property)

185.4.53 ResX as Double

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The horizontal resolution for scanning.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting.
Use -1 to use the default setting.
(Read and Write property)

185.4.54 ResY as Double

MBS Picture Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The vertical resolution for scanning.
Notes:

This value is stored and next time you call Acquire the plugin will ask the scanner to use this resolution. If the scanner does not support the resolution, the scanner will use the last valid setting.
Use -1 to use the default setting.
(Read and Write property)

185.4.55 Shadow as Double

MBS Picture Plugin, Plugin Version: 13.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Specifies which value in an image should be interpreted as the darkest shadow.
Notes:

The plugin will apply this setting on the next scan.
All values darker than this value will be clipped to this value.

Whether darker values are smaller or larger can be determined by examining the Current value of PixelFlavor.
Source

If more or less than 8 bits are used to describe the image, the actual data values should be normalized to fit within the 0-255 range. The normalization need not result in a homogeneous distribution if the original distribution was not homogeneous.
(Read and Write property)

185.4.56 DefaultDevice as TwainIdentityMBS

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: Desktop only.

Function: The default device.
Notes: (Read and Write computed property)

185.4.57 Imagelayout as TwainImageLayoutMBS

MBS Picture Plugin, Plugin Version: 15.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: Get/Set the image layout.
Notes:

Lasterror is set. DataSource must be open.
(Read and Write computed property)

185.4.58 Events

185.4.59 CloseRequest

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: Closes a request.
Notes: Lasterror is set.

185.4.60 TransferEnded(pic as picture, ImageInfo as TwainImageInfoMBS, sliced as boolean, layout as TwainImageLayoutMBS)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: The transfer finished.
Notes:

Pic: The final picture. Nil if sliced is true.
ImageInfo: Details about the image format.
Sliced: Whether the image was transferred in slices.

185.4.61 TransferProgress(percent as Double, dataRead as Int64, DataSize as Int64, ImageInfo as TwainImageInfoMBS, NewDataSize as Integer, NewData as Memoryblock, NewPicture as Picture, layout as TwainImageLayoutMBS, Columns as Integer, Rows as Integer, XOffset as Integer, YOffset as Integer)

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: The progress event.
Notes:

Percent: The percent value (0 to 100) of the progress.
dataRead: Number of bytes read.
DataSize: Total size of image in bytes.
ImageInfo: Details about the image format.
NewDataSize: The number of bytes received.
NewData: The memoryblock for the new data. Use NewDataSize to copy right amount of data as this memoryblock has no size value set.
NewPicture: The picture for the new data.
Layout: The image layout.
Columns: Number of columns got in this slice.
Rows: Number of rows got in this slice.
XOffset: Column start for this slice.
YOffset: Row start for this slice.

NewData is only valid if you set ProvideSliceData to true.
NewPicture is only valid if you set ProvideSlicePicture to true.

185.4.62 TransferReady

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: Called to tell you that a transfer is waiting.
Notes:

The user pressed button to start scan.
Please call TransferImage method when you are ready.

185.4.63 TransferStarted(DataSize as Int64, ImageInfo as TwainImageInfoMBS, layout as TwainImageLayoutMBS) as boolean

MBS Picture Plugin, Plugin Version: 12.3, Platforms: macOS, Windows, Targets: .

Function: A transfer started.
Notes:

DataSize total numnber of bytes expected.
ImageInfo: details on the image we receive.

You can return true to have the plugin not created one big picture.
A 42 inch scanner normally creates huge images, so you only can process them in slices.

185.4.64 Constants

185.4.65 TWCY_AFGHANISTAN = 1001

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the country codes.

185.4.66 TWCY_ALBANIA = 355

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the country codes.

185.4.67 TWCY_ALGERIA = 213

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the country codes.

185.4.68 TWCY_AMERICANSAMOA = 684

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the country codes.

185.4.69 TWCY_ANDORRA = 033

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the country codes.

185.4.70 TWCY_ANGOLA = 1002

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the pixel format constants.
Notes: YUVK

185.4.442 TWRC_CANCEL = 3

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes: Operation has been canceled.

185.4.443 TWRC_CHECKSTATUS = 2

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with Capability and ImageLayout. Operation failed to completely perform the desired operation. For example, setting Brightness to 3 when its range is -1000 to 1000 with a step of 200. The data source may opt to set the value to 0 and return this status.
The application should confirm its last setting, if it depends on getting the exact value it requested.

185.4.444 TWRC_DATANOTAVAILABLE = 9

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with extended ImageInfo. There is no data available for the requested item.
Scanning may continue. The decision to continue with scanning is at the discretion of the application, depending on which field reported this status.

185.4.445 TWRC_DSEVENT = 4

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_EVENT. The data source processed the event.
The application must not take any further action on this message.

185.4.446 TWRC_ENDOFLIST = 7

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_IDENTITY and DAT_FILESYSTEM.
There are no more items to enumerate in this list. If a call is needed to close the list, it must be called next.

185.4.447 TWRC_FAILURE = 1

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

May be returned by any operation. An error has occurred.
The application must call status functions, and refer to the condition code for more information.

185.4.448 TWRC_INFONOTSUPPORTED = 8

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_EXTIMAGEINFO. The requested TWEI_ data is either not supported by this data source, or is not supported for this particular image.
Scanning may continue. The decision to continue with scanning is at the discretion of the application, depending on which field reported this status.

185.4.449 TWRC_NOTDSEVENT = 5

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with DAT_EVENT. The data source did not process the event.
The application passes the message to its own dialogs.

185.4.450 TWRC_SUCCESS = 0

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Operation was successful.
The application continues as normal.

185.4.451 TWRC_XFERDONE = 6

MBS Picture Plugin, Plugin Version: 12.2.

Function: One of the error codes.
Notes:

Intended for use with the Image Transfer operations. The image has been fully transferred.
The application must be in state 7. It should call GetImageInfo, if it needs to collect metadata for this image.

185.5 class TwainVersionMBS

185.5.1 class TwainVersionMBS

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The class for version details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

185.5.2 Methods

185.5.3 Constructor

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The private constructor.

185.5.4 Properties

185.5.5 Country as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The primary country where your Source or application is intended to be distributed.
Notes:

e.g. Germany.
(Read and Write property)

185.5.6 Info as String

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: General information string - fill in as needed.
Notes:

e.g. "1.0b3 Beta release".
(Read and Write property)

185.5.7 Language as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The primary language for your Source or application.
Notes:

e.g. TWLG_GER.
(Read and Write property)

185.5.8 MajorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: This refers to your application or Source's major revision number.
Notes:

e.g. The 2 in "version 2.1".
(Read and Write property)

185.5.9 MinorNum as Integer

MBS Picture Plugin, Plugin Version: 12.2, Platforms: macOS, Windows, Targets: All.

Function: The incremental revision number of your application or Source.
Notes:

e.g. The 1 in "version 2.1".
(Read and Write property)

Chapter 186

USB

186.1 class HIDAPIDeviceInfoMBS

186.1.1 class HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for device information.

186.1.2 Properties

186.1.3 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The USB interface which this logical device represents.
Notes:

Valid on both Linux implementations in all cases, and valid on the Windows implementation only if the device contains more than one interface.
(Read only property)

186.1.4 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Manufacturer String.
Notes: (Read only property)

186.1.5 NextDevice as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Next device.
Notes: (Read only property)

186.1.6 Path as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Platform-specific device path.
Notes: (Read only property)

186.1.7 ProductID as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device Product ID.
Notes: (Read only property)

186.1.8 ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Product string.
Notes: (Read only property)

186.1.9 ReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device Release Number in binary-coded decimal, also known as Device Version Number.
Notes: (Read only property)

186.1.10 SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Serial Number.
Notes: (Read only property)

186.1.11 Usage as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Usage for this Device/Interface.
Notes: (Read only property)

186.1.12 UsagePage as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Usage Page for this Device/Interface.
Notes: (Read only property)

186.1.13 VendorID as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device Vendor ID.
Notes: (Read only property)

186.2 class HIDAPIDeviceMBS

186.2.1 class HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a HIDAPI device.
Notes:

For HIDAPI see website:
https://github.com/signal11/hidapi

The MBS Plugin includes a copy of hidapi for Mac, Windows and Linux.
The linux version needs libudev installed.

You can optionally load a different version of hidapi with LoadLibrary methods.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.2.2 Blog Entries

- MBS Xojo Plugins, version 21.2pr3
- MBS Xojo Plugins, version 19.1pr2
- MBS Xojo / Real Studio Plugins, version 16.1pr3

186.2.3 Blog Entries

- MBS Xojo Plugins, version 21.2pr3
- MBS Xojo Plugins, version 19.1pr2
- MBS Xojo / Real Studio Plugins, version 16.1pr3

186.2.4 Methods

186.2.5 Close

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close a HID device.

186.2.6 Constructor

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.2.7 Enumerate(VendorID as Integer = 0, ProduceID as Integer = 0) as HIDAPIDeviceInfoMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enumerate the HID Devices.
Notes: This function returns a linked list of all the HID devices attached to the system which match VendorID and ProduceID. If VendorID is set to 0 then any vendor matches. If ProduceID is set to 0 then any product matches. If VendorID and ProduceID are both set to 0, then all HID devices will be returned.

186.2.8 GetFeatureReport(ReportID as Integer, MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a feature report from a HID device.
Notes:

Set the first byte of Data to the Report ID of the report to be read. Make sure to allow space for this extra byte in data. Upon return, the first byte will still contain the Report ID, and the report data will start in data.UInt8(1).

ReportID: The report ID to read.

This function returns the number of bytes read plus one for the report ID (which is still in the first byte), or -1 on error.

186.2.9 GetInputReport(ReportID as Integer, MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a input report from a HID device.
Notes:

MaxLength is how many bytes we allocate for receiving buffer.

Returns the data read, which has the report ID as first byte.

186.2.10 IndexedString(Index as Integer, MaxLen as Integer = 1024) as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a string from a HID device, based on its string index.
Notes:

Index: The index of the string to get.
maxlen: The maximum length for read buffer.
Returns text read.

186.2.11 Init as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initialize the HIDAPI library.
Notes:

This function initializes the HIDAPI library. Calling it is not strictly necessary, as it will be called automatically by Enumerate() and any of the Open*() functions if it is needed. This function should be called at the beginning of execution however, if there is a chance of HIDAPI handles being opened by different threads simultaneously.
This function returns 0 on success and -1 on error.

186.2.12 LoadError as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The load error message.

186.2.13 LoadLibrary(File as FolderItem) as boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the library.
Notes:

Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).

But since MBS Plugin contains the code, you may not need to load a custom library.
See also:

- 186.2.14 LoadLibrary(Path as string) as boolean 26197

186.2.14 LoadLibrary(Path as string) as boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the library.
Notes:

Returns true on success.
You can load a custom libhidapi.dylib (Mac), libhidapi.so (Linux) or libhidapi.dll (Windows).

But since MBS Plugin contains the code, you may not need to load a custom library.
See also:

- 186.2.13 LoadLibrary(File as FolderItem) as boolean 26197

186.2.15 Open(VendorID as Integer, ProduceID as Integer, SerialNumber as String = "") as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a HID device using a Vendor ID (VID), Product ID (PID) and optionally a serial number.
Notes:

If SerialNumber is "", the first device with the specified VID and PID is opened.
VendorID: The Vendor ID (VID) of the device to open.
ProduceID: The Product ID (PID) of the device to open.
SerialNumber: The Serial Number of the device to open (Optionally "").

This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

186.2.16 OpenPath(path as string) as HIDAPIDeviceMBS

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a HID device by its path name.
Notes:

The path name be determined by calling Enumerate(), or a platform-specific path name can be used (eg: /dev/hidraw0 on Linux).
Path: The path name of the device to open
This function returns a pointer to a HIDAPIDeviceMBS object on success or nil on failure.

186.2.17 Read(MaxLength as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read an Input report from a HID device.
Notes:

Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.

MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.

This function returns the actual number of bytes read and -1 on error. If no packet was available to be read and the handle is in non-blocking mode, this function returns 0.

186.2.18 ReadTimeOut(MaxLength as Integer, TimeoutMS as Integer) as MemoryBlock

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read an Input report from a HID device with timeout.
Notes:

Input reports are returned to the host through the INTERRUPT IN endpoint. The first byte will contain the Report number if the device uses numbered reports.

MaxLength: The number of bytes to read. For devices with multiple reports, make sure to read an extra byte for the report number.

TimeoutMS: timeout in milliseconds or -1 for blocking wait.

This function returns the actual number of bytes read and -1 on error. If no packet was available to be read within the timeout period, this function returns 0.

186.2.19 SendFeatureReport(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send a Feature report to the device.
Notes:

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

dat:a The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
See also:

- 186.2.20 SendFeatureReport(data as String) as Integer 26199

186.2.20 SendFeatureReport(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Send a Feature report to the device.
Notes:

Feature reports are sent over the Control endpoint as a Set_Report transfer. The first byte of Data must contain the Report ID. For devices which only support a single report, this must be set to 0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to SendFeatureReport() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must

be passed to SendFeatureReport(): the Report ID (or 0, for devices which do not use numbered reports), followed by the report data (16 bytes). In this example, the length passed in would be 17.

dat:a The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
See also:

- 186.2.19 SendFeatureReport(data as MemoryBlock) as Integer 26199

186.2.21 Shutdown as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Finalize the HIDAPI library.
Notes:

This function frees all of the static data associated with HIDAPI. It should be called at the end of execution to avoid memory leaks.
This function returns 0 on success and -1 on error.

186.2.22 VersionString as String

MBS USB Plugin, Plugin Version: 21.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries version number of the library.
Example:

```
// shows 0.10.1
MsgBox HIDAPIDeviceMBS.VersionString
```

186.2.23 Write(data as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write an Output report to a HID device.
Notes:

The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to

Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
Length of data to send is data.size.
See also:

- 186.2.24 Write(data as String) as Integer 26201

186.2.24 Write(data as String) as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Write an Output report to a HID device.
Notes:

The first byte of data must contain the Report ID. For devices which only support a single report, this must be set to 0x0. The remaining bytes contain the report data. Since the Report ID is mandatory, calls to Write() will always contain one more byte than the report contains. For example, if a hid report is 16 bytes long, 17 bytes must be passed to Write(), the Report ID (or 0x0, for devices with a single report), followed by the report data (16 bytes). In this example, the length passed in would be 17.
Write() will send the data on the first OUT endpoint, if one exists. If it does not, it will send the data through the Control Endpoint (Endpoint 0).

data: The data to send, including the report number as the first byte.

This function returns the actual number of bytes written and -1 on error.
Length of data to send is LenB(data).
See also:

- 186.2.23 Write(data as MemoryBlock) as Integer 26200

186.2.25 Properties

186.2.26 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device handle used.
Notes:

For Windows a HANDLE to the open device, for Mac a IOHIDDeviceRef reference and Linux the handle from open function.
(Read only property)

186.2.27 Error as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a string describing the last error which occurred.
Notes:

This function returns a string containing the last error which occurred or "" if none has occurred.
(Read only property)

186.2.28 FeatureReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The length of a feature report.
Notes:

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

186.2.29 Handle as Integer

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

186.2.30 InputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The length of an input report.
Notes:

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

186.2.31 ManufacturerString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Manufacturer String from a HID device.
Notes: (Read only property)

186.2.32 NonBlocking as Boolean

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the device handle to be non-blocking.
Notes:

In non-blocking mode calls to Read() will return immediately with a value of 0 if there is no data to be read.
In blocking mode, Read() will wait (block) until there is data to read before returning.
Nonblocking can be turned on and off at any time.

Value true: enable or not the nonblocking reads.
Value false: to disable nonblocking.
(Read and Write property)

186.2.33 OutputReportLength as Integer

MBS USB Plugin, Plugin Version: 16.1, Platforms: macOS, Windows, Targets: Desktop, Console & Web.

Function: The length of an output report.
Notes:

Not implemented for Linux.
Returns -1 if unknown.
On Mac this is more the maximum report length.
(Read only property)

186.2.34 ProductString as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Product String from a HID device.
Notes: (Read only property)

186.2.35 SerialNumber as String

MBS USB Plugin, Plugin Version: 16.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The Serial Number String from a HID device.
Notes: (Read only property)

186.3 class LibUSBConfigDescriptorMBS

186.3.1 class LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB configuration descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.3.2 Methods

186.3.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.3.4 GetInterface(index as Integer) as LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries interface by index.

186.3.5 Properties

186.3.6 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Configuration characteristics.
Notes: (Read only property)

186.3.7 Configuration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing this configuration.
Notes: (Read only property)

186.3.8 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Identifier value for this configuration.
Notes: (Read only property)

186.3.9 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

186.3.10 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

186.3.11 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

186.3.12 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of interfaces supported by this configuration.
Notes: (Read only property)

186.3.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

186.3.14 MaxPower as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum power consumption of the USB device from this bus in this configuration when the device is fully opreation.
Notes:

Expressed in units of 2 mA when the device is operating in high-speed mode and in units of 8 mA when the device is operating in super-speed mode.
(Read only property)

186.3.15 NumInterfaces as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of interfaces supported by this configuration.
Notes: (Read only property)

186.3.16 TotalLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Total length of data returned for this configuration.
Notes: (Read only property)

186.4 class LibUSBDeviceDescriptorMBS

186.4.1 class LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB device descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.4.2 Methods

186.4.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.4.4 Properties

186.4.5 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

186.4.6 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF class code for the device.
Notes: (Read only property)

186.4.7 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF protocol code for the device, qualified by the DeviceClass and DeviceSubClass values.
Notes: (Read only property)

186.4.8 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Device release number in binary-coded decimal.
Notes: (Read only property)

186.4.9 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF subclass code for the device, qualified by the DeviceClass value.
Notes: (Read only property)

186.4.10 IndexManufacturer as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing manufacturer.
Notes: (Read only property)

186.4.11 IndexProduct as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing product.
Notes: (Read only property)

186.4.12 IndexSerialNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor containing device serial number.
Notes: (Read only property)

186.4.13 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes).
Notes: (Read only property)

186.4.14 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum packet size for endpoint 0.
Notes: (Read only property)

186.4.15 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of possible configurations.
Notes: (Read only property)

186.4.16 ProductID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF product ID.
Notes: (Read only property)

186.4.17 USBReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB specification release number in binary-coded decimal.
Notes: (Read only property)

186.4.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF vendor ID.
Notes: (Read only property)

186.4.19 Constants

186.4.20 kClassApplication = & hfe

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Application

186.4.21 kClassAudio = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Audio

186.4.22 kClassComm = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Comm

186.4.23 kClassContentSecurity = 13

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Security

186.4.24 kClassData = 10

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Data

186.4.25 kClassDiagnosticDevice = & hdc

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Diagnostic Device

186.4.26 kClassHID = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: HID

186.4.27 kClassHUB = 9

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: HUB

186.4.28 kClassImage = 6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Image

186.4.29 kClassMassStorage = 8

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Storage

186.4.30 kClassPerInterface = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Classes per Interface

186.4.31 kClassPersonalHealthcare = 15

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Personal Healthcare

186.4.32 kClassPhysical = 5

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Physical

186.4.33 kClassPrinter = 7

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Printer

186.4.34 kClassPTP = 6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: PTP

186.4.35 kClassSmartCard = 11

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: SmartCard

186.4.36 kClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Vendor Specific

186.4.37 kClassVideo = 14

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Video

186.4.38 kClassWireless = & he0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the USB class constants.
Notes: Wireless

186.5 class LibUSBDeviceMBS

186.5.1 class LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a device.
Notes:

This is both for a device as general and an open connection.

LibUSB abstracts on Mac, Windows and Linux for using USB devices. SO far it's the best generic USB interface we have.
You need libUSB dylib (mac), dll (Windows) and so (Linux) files from LibUSB. For Linux the LibUSB library is usually preinstalled with a LibUSB package, so the plugin finds it automatically.

For MacOS you can take a look on the MacUSBDeviceMBS class and the IORegistryMBS class.
See also WindowsDeviceMBS, WinUSBDeviceMBS and WinUSBMBS classes for WIndows.

186.5.6 Methods

186.5.7 AttachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Re-attach an interface's kernel driver, which was previously detached using libusb_detach_kernel_driver().
Notes:

This call is only effective on Linux and returns kErrorNotSupported on all other platforms.

This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to attach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
kErrorBusy if the driver cannot be attached because the interface is claimed by a program or driver
another error code on other failure

186.5.8 BulkTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB bulk transfer.
Notes:

The direction of the transfer is inferred from the direction bits of the endpoint address.

For bulk reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for bulk writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

Parameters:

endpoint	the address of a valid endpoint to communicate with
data	a suitably-sized data buffer for either input or output (depending on endpoint)
length	for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
transferred	output location for the number of bytes actually transferred.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

Lasterror is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out (and populates transferred)
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other failures

186.5.9 ClaimInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Claim an interface on a given device handle.
Notes:

You must claim the interface you wish to use before you can perform I/O on any of its endpoints.

It is legal to attempt to claim an already-claimed interface, in which case libusb just returns 0 without doing anything.

Claiming of interfaces is a purely logical operation; it does not cause any requests to be sent over the bus. Interface claiming is used to instruct the underlying operating system that your application wishes to take ownership of the interface.

This is a non-blocking function.

Parameters:
interfaceNumber: the bInterfaceNumber of the interface you wish to claim

Lasterror is set:
0 on success
kErrorNotFound if the requested interface does not exist
kErrorBusy if another program or driver has claimed the interface
kErrorNoDevice if the device has been disconnected
a error code on other failure

186.5.10 ClearHalt(endpoint as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clear the halt/stall condition for an endpoint.
Notes:

Endpoints with halt status are unable to receive or transmit data until the halt condition is stalled.

You should cancel all pending transfers before attempting to clear the halt condition.

This is a blocking function.

Parameters:
endpoint: the endpoint to clear halt status

Returns:
0 on success
kErrorNotFound if the endpoint does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

186.5.11 Close

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Close a device handle.
Notes:

Should be called on all open handles before your application exits.

Internally, this function destroys the reference that was added by Open on the given device.
This is a non-blocking function; no requests are sent over the bus.

186.5.12 ControlTransfer(requestType as Integer, Request as Integer, Value as Integer, Index as Integer, data as Ptr, Length as Integer, Timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB control transfer.
Notes:

The direction of the transfer is inferred from the RequestType field of the setup packet.

The Value, Index and Length fields values should be given in host-endian byte order.

Parameters:

RequestType	the request type field for the setup packet
Request	the request field for the setup packet
Value	the value field for the setup packet
Index	the index field for the setup packet
data	a suitably-sized data buffer for either input or output (depending on direction bits within bmRequestType)
Length	the length field for the setup packet. The data buffer should be at least this size.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

on success, the number of bytes actually transferred is returned.

Lasterror is set to:
kErrorTimeout if the transfer timed out
kErrorPipe if the control request was not supported by the device
kErrorNoDevice if the device has been disconnected
another error code on other failures

186.5.13 DetachKernelDriver(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Detach a kernel driver from an interface.
Notes:

If successful, you will then be able to claim the interface and perform I/O.
This functionality is not available on Darwin or Windows.

Parameters:
interfaceNumber: the interface to detach the driver from

Lasterror is set:
0 on success
kErrorNotFound if no kernel driver was active
kErrorInvalidParam if the interface does not exist
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

186.5.14 Devices as LibUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of USB devices currently attached to the system.
Notes:

This is your entry point into finding a USB device to operate.

This return value of this function indicates the number of devices in the resultant list.

The number of devices in the outputted list.
Lasterror is set to zero on success or or any error codes according to errors encountered by the backend.

186.5.15 ErrorName(ErrorCode as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a constant string with the ASCII name of a libusb error code.

186.5.16 GetActiveConfigDescriptor as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the USB configuration descriptor for the currently active configuration.
Notes:

This is a non-blocking function which does not involve any requests being sent to the device.

Lasterror is set to:
0 on success
kErrorNotFound if the device is in unconfigured state
another error code on error.

186.5.17 GetConfigDescriptor(Index as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a USB configuration descriptor based on its index.
Notes:

This is a non-blocking function which does not involve any requests being sent to the device.

Parameters:

Index the index of the configuration you wish to retrieve

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

186.5.18 GetConfigDescriptorByValue(Value as Integer) as LibUSBConfigDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a USB configuration descriptor with a specific ConfigurationValue.
Notes:

This is a non-blocking function which does not involve any requests being sent to the device.

Value: the bConfigurationValue of the configuration you wish to retrieve.

Lasterror is set to:
0 on success
kErrorNotFound if the configuration does not exist
another error code on error

186.5.19 GetConfiguration as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determine the bConfigurationValue of the currently active configuration.
Notes:

You could formulate your own control request to obtain this information, but this function has the advantage that it may be able to retrieve the information from operating system caches (no I/O involved).

If the OS does not cache this information, then this function will block while a control transfer is submitted to retrieve the information.

This function will return a value of 0 in the config output parameter if the device is in unconfigured state.

Returns Configuration value of the active configuration (only valid for return code 0)

The lasterror is set to:
0 on success
kErrorNoDevice if the device has been disconnected
another error code on other failure

186.5.20 GetDescriptor(descType as Integer, descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from the default control pipe.

Notes:

This is a convenience function which formulates the appropriate control message to retrieve the descriptor.

Parameters:

descType	the descriptor type, see libusb_descriptor_type
descIndex	the index of the descriptor to retrieve
data	output buffer for descriptor
length	size of data buffer

Returns number of bytes returned in data or zero.
Sets lasterror to error code on failure

186.5.21 GetDeviceDescriptor as LibUSBDeviceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the USB device descriptor for a given device.
Notes:

This is a non-blocking function; the device descriptor is cached in memory.

Returns 0 on success or a error code on failure.

186.5.22 GetMaxISOPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Calculate the maximum packet size which a specific endpoint is capable is sending or receiving in the duration of 1 microframe.
Notes:

Only the active configution is examined. The calculation is based on the wMaxPacketSize field in the endpoint descriptor as described in section 9.6.6 in the USB 2.0 specifications.

If acting on an isochronous or interrupt endpoint, this function will multiply the value found in bits 0:10 by the number of transactions per microframe (determined by bits 11:12). Otherwise, this function just returns the numeric value found in bits 0:10.

This function is useful for setting up isochronous transfers, for example you might pass the return value from this function to libusb_set_iso_packet_lengths() in order to set the length field of every isochronous packet in a transfer.

Since v1.0.3.

Parameters:
endpoint: address of the endpoint in question

Returns the maximum packet size which can be sent/received on this endpoint.

The lasterror is set to:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

186.5.23 GetMaxPacketSize(EndPoint as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convenience function to retrieve the wMaxPacketSize value for a particular endpoint in the active device configuration.
Notes:

This function was originally intended to be of assistance when setting up isochronous transfers, but a design mistake resulted in this function instead. It simply returns the wMaxPacketSize value without considering its contents. If you're dealing with isochronous transfers, you probably want libusb_get_max_iso_packet_size() instead.

Parameters:
endpoint: address of the endpoint in question

Returns the Max Packet Size value.

The lasterror is set:
0 for success.
kErrorNotFound if the endpoint does not exist
kErrorOther on other failure

186.5.24 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from a device.
Notes:

This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

descIndex	the index of the descriptor to retrieve
LangID	the language ID for the string descriptor

Returns string.
Lasterror is set to zero or error code on failure.
See also:

- 186.5.25 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer 26226

186.5.25 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a descriptor from a device.
Notes:

This is a convenience function which formulates the appropriate control message to retrieve the descriptor. The string returned is Unicode, as detailed in the USB specifications.

Parameters:

Returns number of bytes returned in data.
Lasterror is set to zero or error code on failure.
See also:

- 186.5.24 GetStringDescriptor(descIndex as Integer, LangID as Integer = 0) as String 26226

descIndex	the index of the descriptor to retrieve
LangID	the language ID for the string descriptor
data	output buffer for descriptor
length	size of data buffer

186.5.26 GetStringDescriptorAscii(descIndex as Integer) as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a string descriptor in ASCII.
Notes:

Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

descIndex	the index of the descriptor to retrieve

Returns string.
Lasterror is set to error code on failure and zero on success.
See also:

- 186.5.27 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer 26227

186.5.27 GetStringDescriptorAscii(descIndex as Integer, data as Ptr, Length as Integer) as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve a string descriptor in ASCII.
Notes:

Wrapper around GetStringDescriptor(). Uses the first language supported by the device.

Parameters:

Returns number of bytes returned in data.
Lasterror is set to error code on failure and zero on success.
See also:

descIndex	the index of the descriptor to retrieve
data	output buffer for ASCII string descriptor
length	size of data buffer

• 186.5.26 GetStringDescriptorAscii(descIndex as Integer) as String 26227

186.5.28 HasCapability(Capability as UInt32) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check at runtime if the loaded library has a given capability.
Notes: Returns true if the running library has the capability, false otherwise.

186.5.29 Initialize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Initialize libusb.

186.5.30 InterruptTransfer(endpoint as Integer, data as Ptr, Length as Integer, byref ActualLength as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB interrupt transfer.
Notes:

The direction of the transfer is inferred from the direction bits of the endpoint address.

For interrupt reads, the length field indicates the maximum length of data you are expecting to receive. If less data arrives than expected, this function will return that data, so be sure to check the transferred output parameter.

You should also check the transferred parameter for interrupt writes. Not all of the data may have been written.

Also check transferred when dealing with a timeout error code. libusb may have to split your transfer into

a number of chunks to satisfy underlying O/S requirements, meaning that the timeout may expire after the first few chunks have completed. libusb is careful not to lose any data that may have been transferred; do not assume that timeout conditions indicate a complete lack of I/O.

The default endpoint bInterval value is used as the polling interval.

Parameters:

endpoint	the address of a valid endpoint to communicate with
data	a suitably-sized data buffer for either input or output (depending on endpoint)
length	for bulk writes, the number of bytes from data to be sent. for bulk reads, the maximum number of bytes to receive into the data buffer.
transferred	output location for the number of bytes actually transferred.
timeout	timeout (in millseconds) that this function should wait before giving up due to no response being received. For an unlimited timeout, use value 0.

The lasterror property is set to:
0 on success (and populates transferred)
kErrorTimeout if the transfer timed out
kErrorPipe if the endpoint halted
kErrorOverflow if the device offered more data, see Packets and overflows
kErrorNoDevice if the device has been disconnected
another error code on other error

186.5.31 KernelDriverActive(interfaceNumber as Integer) as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Determine if a kernel driver is active on an interface.
Notes:

If a kernel driver is active, you cannot claim the interface, and libusb will be unable to perform I/O.

This functionality is not available on Windows.

Parameters:
interfaceNumber: the interface to check

Lasterror is set:
0 if no kernel driver is active

1 if a kernel driver is active
kErrorNoDevice if the device has been disconnected
kErrorNotSupported on platforms where the functionality is not available
another error code on other failure

186.5.32 LibraryLoaded as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether library is loaded.

186.5.33 LibraryLoadErrorMessage as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error message from loading library.

186.5.34 LibVersion as LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries version of library.

186.5.35 LoadLibrary(file as folderitem) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the libusb library.
Notes:

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 186.5.36 LoadLibrary(path as string) as boolean

186.5.36 LoadLibrary(path as string) as boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the libusb library.
Notes:

Returns true on success or false on failure.
The LibraryLoadErrorMessage function returns error message on failure.
See also:

- 186.5.35 LoadLibrary(file as folderitem) as boolean 26230

186.5.37 Open as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Open a device and obtain a device handle.
Notes:

A handle allows you to perform I/O on the device in question.

Internally, this function adds a reference to the device. This reference is removed during Close().

This is a non-blocking function; no requests are sent over the bus.

The last error to:
0 on success
kErrorNoMemory on memory allocation failure
kErrorAccess if the user has insufficient permissions
kErrorNoDevice if the device has been disconnected
another error code on other failure

186.5.38 OpenDevice(VID as Integer, PID as Integer) as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Convenience function for finding a device with a particular VID/PID combination.
Notes:

This function is intended for those scenarios where you are using libusb to knock up a quick test application - it allows you to avoid calling libusb_get_device_list() and worrying about traversing/freeing the list.

This function has limitations and is hence not intended for use in real applications: if multiple devices have the same IDs it will only give you the first one, etc.

Parameters:

VID	the idVendor value to search for
PID	the idProduct value to search for

Returns:
a handle for the first found device, or NULL on error or if the device could not be found.

186.5.39 ReleaseInterface(interfaceNumber as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release an interface previously claimed with ClaimInterface.
Notes:

You should release all claimed interfaces before closing a device handle.

This is a blocking function. A SET_INTERFACE control request will be sent to the device, resetting interface state to the first alternate setting.

Parameters:
interfaceNumber: the bInterfaceNumber of the previously-claimed interface

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

186.5.40 Reset

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Perform a USB port reset to reinitialize a device.
Notes:

The system will attempt to restore the previous configuration and alternate settings after the reset has completed.

If the reset fails, the descriptors change, or the previous state cannot be restored, the device will appear to be disconnected and reconnected. This means that the device handle is no longer valid (you should close it) and rediscover the device. An error code of kErrorNotFound indicates when this is the case.

This is a blocking function which usually incurs a noticeable delay.

Lasterror is set:
0 on success
kErrorNotFound if re-enumeration is required, or if the device has been disconnected
another error code on other failure

186.5.41 SetConfiguration(configuration as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the active configuration for a device.
Notes:

The operating system may or may not have already set an active configuration on the device. It is up to your application to ensure the correct configuration is selected before you attempt to claim interfaces and perform other operations.

If you call this function on a device already configured with the selected configuration, then this function will act as a lightweight device reset: it will issue a SET_CONFIGURATION request using the current configuration, causing most USB-related device state to be reset (altsetting reset to zero, endpoint halts cleared, toggles reset).

You cannot change/reset configuration if your application has claimed interfaces - you should free them with libusb_release_interface() first. You cannot change/reset configuration if other applications or drivers have claimed interfaces.

A configuration value of -1 will put the device in unconfigured state. The USB specifications state that a configuration value of 0 does this, however buggy devices exist which actually have a configuration 0.

You should always use this function rather than formulating your own SET_CONFIGURATION control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:
configuration: the bConfigurationValue of the configuration you wish to activate, or -1 if you wish to put the device in unconfigured state

The lasterror is set to:
0 on success
kErrorNotFound if the requested configuration does not exist
kErrorBusy if interfaces are currently claimed
kErrorNoDevice if the device has been disconnected
another error code on other failure

186.5.42 SetDebug(level as integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set message verbosity.
Notes:

Level 0: no messages ever printed by the library (default)
Level 1: error messages are printed to stderr
Level 2: warning and error messages are printed to stderr
Level 3: informational messages are printed to stdout, warning and error messages are printed to stderr
The default level is 0, which means no messages are ever printed. If you choose to increase the message verbosity level, ensure that your application does not close the stdout/stderr file descriptors.

You are advised to set level 3. libusb is conservative with its message logging and most of the time, will only log messages that explain error conditions and other oddities. This will help you debug your software.

If the LIBUSB_DEBUG environment variable was set when libusb was initialized, this function does nothing: the message verbosity is fixed to the value in the environment variable.

If libusb was compiled without any message logging, this function does nothing: you'll never get any messages.
If libusb was compiled with verbose debug message logging, this function does nothing: you'll always get messages from all levels.

186.5.43 SetInterfaceAltSetting(interfaceNumber as Integer, alternateSetting as Integer)

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Activate an alternate setting for an interface.
Notes:

The interface must have been previously claimed with ClaimInterface().

You should always use this function rather than formulating your own SET_INTERFACE control request. This is because the underlying operating system needs to know when such changes happen.

This is a blocking function.

Parameters:

interfaceNumber	the InterfaceNumber of the previously-claimed interface
alternateSetting	the AlternateSetting of the alternate setting to activate

The lasterror:
0 on success
kErrorNotFound if the interface was not claimed, or the requested alternate setting does not exist
kErrorNoDevice if the device has been disconnected
another error code on other failure

186.5.44 Shutdown

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Deinitialize libusb.
Notes: Should be called after closing all open devices and before your application terminates.

186.5.45 Properties

186.5.46 BusNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of the bus that a device is connected to.
Notes: (Read only property)

186.5.47 DeviceAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the address of the device on the bus it is connected to.
Notes: (Read only property)

186.5.48 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the device.
Notes: (Read only property)

186.5.49 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the negotiated connection speed for a device.
Notes:

a speed value, where kSpeedUnknown means that the OS doesn't know or doesn't support returning the negotiated speed.
(Read only property)

186.5.50 Handle as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The handle to the open device.
Notes: (Read only property)

186.5.51 IsOpen as Boolean

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether device is open.
Notes:

True if you called OpenDevice successful.
(Read only property)

186.5.52 Lasterror as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

186.5.53 Constants

186.5.54 kCapabilitiesHasCapabilities = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes: The HasCapability() API is available.

186.5.55 kCapabilitiesHasHIDAccess = 256

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes:

The library can access HID devices without requiring user intervention.
Note that before being able to actually access an HID device, you may still have to call additional libusb functions such as
DetachKernelDriver.

186.5.56 kCapabilitiesHasHotplug = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes: Hotplug support is available on this platform.

186.5.57 kCapabilitiesSupportsDetachKernelDriver = 257

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the capabilities constants.
Notes: The library supports detaching of the default USB driver, using DetachKernelDriver, if one is set by the OS kernel.

186.5.58 kDescriptorTypeBOS = 6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: BOS descriptor

186.5.59 kDescriptorTypeConfig = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Configuration descriptor.

186.5.60 kDescriptorTypeDevice = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Device descriptor.

186.5.61 kDescriptorTypeDeviceCapabilities = 16

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Device Capability descriptor

186.5.62 kDescriptorTypeEndpoint = 5

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Endpoint descriptor.

186.5.63 kDescriptorTypeHID = & h21

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: HID descriptor.

186.5.64 kDescriptorTypeHub = & h29

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Hub descriptor.

186.5.65 kDescriptorTypeInterface = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Interface descriptor.

186.5.66 kDescriptorTypePhysical = & h23

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: Physical descriptor.

186.5.67 kDescriptorTypeReport = & h22

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: HID report descriptor.

186.5.68 kDescriptorTypeString = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: String descriptor.

186.5.69 kDescriptorTypeSuperSpeedEndpointCompanion = & h30

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: SuperSpeed Endpoint Companion descriptor

186.5.70 kDescriptorTypeSuperSpeedHub = & h2A

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the descriptor type constants.
Notes: SuperSpeed Hub descriptor

186.5.71 kErrorAccess = -3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Access

186.5.72 kErrorBusy = -6

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Busy

186.5.73 kErrorInterrupted = -10

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Interrupted

186.5.74 kErrorInvalidParam = -2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Invalid parameter

186.5.75 kErrorIO = -1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: I/O Error

186.5.76 kErrorNoDevice = -4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: No device.

186.5.77 kErrorNoMemory = -11

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Out of Memory

186.5.78 kErrorNotFound = -5

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Not found

186.5.79 kErrorNotSupported = -12

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Function not supported

186.5.80 kErrorOther = -99

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Other errors

186.5.81 kErrorOverflow = -8

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Overflow

186.5.82 kErrorPipe = -9

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Pipe

186.5.83 kErrorTimeout = -7

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the error constants.
Notes: Timeout

186.5.84 kLogLevelDebug = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: debug and informational messages are printed to stdout, warnings and errors to stderr

186.5.85 kLogLevelError = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: error messages are printed to stderr

186.5.86 kLogLevelInfo = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: informational messages are printed to stdout, warning and error messages are printed to stderr

186.5.87 kLogLevelNone = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: no messages ever printed by the library (default)

186.5.88 kLogLevelWarning = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the debug log level constants.
Notes: warning and error messages are printed to stderr

186.5.89 kSpeedFull = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at full speed (12MBit/s).

186.5.90 kSpeedHigh = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at high speed (480MBit/s).

186.5.91 kSpeedLow = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at low speed (1.5MBit/s).

186.5.92 kSpeedSuper = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The device is operating at super speed (5000MBit/s).

186.5.93 kSpeedUnknown = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the constants indicates the speed at which the device is operating.
Notes: The OS doesn't report or know the device speed.

186.6 class LibUSBEndpointDescriptorMBS

186.6.1 class LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB endpoint descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.6.2 Methods

186.6.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.6.4 Properties

186.6.5 AttributesBitmap as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Attributes which apply to the endpoint when it is configured using the bConfigurationValue.
Notes: (Read only property)

186.6.6 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

186.6.7 EndpointAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The address of the endpoint described by this descriptor.
Notes: (Read only property)

186.6.8 EndpointDirection as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The transfer direction.
Notes: (Read only property)

186.6.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

186.6.10 extraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

186.6.11 Interval as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Interval for polling endpoint for data transfers.
Notes: (Read only property)

186.6.12 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

186.6.13 MaxPacketSize as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Maximum packet size this endpoint is capable of sending/receiving.
Notes: (Read only property)

186.6.14 Refresh as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For audio devices only: the rate at which synchronization feedback is provided.
Notes: (Read only property)

186.6.15 SynchAddress as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: For audio devices only: the address if the synch endpoint.
Notes: (Read only property)

186.6.16 TransferType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The transfer type.
Notes: (Read only property)

186.6.17 Constants

186.6.18 kEndpointDirectionIn = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Endpoint Directions constants.
Notes: In: device-to-host

186.6.19 kEndpointDirectionOut = 128

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Endpoint Directions constants.
Notes: Out: host-to-device.

186.6.20 kTransferTypeBulk = 2

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Bulk endpoint.

186.6.21 kTransferTypeBulkStream = 4

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Bulk stream transfer.

186.6.22 kTransferTypeControl = 0

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Control endpoint.

186.6.23 kTransferTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Interrupt endpoint.

186.6.24 kTransferTypeISOChronous = 1

MBS USB Plugin, Plugin Version: 18.1.

Function: One of the Transfer Type constants.
Notes: Isochronous endpoint.

186.7 class LibUSBInterfaceDescriptorMBS

186.7.1 class LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class representing the standard USB interface descriptor.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.7.2 Methods

186.7.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.7.4 EndpointDescriptor(index as Integer) as LibUSBEndpointDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries endpoint descriptors by index.

186.7.5 Properties

186.7.6 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Value used to select this alternate setting for this interface.
Notes: (Read only property)

186.7.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Descriptor type.
Notes: (Read only property)

186.7.8 Endpoints as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of endpoint descriptors.
Notes: (Read only property)

186.7.9 extra as MemoryBlock

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Extra descriptors.
Notes: (Read only property)

186.7.10 ExtraLength as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of the extra descriptors, in bytes.
Notes: (Read only property)

186.7.11 IndexInterface as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Index of string descriptor describing this interface.
Notes: (Read only property)

186.7.12 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF class code for this interface.
Notes: (Read only property)

186.7.13 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of this interface.
Notes: (Read only property)

186.7.14 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF protocol code for this interface, qualified by the InterfaceClass and InterfaceSubClass values.
Notes: (Read only property)

186.7.15 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: USB-IF subclass code for this interface, qualified by the InterfaceClass value.
Notes: (Read only property)

186.7.16 Length as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Size of this descriptor (in bytes)
Notes: (Read only property)

186.7.17 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of endpoints used by this interface (excluding the control endpoint).
Notes: (Read only property)

186.8 class LibUSBInterfaceMBS

186.8.1 class LibUSBInterfaceMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A collection of alternate settings for a particular USB interface.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.8.2 Methods

186.8.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.8.4 InterfaceDescriptor(index as Integer) as LibUSBInterfaceDescriptorMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries interface descriptor by index.

186.8.5 Properties

186.8.6 Count as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of alternate settings that belong to this interface.
Notes: (Read only property)

186.8.7 InterfaceDescriptors as Variant

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Array of interface descriptors.
Notes: (Read only property)

186.9 class LibUSBISOPacketDescriptorMBS

186.9.1 class LibUSBISOPacketDescriptorMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Isochronous packet descriptor.
Notes:

See LibUSBTransferMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.9.2 Methods

186.9.3 Constructor

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

186.9.4 Properties

186.9.5 ActualLength as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Amount of data that was actually transferred.
Notes: (Read and Write property)

186.9.6 Length as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of data to request in this packet.
Notes: (Read and Write property)

186.9.7 Status as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Status code for this packet.
Notes:

See constants in LibUSBTransferMBS class.
(Read and Write property)

186.10 class LibUSBTransferMBS

186.10.1 class LibUSBTransferMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for asynchronous USB transfer.
Notes:

The user populates this class and then submits it in order to request a transfer. After the transfer has completed, the library populates the transfer with the results and passes it back to the user.

Please check LibUSB documentation and examples for asynchronous transfers.

186.10.2 Methods

186.10.3 Cancel as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Cancels a running transfer.
Notes: Returns error code.

186.10.4 Constructor(ISOPackets as Integer = 0)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Allocates usb transfer object with given number of packets.

186.10.5 ControlTransferGetData as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries pointer ot the setup part of the control transfer structure within the buffer.
Notes:

Convenience function since there is a 8 byte control block in front of the data.
Returns nil if not possible.

186.10.6 ControlTransferGetSetup as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries pointer ot the setup part of the control transfer structure within the buffer.
Notes:

Convenience function since there is a 8 byte control block in front of the data.
Returns nil if not possible.

186.10.7 FillBulkStreamTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, StreamId as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required fields for a bulk transfer using bulk streams.
Notes:

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
StreamId: id for this transfer
buffer: data buffer
timeout: timeout for the transfer in milliseconds

186.10.8 FillBulkTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required fields for a bulk transfer.
Notes:

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
timeout: timeout for the transfer in milliseconds

186.10.9 FillControlSetup(Buffer as MemoryBlock, RequestType as Integer, Request as Integer, Value as Integer, Index as Integer, Length as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the setup packet (first 8 bytes of the data buffer) for a control transfer.
Notes: The Index, Value and Length values should be given in host-endian byte order.

186.10.10 FillControlTransfer(Device as LibUSBDeviceMBS, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required transfer fields for a control transfer.
Notes:

If you pass a transfer buffer to this function, the first 8 bytes will be interpreted as a control setup packet.

Therefore the recommended approach is:

- Allocate a suitably sized MemoryBlock (including space for control setup)
- Call FillControlSetup()
- If this is a host-to-device transfer with a data stage, put the data in place after the setup packet
- Call this function
- Call Submit()

Device: the device that will handle the transfer
buffer: The data buffer. If provided, this function will interpret the first 8 bytes as a setup packet and infer the transfer length from that.
timeout: timeout for the transfer in milliseconds

186.10.11 FillInterruptTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required fields for an interrupt transfer.
Notes:

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
timeout: timeout for the transfer in milliseconds

186.10.12 FillISOTransfer(Device as LibUSBDeviceMBS, EndPoint as Integer, Buffer as MemoryBlock, NumISOPackets as Integer, Timeout as Integer)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Helper function to populate the required \ref libusb_transfer fields for an isochronous transfer.
Notes:

Device: the device that will handle the transfer
endpoint: address of the endpoint where this transfer will be sent
buffer: data buffer
NumISOPackets: the number of isochronous packets
timeout: timeout for the transfer in milliseconds

186.10.13 ISOPacketBuffer(Index as Integer) as Ptr

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries buffer pointer for the packet.
Notes: This points within the buffer MemoryBlock.

186.10.14 ISOPacketDescriptor(index as Integer) as LibUSBISOPacketDescriptorMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Isochronous packet descriptors, for isochronous transfers only.
Notes: Queries packet with given index. Zero based.

186.10.15 SetISOPacketLengths(Length as UInt32)

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets length field for all packets.
Example:

```
// 3 buffers
Dim t As New LibUSBTransferMBS(3)
t.buffer = New MemoryBlock(100)

// set all length to 4
t.SetISOPacketLengths 4

Dim p0 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(0)
Dim p1 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(1)
Dim p2 As LibUSBISOPacketDescriptorMBS = t.ISOPacketDescriptor(2)

Break // check
```

186.10.16 Submit as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Submits transfer asynchronously.
Notes:

Returns error code.

Later Completed event is called.

186.10.17 Properties

186.10.18 ActualLength as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Actual length of data that was transferred.
Notes:

Read-only, and only for use within transfer callback function.

Not valid for isochronous endpoint transfers.
(Read only property)

186.10.19 Buffer as MemoryBlock

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The memory buffer to use.
Notes:

Please assign MemoryBlock of right size as this sets length property.
(Read and Write property)

186.10.20 Device as LibUSBDeviceMBS

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The device that this transfer will be submitted to.
Notes: (Read and Write property)

186.10.21 Endpoint as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Address of the endpoint where this transfer will be sent.
Notes: (Read and Write property)

186.10.22 Flags as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A bitwise OR combination of flags.
Notes: (Read and Write property)

186.10.23 ISOPackets as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of isochronous packets.
Notes:

Only used for I/O with isochronous endpoints.
(Read only property)

186.10.24 Length as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Length of buffer.
Notes:

Set to length of MemoryBlock assigned to buffer property.
(Read only property)

186.10.25 Status as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The status of the transfer.
Notes:

Read-only, and only for use within transfer callback function.

If this is an isochronous transfer, this field may read kTransferStatusCompleted even if there were errors in the frames. Use the status in LibUSBISOPacketDescriptorMBS in each packet to determine if errors occurred.
(Read only property)

186.10.26 Tag as Variant

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag for the transfer.
Notes:

A value you can use as you like, e.g. to store reference to your window.
(Read and Write property)

186.10.27 Timeout as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Timeout for this transfer in millseconds.
Notes:

A value of 0 indicates no timeout.
(Read and Write property)

186.10.28 Type as Integer

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Type of the endpoint.
Notes:

See kTransferType* constants.
(Read and Write property)

186.10.29 Events

186.10.30 Completed

MBS USB Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The completion event.
Notes:

Called when transfer is done (successful or failed).
Dispatched on main thread.

Not implemented for 32-bit Linux on Intel.

186.10.31 Constants

186.10.32 kTransferFlagsAddZeroPacket = 4

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the flag constants.
Notes:

Terminate transfers that are a multiple of the endpoint's MaxPacketSize with an extra zero length packet. This is useful when a device protocol mandates that each logical request is terminated by an incomplete packet (i.e. the logical requests are not separated by other means).

This flag only affects host-to-device transfers to bulk and interrupt endpoints. In other situations, it is ignored.

This flag only affects transfers with a length that is a multiple of the endpoint's wMaxPacketSize. On transfers of other lengths, this flag has no effect. Therefore, if you are working with a device that needs a ZLP whenever the end of the logical request falls on a packet boundary, then it is sensible to set this flag on every transfer (you do not have to worry about only setting it on transfers that end on the boundary).

This flag is currently only supported on Linux. On other systems, libusb_submit_transfer() will return LIBUSB_ERROR_NOT_SUPPORTED for every transfer where this flag is set.
Available since libusb-1.0.9.

186.10.33 kTransferFlagsShortNotOK = 1

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the flag constants.
Notes: Report short frames as errors.

186.10.34 kTransferStatusCancelled = 3

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: Transfer was cancelled.

186.10.35 kTransferStatusCompleted = 0

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: Transfer completed without error. Note that this does not indicate that the entire amount of requested data was transferred.

186.10.36 kTransferStatusError = 1

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: Transfer failed

186.10.37 kTransferStatusNoDevice = 5

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: Device was disconnected

186.10.38 kTransferStatusOverflow = 6

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: Device sent more data than requested

186.10.39 kTransferStatusStall = 4

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: For bulk/interrupt endpoints: halt condition detected (endpoint stalled). For control endpoints: control request not supported.

186.10.40 kTransferStatusTimeout = 2

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the status constants.
Notes: Transfer timed out.

186.10.41 kTransferTypeBulk = 2

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the transfer type constants.
Notes: Bulk endpoint

186.10.42 kTransferTypeBulkStream = 4

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the transfer type constants.
Notes: Stream endpoint.

186.10.43 kTransferTypeControl = 0

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the transfer type constants.
Notes: Control endpoint

186.10.44 kTransferTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the transfer type constants.
Notes: Interrupt endpoint

186.10.45 kTransferTypeISOChronous = 1

MBS USB Plugin, Plugin Version: 22.2.

Function: One of the transfer type constants.
Notes: Isochronous endpoint

186.11 class LibUSBVersionMBS

186.11.1 class LibUSBVersionMBS

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Class representing the libusb version.

186.11.2 Methods

186.11.3 Constructor

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Queries library version if possible.

186.11.4 Properties

186.11.5 Describe as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Output of git describe –tags at library build time.
Notes: (Read only property)

186.11.6 Major as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library major version.
Notes:

Currently 1.
(Read only property)

186.11.7 Micro as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library micro version.
Notes: (Read only property)

186.11.8 Minor as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library minor version.
Notes: (Read only property)

186.11.9 Nano as Integer

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library nano version.
Notes: (Read only property)

186.11.10 RC as String

MBS USB Plugin, Plugin Version: 18.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Library release candidate suffix string, e.g. ”-rc4”.
Notes: (Read only property)

186.12 class LinuxHIDInterfaceMBS

186.12.1 class LinuxHIDInterfaceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for linux to connect to USB HID devices.
Notes:

For newer development, please use our HIDAPIMBS class.

The constructor does the initialisation of the HID Library and the destructor does the cleanup. This works with several instances, too.

The plugin tries to load one of libhid.so, libhid.so.0 or libhid.so.0.0.0 and one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

186.12.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 14.2pr12
- MBS REALbasic Plugins, version 10.6pr1
- MBS REALbasic Plugins, version 10.4pr2
- MBS REALbasic Plugins, version 10.3pr4

- MBS REALbasic Plugins, version 10.4pr2
- MBS REALbasic Plugins, version 10.3pr4

186.12.4 Methods

186.12.5 Available as boolean

MBS USB Plugin, Plugin Version: 10.4, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether libhid is available.
Notes: Not all Linux distribution have libusb and libhid installed by default.

186.12.6 Close as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Closes the device.
Notes: Returns error code. See kError* constants.

186.12.7 DumpTreeToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Dumps the device tree to stderr.
Example:

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStderr
```

Notes: Returns error code. See kError* constants.

186.12.8 DumpTreeToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Dumps the device tree to stdout.
Example:

```
dim h as LinuxHIDInterfaceMBS
// open device
call h.DumpTreeToStdout
```

Notes: Returns error code. See kError* constants.

186.12.9 ForceOpen(theInterface as Integer, Vendor as Integer, Product as Integer, retries as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the USB device with the given interface index, vendor and product codes.
Example:

```
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500
const retries = 3

dim e as Integer = h.ForceOpen(0, vendor, product, retries)
```

Notes:

Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

186.12.10 GetInputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Reads an input report.
Notes:

Path: The path to the endpoint.
Data: the memoryblock to store the data.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.

186.12.11 InterruptRead(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Reads data from an endpoint with timeout.

Notes:

EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

186.12.12 InterruptWrite(EndPoint as Integer, mem as memoryblock, size as Integer, timeout as Integer) as Integer

MBS USB Plugin, Plugin Version: 11.0, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data from an endpoint with timeout.
Notes:

EndPoint: The index of the endpoint.
mem: the memoryblock where to store the data.
size: the length of the data block to read.
timeout: the timeout in milliseconds.

Returns error code. See kError* constants.

186.12.13 IsInitialised as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the HID library was initialised in the constructor.
Notes: Should always be true on linux.

186.12.14 IsOpen as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Whether the device is opened.
Notes: True if open, false if closed.

186.12.15 Open(theInterface as Integer, Vendor as Integer, Product as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Opens the USB device with the given interface index, vendor and product codes.
Example:

```
dim h as new LinuxHIDInterfaceMBS

const vendor = & h7C0
const product = & h1500

dim e as Integer = h.Open(0, vendor, product)
```

Notes:

Vendor or Product code can be kMatchAny (0) to match all devices.
You can use the MatchDevice event to learn which devices are there and return true there to select one.
Returns error code. See kError* constants.

186.12.16 Reset

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Resets the device.
Notes: Returns error code. See kError* constants.

186.12.17 SetDebugLevel(level as Integer)

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Sets the debug level.
Example:

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugLevel(h.kDebugWarnings)
```

186.12.18 SetDebugOutputToStderr

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Tells HID library to write debug output to stderr.
Example:

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStderr
```

186.12.19 SetDebugOutputToStdout

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Tells HID library to write debug output to stdout.
Example:

```
dim h as new LinuxHIDInterfaceMBS
h.SetDebugOutputToStdout
```

186.12.20 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data to the output.
Example:

```
dim h as LinuxHIDInterfaceMBS // your interface
dim n as Integer // some value

const IOW_PIPE_IO_PINS=0

dim m as MemoryBlock = NewMemoryBlock(4) // a device with 4 byte packets

m.Byte(3)=n
m.Byte(0)=IOW_PIPE_IO_PINS

dim path(-1) as Integer

path.Append & h00010000
path.Append 0

dim e as Integer = h.SetOutputReport(path, m, 0, m.size)
```

Notes:

Path: The path to the endpoint.
Data: the data to write.
Offset: The offset where to start inside the memoryblock.
Size: the length of the data int he memoryblock.

Returns error code. See kError* constants.
See also:

- 186.12.21 SetOutputReport(path() as Integer, data as string) as Integer 26277

186.12.21 SetOutputReport(path() as Integer, data as string) as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes data to the output.
Notes:

Path: The path to the endpoint.
Data: the data to write.

Returns error code. See kError* constants.
See also:

- 186.12.20 SetOutputReport(path() as Integer, data as memoryblock, offset as Integer, size as Integer) as Integer 26276

186.12.22 WriteIdentificationToStderr as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes identification to stderr.
Notes: Returns error code. See kError* constants.

186.12.23 WriteIdentificationToStdout as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Writes identification to stdout.
Notes: Returns error code. See kError* constants.

186.12.24 Properties

186.12.25 Handle as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The internal handle to the device connection.
Notes: (Read and Write property)

186.12.26 Events

186.12.27 MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) as boolean

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: .

Function: The event called to decide whether you want to connect to this device.
Example:

```
Function MatchDevice(usbdev as LinuxUSBDeviceHandleMBS) As boolean
MsgBox usbdev.Device.Descriptor.SerialNumber
End Function
```

Notes:

If several devices match the given vendor/product codes in Open/ForceOpen, you can decide here which one you accept.
Return true to accept a device.

186.12.28 Constants

186.12.29 kDebugAll = 31

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.
Notes: same as kDebugWarnings + kDebugTraces + kDebugNotices + kDebugErrors + kDebugAsserts

186.12.30 kDebugAsserts = 16

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

186.12.31 kDebugErrors = 1

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

186.12.32 kDebugNone = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

186.12.33 kDebugNotices = 4

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

186.12.34 kDebugNoTraces = 23

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.
Notes: same as kDebugWarnings + kDebugNotices + kDebugErrors + kDebugAsserts

186.12.35 kDebugTraces = 8

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

186.12.36 kDebugWarnings = 2

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the debug level constants.

186.12.37 kErrorAlreadyInitialised = 3

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device alreay initialised.

186.12.38 kErrorDeviceAlreadyOpened = 9

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device already opened.

186.12.39 kErrorDeviceNotFound = 7

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device is not found.

186.12.40 kErrorDeviceNotOpened = 8

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device is not opened.

186.12.41 kErrorFailAlloc = 17

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to allocate.

186.12.42 kErrorFailClaimIFace = 11

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to claim the interface.

186.12.43 kErrorFailCloseDevice = 10

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to close device.

186.12.44 kErrorFailDetachDriver = 12

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to detach driver.

186.12.45 kErrorFailFindBusses = 4

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to find buses.

186.12.46 kErrorFailFindDevices = 5

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to find devices.

186.12.47 kErrorFailGetReport = 20

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Get Report failed.

186.12.48 kErrorFailIntRead = 21

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

186.12.49 kErrorFailOpenDevice = 6

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Failed to open device.

186.12.50 kErrorFailSetReport = 19

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Set Report failed.

186.12.51 kErrorHIDDescShort = 14

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

186.12.52 kErrorInvalidParameter = 1

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Invalid Parameter.

186.12.53 kErrorNotFound = 22

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Device not found.

186.12.54 kErrorNotHIDDevice = 13

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Not a HID Device.

186.12.55 kErrorNotInitialised = 2

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Not initialised.

186.12.56 kErrorOutOfSpace = 18

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Out of space.

186.12.57 kErrorReportDescLong = 16

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

186.12.58 kErrorReportDescShort = 15

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.

186.12.59 kErrorSuccess = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the error codes.
Notes: Success. No error.

186.12.60 kMatchAny = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: The vendor/product ID to match any device.

186.13 class LinuxUSBBusMBS

186.13.1 class LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for an USB Bus on Linux.
Notes: This class only works, if the plugin could load one of libusb.so or libusb-0.1.so.4 from your /usr/lib folder (or where else the path environment variable points to). If the libraries are missing, this class will not work properly.

186.13.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr7
- MBS REALbasic Plugins, version 10.3pr4

186.13.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr7
- MBS REALbasic Plugins, version 10.3pr4

186.13.4 Methods

186.13.5 Buses as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 11.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the buses list.
Notes:

This function allows you to query the current buses and devices.
No device is opened and you just read through libusb data structures.

186.13.6 RescanBusses as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

Function: Finds all USB busses on system.
Notes:

RescanBusses will find all of the busses on the system.
Returns the number of changes since previous call to this function (total of new busses and busses removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch.

186.13.7 RescanDevices as Integer

MBS USB Plugin, Plugin Version: 14.2, Platform: Linux, Targets: Desktop, Console & Web.

Function: Find all devices on all USB devices.
Notes:

RescanDevices will find all of the devices on each bus.
This should be called after RescanBusses.
Returns the number of changes since the previous call to this function (total of new device and devices removed).

The plugin performs RescanBusses and RescanDevices automatically on application launch. So you can call RescanDevices at any time.

186.13.8 Properties

186.13.9 Devices as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The devices attached to this bus.
Notes: (Read and Write property)

186.13.10 DirName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The dir name.
Notes: (Read and Write property)

186.13.11 Location as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The location value.
Notes: (Read and Write property)

186.13.12 NextBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The next bus.
Notes: (Read and Write property)

186.13.13 PrevBus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The previous bus.
Notes: (Read and Write property)

186.13.14 RootDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The root device on this device.
Notes: (Read and Write property)

186.14 class LinuxUSBDeviceDescriptionMBS

186.14.1 class LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: A class for an USB device description.
Notes: Some linux installations require app to be run with sudo to allow reading USB device strings.

186.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- MBS REALbasic Plugins, version 10.3pr4

186.14.3 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6
- MBS REALbasic Plugins, version 10.3pr4

186.14.4 Properties

186.14.5 cdDevice as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device version.
Notes:

Identifies the version of the device. This value is a binary-coded decimal number.
(Read and Write property)

186.14.6 cdUSB as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The USB version.
Notes:

Identifies the version of the USB specification that this descriptor structure complies with. This value is a binary-coded decimal number.
(Read and Write property)

186.14.7 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The descriptor type.
Notes:

Specifies the descriptor type. Must be set to USB_DEVICE_DESCRIPTOR_TYPE.
(Read and Write property)

186.14.8 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device class.
Notes:

Specifies the class code of the device as assigned by the USB specification group.
See the kDeviceClass* constants.
(Read and Write property)

186.14.9 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes:

Specifies the protocol code of the device as assigned by the USB specification group.
(Read and Write property)

186.14.10 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes:

Specifies the subclass code of the device as assigned by the USB specification group.
(Read and Write property)

186.14.11 Manufacturer as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The manufacturer name string.
Notes:

A string containing the name of the manufacturer of this device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

186.14.12 MaxPacketSize0 as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The maximum packet size.
Notes:

Specifies the maximum packet size, in bytes, for endpoint zero of the device. The value must be set to 8, 16, 32, or 64.
(Read and Write property)

186.14.13 NumConfigurations as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of configurations.
Notes:

Specifies the total number of possible configurations for the device.
(Read and Write property)

186.14.14 Product as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The product ID for this device.
Notes:

Specifies the product identifier. This value is assigned by the manufacturer and is device-specific.
Only available when the device has been opened.
(Read and Write property)

186.14.15 ProductName as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The product name for this device.
Notes:

A string that contains a description of the device.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

186.14.16 SerialNumber as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The serial number string for this device.
Notes:

A string that contains a manufacturer-determined serial number for the device.
Can be empty if the library does not know it.
Some linux installations require app to be run with sudo to allow reading USB device strings.
(Read and Write property)

186.14.17 Vendor as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The vendor code for this device.
Notes:

Specifies the vendor identifier for the device as assigned by the USB specification committee.
Only available when the device has been opened.
(Read and Write property)

186.14.18 Constants

186.14.19 kDeviceClassAudio = 1

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: Audio device.

186.14.20 kDeviceClassCOMM = 2

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: COMM device.

186.14.21 kDeviceClassDATA = 10

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: DATA device.

186.14.22 kDeviceClassHID = 3

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: HID device.

186.14.23 kDeviceClassHUB = 9

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: The device is an USB HUB.

186.14.24 kDeviceClassMassStorage = 8

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: A mass storage device.

186.14.25 kDeviceClassPerInterface = 0

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.

186.14.26 kDeviceClassPrinter = 7

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: Printer device.

186.14.27 kDeviceClassVendorSpecific = 255

MBS USB Plugin, Plugin Version: 10.3.

Function: One of the device class constants.
Notes: Some vendor specific device.

186.15 class LinuxUSBDeviceHandleMBS

186.15.1 class LinuxUSBDeviceHandleMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for a device handle.

186.15.4 Properties

186.15.5 AltSetting as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Some alt setting value.
Notes: (Read and Write property)

186.15.6 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bus for this device handle.
Notes: (Read and Write property)

186.15.7 Config as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: A config value.
Notes: (Read and Write property)

186.15.8 Device as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The device.
Notes: (Read and Write property)

186.15.9 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The interface index.
Notes: (Read and Write property)

186.16 class LinuxUSBDeviceMBS

186.16.1 class LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The class for an USB device information on Linux.

186.16.2 Blog Entries

- Showing USB Devices
- MBS REALbasic Plugins, version 10.3pr4

186.16.4 Methods

186.16.5 Children(index as Integer) as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: Returns the child device with the given index.
Notes: Index is zero based and from 0 to ChildrenCount-1.

186.16.6 Properties

186.16.7 Bus as LinuxUSBBusMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The bus this device is attached to.
Notes: (Read and Write property)

186.16.8 ChildrenCount as Integer

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The number of child devices.
Notes: (Read and Write property)

186.16.9 Descriptor as LinuxUSBDeviceDescriptionMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The descriptior for this device.
Notes: (Read and Write property)

186.16.10 Filename as String

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The filename for this device.
Notes: (Read and Write property)

186.16.11 NextDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The next device on the same level.
Notes: (Read and Write property)

186.16.12 PrevDevice as LinuxUSBDeviceMBS

MBS USB Plugin, Plugin Version: 10.3, Platform: Linux, Targets: Desktop, Console & Web.

Function: The previous device on the same level.
Notes: (Read and Write property)

186.17 class MacHIDMBS

186.17.1 class MacHIDMBS

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to work with HID devices on Mac OS X.
Notes: For newer development, please use our HIDAPIMBS class.

- MBS Xojo / Real Studio Plugins, version 15.1pr6
- MBS Xojo / Real Studio Plugins, version 15.0pr11
- MBS Xojo / Real Studio Plugins, version 14.0pr3

186.17.4 Methods

186.17.5 Close

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes the active connection.

186.17.6 Connect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Creates a connection to the current device.
Example:

```
Function OpenUSBDevice() As boolean
dim i as Integer
dim h as MacHIDMBS
```

```
h=FindDevice // see FindFirst example

if h=nil then
MsgBox "No XYZ device found."
Return false
end if

h.Connect

if h.Lasterror<>0 then
MsgBox "Failed to connect to USB Device."
Return false
end if

h.InstallCallback

Return true

End Function
```

Notes:

Lasterror is set.

Lasterror values for this function:

-1	Not supported (Windows and Linux).
0	Everything okay.
1	Failed to get IOKit Plugin Interface for this IO object.
2	Failed to query interface
3	Failed to open interface
4	Failed to create async port
5	Failed to create async event source
6	no longer used
7	Failed to start queue

186.17.7 Disconnect

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Disconnets current USB device.

Notes: Lasterror is set.

186.17.8 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds the first device and loads the properties.
Example:

```
Function FindDevice() As MyMacHIDMBS
dim h as MyMacHIDMBS
dim p as string

h=new MyMacHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice

p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

Notes: Returns true on success and false on failure.

186.17.9 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Finds next device.
Notes: Returns true on success and false on failure.

186.17.10 HIDProperties as Variant

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries HID properties dictionary.
Notes:

Value is a CFDictionaryMBS with details about current device. Returned as Variant to reduce plugin dependencies.

The plugin queries this dictionary to return SerialNumber, ProductID, Manufacturer, Product, VendorID and VersionNumber.

186.17.11 InstallCallback

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Installs the callback used for the event handler.
Notes:

Lasterror is set.
Please use after connect. For use with ReceivedData event.

186.17.12 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The manufacturer name.
Notes: On any error an empty string is returned.

186.17.13 Product as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product string of the selected device.
Notes: Lasterror is set.

186.17.14 ProductID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID of the selected device.
Notes: Lasterror is set.

186.17.15 ReadMessage(ReportID as Integer, reportType as Integer, length as Integer) as string

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads a message from usb device.
Notes:

This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

186.17.16 ReadMessageMemory(ReportID as Integer, reportType as Integer, length as Integer) as memoryblock

MBS USB Plugin, Plugin Version: 14.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads a message from usb device.
Notes:

This is for synchronously operation without the event/callback.
You can specify report id, report type and the maximum length to read.
Also set timeout property.

Doesn't work if InstallCallback with event is used.

186.17.17 SendMessage(data as string)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Uses kIOHIDReportTypeOutput.
See also:

- 186.17.18 SendMessage(ReportID as Integer, reportType as Integer, data as string) 26303

186.17.18 SendMessage(ReportID as Integer, reportType as Integer, data as string)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 186.17.17 SendMessage(data as string) 26302

186.17.19 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
Internally ReportID=0 is used.

While writing a crossplatform application for one specific device we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.
Uses kIOHIDReportTypeOutput.
See also:

- 186.17.20 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer) 26303

186.17.20 SendMessageMemory(ReportID as Integer, reportType as Integer, data as memoryblock, offset as Integer, length as Integer)

MBS USB Plugin, Plugin Version: 8.6, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set. Lasterror -536854447 is an USB timeout.
ReportType can be kIOHIDReportTypeOutput or kIOHIDReportTypeFeature.
See also:

- 186.17.19 SendMessageMemory(data as memoryblock, offset as Integer, length as Integer) 26303

186.17.21 SerialNumber as string

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The serial number of the current selected device.
Notes: Lasterror is set.

186.17.22 VendorID as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID of the selected device.
Notes: Lasterror is set.

186.17.23 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The device specific version number.
Notes:

Value can be anything.
On any error, 0 is returned.

186.17.24 Properties

186.17.25 IOHIDDeviceInterface122Handle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal handle for the device interface object.
Notes:

This is of type IOHIDDeviceInterface122** from IOKit.
(Read only property)

186.17.26 IOHIDObjectIteratorHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The iterator used to find USB devices.
Notes:

This is of type io_iterator_t from IOKit.
(Read only property)

186.17.27 IOObjectHandle as Integer

MBS USB Plugin, Plugin Version: 15.0, Platform: macOS, Targets: Desktop, Console & Web.

Function: The internal object reference for current device.
Notes:

This is of type io_object_t from IOKit.
(Read only property)

186.17.28 Lasterror as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Last error code.
Notes:

0 is success.
-1 means that the function is not available.
else Mac OS USB error codes.
See table below, e.g. error -536854447 (=& he0004051) is an USB timeout.

(Read and Write property)

186.17.29 OnlyOneEventPerTick as Boolean

MBS USB Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop, Console & Web.

Constant	Number	LastError value	Description
kIOUSBUnknownPipeErr	& h61	& he0004061	Pipe ref not recognized
kIOUSBTooManyPipesErr	& h60	& he0004060	Too many pipes
kIOUSBNoAsyncPortErr	& h5f	& he000405f	no async port
kIOUSBNotEnoughPipesErr	& h5e	& he000405e	not enough pipes in interface
kIOUSBNotEnoughPowerErr	& h5d	& he000405d	not enough power for selected configuration
kIOUSBEndpointNotFound	& h57	& he0004057	Endpoint Not found
kIOUSBConfigNotFound	& h56	& he0004056	Configuration Not found
kIOUSBPortWasSuspended	& h52	& he0004052	The transaction was returned because the port was suspended
kIOUSBPipeStalled	& h4f	& he000404f	Pipe has stalled, error needs to be cleared
kIOUSBInterfaceNotFound	& h4e	& he000404e	Interface ref not recognized
kIOUSBLowLatencyBufferNotPreviouslyAllocated	& h4d	& he000404d	Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the data buffer) first
kIOUSBLowLatencyFrameListNotPreviouslyAllocated	& h4c	& he000404c	Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the frame list) first
kIOUSBHighSpeedSplitError	& h4b	& he000404b	Error to hub on high speed bus trying to do split transaction
kIOUSBSyncRequestOnWLThread	& h4a	& he000404a	A synchronous USB request was made on the workloop thread (from a callback?). Only async requests are permitted in that case
kIOUSBDeviceNotHighSpeed	& h49	& he0004049	Name is deprecated, see below
kIOUSBDeviceTransferredToCompanion	& h49	& he0004049	The device has been tranferred to another controller for enumeration
kIOUSBClearPipeStallNotRecursive	& h48	& he0004048	ClearPipeStall should not be called recursively
kIOUSBDevicePortWasNotSuspended	& h47	& he0004047	Port was not suspended
kIOUSBEndpointCountExceeded	& h46	& he0004046	The endpoint was not created because the controller cannot support more endpoints
kIOUSBDeviceCountExceeded	& h45	& he0004045	The device cannot be enumerated because the controller cannot support more devices
kIOUSBStreamsNotSupported	& h44	& he0004044	The request cannot be completed because the XHCI controller does not support streams
kIOUSBInvalidSSEndpoint	& h43	& he0004043	An endpoint found in a SuperSpeed device is invalid (usually because there is no Endpoint Companion Descriptor)
kIOUSBTooManyTransactionsPending	& h42	& he0004042	The transaction cannot be submitted because it would exceed the allowed number of pending transactions
kIOUSBTransactionReturned	& h50	& he0004050	The transaction has been returned to the caller
kIOUSBTransactionTimeout	& h51	& he0004051	Transaction timed out

Function: Whether to limit ReceivedData event.
Notes:

Some devices send a lot of measurement data.
This option allows to slow down and limit to 60 events per second.
So if device sends a thousand data records per second, we can ignore over 90% and just pick a few to display.
(Read and Write property)

186.17.30 TimeOut as Integer

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: Desktop, Console & Web.

Function: Timeout value to use for sending/reading USB data.
Notes:

Please specify time in Milliseconds. Default is 500ms.
(Read and Write property)

186.17.31 Events

186.17.32 DeviceRemoved(result as Integer)

MBS USB Plugin, Plugin Version: 8.7, Platform: macOS, Targets: .

Function: The event called whenever the device is removed.
Notes: You need to call connect to install the callback which raises this event.

186.17.33 ReceivedData(data as string, size as Integer)

MBS USB Plugin, Plugin Version: 6.4, Platform: macOS, Targets: .

Function: Data was received and is available for processing.
Example:

```
Sub ReceivedData(data as string, size as Integer)
dim m as MemoryBlock
dim s as string
dim n,i as Integer

// Debug Output data received:

m=data

n=lenb(data)-1
for i=0 to n
s=s+str(m.Byte(i))+" "
next

s=s+"= "+data

System.DebugLog s

End Sub
```

Notes: Event is only called when InstallCallback was used and a connection is open.

186.17.34 Constants

186.17.35 kIOHIDReportTypeFeature = 2

MBS USB Plugin, Plugin Version: 14.0.

Function: One of the report type constants.
Notes: Feature report.

186.17.36 kIOHIDReportTypeInput = 0

MBS USB Plugin, Plugin Version: 14.0.

Function: One of the report type constants.
Notes: Input report.

186.17.37 kIOHIDReportTypeOutput = 1

MBS USB Plugin, Plugin Version: 14.0.

Function: One of the report type constants.
Notes: Output report.

186.18 class MacUSBDeviceMBS

186.18.1 class MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The class for an USB Device on Mac OS X.
Example:

```
// iterate over all devices without recursion and count devices
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim count as Integer = -1 // do not count Mac itself

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop

count = count + 1

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox str(Count)+" USB devices."
```

Notes:

Use the root method to get the device hierarchy.

For Windows you can take a look on the WindowsDeviceMBS and WinUSBDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

186.18.4 Methods

186.18.5 children as MacUSBDeviceMBS()

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The array with all the USB device having the current device as parent.

186.18.6 Constructor

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes:

This constructor makes sure you don't create useless MacUSBDeviceMBS objects by error. The only way to create an object is to use the root method to get the object hierarchy.
This constructor is private to make sure you don't create an object from this class by error. Please use designated functions to create objects.

186.18.7 root as MacUSBDeviceMBS

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The root of the device tree.
Example:

```
// display devices with serialnumbers.
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

dim lines(-1) as string

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop

if len(dev.SerialNumber)>0 then
lines.Append dev.name+": "+dev.serialnumber
end if

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox Join(lines,EndOfLine)
```

Notes: Root is the Mac itself. Below root you find the built in USB hubs.

186.18.8 Properties

186.18.9 Address as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device address number.
Notes: (Read and Write property)

186.18.10 BusPowerAvailable as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The available bus power.
Notes:

Value is in milli ampere.
(Read and Write property)

186.18.11 ClassName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The class name for this device.
Notes:

Basicly this is what driver Apple uses.
(Read and Write property)

186.18.12 DeviceClass as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device class.
Notes:

See kUSB*Class constants.

And read here:
http://www.usb.org/developers/defined_class
(Read and Write property)

186.18.13 DeviceMaxPacketSize as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The maximum device packet size.
Notes: (Read and Write property)

186.18.14 DeviceNumConfigs as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The number of configurations for this device.
Notes: (Read and Write property)

186.18.15 DeviceProtocol as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device protocol.
Notes: (Read and Write property)

186.18.16 DeviceReleaseNumber as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device release number.
Notes: (Read and Write property)

186.18.17 DeviceSpeed as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device speed.
Notes: (Read and Write property)

186.18.18 DeviceSubClass as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device sub class.
Notes:

See kUSB*SubClass constants.
(Read and Write property)

186.18.19 ExtraPowerForPorts as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The extra power asked for ports.
Notes:

Value is in milli ampere.
(Read and Write property)

186.18.20 Name as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The name of this device node.
Example:

```
// show all names of all devices in a msgbox
dim names(-1) as string

// iterate over all devices without recursion
dim devices(-1) as MacUSBDeviceMBS

devices.Append MacUSBDeviceMBS.root

while UBound(devices)>=0
dim dev as MacUSBDeviceMBS = devices.Pop
names.Append dev.name

for each child as MacUSBDeviceMBS in dev.children
devices.Append child
next
wend

MsgBox Join(names,", ")
```

Notes: (Read and Write property)

186.18.21 NumEndpoints as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The number of endpoints.
Notes: (Read and Write property)

186.18.22 Path as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The object path.
Notes:

This is internally used by the kernel.
(Read and Write property)

186.18.23 Ports as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The number of ports on an USB hub.
Notes: (Read and Write property)

186.18.24 ProductID as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The product ID
Notes: (Read and Write property)

186.18.25 ProductName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The product name.
Notes: (Read and Write property)

186.18.26 Properties as Dictionary

MBS MacOSX Plugin, Plugin Version: 11.2, Platform: macOS, Targets: All.

Function: Creates dictionary with all the properties associated for this USB device in IORegistry.
Notes: (Read and Write property)

186.18.27 RequestedPower as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: Requested power.
Notes:

Value is in milli ampere.
(Read and Write property)

186.18.28 SerialNumber as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The device serial number.
Notes: (Read and Write property)

186.18.29 VendorID as Integer

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The vendor ID.
Notes:

Assigned by USB Org.
(Read and Write property)

186.18.30 VendorName as String

MBS MacOSX Plugin, Plugin Version: 10.4, Platform: macOS, Targets: All.

Function: The vendor name.
Notes: (Read and Write property)

186.18.31 Constants

186.18.32 kUSBApplicationSpecificClass = 254

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.33 kUSBATMNetworkingSubClass = 7

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBCommunicationDataInterfaceClass.

186.18.34 kUSBAudioControlSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

Function: One of the USB device class constants.

186.18.45 kUSBCompositeSubClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

186.18.46 kUSBDataClass = 10

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.47 kUSBDFUSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBApplicationSpecificInterfaceClass.

186.18.48 kUSBDiagnosticClass = 220

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.49 kUSBHIDBootInterfaceSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBHIDBootInterfaceSubClass.

186.18.50 kUSBHubClass = 9

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.51 kUSBHubSubClass = 0

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

186.18.52 kUSBIrDABridgeSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBApplicationSpecificInterfaceClass.

186.18.53 kUSBMassStorageATAPISubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

186.18.54 kUSBMassStorageQIC157SubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

186.18.55 kUSBMassStorageRBCSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

186.18.56 kUSBMassStorageSCSISubClass = 6

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

186.18.57 kUSBMassStorageSFF8070iSubClass = 5

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

186.18.58 kUSBMassStorageUFISubClass = 4

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBMassStorageInterfaceClass.

186.18.59 kUSBMIDIStreamingSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBAudioInterfaceClass.

186.18.60 kUSBMiscellaneousClass = 239

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.61 kUSBPersonalHealthcareClass = 15

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.62 kUSBReprogrammableDiagnosticSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBDiagnosticDeviceInterfaceClass.

186.18.63 kUSBRFControllerSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBWirelessControllerInterfaceClass.

186.18.64 kUSBTestMeasurementSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.
Notes: For kUSBApplicationSpecificInterfaceClass.

186.18.65 kUSBVendorSpecificClass = 255

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.18.66 kUSBVideoControlSubClass = 1

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

186.18.67 kUSBVideoInterfaceCollectionSubClass = 3

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

186.18.68 kUSBVideoStreamingSubClass = 2

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device sub class constants.

186.18.69 kUSBWirelessControllerClass = 224

MBS MacOSX Plugin, Plugin Version: 10.4.

Function: One of the USB device class constants.

186.19 class MacUSBMBS

186.19.1 class MacUSBMBS

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: A class to talk to an USB device.
Notes: Written for a client and probably not yet universally useable, so it may not work with your device.

186.19.4 Methods

186.19.5 AbortPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Aborts any outstanding transactions on the pipe with status kIOReturnAborted.
Notes:

If there are outstanding asynchronous transactions on the pipe, the callbacks will happen.
Note that this command will also clear the halted bit on the endpoint in the controller, but will NOT clear

the data toggle bit. If you want to clear the data toggle bit as well, see ClearPipeStall or ClearPipeStallBothEnds for more information. The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

186.19.6 ClearPipeStall(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Clears the halted bit and the data toggle bit on the pipe's endpoint in the controller.
Notes:

This function also returns any outstanding transactions on the pipe with status kIOUSBTransactionReturned.
If there are outstanding asynchronous transactions on the pipe, the callbacks will happen. The data toggle may need to be resynchronized. The driver may handle this by sending a ClearFeature(ENDPOINT_HALT) to the default control pipe, specifying the device's endpoint for this pipe.

pipeRef: Index for the desired pipe (1 - NumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

186.19.7 Close

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Closes connection to the device.

186.19.8 ConfigurationValue as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the current configuration value set in the device (the interface will be part of that configuration.)
Notes:

The interface does not have to be open to use this function.
Lasterror is set.

186.19.9 Connect as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Connects to the first device matching product and vendor IDs.
Notes: Returns true on success.

186.19.10 DeviceProduct as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Product ID (idProduct) of the device.
Notes:

The device does not have to be open to use this function.
Lasterror is set. Returns the actual product ID of the device.

186.19.11 DeviceReleaseNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the Device Release Number (bcdDevice) of the device.
Notes:

The device does not have to be open to use this function.
Lasterror is set.

186.19.12 DeviceVendor as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Vendor ID (idVendor) of the device.
Notes:

The device does not have to be open to use this function.
Lasterror is set. Returns the actual vendor ID of the device.

186.19.13 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Class of the interface.
Notes: Lasterror is set.

186.19.14 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the interface number (zero-based index) of this interface within the current configuration of the device.
Notes: Lasterror is set.

186.19.15 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Protocol of the interface.
Notes: Lasterror is set.

186.19.16 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the USB Subclass of the interface.
Notes: Lasterror is set.

186.19.17 LocationID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the location ID.
Notes:

The location ID is a 32 bit number which is unique among all USB devices in the system, and which will not change on a system reboot unless the topology of the bus itself changes. The interface does not have to be open to use this function.
Lasterror is set.

186.19.18 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Returns the number of endpoints in this interface.
Notes:

The interface does not have to be open to use this function.
Lasterror is set.

186.19.19 ReadPacket(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.

186.19.20 ReadRaw(PipeRef as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Reads data on a BULK IN or an INTERRUPT pipe.
Notes: Reads up to MaxSize bytes from the given pipe. Pipe is in range 1 to GetNumEndpoints.

186.19.21 ResetPipe(PipeRef as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Equivalent to ClearPipeStall.
Notes:

The interface must be open for the pipe to exist.
pipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Lasterror is set to kIOReturnSuccess if successful, kIOReturnNoDevice if there is no connection to an IOService, or kIOReturnNotOpen if the interface is not open for exclusive access.

186.19.22 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes:

We developed this function for a client, so it's probably useless for everyone else.

Lasterror is set.
See also:

- 186.19.23 WritePacket(PipeRef as Integer, Data as string) as boolean 26329

186.19.23 WritePacket(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes:

We developed this function for a client, so it's probably useless for everyone else.
Lasterror is set.
See also:

- 186.19.22 WritePacket(PipeRef as Integer, Data as Memoryblock) as boolean 26328

186.19.24 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes data on a BULK OUT or INTERRUPT OUT pipe.
Notes:

The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 186.19.25 WriteRaw(PipeRef as Integer, Data as string) as boolean 26329

186.19.25 WriteRaw(PipeRef as Integer, Data as string) as boolean

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: Writes data on a BULK OUT or INTERRUPT OUT pipe.
Notes:

The interface must be open for the pipe to exist.
PipeRef: Index for the desired pipe (1 - GetNumEndpoints).
Data: the buffer of data to send.
Lasterror is set.
See also:

- 186.19.24 WriteRaw(PipeRef as Integer, Data as Memoryblock) as boolean 26329

186.19.26 Properties

186.19.27 completionTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The completion timeout.
Notes:

Specifies a time value in milliseconds. Once the request is queued on the bus, if the entire request is not completed in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

186.19.28 LastError as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

186.19.29 noDataTimeout as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The timeout for no data.
Notes:

Specifies a time value in milliseconds. Once the request is queued on the bus, if no data is transferred in this amount of time, the request will be aborted and returned.
Default is 1000.
(Read and Write property)

186.19.30 ProductID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The product ID for connecting to the device.
Notes: (Read and Write property)

186.19.31 VendorID as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop, Console & Web.

Function: The vendor ID for connecting to the device.
Notes: (Read and Write property)

186.19.32 Constants

186.19.33 kIOReturnSuccess = 0

MBS USB Plugin, Plugin Version: 12.5.

Function: The error constant for no error.

186.19.34 kIOUSBConfigNotFound = & he0004056

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Configuration Not found.

186.19.35 kIOUSBDeviceNotHighSpeed = & he0004049

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: The device is not a high speed device, so the EHCI driver returns an error.

186.19.36 kIOUSBDevicePortWasNotSuspended = & he0004050

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Port was not suspended.

186.19.37 kIOUSBEndpointNotFound = & he0004057

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Endpoint Not found.

186.19.38 kIOUSBHighSpeedSplitError = & he000404b

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Error to hub on high speed bus trying to do split transaction.

186.19.39 kIOUSBInterfaceNotFound = & he000404e

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Interface ref not recognized.

186.19.40 kIOUSBLowLatencyBufferNotPreviouslyAllocated = & he000404d

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the data buffer) first.

186.19.41 kIOUSBLowLatencyFrameListNotPreviouslyAllocated = & he000404c

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Attempted to use user land low latency isoc calls w/out calling PrepareBuffer (on the frame list) first.

186.19.42 kIOUSBNoAsyncPortErr = & he000405f

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: No async port.

186.19.43 kIOUSBNotEnoughPipesErr = & he000405e

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Not enough pipes in interface.

186.19.44 kIOUSBNotEnoughPowerErr = & he000405d

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Not enough power for selected configuration.

186.19.45 kIOUSBPipeStalled = & he000404f

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Pipe has stalled, error needs to be cleared.

186.19.46 kIOUSBSyncRequestOnWLThread = & he000404a

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: A synchronous USB request was made on the workloop thread (from a callback?). Only async requests are permitted in that case.

186.19.47 kIOUSBTooManyPipesErr = & he0004060

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Too many pipes.

186.19.48 kIOUSBTransactionReturned = & he0004050

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: The transaction has been returned to the caller.

186.19.49 kIOUSBTransactionTimeout = & he0004051

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Transaction timed out.

186.19.50 kIOUSBUnknownPipeErr = & he0004061

MBS USB Plugin, Plugin Version: 13.5.

Function: One of the error constants.
Notes: Pipe ref not recognized.

186.20 class MacUSBNotificationMBS

186.20.1 class MacUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The class for receiving notifications if an USB device has been attached or removed.
Notes:

Please make a subclass so you can put your own code in the events.

Use WinUSBNotificationMBS for Windows.

186.20.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1

186.20.4 Methods

186.20.5 Constructor(vendor as Integer = 0, product as Integer = 0)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: Setup the notification system so you are informed about USB devices being attached or removed.
Example:

```
// look only for device with this vendor/product ID
dim m as new MyMacUSBNotificationMBS(& h5AC, & h263)
```

Notes:

You can use vendor and product IDs to limit the class to look only for devices with matching IDs.
Lasterror is set.

186.20.6 GetUSBDeviceInfo(DeviceHandle as Integer, byref Vendor as string, byref Product as string, byref SerialNumber as string, byref Revision as Integer) as boolean

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Queries USB details for a given handle.
Notes:

This is a convenience function to query details on the devices found within the events.
Returns true on success.

186.20.7 QueryBSDName(DeviceHandle as Integer) as string

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Function to query BSDName of a given device.
Notes:

If the device is a disk or USB stick and has been mounted, this would give the bsd name of the disk.
Returns "" on any error.

186.20.8 Release(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Releases an object reference when you don't need it any longer.
Notes:

Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

186.20.9 Retain(DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 13.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: Retains an object reference so it is available later.
Notes:

Please call Retain and Release in pairs.
Does nothing if handle is zero or when called on Linux/Windows.

186.20.10 Properties

186.20.11 LastError as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Zero is no error while other values are Mac OS error codes.
(Read and Write property)

186.20.12 Events

186.20.13 DeviceAdded(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: This event is called when the device is added.
Notes:

You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

186.20.14 DeviceRemoved(properties as dictionary, NewDevice as boolean, ClassName as string, DeviceName as string, DeviceHandle as Integer)

MBS USB Plugin, Plugin Version: 11.2, Platform: macOS, Targets: .

Function: This event is called when the device is removed.
Notes:

You find properties like product and vendor in the dictionary.
This event can be called from the constructor for existing devices with NewDevice = false. Later events have

NewDevice = true so you see that this is a new device.

DeviceName and ClassName give details on the USB item found.
DeviceHandle is the internal object reference which can be used with other helper functions in this class (io_service_t).

186.21 class WinHIDMBS

186.21.1 class WinHIDMBS

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to work with HID devices on Windows.
Example:

```
dim m as new WinHIDMBS
dim s as string

# if not TargetWin32
MsgBox "This example requires Windows."
# endif

if m.FindFirstDevice then

do
ListBox1.AddRow ""

ListBox1.Cell(ListBox1.LastIndex,0)=hex(m.ProductID)
ListBox1.Cell(ListBox1.LastIndex,1)=hex(m.VendorID)
ListBox1.cell(ListBox1.LastIndex,2)=m.Product
ListBox1.cell(ListBox1.LastIndex,3)=m.Manufacturer
ListBox1.cell(ListBox1.LastIndex,4)=m.SerialNumber
ListBox1.cell(ListBox1.LastIndex,5)=hex(m.VersionNumber)

if left(m.Product,3)="RF1" then // my test device

if m.Connect then
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)

MsgBox "Send bytes: "+str(m.SendMessage(s))

do
s=m.ReadMessage(17)
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again

m.Disconnect
end if
end if

loop until not m.FindNextDevice
```

```
end if

Title=str(ListBox1.ListCount)+" devices found."
```

Notes:

For newer development, please use our HIDAPIMBS class.

Updated in version 10.4 of plugins to ignore devices which you don't have permissions to access them. So you will now see devices with VendorID=0 and ProductID=0.

This class can be used in three different ways. First normal with Connect and ReadMessage/SendMessage. Second with InstallListener and SendMessage/Poll functions. Third low level via GetInputReport and SetOutputReport.

186.21.6 Methods

186.21.7 Close

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the active connection.

186.21.8 Connect as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a connection to the current device.
Example:

```
Function OpenUSBDevice() As boolean
dim i as Integer
dim h as WinHIDMBS

h=FindDevice // see FindFirst example

if h=nil then
MsgBox "No XYZ device found."
Return false
end if

call h.Connect

if h.Lasterror<>0 then
MsgBox "Failed to connect to USB Device."
Return false
end if

Return true

End Function
```

Notes:

Lasterror is set.
Returns true on success and false on failure.

The plugin tries to open a read and a write connection. If both fail, connect returns false. If one is okay, it returns true.

Some devices don't allow read or write because of missing permissions.

186.21.9 DevicePath as string

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal path used by Windows to identify the device.
Notes: Only for debugging.

186.21.10 Disconnect

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Disconnets current USB device.
Notes: Lasterror is set.

186.21.11 FindFirstDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds the first device and loads the properties.
Example:

```
Function FindDevice() As MyWinHIDMBS
dim h as MyWinHIDMBS
dim p as string

h=new MyWinHIDMBS // your own subclass of MacHIDMBS so you can get events

if h.FindFirstDevice then

p=h.Product
if p="MyProduct" then
Return h
end if

while h.FindNextDevice
```

```
p=h.Product
if p="MyProduct" then
Return h
end if

wend

end if
End Function
```

Notes:

Returns true on success and false on failure.
On Windows finds only devices which can be opened for Read/Write.

186.21.12 FindNextDevice as boolean

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds next device.
Notes: Returns true on success and false on failure.

186.21.13 GetInputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an input reports from a top-level collection.
Notes:

This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also:
https://msdn.microsoft.com/en-us/library/windows/hardware/ff538945(v=vs.85).aspx

186.21.14 InstallListener(PollSize as Integer) as boolean

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Installs a second thread which performs Read.
Example:

```
dim h as new WinHIDMBS

call h.InstallListener 9 // 8 bytes + Report ID
```

Notes:

Use PollString or PollMemory in a timer or a loop to get the data.
This is an alternative way compared to ReadMessage functions.

186.21.15 Manufacturer as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The manufacturer name.
Notes:

On any error an empty string is returned.
Lasterror is set.

186.21.16 PollMemory as memoryblock

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Notes:

A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

186.21.17 PollString as string

MBS USB Plugin, Plugin Version: 7.8, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
dim m as WinHIDMBS // your WinHIDMBS object
dim s as string
```

```
do
s=m.PollString
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

Notes:

A connection must be open and InstallListener must be used.
Lasterror is set.
You may want to try this function in a loop or a timer till you get data.

186.21.18 Product as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product string of the selected device.
Notes: Lasterror is set.

186.21.19 ProductID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID of the selected device.
Notes: Lasterror is set.

186.21.20 ReadMessage(length as Integer, timeOut as Integer = 0) as string

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
dim m as WinHIDMBS
dim s as string

do
s=m.ReadMessage(48)
loop until lenb(s)>0 // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

Notes:

Length is the length of the receive buffer you want to use.
The string returned is 0 to length bytes long.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

186.21.21 ReadMessageMemory(length as Integer, timeOut as Integer = 0) as memoryblock

MBS USB Plugin, Plugin Version: 13.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a message from the device.
Example:

```
dim m as WinHIDMBS
dim s as memoryblock

do
s=m.ReadMessageMemory(48)
loop until s<>nil // until we got something
MsgBox midb(s,2) // shows result. First byte is ReportID again
```

Notes:

Length is the length of the receive buffer you want to use.
The memoryblock returned has a size of 0 to length bytes.
A connection must be open.
Lasterror is set.
You may want to try this function in a loop till you get data.
Timeout is a timeout value in milliseconds.

186.21.22 SendMessage(data as string) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Example:

```
dim m as WinHIDMBS // your hid object
dim s as string
// write 9 bytes report
// first byte is report ID plus 8 byte data
s=chr(0)+"P"+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)+chr(0)
```

MsgBox "Send bytes: "+str(m.SendMessage(s))

Notes:

A connection must be open.
Returns number of bytes sent.

The first byte must be the Report ID which seems to be zero for most devices.

186.21.23 SendMessageMemory(data as memoryblock, Offset as Integer = 0, length as Integer = 0) as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends a message to the USB device.
Notes:

A connection must be open.
Lasterror is set.
Returns number of bytes sent.

While writing a crossplatform application we saw the following thing: The data buffer for the SendMessageMemory call must be 8 bytes long on Mac for our device (with MacHIDMBS) and 61 bytes long for Windows (with WinHIDMBS) for our HID device. We have 1 byte for the ReportID and 60 data bytes where the first 8 are set like on the Mac. So if the calls fail on Windows, try with a higher length and check the WinHIDMBS.OutputReportByteLength property.

The first byte must be the Report ID which seems to be zero for most devices.
If length is zero, we use the length of memoryblock.

186.21.24 SerialNumber as string

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the current selected device.
Notes: Lasterror is set.

186.21.25 SetOutputReport(data as MemoryBlock, Offset as Integer = 0, Length as Integer = 0) as boolean

MBS USB Plugin, Plugin Version: 15.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends an output report.
Notes:

This is very low level.
First byte of data block is report ID.
If Length is 0, we use size of memoryblock.
Returns true on success.

see also
https://msdn.microsoft.com/en-us/library/windows/hardware/ff539690(v=vs.85).aspx

186.21.26 VendorID as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the selected device.
Notes: Lasterror is set.

186.21.27 VersionNumber as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device specific version number.
Notes:

Value can be anything.
On any error, 0 is returned.
Lasterror is set.

186.21.28 Properties

186.21.29 FeatureReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum length, in bytes, of all the feature reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.

Notes: (Read and Write property)

186.21.30 HidHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the HID device.
Notes: (Read and Write property)

186.21.31 InputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum size, in bytes, of the input reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

186.21.32 Lasterror as Integer

MBS USB Plugin, Plugin Version: 7.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Last error code.
Notes:

0 is success.
-1 means that the function is not available.
else Windows error codes like 5 for Access Denied.
(Read and Write property)

186.21.33 LasterrorString as String

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code in a formatted and localized string.
Notes:

This does not work for plugin error codes.
Like -1 if the function is not available.
(Read only property)

186.21.34 OutputReportByteLength as Integer

MBS USB Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum size, in bytes, of all the output reports, including the report identifier, if report identifiers are used, which is added to the beginning of the report data.
Notes: (Read and Write property)

186.21.35 PnPHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for Plug and Play.
Notes: (Read and Write property)

186.21.36 ReadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the stream for reading data from the USB device.
Notes: (Read and Write property)

186.21.37 ThreadHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the thread which waits in the background for new data.
Notes: (Read and Write property)

186.21.38 WriteHandle as Integer

MBS USB Plugin, Plugin Version: 9.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the stream for writing data to the USB device.
Notes: (Read and Write property)

186.22 class WinUSBDeviceMBS

186.22.1 class WinUSBDeviceMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query USB devices.
Example:

```
dim devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MsgBox d.Vendor+" - "+d.Product
next
```

186.22.2 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr6

186.22.3 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.2pr6

186.22.4 Methods

186.22.5 Devices as WinUSBDeviceMBS()

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries a list of all USB Devices.
Example:

```
dim devices() as WinUSBDeviceMBS = WinUSBDeviceMBS.devices
for each d as WinUSBDeviceMBS in devices
msgbox d.vendor+" "+d.product+" "+d.serialnumber
next
```

Notes: Returns an emtpy array on errors.

186.22.6 Properties

186.22.7 cdUSB as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device USB version.
Notes:

USB Specification Number which device complies too.

The cdUSB field reports the highest version of USB the device supports. The value is in binary coded decimal with a format of 0xJJMN where JJ is the major version number, M is the minor version number and N is the sub minor version number. e.g. USB 2.0 is reported as & h0200, USB 1.1 as 0x0110 and USB 1.0 as & h0100.
(Read and Write property)

186.22.8 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device descriptor type.
Notes:

Device Descriptor (0x01)
(Read and Write property)

186.22.9 DeviceClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device class.
Notes:

See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

186.22.10 DeviceID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID.

Notes: (Read and Write property)

186.22.11 DeviceProtocol as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device protocol.
Notes:

Assigned by USB Org
(Read and Write property)

186.22.12 DeviceSubClass as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device sub class.
Notes:

See constants in MacUSBDeviceMBS class.
Assigned by USB Org
(Read and Write property)

186.22.13 MaxEP0Size as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Maximum Packet Size for Zero Endpoint.
Notes:

Valid Sizes are 8, 16, 32, 64
(Read and Write property)

186.22.14 Product as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product name.
Notes: (Read and Write property)

186.22.15 ProductID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID of the device.
Notes: (Read and Write property)

186.22.16 SerialNumber as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the USB device.
Example:

```
dim devices(-1) as WinUSBDeviceMBS = WinUSBDeviceMBS.Devices

for each d as WinUSBDeviceMBS in devices
MsgBox d.Vendor+" - "+d.Product+": "+d.SerialNumber
next
```

Notes:

Not all vendors save the serial number in the device.
(Read and Write property)

186.22.17 Vendor as String

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor name of the USB device.
Notes: (Read and Write property)

186.22.18 VendorID as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the USB device.
Notes:

Assigned by USB Org.
(Read and Write property)

186.23 class WinUSBInterfaceDescriptionMBS

186.23.1 class WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is used by USB clients to retrieve a USB-defined interface descriptor.

186.23.2 Properties

186.23.3 AlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index number of the alternate setting of the interface.
Notes: (Read and Write property)

186.23.4 DescriptorType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The descriptor type.
Notes:

Descriptor must be set to USB_INTERFACE_DESCRIPTOR_TYPE.
(Read and Write property)

186.23.5 InterfaceClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class code of the device that the USB specification group assigned.
Notes: (Read and Write property)

186.23.6 InterfaceIndex as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index of a string descriptor that describes the interface.
Notes:

For information about this field, see section 9.6.5 in the "Universal Serial Bus Revision 2.0" specification at USB Technology.
(Read and Write property)

186.23.7 InterfaceNumber as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The index number of the interface.
Notes: (Read and Write property)

186.23.8 InterfaceProtocol as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The protocol code of the device that the USB specification group assigned.
Notes: (Read and Write property)

186.23.9 InterfaceSubClass as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The subclass code of the device that the USB specification group assigned.
Notes: (Read and Write property)

186.23.10 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length, in bytes, of the descriptor.
Notes: (Read and Write property)

186.23.11 NumEndpoints as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of endpoints that are used by the interface, excluding the default status endpoint.
Notes: (Read and Write property)

186.24 class WinUSBMBS

186.24.1 class WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Provides access to any USB device on Windows.
Notes:

This class provides funtions exposed by Winusb.dll, which user-mode client drivers and applications can use to communicate with USB devices.
WinUSB functions require Windows XP or later.

186.24.4 Methods

186.24.5 AbortPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Aborts all of the pending transfers for a pipe. This is a synchronous operation.
Notes:

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

186.24.6 Available as boolean

MBS USB Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns true if winusb.dll has been found and loaded.
Notes: Always false on Linux and Mac OS X.

186.24.7 Constructor(path as string)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a WinUSB object for the device specified by a device path.
Example:

```
Dim path As String = "\\?\usb# vid_0e0f& pid_0003# 6& 30c8ca5f& 0& 5# { a5dcbf10-6530-11d2-901f-00c04fb951ed } "
Dim w As New WinUSBMBS(path)

If w.Lasterror <>0 Then
MsgBox "Lasterror: "+Str(w.Lasterror)
else
MsgBox "DeviceHandle: "+Hex(w.DeviceHandle)
End If
```

Notes:

Use WindowsDeviceMBS class to find USB devices and their device paths.
Lasterror is set.
On success DeviceHandle and Handle properties are not nil.

When Constructor is called, the policy settings of the interface are reset to the default values.
The Constructor call queries the underlying USB stack for various descriptors and allocates enough memory to store the retrieved descriptor data.
Constructor first retrieves the device descriptor and then gets the associated configuration descriptor. From the configuration descriptor, the call derives the associated interface descriptors and stores them in an array. The interfaces in the array are identified by zero-based indexes. An index value of 0 indicates the first interface (the default interface), a value of 1 indicates the second associated interface, and so on. Constructor parses the default interface descriptor for the endpoint descriptors and caches information such as the associated pipes or state specific data. The handle received in the InterfaceHandle parameter is a pointer to the memory block allocated for the first interface in the array.

If an application wants to use another interface on the device, it must call GetAssociatedInterface, specify the index of the interface, and retrieve a handle to the memory block allocated for the specified interface.

e.g. path like this format.
\\?\usb# vid_0e0f& pid_0003# 6& 30c8ca5f& 0& 5# { a5dcbf10-6530-11d2-901f-00c04fb951ed }

See also WinUSBDeviceMBS and WindowsDeviceMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.

186.24.8 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transmits control data over a default control endpoint.

Notes:

To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 186.24.9 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer 26360

186.24.9 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Transmits control data over a default control endpoint.
Notes:

To send a control request to the entire device or the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

SetupPacket: The 8-byte setup packet of type WinUSBSetupPacketMBS.
Buffer: A buffer that contains the data to transfer. Can be empty.

Returns the actual number of transferred bytes.
Lasterror property is set.
See also:

- 186.24.8 ControlTransfer(SetupPacket as WinUSBSetupPacketMBS, Buffer as MemoryBlock) as Integer 26359

186.24.10 DeviceSpeed as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries device speed.
Notes:

Lasteror is set.

Use constants LowSpeed, HighSpeed and FullSpeed.

186.24.11 FlushPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Discards any data that is cached in a pipe. This is a synchronous operation.
Notes:

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

186.24.12 GetAssociatedInterface(index as Integer) as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a WinUSBMBS object for an associated interface.
Notes:

This is a synchronous operation.

AssociatedInterfaceIndex: An index that specifies the associated interface to retrieve. A value of 0 indicates the first associated interface, a value of 1 indicates the second associated interface, and so on.

Returns new WinUBSMBS object.
The first associated interface is the interface that immediately follows the interface whose handle the WinUsb_Initialize routine retrieves.

Callers of GetAssociatedInterfacecan retrieve only one handle for each interface. If a caller attempts to retrieve more than one handle for the same interface, the routine will fail with an error of ERROR_ALREADY_EXISTS.

186.24.13 QueryInterfaceSettings(index as Integer) as WinUSBInterfaceDescriptionMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the interface descriptor for the specified alternate interface settings for a particular interface handle.
Notes:

To retrieve the settings of the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateSettingNumber: A value that indicates which alternate settings to return. A value of 0 indicates the first alternate setting, a value of 1 indicates the second alternate setting, and so on.

Returns WinUSBInterfaceDescriptionMBS object on success or nil on any error.

186.24.14 QueryPipe(AlternateInterfaceNumber as Integer, PipeIndex as Integer) as WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves information about the specified endpoint and the associated pipe for an interface.
Notes:

To query a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

AlternateInterfaceNumber: A value that specifies the alternate interface to return the information for.
PipeIndex: A value that specifies the pipe to return information about. This value is not the same as the bEndpointAddress field in the endpoint descriptor. A PipeIndex value of 0 signifies the first endpoint that is associated with the interface, a value of 1 signifies the second endpoint, and so on. PipeIndex must be less than the value in the NumEndpoints field of the interface descriptor.

Returns pipe information or nil on error. Also sets Lasterror property.

The QueryPipe function does not retrieve information about the control pipe.

Each interface on the USB device can have multiple endpoints. To communicate with each of these endpoints, the bus driver creates pipes for each endpoint on the interface. The pipe indices are zero-based. Therefore for n number of endpoints, the pipes' indices are set from n-1. WinUsb_QueryPipe parses the configuration descriptor to get the interface specified by the caller. It searches the interface descriptor for the

endpoint descriptor associated with the caller-specified pipe. If the endpoint is found, the function populates a WinUSBPipeInformationMBS object with information from the endpoint descriptor.

186.24.15 ReadPipeMemory(PipeID as Integer, BufferLength as Integer) as Memoryblock

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from the specified pipe.
Notes:

To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns memoryblock with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ER-

ROR_GEN_FAILURE.

186.24.16 ReadPipePacket(PipeID as Integer, MaxSize as Integer = 1024) as Memoryblock

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.

186.24.17 ReadPipeString(PipeID as Integer, BufferLength as Integer) as string

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data from the specified pipe.
Notes:

To read a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the EndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
BufferLength: The maximum number of bytes to read.

Returns string with the data read. This may be shorter than BufferLength.
Lasterror is set.

Lasterror is 0 if the operation succeeds. Otherwise, lasterror has the Windows error code.

If the data returned by the device is greater than a maximum transfer length, WinUSB divides the request into smaller requests of maximum transfer length and submits them serially. If the transfer length is not a multiple of the endpoint's maximum packet size (retrievable through the WinUSBPipeInformationMBS class's MaximumPacketSize member), WinUSB increases the size of the transfer to the next multiple of MaximumPacketSize.
USB packet size does not factor into the transfer for a read request. If the device responds with a packet that is too large for the client buffer, the behavior of the read request corresponds to the type of policy set on the pipe. If policy type for the pipe is ALLOW_PARTIAL_READS, WinUSB adds the remaining data to the beginning of the next transfer. If ALLOW_PARTIAL_READS is not set, the read request fails. For more information about policy types, see WinUSB Functions for Pipe Policy Modification.

When no data is available in the endpoint (pipe is empty), ReadPipe does not return until there is data in the pipe. If an error condition occurs or the application-specified timeout expires, ReadPipe always returns false. To determine the actual reason for that return value, always check LastError. For example, in these cases the GetLastError error value indicates the actual reason:
If the application specified a timeout value in the pipe policy and that timeout expires, ReadPipe returns false and LastError is ERROR_SEM_TIMEOUT.
If an error condition occurs while reading data from the pipe, ReadPipe returns false and LastError is ERROR_GEN_FAILURE.

186.24.18 ResetPipe(PipeID as Integer)

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Resets the data toggle and clears the stall condition on a pipe.
Notes:

To reset a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: The identifier (ID) of the control pipe. The PipeID parameter is an 8-bit value that consists in a 7-bit address and a direction bit. This parameter corresponds to the EndpointAddress field in the endpoint descriptor.

Lasterror is zero on success and false on failure.

186.24.19 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data to a pipe.
Notes:

To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.

Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 186.24.20 WritePipe(PipeID as Integer, Buffer as String) as Integer 26366

186.24.20 WritePipe(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data to a pipe.
Notes:

To write to a pipe associated with an endpoint in the first interface, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

PipeID: PipeID corresponds to the EndpointAddress field in the endpoint descriptor. For information about the layout of this field, see Table 9-13 in "Universal Serial Bus Specification Revision 2.0" at USB Technology. In the bEndpointAddress field, Bit 7 indicates the direction of the endpoint: 0 for OUT; 1 for IN.
Buffer: A buffer that contains the data to write.

Returns the actual number of bytes that were written to the pipe.
Lasterror is set. Zero for success.

To create a write request, your the application must allocate a buffer, fill it with the data that you want to write to the device, and send the buffer to the host controller by calling WritePipe.
The following restrictions apply to the size of the buffer if RAW_IO is set:

- The buffer length must be a multiple of the maximum endpoint packet size.

- The length must be less than or equal to the value of MAXIMUM_TRANSFER_SIZE retrieved by GetPipePolicy.

There are no restrictions on the size of the buffer if RAW_IO is not set as the pipe's policy type. If the size of the buffer is greater than the maximum transfer length reported by MAXIMUM_TRANSFER_SIZE, WinUSB divides the request into smaller requests and submits them serially to the host controller.
A write request that contains zero-length data is forwarded down the USB stack.
See also:

- 186.24.19 WritePipe(PipeID as Integer, Buffer as MemoryBlock) as Integer 26365

186.24.21 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
See also:

- 186.24.22 WritePipePacket(PipeID as Integer, Buffer as String) as Integer 26367

186.24.22 WritePipePacket(PipeID as Integer, Buffer as String) as Integer

MBS USB Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends data packet.
Notes: We developed this function for a client, so it's probably useless for everyone else.
See also:

- 186.24.21 WritePipePacket(PipeID as Integer, Buffer as MemoryBlock) as Integer 26367

186.24.23 Properties

186.24.24 DeviceHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the device.
Notes: (Read and Write property)

186.24.25 Lasterror as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

186.24.26 LasterrorMessage as String

MBS USB Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error message.
Notes: (Read and Write property)

186.24.27 Parent as WinUSBMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parent usb object.
Notes:

Objects created with GetAssociatedInterface have here the parent object, so you can go back to main interface.
(Read and Write property)

186.24.28 Tag as Variant

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The attached value.
Notes:

You can use this property as you like.
(Read and Write property)

186.24.29 USBHandle as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the USB device.
Notes: (Read and Write property)

186.24.30 CurrentAlternateSetting as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current alternate interface setting for an interface.
Notes:

To get the current alternate setting in the first (default) interface on the device, use the WinUSBMBS object created with constructor. For all other interfaces, use the WinUSBMBS objects to the target interface, retrieved by GetAssociatedInterface.

Lasterror is set. You can set and get the value.
(Read and Write computed property)

186.24.31 PipePolicyAllowPartialReads(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to allow partial reads.
Notes:

The default value is true. To disable set to false.
Disabling AllowPartialReads causes the read requests to fail whenever the device returns more data (on bulk and interrupt IN endpoints) than the caller requested.
Enabling AllowPartialReads causes WinUSB to save or discard the extra data when the device returns more data (on bulk and interrupt IN endpoints) than the caller requested. This behavior is defined by setting the auto flush value.
Lasterror is set.
(Read and Write computed property)

186.24.32 PipePolicyAutoClearStall(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether WinUSB resets the pipe in order to automatically clear the stall condition.
Notes:

Data continues to flow on the bulk and interrupt IN endpoints again as soon as a new or a queued transfer arrives on the endpoint. This policy parameter does not affect control pipes.
Disabling AutoClearStall causes all transfers (that arrive to the endpoint after the stalled transfer) to fail until the caller manually resets the endpoint's pipe by calling ResetPipe.
Lasterror is set.
(Read and Write computed property)

186.24.33 PipePolicyAutoFlush(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use auto flush.
Notes:

The default value is false (zero). To enable auto flush set to true.
auto flush must be used with AllowPartialReads enabled. If AllowPartialReads is TRUE, the value of auto flush determines the action taken by WinUSB when the device returns more data than the caller requested.
Disabling AllowPartialReads causes WinUSB to ignore the auto flush value.
Disabling auto flush with AllowPartialReads enabled causes WinUSB to save the extra data, add the data to the beginning of the caller's next read request, and send it to the caller in the next read operation.
Enabling auto flush with AllowPartialReads enabled causes WinUSB to discard the extra data remaining from the read request.
Lasterror is set.
(Read and Write computed property)

186.24.34 PipePolicyIgnoreShortPackets(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enabling IgnoreShortPackets causes the host controller to not complete a read operation after it receives a short packet.
Notes:

Instead, the host controller completes the operation only after the host has read the specified number of bytes.
Disabling IgnoreShortPackets causes the host controller to complete a read operation when either the host has read the specified number of bytes or the host has received a short packet.
The default value is false. To enable set to true.
Lasterror is set.
(Read and Write computed property)

186.24.35 PipePolicyMaximumTransferSize(PipeID as Integer) as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the maximum size of a USB transfer supported by WinUSB.
Notes:

This is a read-only policy.
Lasterror is set.
(Read and Write computed property)

186.24.36 PipePolicyPipeTransferTimeout(PipeID as Integer) as UInt32

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the time-out interval.
Notes:

The default value is zero.
The PipeTransferTimeout value specifies the time-out interval, in milliseconds. The host controller cancels transfers that do not complete within the specified time-out interval.
A value of zero (default) indicates that transfers do not time out because the host controller never cancels the transfer.
Lasterror is set.
(Read and Write computed property)

186.24.37 PipePolicyRawIO(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use Raw IO.
Notes:

The default value is false.
Enabling raw IO causes WinUSB to send data directly to the USB driver stack, bypassing WinUSB's queuing and error handling mechanism.
The buffers that are passed to ReadPipe must be configured by the caller as follows:

- The buffer length must be a multiple of the maximum endpoint packet size.
- The length must be less than or equal to the value of PipePolicyMaximumTransferSize.

Disabling raw IO (false) does not impose any restriction on the buffers that are passed to ReadPipe.
Lasterror is set.
(Read and Write computed property)

186.24.38 PipePolicyResetPipeOnResume(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to reset pipe on resume.
Notes:

True indicates that on resume from suspend, WinUSB resets the endpoint before it allows the caller to send new requests to the endpoint.
Lasterror is set.

(Read and Write computed property)

186.24.39 PipePolicyShortPacketTerminate(PipeID as Integer) as boolean

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the driver sends a zero-length packet at the end of every write request to the host controller.
Notes:

Lasterror is set.
(Read and Write computed property)

186.24.40 Constants

186.24.41 AutoSuspend = & h81

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the power policy type constants.

186.24.42 FullSpeed = 2

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the Device Speed Constants
Notes: Full Speed

186.24.43 HighSpeed = 3

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the Device Speed Constants
Notes: High Speed

186.24.44 LowSpeed = 1

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the Device Speed Constants
Notes: Low Speed

186.24.45 SuspendDelay = & h83

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the power policy type constants.

186.25 class WinUSBNotificationMBS

186.25.1 class WinUSBNotificationMBS

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for getting notifications about USB devices being connected or removed.
Notes: Use MacUSBNotificationMBS for Mac OS X.

186.25.2 Blog Entries

- Showing USB Devices
- MBS Real Studio Plugins, version 11.3pr15
- MBS Real Studio Plugins, version 11.2pr3

186.25.3 Blog Entries

- Showing USB Devices

- MBS Real Studio Plugins, version 11.2pr3

186.25.4 Methods

186.25.5 Constructor

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor initializes the notification engine.
Notes: On success WindowHandle and NotifyHandle is not zero.

186.25.6 Properties

186.25.7 NotifyHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal handle to the notification system.
Notes: (Read and Write property)

186.25.8 WindowHandle as Integer

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal handle to the dummy window for receiving notification.
Notes: (Read only property)

186.25.9 Events

186.25.10 DeviceAdded(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: .

Function: This event is called when a device has been attached.
Notes:

Name is typically for an USB device: "\\?\USB# Vid_05ac& Pid_8403# 000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

186.25.11 DeviceRemoved(Name as string)

MBS USB Plugin, Plugin Version: 11.2, Platform: Windows, Targets: .

Function: This event is called when a device has been removed.
Notes:

Name is typically for an USB device: "\\?\USB# Vid_05ac& Pid_8403# 000000009833# { a5dcbf10-6530-11d2-901f-00c04fb951ed } ".
That means you can get Vendor ID and Product ID from this string. Also the unique ID and finally the class GUID.

186.26 class WinUSBPipeInformationMBS

186.26.1 class WinUSBPipeInformationMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for pipe details.

186.26.2 Properties

186.26.3 Interval as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe interval.
Notes: (Read and Write property)

186.26.4 MaximumPacketSize as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum size, in bytes, of the packets that are transmitted on the pipe.
Notes: (Read and Write property)

186.26.5 PipeId as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe identifier (ID).
Notes: (Read and Write property)

186.26.6 PipeType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pipe type.
Notes: (Read and Write property)

186.26.7 Constants

186.26.8 UsbdPipeTypeBulk = 2

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is a bulk transfer pipe.

186.26.9 UsbdPipeTypeControl = 0

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is a control pipe.

186.26.10 UsbdPipeTypeInterrupt = 3

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is a interrupt pipe.

186.26.11 UsbdPipeTypeIsochronous = 1

MBS USB Plugin, Plugin Version: 12.2.

Function: One of the pipe type constants.
Notes: Indicates that the pipe is an isochronous transfer pipe.

186.27 class WinUSBSetupPacketMBS

186.27.1 class WinUSBSetupPacketMBS

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The metadata needed to create an USB packet.

186.27.2 Properties

186.27.3 Index as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The meaning of this member varies according to the request.
Notes:

For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

186.27.4 Length as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes to transfer.
Notes: (Read and Write property)

186.27.5 Request as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device request.
Notes:

The values that are assigned to this member are defined in Table 9.3 of section 9.4 of the Universal Serial Bus (USB) specification.
(Read and Write property)

186.27.6 RequestType as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The request type.
Notes:

The values that are assigned to this member are defined in Table 9.2 of section 9.3 of the Universal Serial Bus (USB) specification (www.usb.org).
(Read and Write property)

186.27.7 Value as Integer

MBS USB Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The meaning of this member varies according to the request.
Notes:

For an explanation of this member, see the Universal Serial Bus (USB) specification.
(Read and Write property)

Chapter 187

User Notifications

187.1 class NSUserNotificationActionMBS

187.1.1 class NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: An action shown to the user as part of a NSUserNotification in the additionalActions property. **Deprecated:** This item is deprecated and should no longer be used. You can use UNNotificationActionMBS class instead. **Notes:** Available on Mac OS X 10.10 and newer.

187.1.2 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr4
- New for Mac OS X 10.10 in MBS Xojo Plugins

187.1.3 Blog Entries

- MBS Xojo Plugins, version 20.6pr1
- MBS Xojo Plugins, version 19.2pr4
- New for Mac OS X 10.10 in MBS Xojo Plugins

187.1.4 Methods

187.1.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes: Returns true on Mac OS X 10.10 or newer. False in all other cases.

187.1.6 Constructor(identifier as string, title as string)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.

187.1.7 copy as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Creates a copy of this object.

187.1.8 Properties

187.1.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

187.1.10 Identifier as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The internal identifier for this action.
Notes: (Read only property)

187.1.11 Title as String

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: The localized title of the action.
Notes: (Read only property)

187.2 class NSUserNotificationCenterDelegateMBS

187.2.1 class NSUserNotificationCenterDelegateMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: This class allows you to react to events from the user notification center.
Deprecated: This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Notes:** This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

187.2.2 Blog Entries

- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

187.2.3 Blog Entries

- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

187.2.4 Methods

187.2.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes: Must be called to have the class register itself.

187.2.6 Destructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The destructor.

187.2.7 Properties

187.2.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

187.2.9 Events

187.2.10 didActivateNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent to the delegate when a user clicks on a user notification presented by the user notification center.
Example:

```
Sub applicationDidFinishLaunching(Notification as NSNotificationMBS)
dim userInfo as Dictionary = Notification.userInfo
dim key as string = NSApplicationMBS.NSApplicationLaunchUserNotificationKey
dim UserNotification as NSUserNotificationMBS = userInfo.Lookup(key, nil)

if UserNotification <>nil then
MsgBox UserNotification.identifier+": "+UserNotification.informativeText
end if
End Sub
```

Notes:

center: The user notification center.
notification: The user notification object.

This would be a good time to take action in response to user interacting with a specific notification.

To take an action when your application is launched as a result of a user clicking on a notification, be sure to implement the applicationDidFinishLaunching method in the application class that implements the NSApplicationDelegateMBS class. The notification parameter to that method has a userInfo dictionary, and if that dictionary has the NSApplicationLaunchUserNotificationKey key. The value of that key is the NSUserNotification object that caused the application to launch. The NSUserNotification object is delivered to the NSApplication delegate because that message will be sent before your application has a chance to set a delegate for the NSUserNotificationCenter.

Available in OS X v10.8 and later.

187.2.11 didDeliverNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent to the delegate when a notification delivery date has arrived.
Notes:

center: The user notification center.
notification: The user notification object.

This method is always called, regardless of your application state and even if you deliver the user notification yourself using deliverNotification:.

This event is invoked before the shouldPresentNotification event.
Available in OS X v10.8 and later.

187.2.12 shouldPresentNotification(center as NSUserNotificationCenterMBS, notification as NSUserNotificationMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: .

Function: Sent to the delegate when the user notification center has decided not to present your notification.
Notes:

center: The user notification center.
notification: The user notification object.

Return true if the user notification should be displayed regardless; false otherwise.
Available in OS X v10.8 and later.

187.3 class NSUserNotificationCenterMBS

187.3.1 class NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSUserNotificationCenterMBS class delivers user notifications to the user from applications or helper applications.
Example:

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

dim d as new date
d.Second = d.Second + 10
u.deliveryDate = d

dim c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

Deprecated: This item is deprecated and should no longer be used. You can use UNUserNotificationCenterMBS class instead. **Notes:**

When a user notifications is delivery date has been reached, or it is manually delivered, the notification center it may display the notification to the user. The user notification center reserves the right to decide if a delivered user notification is presented to the user. For example, it may suppress the notification if the application is already frontmost (the delegate can override this action). The application can check the result of this decision by examining the presented property of a delivered user notification.

NSUserNotificationMBS instances the NSUserNotificationCenterMBS are tracking will be in one of two states: scheduled or delivered. A scheduled user notification has a deliveryDate. On that delivery date, the notification will move from being scheduled to being delivered. Note that the user notification may be displayed later than the delivery date depending on a number of factors.

A delivered user notification has an actualDeliveryDate. That is the date when it moved from being scheduled to delivered, or when it was manually delivered using the deliverNotification method.

The application and the user notification center are both ultimately subject to the user's preferences. If the user decides to hide all alerts from your application, the presented property will still behave as above, but the user will not see any animation or hear any sound.

The NSUserNotificationCenterDelegateMBS class provides more information about the delivered user notification and allows forcing the display of a user notification even if the application is frontmost.

Note: It the user wakes more than 15 minutes after a scheduled notification is scheduled to fire, it is discarded. If the notification repeats with an interval less than 15 minutes, then it expires in 1 minute. Expired notifications are just discarded, unless they repeat, in which case, they stay in the scheduled list and just fire again later.
Important Many of the NSUserNotificationCenterMBS class's methods involve talking to a server process, so calling them repeatedly can have a negative effect on performance.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

187.3.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr3
- Mac OS X 10.8 User Notifications with Filemaker and Real Studio

187.3.4 Methods

187.3.5 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether user notification framework is available.
Notes: Returns true on Mac OS X 10.8 and false otherwise.

187.3.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor.
Notes:

Initializes this object to point to the default user notification center.
Available in OS X v10.8 and later.

187.3.7 defaultUserNotificationCenter as NSUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the default user notification center.
Notes: Available in OS X v10.8 and later.

187.3.8 deliveredNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: An array of all user notifications delivered to the notification center.
Notes:

The number of notifications the user actually sees in the user interface may be less than the size of this array.

Note that these may or may not have been actually presented to the user. See the presented property in the NSUserNotificationMBS class.

Note: A scheduled user notification that specifies a deliveryRepeatInterval remains in the scheduledNotifications list, even though it has been delivered. The item that goes into the deliveredNotifications list is a copy of the user notification item.

Available in OS X v10.8 and later.

187.3.9 deliverNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Deliver the specified user notification.
Example:

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "just a test"

dim c as new NSUserNotificationCenterMBS
c.deliverNotification u
```

Notes:

notification: The user notification.

The notification will be presented to the user (subject to the user's preferences). The presented property of the NSUserNotification object will always be set to true if a notification is delivered using this method.

Available in OS X v10.8 and later.

187.3.10 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Remove all delivered user notifications from the user notification center.
Notes: Available in OS X v10.8 and later.

187.3.11 removeAllScheduledNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: Desktop only.

Function: Remove all scheduled user notifications from the user notification center.
Notes: Available in OS X v10.8 and later.

187.3.12 removeDeliveredNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Remove a delivered user notification from the user notification center.
Notes:

notification: The user notification.

If the user notification is not in deliveredNotifications, nothing happens.

Available in OS X v10.8 and later.

187.3.13 removeScheduledNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Removes the specified user notification for the scheduled notifications.
Notes:

notification: The user notification.

If the user notification's deliveryDate occurs before the cancellation finishes, the notification may still be delivered.
If the notification is not in the scheduled list, nothing happens.

Available in OS X v10.8 and later.

187.3.14 scheduledNotifications as NSUserNotificationMBS()

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies an array of scheduled user notifications that have not yet been delivered.
Notes:

Newly scheduled notifications are added to the end of the array. You may also bulk-schedule notifications by setting this array. Bulk setting new scheduled notifications unschedules existing notifications.

Note: The scheduled user notification could be changing to a delivered notification at the time you are calling this method. and if that case the user notification will still be delivered.

Available in OS X v10.8 and later.

187.3.15 scheduleNotification(notification as NSUserNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Schedules the specified user notification.
Notes:

notification: The user notification.

Scheduled notifications are added to the end of the notification queue.
Available in OS X v10.8 and later.

187.3.16 Properties

187.3.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

187.4 class NSUserNotificationMBS

187.4.1 class NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The NSUserNotificationMBS class is used to configure a notification that is scheduled for display by the NSUserNotificationCenterMBS class.
Example:

```
dim u as new NSUserNotificationMBS

u.Title = "Hello World"
u.subtitle = "from Xojo."
u.informativeText = "Our first Notification from Xojo."

dim d as new date
d.Second = d.Second + 10
u.deliveryDate = d

dim c as new NSUserNotificationCenterMBS
c.scheduleNotification u
```

Deprecated: This item is deprecated and should no longer be used. You can use UNNotificationMBS class instead. **Notes:**

The NSUserNotificationMBS object not only configures the notification, when the notification is delivered information about when the notification was actually presented to the user (if at all) and other details are provided in the notification object. User applications can create NSUserNotification objects and register them with the NSUserNotificationCenterMBS object to notify the user when an application requires attention.

See NSUserNotificationCenterMBS Class Reference for more information.

Threading Information
The NSUserNotificationCenterMBS class and the NSUserNotificationMBS class are both thread safe.

This is for sending user notifications to the Mac your Xojo application runs on. Not for remote notifications or notifications to iOS devices.

187.4.6 Methods

187.4.7 additionalActions as NSUserNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Queries the array of additional actions.
Notes:

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but simply return empty array.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

187.4.8 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Whether this class is available.
Notes:

Returns true on Mac OS X 10.8 and newer.
Returns false on other operation systems, e.g. older OS X, Windows or Linux.

187.4.9 Constructor

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The constructor to create a new notification.

187.4.10 copy as NSUserNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Creates a clone of the notification object.

187.4.11 NSUserNotificationDefaultSoundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The default sound played by the user notification center for this notification.
Notes:

The default notification sound.
Available in OS X v10.8 and later.

187.4.12 Print

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Prints description of notification object to console for debugging.

187.4.13 setAdditionalActions(additionalActions() as NSUserNotificationAction-MBS)

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Sets the array of additional actions.
Notes:

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions.

An array of NSUserNotificationActionMBS objects that describe the different actions that can be taken on a notification in addition to the default action described by actionButtonTitle.

187.4.14 Properties

187.4.15 actionButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the title of the action button displayed in the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

Available in OS X v10.8 and later.
(Read and Write property)

187.4.16 activationType as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies what caused a user notification to occur.
Notes:

This property specifies why the user notification was sent to to the NSUserNotificationCenterDelegateMBS didActivateNotification event. The supported values are described in constants.

Available in OS X v10.8 and later.
(Read only property)

187.4.17 actualDeliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The date this notification was actually delivered.
Notes:

The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCenterMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

187.4.18 actualDeliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: The date this notification was actually delivered.
Notes:

The notification center will set this value if a notification is put in the scheduled list and the delivery time arrives.

If the notification is delivered directly using the deliverNotification: method of the NSUserNotificationCen-

terMBS class, this value will be set to the deliveryDate value. If the deliveryDate value nil this value is set to the current date.

This value is used to sort the list of notifications in the user interface.

Available in OS X v10.8 and later.
(Read only property)

187.4.19 additionalActivationAction as NSUserNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 14.3, Platform: macOS, Targets: Desktop only.

Function: Queries which additional action was selected.
Notes:

For Mac OS X 10.10 and newer. Will not cause exception if called on older versions, but always return nil.

When a user selects an additional action that action will be set on the notification's additionalActivationAction property when passed into the delegate event didActivateNotification.
(Read only property)

187.4.20 contentImage as NSImageMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Image shown in the content of the notification.
Notes: (Read and Write property)

187.4.21 deliveryDate as date

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies when the notification should be delivered.
Notes:

The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.22 deliveryDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Specifies when the notification should be delivered.
Notes:

The delivery date is specified in an absolute time.
After a notification is delivered, it may be presented to the user.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.23 deliveryRepeatInterval as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the date components that control how often a user notification is repeated.
Notes:

This value may be nil if the notification should not repeat.

The date component values are relative to the date the notification was delivered.

If the calendar value of the deliveryRepeatInterval is nil, the current calendar will be used to calculate the repeat interval. For example, if a notification should repeat every hour, set the hour property of the deliveryRepeatInterval to 1.

This value is ignored unless the user notification is scheduled with the NSUserNotificationCenterMBS object.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.24 deliveryTimeZone as NSTimeZoneMBS

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specify the time zone to interpret the delivery date in.
Notes:

If this value is nil and the user switches time zones, the notification center will adjust the time of presentation to account for the time zone change.

If a notification should be delivered at a time in a specific time zone (regardless of whether the user switches time zones), set this value to the specific time zone, for example the current time zone.

Available in OS X v10.8 and later.
(Read and Write property)

187.4.25 description as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Description of notification object for debugging.
Notes: (Read only property)

187.4.26 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

187.4.27 hasActionButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the notification displays an action button.
Notes:

Set to false if the notification has no action button. This will be the case for notifications that are purely for informational purposes and have no user action.

The default value is true.

Available in OS X v10.8 and later.
(Read and Write property)

187.4.28 hasReplyButton as boolean

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Set to true if the notification has a reply button.
Notes:

The default value is false. If both this and hasActionButton are true, the reply button will be shown.
(Read and Write property)

187.4.29 identifier as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: This identifier is used to uniquely identify a notification.
Notes:

A notification delivered with the same identifier as an existing notification will replace that notification, rather then display a new one.

Available in OS X 10.9 and newer.
(Read and Write property)

187.4.30 informativeText as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: The body text of the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.31 otherButtonTitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies a custom title for the close button in an alert-style notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.

An empty string will cause the default localized text to be used.

Available in OS X v10.8 and later.
(Read and Write property)

187.4.32 Presented as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the user notification has been presented.
Notes:

In some cases, for example when your application is frontmost, the notification center may decide not to actually present a delivered notification. In that case, the value of this property will be false. It will be set to true if the notification was presented according to user preferences.

Available in OS X v10.8 and later.
(Read only property)

187.4.33 remote as boolean

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies whether the remote was generated by a push notification.
Notes:

If this property is true then the user notification was generated by a push notification (that is, remotely); if false it was generated locally.
Available in OS X v10.8 and later.
(Read only property)

187.4.34 response as NSAttributedStringMBS

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: The response text.
Notes:

When a notification has been responded to, the NSUserNotificationCenter event didActivateNotification will be called with the notification with the activationType set to NSUserNotificationActivationTypeReplied and the response set on the response property.
(Read only property)

187.4.35 responsePlaceholder as string

MBS MacFrameworks Plugin, Plugin Version: 13.5, Platform: macOS, Targets: Desktop only.

Function: Optional placeholder for inline reply field.
Notes: (Read and Write property)

187.4.36 soundName as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the name of the sound to play when the notification is delivered.
Notes:

Passing the NSUserNotificationDefaultSoundName constant causes the default notification center sound to be played.
A value of nil means no sound is played.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.37 subtitle as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the subtitle of the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.38 title as string

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Specifies the title of the notification.
Notes:

This value should localized as it will be presented to the user. The string will be truncated to a length appropriate for display and the property will be modified to reflect the truncation.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.39 userInfo as dictionary

MBS MacFrameworks Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Application-specific user info that can be attached to the notification.
Example:

```
dim u as new NSUserNotificationMBS
dim d as new dictionary
d.value("Key") = "Value"
u.userinfo = d
```

Notes:

All items must be property list types or an exception will be thrown.
The userInfo content must be of reasonable serialized size (less than 1k) or an exception will be thrown.
Available in OS X v10.8 and later.
(Read and Write property)

187.4.40 Constants

187.4.41 NSUserNotificationActivationTypeActionButtonClicked = 2

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the activation type constants.
Notes:

The user clicked on the action button of the notification alert.
Available in OS X v10.8 and later.

187.4.42 NSUserNotificationActivationTypeAdditionalActionClicked = 4

MBS MacFrameworks Plugin, Plugin Version: 14.3.

Function: One of the activation type constants.
Notes:

User did select an additional action.
Only for Mac OS X 10.10 and newer.

187.4.43 NSUserNotificationActivationTypeContentsClicked = 1

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the activation type constants.
Notes:

The user clicked on the contents of the notification alert.
Available in OS X v10.8 and later.

187.4.44 NSUserNotificationActivationTypeNone = 0

MBS MacFrameworks Plugin, Plugin Version: 12.3.

Function: One of the activation type constants.
Notes:

The user did not interact with the notification alert.
Available in OS X v10.8 and later.

187.4.45 NSUserNotificationActivationTypeReplied = 3

MBS MacFrameworks Plugin, Plugin Version: 13.5.

Function: The activation type for a notification which got a reply.

187.5 class UNCalendarNotificationTriggerMBS

187.5.1 class UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that causes a notification to be delivered at a specific date and time.
Notes:

Create a UNCalendarNotificationTriggerMBS object when you want to schedule the delivery of a local notification at the specified date and time. You specify the temporal information using an NSDateComponentsMBS object, which lets you specify only the time values that matter to you. The system uses the provided information to determine the next date and time that matches the specified information.
Subclass of the UNNotificationTriggerMBS class.

187.5.2 Methods

187.5.3 Constructor(dateComponents as NSDateComponentsMBS, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a calendar trigger from the specified date components.
Notes:

dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

187.5.4 trigger(dateComponents as NSDateComponentsMBS, repeats as boolean) as UNCalendarNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a calendar trigger from the specified date components.
Notes:

dateComponents: The temporal information to use when constructing the trigger. Provide only the date components that are relevant for your trigger.
repeats: Specify false to deliver the notification one time. Specify YES to reschedule the notification request each time the notification is delivered.

Returns a new calendar trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

187.5.5 Properties

187.5.6 dateComponents as NSDateComponentsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The date components used to construct this object.
Notes:

Use this property to review the date components associated with this trigger.
(Read only property)

187.5.7 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

187.5.8 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

187.6 class UNMutableNotificationContentMBS

187.6.1 class UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The editable content for a notification.
Notes:

Create a UNMutableNotificationContent object when you want to specify the payload for a local notification. Specifically, use this object to specify the title and message for an alert, the sound to play, or the value to assign to your app's badge. You might also provide details about how the system handles the notification. For example, you can specify a custom launch image and a thread identifier for visually grouping related notifications.
After creating your content object, assign it to a UNNotificationRequest object, add a trigger condition, and schedule your notification. The trigger condition defines when the notification is delivered to the user. Listing 1 shows the scheduling of a local notification that displays an alert and plays a sound after a delay of five seconds. The strings for the alert's title and body are stored in the app's Localizable.strings file.
Subclass of the UNNotificationContentMBS class.

187.6.2 Methods

187.6.3 addAttachment(attachment as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Adds an attachment.

187.6.4 clearBadge

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Clears the badge.

187.6.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The constructor.

187.6.6 setAttachments(attachments() as UNNotificationAttachmentMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Sets an array of attachments to display in an alert-based notification.
Notes:

Use this property to include images or movies, or to include playable audio files, with the contents of an alert. The system displays the attachments alongside the title and body of your alert. You can also customize the presentation of attachments using a notification content app extension.
All attachments must reside locally on the current device before they can be added. For local notifications, modify this property before scheduling the notification. For remote notifications, use a notification service app extension to locate and download the specified files and modify the notification content before it is delivered.
For more information on how to specify attachments, see UNNotificationAttachmentMBS.

187.6.7 Properties

187.6.8 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number to apply to the app's icon.
Notes:

Use this property to specify the number to apply to the app's icon when the notification arrives. If your app is not authorized to display badge-based notifications, this property is ignored.
Specify the number 0 to remove the current badge, if present. Specify a number greater than 0 to display a badge with that number. Use clearBadge to leave the current badge unchanged.
(Read and Write property)

187.6.9 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized message to display in the notification alert.
Notes:

Use this property to specify the body of the notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
The body text should contain the final text that you want to display, and should not contain any placeholder characters. To include a percent symbol (%) in the message body, use two percent symbols (% %). The system strips all other printf style escape characters from your string prior to display.
(Read and Write property)

187.6.10 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier of the category object that represents the notification's type.
Notes:

Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications—that is, notifications with custom action buttons—and to redirect your notifications through either your notification service app extension or your notification content app extension.
Assign a value to this property that matches the identifier property of one of the UNNotificationCategory objects you previously registered with your app. If you assign a string that does not match one of your registered categories, the system displays your notification without custom actions and without routing it through your app extensions.
(Read and Write property)

187.6.11 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound to play when the notification is delivered.
Notes:

Use this property to specify the sound that you want played when the notification arrives. If your app is not authorized to play sounds for notifications, this property is ignored.
For information on how to specify sounds for your notifications, see UNNotificationSoundMBS.
(Read and Write property)

187.6.12 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized subtitle, containing a secondary description of the reason for the alert.
Notes:

Use this property to specify additional context about the purpose of the notification. Subtitles offer additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read and Write property)

187.6.13 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The string the notification adds to the category's summary format string.
Notes: (Read and Write property)

187.6.14 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number of items the notification adds to the category's summary format string.
Notes: (Read and Write property)

187.6.15 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An identifier that you use to group related notifications together.
Notes:

You may specify any value for the string, but assign the same thread identifier string to all notifications that you want to group together visually.
(Read and Write property)

187.6.16 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized title, containing the reason for the alert.
Notes:

Use this property to specify the title of your notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read and Write property)

187.6.17 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A dictionary of custom information associated with the notification.
Notes:

Use this property to associate custom information with the notification. The contents of the dictionary are not seen by the user, but are accessible to your app or to any notification-related app extensions.

The keys in this dictionary must be property-list types—that is, they must be types that can be serialized into the property-list format.
(Read and Write property)

187.7 class UNNotificationActionMBS

187.7.1 class UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The class for an action for a notification.
Notes:

Use UNNotificationAction objects to define the actions that your app can perform in response to a delivered notification. You define the actions that your app supports. For example, a meeting app might define actions for accepting or rejecting a meeting invitation. The action object itself contains the title to display in an action button and the button's appearance. After creating action objects, add them to a UNNotificationCategory object and register your categories with the system.
For information on how to define actions and categories, see Declaring Your Actionable Notification Types.

When the user selects one of your actions in response to a notification, the system notifies the delegate of the shared UNUserNotificationCenterMBS object. Specifically, the system calls the didReceiveNotificationResponse event. The response object passed to your delegate includes the identifier string of the action that was selected, which you can use to perform the corresponding task.

- MBS Xojo Plugins, version 20.6pr1

187.7.4 Methods

187.7.5 action(identifier as string, title as string, options as integer) as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object with the specified title and options.
Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.

options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

187.7.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationAction class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.7.7 Constructor(identifier as string, title as string, options as integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object with the specified title and options.
Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see constants.

187.7.8 copy as UNNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.7.9 Properties

187.7.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.7.11 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique string that your app uses to identify the action.
Notes:

When the user selects an action, the system reports the value of this string to your app. Because all actions are handled by a single delegate method, the identifier strings for all of your app's actions must be unique.
(Read only property)

187.7.12 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The behaviors associated with the action.
Notes:

Options should be applied to an action when the corresponding behavior is required.
(Read only property)

187.7.13 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized string to use as the title of the action.
Notes:

This string is used as the title of the button that the user taps or selects in the notification interface.
(Read only property)

187.7.14 Constants

187.7.15 OptionAuthenticationRequired = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes:

The action can be performed only on an unlocked device.
When the user selects an action with this option, the system prompts the user to unlock the device. After unlocking, the system notifies your app of the selected action. You might use option to perform actions that require accessing data that is encrypted while the device is locked.

187.7.16 OptionDestructive = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes:

The action performs a destructive task.
Use this option for actions that delete user data or change the app irrevocably. The action button is displayed with special highlighting to indicate that it performs a destructive task.

187.7.17 OptionForeground = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes:

The action causes the app to launch in the foreground.
When the user selects an action containing this option, the system brings the app to the foreground, asking the user to unlock the device as needed. Use this option for actions that require the user to interact further with your app. Do not use this option simply to bring your app to the foreground.

187.7.18 OptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the option constants.
Notes: The action has the default behavior.

187.8 class UNNotificationAttachmentMBS

187.8.1 class UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A media file associated with a notification.
Notes:

Create a UNNotificationAttachmentMBS object when you want to include audio, image, or video content together in an alert-based notification. When creating the UNNotificationAttachmentMBS object, the file you specify must be on disk, and the file format must be one of the supported types.

You are responsible for supplying attachments before the system displays your notification's alert. For local notifications, add attachments when creating the notification's content. For remote notifications, use a notification service app extension to download the attached files and then add them to the notification's content before delivery.

The system validates attachments before displaying the associated notification. If you attach a file to a local notification request that is corrupted, invalid, or of an unsupported file type, the system doesn't schedule your request. For remote notifications, the system validates attachments after your notification service app extension finishes. Once validated, attached files are moved into the attachment data store so that they can be accessed by all of the appropriate processes. Attachments located inside an app's bundle are copied instead of moved.

Supported File Types
Table lists the types of files you can include as an attachment and the supported file formats. The table also lists the maximum size allowed for attachments of each type. An image file may contain a static image or an animated image sequence.

Supported attachment file types

Attachment	Supported file types	Maximum size
Audio	kUTTypeAudioInterchangeFileFormat, kUTTypeWaveformAudio, kUTTypeMP3 and kUTTypeMPEG4Audio	5 MB
Image	kUTTypeJPEG, kUTTypeGIF and kUTTypePNG	10 MB
Movie	kUTTypeMPEG, kUTTypeMPEG2Video, kUTTypeMPEG4 and kUTTypeAVIMovie	50 MB

When creating an attachment, you can specify optional details about how to present the thumbnail image for the image or movie. Use the UNNotificationAttachmentOptionsThumbnailClippingRectKey option to use only the specified portion of an image as a thumbnail. For animated images and movies, use the UNNotificationAttachmentOptionsThumbnailTimeKey option to select which frame to use for the thumbnail image.

The amount of storage space allocated for attachments is limited for each app. To delete attachments, use the methods of the UNUserNotificationCenterMBS class to remove the notification requests that contain those attachments.

187.8.4 Methods

187.8.5 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.

- 187.8.6 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

187.8.6 attachment(identifier as String, URL as String, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 187.8.5 attachment(identifier as String, File as FolderItem, options as Dictionary = nil, byref error as NSErrorMBS) as UNNotificationAttachmentMBS 26418

187.8.7 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationAttachment class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.8.8 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 187.8.9 Constructor(identifier as String, URL as String, options as Dictionary = nil) 26420

187.8.9 Constructor(identifier as String, URL as String, options as Dictionary = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an attachment object from the specified file and options.
Notes:

identifier: The unique identifier of the attachment. Use this string to identify the attachment later. If you specify an empty string, this method creates a unique identifier string for you.
URL: The URL of the file you want to attach to the notification. The URL must be a file URL and the file must be readable by the current process. This parameter must not be nil. For a list of supported file types, see Supported File Types.
options: A dictionary of options related to the attached file. Use the options to specify meta information about the attachment, such as the clipping rectangle to use for the resulting thumbnail.
error: An error object indicating whether a problem occurred. If the attachment was created successfully, this parameter is set to nil. If an error occurs, it is set to an error object containing information about why the attachment was not created. You may specify nil for this parameter if you do not want the error information.

Returns an attachment object containing information about the specified file or nil if the attachment could

not be created.

This method verifies that the specified file is readable and that the file format is one of the supported types. When errors occur, the method provides an appropriate error object.
When you schedule a notification request containing the attachment, the attachment's file is moved to a new location to facilitate access by the appropriate processes. After the move, the only way to access the file is using the methods of the UNUserNotificationCenterMBS object.
See also:

- 187.8.8 Constructor(identifier as String, File as FolderItem, options as Dictionary = nil) 26419

187.8.10 copy as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.2, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.8.11 UNNotificationAttachmentOptionsThumbnailClippingRectKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The clipping rectangle for a thumbnail image.
Notes: The value of this key is a dictionary containing a normalized CGRectMBS—that is, a unit rectangle whose values are in the range 0.0 to 1.0 and represent the portion of the original image that you want to display. For example, specifying an origin of (0.25, 0.25) and a size of (0.5, 0.5) defines a clipping rectangle that shows only the center portion of the image.

187.8.12 UNNotificationAttachmentOptionsThumbnailHiddenKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the attachment's thumbnail is hidden.
Notes: The value of this key is a number containing a Boolean value. When set to true, the attachment's thumbnail is not displayed. If you do not include this key, the thumbnail is shown.

187.8.13 UNNotificationAttachmentOptionsThumbnailTimeKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The frame number of an animation to use as a thumbnail image.
Notes: For animated images, the value of this key is an number containing the frame number to use as the thumbnail. For movies, the value of this key is the time (in seconds) into the movie from which to grab the

thumbnail image.

187.8.14 UNNotificationAttachmentOptionsTypeHintKey as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A hint about an attachment's file type.
Notes: The value of this key is a string containing a Uniform Type Identifier (UTI) that describes the file's type. If you do not include this key, the attachment's filename extension is used to determine its type.

187.8.15 Properties

187.8.16 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.8.17 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique identifier for the attachment.
Notes: (Read only property)

187.8.18 type as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The UTI type of the attachment.
Notes:

The value of this property is derived from the attachment data.
(Read only property)

187.8.19 URL as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The URL of the file for this attachment.
Notes:

The file at the specified URL is security scoped to your app. Before you access it, call the startAccessingSecurityScopedResource method of NSURL.
(Read only property)

187.9 class UNNotificationCategoryMBS

187.9.1 class UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A type of notification that your app supports and the custom actions to display with it.
Notes:

A UNNotificationCategoryMBS object defines a type of notification that your executable can receive. You create category objects to define your app's actionable notifications—that is, notifications that have action buttons that the user can select in response to the notification. Each category object you create stores the actions and other behaviors associated with a specific type of notification. Register your category objects using the setNotificationCategories method of UNUserNotificationCenterMBS. You can register as many category objects as you want.

To apply category objects to your notifications, include the category's identifier string in the payload of any notifications you create. For local notifications, put this string in the categoryIdentifier property of the UNMutableNotificationContentMBS object that you use to specify the notification's content. For remote notifications, use this string as the value of the category key in the aps dictionary of your payload.

Categories can have associated actions, which define custom buttons to display for notifications of that category. When space is unlimited, the system displays up to 10 actions. When space is limited, the system displays at most two actions.

187.9.2 Methods

187.9.3 actions as UNNotificationActionMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The actions to display when a notification of this type is presented.
Notes:

When displaying a notification assigned to this category, the system adds a button to the notification interface for each action in this property. These buttons are displayed after the notification's content but before the Dismiss button.
When displaying banner notifications, the system displays only the first two actions.

187.9.4 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationCategory class is available.

Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options, a hidden previous placeholder, and the category's summary format string.
See also:

- 187.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS 26425
- 187.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS 26426

187.9.6 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions, options, and a hidden previous placeholder.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters % u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "% u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization

Guide.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.
See also:

- 187.9.5 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) as UNNotificationCategoryMBS 26425

187.9.7 category(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.

187.9.9 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions, options, and a hidden previous placeholder.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
hiddenPreviewsBodyPlaceholder: A placeholder string to display when the user has disabled notification previews for the app. Include the characters % u in the string to represent the number of notifications with the same thread identifier. (No other formatting characters are supported.) For example, the string "% u Messages" becomes "2 Messages" when there are two messages.
To specify different strings for the singular and plural cases, use the localizedUserNotificationStringForKey method of string to specify the value for this parameter. The key passed to that method contains the identifier of an entry in a .stringsdict property list of your project. A strings dictionary lets you specify different formatted strings based on the language rules, and is as described in Internationalization and Localization Guide.

- 187.9.8 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as

string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) 26427

- 187.9.10 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer) 26428

187.9.10 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a category object containing the specified actions and options.
Notes:

identifier: The unique identifier for the category. Each category that your app uses must have a unique identifier. Do not specify an empty string.
actions: The actions to display when notifications of this type are delivered. When minimal space is available, only the first two actions in the array are displayed. You may specify nil for this parameter if you do not want to display custom actions.
intentIdentifiers: The intent identifier strings that you want to associate with notifications of this type. The Intents framework defines constants for each type of intent that you can associate with your notifications.
options: Additional options for handling notifications of this type. For a list of possible values, see UNNotificationCategoryOptions.

Returns an initialized category object.
See also:

- 187.9.8 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, categorySummaryFormat as String, options as Integer) 26427
- 187.9.9 Constructor(identifier as String, actions() as UNNotificationActionMBS, intentIdentifiers() as string, hiddenPreviewsBodyPlaceholder as String, options as Integer) 26427

187.9.11 copy as UNNotificationCategoryMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.9.12 intentIdentifiers as String()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The intents related to notifications of this category.
Notes: When a notification is delivered, the presence of an intent identifier lets the system know that the

notification is potentially related to the handling of a request made through Siri.

187.9.13 Properties

187.9.14 categorySummaryFormat as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A format string for the summary description used when the system groups the category's notifications.
Notes: (Read only property)

187.9.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.9.16 hiddenPreviewsBodyPlaceholder as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The placeholder text to display when notification previews are disabled for the app.
Notes:

The string in this property may contain the special characters % u as a placeholder for the number of messages with the same thread identifier. If the string in this property is declared in a .stringsdict property list, the system formats the preview message using the information in that file. For more information about specifying a .stringsdict property file, see Internationalization and Localization Guide.
(Read only property)

187.9.17 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique string assigned to the category.
Notes:

Use this string to differentiate the different types of notifications that your app can send. To assign a category to a local notification, assign this string to the categoryIdentifier property of the content object. To assign a category to a remote notification, use the string as the value of the category key in the aps dictionary of

the notification payload.
(Read only property)

187.9.18 options as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Options for how to handle notifications of this type.
Notes: (Read only property)

187.9.19 Constants

187.9.20 OptionAllowInCarPlay = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes:

Allow CarPlay to display notifications of this type.
Apps must be approved for CarPlay overall and then you must enable CarPlay for the notification types you want displayed. If a category does not explicitly contain this option, notifications of that type are not displayed in a CarPlay environment.

187.9.21 OptionCustomDismissAction = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: Send dismiss actions to the UNUserNotificationCenter object's delegate for handling.

187.9.22 OptionHiddenPreviewsShowSubtitle = 8

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: Show the notification's subtitle, even if the user has disabled notification previews for the app.

187.9.23 OptionHiddenPreviewsShowTitle = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: Show the notification's title, even if the user has disabled notification previews for the app.

187.9.24 OptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to handle notifications associated with this category.
Notes: No options.

187.10 class UNNotificationContentMBS

187.10.1 class UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The uneditable content of a notification.
Notes:

A UNNotificationContent object contains the data associated with a notification. When your app receives a notification, the associated UNNotificationRequestMBS object contains an object of this type with the content that your app received. Use the content object to get the details of the notification, including the type of notification that was delivered, any custom data you stored in the userInfo dictionary before scheduling the notification, and any attachments.
Don't create instances of this class directly. For remote notifications, the contents of this object are derived from the JSON payload that your server sends to the APNS server. For local notifications, create a UNMutableNotificationContentMBS object, and configure the contents of that object instead.

187.10.4 Methods

187.10.5 attachment(Index as integer) as UNNotificationAttachmentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Queries attachment with given index.
Notes: Index from 0 to attachmentCount-1.

187.10.6 attachments as UNNotificationAttachmentMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An array of attachments to display with the notification.
Notes: Use this property to retrieve the images, movies, and audio files associated with your notification's content. A notification content app extension might use these values to add the associated content to its

view controller.

187.10.7 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationContent class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.10.8 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 187.10.9 Constructor(Handle as Integer) 26433

187.10.9 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Constructor for creating an instanced based on an existing handle.
Notes:

Useful if you get a UNNotificationContent reference from a declare.
The object is retained.
See also:

- 187.10.8 Constructor 26433

187.10.10 copy as UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.10.11 mutableCopy as UNMutableNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a mutable copy of the object.

187.10.12 Properties

187.10.13 attachmentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The attachment count.
Notes: (Read only property)

187.10.14 badge as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number to display as the app's icon badge.
Notes:

When the number in this property is 0, the system does not display a badge. When the number is greater than 0, the system displays the badge with the specified number. When the value in this property is not set, the system leaves the current badge unchanged.
(Read only property)

187.10.15 body as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The message displayed in the notification alert.
Notes:

The body text contains the final text that you want to display. If your app is not authorized to display alert-based notifications, this property is ignored.
If you specified two percent symbols (% %) in the message body, the system replaces it with a single percent symbol (%). The system strips all other printf style escape characters from your string prior to display.
(Read only property)

187.10.16 categoryIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier of the app-defined category object.
Notes:

Use notification types to distinguish between the different types of notifications your app supports. You use this support primarily to create actionable notifications—that is, notifications with custom action buttons—and to redirect your notifications through either your notification service app extension or your notification content app extension.
For remote notifications, this property is set to the value of the category key in the aps dictionary.
(Read only property)

187.10.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.10.18 sound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound to play when the notification is delivered.
Notes:

Notifications can play a default sound or a custom sound. For information on how to specify custom sounds for your notifications, see UNNotificationSoundMBS.
(Read only property)

187.10.19 subtitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A secondary description of the reason for the alert.
Notes:

Subtitles offer additional context in cases where the title alone is not clear. Subtitles are not displayed in all cases. If your app is not authorized to display alert-based notifications, this property is ignored.
(Read only property)

187.10.20 summaryArgument as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The string the notification adds to the category's summary format string.
Notes: (Read only property)

187.10.21 summaryArgumentCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The number of items the notification adds to the category's summary format string.
Notes: (Read only property)

187.10.22 threadIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An identifier that you use to group related notifications together.
Notes:

For remote notifications, this property is set to the value of the thread-id key in the aps dictionary.
(Read only property)

187.10.23 title as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A short description of the reason for the alert.
Notes:

When a title is present, the system attempts to display a notification alert. If your app is not authorized to display alert-based notifications, this property is ignored.
Title strings should be short, usually only a couple of words describing the reason for the notification. In watchOS, the title string is displayed as part of the short look notification interface, which has limited space.
(Read only property)

187.10.24 userInfo as Dictionary

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A dictionary of custom information associated with the notification.
Notes:

For remote notifications, this property contains the entire notification payload. For local notifications, you configure the property directly before scheduling the notification.
The keys in this dictionary must be property-list types—that is, they must be types that can be serialized into the property-list format.

(Read only property)

187.11 class UNNotificationMBS

187.11.1 class UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The data for a local or remote notification that was delivered to your app.
Notes:

A UNNotification object contains the initial notification request, which contains the notification's payload, and the date on which the notification was delivered.
Don't create notification objects directly. When handling notifications, the system delivers notification objects to your events. The UNUserNotificationCenterMBS object also maintains the list of notifications that were previously delivered, and you use the getDeliveredNotifications method to retrieve those objects.

187.11.8 Methods

187.11.9 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotification class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.11.10 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.
See also:

- 187.11.11 Constructor(Handle as Integer) 26439

187.11.11 Constructor(Handle as Integer)

MBS MacFrameworks Plugin, Plugin Version: 21.1, Platform: macOS, Targets: Desktop only.

Function: Constructor for creating an instanced based on an existing handle.
Notes:

Useful if you get a UNNotification reference from a declare.
The object is retained.
See also:

- 187.11.10 Constructor 26439

187.11.12 copy as UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.11.13 UNErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The error domain for notifications.

187.11.14 Properties

187.11.15 Date as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The delivery date of the notification.
Notes:

This date is displayed to the user in Notification Center.
(Read only property)

187.11.16 DateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The delivery date of the notification.
Notes:

This date is displayed to the user in Notification Center.
(Read only property)

187.11.17 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.11.18 request as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The notification request containing the payload and trigger condition for the notification.
Notes:

For local notifications, the request object is a copy of the one you originally configured. For remote notifications, the request object is synthesized from information received from Apple Push Notification service. (Read only property)

187.11.19 Constants

187.11.20 UNErrorCodeAttachmentCorrupt = 105

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The file for an attachment is corrupt.

187.11.21 UNErrorCodeAttachmentInvalidFileSize = 102

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: An attachment is too large.

187.11.22 UNErrorCodeAttachmentInvalidURL = 100

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The URL for an attachment was invalid.

187.11.23 UNErrorCodeAttachmentMoveIntoDataStoreFailed = 104

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: An error occurred when trying to move an attachment to the system data store.

187.11.24 UNErrorCodeAttachmentNotInDataStore = 103

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The specified attachment is not in the system data store.

187.11.25 UNErrorCodeAttachmentUnrecognizedType = 101

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The file type of an attachment is not supported.

187.11.26 UNErrorCodeNotificationInvalidNoContent = 1401

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The notification has no user-facing content, but should.

187.11.27 UNErrorCodeNotificationInvalidNoDate = 1400

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes: The notification does not have an associated date, but should.

187.11.28 UNErrorCodeNotificationsNotAllowed = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the error constants for notifications.
Notes:

Notifications are not allowed.
This error occurs when you try to submit a notification request and your app or app extension is not authorized to schedule notifications.

187.12 class UNNotificationRequestMBS

187.12.1 class UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A request to schedule a local notification, which includes the content of the notification and the trigger conditions for delivery.
Notes:

Create a UNNotificationRequestMBS object when you want to schedule the delivery of a local notification. A notification request object contains a UNNotificationContentMBS object with the payload to be delivered, and it contains the UNNotificationTriggerMBS object with the conditions that trigger the delivery of the notification. To schedule the delivery of your notification, pass your request object to the addNotificationRequest method of the shared user notification center object.

After scheduling a request, you interact with UNNotificationRequestMBS objects in the following ways:

- View your app's pending notifications by calling the getPendingNotificationRequestsWithCompletionHandler: method of your shared user notification center object.
- When a notification is delivered to your app, the provided UNNotificationMBS object contains a UNNotificationRequest object that you can inspect to get the notification details.
- Use the request's identifier to remove delivered notifications from Notification Center.

When receiving a local or remote notification, use the provided UNNotificationRequestMBS object to fetch details about the notification.

187.12.2 Methods

187.12.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationRequest class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.12.4 Constructor(identifier as string, content as UNNotificationContentMBS, trigger as UNNotificationTriggerMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a notification request object that you use to schedule a notification.
Notes:

identifier: An identifier for the request; this parameter must not be nil. You can use this identifier to cancel the request if it is still pending (see the removePendingNotificationRequests method).
content: The content of the notification. This parameter must not be nil.
trigger: The condition that causes the notification to be delivered. Specify nil to deliver the notification right away.

Returns a new notification request object.

Use this method when you want to schedule the delivery of a local notification. This method creates the request object that you subsequently pass to the addNotificationRequest method.
The system uses the identifier parameter to determine how to handle the request:

- If you provide a unique identifier, the system creates a new notification.
- If the identifier matches a previously delivered notification, the system alerts the user again, replaces the old notification with the new one, and places the new notification at the top of the list.
- If the identifier matches a pending request, the new request replaces the pending request.

187.12.5 Copy as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.12.6 request(identifier as string, content as UNNotificationContentMBS, trigger as UNNotificationTriggerMBS) as UNNotificationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a notification request object that you use to schedule a notification.
Notes:

identifier: An identifier for the request; this parameter must not be nil. You can use this identifier to cancel the request if it is still pending (see the removePendingNotificationRequests method).
content: The content of the notification. This parameter must not be nil.
trigger: The condition that causes the notification to be delivered. Specify nil to deliver the notification right away.

Returns a new notification request object.

Use this method when you want to schedule the delivery of a local notification. This method creates the request object that you subsequently pass to the addNotificationRequest method.
The system uses the identifier parameter to determine how to handle the request:

- If you provide a unique identifier, the system creates a new notification.
- If the identifier matches a previously delivered notification, the system alerts the user again, replaces the old notification with the new one, and places the new notification at the top of the list.
- If the identifier matches a pending request, the new request replaces the pending request.

187.12.7 Properties

187.12.8 content as UNNotificationContentMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The content associated with the notification.
Notes:

Use this property to access the contents of the notification.
(Read only property)

187.12.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.12.10 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The unique identifier for this notification request.
Notes:

Use this string to identify notifications in your app. For example, you can pass this string to the removePendingNotificationRequests method to cancel a previously scheduled notification.
If you use the same identifier when scheduling a new notification, the system removes the previously scheduled notification with that identifier and replaces it with the new one.
For local notifications, this property is set to the value passed to the request's initializer (see the request method). For remote notifications, it is set to the value of the apns-collapse-id key that you specified in the APNs request header when generating the remote notification. If no value is set, the system automatically

assigns an identifier.
(Read only property)

187.12.11 trigger as UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The conditions that trigger the delivery of the notification.
Notes:

For notifications that have already been delivered, use this property to determine what caused the delivery to occur. For remote notifications, this property contains a UNPushNotificationTriggerMBS object. For other notifications, the type is based on the trigger condition specified in the original request.
(Read only property)

187.13 class UNNotificationResponseMBS

187.13.1 class UNNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The user's response to an actionable notification.
Notes:

When the user interacts with a delivered notification, the system delivers a UNNotificationResponseMBS object to your app so that you can process the response. Users can interact with delivered notifications in many ways. If the notification's category had associated action buttons, they can select one of those buttons. Users can also dismiss the notification without selecting one of your actions and they can open your app. A response object tells you which option the user selected.

You don't create UNNotificationResponseMBS objects yourself. Instead, the shared user notification center object creates them and delivers them to the didReceiveNotificationResponse event. Use that method to extract any needed information from the response object and take appropriate action.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

187.13.2 Methods

187.13.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationResponse class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.13.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

187.13.5 copy as UNNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.13.6 UNNotificationDefaultActionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An action that indicates the user opened the app from the notification interface.
Notes: The delivery of this action does not require any special configuration of notification categories. Use the didReceiveNotificationResponse event to receive this action.

187.13.7 UNNotificationDismissActionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The action that indicates the user explicitly dismissed the notification interface.
Notes:

This action is delivered only if the notification's category object was configured with the UNNotificationCategoryOptionCustomDismissAction option. To trigger this action, the user must explicitly dismiss the notification interface. For example, the user must tap the Dismiss button or swipe down on the notification interface in watchOS to trigger this action.
Ignoring a notification or flicking away a notification banner does not trigger this action.

187.13.8 Properties

187.13.9 actionIdentifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The identifier string of the action that the user selected.
Notes:

This parameter may contain one the identifier of one of your UNNotificationActionMBS objects or it may contain a system-defined identifier. The system defined identifiers are UNNotificationDefaultActionIdentifier and UNNotificationDismissActionIdentifier, which indicate that the user opened the app or dismissed the notification without any further actions.
(Read only property)

187.13.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.13.11 notification as UNNotificationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The notification to which the user responded.
Notes: (Read only property)

187.14 class UNNotificationSettingsMBS

187.14.1 class UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The object for managing notification-related settings and the authorization status of your app.
Notes:

A UNNotificationSettingsMBS object contains the current authorization status and notification-related settings for your app. Apps must receive authorization to schedule notifications and to interact with the user. Apps that run in CarPlay must similarly receive authorization to do so. You use this object to determine what notification-related actions your app is allowed to perform. You might then use that information to enable, disable, or adjust your app's notification-related behaviors. Regardless of whether you take action, the system enforces your app's settings by preventing denied interactions from occurring.
You don't create instances of this class directly. Instead, call the getNotificationSettings method of your app's UNUserNotificationCenterMBS object to get the current settings.
For more information about requesting authorization for user interactions, see UNUserNotificationCenter.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

187.14.2 Methods

187.14.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationSettings class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.14.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

187.14.5 copy as UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.14.6 settings as UNNotificationSettingsMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The last settings received via getNotificationSettingsCompleted event.
Notes: You call getNotificationSettings and whether you implement and handle the event or not, the settings are stored by plugin in a global variable, so you can query them here.

187.14.7 Properties

187.14.8 alertSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for displaying alerts.
Notes:

When the value of this property is NotificationSettingEnabled, the app is authorized to display alerts. Authorization does not guarantee that alerts always appear on the user's screen. When a device is unlocked, the alertStyle property determines the presentation style for the alert, which can include not displaying the alert at all.
The system tries to display an alert when the title, subtitle, or body properties of a UNNotificationContentMBS object contain values, or when the aps dictionary in a remote notification contains the alert key.
(Read only property)

187.14.9 alertStyle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The type of alert that the app may display when the device is unlocked.
Notes:

When alerts are authorized, this property specifies the presentation style for alerts when the device is unlocked. The user may choose to display alerts as automatically disappearing banners or as modal windows that require explicit dismissal. The user may also choose not to display alerts at all.
(Read only property)

187.14.10 authorizationStatus as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The app's ability to schedule and receive local and remote notifications.
Notes:

When the value of this property is AuthorizationStatusAuthorized, your app is allowed to schedule and receive local and remote notifications. When authorized, use the alertSetting, badgeSetting, and soundSetting properties to specify which types of interactions are allowed. When the value of the property is AuthorizationStatusDenied, the system doesn't deliver notifications to your app, and the system ignores any attempts to schedule local notifications.
The value of this property is AuthorizationStatusNotDetermined if your app has never requested authorization using the requestAuthorization method.
(Read only property)

187.14.11 badgeSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for badging your app's icon.
Notes:

When the value of this property is NotificationSettingEnabled, the app is authorized to badge its icon. The system tries to badge your app's icon when the badge property of a UNNotificationContentMBS object contain a value, or when the aps dictionary in a remote notification contains the badge key.
(Read only property)

187.14.12 criticalAlertSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status to play sounds for critical alerts.
Notes:

When NotificationSettingEnabled, this property authorizes the app to play critical sounds that ignore Do Not Disturb and the device's mute switch.
For local notifications, the system attempts to play a critical sound when the sound property of the UNNotificationContentMBS object contains an object returned by the defaultCriticalSound property, the criticalSoundNamed method, or a related method.
For remote notifications, the system attempts to play a critical sound when the notification's payload contains a sound directory that contains the critical key.
Critical alerts require a special entitlement issued by Apple.
(Read only property)

187.14.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.14.14 lockScreenSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether your app's notifications appear onscreen when the device is locked.
Notes:

Even if the user disables lock screen notifications, your notifications may still appear onscreen when the device is unlocked.
(Read only property)

187.14.15 notificationCenterSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether your app's notifications are displayed in Notification Center.
Notes:

The default value of this property is NotificationSettingEnabled.
(Read only property)

187.14.16 providesAppNotificationSettings as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating the system displays a button for in-app notification settings.
Notes: (Read only property)

187.14.17 showPreviewsSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The setting that indicates whether the app shows a preview of the notification's content.
Notes: (Read only property)

187.14.18 soundSetting as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The authorization status for playing sounds for incoming notifications.
Notes:

When the value of this property is NotificationSettingEnabled, the app is authorized to play sounds. The system tries to play a sound when the sound property of the UNNotificationContentMBS object contains a value, or when the aps dictionary in a remote notification contains the sound key.
(Read only property)

187.14.19 Constants

187.14.20 AlertStyleAlert = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the presentation styles for alerts.
Notes:

Modal alerts.
Alerts are displayed in a modal window that must be dismissed explicitly by the user.

187.14.21 AlertStyleBanner = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the presentation styles for alerts.
Notes:

Banner alerts.
Alerts are displayed as a slide-down banner. Banners appear for a short time and then disappear automatically if the user does nothing.

187.14.22 AlertStyleNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the presentation styles for alerts.
Notes: No alert.

187.14.23 AuthorizationStatusAuthorized = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The app is authorized to schedule or receive notifications.

187.14.24 AuthorizationStatusDenied = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The app isn't authorized to schedule or receive notifications.

187.14.25 AuthorizationStatusNotDetermined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The user hasn't yet made a choice about whether the app is allowed to schedule notifications.

187.14.26 AuthorizationStatusProvisional = 3

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate whether the app is allowed to schedule notifications.
Notes: The application is provisionally authorized to post noninterruptive user notifications.

187.14.27 NotificationSettingDisabled = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the current status of a notification setting.
Notes: The setting is disabled.

187.14.28 NotificationSettingEnabled = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the current status of a notification setting.
Notes: The setting is enabled.

187.14.29 NotificationSettingNotSupported = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the current status of a notification setting.
Notes: The setting is not available to your app.

187.14.30 ShowPreviewsSettingAlways = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the style previewing a notification's content.
Notes: The notification's content is always shown, even when the device is locked.

187.14.31 ShowPreviewsSettingNever = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the style previewing a notification's content.
Notes: The notification's content is never shown, even when the device is unlocked.

187.14.32 ShowPreviewsSettingWhenAuthenticated = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate the style previewing a notification's content.
Notes: The notification's content is shown only when the device is unlocked.

187.15 class UNNotificationSoundMBS

187.15.1 class UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The sound played when a notification is delivered.
Notes:

Create a UNNotificationSoundMBS object when you want the delivery of your notification to be accompanied by a specific sound. To play the default system sound, create your sound object using the defaultSound method. If you want to play a custom sound, create a new sound object and specify the name of the audio file that you want to play.

For local notifications, assign the sound object to the sound property of your UNMutableNotificationContentMBS object. For a remote notification, assign the name of your sound file to the sound key in the aps dictionary. You can also use a notification service app extension to add a sound file to a notification shortly before delivery. In your extension, create a UNNotificationSound object and add it to your notification content in the same way that you would for a local notification.
Audio files must already be on the user's device before they can be played. If you use a predefined set of sounds for your notifications, include the audio files in your app's bundle. For all other sounds, place a copy of the audio file in the Library/Sounds folder of your app's container directory. The UNNotificationSound object looks only in those two locations.

Prepare Sound Resources
The system sound facility plays custom alert sounds, so they must be in one of the following audio data formats:

- Linear PCM
- MA4 (IMA/ADPCM)
- µLaw
- aLaw

You can package the audio data in an aiff, wav, or caf file. Sound files must be less than 30 seconds in length. If the sound file is longer than 30 seconds, the system plays the default sound instead.

You can use the afconvert command-line tool to convert sounds. For example, to convert the system sound Submarine.aiff to IMA4 audio in a CAF file, use the following command in Terminal:

afconvert /System/Library/Sounds/Submarine.aiff
textasciitilde /Desktop/sub.caf -d ima4 -f caff -v
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

187.15.2 Methods

187.15.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationSound class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.15.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

187.15.5 copy as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.15.6 criticalSoundNamed(name as string) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a custom sound object for critical alerts.
Notes:

name: The name of the sound file to play. This file must be located in the current executable's main bundle or in the Library/Sounds directory of the current app container directory. If files exist at both locations, the system uses the file from the Library/Sounds directory. This parameter must not be nil.

Returns a sound object representing a custom critical alert sound.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.
See also:

- 187.15.7 criticalSoundNamed(name as string, volume as double) as UNNotificationSoundMBS

187.15.7 criticalSoundNamed(name as string, volume as double) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a custom sound object for critical alerts with the specified volume.
Notes:

name: The name of the sound file to play. This file must be located in the current executable's main bundle or in the Library/Sounds directory of the current app container directory. If files exist at both locations, the system uses the file from the Library/Sounds directory. This parameter must not be nil.
volume: The volume must be a value between 0.0 and 1.0.

Returns a sound object representing a custom critical alert sound at the specified volume.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.
See also:

- 187.15.6 criticalSoundNamed(name as string) as UNNotificationSoundMBS 26458

187.15.8 defaultCriticalSound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The default sound used for critical alerts.
Notes: Critical alerts ingore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.

187.15.9 defaultCriticalSoundWithAudioVolume(volume as double) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a sound object that plays the default critical alert sound at the specified volume.
Notes:

volume: The volume must be a value between 0.0 and 1.0.

Returns a sound object representing the default critical alert sound at the specified volume.

Critical alerts ignore the mute switch and Do Not Disturb. They require a special entitlement issued by Apple.

187.15.10 defaultSound as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns an object representing the default sound for notifications.

187.15.11 soundNamed(name as string) as UNNotificationSoundMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a sound object that represents a custom sound file.
Notes:

name: The name of the sound file to play. This file must be located in the current executable's main bundle or in the Library/Sounds directory of the current app container directory. This parameter must not be nil.

Returns a sound object representing the custom sound.

If a sound file with the given name exists both in the current bundle and in the Library/Sounds folder, this method chooses the file in the Library/Sounds folder.

187.15.12 Properties

187.15.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.16 class UNNotificationTriggerMBS

187.16.1 class UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The common behavior for subclasses that trigger the delivery of a local or remote notification.
Notes:

The UNNotificationTrigger class is an abstract class for representing an event that triggers the delivery of a notification. You don't create instances of this class directly. Instead, you instantiate the concrete subclass that defines the trigger condition you want for your notification. You then assign the resulting object to the UNNotificationRequestMBS object that you use to schedule your notification.

Concrete trigger classes include the following:

- UNTimeIntervalNotificationTriggerMBS
- UNCalendarNotificationTriggerMBS
- UNLocationNotificationTriggerMBS
- UNPushNotificationTriggerMBS

This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

187.16.2 Methods

187.16.3 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNNotificationTrigger class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.16.4 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

187.16.5 copy as UNNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

187.16.6 Properties

187.16.7 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.16.8 repeats as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the system reschedules the notification after it is delivered.
Notes:

When this property is NO, the notification is delivered only once. When this property is YES, the notification request is rescheduled automatically, resulting in the notification being delivered each time the trigger condition is met. To unschedule the notification request, use the methods of the UNUserNotificationCenterMBS to remove the notification request.
(Read only property)

187.17 class UNPushNotificationTriggerMBS

187.17.1 class UNPushNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that indicates the notification was sent from Apple Push Notification Service (APNs).
Notes:

You don't create instances of this class yourself. The system creates UNPushNotificationTrigger objects and associates them with requests that originated from Apple Push Notification service. You encounter instances of this class when managing your app's delivered notification requests, which store an object of this type in their trigger property.
Subclass of the UNNotificationTriggerMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

187.17.2 Methods

187.17.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

187.18 class UNTextInputNotificationActionMBS

187.18.1 class UNTextInputNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: An action that can accept user-typed text.
Notes:

Use UNTextInputNotificationActionMBS objects to define an action that allows the user to provide a custom text-based response. When the user selects an action of this type, the system displays controls for the user to enter or dictate the text content. That text is then included in the response object that is delivered to your app.
Subclass of the UNNotificationActionMBS class.

187.18.2 Methods

187.18.3 action(identifier as string, title as string, options as integer, textInputButtonTitle as string, textInputPlaceholder as string) as UNTextInputNotificationActionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object that accepts text input from the user.
Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see options.
textInputButtonTitle: The localized title of the text input button that is displayed to the user.
textInputPlaceholder: The localized placeholder text to display in the text input field.

Returns a new text input action object.

187.18.4 Constructor(identifier as string, title as string, options as integer, textInputButtonTitle as string, textInputPlaceholder as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates an action object that accepts text input from the user.

Notes:

identifier: The string that you use internally to identify the action. This string must be unique among all of your app's supported actions. When the user selects the action, the system passes this string to your app and asks you to perform the related task. This parameter must not be nil or an empty string.
title: The localized string to display to the user. This string is used as the title of a button, which is added to the notification interface. This parameter must not be nil.
options: Additional options describing how the action behaves. Include options when you need the related behavior. For a list of possible values, see options.
textInputButtonTitle: The localized title of the text input button that is displayed to the user.
textInputPlaceholder: The localized placeholder text to display in the text input field.

Returns a new text input action object.

187.18.5 Properties

187.18.6 textInputButtonTitle as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized title of the text input button that is displayed to the user.
Notes: (Read only property)

187.18.7 textInputPlaceholder as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The localized placeholder text to display in the text input field.
Notes: (Read only property)

187.19 class UNTextInputNotificationResponseMBS

187.19.1 class UNTextInputNotificationResponseMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The user's response to an actionable notification, including any custom text that the user typed or dictated.
Notes:

The system delivers a UNTextInputNotificationResponse object to your app so that you can process user-provided text content. When defining your categories, you can specify an UNTextInputNotificationActionMBS object instead of an UNNotificationActionMBS object for your action. If you do, the system creates an UNTextInputNotificationResponseMBS object when the user selects the accompanying action, and it fills the userText property with any user-entered text.

You don't create UNTextInputNotificationResponseMBS objects yourself. Instead, the shared user notification center object creates them and delivers them to the didReceiveNotificationResponse event. Use that method to extract any needed information from the response object and take appropriate action.
Subclass of the UNNotificationResponseMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

187.19.2 Methods

187.19.3 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The private constructor.

187.19.4 Properties

187.19.5 userText as String

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The text response provided by the user.
Notes:

If the user does not specify any text, this property contains an empty string.
(Read only property)

187.20 class UNTimeIntervalNotificationTriggerMBS

187.20.1 class UNTimeIntervalNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A trigger condition that causes a notification to be delivered after the specified amount of time elapses.
Notes:

Create a UNTimeIntervalNotificationTrigger object when you want to schedule the delivery of a local notification after the specified number of seconds elapse. You use this type of trigger to implement timers.
Subclass of the UNNotificationTriggerMBS class.

187.20.2 Methods

187.20.3 Constructor(timeInterval as double, repeats as boolean)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a time interval trigger from the specified time value.
Notes:

timeInterval: The time (in seconds) that must elapse from the current time before the trigger fires. This value must be greater than zero.
repeats: Specify false to deliver the notification one time. Specify true to reschedule the notification request each time the notification is delivered. If this parameter is true, the value in the timeInterval parameter must be 60 seconds or greater.

Return Value:
A new time interval trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

187.20.4 trigger(timeInterval as double, repeats as boolean) as UNTimeIntervalNotificationTriggerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Creates a time interval trigger from the specified time value.
Notes:

timeInterval: The time (in seconds) that must elapse from the current time before the trigger fires. This value must be greater than zero.
repeats: Specify false to deliver the notification one time. Specify true to reschedule the notification request each time the notification is delivered. If this parameter is true, the value in the timeInterval parameter must be 60 seconds or greater.

Return Value:
A new time interval trigger based on the specified temporal information.

If you specify true for the repeats parameter, you must explicitly remove the notification request to stop the delivery of the associated notification. Use the methods of UNUserNotificationCenterMBS to remove notification requests that are no longer needed.

187.20.5 Properties

187.20.6 nextTriggerDate as Date

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: Desktop, Console & Web.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

187.20.7 nextTriggerDateTime as DateTime

MBS MacFrameworks Plugin, Plugin Version: 20.5, Platform: macOS, Targets: All.

Function: The next date at which the trigger conditions will be met.
Notes:

Use this property to find out when a notification associated with this trigger will next be delivered.
(Read only property)

187.20.8 timeInterval as Double

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The time interval used to create the trigger.
Notes:

This property contains the original time interval that you specified when creating the trigger object. The

value in this property is not updated as time counts down. To find out when the trigger will fire next, call the nextTriggerDate method.
(Read only property)

187.21 class UNUserNotificationCenterMBS

187.21.1 class UNUserNotificationCenterMBS

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The central object for managing notification-related activities for your app or app extension.
Notes:

187.21.4 Methods

187.21.5 addNotificationRequest(request as UNNotificationRequestMBS, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Schedules a local notification for delivery.
Notes:

This method schedules local notifications only; you cannot use it to schedule the delivery of remote notifications. Upon calling this method, the system begins tracking the trigger conditions associated with your request. When the trigger condition is met, the system delivers your notification. If the request does not contain a UNNotificationTriggerMBS object, the notification is delivered right away.
You may call this method from any thread of your app.

request: The request object containing the notification payload and trigger information. This parameter must not be nil.

Calls addNotificationRequestCompleted event later. Request and tag parameter is passed through.

187.21.6 Available as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Whether the UNUserNotificationCenter class is available.
Notes: Returns true on MacOS 10.14 or newer in 64-bit MacOS application.

187.21.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns the shared user notification center object for your app or app extension.

187.21.8 Destructor

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The destructor.

187.21.9 getDeliveredNotifications(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns a list of the app's notifications that are still displayed in Notification Center.
Notes:

This method executes asynchronously, returning immediately and executing the provided block on a background thread when the results become available.

Calls getDeliveredNotificationsCompleted event later. Tag parameter is

187.21.10 getNotificationCategories(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Retrieves the app's currently registered notification categories.
Notes:

Use this method to retrieve your app's currently registered notification types. You might use this method when you want to augment the current set of categories with new categories later on. Simply merge the returned set with any new category objects and register the updated set.

Calls getNotificationCategoriesCompleted event later. Tag parameter is passed through.

187.21.11 getNotificationSettings(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Requests the notification settings for this app.
Notes:

Use this method to determine the user interactions and notification-related features that your app is authorized to use. You might then use this information to enable or disable specific notification-related features of your app.
When the user initially grants authorization to your app, the system gives your app a set of default notification-related settings. The user may change those settings at any time to enable or disable specific capabilities. For example, the user might disable the playing of sounds when a notification arrives.

Calls getNotificationSettingsCompleted event later. Tag parameter is passed through.

187.21.12 getPendingNotificationRequests(tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Returns a list of all notification requests that are scheduled and waiting to be delivered.
Notes:

This method executes asynchronously, returning immediately and executing the provided block on a secondary thread when the results are available.

Calls getPendingNotificationRequestsCompleted event later. Tag parameter is passed through.

187.21.13 removeAllDeliveredNotifications

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Removes all of the app's delivered notifications from Notification Center.
Notes: Use this method to remove all of your app's delivered notifications from Notification Center. The method executes asynchronously, returning immediately and removing the identifiers on a background thread. This method does not affect any notification requests that are scheduled, but have not yet been delivered.

187.21.14 removeAllPendingNotificationRequests

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Unschedules all pending notification requests.
Notes: This method executes asynchronously, removing all pending notification requests on a secondary thread.

187.21.15 removeDeliveredNotifications(identifiers() as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Removes the specified notification requests from Notification Center.
Notes:

identifiers: An array of strings, each of which corresponds to a value in the identifier property of a UNNotificationRequestMBS object. This method ignores the identifiers of requests whose notifications are not currently displayed in Notification Center.

Use this method to selectively remove notifications that you no longer want displayed in Notification Center. The method executes asynchronously, returning immediately and removing the specified notifications on a background thread.

187.21.16 removePendingNotificationRequests(identifiers() as string)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Unschedules the specified notification requests.
Notes:

identifiers: An array of strings, each of which contains the identifier of an active UNNotificationRequestMBS object. If the identifier belongs to a non repeating request, and the trigger condition for that request has already been met, this method ignores the identifier.

This method executes asynchronously, removing the pending notification requests on a secondary thread.

187.21.17 requestAuthorization(options as integer, tag as Variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Requests authorization to interact with the user when local and remote notifications are delivered to the user's device.
Notes:

options: The authorization options your app is requesting. You may combine the available constants to request authorization for multiple items. Request only the authorization options that you plan to use. For a list of possible values, see UNAuthorizationOptions.

Calls requestAuthorizationCompleted event later. The tag parameter is passed through.

If your app's local or remote notifications involve user interactions, you must request authorization for the system to perfom those interactions on your app's behalf. Interactions include displaying an alert, playing a sound, or badging the app's icon.

Always call this method before scheduling any local notifications and before registering with the Apple Push Notification service. Typically, you call this method at launch time when configuring your app's notification support.

The first time your app ever calls the method, the system prompts the user to authorize the requested interactions. The user may grant or deny authorization, and the system stores the user's response so that subsequent calls to this method do not prompt the user again. After determining the authorization status, the user notification center object executes the block in the completionHandler parameter. Use that block to make any adjustments to your app's behavior. For example, if authorization was denied, you might notify a remote notification server not to send notifications to the user's device.

The user may change the allowed interactions at any time in system settings. Use the getNotificationSettings method to determine what interactions are currently allowed for your app.

187.21.18 setNotificationCategories(categories() as UNNotificationCategoryMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: Registers your app's notification types and the custom actions that they support.
Notes:

categories: A set of UNNotificationCategoryMBS objects, each of which contains the actions that are displayed with the notification interface. This parameter must contain all of your app's supported categories.

Call this method at launch time to register your app's actionable notification types. This method registers all of your categories at once, replacing any previously registered categories with the new ones in the categories parameter. Typically, you call this method only once.

Each object in the categories parameter contains a string for identifying the notification's type. It also contains one or more custom actions that the user may perform in response to notifications of that type. When the system displays an alert for a notification, it looks in the notification payload for one of the identifier strings from your category objects. If it finds one, it adds user-selectable buttons for each action associated

with that category object. Tapping a button notifies your app of the selected action, without bringing your app to the foreground.

187.21.19 Properties

187.21.20 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

187.21.21 supportsContentExtensions as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: All.

Function: A Boolean value indicating whether the current device supports notification content extensions.
Notes:

Notification content extensions let you customize the appearance of the alerts displayed for your app's notifications. The value of this property is YES for devices that support notification content extensions and NO for devices that do not support them.
(Read only property)

187.21.22 Events

187.21.23 addNotificationRequestCompleted(request as UNNotificationRequestMBS, error as NSErrorMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by addNotificationRequest method when completed.
Notes: error: An error object indicating whether a problem occurred. If the notification was scheduled successfully, this parameter is nil; otherwise, it is set to an error object indicating the reason for the failure.

187.21.24 didReceiveNotificationResponse(response as UNNotificationResponseMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Asks you to process the user's response to a delivered notification.
Notes:

response: The user's response to the notification. This object contains the original notification and the identifier string for the selected action. If the action allowed the user to provide a textual response, this parameter contains a UNTextInputNotificationResponseMBS object.

Use this method to process the user's response to a notification. If the user selected one of your app's custom actions, the response parameter contains the identifier for that action. (The response can also indicate that the user dismissed the notification interface, or launched your app, without selecting a custom action.) At the end of your implementation, call the completionHandler block to let the system know that you are done processing the user's response. If you do not implement this method, your app never responds to custom actions.

You specify your app's notification types at app launch using UNNotificationCategoryMBS objects, and you specify the custom actions for each type using UNNotificationActionMBS objects.

187.21.25 getDeliveredNotificationsCompleted(notifications() as UNNotificationMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getDeliveredNotifications method.
Notes: notifications: An array of UNNotificationMBS objects representing the local and remote notifications of your app that have been delivered and are still visible in Notification Center. If none of your app's notifications are visible in Notification Center, the array is empty.

187.21.26 getNotificationCategoriesCompleted(categories() as UNNotificationCategoryMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getNotificationCategories method later.
Notes: categories: The array of UNNotificationCategoryMBS objects containing your registered notification types. If your app has not yet registered any categories, this parameter is an empty set.

187.21.27 getNotificationSettingsCompleted(settings as UNNotificationSettingsMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getNotificationSettings when finished.

187.21.28 getPendingNotificationRequestsCompleted(requests() as UNNotificationRequestMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by getPendingNotificationRequests method.
Notes: requests: An array of UNNotificationRequestMBS objects representing the scheduled notification requests. If there are no scheduled requests, this array is empty.

187.21.29 openSettingsForNotification(notification as UNNotificationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Asks the delegate to display the in-app notification settings.

187.21.30 requestAuthorizationCompleted(granted as boolean, error as NSErrorMBS, tag as variant)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Called by requestAuthorization method when completed.
Notes:

granted: A Boolean value indicating whether authorization was granted. The value of this parameter is YES when authorization was granted for one or more options. The value is false when authorization is denied for all options.
error: An object containing error information or nil if no error occurred.

187.21.31 willPresentNotification(notification as UNNotificationMBS, byref options as Integer)

MBS MacFrameworks Plugin, Plugin Version: 19.1, Platform: macOS, Targets: .

Function: Asks you how to handle a notification that arrived while the app was running in the foreground.
Notes:

notification: The notification that is about to be delivered. Use the information in this object to determine an appropriate course of action. For example, you might use the information to update your app's interface.

options
The option for notifying the user. Specify NotificationPresentationOptionNone to silence the notification completely. Specify other values to interact with the user. For a list of possible options, see constants.

If your app is in the foreground when a notification arrives, the shared user notification center calls this method to deliver the notification directly to your app. If you implement this method, you can take whatever actions are necessary to process the notification and update your app. When you finish, call the completionHandler block and specify how you want the system to alert the user, if at all.
If your event does not implement this method, the system behaves as if you had passed the UNNotificationPresentationOptionNone option to the completionHandler block. If you do not provide a delegate at all for the UNUserNotificationCenterMBS object, the system uses the notification's original options to alert the user.

187.21.32 Constants

187.21.33 AuthorizationOptionAlert = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to display alerts.

187.21.34 AuthorizationOptionAnnouncement = 128

MBS MacFrameworks Plugin, Plugin Version: 20.5.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability for Siri to automatically read out messages over AirPods.

187.21.35 AuthorizationOptionBadge = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to update the app's badge.

187.21.36 AuthorizationOptionCarPlay = 8

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to display notifications in a CarPlay environment.

187.21.37 AuthorizationOptionCriticalAlert = 16

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes:

The ability to play sounds for critical alerts.
Critical alerts ignore the mute switch and Do Not Disturb; the system plays a critical alert's sound regardless of the device's mute or Do Not Disturb settings. You can specify a custom sound and volume.
Critical alerts require a special entitlement issued by Apple.

187.21.38 AuthorizationOptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: No options.

187.21.39 AuthorizationOptionProvidesAppNotificationSettings = 32

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: An option indicating the system should display a button for in-app notification settings.

187.21.40 AuthorizationOptionProvisional = 64

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to post noninterrupting notifications provisionally to the Notification Center.

187.21.41 AuthorizationOptionSound = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants for requesting authorization to interact with the user.
Notes: The ability to play sounds.

187.21.42 NotificationPresentationOptionAlert = 4

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: Display the alert using the content provided by the notification.

187.21.43 NotificationPresentationOptionBadge = 1

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes:

Apply the notification's badge value to the app's icon.
for MacOS 11.0 or newer, please use NotificationPresentationOptionBanner + NotificationPresentationOptionList + NotificationPresentationOptionBadge.

187.21.44 NotificationPresentationOptionBanner = 16

MBS MacFrameworks Plugin, Plugin Version: 20.5.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: New for macOS 11.0

187.21.45 NotificationPresentationOptionList = 8

MBS MacFrameworks Plugin, Plugin Version: 20.5.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: New for macOS 11.0

187.21.46 NotificationPresentationOptionNone = 0

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes:

No alert.
Specify this constant when you want to silence any user interactions for a notification.

187.21.47 NotificationPresentationOptionSound = 2

MBS MacFrameworks Plugin, Plugin Version: 19.1.

Function: One of the constants to indicate how to present a notification in a foreground app.
Notes: Play the sound associated with the notification.

187.22 class WinUserNotificationCenterMBS

187.22.1 class WinUserNotificationCenterMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the window notification center.

187.22.2 Blog Entries

187.22.6 Methods

187.22.7 Available as Boolean

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this Windows version has required functions.
Notes: Returns true on Windows 8.1 and Windows 10.

187.22.8 configureAUMI(Company as String, Name as String, SurName as String, VersionInfo as String) as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Configures the AppUserModelID for Constructor.
Notes:

Concats strings with dot between.
Please be aware of maximum ID length of 128 characters.

187.22.9 Constructor(appName as string, aumi as string)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Please pass your AppUserModelID and application name.

187.22.10 Destructor

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

187.22.11 HideNotification(notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Hides a notification.
Notes: Boolean return value removed for MBS Plugins 22.2.

187.22.12 Setting as Integer

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value that tells you whether there is an app, user, or system block that prevents the display of a toast notification.
Notes:

Returns Enabled value, if you can show notifications.

When toast notifications have been disabled at more than one level, this property value reflects the setting with the largest scope. Precedence is as follows, from largest scope to smallest:

DisabledByManifest
DisabledByGroupPolicy

DisabledForUser
DisabledForApplication

If toast notifications have been disabled both by the user and by group policy, this property returns DisabledByGroupPolicy.

187.22.13 ShowNotification(notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows a notification.
Notes: Boolean return value removed for MBS Plugins 22.2.

187.22.14 Properties

187.22.15 appName as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The application name used.
Notes: (Read only property)

187.22.16 aumi as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique id.
Notes: (Read only property)

187.22.17 Handle as Integer

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object handle.
Notes: (Read only property)

187.22.18 Events

187.22.19 Activated(Notification as WinUserNotificationMBS)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: .

Function: The notification was activated.

187.22.20 Dismissed(Notification as WinUserNotificationMBS, Reason as Integer)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: .

Function: The notification was dismissed.
Notes: See DismissalReason* constants.

187.22.21 Failed(Notification as WinUserNotificationMBS, ErrorCode as Integer)

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: .

Function: Called when notification failed.

187.22.22 Constants

187.22.23 DismissalReasonApplicationHidden = 1

MBS Win Plugin, Plugin Version: 17.2.

Function: One of the dismissal reasons.
Notes: The application hid the notification using hide method.

187.22.24 DismissalReasonTimedOut = 2

MBS Win Plugin, Plugin Version: 17.2.

Function: One of the dismissal reasons.
Notes: The notification has expired.

187.22.25 DismissalReasonUserCanceled = 0

MBS Win Plugin, Plugin Version: 17.2.

Function: One of the dismissal reasons.
Notes: The user dismissed the notification.

187.22.26 SettingDisabledByGroupPolicy = 3

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: An administrator has disabled all notifications on this computer through group policy. The group policy setting overrides the user's setting.

187.22.27 SettingDisabledByManifest = 4

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: This app has not declared itself toast capable in its package.appxmanifest file. This setting is found on the manifest's Application UI page, under the Notification section. For an app to send toast, the Toast Capable option must be set to "Yes".

187.22.28 SettingDisabledForApplication = 1

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: The user has disabled notifications for this app.

187.22.29 SettingDisabledForUser = 2

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: The user or administrator has disabled all notifications for this user on this computer.

187.22.30 SettingEnabled = 0

MBS Win Plugin, Plugin Version: 18.3.

Function: One of the constants to specify the limitations on tile or toast notification display.
Notes: All notifications raised by this app can be displayed.

187.23 class WinUserNotificationExceptionMBS

187.23.1 class WinUserNotificationExceptionMBS

MBS Win Plugin, Plugin Version: 22.2, Platforms: macOS, Linux, Windows, iOS, Targets: Desktop only.

Function: The exception class for user notifications.
Notes: Subclass of the RuntimeException class.

187.24 class WinUserNotificationMBS

187.24.1 class WinUserNotificationMBS

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for the notification.
Example:

```
dim n as new WinUserNotificationMBS

n.Image = "C:\test.png"
n.text(0) = "Hello World"
n.text(1) = "Greetings from Xojo"
```

187.24.8 Methods

187.24.9 Create

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates the OS object.
Notes: Please first set text/image and then when you set other properties we create the object for you. This method creates it automatically.

187.24.10 Properties

187.24.11 ExpiresOnReboot as Boolean

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates whether the toast notification will remain in the Notification Center after a reboot.
Notes:

If true, notification will expire when the computer is rebooted.

Requires Windows 10, version 1903 (introduced in 10.0.18362.0)
(Read and Write property)

187.24.12 Group as String

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the group identifier for the notification.
Notes:

In previous versions of Windows, the group property can be a maximum length of 16 characters long. However, in the Creators Update (15063), the maximum limit was increased to 64 characters.
(Read and Write property)

187.24.13 Handle as Integer

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

187.24.14 Image as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The image file path.
Notes:

Leave empty if you don't need a picture.

May not be a network path as system needs to load it independent of your permissions.
Maybe better use image coming with application or put one in temp folder.
(Read and Write property)

187.24.15 NotificationMirroring as Integer

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets a value that specifies whether notification mirroring is allowed.
Notes:

Requires Windows 10 Anniversary Edition (introduced in 10.0.14393.0)
(Read and Write property)

187.24.16 Priority as Integer

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the priority of the toast notification.
Notes:

Requires Windows 10 Creators Update (introduced in 10.0.15063.0)

The priority setting provides hints on how and at what urgency level a notification should be presented to the user (whether to wake up the screen, etc). Whether the notification is displayed in high priority is based on the state and power management policy of the device.

(Read and Write property)

187.24.17 RemoteId as String

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets a remote id.
Notes:

A remote id for the notification that enables the system to correlate this notification with another one generated on another device.

Requires Windows 10 Anniversary Edition (introduced in 10.0.14393.0)
(Read and Write property)

187.24.18 SuppressPopup as Boolean

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets whether a toast's pop-up UI is displayed on the user's screen.
Notes:

Set to true to suppress the popup message; otherwise, false. The default value is false, meaning the toast's pop-up message will be shown. Setting this property to true places the toast notification silently into the action center. This enables your app to communicate with the user without interrupting them.
(Read and Write property)

187.24.19 Tag as String

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets or sets the unique identifier of this notification within the notification Group.
Notes:

This API returns an exception if the property is set to null or the empty string.
The tag can be maximum 16 characters long. However, the Creators Update (15063) extends this limit to 64 characters.
(Read and Write property)

187.24.20 Text as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text to display.
Notes:

Same as text(0).
(Read and Write property)
See also:

- 187.24.23 Text(Index as Integer) as String 26494

187.24.21 XMLUsed as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The XML template used.
Notes:

For debugging.
(Read only property)

187.24.22 DataValues as Dictionary

MBS Win Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries or sets data values.
Example:

```
dim n as new WinUserNotificationMBS

// set it
Dim d As New Dictionary
d.Value("Hello") = "World"

n.DataValues = d

// query back
Dim dic As Dictionary = n.DataValues

MessageBox "Hello: "+dic.Lookup("Hello", "")
```

Notes:

Allows you to store data for your app with the notfication.
(Read and Write computed property)

187.24.23 Text(Index as Integer) as String

MBS Win Plugin, Plugin Version: 17.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text lines to display.
Notes:

Index from 0 to 2.
(Read and Write computed property)
See also:

- 187.24.20 Text as String 26492

187.24.24 Constants

187.24.25 NotificationMirroringAllowed = 0

MBS Win Plugin, Plugin Version: 22.2.

Function: One of the notification mirroring constants.
Notes: Notification mirroring is allowed.

187.24.26 NotificationMirroringDisabled = 1

MBS Win Plugin, Plugin Version: 22.2.

Function: One of the notification mirroring constants.
Notes: Notification mirroring is disabled.

187.24.27 PriorityDefault = 0

MBS Win Plugin, Plugin Version: 22.2.

Function: One of the priority constants.
Notes: The notification should have default behavior in terms of delivery and display priority during connected standby mode.

187.24.28 PriorityHigh = 1

MBS Win Plugin, Plugin Version: 22.2.

Function: One of the priority constants.
Notes: The notification should be treated as high priority. For desktop PCs, this means during connected

standby mode the incoming notification can turn on the screen for Surface-like devices if it doesn't have a closed lid detected.

Chapter 188

Vision

188.1 module VisionModuleMBS

188.1.1 module VisionModuleMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The Vision module.
Notes:

Global declarations for the Vision framework on MacOS.
Requires MacOS 10.13 or newer.

188.1.2 Blog Entries

- Vision Framework for Xojo

188.1.3 Blog Entries

- Vision Framework for Xojo

188.1.4 Methods

188.1.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether the Vision module is available.

Notes: Returns true on MacOS 10.13 or newer.

188.1.6 ElementSize(ElementType as Integer) as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries byte size of an element type.
Notes:

Returns 4 for floats and 8 for double.
Otherwise returns zero.

188.1.7 ImagePointForNormalizedPoint(normalizedPoint as CGPointMBS, imageWidth as Integer, imageHeight as Integer) as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Projects a point from normalized coordinate space into image coordinates.
Notes:

normalizedPoint: The input point, in normalized coordinate space.
imageWidth: The width of the image into whose coordinate space you're projecting the input point.
imageHeight: The height of the image into whose coordinate space you're projecting the input point.

Returns the input point projected into image coordinates.

The resulting point in image coordinate space may have nonintegral (floating-point) coordinates.

188.1.8 ImageRectForNormalizedRect(normalizedRect as CGRectMBS, imageWidth as Integer, imageHeight as Integer) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Projects a rectangle from normalized coordinate space into image coordinates.
Notes:

normalizedRect: The input rect, in normalized coordinate space.
imageWidth: The width of the image into whose coordinate space you're projecting the input rect.
imageHeight: The height of the image into whose coordinate space you're projecting the input rect.

Returns the input rect projected into image (pixel) coordinates.

188.1.9 NormalizedIdentityRect as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The normalized identity rectangle with origin (0,0) and unit length and width.

188.1.10 NormalizedRectForImageRect(imageRect as CGRectMBS, imageWidth as Integer, imageHeight as Integer) as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Normalizes a rectangle from image coordinates.
Notes:

imageRect: The input rect, in image coordinate space.
imageWidth: The width of the image in whose coordinates the input rect resides.
imageHeight: The height of the image in whose coordinates the input rect resides.

Returns the input rect projected into normalized coordinates.

188.1.11 NormalizedRectIsIdentityRect(rect as CGRectMBS) as boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Returns true if the rectangle has origin (0,0) and unit length and width.
Notes:

normalizedRect: Normalized input rect to test for identity.

Returns a Boolean value that indicates whether the input normalized rect is the identity rect.

188.1.12 VNErrorDomain as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The domain for NSError objects produced by Vision framework methods.

188.1.13 Properties

188.1.14 VersionNumber as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current version number of the Vision framework.
Notes: (Read only property)

188.1.15 Constants

188.1.16 VNErrorDataUnavailable = 17

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying unavailable data.

188.1.17 VNErrorInternalError = 9

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an error internal to the Vision system.

188.1.18 VNErrorInvalidArgument = 14

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid parameter passed to a Vision request.

188.1.19 VNErrorInvalidFormat = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid image format.

188.1.20 VNErrorInvalidImage = 13

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying a problematic image.

188.1.21 VNErrorInvalidModel = 15

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid model.

188.1.22 VNErrorInvalidOperation = 12

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an unsupported operation for a Vision request.

188.1.23 VNErrorInvalidOption = 5

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an invalid option in a Vision request.

188.1.24 VNErrorIOError = 6

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an input or output error for an image, image sequence, or Core ML model.

188.1.25 VNErrorMissingOption = 7

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying that a Vision request is missing a required option.

188.1.26 VNErrorNotImplemented = 8

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying a method not implemented in the underlying model.

188.1.27 VNErrorOK = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying no error.

188.1.28 VNErrorOperationFailed = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying that a request operation failed.

188.1.29 VNErrorOutOfBoundsError = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an out-of-bounds access.

188.1.30 VNErrorOutOfMemory = 10

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying insufficient memory to complete a Vision request.

188.1.31 VNErrorRequestCancelled = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying a canceled Vision request.

188.1.32 VNErrorUnknownError = 11

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an unidentifiable error.

188.1.33 VNErrorUnsupportedRevision = 16

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the error codes.
Notes: Error code signifying an unsupported revision number.

188.1.34 Delegates

188.1.35 VNPerformRequestsCompletedMBS(Requests() as VNRequestMBS, result as boolean, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for completed event calls.
Notes: You declare a method with (Requests() as VNRequestMBS, result as boolean, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin method. Later the plugin may invoke the delegate and call your method.

188.1.36 VNProgressHandlerMBS(Request as VNRequestMBS, fractionCompleted as double, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for progress event calls.
Notes: You declare a method with (Request as VNRequestMBS, fractionCompleted as double, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin

method. Later the plugin may invoke the delegate and call your method.

188.1.37 VNRequestCompletedMBS(Request as VNRequestMBS, error as NSErrorMBS, tag as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The delegate used for completed event calls.
Notes: You declare a method with (Request as VNRequestMBS, error as NSErrorMBS) as parameters and pass the method reference with addressOf or weakAddressOf to the plugin method. Later the plugin may invoke the delegate and call your method.

188.2 class VNBarcodeObservationMBS

188.2.1 class VNBarcodeObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Barcode information detected by an image analysis request.
Notes:

This type of observation results from a VNDetectBarcodesRequest. It contains information about the detected barcode, including parsed payload data for supported symbology.
Available on MacOS 10.13 or newer.
Subclass of the VNRectangleObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.2.2 Blog Entries

- MBS Xojo Plugins, version 21.3pr4

188.2.3 Blog Entries

- MBS Xojo Plugins, version 21.3pr4
- Vision Framework for Xojo

188.2.4 Methods

188.2.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.2.6 VNBarcodeSymbologyAztec as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Aztec code recognition.

188.2.7 VNBarcodeSymbologyCodabar as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes:

A constant that indicates Codabar symbology.
Available in iOS 15 or macOS 12 or later.

188.2.8 VNBarcodeSymbologyCode128 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 128 barcode recognition.

188.2.9 VNBarcodeSymbologyCode39 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 39 barcode recognition.

188.2.10 VNBarcodeSymbologyCode39Checksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in standard Code 39 with checksum.

188.2.11 VNBarcodeSymbologyCode39FullASCII as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in full ASCII Code 39.

188.2.12 VNBarcodeSymbologyCode39FullASCIIChecksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in full ASCII Code 39 with checksum.

188.2.13 VNBarcodeSymbologyCode93 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 93 barcode recognition.

188.2.14 VNBarcodeSymbologyCode93i as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for standard Code 93i barcode recognition.

188.2.15 VNBarcodeSymbologyDataMatrix as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Data Matrix barcode recognition.

188.2.16 VNBarcodeSymbologyEAN13 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for EAN-13 barcode recognition.

188.2.17 VNBarcodeSymbologyEAN8 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for EAN-8 barcode recognition.

188.2.18 VNBarcodeSymbologyGS1DataBar as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes:

A constant that indicates GS1 DataBar symbology.
Available in iOS 15 or macOS 12 or later.

188.2.19 VNBarcodeSymbologyGS1DataBarExpanded as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes:

A constant that indicates GS1 DataBar Expanded symbology.
Available in iOS 15 or macOS 12 or later.

188.2.20 VNBarcodeSymbologyGS1DataBarLimited as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes:

A constant that indicates GS1 DataBar Limited symbology.
Available in iOS 15 or macOS 12 or later.

188.2.21 VNBarcodeSymbologyI2of5 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for Interleaved 2 of 5 (ITF) barcode recognition.

188.2.22 VNBarcodeSymbologyI2of5Checksum as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for recognizing barcodes in Interleaved 2 of 5 (ITF) with checksum.

188.2.23 VNBarcodeSymbologyITF14 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for ITF-14 barcode recognition.

188.2.24 VNBarcodeSymbologyMicroPDF417 as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes:

A constant that indicates MicroPDF417 symbology.
Available in iOS 15 or macOS 12 or later.

188.2.25 VNBarcodeSymbologyMicroQR as String

MBS MacFrameworks Plugin, Plugin Version: 21.3, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes:

A constant that indicates MicroQR symbology.
Available in iOS 15 or macOS 12 or later.

188.2.26 VNBarcodeSymbologyPDF417 as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for PDF417 barcode recognition.

188.2.27 VNBarcodeSymbologyQR as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for QR code recognition.

188.2.28 VNBarcodeSymbologyUPCE as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: One of the Symbologies supported by the Vision framework.
Notes: A symbol indicating support for UPC-E barcode recognition.

188.2.29 Properties

188.2.30 barcodeDescriptor as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A CIBarcodeDescriptorMBS object with low-level details about the barcode and its data.
Notes:

This object is sufficient for Core Image to regenerate the observed barcode.
(Read only property)

188.2.31 payloadStringValue as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The string representation of the barcode's payload.
Notes:

Depending on the symbology of the barcode or the payload data itself, a string representation of the payload may not be available.
(Read only property)

188.2.32 symbology as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The symbology of the observed barcode.
Notes:

To detect specific barcode symbologies in a Vision request, add the corresponding VNBarcodeSymbology to the supportedSymbologies property of your VNDetectBarcodesRequestMBS.
(Read only property)

188.3 class VNClassificationObservationMBS

188.3.1 class VNClassificationObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Classification information produced by an image analysis request.
Notes:

This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is classification (rather than prediction or image-to-image processing). Vision infers that an MLModel object is a classifier model if that model predicts a single feature. That is, the model's modelDescription object has a non-nil value for its predictedFeatureName property.
Subclass of the VNObservationMBS class.

188.3.2 Blog Entries

- Vision Framework for Xojo

188.3.3 Blog Entries

- Vision Framework for Xojo

188.3.4 Methods

188.3.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.3.6 hasMinimumPrecision(minimumPrecision as single, recall as single) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determines whether the observation for a specific recall has a minimum precision value.
Notes:

minimumPrecision: The minimum percentage of classification results that are relevant.
recall: The percentage of relevant results that the algorithm correctly classified.

Returns a Boolean indicating whether or not this classification observation provides a minimum percentage of relevant results that meet the desired recall criterion.

188.3.7 hasMinimumRecall(minimumRecall as single, precision as single) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determines whether the observation for a specific precision has a minimum recall value.
Notes:

minimumRecall: The minimum percentage of relevant results that the algorithm correctly classified.
precision: The percentage of classification results that are relevant.

Returns a Boolean indicating whether or not this classification observation provides a minimum percentage of relevant results that meet the desired precision criterion.

188.3.8 Properties

188.3.9 hasPrecisionRecallCurve as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable indicating whether the observation contains precision and recall curves.
Notes:

Precision refers to the percentage of your classification results that are relevant, while recall refers to the percentage of total relevant results correctly classified.
If this property is true, then you can call precision and recall-related methods in this observation. If this property is false, then the precision and recall-related methods won't return meaningful data.
(Read only property)

188.3.10 identifier as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Classification label identifying the type of observation.
Notes:

An example classification could be a string like cat or hotdog. The model used for the classification defines the domain of strings that may result. Usually, these strings are unlocalized technical labels not meant for direct presentation to the end user.

(Read only property)

188.4 class VNClassifyImageRequestMBS

188.4.1 class VNClassifyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request to classify an image.
Notes:

This type of request produces a collection of VNClassificationObservationMBS objects that describe an image. Access the classifications through knownClassificationsForRevision function.

Available on MacOS 10.15 or newer.
Subclass of the VNImageBasedRequestMBS class.

188.4.2 Blog Entries

- Vision Framework for Xojo

188.4.3 Blog Entries

- Vision Framework for Xojo

188.4.4 Methods

188.4.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.4.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.4.7 knownClassificationsForRevision(requestRevision as Integer = 1, byref error as NSErrorMBS) as VNClassificationObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests the collection of classifications that the Vision framework recognizes.
Notes:

requestRevision: The revision of the request for which classifications should be reported.
error: The address of the error variable to populate should the call fail.

Returns an array of classifications for the given revision, or nil if an error occurred.

188.5 class VNCoreMLFeatureValueObservationMBS

188.5.1 class VNCoreMLFeatureValueObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of key-value information produced by a Core ML image analysis request.
Notes:

This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is prediction rather than classification or image-to-image processing.
Vision infers that an MLModel object is a predictor model if that model predicts multiple features. You can tell that a model predicts multiple features when its modelDescription object has a nil value for its predictedFeatureName property, or when it inserts its output in an outputDescriptionsByName dictionary.
Subclass of the VNObservationMBS class.

188.5.2 Blog Entries

188.5.3 Blog Entries

- Vision Framework for Xojo

188.5.4 Methods

188.5.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.5.6 Properties

188.5.7 featureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name used in the model description of the CoreML model that produced this observation.
Notes: (Read only property)

188.5.8 featureValue as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The feature result of a VNCoreMLRequestMBS that outputs neither a classification nor an image.
Notes:

Refer to Core ML documentation and the model itself to learn about proper handling of the content.
Value is a MLFeatureValueMBS object.
(Read only property)

188.6 class VNCoreMLModelMBS

188.6.1 class VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A container for a Core ML model used with Vision requests.
Notes: A Core ML model encapsulates the information trained from a data set used to drive Vision recognition requests. See Getting a Core ML Model for instructions on training your own. Once you have the trained model, use this class to initialize a VNCoreMLRequestMBS for identification.

188.6.2 Blog Entries

188.6.3 Blog Entries

- Vision Framework for Xojo

188.6.4 Methods

188.6.5 Constructor(MLModel as Variant)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a model container to be used with VNCoreMLRequestMBS.
Notes:

Please pass MLModelMBS object.

This method may fail if Vision does not support the created CoreML model. For example, a model that does not accept an image as any of its inputs will yield an VNErrorInvalidModel error.

188.6.6 modelForMLModel(MLModel as Variant) as VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a model container to be used with VNCoreMLRequestMBS.
Notes:

Please pass MLModelMBS object.

This method may fail if Vision does not support the created CoreML model. For example, a model that does not accept an image as any of its inputs will yield an VNErrorInvalidModel error.

188.6.7 Properties

188.6.8 featureProvider as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An optional object to support inputs outside Vision.
Notes:

An MLFeatureProviderMBS object.

This optional object conforms to the MLFeatureProvider protocol that the model uses to predict inputs that are not supplied by Vision. Vision provides the MLModel with the image for the inputImageFeatureName via the VNRequestHandlerMBS.
A feature provider is necessary for models that have more than one required input. Models with only one image input won't use the feature provider.

Available on MacOS 10.15 or newer.
(Read only property)

188.6.9 inputImageFeatureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name of the MLFeatureValueMBS that Vision sets from the request handler.
Notes:

By default, Vision uses the first input found, but you can manually set that input to another featureName instead.
(Read and Write property)

188.7 class VNCoreMLRequestMBS

188.7.1 class VNCoreMLRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that uses a Core ML model to process images.
Notes:

The results array of a Core ML-based image analysis request contains a different observation type depending on the kind of MLModel object you create the request with:

- If the model predicts a single feature (that is, the model's modelDescription object has a non-nil value for its predictedFeatureName property), Vision treats that model as a classifier: the results are VNClassificationObservationMBS objects.
- If the model's outputs include at least one output whose feature type is MLFeatureTypeImage, Vision treats that model as an image-to-image model: the results are VNPixelBufferObservationMBS objects.
- Otherwise, Vision treats the model as a general predictor model: the results are VNCoreMLFeatureValueObservationMBS objects.

Subclass of the VNImageBasedRequestMBS class.

188.7.2 Blog Entries

- Vision Framework for Xojo

188.7.3 Blog Entries

- Vision Framework for Xojo

188.7.4 Methods

188.7.5 Constructor(model as VNCoreMLModelMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.7.6 Properties

188.7.7 imageCropAndScaleOption as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determine what type of croping and scaling action should be applied to the image before generating the feature print.
Notes:

The default value for this property is VNImageCropAndScaleOptionScaleFill.
(Read and Write property)

188.7.8 model as VNCoreMLModelMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The Core ML model on which the request is based, wrapped in a VNCoreMLModel.
Notes: (Read only property)

188.7.9 Constants

188.7.10 VNImageCropAndScaleOptionCenterCrop = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that maintains aspect ratio to fit the short side, and crops the centered image on its long side.

188.7.11 VNImageCropAndScaleOptionScaleFill = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that scales an image proportionally so that its shorter dimension fills the canvas, potentially cropping along the longer dimension.

188.7.12 VNImageCropAndScaleOptionScaleFit = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes:

An option that scales an image to fit the input image dimensions while maintaining aspect ratio.
This option ensures the entire image fits into the Vision algorithm's input image dimensions by scaling down the longer dimension until it fits. This option pads the image along the shorter dimension to maintain aspect ratio.

188.8 class VNDetectBarcodesRequestMBS

188.8.1 class VNDetectBarcodesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds and recognizes barcodes in an image.
Notes:

By default, a barcode request first locates all barcodes in the input image, then analyzes each to decode payload. To specify or limit the types of barcodes sought in the request, set the symbologies property to an array of barcode types you would like to support.
Subclass of the VNImageBasedRequestMBS class.

188.8.6 Methods

188.8.7 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.8.8 setSymbologies(symbologies() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of symbologies that Vision should detect in the image.
Notes: Use this array to specify or restrict the types of symbols you want the Vision algorithm to detect. The default value leads Vision to scan for all possible symbologies.

188.8.9 supportedSymbologies as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNBarcodeSymbology objects describing the symbologies that Vision currently supports.
Notes: Calling this method could be an expensive operation.

188.8.10 symbologies as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of symbologies that Vision should detect in the image.
Notes: Use this array to specify or restrict the types of symbols you want the Vision algorithm to detect. The default value leads Vision to scan for all possible symbologies.

188.9 class VNDetectedObjectObservationMBS

188.9.1 class VNDetectedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis result that provides the position and extent of a detected image feature.
Notes:

This type of observation results from a VNTrackObjectRequestMBS. It represents a detected object that the Vision request should track.
Subclass of the VNObservationMBS class.

188.9.4 Methods

188.9.5 Constructor(boundingBox as CGRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a detected object observation based on bounding box coordinates.
Notes: boundingBox: The observation's bounding box, in coordinates normalized to the dimensions of the processed image, with its origin at the image's lower-left corner.
See also:

- 188.9.6 Constructor(requestRevision as Integer, boundingBox as CGRectMBS) 26526

188.9.6 Constructor(requestRevision as Integer, boundingBox as CGRectMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a detected object observation with the specified revision number and bounding box coordinates.
See also:

- 188.9.5 Constructor(boundingBox as CGRectMBS) 26526

188.9.7 Properties

188.9.8 boundingBox as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The bounding box of the detected object.
Notes:

The coordinates are normalized to the dimensions of the processed image, with the origin at the image's lower-left corner.
(Read only property)

188.10 class VNDetectFaceCaptureQualityRequestMBS

188.10.1 class VNDetectFaceCaptureQualityRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that produces a floating-point number representing the capture quality of a given face in a photo.
Notes:

This request produces or updates a VNFaceObservationMBS object's property faceCaptureQuality with a floating-point value. The float will be a value between 0 and 1. Faces with quality closer to 1 are better lit, sharper, and centrally positioned than faces with quality closer to 0. If the request fails, or the face observation has never been processed, the property faceCaptureQuality will be nil.
Subclass of the VNImageBasedRequestMBS class.

188.10.3 Blog Entries

- Vision Framework for Xojo

188.10.4 Methods

188.10.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.10.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.10.7 inputFaceObservations as VNFaceObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNFaceObservation objects to process as part of the request.

188.10.8 setInputFaceObservations(faces() as VNFaceObservationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of VNFaceObservation objects to process as part of the request.

188.11 class VNDetectFaceLandmarksRequestMBS

188.11.1 class VNDetectFaceLandmarksRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds facial features (such as the eyes and mouth) in an image.
Notes:

By default, a face landmarks request first locates all faces in the input image, then analyzes each to detect facial features.
If you've already located all the faces in an image, or want to detect landmarks in only a subset of the faces in the image, set the inputFaceObservations property to an array of VNFaceObservationMBS objects representing the faces you want to analyze. (You can either use face observations output by a VNDetectFaceRectanglesRequestMBS or manually create VNFaceObservation instances with the bounding boxes of the faces you want to analyze.)
Subclass of the VNImageBasedRequestMBS class.

188.11.4 Methods

188.11.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.11.6 inputFaceObservations as VNFaceObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of VNFaceObservation objects to process as part of the request.

188.11.7 setInputFaceObservations(faces() as VNFaceObservationMBS)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of VNFaceObservation objects to process as part of the request.

188.11.8 supportsConstellation(requestRevision as Integer = 1, constellation as Integer) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable that indicates whether the Vision framework supports a given constellation type for a given request revision.

188.11.9 Properties

188.11.10 constellation as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A variable describing how a face landmarks request orders or enumerates the resulting features.
Notes:

Set this variable to one of the supported constellation types detailed in VNRequestFaceLandmarksConstellation. The default value is VNRequestFaceLandmarksConstellationNotDefined.
(Read and Write property)

188.11.11 Constants

188.11.12 VNRequestFaceLandmarksConstellation65Points = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants of face landmarks in a constellation object.
Notes: A constellation with 65 points.

188.11.13 VNRequestFaceLandmarksConstellation76Points = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants of face landmarks in a constellation object.
Notes: A constellation with 76 points.

188.11.14 VNRequestFaceLandmarksConstellationNotDefined = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the constants of face landmarks in a constellation object.
Notes: An undefined constellation.

188.12 class VNDetectFaceRectanglesRequestMBS

188.12.1 class VNDetectFaceRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds faces within an image.
Notes:

This request returns faces as rectangular bounding boxes with origin and size.
Subclass of the VNImageBasedRequestMBS class.

188.12.4 Methods

188.12.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.13 class VNDetectHorizonRequestMBS

188.13.1 class VNDetectHorizonRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the horizon angle in an image.
Notes:

This request returns the horizon angle detected in an image.
Subclass of the VNImageBasedRequestMBS class.

188.13.4 Methods

188.13.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.14 class VNDetectHumanRectanglesRequestMBS

188.14.1 class VNDetectHumanRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds rectangular regions containing humans in an image.
Notes: Subclass of the VNImageBasedRequestMBS class.

188.14.2 Blog Entries

- Vision Framework for Xojo

188.14.3 Blog Entries

- Vision Framework for Xojo

188.14.4 Methods

188.14.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.15 class VNDetectRectanglesRequestMBS

188.15.1 class VNDetectRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds projected rectangular regions in an image.
Notes:

A rectangle detection request locates regions of an image with rectangular shape, like credit cards, business cards, documents, and signs. The request returns its observations in the form of VNRectangleObservationMBS objects, which contain normalized coordinates of bounding boxes containing the rectangle.
Use this type of request to find the bounding boxes of rectangles in an image. Vision returns observations for rectangles found in all orientations and sizes, along with a confidence level to indicate how likely it is that the observation contains an actual rectangle.
To further configure or restrict the types of rectangles found, set properties on the request specifying a range of aspect ratios, sizes, and quadrature tolerance.
Subclass of the VNImageBasedRequestMBS class.

188.15.3 Blog Entries

- Vision Framework for Xojo

188.15.4 Methods

188.15.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.15.6 Properties

188.15.7 maximumAspectRatio as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the maximum aspect ratio of the rectangle to detect, defined as the shorter dimension over the longer dimension.
Notes:

The value should range from 0.0 to 1.0, inclusive. The default value is 0.5.
(Read and Write property)

188.15.8 maximumObservations as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An integer specifying the maximum number of rectangles Vision returns.
Notes:

The default value is 1.
Setting this property to 0 allows Vision algorithms to return an unlimited number of observations.
(Read and Write property)

188.15.9 minimumAspectRatio as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the minimum aspect ratio of the rectangle to detect, defined as the shorter dimension over the longer dimension.
Notes:

The value should range from 0.0 to 1.0, inclusive. The default value is 0.5.
(Read and Write property)

188.15.10 minimumConfidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value specifying the minimum acceptable confidence level.
Notes:

Vision won't return rectangles with a confidence score lower than the specified minimum.
The confidence score ranges from 0.0 to 1.0, inclusive, where 0.0 represents no confidence, and 1.0 represents

full confidence.
(Read and Write property)

188.15.11 minimumSize as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the minimum size of the rectangle to be detected, as a proportion of the smallest dimension.
Notes:

The value should range from 0.0 to 1.0 inclusive. The default minimum size is 0.2.
Any smaller rectangles that Vision may have detected aren't returned.
(Read and Write property)

188.15.12 quadratureTolerance as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A float specifying the number of degrees a rectangle corner angle can deviate from 90°.
Notes:

The tolerance value should range from 0 to 45, inclusive. The default tolerance is 30.
(Read and Write property)

188.16 class VNDetectTextRectanglesRequestMBS

188.16.1 class VNDetectTextRectanglesRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds regions of visible text in an image.
Notes:

This request returns detected text characters as rectangular bounding boxes with origin and size.
Subclass of the VNImageBasedRequestMBS class.

188.16.4 Methods

188.16.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.16.6 Properties

188.16.7 reportCharacterBoxes as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean variable indicating interest in detecting character bounding boxes.
Notes:

Set to true to have the detector return character bounding boxes as an array of VNRectangleObservationMBS objects.

(Read and Write property)

188.17 class VNFaceLandmarkRegion2DMBS

188.17.1 class VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: 2D geometry information for a specific facial feature.
Notes:

This class represents the set of all facial landmark regions in 2D, exposed as properties.
Subclass of the VNFaceLandmarkRegionMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.17.4 Methods

188.17.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.17.6 normalizedPoints as CGPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A buffer in memory containing normalized landmark points.
Notes: Returns array with CGPointMBS representing landmark points.

188.17.7 pointsInImageOfSize(imageSize as CGSizeMBS) as CGPointMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A buffer in memory containing landmark points in the coordinate space of the specified image size.
Notes: imageSize: The pixel dimensions of the image in which to present landmark points.

188.17.8 precisionEstimatesPerPoint as Variant()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of precision estimates for each landmark point.
Notes: This property is only populated when you configure your VNDetectFaceLandmarksRequestMBS object with VNRequestFaceLandmarksConstellation76Points. For other constellation types, this array is set to nil.

188.18 class VNFaceLandmarkRegionMBS

188.18.1 class VNFaceLandmarkRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for information about a specific face landmark.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.18.4 Methods

188.18.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.18.6 copy as VNFaceLandmarkRegionMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

188.18.7 Properties

188.18.8 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.18.9 pointCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The number of points in the face region.
Notes:

The value is zero if no points for a region could be found.
(Read only property)

188.18.10 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the VNRequest subclass used to generate the implementing object.
Notes: (Read only property)

188.19 class VNFaceLandmarks2DMBS

188.19.1 class VNFaceLandmarks2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of all facial features detected in a face observation, with 2D geometry information for each.
Notes:

This class represents the set of all detectable 2D face landmarks and regions, exposed as properties. The coordinates of the face landmarks are normalized to the dimensions of the face observation's boundingBox, with the origin at the bounding box's lower-left corner. Use the VNImagePointForFaceLandmarkPointMBS function to convert normalized face landmark points into absolute points within the image's coordinate system.
Subclass of the VNFaceLandmarksMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.19.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.19.6 Properties

188.19.7 allPoints as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing all face landmark points.
Notes: (Read only property)

188.19.8 faceContour as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the face contour from the left cheek, over the chin, to the right cheek.
Notes: (Read only property)

188.19.9 innerLips as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the space between the lips.
Notes: (Read only property)

188.19.10 leftEye as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the left eye.
Notes: (Read only property)

188.19.11 leftEyebrow as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the left eyebrow.
Notes: (Read only property)

188.19.12 leftPupil as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing the point where the left pupil is located.
Notes:

This value may be inaccurate if the eye is blinking.
(Read only property)

188.19.13 medianLine as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace a vertical line down the center of the face.
Notes: (Read only property)

188.19.14 nose as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the nose.
Notes: (Read only property)

188.19.15 noseCrest as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the center crest of the nose.
Notes: (Read only property)

188.19.16 outerLips as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the outside of the lips.
Notes: (Read only property)

188.19.17 rightEye as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that outline the right eye.
Notes: (Read only property)

188.19.18 rightEyebrow as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing points that trace the right eyebrow.
Notes: (Read only property)

188.19.19 rightPupil as VNFaceLandmarkRegion2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region containing the point where the right pupil is located.
Notes:

This value may be inaccurate if the eye is blinking.
(Read only property)

188.20 class VNFaceLandmarksMBS

188.20.1 class VNFaceLandmarksMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for containers of face landmark information.
Notes:

This class represents the set of all detectable facial landmarks and regions, exposed as properties.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.20.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.20.6 copy as VNFaceLandmarksMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

188.20.7 Properties

188.20.8 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A confidence estimate for the detected landmarks.
Notes:

A value of 0 indicates no confidence. A value of 1 indicates full confidence.
(Read only property)

188.20.9 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.20.10 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the VNRequestMBS subclass used to generate the implementing object.
Notes: (Read only property)

188.21 class VNFaceObservationMBS

188.21.1 class VNFaceObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Face or facial-feature information detected by an image analysis request.
Notes:

This type of observation results from a VNDetectFaceRectanglesRequestMBS. It contains information about facial landmarks and regions found in the image.
Subclass of the VNDetectedObjectObservationMBS class.

188.21.4 Methods

188.21.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.21.6 faceObservationWithRequestRevision(requestRevision as Integer = 2, boundingBox as CGRectMBS, roll as Variant, yaw as Variant) as VNFaceObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a face observation with the given revision number, bounding box, roll, and yaw.

188.21.7 Properties

188.21.8 faceCaptureQuality as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The capture quality of the face, normalized between 0.0 and 1.0.
Notes:

The capture quality of the face allows you to compare the quality of the face in terms of its capture attributes: lighting, blur, and prime positioning. Use this metric to compare the capture quality of a face against other captures of the same face in a given set. Faces with quality closer to 1.0 are better lit, sharper, and centrally positioned than faces with quality closer to 0.0.
(Read only property)

188.21.9 landmarks as VNFaceLandmarks2DMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The facial features found in the detected face.
Notes:

This property's value is nil for face observations produced by a VNDetectFaceRectanglesRequestMBS analysis. Use the VNDetectFaceLandmarksRequestMBS class to find facial features.
(Read only property)

188.21.10 roll as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The detected face's roll angle, as populated by the VNDetectFaceRectanglesRequestMBS.
Notes:

The roll is reported in radians. A positive angle corresponds to counterclockwise roll. The range is [-Pi, Pi). A nil value indicates that the roll angle hasn't been computed.
(Read only property)

188.21.11 yaw as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The detected face's yaw angle, as populated by the VNDetectFaceRectanglesRequestMBS.
Notes:

The yaw is reported in radians. A positive angle corresponds to counterclockwise roll. The range is [-Pi/2, Pi/2). A nil value indicates that the yaw angle hasn't been computed.
(Read only property)

188.22 class VNFeaturePrintObservationMBS

188.22.1 class VNFeaturePrintObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The observation resulting from a VNGenerateImageFeaturePrintRequestMBS.
Notes:

The observations returned from a VNGenerateImageFeaturePrintRequestMBS are of this class.
Subclass of the VNObservationMBS class.

188.22.4 Methods

188.22.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.22.6 computeDistance(byref outDistance as Single, featurePrint as VNFeaturePrintObservationMBS, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Computes the distance between two observations.
Notes: The larger the distance the more dissimlar the feature prints are. In case of an error this method returns false with an error describing the error condition, for instance comparing two non-comparable feature prints.

188.22.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.22.8 Values as Double()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries values as a double array.
Notes: Floats are expanded to doubles for your convenience.

188.22.9 Properties

188.22.10 data as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The feature print data.
Notes:

The data is divided into separate elements. Determine the type of element using elementType, and the number of elements using elementCount.
(Read only property)

188.22.11 elementCount as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The total number of elements in the data.
Notes: (Read only property)

188.22.12 elementType as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The type of each element in the data.
Notes: (Read only property)

188.22.13 Constants

188.22.14 ElementTypeDouble = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the element types.
Notes: The elements are double-precision floating-point numbers.

188.22.15 ElementTypeFloat = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the element types.
Notes: The elements are floating-point numbers.

188.22.16 ElementTypeUnknown = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the element types.
Notes: The element type isn't known.

188.23 class VNGenerateAttentionBasedSaliencyImageRequestMBS

188.23.1 class VNGenerateAttentionBasedSaliencyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Generates a heat map that identifies the parts of an image most likely to draw attention.
Notes:

The resulting observation, VNSaliencyImageObservationMBS, encodes this data as a heat map, which you can use to highlight regions of interest.
Subclass of the VNImageBasedRequestMBS class.

188.23.4 Methods

188.23.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.23.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.24 class VNGenerateImageFeaturePrintRequestMBS

188.24.1 class VNGenerateImageFeaturePrintRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image-based request to generate feature prints from an image.
Notes:

This request returns an array of feature print elements in the form of data wrapped in VNFeaturePrintObservationMBS objects.
Available in MacOS 10.15 or newer.
Subclass of the VNImageBasedRequestMBS class.

188.24.4 Methods

188.24.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.24.6 Properties

188.24.7 imageCropAndScaleOption as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Determine what type of croping and scaling action should be applied to the image before generating the feature print.
Notes:

The default value for this property is VNImageCropAndScaleOptionScaleFill.
(Read and Write property)

188.24.8 Constants

188.24.9 VNImageCropAndScaleOptionCenterCrop = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that maintains aspect ratio to fit the short side, and crops the centered image on its long side.

188.24.10 VNImageCropAndScaleOptionScaleFill = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes: A scaling option that scales an image proportionally so that its shorter dimension fills the canvas, potentially cropping along the longer dimension.

188.24.11 VNImageCropAndScaleOptionScaleFit = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the different ways Vision can crop and scale an input image.
Notes:

An option that scales an image to fit the input image dimensions while maintaining aspect ratio.
This option ensures the entire image fits into the Vision algorithm's input image dimensions by scaling down the longer dimension until it fits. This option pads the image along the shorter dimension to maintain aspect ratio.

188.25 class VNGenerateObjectnessBasedSaliencyImageRequestMBS

188.25.1 class VNGenerateObjectnessBasedSaliencyImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Generates a heat map that identifies the parts of an image most likely to represent objects.
Notes:

The resulting observation, VNSaliencyImageObservationMBS, encodes this data as a heat map, which you can use to highlight regions of interest.
Subclass of the VNImageBasedRequestMBS class.

188.25.4 Methods

188.25.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.25.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.26 class VNHomographicImageRegistrationRequestMBS

188.26.1 class VNHomographicImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the perspective warp matrix needed to align the content of two images.
Notes:

Create and perform a homographic image registration request to align content in two images through a homography. A homography is an isomorphism of projected spaces, a bijection that maps lines to lines.
Requires MacOS 10.13 or newer.
Subclass of the VNImageRegistrationRequestMBS class.

- Vision Framework for Xojo

188.26.3 Blog Entries

- Vision Framework for Xojo

188.26.4 Methods

188.26.5 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.27 class VNHorizonObservationMBS

188.27.1 class VNHorizonObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Horizon angle information detected by an image analysis request.
Notes:

Instances of this class result from invoking a VNDetectHorizonRequestMBS and report the angle and transform of the horizon in an image.
Subclass of the VNObservationMBS class.

188.27.2 Blog Entries

- Vision Framework for Xojo

188.27.3 Blog Entries

188.27.4 Methods

188.27.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.27.6 Properties

188.27.7 angle as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Angle of the observed horizon.
Notes:

Use the angle to orient the image in an upright position and make the detected horizon level.
(Read only property)

188.27.8 transform as CGAffineTransformMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Transform applied to the detected horizon.
Notes:

Apply the transform's inverse to orient the image in an upright position and make the detected horizon level. (Read only property)

188.28 class VNImageAlignmentObservationMBS

188.28.1 class VNImageAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis results that describe the relative alignment of two images.
Notes:

This abstract superclass forms the basis of image alignment or registration output. You receive its subclasses, such as VNImageTranslationAlignmentObservationMBS and VNImageHomographicAlignmentObservationMBS, by performing specific registration requests. Don't create one of these classes yourself.
Subclass of the VNObservationMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.28.3 Blog Entries

- Vision Framework for Xojo

188.28.4 Methods

188.28.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.29 class VNImageBasedRequestMBS

188.29.1 class VNImageBasedRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that focus on a specific part of an image.
Notes:

Other Vision request handlers that operate on still images inherit from this abstract base class. Don't use it directly.
Subclass of the VNRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.29.4 Methods

188.29.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.29.6 Properties

188.29.7 regionOfInterest as CGRectMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The region of the image in which Vision will perform the request.
Notes:

The rectangle is normalized to the dimensions of the processed image. Its origin is specified relative to the image's lower-left corner.

The default value is { { 0, 0 } , { 1, 1 } } .

Important
The request will fail to perform if you set this property to a rectangle outside the normalized coordinate space.
(Read and Write property)

188.30 class VNImageHomographicAlignmentObservationMBS

188.30.1 class VNImageHomographicAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Perspective warp information produced by an image alignment request.
Notes:

This type of observation results from a VNHomographicImageRegistrationRequestMBS, informing the warpTransform performed to align the input images.
Subclass of the VNImageAlignmentObservationMBS class.

188.30.4 Methods

188.30.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.30.6 Properties

188.30.7 warpTransform as MemoryBlock

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The warp transform matrix to morph the floating image into the reference image.
Notes:

This is a 3x3 float matrix wrapped into a memoryblock.
(Read only property)

188.31 class VNImageRegistrationRequestMBS

188.31.1 class VNImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that align images based on their content.
Notes:

This abstract superclass forms the basis of image alignment or registration requests. Make specific requests through one of its subclasses, VNTranslationalImageRegistrationRequestMBS or VNHomographicImageRegistrationRequestMBS. Don't create an instance of this superclass yourself.
Subclass of the VNTargetedImageRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.31.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.32 class VNImageRequestHandlerMBS

188.32.1 class VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object that processes one or more image analysis requests pertaining to a single image.
Notes:

Instantiate this handler to perform Vision requests on a single image. You specify the image and, optionally, a completion handler at the time of creation, and call performRequests to begin executing the request.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.32.3 Blog Entries

- Vision Framework for Xojo

188.32.4 Methods

188.32.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.32.6 performRequests(requests() as VNRequestMBS, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules Vision requests to be performed.
Notes:

requests: A nonempty array of VNRequestMBS instances to perform.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. If the return value is false, check the error parameter.

The function returns after all requests have either completed or failed. Check individual requests and errors for their respective successes and failures.

188.32.7 performRequestsAsync(requests() as VNRequestMBS, DelegateHandler as VNPerformRequestsCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules Vision requests to be performed asynchronously in background.
Notes:

requests: A nonempty array of VNRequestMBS instances to perform.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. If the return value is false, check the error parameter.

The function returns immediately. Delegate will be called when finished.

188.32.8 RequestWithCGImage(CGImage as CGImageMBS, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a Core Graphics image.
Notes:

image: A CGImageMBS containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

188.32.9 RequestWithCIImage(CIImage as Variant, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on CIImage data.
Notes:

image: A CIImageMBS containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

188.32.10 RequestWithCVPixelBuffer(CVPixelBuffer as Variant, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a Core Video pixel buffer of a known orientation.
Notes:

pixelBuffer: A CVPixelBufferMBS containing the image to be used for performing the requests. Buffer contents can't be changed for the lifetime of the request handler.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

188.32.11 RequestWithData(Data as MemoryBlock, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on an image, contained in a memoryblock.
Notes:

imageData: Data containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

The intended use cases of this type of initializer include compressed images and network downloads, where a client may receive a JPEG from a website or the cloud.

188.32.12 RequestWithFile(File as FolderItem, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on an image, at the specified folderitem.

Notes:

File: A folderitem pointing to the image to be used for performing the requests. The image must be in a format supported by Image I/O. Image content is immutable.
orientation: The orientation of the input image. pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

188.32.13 RequestWithPicture(Picture as Picture, orientation as Integer = 0, Options as Dictionary = nil) as VNImageRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a handler to be used for performing requests on a picture.
Notes:

image: A Picture containing the image to be used for performing the requests. Image content is immutable.
orientation: The orientation of the input image. Pass zero if unknown.
options: An optional dictionary containing VNImageOption keys to auxiliary image data.

188.32.14 VNImageOptionCameraIntrinsics as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An option to specify the camera intrinstics as an MemoryBlock object representing a matrix_float3x3.
Notes:

see
https://developer.apple.com/documentation/vision/vnimageoptioncameraintrinsics?language=objc

188.32.15 VNImageOptionCIContext as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An option key to specify the CIContextMBS to be used in the handler's Core Image operations.
Notes:

If this key isn't specified, Vision will create its own CIContext.
Specify a CIContextMBS when you've used one in processing an input CIImageMBS or executing a CIFilterMBS chain, so you can save the cost of creating a new context.

188.32.16 VNImageOptionProperties as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The dictionary from CGImageSourceCopyPropertiesAtIndex containing metadata for algorithms like horizon detection.

188.32.17 Properties

188.32.18 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.32.19 Constants

188.32.20 kOrientationDown = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 180° from the image's intended display orientation.

188.32.21 kOrientationDownMirrored = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is vertically flipped from the image's intended display orientation.

188.32.22 kOrientationLeft = 8

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

188.32.23 kOrientationLeftMirrored = 5

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° counter-clockwise from the image's intended display orientation.

188.32.24 kOrientationRight = 6

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

188.32.25 kOrientationRightMirrored = 7

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° clockwise from the image's intended display orientation.

188.32.26 kOrientationUp = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data matches the image's intended display orientation.

188.32.27 kOrientationUpMirrored = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped from the image's intended display orientation.

188.33 class VNImageTranslationAlignmentObservationMBS

188.33.1 class VNImageTranslationAlignmentObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Affine transform information produced by an image alignment request.
Notes:

This type of observation results from a VNTranslationalImageRegistrationRequestMBS, informing the alignmentTransform performed to align the input images.
Subclass of the VNImageAlignmentObservationMBS class.

188.33.4 Methods

188.33.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.33.6 Properties

188.33.7 alignmentTransform as CGAffineTransformMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The alignment transform to align the floating image with the reference image.
Notes: (Read only property)

188.34 class VNObservationMBS

188.34.1 class VNObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for analysis results.
Notes:

Observations resulting from Vision image analysis requests inherit from this abstract base class. Do not use this abstract superclass directly.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.34.4 Methods

188.34.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.34.6 copy as VNObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

188.34.7 Properties

188.34.8 className as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries class name of the observation.
Notes: (Read only property)

188.34.9 Confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence in the observation's accuracy, normalized to [0, 1.0] .
Notes:

A value of 0.0 indicates no confidence.
A value of 1.0 indicates the highest confidence. An observation that doesn't support or assign meaning to confidence also returns 1.0.
(Read only property)

188.34.10 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.34.11 requestRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision used in request.
Notes: (Read only property)

188.34.12 UUID as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A unique identifier assigned to the Vision observation.
Notes: (Read only property)

188.35 class VNPixelBufferObservationMBS

188.35.1 class VNPixelBufferObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An output image produced by a Core ML image analysis request.
Notes:

This type of observation results from performing a VNCoreMLRequestMBS image analysis with a Core ML model whose role is image-to-image processing. For example, this observation would result from a model that analyzes the style of one image and then transfers that style to a different image.
Vision infers that an MLModel object is an image-to-image model if that model includes an image. Its modelDescription object includes an image-typed feature description in its outputDescriptionsByName dictionary.
Subclass of the VNObservationMBS class.

188.35.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.35.7 Properties

188.35.8 featureName as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The name used in the model description of the CoreML model that produced this observation.
Notes:

This value can be empty if the observation is not the result of a VNCoreMLRequest operation.
Available in MacOS 10.15 or later.
(Read only property)

188.35.9 pixelBuffer as Variant

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The image that results from a request with image output.
Notes:

VNCoreMLRequestMBS produces observations that contain images in pixel buffer format. The confidence level is always 1.0.
(Read only property)

188.36 class VNRecognizeAnimalsRequestMBS

188.36.1 class VNRecognizeAnimalsRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that will recognize various animals in an image.
Notes:

The list of animals supported by the recognition algorithm can be queried by knownAnimalIdentifiersFor-Revision.
This request will generate VNRecognizedObjectObservationMBS objects with a defined boundingBox, label and confidence level.

Availalble on MacOS 10.15.
Subclass of the VNImageBasedRequestMBS class.

- Vision Framework for Xojo

188.36.3 Blog Entries

- Vision Framework for Xojo

188.36.4 Methods

188.36.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.36.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error

on failure.

188.36.7 knownAnimalIdentifiersForRevision(requestRevision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: This class method returns a list of all animals supported by the recognition algorithm
Notes: This request will generate a collection of names for supported animals by current recognition algorithm.

188.36.8 VNAnimalIdentifierCat as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The identifier for cats.

188.36.9 VNAnimalIdentifierDog as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The identifier for dogs.

188.37 class VNRecognizedObjectObservationMBS

188.37.1 class VNRecognizedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A detected object observation with an array of classification labels that classify the recognized object.
Notes:

The confidence of the classifications sum up to 1.0. Multiply the classification confidence with the confidence of this observation.

Available on MacOS 10.14 or newer.
Subclass of the VNDetectedObjectObservationMBS class.

188.37.2 Blog Entries

188.37.3 Blog Entries

- Vision Framework for Xojo

188.37.4 Methods

188.37.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.37.6 labels as VNClassificationObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of observations that classify the recognized object.

188.38 class VNRecognizedTextMBS

188.38.1 class VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A block of recognized text.
Notes: There can be multiple VNRecognizedTextMBS objects returned in a VNRecognizedTextObservationMBS - one for each candidate.

188.38.2 Blog Entries

- Vision Framework for Xojo

188.38.3 Blog Entries

- Vision Framework for Xojo

188.38.4 Methods

188.38.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.38.6 boundingBoxForRange(range as NSRangeMBS, byref error as NSErrorMBS) as VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Calculate the bounding box around the characters in the range of the string.
Notes:

The bounding boxes are not guaranteed to be an exact fit around the characters and are purely meant for UI purposes and not for image processing.
Range is zero based!

188.38.7 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.38.8 copy as VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

188.38.9 Properties

188.38.10 confidence as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The level of confidence normalized to [0.0, 1.0] where 1.0 is most confident.
Notes: (Read only property)

188.38.11 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.38.12 string as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Field that contains recognized text.
Notes:

This is the top candidate of the recognized text.
(Read only property)

188.39 class VNRecognizedTextObservationMBS

188.39.1 class VNRecognizedTextObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A request that detects and recognizes regions of text in an image.
Notes:

This type of observation results from a VNRecognizeTextRequestMBS. It contains information about both the location and content of text and glyphs that Vision recognized in the input image.
Subclass of the VNRectangleObservationMBS class.

188.39.2 Blog Entries

- Vision Framework for Xojo

188.39.3 Blog Entries

- Vision Framework for Xojo

188.39.4 Methods

188.39.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.39.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.39.7 topCandidates(maxCandidateCount as integer) as VNRecognizedTextMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests the n top candidates for a recognized text string.
Notes:

maxCandidateCount: The maximum number of candidates to return. This can't exceed 10.

Returns an array of the n top candidates, sorted by decreasing confidence score.

This function returns no more than n candidates, but it may return fewer than n candidates.

188.39.8 Properties

188.39.9 string as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The top candidate's string.
Notes:

For your convenience.
(Read only property)

188.39.10 topCanditate as VNRecognizedTextMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: First top candidate.
Notes:

For your convenience.
Same as first element of topCanditates(1).
(Read only property)

188.40 class VNRecognizeTextRequestMBS

188.40.1 class VNRecognizeTextRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that finds and recognizes text in an image.
Notes:

By default, a text recognition request first locates all possible glyphs or characters in the input image, then analyzes each string. To specify or limit the languages sought in the request, set the recognitionLanguages property to an array containing the names of the languages of text you'd like to recognize. Vision returns the result of this request in a VNRecognizedTextObservationMBS object.

Available on MacOS 10.15.
Subclass of the VNImageBasedRequestMBS class.

188.40.2 Blog Entries

- Vision Framework for Xojo

188.40.3 Blog Entries

- Vision Framework for Xojo

188.40.4 Methods

188.40.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.40.6 Constructor(DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.
Notes: When work is done, the optional delegate method is invoked to provide result on success or error

on failure.

188.40.7 customWords as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of strings to supplement the recognized languages at the word recognition stage.
Notes: The customWords list takes precedence over the standard lexicon.

188.40.8 recognitionLanguages as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of languages to detect, in priority order.
Notes:

The order of the languages in the array defines the order in which languages are used during language processing and text recognition.
Specify the languages as ISO language codes.

188.40.9 setCustomWords(customWords() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets an array of strings to supplement the recognized languages at the word recognition stage.
Notes: The customWords list takes precedence over the standard lexicon.

188.40.10 setProgressHandler(ProgressHandler as VNProgressHandlerMBS, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets progress handler.
Notes: The progress handler is an optional delegate that allows clients of the request to report progress to the user or to display partial results as they become available.

188.40.11 setRecognitionLanguages(recognitionLanguages() as String)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Sets array of languages to detect, in priority order.
Notes:

The order of the languages in the array defines the order in which languages are used during language processing and text recognition.
Specify the languages as ISO language codes.

188.40.12 supportedRecognitionLanguages(recognitionLevel as Integer, requestRevision as Integer = 1, byref error as NSErrorMBS) as String()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Requests a list of languages recognized by the specified revision.
Example:

```
Dim recognitionLevel As Integer = VNRecognizeTextRequestMBS.RecognitionLevelAccurate
Dim languages() As String
Dim error As NSErrorMBS

languages = VNRecognizeTextRequestMBS.supportedRecognitionLanguages(recognitionLevel, error)

MsgBox Join(languages, EndOfLine)

If error <>Nil Then
MsgBox error.LocalizedDescription
End If
```

Notes:

recognitionLevel: The level of recognition to prioritize. Set this level to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate to prioritize accuracy at the expense of speed.
requestRevision: The revision of the text recognition algorithm for the Vision framework to use.
error: An error that contains information about failed language support, or nil if no error occurred.

Returns an array of supported languages, listed as ISO language codes.

A language supported in one recognition level may not be available in another recognition level.

May show just "en-US".

188.40.13 Properties

188.40.14 indeterminate as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean set to true when a request can't determine its progress in fractions completed.
Notes:

A value of true doesn't mean that the request will run forever. Rather, it means that the nature of the request can't be broken down into identifiable fractions to report. The progressHandler will still be called at suitable intervals.
(Read only property)

188.40.15 minimumTextHeight as Double

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The minimum height of the text expected to be recognized, relative to the image height.
Notes:

Specify a floating-point number relative to the image height. For example, to limit recognition to text that is half of the image height, use 0.5. Increasing the size reduces memory consumption and expedites recognition with the tradeoff of ignoring text smaller than the minimum height. The default value is 1/32, or 0.03125.
(Read and Write property)

188.40.16 recognitionLevel as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value that determines whether the request prioritizes accuracy or speed in text recognition.
Notes:

The recognition level determines which techniques are used during the text recognition. Set this value to RecognitionLevelFast to prioritize speed over accuracy, and to RecognitionLevelAccurate for longer, more computationally intensive recognition.
(Read and Write property)

188.40.17 usesLanguageCorrection as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean indicating whether Vision applies language correction during the recognition process.
Notes:

When this Boolean is set to true, Vision applies language correction during the recognition process. Disabling this property returns the raw recognition results, which provides performance benefits but less accurate results.
(Read and Write property)

188.40.18 Constants

188.40.19 RecognitionLevelAccurate = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the recognition levels.
Notes: Accurate text recognition takes more time to produce a more comprehensive result.

188.40.20 RecognitionLevelFast = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the recognition levels.
Notes: Fast text recognition returns results more quickly at the expense of accuracy.

188.41 class VNRectangleObservationMBS

188.41.1 class VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Information about projected rectangular regions detected by an image analysis request.
Notes:

This type of observation results from a VNDetectRectanglesRequestMBS. It defines the four vertices of a detected rectangle.
Subclass of the VNDetectedObjectObservationMBS class.

188.41.4 Methods

188.41.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.41.6 rectangleObservationWithRequestRevision(requestRevision as Integer = 1, topLeft as CGPointMBS, bottomLeft as CGPointMBS, bottomRight as CGPointMBS, topRight as CGPointMBS) as VNRectangleObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A convenience initializer for creating a rectangle observation from its corner points.
Notes:

requestRevision: The rectangle detector revision number. A higher revision indicates more recent iterations of the framework.
topLeft: The upper-left corner point.
bottomLeft: The lower-left corner point.

bottomRight: The lower-right corner point.
topRight: The upper-right corner point.

Available on MacOS 10.15 or newer.

188.41.7 Properties

188.41.8 bottomLeft as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the lower-left corner of the observation bounding box.
Notes: (Read only property)

188.41.9 bottomRight as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the lower-right corner of the observation bounding box.
Notes: (Read only property)

188.41.10 topLeft as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the upper-left corner of the observation bounding box.
Notes: (Read only property)

188.41.11 topRight as CGPointMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The coordinates of the upper-right corner of the observation bounding box.
Notes: (Read only property)

188.42 class VNRequestMBS

188.42.1 class VNRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for analysis requests.
Notes:

Other Vision request handlers that perform image analysis inherit from this abstract base class. Instantiate one of its subclasses to perform image analysis.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.42.2 Blog Entries

- Vision Framework for Xojo

188.42.3 Blog Entries

- Vision Framework for Xojo

188.42.4 Methods

188.42.5 cancel

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Cancels the request before it can finish executing.

188.42.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.42.7 copy as VNRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a copy of the object.

188.42.8 currentRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The current revison supported by the request.
Notes: Available on MacOS 10.14 or newer.

188.42.9 defaultRevision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The revision of the latest request for the particular SDK linked with the client application.
Notes: Available on MacOS 10.14 or newer.

188.42.10 results as VNObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The collection of VNObservationMBS results generated by request processing.
Notes:

If the request fails, this property is nil. Otherwise, it contains an array of VNObservationMBS subclasses specific to the VNRequest subclass.
Don't access this property until the request has finished processing.

188.42.11 supportedRevisions as NSIndexSetMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The collection of currently-supported algorithm versions for the class of request.
Notes:

This method allows clients to inspect at runtime what capabilities are available for each class of VNRequest in the Vision framework.
Available on MacOS 10.14 or newer.

188.42.12 Properties

188.42.13 className as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Queries class name of the request.
Notes: (Read only property)

188.42.14 ClassPath as String

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The class path.
Notes:

Useful for debugging to know what super classes the request has.
(Read only property)

188.42.15 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.42.16 preferBackgroundProcessing as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A hint to minimize the resource burden of the request.
Notes:

If set to true, this property reduces the request's memory footprint, processing footprint, and CPU/GPU contention at the potential cost of longer execution time.
Setting this value can help ensure that Vision processing doesn't block UI updates and other rendering on the main thread.
(Read and Write property)

188.42.17 revision as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The specific algorithm or implementation revision that is to be used to perform the request.
Notes: (Read and Write property)

188.42.18 usesCPUOnly as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean signifying that the Vision request should execute exclusively on the CPU.
Notes:

This value defaults to false to signify that the Vision request is free to leverage the GPU to accelerate its processing.
(Read and Write property)

188.43 class VNSaliencyImageObservationMBS

188.43.1 class VNSaliencyImageObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An observation containing a grayscale heat map of important areas across an image.
Notes:

The heat map is a CVPixelBufferRef in a one-component floating-point pixel format. Its dimensions are 64 x 64 when fetched in real time, or 68 x 68 when requested in its deferred form.
Available on MacOS 10.15 or later.
Subclass of the VNPixelBufferObservationMBS class.

188.43.2 Blog Entries

- Vision Framework for Xojo

188.43.3 Blog Entries

- Vision Framework for Xojo

188.43.4 Methods

188.43.5 available as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Whether this class is available.
Notes: Returns true on MacOS 10.15 or newer.

188.43.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.43.7 salientObjects as VNRectangleObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A collection of objects describing the distinct areas of the saliency heat map.
Notes:

The objects in this array don't follow any specific ordering. It's up to your app to iterate across the observations and apply desired ordering.
Requesting this array lazily computes the bounds of salient objects within the image.

188.44 class VNSequenceRequestHandlerMBS

188.44.1 class VNSequenceRequestHandlerMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An object that processes image analysis requests for each frame in a sequence.
Notes: Instantiate this handler to perform Vision requests on a series of images. Unlike the VNImageRequestHandlerMBS, you don't specify the image on creation. Instead, you supply each image frame one by one as you continue to call one of the perform methods.

188.44.4 Methods

188.44.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.44.6 performRequestsOnCGImage(requests() as VNRequestMBS, CGImage as CGImageMBS, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Graphics image with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
image: The input CGImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

188.44.7 performRequestsOnCIImage(requests() as VNRequestMBS, CIImage as Variant, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on CIImageMBS data with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
image: The input CIImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

188.44.8 performRequestsOnCVPixelBuffer(requests() as VNRequestMBS, CVPixelBuffer as Variant, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Video pixel buffer with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
pixelBuffer: The input CVPixelBufferMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

188.44.9 performRequestsOnImageData(requests() as VNRequestMBS, Data as MemoryBlock, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on raw data containing an image with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
imageData: The input MemoryBlock on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

188.44.10 performRequestsOnImageFile(requests() as VNRequestMBS, File as FolderItem, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on an image with known orientation, at a specific file.
Notes:

requests: An array of VNRequestMBS requests to perform.
File: A folderitem pointing to the image on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is NO.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

188.44.11 performRequestsOnPicture(requests() as VNRequestMBS, Picture as Picture, orientation as Integer = 0, byref error as NSErrorMBS) as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Schedules one or more Vision requests to be performed on a Core Graphics image with known orientation.
Notes:

requests: An array of VNRequestMBS requests to perform.
image: The input CGImageMBS on which to perform the request.
orientation: The orientation of the input image. Pass zero if unknown.
error: An optional error parameter populated when problems arise in scheduling the requests. Check if the return value is false.

Returns true if all requests were scheduled and performed. Check the error parameter if the return value is false.

188.44.12 Properties

188.44.13 Handle as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The internal object reference.
Notes: (Read and Write property)

188.44.14 Constants

188.44.15 kOrientationDown = 3

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 180° from the image's intended display orientation.

188.44.16 kOrientationDownMirrored = 4

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is vertically flipped from the image's intended display orientation.

188.44.17 kOrientationLeft = 8

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

188.44.18 kOrientationLeftMirrored = 5

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° counter-clockwise from the image's intended display orientation.

188.44.19 kOrientationRight = 6

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is rotated 90° clockwise from the image's intended display orientation.

188.44.20 kOrientationRightMirrored = 7

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped and rotated 90° clockwise from the image's intended display orientation.

188.44.21 kOrientationUp = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data matches the image's intended display orientation.

188.44.22 kOrientationUpMirrored = 2

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the image orientations.
Notes: The encoded image data is horizontally flipped from the image's intended display orientation.

188.45 class VNTargetedImageRequestMBS

188.45.1 class VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that operate on both the processed image and a secondary image.
Notes:

Other Vision request handlers that operate on both the processed image and a secondary image inherit from this abstract base class. Instantiate one of its subclasses to perform image analysis, and pass in auxiliary image data by filling in the options dictionary at initialization.
Subclass of the VNImageBasedRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.45.4 Methods

188.45.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.45.6 TargetedImageRequestWithCGImage(CGImage as CGImageMBS, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a Core Graphics image of known orientation, executing the completion handler when done.
Notes:

cgImage: The targeted Core Graphics image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Value 0 means unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.45.7 TargetedImageRequestWithCIImage(CIImage as Variant, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a CIImageMBS of known orientation, executing the completion handler when done.
Notes:

ciImage: The CIImage encapsulating the targeted image. Variant must be CIImageMBS.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.45.8 TargetedImageRequestWithCVPixelBuffer(CVPixelBuffer as Variant, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting an image in a CVPixelBufferMBS of known orientation, executing the completion handler when done.
Notes:

pixelBuffer: The pixel buffer containing the targeted image. Variant must be CVPixelBufferMBS.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orienta-

tion information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.45.9 TargetedImageRequestWithImageData(Data as MemoryBlock, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a raw data image of known orientation, executing the completion handler when done.
Notes:

imageData: The data containing the targeted image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass zero if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.45.10 TargetedImageRequestWithImageFile(File as FolderItem, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting an image of known orientation, at the specified file, executing the completion handler when done.
Notes:

File: The file of the targeted image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Pass 0 if unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.45.11 TargetedImageRequestWithPicture(Picture as Picture, orientation as Integer = 0, options as Dictionary, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil) as VNTargetedImageRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new request targeting a Core Graphics image of known orientation, executing the completion handler when done.
Notes:

Picture: The targeted Core Graphics image.
orientation: The orientation of the image buffer, based on EXIF specification and superseding other orientation information. The value must be an integer from 1 to 8; see kCGImagePropertyOrientation for details. Value 0 means unknown.
options: A dictionary with options specifying auxiliary information for the image.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.46 class VNTextObservationMBS

188.46.1 class VNTextObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Information about regions of text detected by an image analysis request.
Notes:

This type of observation results from a VNDetectTextRectanglesRequestMBS. It expresses the location of each detected character by its bounding box.
Available on MacOS 10.13 or newer.
Subclass of the VNRectangleObservationMBS class.

- Vision Framework for Xojo

188.46.4 Methods

188.46.5 characterBoxes as VNRectangleObservationMBS()

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An array of detected individual character bounding boxes.
Notes: If the associated VNDetectTextRectanglesRequestMBS request indicates interest in character boxes by setting the option VNRequestOptionReportCharacterBoxes to true, this property is non-nil. If no characters are found, it remains empty.

188.46.6 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The constructor.

188.47 class VNTrackingRequestMBS

188.47.1 class VNTrackingRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The abstract superclass for image analysis requests that track unique features across multiple images or video frames.
Notes:

Instantiate a tracking request subclass to perform object tracking across multiple frames of an image. After initialization, configure the degree of accuracy by setting trackingLevel, and provide observations you would like to track by setting the inputObservation initial bounding box.
Subclass of the VNImageBasedRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.47.4 Methods

188.47.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

188.47.6 Properties

188.47.7 inputObservation as VNDetectedObjectObservationMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The observation object defining a region to track.
Notes:

Providing an observation not returned from a tracker, such as a user-defined observation, begins a new tracker for the sequence. Providing an observation that was returned from a tracker continues the use of

that tracker, to track the region to the next frame.
In general, unless specified in the request's documentation or header file, you must define the rectangle in normalized coordinates, with the origin at the lower-left corner.
(Read only property)

188.47.8 LastFrame as Boolean

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A Boolean that indicates the last frame in a tracking sequence.
Notes:

If set to true, the current tracker will be released to the pool of available trackers when the current frame finishes processing.
(Read and Write property)

188.47.9 trackingLevel as Integer

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: A value for specifying whether to prioritize speed or location accuracy.
Notes:

Use VNRequestTrackingLevelAccurate or VNRequestTrackingLevelFast.
(Read only property)

188.47.10 Constants

188.47.11 VNRequestTrackingLevelAccurate = 0

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the tracking levels.
Notes: Tracking level that favors location accuracy over speed.

188.47.12 VNRequestTrackingLevelFast = 1

MBS MacFrameworks Plugin, Plugin Version: 19.4.

Function: One of the tracking levels.
Notes: Tracking level that favors speed over location accuracy.

188.48 class VNTrackObjectRequestMBS

188.48.1 class VNTrackObjectRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that tracks movement of a previously identified arbitrary object across multiple images or video frames.
Notes:

Use this type of request to track the bounding boxes around objects previously identified in an image. Vision will attempt to locate the same object from the input observation throughout the sequence.
Subclass of the VNTrackingRequestMBS class.

- Vision Framework for Xojo

188.48.3 Blog Entries

- Vision Framework for Xojo

188.48.4 Methods

188.48.5 Constructor(observation as VNDetectedObjectObservationMBS, DelegateHandler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new object tracking request with a detected object observation.
Notes:

observation: A detected object observation with bounding box information.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.49 class VNTrackRectangleRequestMBS

188.49.1 class VNTrackRectangleRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that tracks movement of a previously identified rectangular object across multiple images or video frames.
Notes:

Use this type of request to track the bounding boxes of rectangles throughout a sequence of images. Vision returns locations for rectangles found in all orientations and sizes.
Subclass of the VNTrackingRequestMBS class.

- Vision Framework for Xojo

188.49.3 Blog Entries

- Vision Framework for Xojo

188.49.4 Methods

188.49.5 Constructor(observation as VNRectangleObservationMBS, Delegate-Handler as VNRequestCompletedMBS = nil, tag as variant = nil)

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: Creates a new rectangle tracking request with a rectangle observation.
Notes:

observation: A rectangle observation with bounding box and corner location information.

When work is done, the optional delegate method is invoked to provide result on success or error on failure.

188.50 class VNTranslationalImageRegistrationRequestMBS

188.50.1 class VNTranslationalImageRegistrationRequestMBS

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: An image analysis request that determines the affine transform needed to align the content of two images.
Notes:

Create and perform a translational image registration request to align content in two images through translation.
Subclass of the VNImageRegistrationRequestMBS class.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

188.50.4 Methods

188.50.5 Constructor

MBS MacFrameworks Plugin, Plugin Version: 19.4, Platform: macOS, Targets: All.

Function: The private constructor.

Chapter 189

VLC

189.1 class VLCAudioOutputDeviceMBS

189.1.1 class VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for details on audio output devices.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

189.1.2 Methods

189.1.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

189.1.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.1.5 Properties

189.1.6 Description as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The User-friendly device description.
Notes: (Read and Write property)

189.1.7 Device as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The output device ID.
Notes: (Read and Write property)

189.1.8 NextOutput as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next entry in the list.
Notes:

You can loop over entries. Last one has nil in this property.
(Read and Write property)

189.2 class VLCAudioOutputMBS

189.2.1 class VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Description for audio output.
Notes:

It contains name, description and pointer to next record.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

189.2.2 Methods

189.2.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

189.2.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.2.5 Properties

189.2.6 Description as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The description for this audio output.
Notes: (Read and Write property)

189.2.7 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of this audio output.
Notes: (Read and Write property)

189.2.8 NextOutput as VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next audio output reference.
Notes: (Read and Write property)

189.3 class VLCEqualizerMBS

189.3.1 class VLCEqualizerMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for equalizer in VLC.
Notes: Requires VLC 2.2.

189.3.2 Blog Entries

- MBS Xojo Plugins, version 18.0pr8

189.3.3 Blog Entries

- MBS Xojo Plugins, version 18.0pr8

189.3.4 Methods

189.3.5 BandFrequency(index as Integer) as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get a particular equalizer band frequency.
Notes:

This value can be used, for example, to create a label for an equalizer band control in a user interface.

Index: index of the band, counting from zero
Returns equalizer band frequency (Hz), or -1 if there is no such band

Requires LibVLC 2.2.0 or later

189.3.6 Constructor(index as Integer, vlc as VLCInstanceMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a new equalizer, with initial frequency values copied from an existing preset.
Notes:

The new equalizer can subsequently be applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.

Index: index of the preset, counting from zero.

Requires VLC 2.2.
See also:

- 189.3.7 Constructor(vlc as VLCInstanceMBS = nil) 26622

189.3.7 Constructor(vlc as VLCInstanceMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a new default equalizer, with all frequency values zeroed.
Notes:

The new equalizer can subsequently be applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.
Requires VLC 2.2.
See also:

- 189.3.6 Constructor(index as Integer, vlc as VLCInstanceMBS = nil) 26621

189.3.8 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.3.9 PresetName(index as Integer) as string

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the name of a particular equalizer preset.
Notes:

This name can be used, for example, to prepare a preset label or menu in a user interface.

index: index of the preset, counting from zero
Returns name, or "" if there is no such preset

Requires LibVLC 2.2.0 or later.

189.3.10 Properties

189.3.11 BandCount as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of distinct frequency bands for an equalizer.
Notes:

Requires LibVLC 2.2.0 or later.
(Read only property)

189.3.12 Handle as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.3.13 Preamp as Single

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a new pre-amplification value for an equalizer.
Notes:

The new equalizer settings are subsequently applied to a media player by invoking VLCMediaPlayer.SetEqualizer.

The supplied amplification value will be clamped to the -20.0 to +20.0 range.

preamp value (-20.0 to 20.0 Hz)
Returns zero on success, -1 on error.

Requires LibVLC 2.2.0 or later
(Read and Write property)

189.3.14 PresetCount as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of equalizer presets.
Notes:

Requires LibVLC 2.2.0 or later
(Read only property)

189.3.15 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the parent VLC instance object.
Notes: (Read only property)

189.3.16 Map(Index as Integer) as Single

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set a new amplification value for a particular equalizer frequency band.
Notes:

The new equalizer settings are subsequently applied to a media player by invoking VLCMediaPlayerMBS.SetEqualizer.

The supplied amplification value will be clamped to the -20.0 to +20.0 range.

Value: amplification value (-20.0 to 20.0 Hz)
index, counting from zero, of the frequency band to set

Requires LibVLC 2.2.0 or later
(Read and Write computed property)

189.4 class VLCEventManagerMBS

189.4.1 class VLCEventManagerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for getting event with VLC.
Notes:

Only the events which the parent object sends are delivered.
With 12.3pr5 and newer plugins, this function sends events to main thread as it should be.

- 189.4.8 Constructor(MediaListPlayer as VLCMediaListPlayerMBS) 26626

189.4.10 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.4.11 Listen

MBS VLC Plugin, Plugin Version: 14.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers internally events.
Notes:

This is normally called in the constructor.
If you add event handlers later via AddHandler command, you need to call this method to have those event handlers also registered.

189.4.12 Properties

189.4.13 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.4.14 Parent as Variant

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The parent object.
Notes:

Just a reference back, so the target object is not released too early.
(Read and Write property)

189.4.15 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.4.16 Events

189.4.17 Log(Message as String, level as Integer, Name as String, Header as String, ModuleName as String, FileName as String, Line as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: .

Function: A log message arrived.
Notes:

message: The message to log.
level: message level, e.g. kLogLevelError
Name: object name
Header: object header or empty.
ModuleName: module name
FileName: The source code file name.
Line: The source code line number.

Enable this event using VLCInstanceMBS.SetLogEvent method.

189.4.18 MediaDiscovererEnded

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media discovered ended.

189.4.19 MediaDiscovererStarted

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media discoverer started.

189.4.20 MediaDurationChanged(newDuration as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Duration of media changed.

189.4.21 MediaFreed(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media was released.

189.4.22 MediaListItemAdded(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list item added.

189.4.23 MediaListItemDeleted(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list item deleted.

189.4.24 MediaListPlayerNextItemSet(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.25 MediaListPlayerPlayed

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list player played.

189.4.26 MediaListPlayerStopped

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list player stopped.

189.4.27 MediaListWillAddItem(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list will add item.

189.4.28 MediaListWillDeleteItem(item as VLCMediaMBS, index as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media list will delete item.

189.4.29 MediaMetaChanged(metatype as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Metadata changed.

189.4.30 MediaParsedChanged(newStatus as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Parsed status changed.

189.4.31 MediaPlayerBackward

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player moved backwards.

189.4.32 MediaPlayerBuffering

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.33 MediaPlayerEncounteredError

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.34 MediaPlayerEndReached

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player reached end of media.

189.4.35 MediaPlayerForward

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Player moved forward.

189.4.36 MediaPlayerLengthChanged(NewLength as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The length of the media changed.

189.4.37 MediaPlayerMediaChanged(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The media changed in the media player.

189.4.38 MediaPlayerNothingSpecial

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.39 MediaPlayerOpening

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The Media player is opening.

189.4.40 MediaPlayerPausableChanged(pausable as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player's pausable state changed.

189.4.41 MediaPlayerPaused

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The player was paused.

189.4.42 MediaPlayerPlaying

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The player is playing.

189.4.43 MediaPlayerPositionChanged(newPosition as Double)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Position changed.
Notes: This event does not fire if you assigned new position. It is only to inform you that position changed due to playing video.

189.4.44 MediaPlayerScrambledChanged(newScrambled as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The scrambled property changed.

189.4.45 MediaPlayerSeekableChanged(seekable as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media Player's seekable status changed.

189.4.46 MediaPlayerSnapshotTaken(filename as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: A snapshot has been taken.

189.4.47 MediaPlayerStopped

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player stopped.

189.4.48 MediaPlayerTimeChanged(newTime as Int64)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media player reached a new time.

189.4.49 MediaPlayerTitleChanged(newTitle as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: The title changed.

189.4.50 MediaPlayerVout(newCount as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.51 MediaStateChanged(newState as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: State changed on media.

189.4.52 MediaSubItemAdded(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media got a new subitem.

189.4.53 MediaSubItemTreeAdded(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: .

Function: A media item got new sub items.

189.4.54 VlmMediaAdded(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.55 VlmMediaChanged(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.56 VlmMediaInstanceStarted(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.57 VlmMediaInstanceStatusEnd(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.58 VlmMediaInstanceStatusError(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.59 VlmMediaInstanceStatusInit(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.60 VlmMediaInstanceStatusOpening(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.61 VlmMediaInstanceStatusPause(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.62 VlmMediaInstanceStatusPlaying(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.63 VlmMediaInstanceStopped(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: One of the events.

189.4.64 VlmMediaRemoved(MediaName as string, InstanceName as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: Media was removed.

189.4.65 Constants

189.4.66 kLogLevelDebug = 0

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Debug message

189.4.67 kLogLevelError = 4

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Error message.

189.4.68 kLogLevelNotice = 2

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Important informational message

189.4.69 kLogLevelWarning = 3

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the log levels.
Notes: Warning (potential error) message

189.5 class VLCExitHandlerMBS

189.5.1 class VLCExitHandlerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: A class to receive exit events from VLC user interface.
Notes: As you probably use this plugin with your own user interface, you don't need this class.

189.5.2 Events

189.5.3 ExitEvent

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: .

Function: An exit event was received from VLC user interface.

189.6 class VLCInstanceMBS

189.6.1 class VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The main VLC class.
Notes:

Keep the instance in memory as long as you use any other VLC classes.
Only one instance per app, please.

189.6.2 Blog Entries

- MBS Xojo Plugins, version 18.6pr4

189.6.3 Blog Entries

- MBS Xojo Plugins, version 18.6pr4

189.6.4 Methods

189.6.5 AddUserInterface(name as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Try to start a user interface for the libvlc instance.
Notes:

name: interface name, or nil for default.
Return true on success, false on error.

189.6.6 AudioOutputDevices(ModuleName as string) as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets a list of audio output devices for a given audio output module.
Notes:

Not all audio outputs support this. In particular, an empty (nil)
list of devices does not imply that the specified audio output does
not work.

The list might not be exhaustive.

Some audio output devices in the list might not actually work in some circumstances. By default, it is recommended to not specify any explicit audio device.

Modulename: audio output name.

Returns a nil-terminated linked list of potential audio output devices.
Requires VLC 2.1.

189.6.7 ClearError

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Clears the LibVLC error status for the current thread.
Notes:

This is optional.
By default, the error status is automatically overridden when a new error occurs, and destroyed when the thread exits.

189.6.8 ClearLog

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Unsets the logging callback for a LibVLC instance.
Notes:

This is rarely needed: the callback is implicitly unset when the instance is destroyed.
This function will wait for any pending callbacks invocation to complete
(causing a deadlock if called from within the callback).

Requires VLC 2.1.

189.6.9 Clock as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Return the current time as defined by LibVLC.
Notes:

The unit is the microsecond.
Time increases monotonically (regardless of time zone changes and RTC adjustements).
The origin is arbitrary but consistent across the whole system (e.g. the system uptim, the time since the system was booted). On systems that support it, the POSIX monotonic clock is used.

189.6.10 Constructor(args() as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create and initialize a libvlc instance.
Notes:

This functions accept a list of "command line" arguments similar to the main(). These arguments affect the LibVLC instance default configuration.

Arguments are meant to be passed from the command line to LibVLC, just like VLC media player does. The list of valid arguments depends on the LibVLC version, the operating system and platform, and set of available LibVLC plugins. Invalid or unsupported arguments will cause the function to fail (i.e. return nil). Also, some arguments may alter the behaviour or otherwise interfere with other LibVLC functions.

There is absolutely no warranty or promise of forward, backward and cross-platform compatibility with regards to this Constructor() arguments. We recommend that you do not use them, other than when debugging.

On success handle property is not nil.
For Version 19.0 of the plugins, please do not pass app path as first argument.

For MacOS, please set VLC_PLUGIN_PATH environment variable for the path to the plugins folder.

189.6.11 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.6.12 ErrorMessage as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns an human-readable error message for the last VLC error in the calling thread.

189.6.13 GetAudioFilterList as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of audio filters that are available.
Notes: Return a list of module descriptions.

189.6.14 GetAudioOutputDeviceCount(AudioOutputName as string) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get count of devices for audio output, these devices are hardware oriented like analor or digital output of sound card.
Notes:

AudioOutputName: name of audio output.
Returns number of devices.

189.6.15 GetAudioOutputDeviceID(AudioOutputName as string, index as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get id name of device.
Notes:

AudioOutputName: name of audio output.
Index: device index.
Returns id name of device, use for setting device.

189.6.16 GetAudioOutputDeviceLongName(AudioOutputName as string, index as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get long name of device, if not available short name given.
Notes:

AudioOutputName: name of audio output.
Index: Device Index.
Returns long name of device.

189.6.17 GetAudioOutputList as VLCAudioOutputMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the list of available audio outputs.
Notes: Returns list of available audio outputs. In case of error, nil is returned.

189.6.18 GetChangeset as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc changeset.
Notes:

Example: "aa9bce0bc4"
Return a string containing the libvlc changeset.

189.6.19 GetCompiler as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc compiler version.
Notes:

Example: "gcc version 4.2.3 (Ubuntu 4.2.3-2ubuntu6)"
Return a string containing the libvlc compiler version.

189.6.20 getenv(name as string) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Queries the environment variable with given name.

189.6.21 GetLoadError as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns error string from LoadLibrary function.

189.6.22 GetVersion as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Retrieve libvlc version.
Notes:

Example: "1.1.0-git The Luggage"
Return a string containing the libvlc version.

189.6.23 GetVideoFilterList as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns a list of video filters that are available.
Notes: Return a list of module descriptions

189.6.24 LoadLibrary(path as folderitem) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the vlc library.
Notes:

Returns true on success and false on failure.

Please point to libVLC.dylib on Mac and libVLC.dll on Windows.
See also:

- 189.6.25 LoadLibrary(path as string) as boolean 26645

189.6.25 LoadLibrary(path as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Loads the vlc library.
Notes:

Returns true on success and false on failure.
Please point to libVLC.dylib on Mac and libVLC.dll on Windows.
See also:

- 189.6.24 LoadLibrary(path as folderitem) as boolean 26644

189.6.26 SetAppID(ID as string, Version as string, Icon as String)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets some meta-information about the application.
Notes:

See also SetUserAgent().

id: Java-style application identifier, e.g. "com.acme.foobar"
version: application version numbers, e.g. "1.2.3"
icon: application icon name, e.g. "foobar"

Requires VLC 2.1.

189.6.27 setlocale(category as Integer, locale as string) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the locale to use.
Notes:

The Setlocale function sets the C library's notion of natural language formatting style for particular sets of routines. Each such style is called a 'locale' and is invoked using an appropriate name passed as a C string.

The setlocale() function recognizes several categories of routines. These are the categories and the sets of routines they select:

LocaleAll	Set the entire locale generically.
LocaleCollate	Set a locale for string collation routines. This controls alphabetic ordering in strcoll() and strxfrm().
LocaleCType	Set a locale for the ctype and multibyte functions. This controls recognition of upper and lower case, alphabetic or non-alphabetic characters, and so on.
LocaleMessages	Set a locale for message catalogs, see catopen function.
LocaleMonetary	Set a locale for formatting monetary values; this affects the localeconv() function.
LocaleNumeric	Set a locale for formatting numbers. This controls the formatting of decimal points in input and output of floating point numbers in functions such as printf() and scanf(), as well as values returned by localeconv().
LocaleTime	Set a locale for formatting dates and times using the strftime() function.

Only three locales are defined by default: the empty string "" (which denotes the native environment) and the "C" and "POSIX" locales (which denote the C-language environment). By default, C programs start in the "C" locale.

189.6.28 SetLogEvent

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the logging callback for a LibVLC instance.
Notes:

This function is thread-safe: it will wait for any pending callbacks
invocation to complete.

Some log messages (especially debug) are emitted by LibVLC while
is being initialized. These messages cannot be captured with this interface.

A deadlock may occur if this function is called from the event.

Requires VLC 2.1.

189.6.29 SetLogFile(File as FolderItem)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets up logging to a file.
Notes: Requires VLC 2.1.

189.6.30 SetUserAgent(AppName as string, httpUserAgent as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the application name.
Notes:

VLC passes this as the user agent string when a protocol requires it.

name: human-readable application name, e.g. "FooBar player 1.2.3"
http: HTTP User Agent, e.g. "FooBar/1.2.3 Python/2.6.0"

189.6.31 WaitUserInterface

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Waits until an interface causes the instance to exit.
Notes: You should start at least one interface first, using AddUserInterface.

189.6.32 Properties

189.6.33 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.6.34 ExitHandler as VLCExitHandlerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Registers a callback for the LibVLC exit event.
Notes:

This is mostly useful if you have started at least one interface with AddUserInterface. Typically, this function will wake up your application main loop (from another thread).

This function and WaitUserInterface() cannot be used at the same time.
Use either or none of them but not both.
(Read and Write computed property)

189.7 class VLCMediaDiscovererMBS

189.7.1 class VLCMediaDiscovererMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The plugin class for the VLC media discovery.
Notes:

LibVLC media discovery finds available media via various means.
This corresponds to the service discovery functionality in VLC media player.
Different plugins find potential medias locally (e.g. user media directory), from peripherals (e.g. video capture device), on the local network (e.g. SAP) or on the Internet (e.g. Internet radios).

189.7.2 Methods

189.7.3 Constructor(vlc as VLCInstanceMBS, name as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Discover media service by name.
Notes:

vlc: The VLC instance.
Name: service name.
Handle is not nil on success.

189.7.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.7.5 IsRunning as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Query if media service discover object is running.
Notes: Returns true if running, false if not.

189.7.6 LocalizedName as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the localized name.

189.7.7 MediaList as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media service discover media list.

189.7.8 Properties

189.7.9 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

189.7.10 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.8 class VLCMediaLibraryMBS

189.8.1 class VLCMediaLibraryMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for VLC media library.

189.8.2 Methods

189.8.3 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an new Media Library object.
Notes: On success handle property is not nil.

189.8.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.8.5 Load as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Load media library.
Notes: Return true on success, false on error.

189.8.6 MediaList as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media library subitems.

189.8.7 Properties

189.8.8 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.8.9 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.9 class VLCMediaListMBS

189.9.1 class VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a media list.

189.9.2 Methods

189.9.3 AddMedia(item as VLCMediaMBS) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add media instance to media list.
Notes:

item: a media instance
Return true on success, false if the media list is read-only.
The Lock should be held upon entering this function.

189.9.4 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an empty media list.
Notes: On success the handle property is not zero.

189.9.5 Count as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get count on media list items.
Notes:

The Lock should be held upon entering this function.
Return number of items in media list.

189.9.6 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.9.7 GetMedia as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media instance from this media list instance.
Notes:

The Lock should NOT be held upon entering this function.
Returns media instance or nil.

189.9.8 IndexOfItem(item as VLCMediaMBS) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Find index position of List media instance in media list.
Notes:

Warning: the function will return the first matched position.
The Lock should be held upon entering this function.

Returns position of media instance or -1 if media not found.

189.9.9 InsertMedia(item as VLCMediaMBS, index as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Insert media instance in media list on a position.
Notes:

The Lock should be held upon entering this function.
item: a media instance
index: position in array where to insert

Return true on success, false if the media list is read-only.

189.9.10 isReadOnly as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether this media list is read-only from a user point of view.
Notes: Returns true if readonly and false if read/write.

189.9.11 ItemAtIndex(index as Integer) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: List media instance in media list at a position.
Notes:

The Lock should be held upon entering this function.
index: position in array where to get item.
Returns instance at position index, or nil if not found.

189.9.12 Lock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get lock on media list items.

189.9.13 Remove(index as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Remove media instance from media list on a position.
Notes:

The Lock should be held upon entering this function.
index: position in array where to insert
Returns true on success, false if the list is read-only or the item was not found.

189.9.14 SetMedia(item as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Associate media instance with this media list instance.
Notes:

If another media instance was present it will be released.
The Lock should NOT be held upon entering this function.

189.9.15 Unlock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Release lock on media list items.
Notes: The Lock should be held upon entering this function.

189.9.16 Properties

189.9.17 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

189.9.18 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.10 class VLCMediaListPlayerMBS

189.10.1 class VLCMediaListPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a VLC media list player.
Notes:

This is required to especially support playlist files.
The normal media player can only play a single media, and does not handle playlist files properly.

189.10.2 Methods

189.10.3 Constructor(vlc as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create new media list player.

189.10.4 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.10.5 IsPlaying as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is media list playing?
Notes: Return true for playing and false for not playing.

189.10.6 MoveNext as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play next item from media list.
Notes: Return true upon success false if there is no next item.

189.10.7 MovePrevious as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play previous item from media list.
Notes: Return true upon success false if there is no previous item.

189.10.8 Pause

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pause media list

189.10.9 Play

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play media list.

189.10.10 PlayItem(item as VLCMediaMBS) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play the given media item.
Notes: Return true upon success, false if the media is not part of the media list.

189.10.11 PlayItemAtIndex(index as Integer) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Play media list item at position index.
Notes:

index: index in media list to play.
Return true upon success false if the item wasn't found.

189.10.12 SetMediaList(list as VLCMediaListMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the media list associated with the player.

189.10.13 SetMediaPlayer(player as VLCMediaPlayerMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Replace media player in media list player with this instance.

189.10.14 SetPlaybackMode(mode as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets the playback mode for the playlist.
Notes: See kPlaybackMode* constants.

189.10.15 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current State of media list player.

189.10.16 Stop

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stop playing media list.

189.10.17 Properties

189.10.18 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.10.19 List as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The list assigned to this media list player.
Notes: (Read and Write property)

189.10.20 Player as VLCMediaPlayerMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The player assigned to this media list player.
Notes: (Read and Write property)

189.10.21 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.10.22 Constants

189.10.23 kPlaybackModeDefault = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the playback mode constants.
Notes: Default

189.10.24 kPlaybackModeLoop = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the playback mode constants.
Notes: Loop

189.10.25 kPlaybackModeRepeat = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the playback mode constants.
Notes: Repeat

189.11 class VLCMediaMBS

189.11.1 class VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The VLC class for a media item.

189.11.2 Blog Entries

- MBS Xojo Plugins, version 20.3pr9
- MBS Xojo / Real Studio Plugins, version 14.0pr5

189.11.3 Blog Entries

- MBS Xojo Plugins, version 20.3pr9
- MBS Xojo / Real Studio Plugins, version 14.0pr5

189.11.4 Methods

189.11.5 AddOption(options as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add an option to the media.
Notes:

This option will be used to determine how the media_player will read the media. This allows to use VLC's advanced reading/streaming options on a per-media basis.

The options are detailed in vlc –long-help, for instance "–sout-all"

189.11.6 AddOptionFlag(options as string, flags as UInt32)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Add an option to the media with configurable flags.
Notes:

This option will be used to determine how the media_player will read the media. This allows to use VLC's advanced reading/streaming options on a per-media basis.

The options are detailed in vlc –long-help, for instance "–sout-all"

189.11.7 Clone as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a duplicate of media object.

189.11.8 Constructor(original as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Creates a copy of the media object.
See also:

- 189.11.9 Constructor(vlc as VLCInstanceMBS, URL as string) 26663

189.11.9 Constructor(vlc as VLCInstanceMBS, URL as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media with a certain given media resource location, for instance a valid URL.
Notes:

Do not pass a file path here! This is for URLs.

URL: the media location

To refer to a local file with this function, the file://... URI syntax must be used (see IETF RFC3986).
We recommend using MediaWithPath() instead when dealing with local files.
See also:

- 189.11.8 Constructor(original as VLCMediaMBS) 26663

189.11.10 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor to cleanup the media.

189.11.11 Duration as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get duration (in ms) of media descriptor object item.
Notes: Return duration of media item or -1 on error.

189.11.12 IsParsed as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get Parsed status for media descriptor object.
Notes: Returns true if media object has been parsed otherwise it returns false.

189.11.13 MediaWithData(vlc as VLCInstanceMBS, data as memoryblock) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain data.
Notes:

Internally creates temp file for the data and opens the file.
File is later deleted when VLCMediaMBS goes out of scope.
Returns new media object or nil.
See also:

- 189.11.14 MediaWithData(vlc as VLCInstanceMBS, data as string) as VLCMediaMBS

189.11.14 MediaWithData(vlc as VLCInstanceMBS, data as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain data.
Notes:

Internally creates temp file for the data and opens the file.
File is later deleted when VLCMediaMBS goes out of scope.
Returns new media object or nil.
See also:

- 189.11.13 MediaWithData(vlc as VLCInstanceMBS, data as memoryblock) as VLCMediaMBS 26664

189.11.15 MediaWithFile(vlc as VLCInstanceMBS, file as folderitem) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain file path.
Notes:

file: local filesystem path as folderitem.
Returns new media object or nil.

189.11.16 MediaWithFileDescriptor(vlc as VLCInstanceMBS, fd as Integer) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for an already open file descriptor.
Notes:

The file descriptor shall be open for reading (or reading and writing).

Regular file descriptors, pipe read descriptors and character device descriptors (including TTYs) are supported on all platforms. Block device descriptors are supported where available.
Directory descriptors are supported on systems that provide fdopendir(). Sockets are supported on all platforms where they are file descriptors, i.e. all except Windows.

This library will not automatically close the file descriptor under any circumstance. Nevertheless, a file de-

scriptor can usually only be rendered once in a media player. To render it a second time, the file descriptor should probably be rewound to the beginning with lseek().

Returns new media object or nil.

189.11.17 MediaWithPath(vlc as VLCInstanceMBS, Path as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media for a certain file path.
Notes:

path: local filesystem path
Returns new media object or nil.

189.11.18 MediaWithURL(vlc as VLCInstanceMBS, URL as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media with a certain given media resource location, for instance a valid URL.
Example:

```
dim v as VLCInstanceMBS // your vlc object
dim m as VLCMediaMBS

// load with URL
m = VLCMediaMBS.MediaWithURL(v, "http://www.mbsplugins.com/WriteInvoice-iPhone.m4v")

// or with file URL:
m = VLCMediaMBS.MediaWithURL(v, moviefile.URLPath)
```

Notes:

URL: the media location
Returns the new media object or nil.
To refer to a local file with this function, the file://... URI syntax must be used (see IETF RFC3986).
We recommend using MediaWithPath() instead when dealing with local files.

189.11.19 Meta(type as Integer) as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Read the meta of the media.
Notes:

If the media has not yet been parsed this will return an empty string.

This methods automatically calls ParseAsync(), so after calling it you may receive a MediaMetaChanged event. If you prefer a synchronous version ensure that you call Parse() before get_meta().

189.11.20 MRL as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the media resource locator (mrl) from a media descriptor object.

189.11.21 NewAsNode(vlc as VLCInstanceMBS, name as string) as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a media as an empty node with a given name.
Notes:

Name: The name of the new node.
Returns new media object or nil.

189.11.22 Parse

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parse a media.
Notes:

This fetches (local) meta data and tracks information.
The method is synchronous.

189.11.23 ParseAsync

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Parse a media.
Notes:

This fetches (local) meta data and tracks information.
The method is the asynchronous of Parse.
To track when this is over you can listen to MediaParsedChanged event. However if the media was already parsed you will not receive this event.

189.11.24 SaveMeta as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Save the meta previously set.
Notes: Return true if the write operation was successfull.

189.11.25 SetMeta(meta as Integer, value as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the meta of the media
Notes:

This function will not save the meta, call SaveMeta in order to save the meta.

meta: Which meta data. See kMeta* constants.
Value: the media's meta

189.11.26 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current state of media descriptor object.
Notes: See kState* constants.

189.11.27 Stats as VLCMediaStatsMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current statistics about the media.
Notes: Returns statistics for media.

189.11.28 SubItems as VLCMediaListMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get subitems of media descriptor object.

189.11.29 TrackInfos as VLCMediaTrackInfoMBS()

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media descriptor's elementary streams description.
Notes:

Note, you need to call Parse or play the media at least once before calling this function.
Not doing this will result in an empty array.

189.11.30 Tracks as VLCMediaTrackMBS()

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get media descriptor's elementary streams description.
Notes:

Note, you need to call Parse or play the media at least once before calling this function.
Not doing this will result in an empty array.

Requires LibVLC 2.1.0 and later.

Returns an array of track objects.

189.11.31 Properties

189.11.32 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.11.33 Tag as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The media descriptor's user_data.
Notes:

This is a value you can use as you like.
This value survives even if the VLCMediaMBS object is destroyed and later recreated with the same VLC media object behind.
(Read and Write property)

189.11.34 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.11.35 Constants

189.11.36 kMetaActors = 22

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the Metadata Types Constants
Notes: Actors

189.11.37 kMetaAlbum = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Metadata Types Constants
Notes: Album

189.11.38 kMetaAlbumArtist = 23

MBS VLC Plugin, Plugin Version: 18.2.

Function: One of the Metadata Types Constants
Notes: Album artist

189.11.39 kMetaArtist = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Metadata Types Constants
Notes: Artist

189.11.40 kMetaArtworkURL = 15

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Metadata Types Constants
Notes: Artwork URL

189.12.6 Methods

189.12.7 Constructor(media as VLCMediaMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create a Media Player object from a Media.
Notes: On success handle is not nil.
See also:

- 189.12.8 Constructor(VLCInstance as VLCInstanceMBS) 26680

189.12.8 Constructor(VLCInstance as VLCInstanceMBS)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Create an empty Media Player object.
Notes: On success handle is not nil.
See also:

- 189.12.7 Constructor(media as VLCMediaMBS) 26680

189.12.9 CopyCGImage as Variant

MBS VLC Plugin, Plugin Version: 19.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as CGImageMBS.
Notes: This method set HasNewFrame to false.

189.12.10 CopyMemory as memoryblock

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as memoryblock.
Notes:

This method set HasNewFrame to false.
The format depends on what you passed to VideoSetFormat.
Byte order usually is BGRA.

189.12.11 CopyPicture as Picture

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame as picture.
Notes:

This method set HasNewFrame to false.
If using CGContext, this returns a CGImageMBS. Else a Picture.

With version 19.0, this returns always a picture.

189.12.12 CopyToMemory(dest as Ptr, offset as Integer, RowBytes as Integer) as boolean

MBS VLC Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Copies current frame into a given memory block.
Notes:

Offset: Position of first byte in memoryblock.
RowBytes: The row size in bytes of your memoryblock.

This way you can have your frame go into a buffer of bigger width/height representing an OpenGL texture for example.
Byte order usually is BGRA.

189.12.13 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.12.14 GetChapterCountForTitle(title as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get title chapter count.
Notes: Return number of chapters in title, or -1.

189.12.15 GetChapterDescription(index as Integer) as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available chapters for specific title.
Notes: Return list containing description of available chapter for title with index.

189.12.16 GetMemory as Ptr

MBS VLC Plugin, Plugin Version: 13.4, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Returns pointer to memory with current frame.
Notes:

This method set HasNewFrame to false.
The format depends on what you passed to VideoSetFormat.

189.12.17 Navigate(Navigate as Integer)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Navigate through DVD Menu.

189.12.18 NextChapter

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set next chapter (if applicable)

189.12.19 NextFrame

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Display the next frame (if supported)

189.12.20 Pause

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle pause (no effect if there is no media)
See also:

- 189.12.21 Pause(pause as boolean) 26683

189.12.21 Pause(pause as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Pause or resume (no effect if there is no media)
Notes: pause: play/resume if false, pause if true.
See also:

- 189.12.20 Pause 26683

189.12.22 Play as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Plays video.
Notes: Return true if playback started (and was already started), or false on error.

189.12.23 PreviousChapter

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set previous chapter (if applicable)

189.12.24 SetAudioOutput(AudioOutputName as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set the audio output.
Notes:

Change will be applied after stop and play.
Name: name of audio output.
Return true on success.

189.12.25 SetAudioOutputDevice(AudioOutputName as string, deviceID as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set audio output device. Changes are only effective after stop and play.
Notes:

AudioOutputName: name of audio output.
deviceID: device ID.

189.12.26 SetEqualizer(Equalizer as VLCEqualizerMBS = nil)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Apply new equalizer settings to a media player.
Notes:

It is possible to apply new equalizer settings to a media player whether the media player is currently playing media or not.
Invoking this method will immediately apply the new equalizer settings to the audio output of the currently playing media if there is any.
If there is no currently playing media, the new equalizer settings will be applied later if and when new media is played.

Equalizer settings will automatically be applied to subsequently played media.

To disable the equalizer for a media player invoke this method passing nil for the equalizer parameter.

The media player does not keep a reference to the supplied equalizer so it is safe for an application to release the equalizer reference any time after this method returns.

Requires VLC 2.2.

189.12.27 SetSubtitleFile(filename as string) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set new video subtitle file.
Notes:

filename: new video subtitle file
Returns the success status.

189.12.28 SetVideoTitleDisplay(position as Integer, timeout as Integer)

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set if, and how, the video title will be shown when media is played.
Notes:

position: position at which to display the title, or kVideoTitleDisplayPositionDisable to prevent the title from being displayed.
timeout: title display timeout in milliseconds (ignored if libvlc_position_disable)

Requires VLC 2.1.

189.12.29 Stop

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Stop (no effect if there is no media)

189.12.30 ToggleFullScreen

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle fullscreen status on non-embedded video outputs.
Notes: See also Fullscreen property.

189.12.31 ToggleMute

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle mute status.

189.12.32 ToggleTeletext

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Toggle teletext transparent status on video output.

189.12.33 VideoGetCursor(num as Integer, byref px as Integer, byref py as Integer) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the mouse pointer coordinates over a video.
Notes:

Coordinates are expressed in terms of the decoded video resolution, not in terms of pixels on the screen/viewport (to get the latter, you can query your windowing system directly).

Either of the coordinates may be negative or larger than the corresponding dimension of the video, if the cursor is outside the rendering area.

The coordinates may be out-of-date if the pointer is not located on the video rendering area. LibVLC does not track the pointer if it is outside of the video widget.

LibVLC does not support multiple pointers (it does of course support multiple input devices sharing the same pointer) at the moment.

num: number of the video (starting from, and most commonly 0)
px: get the abscissa.
py: get the ordinate.
Returns true on success, false if the specified video does not exist

189.12.34 VideoGetSize(num as Integer, byref px as UInt32, byref py as UInt32) as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the pixel dimensions of a video.
Notes:

num: number of the video (starting from, and most commonly 0)
px: get the pixel width [OUT]
py: get the pixel height [OUT]
Return true on success, false if the specified video does not exist.

189.12.35 VideoSetCallback(width as integer, height as integer, CGContextHandle as integer = 0)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Sets video callbacks, so the plugin can provide current frame with CopyPicture method.
Notes:

You can use CopyPicture and CopyMemory methods to query new frame content.
The hasNewFrame property tells you whether a new frame is available.
The plugin will optionally draw the frames into the CGContext you provide.
Please use CopyCGImage to get a CGImage from image buffer.

189.12.36 VideoSetDeinterlace(Mode as string)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable deinterlace filter.
Notes: Mode: Type of deinterlace filter, "" to disable.

189.12.37 VideoSetFormat(chroma as string, width as UInt32, height as UInt32, pitch as UInt32)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set decoded video chroma and dimensions.
Notes:

This only works in combination with SetVideoCallbacks().
chroma: a four-characters string identifying the chroma (e.g. "RV32" or "YUYV")
width: pixel width
height: pixel height
pitch: line pitch (in bytes)

All pixel planes are expected to have the same pitch.

189.12.38 VideoSetKeyInput(on as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable key press events handling, according to the LibVLC hotkeys configuration.
Notes:

By default and for historical reasons, keyboard events are handled by the LibVLC video widget.

On X11, there can be only one subscriber for key press and mouse click events per window. If your application has subscribed to those events for the X window ID of the video widget, then LibVLC will not be able to handle key presses and mouse clicks in any case.

This function is only implemented for X11 and Win32 at the moment.

on: true to handle key press events, false to ignore them.

189.12.39 VideoSetLogoString(option as Integer, logo as String)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set logo option as string.
Notes: Options that take a different type value are ignored.

189.12.40 VideoSetMouseInput(on as boolean)

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable mouse click events handling.
Notes:

By default, those events are handled. This is needed for DVD menus to work, as well as a few video filters such as "puzzle".

This function is only implemented for X11 and Win32 at the moment.

on: true to handle mouse click events, false to ignore them.

189.12.41 VideoTakeSnapshot(num as Integer, path as string, width as Integer, height as Integer) as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Take a snapshot of the current video window.
Notes:

If width AND height is 0, original size is used.
If width XOR height is 0, original aspect-ratio is preserved. (e.g. width = 0 and height = -1)

num: number of video output (typically 0 for the first/only one)
Path: the path where to save the screenshot to
Width: the snapshot's width
Height: the snapshot's height

Returns true on success, false if the video was not found

189.12.42 Properties

189.12.43 AGL as UInt32

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the agl handler where the media player should render its video output.
Notes:

Returns the agl handler or 0 if none where set.
(Read and Write property)

189.12.44 AspectRatio as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set current video aspect ratio.
Notes:

Set new video aspect-ratio or "" to reset to default. Invalid aspect ratios are ignored.
Get the video aspect ratio or "" if unspecified.

The value must be something like "4:3", "16:9", "16:10", ...
(Read and Write property)

189.12.45 AudioChannel as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio channel.
Notes: (Read and Write property)

189.12.46 AudioDelay as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio delay in microseconds.
Notes:

The audio delay will be reset to zero each time the media changes.
(Read and Write property)

189.12.47 AudioOutputDevices as VLCAudioOutputDeviceMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Gets a list of potential audio output devices,
Notes:

See also SetAudioOutputDevice method.

Not all audio outputs support enumerating devices.
The audio output may be functional even if the list is empty (nil).

The list may not be exhaustive.

Some audio output devices in the list might not actually work in some circumstances. By default, it is recommended to not specify any explicit audio device.

Returns a nil-terminated linked list of potential audio output devices.
Requires LibVLC 2.2.0 or later.
(Read only property)

189.12.48 AudioOutputDeviceType as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set/Get current audio device type.
Notes:

Device type describes something like character of output sound - stereo sound, 2.1, 5.1 etc.
(Read and Write property)

189.12.49 AudioTrack as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current audio track.
Notes:

Get or set current audio track.
(Read and Write property)

189.12.50 AudioTrackCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get number of available audio tracks.
Notes:

Returns the number of available audio tracks (int), or -1 if unavailable.
(Read only property)

189.12.51 CanPause as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Can this media player be paused?
Notes:

Returns true if the media player can pause.
(Read only property)

189.12.52 Chapter as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set movie chapter.
Notes:

Returns chapter number currently playing, or -1 if there is no media.
Sets movie chapter (if applicable).
(Read and Write property)

189.12.53 ChapterCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie chapter count.
Notes:

Returns number of chapters in movie, or -1.
(Read only property)

189.12.54 CropGeometry as string

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current crop filter geometry.
Notes:

Returns the crop filter geometry or "" if unset.
Set with new crop filter geometry ("" to unset).

Seems to be broken in our tests inside libVLC.
(Read and Write property)

189.12.55 FPS as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie fps rate
Notes:

Returns frames per second (fps) for this playing movie, or 0 if unspecified.
(Read only property)

189.12.56 FullScreen as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Enable or disable fullscreen.
Notes:

With most window managers, only a top-level windows can be in full-screen mode. Hence, this function will not operate properly if XWindow property was used to embed the video in a non-top-level window. In that case, the embedding window must be reparented to the root window before fullscreen mode is enabled. You will want to reparent it back to its normal parent when disabling fullscreen.
(Read and Write property)

189.12.57 GetAudioTrackDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available audio tracks.
Notes:

Returns list with description of available audio tracks, or nil.
(Read only property)

189.12.58 GetSPUDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available video subtitles.
Notes:

Return list containing description of available video subtitles or nil.
(Read only property)

189.12.59 GetVideoTitleDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available titles.
Notes:

Return list containing description of available titles.
(Read only property)

189.12.60 Handle as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

189.12.61 HasNewFrame as Boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether a new frame is available.
Notes: (Read and Write property)

189.12.62 HasVOut as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: How many video outputs does this media player have?
Notes:

Return the number of video outputs.
(Read only property)

189.12.63 Height as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current video height.
Notes:

Returns the video pixel height or 0 if not applicable.
(Read only property)

189.12.64 HWND as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a Win32/Win64 API window handle (HWND) where the media player should render its video output.
Notes:

If LibVLC was built without Win32/Win64 API output support, then this has no effects.

Get the Windows API window handle (HWND) previously set with this property. The handle will be returned even if LibVLC is not currently outputting any video to it.
Currently not supported by our plugin.
(Read and Write property)

189.12.65 IsPlaying as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether player is playing.

Notes: (Read only property)

189.12.66 IsSeekable as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is this media player seekable?
Notes:

Returns true if the media player can seek.
(Read only property)

189.12.67 Length as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the current movie length (in ms).
Notes:

Return the movie length (in ms), or -1 if there is no media.
(Read only property)

189.12.68 Media as VLCMediaMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current media.
Notes: (Read and Write property)

189.12.69 Mute as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current mute status.
Notes:

If true then mute, otherwise unmute.
(Read and Write property)

189.12.70 NSObject as Ptr

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the NSView handler where the media player should render its video output.
Notes:

Currently not supported by our plugin.
(Read and Write property)

189.12.71 Position as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set movie position.
Notes:

Movie position as percentage between 0.0 and 1.0.
Returns movie position, or -1. in case of error.
Set movie position. This has no effect if playback is not enabled. This might not work depending on the underlying input format and protocol.
(Read and Write property)

189.12.72 ProgramScrambled as boolean

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Check if the current program is scrambled.
Notes:

true if the current program is scrambled.
Requires VLC 2.2.
(Read only property)

189.12.73 Rate as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the requested movie play rate.
Notes:

Depending on the underlying media, the requested rate may be different from the real playback rate.
(Read and Write property)

189.12.74 Scale as Double

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current video scaling factor.
Notes:

That is the ratio of the number of pixels on screen to the number of pixels in the original decoded video in each dimension. Zero is a special value; it will adjust the video to the output window/drawable (in windowed mode) or the entire screen.

Note that not all video outputs support scaling.
(Read and Write property)

189.12.75 SPU as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current video subtitle.
Notes:

Returns the video subtitle selected, or -1 if none.
(Read and Write property)

189.12.76 SPUCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the number of available video subtitles.
Notes: (Read only property)

189.12.77 SPUDelay as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current subtitle delay.
Notes:

This affects the timing of when the subtitle will be displayed.
Positive values means subtitles are being displayed later, while negative values will result in subtitles being displayed earlier.
The subtitle delay will be reset to zero each time the media changes.
(Read and Write property)

189.12.78 State as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current movie state.
Notes:

Returns the current state of the media player (playing, paused, ...)
(Read only property)

189.12.79 Tag as Variant

MBS VLC Plugin, Plugin Version: 14.0, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The tag value.
Notes:

You can store whatever you like in this property.
(Read only property)

189.12.80 Time as Int64

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set the current movie time (in ms).
Notes:

Return the movie time (in ms), or -1 if there is no media.
Set the movie time (in ms). This has no effect if no media is being played.
Not all formats and protocols support this.
(Read and Write property)

189.12.81 Title as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Set/Get movie title.
Notes:

Returns title number currently playing, or -1.
(Read and Write property)

189.12.82 TitleCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get movie title count.
Notes:

Returns title number count, or -1.
(Read only property)

189.12.83 VideoTeleText as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set current teletext page requested.
Notes: (Read and Write property)

189.12.84 VideoTrack as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set video track.
Notes: (Read and Write property)

189.12.85 VideoTrackCount as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get number of available video tracks.
Notes:

Returns the number of available video tracks.
(Read only property)

189.12.86 VideoTrackDescription as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get the description of available video tracks.
Notes:

Returns list with description of available video tracks, or nil on error.
(Read only property)

189.12.87 VLC as VLCInstanceMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The reference to the VLC instance.
Notes: (Read only property)

189.12.88 Volume as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Current software audio volume.
Notes:

The volume in percents.
0 = mute, 100 = nominal / 0dB.
(Read and Write property)

189.12.89 Width as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get current video width.
Notes:

Returns the video pixel width or 0 if not applicable.
(Read only property)

189.12.90 WillPlay as boolean

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Is the player able to play.
Notes: (Read only property)

189.12.91 XWindow as UInt32

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set an X Window System drawable where the media player should render its video output.
Notes:

If LibVLC was built without X11 output support, then this has no effects.

The specified identifier must correspond to an existing Input/Output class X11 window. Pixmaps are not supported. The caller shall ensure that the X11 server is the same as the one the VLC instance has been configured with. This function must be called before video playback is started; otherwise it will only take effect after playback stop and restart.

Get the X Window System window identifier previously set with this property. Note that this will return the identifier even if VLC is not currently using it (for instance if it is playing an audio-only input).
Currently not supported by our plugin.
(Read and Write property)

189.12.92 VideoAdjust(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set adjust option as Integer.
Notes:

option: See kAdjust* constants.

Options that take a different type value are ignored.

Using kAdjustEnable with value 0 stops adjust filter. With other values you start adjust filter.
(Read and Write computed property)

189.12.93 VideoAdjustFloat(option as Integer) as single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/set adjust option as float.
Notes:

option: See kAdjust* constants.
Options that take a different type value are ignored.
(Read and Write computed property)

189.12.94 VideoLogo(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set logo option as Integer.
Notes:

Options that take a different type value are ignored.
Passing kLogoEnable as option value has the side effect of starting (arg not 0) or stopping (arg 0) the logo filter.
(Read and Write computed property)

189.12.95 VideoMarquee(option as Integer) as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get, Enable, disable or set an integer marquee option.
Notes:

Setting kMarqueeEnable has the side effect of enabling (arg not 0) or disabling (arg 0) the marq filter.
(Read and Write computed property)

189.12.96 VideoMarqueeString(option as Integer) as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Get/Set a string marquee option value
Notes: (Read and Write computed property)

189.12.97 Constants

189.12.98 kAdjustBrightness = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Brightness

189.12.99 kAdjustContrast = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Contrast

189.12.100 kAdjustEnable = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Enable

189.12.101 kAdjustGamma = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Gamma

189.12.102 kAdjustHue = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Hue

189.12.103 kAdjustSaturation = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the adjust parameter constants.
Notes: Saturation

189.12.104 kAudioChannelDolbys = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Dolbys

189.12.105 kAudioChannelError = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Error

189.12.106 kAudioChannelLeft = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Left channel

189.12.107 kAudioChannelRight = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Right channel

189.12.108 kAudioChannelRStereo = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: RStereo

189.12.109 kAudioChannelStereo = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the audio channels constants.
Notes: Stereo

189.12.110 kAudioOutputDevice_2F2R = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 2F2R

189.12.111 kAudioOutputDevice_3F2R = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 3F2R

189.12.112 kAudioOutputDevice_5_1 = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 5/1

189.12.113 kAudioOutputDevice_6_1 = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 6/1

189.12.114 kAudioOutputDevice_7_1 = 8

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: 7/1

189.12.115 kAudioOutputDevice_Error = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: Error

189.12.116 kAudioOutputDevice_Mono = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: Mono

189.12.117 kAudioOutputDevice_SPDIF = 10

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: SPDIF

189.12.118 kAudioOutputDevice_Stereo = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Audio device type constants.
Notes: Stereo

189.12.119 kLogoDelay = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Delay

189.12.120 kLogoEnable = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Enable/Disable

189.12.121 kLogoFile = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes:

File path.
Use with VideoSetLogoString: "file,d,t;file,d,t;..."

189.12.122 kLogoOpacity = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Opacity

189.12.123 kLogoPosition = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Position

189.12.124 kLogoRepeat = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Repeat

189.12.125 kLogoX = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: X Position

189.12.126 kLogoY = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Option Parameters for VideoLogo.
Notes: Y Position

189.12.127 kMarqueeColor = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Color

189.12.128 kMarqueeEnable = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Enable

189.12.129 kMarqueeOpacity = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Opacity

189.12.130 kMarqueePosition = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Position

189.12.131 kMarqueeRefresh = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Refresh

189.12.132 kMarqueeSize = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Size

189.12.133 kMarqueeText = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Text

189.12.134 kMarqueeTimeout = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Timeout

189.12.135 kMarqueeX = 8

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: X

189.12.136 kMarqueeY = 9

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the Marq options definition constants.
Notes: Y

189.12.137 kNavigateActivate = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Activate

189.12.138 kNavigateDown = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Down

189.12.139 kNavigateLeft = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Left

189.12.140 kNavigateRight = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Right

189.12.141 kNavigateUp = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the navigation modes.
Notes: Up

189.12.142 kStateBuffering = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Buffering

189.12.143 kStateEnded = 6

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Ended

189.12.144 kStateError = 7

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Error

189.12.145 kStateNothingSpecial = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Nothing special. Video closed for example.

189.12.146 kStateOpening = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Opening

189.12.147 kStatePaused = 4

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Paused

189.12.148 kStatePlaying = 3

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Playing

189.12.149 kStateStopped = 5

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the state constants.
Notes: Stopped

189.12.150 kVideoTitleDisplayPositionBottom = 6

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Bottom

189.12.151 kVideoTitleDisplayPositionBottomLeft = 7

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Bottom Left

189.12.152 kVideoTitleDisplayPositionBottomRight = 8

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Bottom Right

189.12.153 kVideoTitleDisplayPositionCenter = 0

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Center

189.12.154 kVideoTitleDisplayPositionDisable = -1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Disabled

189.12.155 kVideoTitleDisplayPositionLeft = 1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Left

189.12.156 kVideoTitleDisplayPositionRight = 2

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Right

189.12.157 kVideoTitleDisplayPositionTop = 3

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Top

189.12.158 kVideoTitleDisplayPositionTopLeft = 4

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Top Left

189.12.159 kVideoTitleDisplayPositionTopRight = 5

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the video title display positions.
Notes: Top Right

189.13 class VLCMediaStatsMBS

189.13.1 class VLCMediaStatsMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for media statistics.

189.13.2 Properties

189.13.3 DecodedAudio as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decoded audio.
Notes: (Read and Write property)

189.13.4 DecodedVideo as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Decoded video.
Notes: (Read and Write property)

189.13.5 DemuxBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Bitrate for demux input.
Notes: (Read and Write property)

189.13.6 DemuxCorrupted as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Demux corrupted.
Notes: (Read and Write property)

189.13.7 DemuxDiscontinuity as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The demux discontinuity.
Notes: (Read and Write property)

189.13.8 DemuxRead_bytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of read bytes by demuxer.
Notes: (Read and Write property)

189.13.9 DisplayedPictures as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of displayed video frames.
Notes: (Read and Write property)

189.13.10 InputBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The input bit rate.
Notes: (Read and Write property)

189.13.11 LostAbuffers as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of lost audio buffers.
Notes: (Read and Write property)

189.13.12 LostPictures as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of lost video frames.
Notes: (Read and Write property)

189.13.13 PlayedAbuffers as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of played Audio buffers.
Notes: (Read and Write property)

189.13.14 ReadBytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bytes read from input.
Notes: (Read and Write property)

189.13.15 SendBitrate as Single

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The sending bit rate.
Notes: (Read and Write property)

189.13.16 SentBytes as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of bytes sent.
Notes: (Read and Write property)

189.13.17 SentPackets as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Number of packets sent.
Notes: (Read and Write property)

189.14 class VLCMediaTrackInfoMBS

189.14.1 class VLCMediaTrackInfoMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for track information.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

189.14.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr2

189.14.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr2

189.14.4 Methods

189.14.5 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

189.14.6 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.14.7 Properties

189.14.8 Channels as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of channels in an audio track.
Notes: (Read and Write property)

189.14.9 Codec as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track's codec identifier.
Notes: (Read and Write property)

189.14.10 CodecString as String

MBS VLC Plugin, Plugin Version: 12.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track's codec identifier as string.
Notes: (Read and Write property)

189.14.11 Height as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height in pixel of a video track.
Notes: (Read and Write property)

189.14.12 ID as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track'S ID.
Notes: (Read and Write property)

189.14.13 Level as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec's level.
Notes: (Read and Write property)

189.14.14 Profile as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec's profile.
Notes: (Read and Write property)

189.14.15 Rate as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The rate for an audio track.
Notes:

e.g. 44000 Hz.
(Read and Write property)

189.14.16 Type as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track type.
Notes:

Can be TrackAudio, TrackText, TrackVideo or TrackUnknown.
(Read and Write property)

189.14.17 Width as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width in pixel of a video track.
Notes: (Read and Write property)

189.14.18 Constants

189.14.19 TrackAudio = 0

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Audio

189.14.20 TrackText = 2

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Text track, e.g. subtitles.

189.14.21 TrackUnknown = -1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Unknown

189.14.22 TrackVideo = 1

MBS VLC Plugin, Plugin Version: 12.2.

Function: One of the track types.
Notes: Video

189.15 class VLCMediaTrackMBS

189.15.1 class VLCMediaTrackMBS

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for the media track.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

189.15.2 Methods

189.15.3 Constructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

189.15.4 Destructor

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.15.5 Properties

189.15.6 Bitrate as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The bitrate.
Notes: (Read and Write property)

189.15.7 Channels as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The number of channels.
Notes: (Read and Write property)

189.15.8 Codec as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec ID.
Notes: (Read and Write property)

189.15.9 CodecString as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec ID as 4 letter text.
Notes: (Read and Write property)

189.15.10 Description as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track description.
Notes: (Read and Write property)

189.15.11 Encoding as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The text encoding for subtitles.
Notes: (Read and Write property)

189.15.12 FrameRate as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

189.15.13 FrameRateDen as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

189.15.14 FrameRateNum as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The framerate.
Notes: (Read and Write property)

189.15.15 Height as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The height of a video track.
Notes: (Read and Write property)

189.15.16 ID as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The ID of the track.
Notes: (Read and Write property)

189.15.17 Language as String

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The language for this track.
Notes: (Read and Write property)

189.15.18 Level as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The codec specific level value.
Notes: (Read and Write property)

189.15.19 OriginalCode as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The original code for codec.
Notes: (Read and Write property)

189.15.20 Profile as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Codec specific profile value.
Notes: (Read and Write property)

189.15.21 Rate as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The sound rate in Hz.
Notes: (Read and Write property)

189.15.22 Sar as Double

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

189.15.23 SarDen as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

189.15.24 SarNum as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The aspect ratio.
Notes: (Read and Write property)

189.15.25 Type as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track type.
Notes: (Read and Write property)

189.15.26 Width as Integer

MBS VLC Plugin, Plugin Version: 15.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The width of a video track.
Notes: (Read and Write property)

189.15.27 Constants

189.15.28 TrackAudio = 0

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Audio

189.15.29 TrackText = 2

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Text

189.15.30 TrackUnknown = -1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Unknown type

189.15.31 TrackVideo = 1

MBS VLC Plugin, Plugin Version: 15.3.

Function: One of the track types.
Notes: Video

189.16 class VLCMissingFunctionExceptionMBS

189.16.1 class VLCMissingFunctionExceptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The exception which is raised if you call a function which is not available.
Notes:

Either your VLC shared library does not have the function or you did not yet load the library.
Subclass of the RuntimeException class.

189.17 class VLCModuleDescriptionMBS

189.17.1 class VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a module description.

189.17.2 Methods

189.17.3 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.17.4 Properties

189.17.5 Help as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The help text.
Notes: (Read and Write property)

189.17.6 LongName as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The long name.
Notes: (Read and Write property)

189.17.7 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The name of the module.
Notes: (Read and Write property)

189.17.8 NextModule as VLCModuleDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The link to the next module.
Notes: (Read and Write property)

189.17.9 ShortName as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The short name.
Notes: (Read and Write property)

189.18 class VLCNotInitializedExceptionMBS

189.18.1 class VLCNotInitializedExceptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: This exception is raised if you call a method on an uninitialized object.
Notes:

Should not happen. And if it happens, you have a bug in your code.
Subclass of the RuntimeException class.

189.19 class VLCTrackDescriptionMBS

189.19.1 class VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Description for video, audio tracks and subtitles.
Notes: It contains id, name (description string) and reference to next record.

189.19.2 Methods

189.19.3 Destructor

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

189.19.4 Properties

189.19.5 ID as Integer

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track ID.
Notes: (Read and Write property)

189.19.6 Name as String

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The track name.
Notes: (Read and Write property)

189.19.7 NextTrack as VLCTrackDescriptionMBS

MBS VLC Plugin, Plugin Version: 12.2, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The next track in the list.
Notes: (Read and Write property)

Chapter 190

WebKit2

190.1 control DesktopWKWebViewControlMBS

190.1.1 control DesktopWKWebViewControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Example:

```
// print a WKWebViewControlMBS to PDF file:

dim browser as WKWebViewControlMBS // your control showing website
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pdf")
pi.SetSaveDestination f

Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = False
po.showsProgressPanel = False

If po.runOperation Then
f.launch
End If
```

Notes:

This is a control to use WebKit in 32-bit and WebKit 2 in 64-bit.
Most of the events provided by Xojo for the control will not work.

But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

190.1.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

190.1.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

190.1.4 Methods

190.1.5 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes:

Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

190.1.6 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Adds an user script.

190.1.7 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Example:

```
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = DesktopWKWebViewControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = DesktopWKWebViewControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;",
e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = DesktopWKWebViewControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 190.1.8 EvaluateJavaScript(JavaScript as String, Tag as String = "") 26739

190.1.8 EvaluateJavaScript(JavaScript as String, Tag as String = "")

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Notes:

Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 190.1.7 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 26739

190.1.9 goBack

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

190.1.10 goForward

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

190.1.11 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes:

item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

190.1.12 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

190.1.13 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested file.
Example:

```
Dim w as DesktopWKWebViewControlMBS // your web viewer
Dim HTMLFile as folderItem = getfolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

190.1.14 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.

Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

190.1.15 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

call browser.LoadURL "https://www.mbs-plugins.de/"
```

Notes:

Sets Navigation property.
Sets Navigation property.

190.1.16 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

190.1.17 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
dim browser as DesktopWKWebViewControlMBS // your web viewer
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes:

Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

190.1.18 reload

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as DesktopWKWebViewControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

190.1.19 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as DesktopWKWebViewControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

190.1.20 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Removes all associated user scripts.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.removeAllUserScripts
```

190.1.21 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

190.1.22 runOpenPanelWithParametersCompleted(URLs() as NSURLMBS)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Pass result for a runOpenPanelWithParameters event here.
Notes: Pass nil to indicate cancel was pressed.

190.1.23 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes:

magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

190.1.24 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create DesktopWKWebViewControlMBS with private browsing enabled.
Example:

```
DesktopWKWebViewControlMBS.setUsePrivateBrowsing True
```

Notes:

Set this property to true before creating the DesktopWKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

190.1.25 stopLoading

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Stops loading all resources on the current page.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.stopLoading
```

190.1.26 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 190.1.27 takeSnapshot(tag as string = "") 26746

190.1.27 takeSnapshot(tag as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes:

Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 190.1.26 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 26746

190.1.28 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The user scripts associated with the user content controller.

190.1.29 Properties

190.1.30 AcceptTabs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether the control should accept tab keys.
Notes:

If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

190.1.31 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Allow file access for file URLs.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

190.1.32 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

190.1.33 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

190.1.34 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view's magnification.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes:

The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

190.1.35 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

190.1.36 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The web view's back-forward list.
Notes: (Read only property)

190.1.37 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

190.1.38 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

190.1.39 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The custom user agent string.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

190.1.40 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

190.1.41 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.

(Read only property)

190.1.42 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

190.1.43 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MsgBox "loaded"
```

Notes: (Read only property)

190.1.44 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether java is enabled.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.1.45 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

190.1.46 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether javascript is enabled.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.1.47 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether to load images automatically.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

190.1.48 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.magnification = 2.0
```

Notes:

The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

190.1.49 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The minimum font size to use.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

190.1.50 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The current navigation action.
Notes: (Read only property)

190.1.51 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether plugins are enabled.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.1.52 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed (Inkognito mode).
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.

So use UsePrivateBrowsing there.
(Read and Write property)

190.1.53 Title as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The page title.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox Browser.Title
```

Notes: (Read only property)

190.1.54 URL as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The active URL.
Example:

```
Dim browser As DesktopWKWebViewControlMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

190.1.55 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create DesktopWKWebViewControlMBS with private browsing enabled.
Example:

```
WVWebViewModuleMBS.UsePrivateBrowsing = True
```

Notes:

Set this property to true before creating the DesktopWKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

190.1.56 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The used view.
Notes:

Should be either a WebView (32bit) or WKWebView (64bit).
(Read only property)

190.1.57 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The used WKWebViewMBS view.
Notes:

Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

190.1.58 Events

190.1.59 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

190.1.60 Closing

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

190.1.61 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

190.1.62 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

190.1.63 CreateWebView(URL as String, request as NSURLRequestMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Creates a new web view.
Notes:

If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

190.1.64 decidePolicyForNavigationAction(URL as String, NavigationType as String, modifierFlags as Integer, buttonNumber as Integer, newWindow as boolean, frameName as string, request as NSURLRequestMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Decides whether to allow or cancel a navigation.
Notes:

Return true to cancel or false to allow.
URL is the URL to load.
NavigationType defines what navigation is happening: LinkClicked, FormSubmitted, BackForward, Reload, FormResubmitted or Other.
modifierFlags: The keyboard modifiers.
buttonNumber: Which mouse button was clicked: 0 for left button, 1 for middle button, 2 for right button
newWindow: True if a new window should be opened or false if not.
frameName: The frame name. (32-bit only)
request: the URL request. (added in v20.0)

190.1.65 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Decides whether to allow or cancel a navigation after its response is known.
Notes:

navigationResponse: Descriptive information about the navigation response.

Return true to block or return false to allow.

190.1.66 DidClose

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The webviewer closed.
Notes:

Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

190.1.67 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Will close contextual menu.

190.1.68 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when content starts arriving for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.1.69 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when an error occurs during a committed main frame navigation.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.1.70 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.1.71 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when a main frame navigation completes.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.
Same as DocumentComplete in HTMLViewer.

190.1.72 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when a script message is received from a webpage.
Notes:

body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

190.1.73 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when a server redirect is received for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.1.74 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Invoked when a main frame navigation starts.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.1.75 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

190.1.76 FocusLost

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

190.1.77 FocusReceived

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

190.1.78 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

190.1.79 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: JavaScript was evaluated.
Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

190.1.80 MenuBarSelected

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

190.1.81 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

190.1.82 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

190.1.83 MouseUp(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

190.1.84 Opening

Plugin Version: 21.5, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

190.1.85 runJavaScriptAlertPanel(message as String)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Displays a JavaScript alert panel.
Notes:

message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

190.1.86 runJavaScriptConfirmPanel(message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Displays a JavaScript confirm panel.
Notes:

message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

190.1.87 runJavaScriptTextInputPanel(prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Displays a JavaScript text input panel.
Notes:

message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

190.1.88 runOpenPanelWithParameters(allowsMultipleSelection as Boolean, allowsDirectories as Boolean)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: .

Function: Displays a file upload panel.
Notes:

Please call runOpenPanelWithParametersCompleted method later with result. Pass the selected URLs if the user chose "OK", otherwise nil.

You can use sheet window for the file picker and later call the runOpenPanelWithParametersCompleted method or call it right in the event if you do it synchronously.

If this method is not implemented, the web view behaves as if the user selected the Cancel button.

Not available on iOS. Implemented for macOS 64-bit applications.

190.1.89 ScaleFactorChanged(NewFactor as Double)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

190.1.90 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, tag as string)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

190.1.91 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: The title of the webpage changed.

190.1.92 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: .

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

190.2 class WKBackForwardListItemMBS

190.2.1 class WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKBackForwardListItem object represents a webpage in the back-forward list of a web view.
Notes:

For 32-bit a WebHistoryItem object, for 64-bit a WKBackForwardListItem object.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

190.2.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

190.2.3 Blog Entries

190.2.4 Methods

190.2.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

190.2.6 Properties

190.2.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.2.8 initialURL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL of the initial request that created this item.
Notes: (Read only property)

190.2.9 title as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The title of the webpage represented by this item.
Notes: (Read only property)

190.2.10 URL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The URL of the webpage represented by this item.
Notes: (Read only property)

190.3 class WKBackForwardListMBS

190.3.1 class WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKBackForwardList object is a list of webpages previously visited in a web view that can be reached by going back or forward.
Notes: For 32-bit a WebBackForwardList object, for 64-bit a WKBackForwardList object.

190.3.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.0
- MBS Xojo Plugins, version 20.0r5

190.3.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 20.0
- MBS Xojo Plugins, version 20.0r5

190.3.4 Methods

190.3.5 backList as WKBackForwardListItemMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The portion of the list preceding the current item.
Notes: The items are in the order in which they were originally visited.

190.3.6 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
See also:

- 190.3.7 Constructor(WKWebView as WKWebViewMBS)

190.3.7 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries back forward list for a web view.
See also:

- 190.3.6 Constructor 26768

190.3.8 forwardList as WKBackForwardListItemMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The portion of the list following the current item.
Notes: The items are in the order in which they were originally visited.

190.3.9 itemAtIndex(index as Integer) as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the item at a specified distance from the current item.
Notes:

index: Index of the desired list item relative to the current item:
0 for the current item, -1 for the immediately preceding item, 1 for the immediately following item, and so on.

Returns the item at the specified distance from the current item, or nil if the index parameter exceeds the limits of the list.

190.3.10 Properties

190.3.11 backItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The item immediately preceding the current item, or nil if there isn't one.
Notes: (Read only property)

190.3.12 currentItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The current item.
Notes: (Read only property)

190.3.13 forwardItem as WKBackForwardListItemMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The item immediately following the current item, or nil if there isn't one.
Notes: (Read only property)

190.3.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.4 class WKHTTPCookieStoreMBS

190.4.1 class WKHTTPCookieStoreMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: An object that manages the HTTP cookies associated with a particular WKWebsiteDataStore.
Example:

```
Dim CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Dim cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Dim cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

190.4.6 Methods

190.4.7 AllCookies as NSHTTPCookieMBS()

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Fetches all stored cookies.
Example:

```
Dim CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Dim cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Dim cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

190.4.8 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The constructor.
Notes:

Creates an object for the http cookie store used by web view.
Adds an observer to the cookie store to call DidChange event.

190.4.9 deleteCookie(cookie as NSHTTPCookieMBS, wait as boolean = true)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Deletes the specified cookie.
Notes:

By default waits for this to complete.
Otherwise this is set asynchronously.

190.4.10 Destructor

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The destructor.

190.4.11 setCookie(cookie as NSHTTPCookieMBS, wait as boolean = true)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: Sets a cookie.
Notes:

By default waits for this to complete.
Otherwise this is set asynchronously.

190.4.12 Properties

190.4.13 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.4.14 Events

190.4.15 DidChange

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: .

Function: Called when the cookies in the cookie store have changed.

190.5 class WKNavigationMBS

190.5.1 class WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: A WKNavigation object contains information for tracking the loading progress of a webpage.
Notes:

A navigation object is returned from the web view load methods and is also passed to the navigation delegate methods to uniquely identify a webpage load from start to finish. It has no method or properties of its own. This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

190.5.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

190.5.6 Properties

190.5.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The handle for the navigation action.
Notes: (Read only property)

190.5.8 request as NSURLRequestMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The request.
Notes:

May be nil if not available.
(Read only property)

190.6 class WKNavigationResponseMBS

190.6.1 class WKNavigationResponseMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A WKNavigationResponse object contains information about a navigation response, used for making policy decisions.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

190.6.2 Blog Entries

- MBS Xojo Plugins, version 20.0r5

190.6.4 Methods

190.6.5 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The private constructor.

190.6.6 Properties

190.6.7 canShowMIMEType as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether WebKit can display the response's MIME type natively.
Notes: (Read only property)

190.6.8 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.6.9 isForMainFrame as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the frame being navigated is the main frame.
Notes: (Read only property)

190.6.10 response as NSURLResponseMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The frame's response.
Notes:

Allowing a navigation response with a MIME type that can't be shown will cause the navigation to fail.
(Read only property)

190.7 class WKPreferencesMBS

190.7.1 class WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A WKPreferences object encapsulates the preference settings for a web view.
Notes:

The preferences object associated with a web view is specified by its web view configuration.
Available on MacOS 10.10 or newer.

190.7.6 Methods

190.7.7 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Queries preferences object for a web view.

190.7.8 Properties

190.7.9 crossOriginResourcePolicyEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to enable/disable cross origin resource policy.
Example:

```
Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences

w.crossOriginResourcePolicyEnabled = False
```

Notes:

Disabling some cross policy checks may allow JavaScript to access a website loaded in a frame.

Default is true.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.10 defaultFontSize as Integer

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The default font size for fonts.
Example:

HTMLViewer1.WKWebView.Preferences.defaultFontSize = 10

Notes: (Read and Write property)

190.7.11 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether developer extras are enabled.
Example:

HTMLViewer1.WKWebView.Preferences.developerExtrasEnabled = true

Notes:

Set to true, so you can inspect elements via contextual menus.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.12 FraudulentWebsiteWarningEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether warnings should be shown for suspected fraudulent content such as phishing or malware.
Notes:

The default value is true. This feature is currently available in the following region: China.
(Read and Write property)

190.7.13 fullScreenEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to allow fullscreen mode.
Example:

```
Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.fullScreenEnabled = true
```

Notes:

Default is false.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.14 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.7.15 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether Java is enabled.
Example:

```
WKWebViewControlMBS1.WKWebView.Preferences.javaEnabled = False
```

Notes:

The default value is false.
Deprecated for macOS 10.15.
(Read and Write property)

190.7.16 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether JavaScript can open windows without user interaction.
Example:

```
WKWebViewControlMBS1.WKWebView.Preferences.javaScriptCanOpenWindowsAutomatically = False
```

Notes:

The default value is false in iOS and true in macOS.
(Read and Write property)

190.7.17 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether JavaScript is enabled.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.javaScriptEnabled = False

Notes:

The default value is true. Setting this property to false disables JavaScripts that are loaded or executed by the web page. This setting does not affect user scripts. See WKUserScriptMBS class.
(Read and Write property)

190.7.18 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether images are loaded automatically.
Example:

HTMLViewer1.WKWebView.Preferences.loadsImagesAutomatically = False

Notes: (Read and Write property)

190.7.19 logsPageMessagesToSystemConsoleEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether page log messages go to system console.
Example:

Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences

w.logsPageMessagesToSystemConsoleEnabled = true

Notes:

Default is false.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.20 mediaDevicesEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to allow access to media devices in JavaScript.
Example:

```
Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.mediaDevicesEnabled = true
w.mediaStreamEnabled = true
```

Notes:

Default is false.

You may need to enable mediaStreamEnabled and mediaDevicesEnabled together to allow WebRTC. Also you need permissions to access camera and microphone via AVFoundation functions.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.21 mediaStreamEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to allow access to media streaming in JavaScript.
Example:

```
Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.mediaDevicesEnabled = true
```

w.mediaStreamEnabled = true

Notes:

Default is false.

You may need to enable mediaStreamEnabled and mediaDevicesEnabled together to allow WebRTC. Also you need permissions to access camera and microphone via AVFoundation functions.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.22 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum font size in points.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.minimumFontSize = 20

Notes:

The default value is 0.
(Read and Write property)

190.7.23 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether plug-ins are enabled.
Example:

WKWebViewControlMBS1.WKWebView.Preferences.plugInsEnabled = False

Notes:

The default value is false.
Deprecated for macOS 10.15.

(Read and Write property)

190.7.24 shouldPrintBackgrounds as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether webkit draws background on printing.
Example:

HTMLViewer1.WKWebView.Preferences.shouldPrintBackgrounds = False

Notes: (Read and Write property)

190.7.25 standardFontFamily as String

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the standard font family.
Notes: (Read and Write property)

190.7.26 tabFocusesLinks as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop only.

Function: If tabFocusesLinks is true, the tab key will focus links and form controls.
Notes:

The Option key temporarily reverses this preference.
(Read and Write property)

190.7.27 telephoneNumberDetectionIsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether phone number detection in text is enabled.
Example:

Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences

w.telephoneNumberDetectionIsEnabled = True

Notes:

Default is false.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.7.28 TextInteractionEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop & iOS.

Function: Whether text interactions are enabled.
Notes:

Requires macOS 12.0 or iOS 15.0 or newer.
(Read and Write property)

190.7.29 webSecurityEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to enable/disable web security.
Example:

```
Dim w As WKPreferencesMBS = HTMLViewer1.WKWebViewMBS.Preferences
w.webSecurityEnabled = False
```

Notes:

Default is true.

This property is included in the WebKit project, but not documented by Apple, so use with care and be aware that it may break in future (or gets officially documented in a future version of macOS).
(Read and Write property)

190.8 class WKUserScriptMBS

190.8.1 class WKUserScriptMBS

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: A WKUserScript object represents a script that can be injected into a webpage.
Notes:

Requires MacOS 10.10 or newer.
64-bit target only.

190.8.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.5
- MBS Xojo Plugins, version 19.5pr8

190.8.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 19.5
- MBS Xojo Plugins, version 19.5pr8

190.8.4 Methods

190.8.5 Constructor(Source as String, injectionTime as Integer, isForMainFrameOnly as Boolean)

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: Returns an initialized user script that can be added to a user content controller.
Notes:

source: The script's source code.
injectionTime: The time when the script should be injected into the webpage. Either InjectionTimeAtDocumentStart
or InjectionTimeAtDocumentEnd.
isForMainFrameOnly: A Boolean value indicating whether the script should be injected only into the main frame (YES) or into all frames (NO).

190.8.6 Properties

190.8.7 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.8.8 injectionTime as Integer

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: The time when the script should be injected into the webpage.
Notes:

Either InjectionTimeAtDocumentStart or InjectionTimeAtDocumentEnd.
(Read only property)

190.8.9 isForMainFrameOnly as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the script should be injected only into the main frame (true) or into all frames (false).
Notes: (Read only property)

190.8.10 Source as String

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop & iOS.

Function: The script's source code.
Notes: (Read only property)

190.8.11 Constants

190.8.12 InjectionTimeAtDocumentEnd = 1

MBS Mac64bit Plugin, Plugin Version: 19.5.

Function: One of the constants for the time when a user script should be injected into a webpage.

Notes: Inject the script after the document finishes loading, but before other subresources finish loading.

190.8.13 InjectionTimeAtDocumentStart = 0

MBS Mac64bit Plugin, Plugin Version: 19.5.

Function: One of the constants for the time when a user script should be injected into a webpage.
Notes: Inject the script after the document element is created, but before any other content is loaded.

190.9 class WKWebViewConfigurationMBS

190.9.1 class WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A collection of properties used to initialize a web view.
Notes:

Using the WKWebViewConfiguration class, you can determine how soon a webpage is rendered, how media playback is handled, the granularity of items that the user can select, and many other options.
WKWebViewConfiguration is only used when a web view is first initialized. You cannot use this class to change the web view's configuration after it has been created.

190.9.4 Methods

190.9.5 Constructor(WKWebView as WKWebViewMBS)

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates Xojo object referencing configuration object for web viewer.

190.9.6 copy as WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a copy of the configuration object.

190.9.7 Properties

190.9.8 allowsAirPlayForMediaPlayback as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether AirPlay is allowed.
Notes:

The default value is true.
(Read and Write property)

190.9.9 applicationNameForUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The name of the application as used in the user agent string.
Notes: (Read and Write property)

190.9.10 Handle as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The internal object reference.
Notes: (Read only property)

190.9.11 mediaTypesRequiringUserActionForPlayback as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Determines which media types require a user gesture to begin playing.
Notes:

Use AudiovisualMediaTypeNone to indicate that no user gestures are required to begin playing media.
(Read and Write property)

190.9.12 Preferences as WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The preference object to be used by the web view.
Notes: (Read and Write property)

190.9.13 suppressesIncrementalRendering as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the web view suppresses content rendering until it is fully loaded into memory.
Notes:

The default value is false.
(Read and Write property)

190.9.14 userInterfaceDirectionPolicy as Integer

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: The directionality of user interface elements.
Notes:

The default value is serInterfaceDirectionPolicyContent. For other possible values, see constants.
Available on MacOS 10.12 or newer.

The policy used to determine the directionality of user interface elements in a web view.
When UserInterfaceDirectionPolicyContent is specified, the directionality of user interface elements is affected by the dir attribute or the direction CSS property. When UserInterfaceDirectionPolicySystem is specified, the directionality of user interface elements is affected by the direction of the view.
(Read and Write property)

190.9.15 Constants

190.9.16 AudiovisualMediaTypeAll = -1

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: All media types require a user gesture to begin playing.

190.9.17 AudiovisualMediaTypeAudio = 1

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: Media types containing audio require a user gesture to begin playing.

190.9.18 AudiovisualMediaTypeNone = 0

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: No media types require a user gesture to begin playing.

190.9.19 AudiovisualMediaTypeVideo = 2

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the media type constants.
Notes: Media types containing video require a user gesture to begin playing.

190.9.20 UserInterfaceDirectionPolicyContent = 0

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the User Interface Direction Policy constants.
Notes: The directionality follows the CSS/HTML/XHTML specifications. This is the default value of user-InterfaceDirectionPolicy.

190.9.21 UserInterfaceDirectionPolicySystem = 1

MBS Mac64bit Plugin, Plugin Version: 20.1.

Function: One of the User Interface Direction Policy constants.
Notes: The directionality follows the view's userInterfaceLayoutDirection property

190.10 control WKWebViewControlMBS

190.10.1 control WKWebViewControlMBS

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Example:

```
// print a WKWebViewControlMBS to PDF file:

dim browser as WKWebViewControlMBS // your control showing website
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo

Dim f As FolderItem = SpecialFolder.Desktop.Child("test.pdf")
pi.SetSaveDestination f

Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = False
po.showsProgressPanel = False

If po.runOperation Then
f.launch
End If
```

Notes:

This is a control to use WebKit in 32-bit and WebKit 2 in 64-bit.
Most of the events provided by Xojo for the control will not work.
But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

190.10.8 Methods

190.10.9 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes:

Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

190.10.10 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Adds an user script.

190.10.11 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Example:

```
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = WKWebViewControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 190.10.12 EvaluateJavaScript(JavaScript as String, Tag as String = "") 26797

190.10.12 EvaluateJavaScript(JavaScript as String, Tag as String = "")

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: Evaluates JavaScript.
Notes:

Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 190.10.11 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 26797

190.10.13 goBack

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

190.10.14 goForward

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

190.10.15 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes:

item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

190.10.16 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

190.10.17 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested file.
Example:

```
Dim w as WKWebViewControlMBS // your web viewer
Dim HTMLFile as folderItem = getfolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

190.10.18 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

190.10.19 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

call browser.LoadURL "https://www.mbs-plugins.de/"
```

Notes:

Sets Navigation property.
Sets Navigation property.

190.10.20 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

190.10.21 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
dim browser as WKWebViewControlMBS // your web viewer
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes:

Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

190.10.22 reload

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

190.10.23 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

190.10.24 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Removes all associated user scripts.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.removeAllUserScripts
```

190.10.25 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

190.10.26 runOpenPanelWithParametersCompleted(URLs() as NSURLMBS)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: Desktop only.

Function: Pass result for a runOpenPanelWithParameters event here.

Notes: Pass nil to indicate cancel was pressed.

190.10.27 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes:

magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

190.10.28 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 20.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

```
WKWebViewControlMBS.setUsePrivateBrowsing True
```

Notes:

Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

190.10.29 stopLoading

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: Stops loading all resources on the current page.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.stopLoading
```

190.10.30 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 190.10.31 takeSnapshot(tag as string = "") 26804

190.10.31 takeSnapshot(tag as string = "")

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: Desktop only.

Function: Requests a snapshot.
Notes:

Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 190.10.30 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 26804

190.10.32 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: The user scripts associated with the user content controller.

190.10.33 Properties

190.10.34 AcceptTabs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: Desktop only.

Function: Whether the control should accept tab keys.
Notes:

If true, the plugin will not forward the tab keydown/keyup events to Xojo, because Xojo would do switch to next control.
(Read and Write property)

190.10.35 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Allow file access for file URLs.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

190.10.36 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As WKWebViewControlMBS // your instance
```

```
browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

190.10.37 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

190.10.38 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view's magnification.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes:

The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

190.10.39 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: Desktop only.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

190.10.40 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The web view's back-forward list.
Notes: (Read only property)

190.10.41 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

190.10.42 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As WKWebViewControlMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

190.10.43 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: The custom user agent string.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

190.10.44 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

190.10.45 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

190.10.46 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

190.10.47 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend
```

```
MsgBox "loaded"
```

Notes: (Read only property)

190.10.48 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether java is enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.10.49 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

190.10.50 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether javascript is enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.10.51 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether to load images automatically.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

190.10.52 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 19.4, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.magnification = 2.0
```

Notes:

The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

190.10.53 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: The minimum font size to use.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

190.10.54 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: The current navigation action.
Notes: (Read only property)

190.10.55 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.3, Platform: macOS, Targets: Desktop only.

Function: Whether plugins are enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.10.56 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As WKWebViewControlMBS // your instance
```

```
MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed (Inkognito mode).
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.
(Read and Write property)

190.10.57 Title as String

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The page title.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox Browser.Title
```

Notes: (Read only property)

190.10.58 URL as String

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The active URL.
Example:

```
Dim browser As WKWebViewControlMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

190.10.59 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

Notes:

Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

190.10.60 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: Desktop only.

Function: The used view.
Notes:

Should be either a WebView (32bit) or WKWebView (64bit).
(Read only property)

190.10.61 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The used WKWebViewMBS view.
Notes:

Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

190.10.62 Events

190.10.63 BoundsChanged

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the bounds, but not the frame, changed.

190.10.64 Close

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

190.10.65 Closing

Plugin Version: 16.4, Platform: macOS, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

190.10.66 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS Mac64bit Plugin, Plugin Version: 22.1, Platform: macOS, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

190.10.67 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

190.10.68 CreateWebView(URL as String, request as NSURLRequestMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: Creates a new web view.
Notes:

If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

190.10.69 decidePolicyForNavigationAction(URL as String, NavigationType as String, modifierFlags as Integer, buttonNumber as Integer, newWindow as boolean, frameName as string, request as NSURLRequestMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Decides whether to allow or cancel a navigation.
Notes:

Return true to cancel or false to allow.
URL is the URL to load.
NavigationType defines what navigation is happening: LinkClicked, FormSubmitted, BackForward, Reload, FormResubmitted or Other.
modifierFlags: The keyboard modifiers.
buttonNumber: Which mouse button was clicked: 0 for left button, 1 for middle button, 2 for right button
newWindow: True if a new window should be opened or false if not.
frameName: The frame name. (32-bit only)
request: the URL request. (added in v20.0)

190.10.70 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: Decides whether to allow or cancel a navigation after its response is known.

Notes:

navigationResponse: Descriptive information about the navigation response.

Return true to block or return false to allow.

190.10.71 DidClose

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: .

Function: The webviewer closed.
Notes:

Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

190.10.72 didCloseContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: .

Function: Will close contextual menu.

190.10.73 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when content starts arriving for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.10.74 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when an error occurs during a committed main frame navigation.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.10.75 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.10.76 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when a main frame navigation completes.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.
Same as DocumentComplete in HTMLViewer.

190.10.77 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 18.0, Platform: macOS, Targets: .

Function: Invoked when a script message is received from a webpage.
Notes:

body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

190.10.78 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when a server redirect is received for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.10.79 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 17.0, Platform: macOS, Targets: .

Function: Invoked when a main frame navigation starts.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.10.80 EnableMenuItems

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

190.10.81 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

190.10.82 FocusLost

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The control lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: This only fires if the control itself lost focus and not a sub control.

190.10.83 FocusReceived

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The control itself got focus.
In older Xojo versions, this event is named GotFocus.
Notes: This only fires if the control itself got focus and not a sub control.

190.10.84 FrameChanged

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The event called when the frame changed.
Notes: This event notifies you, that the control changed it's bounding frame, which is position and/or size.

190.10.85 GotFocus

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The control itself got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.
Notes: This only fires if the control itself got focus and not a sub control.

190.10.86 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: JavaScript was evaluated.
Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

190.10.87 LostFocus

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The control lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes: This only fires if the control itself lost focus and not a sub control.

190.10.88 MenuBarSelected

Plugin Version: 17.1, Platform: macOS, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

190.10.89 MouseDown(x as Integer, y as Integer, Modifiers as Integer) As Boolean

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was pressed inside the control's region at the location passed in to x, y.
Notes:

The coordinates x and y are local to the control, i.e. they represent the position of the mouse click relative to the upper-left corner or the Control.
Return True if you are going to handle the MouseDown. In such a case:

- The Action event, if any, will not execute and the state of the object will not change.
- You will receive the MouseDrag and MouseUp events.

If you return False, the system handles the MouseDown so the above event handlers do not get called.

190.10.90 MouseDrag(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: This event fires continuously after the mouse button was pressed inside the Control.
Notes:

Mouse location is local to the control passed in to x, y.
As this event is fired continuously (hundreds of time per second), it is your responsibility to determine if the mouse has really moved.

190.10.91 MouseUp(x as Integer, y as Integer)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The mouse button was released.
Notes: Use the x and y parameters to determine if the mouse button was released within the control's boundaries.

190.10.92 Open

MBS Mac64bit Plugin, Plugin Version: 16.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

190.10.93 Opening

Plugin Version: 16.4, Platform: macOS, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

190.10.94 runJavaScriptAlertPanel(message as String)

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Displays a JavaScript alert panel.
Notes:

message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

190.10.95 runJavaScriptConfirmPanel(message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Displays a JavaScript confirm panel.
Notes:

message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

190.10.96 runJavaScriptTextInputPanel(prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 16.5, Platform: macOS, Targets: .

Function: Displays a JavaScript text input panel.
Notes:

message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

190.10.97 runOpenPanelWithParameters(allowsMultipleSelection as Boolean, allowsDirectories as Boolean)

MBS Mac64bit Plugin, Plugin Version: 22.0, Platform: macOS, Targets: .

Function: Displays a file upload panel.
Notes:

Please call runOpenPanelWithParametersCompleted method later with result. Pass the selected URLs if the user chose "OK", otherwise nil.

You can use sheet window for the file picker and later call the runOpenPanelWithParametersCompleted method or call it right in the event if you do it synchronously.

If this method is not implemented, the web view behaves as if the user selected the Cancel button.

Not available on iOS. Implemented for macOS 64-bit applications.

190.10.98 ScaleFactorChanged(NewFactor as Double)

MBS Mac64bit Plugin, Plugin Version: 17.1, Platform: macOS, Targets: .

Function: The backing store scale factor has changed.
Notes: Please invalidate any cached bitmaps or other relevant state.

190.10.99 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, tag as string)

MBS Mac64bit Plugin, Plugin Version: 17.4, Platform: macOS, Targets: .

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

190.10.100 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 19.0, Platform: macOS, Targets: .

Function: The title of the webpage changed.

190.10.101 willShowContextualMenu(menu as NSMenuMBS, NSEvent as NSEventMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: macOS, Targets: .

Function: Will show contextual menu.
Notes: Your chance to modify the menu before it is shown, e.g. to add menu entries.

190.11 control WKWebViewIOSControlMBS

190.11.1 control WKWebViewIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A WKWebView object displays interactive web content, such as for an in-app browser.
Notes:

This is a control is for iOS only and uses 64-bit.

But we can add features over time as needed.
Let us know if you need a method from WKWebView or an event from WKNavigationDelegate or WKUIDelegate.

190.11.2 Blog Entries

190.11.4 Methods

190.11.5 addScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Adds a script message handler.
Example:

```
// register once
browser.addScriptMessageHandler "test"
```

```
// later use in javascript:
browser.EvaluateJavaScript("window.webkit.messageHandlers.test.postMessage('Hello');")
```

Notes:

Name: The name of the message handler.

Adding a script message handler with name name causes the JavaScript function window.webkit.messageHandlers.name.postMessage(messageBody) to be defined in all frames in all web views that use the user content controller.

190.11.6 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Adds an user script.

190.11.7 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Evaluates JavaScript.
Example:

```
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = WKWebViewIOSControlMBS1.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 190.11.8 EvaluateJavaScript(JavaScript as String, Tag as String = "") 26827

190.11.8 EvaluateJavaScript(JavaScript as String, Tag as String = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Evaluates JavaScript.
Notes:

Calls later JavaScriptEvaluated event with result and passed tag value.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.
See also:

- 190.11.7 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant 26826

190.11.9 goBack

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to the back item in the back-forward list.
Notes: Sets Navigation property.

190.11.10 goForward

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to the forward item in the back-forward list.
Notes: Sets Navigation property.

190.11.11 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes:

item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

Sets Navigation property.

190.11.12 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

190.11.13 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested file.
Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

Sets Navigation property.

190.11.14 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

Sets Navigation property.

190.11.15 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

call browser.LoadURL "https://www.mbs-plugins.de/"
```

Notes:

Sets Navigation property.
Sets Navigation property.

190.11.16 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Navigates to a requested URL.
Notes: Sets Navigation property.

190.11.17 reload

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewIOSControlMBS, force as Boolean)
If force Then
Call browser.reloadFromOrigin
Else
Call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

190.11.18 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewIOSControlMBS, force as Boolean)
If force Then
call browser.reloadFromOrigin
Else
call browser.reload
End If
End Sub
```

Notes: Sets Navigation property.

190.11.19 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Removes all associated user scripts.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance
```

browser.removeAllUserScripts

190.11.20 removeScriptMessageHandler(Name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Removes a script message handler.
Notes: name: The name of the message handler to remove.

190.11.21 setUsePrivateBrowsing(value as Boolean)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to create WKWebViewIOSControlMBS with private browsing enabled.
Example:

WKWebViewIOSControlMBS.setUsePrivateBrowsing True

Notes:

Set this property to true before creating the WKWebViewIOSControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

190.11.22 stopLoading

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Stops loading all resources on the current page.
Example:

Dim browser As WKWebViewIOSControlMBS // your instance

browser.stopLoading

190.11.23 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Requests a snapshot.
Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.
See also:

- 190.11.24 takeSnapshot(tag as string = "") 26832

190.11.24 takeSnapshot(tag as string = "")

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Requests a snapshot.
Notes:

Calls later takeSnapshotCompleted event.
Tag is passed to event to distinguish various snapshot requests.
See also:

- 190.11.23 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS 26832

190.11.25 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The user scripts associated with the user content controller.

190.11.26 Properties

190.11.27 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Allow file access for file URLs.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

190.11.28 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
Available for 64-bit on macOS 10.10 or newer.
(Read and Write property)

190.11.29 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

190.11.30 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

190.11.31 backForwardList as WKBackForwardListMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The web view's back-forward list.
Notes: (Read only property)

190.11.32 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

190.11.33 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
'Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

190.11.34 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The custom user agent string.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

190.11.35 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

For WebKit 2 (64bit) to enable the context menu to inspect items.
(Read and Write property)

190.11.36 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

190.11.37 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

190.11.38 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend
```

```
MsgBox "loaded"
```

Notes: (Read only property)

190.11.39 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

190.11.40 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether javascript is enabled.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.11.41 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to load images automatically.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False#
```

Notes: (Read and Write property)

190.11.42 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The minimum font size to use.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

190.11.43 Navigation as WKNavigationMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The current navigation action.
Notes: (Read only property)

190.11.44 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed.
Default is non-private mode for the web viewer.

For WebKit 2.x, it looks like you can't change mode after web viewer was created.
So use UsePrivateBrowsing there.
(Read and Write property)

190.11.45 Title as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The page title.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox Browser.Title
```

Notes: (Read only property)

190.11.46 URL as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The active URL.
Example:

```
Dim browser As WKWebViewIOSControlMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

190.11.47 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: Whether to create WKWebViewIOSControlMBS with private browsing enabled.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

Notes:

Set this property to true before creating the WKWebViewIOSControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.

Due to a bug in Xojo 2019r2 and older, please use WVWebViewModuleMBS.UsePrivateBrowsing property instead.
(Read and Write property)

190.11.48 View as NSViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The used view.
Notes:

Should be either a WKWebView (64bit).
(Read only property)

190.11.49 WKWebView as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: iOS only.

Function: The used WKWebViewMBS view.
Notes:

Always a WKWebViewMBS in 64-bit, but nil for 32-bit applications.
(Read only property)

190.11.50 Events

190.11.51 Close

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control is about to close.

190.11.52 CreateWebView(URL as String, request as NSURLRequestMBS) as WKWebViewIOSControlMBS

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Creates a new web view.
Notes:

If needed we can add configuration, windowFeatures and navigationAction parameters in future version.

Return a web viewer control or nil.

The web view returned must be created with the specified configuration. WebKit will load the request in the returned web view.

If you do not implement this method or return nil, the web view will cancel the navigation.

190.11.53 decidePolicyForNavigationAction(URL as String, NavigationType as String, newWindow as boolean, frameName as string, request as NSURLRequestMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Decides whether to allow or cancel a navigation.
Notes:

Return true to cancel or false to allow.
URL is the URL to load.
NavigationType defines what navigation is happening: LinkClicked, FormSubmitted, BackForward, Reload, FormResubmitted or Other.
modifierFlags: The keyboard modifiers.
buttonNumber: Which mouse button was clicked: 0 for left button, 1 for middle button, 2 for right button
newWindow: True if a new window should be opened or false if not.
frameName: The frame name. (32-bit only)
request: the URL request. (added in v20.0)

190.11.54 decidePolicyForNavigationResponse(navigationResponse as WKNavigationResponseMBS) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Decides whether to allow or cancel a navigation after its response is known.
Notes:

navigationResponse: Descriptive information about the navigation response.

Return true to block or return false to allow.

190.11.55 DidClose

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The webviewer closed.
Notes:

Notifies your app that the DOM window object's close() method completed successfully.

Your app should remove the web view from the view hierarchy and update the UI as needed, such as by closing the containing browser tab or window.

190.11.56 didCommitNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when content starts arriving for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.11.57 didFailNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when an error occurs during a committed main frame navigation.
Notes: Sets Navigation property.

190.11.58 didFailProvisionalNavigation(navigation as WKNavigationMBS, Error as NSErrorMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when an error occurs while starting to load data for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.11.59 didFinishNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a main frame navigation completes.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.
Same as DocumentComplete in HTMLViewer.

190.11.60 didReceiveScriptMessage(Body as Variant, name as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a script message is received from a webpage.
Notes:

body: The body of the message. Automatic translated from Javascript types.
name: The name of the message handler to which the message is sent.

190.11.61 didReceiveServerRedirectForProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a server redirect is received for the main frame.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.11.62 didStartProvisionalNavigation(navigation as WKNavigationMBS)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Invoked when a main frame navigation starts.
Notes:

Added navigation parameter with version 20.3.
Sets Navigation property.

190.11.63 EstimatedProgressChanged(estimatedProgress as double, oldEstimatedProgress as double)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The estimated progress for loading the webpage changed.
Notes: This event may be called often, so don't do much here!

190.11.64 GotFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control itself got focus.
Notes: This only fires if the control itself got focus and not a sub control.

190.11.65 JavaScriptEvaluated(JavaScript as String, Result as Variant, Error as NSErrorMBS, Tag as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: JavaScript was evaluated.
Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of variants.

190.11.66 LostFocus

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control lost focus.
Notes: This only fires if the control itself lost focus and not a sub control.

190.11.67 Open

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The control is about to was created and you can initialize it.

190.11.68 runJavaScriptAlertPanel(message as String)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Displays a JavaScript alert panel.
Notes:

message: The message to display.

If you do not implement this method, the web view will behave as if the user selected the OK button.

190.11.69 runJavaScriptConfirmPanel(message as String) as boolean

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Displays a JavaScript confirm panel.
Notes:

message: The message to display.

Return true if the user chose OK, false if the user chose Cancel.

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

190.11.70 runJavaScriptTextInputPanel(prompt as String, defaultText as String) as String

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Displays a JavaScript text input panel.
Notes:

message: The message to display.
defaultText: The initial text to display in the text entry field.

Return the entered text if the user chose OK, otherwise "".

If you do not implement this method, the web view will behave as if the user selected the Cancel button.

190.11.71 takeSnapshotCompleted(image as NSImageMBS, error as NSErrorMBS, tag as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: Called when snapshot of website is completed.
Notes: If snapshot creation failed, error is set.

190.11.72 TitleChanged(Title as String, oldTitle as string)

MBS Mac64bit Plugin, Plugin Version: 21.0, Platform: iOS, Targets: .

Function: The title of the webpage changed.

190.12 class WKWebViewMBS

190.12.1 class WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: An object that displays interactive web content, such as for an in-app browser.
Notes:

see
https://developer.apple.com/documentation/webkit/wkwebview

If something is missing, please let us know and we can add it for you.
Subclass of the NSViewMBS class.

190.12.6 Methods

190.12.7 addUserScript(userScript as WKUserScriptMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Adds an user script.

190.12.8 Constructor

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new web view with size 100/100 and position 0/0
Example:

```
dim x as new WebViewMBS
```

Notes: On success the handle property is not zero.
See also:

- 190.12.9 Constructor(Handle as Integer) 26849
- 190.12.10 Constructor(left as double, top as double, width as double, height as double) 26849

190.12.9 Constructor(Handle as Integer)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates an object based on the given WKWebView handle.
Example:

```
dim t as new WKWebViewMBS(0, 0, 100, 100)
dim v as new WKWebViewMBS(t.handle)

MsgBox str(v.Bounds.Width)+" x "+str(v.Bounds.Height)
```

Notes: The handle is casted to a WKWebView and the plugin retains this handle.
See also:

- 190.12.8 Constructor 26848
- 190.12.10 Constructor(left as double, top as double, width as double, height as double) 26849

190.12.10 Constructor(left as double, top as double, width as double, height as double)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Creates a new button with the given size and position.
Example:

```
dim w as new WKWebViewMBS(0,0,800,600)

w.LoadHTMLString "Hello World",""
```

Notes: On success the handle property is not zero.
See also:

- 190.12.8 Constructor 26848
- 190.12.9 Constructor(Handle as Integer) 26849

190.12.11 copy

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Copies current text selection.

190.12.12 cut

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Cuts current text selection.

190.12.13 deleteSelection

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Deletes current text selection.

190.12.14 EvaluateJavaScript(JavaScript as String, byref Error as NSErrorMBS) as Variant

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Evaluates JavaScript.
Example:

```
Dim w As WKWebViewMBS = WKWebViewControlMBS1.WKWebView
Dim e As NSErrorMBS

// returns array of variants with doubles
Dim v As Variant = w.EvaluateJavaScript("o = [ 1,2,3 ] ;", e)
Dim vd() As Variant = v

// returns array of variants with strings
Dim vv As Variant = w.EvaluateJavaScript("o = [ ""a"",""b"",""d"" ] ;", e)
Dim vs() As Variant = vv

// returns dictionary
Dim v3 As Variant = w.EvaluateJavaScript("o = { a:1 } ", e)
Dim dd As Dictionary = v3

Break
```

Notes:

Synchronous version which waits for JavaScript to return the value.
Error is set in case of errors.

Result is converted from JavaScript data types to Xojo datatypes, usually variants, dictionaries or array of

variants.

190.12.15 goBack

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the back item in the back-forward list.

190.12.16 goForward

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to the forward item in the back-forward list.

190.12.17 goToBackForwardListItem(Item as WKBackForwardListItemMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to an item from the back-forward list and sets it as the current item.
Notes: item: The item to which to navigate. Must be one of the items in the web view's back-forward list.

190.12.18 handlesURLScheme(urlScheme as String) as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Checks whether or not WKWebViews handle the given URL scheme by default.
Notes:

urlScheme: The URL scheme to check.

Returns true if supported.

190.12.19 HTMLText as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries HTML text for the current main page.
Notes: This is live, so any changes made after loading will be included.

190.12.20 LoadData(Data as MemoryBlock, MIMEType as String, textEncodingName as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.LoadData "<p>Hello World</p>", "text/html", "UTF-8", ""
```

Notes:

data: The data to use as the contents of the webpage.
MIMEType: The MIME type of the data.
characterEncodingName: The data's character encoding name.
baseURL: A URL used to resolve relative URLs within the document.

190.12.21 LoadFileURL(File as FolderItem, readAccessItem as FolderItem)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested file.
Example:

```
Dim w as WKWebViewMBS // your web viewer
Dim HTMLFile as folderItem = getfolderItem("test.html")

// pass folderitem parent to allow read to other files in same folder
w.LoadFileURL HTMLFile, HTMLFile.parent
```

Notes:

Navigates to the requested file URL on the filesystem.
file: The file URL to which to navigate.
readAccessItem: The file or folder to allow read access to.
If readAccessItem references a single file, only that file may be loaded by WebKit.
If readAccessItem references a directory, files inside that file may be loaded by WebKit.

190.12.22 LoadHTML(htmlText as String, baseURL as string = "")

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Sets the webpage contents and base URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.LoadHTML "<p>Hello World</p>"
```

Notes:

htmlText: The string to use as the contents of the webpage.
baseURL: A URL used to resolve relative URLs within the document.

190.12.23 LoadURL(URL as string)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.LoadURL "https://www.mbs-plugins.de/"
```

190.12.24 LoadURLRequest(Request as NSURLRequestMBS)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Navigates to a requested URL.

190.12.25 MainResourceData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries the source data from the webviewer.
Notes:

Returns nil in case of error.
Also sets error parameter to NSErrorMBS for details on the error.

190.12.26 paste

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Pastes clipboard into current position in document.

190.12.27 PDFData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Create a PDF document representation from the web page currently displayed in the WKWebView.
Notes:

Returns PDF data of new PDF Document.
If the data is written to a file the resulting file is a valid PDF document.

Available in macOS 11.0 or newer.
May also work if Safari 14 is installed on older macOS versions.

190.12.28 PlainText as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries plain text for the current main page.
Notes: This is live, so any changes made after loading will be included.

190.12.29 printOperation(printInfo as NSPrintInfoMBS) as NSPrintOperationMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Creates a print operation for the current web viewer.
Example:

```
dim browser as WKWebViewMBS // your web viewer
Dim pi As NSPrintInfoMBS = NSPrintInfoMBS.sharedPrintInfo
Dim po As NSPrintOperationMBS = browser.printOperation(pi)

po.showsPrintPanel = True
po.showsProgressPanel = True

po.runOperationModalForWindow(Self)
```

Notes:

Works for WebKit 1.x and 2.x.

For WebKit 2.x may run into endless loop for some websites due to bugs in Apple's WebKit framework.

190.12.30 reload

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Reloads the current page.
Example:

```
Public Sub Reload(browser as WKWebViewMBS, force as Boolean)
If force Then
browser.reloadFromOrigin
Else
browser.reload
End If
End Sub
```

190.12.31 reloadFromOrigin

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Reloads the current page, performing end-to-end revalidation using cache-validating conditionals if possible.
Example:

```
Public Sub Reload(browser as WKWebViewMBS, force as Boolean)
If force Then
browser.reloadFromOrigin
Else
browser.reload
End If
End Sub
```

190.12.32 removeAllUserScripts

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Removes all associated user scripts.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.removeAllUserScripts
```

190.12.33 selectAll

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop only.

Function: Selects all.

190.12.34 setMagnification(magnification as double, pointX as double, pointY as double)

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: Scales the page content by a specified factor and centers the result on a specified point.
Example:

```
Dim browser As WKWebViewMBS // your instance

// zoom to 200% on 100/100
browser.setMagnification(2, 100, 100)
```

Notes:

magnification: The factor by which to scale the content.
x/y: The point (in view space) to center magnification on. As usual with Cocoa, bottom is y = 0.

For MacOS 64-bit only.

190.12.35 stopLoading

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Stops loading all resources on the current page.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.stopLoading
```

190.12.36 takeSnapshot(byref error as NSErrorMBS) as NSImageMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Requests a snapshot.
Example:

```
// get a webview reference
Dim web As WKWebViewMBS = HTMLViewer1.WKWebViewMBS

// take snapshot
Dim error As NSErrorMBS
Dim image As NSImageMBS = web.takeSnapshot(error)

If error <>Nil Then
MsgBox error.LocalizedDescription
return
End If

// save as PNG
Dim png As String = image.PNGRepresentation

// write to file
Dim f As FolderItem = SpecialFolder.Desktop.Child("test.png")
Dim b As BinaryStream = BinaryStream.Create(f, True)
b.Write png
```

Notes:

This is synchronous version which waits for image to be finished.
In case of error the result is nil and error may be set.

190.12.37 userScripts as WKUserScriptMBS()

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The user scripts associated with the user content controller.

190.12.38 WebArchiveData(byref error as NSErrorMBS) as MemoryBlock

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries web archive data for the website.
Example:

```
Dim w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS

Dim error As NSErrorMBS
Dim data As MemoryBlock = w.WebArchiveData(error)

Break // inspect in debugger
```

Notes: May return nil in case of error and maybe report the NSError in case of an error.

190.12.39 Properties

190.12.40 allowFileAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Allow file access for file URLs.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowFileAccessFromFileURLs = True
```

Notes:

Access to files is allowed for some files.
Please check WebKit documentation for details.

Set allowFileAccessFromFileURLs and allowUniversalAccessFromFileURLs to true to disable all the security checks to block local file access for websites. allowUniversalAccessFromFileURLs would allow all file URLs. allowFileAccessFromFileURLs would only allow in same path.
(Read and Write property)

190.12.41 allowsBackForwardNavigationGestures as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether horizontal swipe gestures will trigger back-forward list navigations.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsBackForwardNavigationGestures = True
```

Notes:

The default value is false.
(Read and Write property)

190.12.42 allowsLinkPreview as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value that determines whether pressing on a link displays a preview of the destination for the link.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsLinkPreview = True
```

Notes: (Read and Write property)

190.12.43 allowsMagnification as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: A Boolean value indicating whether magnify gestures will change the web view's magnification.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.allowsMagnification = True
```

Notes:

The default value is false. You can set the magnification property even if allowsMagnification is set to false.
For MacOS 64-bit only.
(Read and Write property)

190.12.44 allowUniversalAccessFromFileURLs as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Allow universal file access for URLs.
Notes:

Any file URL will be loaded if true.
Please check WebKit documentation for details.

Does not work in MacOS 10.14.
(Read and Write property)

190.12.45 backForwardList as WKWebViewMBS

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The web view's back-forward list.
Notes: (Read only property)

190.12.46 backgroundColor as NSColorMBS

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: The background color.
Example:

```
Dim w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS // your webviewer

w.drawsBackground = False
w.backgroundColor = NSColorMBS.clearColor
```

Notes:

If background is not drawn and/or transparent, you may see through.
Requires also CSS to have web view page transparent.

(Read and Write property)

190.12.47 CanGoBack as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether there is a back item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "CanGoBack: "+If(Browser.CanGoBack, "yes", "no")
```

Notes: (Read only property)

190.12.48 CanGoForward as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether there is a forward item in the back-forward list that can be navigated to.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "CanGoForward: "+If(Browser.CanGoForward, "yes", "no")
```

Notes: (Read only property)

190.12.49 Configuration as WKWebViewConfigurationMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Returns the configuration used to initialize the WKWebView.
Notes: (Read only property)

190.12.50 customUserAgent as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The custom user agent string.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.customUserAgent = "MyBrowser/1.0"
```

Notes:

If no custom user agent string has been set, this is set to "".
Available in 32-bit. Available in 64-bit for macOS 10.11 or newer.
(Read and Write property)

190.12.51 developerExtrasEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether developer extras are enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

// enable context menu entry to show developer extras
browser.developerExtrasEnabled = True
```

Notes:

Enables the context menu to inspect items.
(Read and Write property)

190.12.52 drawsBackground as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.4, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to draw background for the view.
Example:

```
Dim w As WKWebViewMBS = HTMLViewer1.WKWebViewMBS // your webviewer

w.drawsBackground = False
```

w.backgroundColor = NSColorMBS.clearColor

Notes:

If background is not drawn and/or transparent, you may see through.
Requires also CSS to have web view page transparent.
(Read and Write property)

190.12.53 EstimatedProgress as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: An estimate of what fraction of the current navigation has been loaded.
Notes:

This value ranges from 0.0 to 1.0 based on the total number of bytes expected to be received, including the main document and all of its potential subresources. After a navigation loading completes, the estimatedProgress remains at 1.0 until a new navigation starts, at which point the estimatedProgress is reset to 0.0.
(Read only property)

190.12.54 hasOnlySecureContent as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether all resources on the page have been loaded through securely encrypted connections.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "hasOnlySecureContent: "+If(Browser.hasOnlySecureContent, "yes", "no")
```

Notes:

Only set for 64-bit, always false on 32-bit.
(Read only property)

190.12.55 HTTPCookieStore as WKHTTPCookieStoreMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience property to directly query HTTP cookie store for WKWebview configuration.
Example:

```
Dim CookieStore As WKHTTPCookieStoreMBS = WKWebViewControlMBS1.WKWebView.HTTPCookieStore
Dim cookies() As NSHTTPCookieMBS = CookieStore.AllCookies
Dim cookie As NSHTTPCookieMBS = cookies(0)

// now check in debugger
Break
```

Notes: (Read only property)

190.12.56 IsLoading as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: A Boolean value indicating whether the view is currently loading content.
Example:

```
Dim browser As WKWebViewMBS // your instance

// load a page
browser.LoadURL "https://www.mbs-plugins.de"

// wait synchronously for website loading
While browser.IsLoading
DelayMBS 0.1
Wend

MsgBox "loaded"
```

Notes: (Read only property)

190.12.57 javaEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether java is enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance
```

```
MsgBox "JavaScript Enabled: "+If(Browser.javaEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.12.58 javaScriptCanOpenWindowsAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether javascript can open new windows.
Example:

```
Dim browser As WKWebViewMBS // your instance

// disable popup windows
Browser.javaScriptCanOpenWindowsAutomatically = False
```

Notes: (Read and Write property)

190.12.59 javaScriptEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: JavaScript was evaluated.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "JavaScript Enabled: "+If(Browser.javaScriptEnabled, "yes", "no")
```

Notes:

Error is only set with 64-bit, not with 32-bit.
Tag is passed from EvaluateJavaScript call.
(Read and Write property)

190.12.60 loadsImagesAutomatically as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether to load images automatically.
Example:

```
Dim browser As WKWebViewMBS // your instance

// disable loading of images
browser.loadsImagesAutomatically = False
```

Notes: (Read and Write property)

190.12.61 magnification as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop only.

Function: The factor by which the page content is currently scaled.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.magnification = 2.0
```

Notes:

The default value is 1.0.
For MacOS 64-bit only.
(Read and Write property)

190.12.62 mediaType as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The media type for the WKWebView.
Notes:

The value of mediaType will override the normal value of the CSS media property.
Setting the value to "" will restore the normal value.
The default value is "".

Available in macOS 11.0 or newer.
(Read and Write property)

190.12.63 MIMEType as String

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: Queries current mime type for showing document.
Notes:

Should be "text/html" for a website or "application/pdf" for a PDF document.
(Read only property)

190.12.64 minimumFontSize as Double

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The minimum font size to use.
Example:

```
Dim browser As WKWebViewMBS // your instance

browser.minimumFontSize = 20
```

Notes: (Read and Write property)

190.12.65 pageZoom as Double

MBS Mac64bit Plugin, Plugin Version: 20.3, Platform: macOS, Targets: Desktop & iOS.

Function: The factor by which page content is scaled relative to the viewport.
Notes:

The default value is 1.0.
Changing this value is equivalent to web content setting the CSS "zoom" property on all page content.

Available in macOS 11.0 or newer.
(Read and Write property)

190.12.66 plugInsEnabled as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether plugins are enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "plugInsEnabled: "+If(Browser.plugInsEnabled, "yes", "no")
```

Notes: (Read and Write property)

190.12.67 Preferences as WKPreferencesMBS

MBS Mac64bit Plugin, Plugin Version: 20.1, Platform: macOS, Targets: Desktop & iOS.

Function: Convenience property to directly query HTTP cookie store for WKWebview preferences.
Notes: (Read only property)

190.12.68 privateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: Whether private browsing is enabled.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox "privateBrowsing: "+If(Browser.privateBrowsing, "yes", "no")
```

Notes:

If enabled, no data should be stored for cookies or cache on disk, so it's cleared when web viewer is destroyed.
Default is non-private mode for the web viewer.

It looks like you can't change mode after web viewer was created.
(Read and Write property)

190.12.69 Title as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The page title.
Example:

```
Dim browser As WKWebViewMBS // your instance
```

MsgBox Browser.Title

Notes: (Read only property)

190.12.70 URL as String

MBS Mac64bit Plugin, Plugin Version: 20.0, Platform: macOS, Targets: Desktop & iOS.

Function: The active URL.
Example:

```
Dim browser As WKWebViewMBS // your instance

MsgBox Browser.URL
```

Notes:

This is the URL that should be reflected in the user interface.
(Read only property)

190.13 module WVWebViewModuleMBS

190.13.1 module WVWebViewModuleMBS

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: The module for global options to WKWebView.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

190.13.2 Blog Entries

- MBS Xojo Plugins, version 19.5pr5

190.13.3 Blog Entries

- MBS Xojo Plugins, version 19.5pr5

190.13.4 Properties

190.13.5 UsePrivateBrowsing as Boolean

MBS Mac64bit Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Whether to create WKWebViewControlMBS with private browsing enabled.
Example:

WVWebViewModuleMBS.UsePrivateBrowsing = True

Notes:

Set this property to true before creating the WKWebViewControlMBS control, so the plugin can enable private browsing.
Set to false later to create a normal control again.

You may want to set this to true or false before the window opens and control initialized.
(Read and Write property)

Chapter 191

WebView2

191.1 control DesktopWebView2ControlMBS

191.1.1 control DesktopWebView2ControlMBS

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The MBS control for the Chrome based WebView2 control from Microsoft.
Notes:

Read about WebView2 control here:

https://developer.microsoft.com/en-us/microsoft-edge/webview2/

There you also fine the installers needed to install it, unless you have the 2021 version of Windows, which may include it preinstalled.

If you use this control on macOS and Linux, it will do nothing.
On Windows if the control fails to initialize, the Opened event will not fire.
But if it fires, it will be some time after the open event fired as initialization is asynchronous.

If you call LoadURL, LoadHTML or set URL property too early, we cache that and perform the action later when the web viewer is initialized properly.

If you add an event, we register it with the C++ control. So if you don't specify an event, you may get the default behavior.

191.1.2 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

191.1.3 Blog Entries

- News from the MBS Xojo Plugins in version 21.5
- New desktop controls

191.1.4 Methods

191.1.5 AddScriptToExecuteOnDocumentCreated(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Add the provided JavaScript to a list of scripts that should be executed after the global object has been created, but before the HTML document has been parsed and before any other script included by the HTML document is executed.
Notes:

This method injects a script that runs on all top-level document and child frame page navigations. This method runs asynchronously, and you must wait for the completion handler to finish before the injected script is ready to run. When this method completes, the handler's Invoke method is called with the id of the injected script. id is a string. To remove the injected script, use RemoveScriptToExecuteOnDocumentCreated.
Note that if an HTML document has sandboxing of some kind via sandbox properties or the Content-Security-Policy HTTP header this will affect the script run here. So, for example, if the 'allow-modals' keyword is not set then calls to the alert function will be ignored.

Calls AddScriptToExecuteOnDocumentCreatedCompleted event later when done.

191.1.6 AddWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Adds a URI and resource context filter to the WebResourceRequested event.
Notes: The URI parameter can be a wildcard string ('*': zero or more, '?': exactly one). See kWebResourceContext constants for description of resource context filters.

191.1.7 AvailableCoreWebView2BrowserVersionString as string

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The available version of the WebView2 browser.
Notes:

Allows you to query the browser version before creating a control.
Returns empty text if none is available.

191.1.8 CanGoBack as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a previous page in the navigation history.
Notes:

The HistoryChanged event will fire if CanGoBack changes value.

Returns false if the browser is not yet initialized.

191.1.9 CanGoForward as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a next page in the navigation history.
Notes:

The HistoryChanged event will fire if CanGoForward changes value.

Returns false if the browser is not yet initialized.

191.1.10 CapturePreview(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Capture an image of what WebView is displaying.
Notes:

Specify the format of the image with the imageFormat parameter. The resulting image binary data is passed to the CapturePreviewCompleted event.

Calls CapturePreviewCompleted event when done or failed.

191.1.11 ClearSelection

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to clear current selection.
Notes: This is the reverse for SelectAll.

191.1.12 Copy

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to copy current selection to clipboard.

191.1.13 Cut

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to cut current selection.
Notes: May do a copy, if selection is read only.

191.1.14 ExecuteScript(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
dim web as DesktopWebView2ControlMBS // your control

web.ExecuteScript "1+5" , "tag value"

// triggers ExecuteScriptCompeleted later with result "6"

web.ExecuteScript "window.chrome.webview.postMessage( { 'Test': 'Hello, world!' } );"

// triggers later WebMessageReceived later
```

Notes:

This will execute asynchronously and when complete, if a handler is provided in the ExecuteScriptCompletedHandler parameter, its Invoke method will be called with the result of evaluating the provided JavaScript. The result value is a JSON encoded string. If the result is undefined, contains a reference cycle, or otherwise cannot be encoded into JSON, the JSON null value will be returned as the string 'null'. Note that a function that has no explicit return value returns undefined. If the executed script throws an unhandled exception, then the result is also 'null'. This method is applied asynchronously. If the method is called after NavigationStarting event during a navigation, the script will be executed in the new document when loading it, around the time ContentLoading is fired. ExecuteScript will work even if IsScriptEnabled is set to false.

Calls ExecuteScriptCompleted event later.

191.1.15 ExecuteScriptSync(JavaScript as String, byref ErrorCode as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
dim web as DesktopWebView2ControlMBS // your control

dim errorCode as integer
dim s as string = web.ExecuteScriptSync("1+2", errorCode)

Break // s contains 3
```

Notes:

Same as ExecuteScript, but waits for event and returns result directly.
errorCode is zero on success.
Result is JSON as text, e.g. "null" if there is no result.

191.1.16 GoBack

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the previous page in the navigation history.

191.1.17 GoForward

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the next page in the navigation history.

191.1.18 HTMLText as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Queries HTML text of the current website.
Example:

```
dim web as DesktopWebView2ControlMBS // your control

dim text as string = web.plaintext
dim html as string = web.HTMLText

break // check in debugger
```

191.1.19 LoadHTML(HTML as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Initiates a navigation to htmlContent as source HTML of a new document.
Notes: The htmlContent parameter may not be larger than 2 MB in total size. The origin of the new page will be about:blank.

191.1.20 LoadURL(URL as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Cause a navigation of the top level document to the specified URI.
Notes: See the navigation events for more information. Note that this starts a navigation and the corresponding NavigationStarting event will fire sometime after this Navigate call completes.

191.1.21 OpenDevToolsWindow

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Opens the DevTools window for the current document in the WebView.
Notes: Does nothing if called when the DevTools window is already open.

191.1.22 Paste

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to paste clipboard content into the current field.
Notes: This may do nothing if there is nothing to paste or nothing to receive (no field in focus).

191.1.23 PlainText as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Queries plain text of the current website.
Example:

```
dim web as DesktopWebView2ControlMBS // your control

dim text as string = web.plaintext
dim html as string = web.HTMLText

break // check in debugger
```

191.1.24 PostWebMessageAsJson(webMessageAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Post the specified webMessage to the top level document in this WebView.
Notes:

The top level document's window.chrome.webview's message event fires. JavaScript in that document may subscribe and unsubscribe to the event via the following:

```
window.chrome.webview.addEventListener('message', handler)
window.chrome.webview.removeEventListener('message', handler)
```

The event args is an instance of MessageEvent. The IsWebMessageEnabled setting must be true or this method will fail with E_INVALIDARG. The event arg's data property is the webMessage string parameter parsed as a JSON string into a JavaScript object. The event arg's source property is a reference to the window.chrome.webview object. See add_WebMessageReceived for information on sending messages from the HTML document in the WebView to the host. This message is sent asynchronously. If a navigation

occurs before the message is posted to the page, then the message will not be sent.

191.1.25 PostWebMessageAsString(webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: This is a helper for posting a message that is a simple string rather than a JSON string representation of a JavaScript object..
Notes: This behaves in exactly the same manner as PostWebMessageAsJson but the window.chrome.webview message event arg's data property will be a string with the same value as webMessageAsString. Use this instead of PostWebMessageAsJson if you want to communicate via simple strings rather than JSON objects.

191.1.26 Print

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to show print dialog.

191.1.27 Reload

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Notes: This is similar to navigating to the URI of current top level document including all navigation events firing and respecting any entries in the HTTP cache. But, the back/forward history will not be modified.

191.1.28 RemoveScriptToExecuteOnDocumentCreated(ID as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Remove the corresponding JavaScript added using AddScriptToExecuteOnDocumentCreated with the specified script id.

191.1.29 RemoveWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Removes a matching WebResource filter that was previously added for the WebResourceRequested event.
Notes: If the same filter was added multiple times, then it will need to be removed as many times as it was added for the removal to be effective. Raises exception with E_INVALIDARG for a filter that was never added.

191.1.30 SelectAll

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to select all text.

191.1.31 Stop

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Stop all navigations and pending resource fetches.
Notes: Does not stop scripts.

191.1.32 Properties

191.1.33 AdditionalBrowserArguments as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Additional browser arguments can be specified to change the behavior of the WebView.
Notes:

These will be passed to the browser process as part of the command line. See Run Chromium with Flags for more information about command line switches to browser process. If the app is launched with a command line switch –edge-webview-switches=xxx the value of that switch (xxx in the above example) will also be appended to the browser process command line. Certain switches like –user-data-dir are internal and important to WebView. Those switches will be ignored even if specified. If the same switches are specified multiple times, the last one wins. There is no attempt to merge the different values of the same switch, except for disabled and enabled features. The features specified by –enable-features and –disable-features will be merged with simple logic: the features will be the union of the specified features and built-in features, and if a feature is disabled, it will be removed from the enabled features list. App process's command line –edge-webview-switches value are processed after the additionalBrowserArguments parameter is processed. Certain features are disabled internally and can't be enabled. If parsing failed for the specified switches, they will be ignored. Default is to run browser process with no extra flags.
(Read and Write property)

191.1.34 AllowSingleSignOnUsingOSPrimaryAccount as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AllowSingleSignOnUsingOSPrimaryAccount property is used to enable single sign on with Azure Active Directory (AAD) resources inside WebView using the logged in Windows account and single sign on with web sites using Microsoft account associated with the login in Windows account.
Notes:

Default is disabled. Universal Windows Platform apps must also declare enterpriseCloudSSO restricted capability for the single sign on to work.
(Read and Write property)

191.1.35 areBrowserAcceleratorKeysEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether all accelerator keys are enabled.
Notes:

When this setting is set to false, it disables all accelerator keys that access features specific to a web browser, including but not limited to:

- Ctrl-F and F3 for Find on Page
- Ctrl-P for Print
- Ctrl-R and F5 for Reload
- Ctrl-Plus and Ctrl-Minus for zooming
- Ctrl-Shift-C and F12 for DevTools
- Special keys for browser functions, such as Back, Forward, and Search

It does not disable accelerator keys related to movement and text editing, such as:

- Home, End, Page Up, and Page Down
- Ctrl-X, Ctrl-C, Ctrl-V
- Ctrl-A for Select All
- Ctrl-Z for Undo

Those accelerator keys will always be enabled unless they are handled in the AcceleratorKeyPressed event. This setting has no effect on the AcceleratorKeyPressed event. The event will be fired for all accelerator keys, whether they are enabled or not.

The default value for AreBrowserAcceleratorKeysEnabled is true.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

191.1.36 AreDefaultContextMenusEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AreDefaultContextMenusEnabled property is used to prevent default context menus from being shown to user in WebView.
Notes:

It is true by default.
(Read and Write property)

191.1.37 AreDefaultScriptDialogsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: AreDefaultScriptDialogsEnabled is used when loading a new HTML document.
Notes:

If set to false, then WebView won't render the default JavaScript dialog box (Specifically those shown by the JavaScript alert, confirm, prompt functions and beforeunload event). Instead, if an event handler is set via add_ScriptDialogOpening, WebView will send an event that will contain all of the information for the dialog and allow the host app to show its own custom UI. It is true by default.
(Read and Write property)

191.1.38 AreDevToolsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: AreDevToolsEnabled controls whether the user is able to use the context menu or keyboard shortcuts to open the DevTools window.
Notes:

It is true by default.
(Read and Write property)

191.1.39 AreHostObjectsAllowed as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AreHostObjectsAllowed property is used to control whether host objects are accessible from the page in WebView.
Notes:

It is true by default.
(Read and Write property)

191.1.40 BrowserExecutableFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The path to the browser executable to use.
Notes:

Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

Use browserExecutableFolder to specify whether WebView2 controls use a fixed or installed version of the WebView2 Runtime that exists on a user machine. To use a fixed version of the WebView2 Runtime, pass the relative folder path that contains the fixed version of the WebView2 Runtime to browserExecutable-Folder. To create WebView2 controls that use the installed version of the WebView2 Runtime that exists on user machines, pass a empty string to browserExecutableFolder. In this scenario, the API tries to find a compatible version of the WebView2 Runtime that is installed on the user machine (first at the machine level, and then per user) using the selected channel preference. The path of fixed version of the WebView2 Runtime should not contain \Edge\Application\. When such a path is used, the API fails with HRESULT_FROM_WIN32(ERROR_NOT_SUPPORTED).
(Read and Write property)

191.1.41 BrowserVersionString as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The browser version info of the current environment, including channel name if it is not the stable channel.
Notes:

This matches the format of the AvailableCoreWebView2BrowserVersionString API. Channel names are 'beta', 'dev', and 'canary'.
(Read only property)

191.1.42 ContainsFullScreenElement as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates if the WebView contains a fullscreen HTML element.
Notes: (Read only property)

191.1.43 DefaultBackgroundColor as Color

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The DefaultBackgroundColor property is the color WebView renders underneath all web content.
Notes:

This means WebView renders this color when there is no web content loaded such as before the initial navigation or between navigations. This also means web pages with undefined css background properties or background properties containing transparent pixels will render their contents over this color. Web pages with defined and opaque background properties that span the page will obscure the DefaultBackgroundColor and display normally. The default value for this property is white to resemble the native browser experience.

The Color is specified by the color that represents an RGBA value. The A represents an Alpha value, meaning DefaultBackgroundColor can be transparent. In the case of a transparent DefaultBackgroundColor WebView will render hosting app content as the background. This Alpha value is not supported on Windows 7. Any A value other than 255 will result in an exception on Windows 7. It is supported on all other WebView compatible platforms.

Semi-transparent colors are not currently supported by this API and setting DefaultBackgroundColor to a semi-transparent color will fail with an exception. The only supported alpha values are 0 and 255, all other values will result in exception. DefaultBackgroundColor can only be an opaque color or transparent.

Requires version 1.0.774.44 of Webview2 or newer.
(Read and Write property)

191.1.44 DocumentTitle as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The title for the current top level document.
Notes:

If the document has no explicit title or is otherwise empty, a default that may or may not match the URI of the document will be used.
(Read only property)

191.1.45 IsBuiltInErrorPageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The IsBuiltInErrorPageEnabled property is used to disable built in error page for navigation failure and render process failure.
Notes:

It is true by default. When disabled, blank page will be shown when related error happens.
(Read and Write property)

191.1.46 IsGeneralAutofillEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether autofill for information like names, street and email addresses, phone numbers, and arbitrary input is enabled.
Notes:

This excludes password and credit card information. When IsGeneralAutofillEnabled is false, no suggestions appear, and no new information is saved. When IsGeneralAutofillEnabled is true, information is saved, suggestions appear and clicking on one will populate the form fields. The default value is true.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

191.1.47 IsPasswordAutosaveEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether autosave for password information is enabled.
Notes:

The IsPasswordAutosaveEnabled property behaves independently of the IsGeneralAutofillEnabled property. When IsPasswordAutosaveEnabled is false, no new password data is saved and no Save/Update Password prompts are displayed. However, if there was password data already saved before disabling this setting, then that password information is auto-populated, suggestions are shown and clicking on one will populate the fields. When IsPasswordAutosaveEnabled is true, password information is auto-populated, suggestions are shown and clicking on one will populate the fields, new data is saved, and a Save/Update Password prompt is displayed. The default value is false.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

191.1.48 IsPinchZoomEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Enable or disable pitch zoom.
Notes:

Pinch-zoom, referred to as "Page Scale" zoom, is performed as a post-rendering step, it changes the page scale factor property and scales the surface the web page is rendered onto when user performs a pinch zooming action.

It does not change the layout but rather changes the viewport and clips the web content, the content outside of the viewport isn't visible onscreen and users can't reach this content using mouse.
The IsPinchZoomEnabled property enables or disables the ability of the end user to use a pinching motion on touch input enabled devices to scale the web content in the WebView2. It defaults to TRUE. When set to FALSE, the end user cannot pinch zoom after the next navigation. Disabling/Enabling IsPinchZoomEnabled only affects the end user's ability to use pinch motions and does not change the page scale factor. This API only affects the Page Scale zoom and has no effect on the existing browser zoom properties (IsZoomControlEnabled and ZoomFactor) or other end user mechanisms for zooming.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

191.1.49 IsScriptEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Controls if JavaScript execution is enabled in all future navigations in the WebView.
Notes:

This only affects scripts in the document; scripts injected with ExecuteScript will run even if script is disabled. It is true by default.
(Read and Write property)

191.1.50 IsStatusBarEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: IsStatusBarEnabled controls whether the status bar will be displayed.
Notes:

The status bar is usually displayed in the lower left of the WebView and shows things such as the URI of a link when the user hovers over it and other information. It is true by default.
(Read and Write property)

191.1.51 IsWebMessageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The IsWebMessageEnabled property is used when loading a new HTML document.
Notes:

If set to true, communication from the host to the WebView's top level HTML document is allowed via PostWebMessageAsJson, PostWebMessageAsString, and window.chrome.webview's message event (see PostWebMessageAsJson documentation for details). Communication from the WebView's top level HTML document to the host is allowed via window.chrome.webview's postMessage function and add_WebMessageReceived method (see add_WebMessageReceived documentation for details). If set to false, then communication is disallowed. PostWebMessageAsJson and PostWebMessageAsString will fail with E_ACCESSDENIED and window.chrome.webview.postMessage will fail by throwing an instance of an Error object. It is true by default.
(Read and Write property)

191.1.52 IsZoomControlEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The IsZoomControlEnabled property is used to prevent the user from impacting the zoom of the WebView.
Notes:

It is true by default. When disabled, user will not be able to zoom using ctrl+/- or ctrl+mouse wheel, but the zoom can be set via ZoomFactor API.
(Read and Write property)

191.1.53 Language as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The default language that WebView will run with.
Notes:

It applies to browser UIs like context menu and dialogs. It also applies to the accept-languages HTTP header that WebView sends to web sites. It is in the format of language [-country] where language is the 2 letter code from ISO 639 and country is the 2 letter code from ISO 3166.
(Read and Write property)

191.1.54 ProcessID as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The process id of the browser process that hosts the WebView.
Notes: (Read only property)

191.1.55 TargetCompatibleBrowserVersion as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The version of the Edge WebView2 Runtime binaries required to be compatible with the calling application.
Notes:

This defaults to the Edge WebView2 Runtime version that corresponds with the version of the SDK the application is using. The format of this value is the same as the format of the BrowserVersionString property and other BrowserVersion values. Only the version part of the BrowserVersion value is respected. The channel suffix, if it exists, is ignored. The version of the Edge WebView2 Runtime binaries actually used may be different from the specified TargetCompatibleBrowserVersion. They are only guaranteed to be compatible. You can check the actual version on the BrowserVersionString property on the control.
(Read and Write property)

191.1.56 URL as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The URI of the current top level document.
Notes:

This value potentially changes as a part of the SourceChanged event firing for some cases such as navigating to a different site or fragment navigations. It will remain the same for other types of navigations such as page reloads or history.pushState with the same URL as the current page.

If assigned, calls LoadURL method.
(Read and Write property)

191.1.57 UserAgent as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The User Agent.
Notes:

The default value is the default User Agent of the Microsoft Edge browser.

This property may be overridden if the User-Agent header is set in a request. If the parameter is empty the

User Agent will not be updated and the current User Agent will remain.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

191.1.58 UserDataFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The user data folder location.
Notes:

Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

You may specify the userDataFolder to change the default user data folder location for WebView2. The path is either an absolute file path or a relative file path that is interpreted as relative to the compiled code for the current process. For UWP apps, the default user data folder is the app data folder for the package. For non-UWP apps, the default user data ({ Executable File Name } .WebView2) folder is created in the same directory next to the compiled code for the app. WebView2 creation fails if the compiled code is running in a directory in which the process does not have permission to create a new directory. The app is responsible to clean up the associated user data folder when it is done.
(Read and Write property)

191.1.59 ZoomFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The ZoomFactor property.
Notes: (Read and Write property)

191.1.60 Events

191.1.61 AddScriptToExecuteOnDocumentCreatedCompleted(JavaScript as String, ErrorCode as Integer, ID as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report that AddScriptToExecuteOnDocumentCreated is done and provide the ID.

191.1.62 CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event called when CapturePreview call is done.
Notes:

We pass you the image data as a string, so you can e.g. write it to a PNG or JPEG file.
Otherwise ErrorCode tells you the reason for the error.

191.1.63 Closing

Plugin Version: 21.5, Platform: Windows, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

191.1.64 Configure

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event called while initializing, where you can apply properties just before plugin reads them.

191.1.65 ConstructContextualMenu(base as DesktopMenuItem, x as Integer, y as Integer) As Boolean

Plugin Version: 22.1, Platform: Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

191.1.66 ContainsFullScreenElementChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: ContainsFullScreenElementChanged fires when the ContainsFullScreenElement property changes.
Notes: This means that an HTML element inside the WebView is entering fullscreen to the size of the WebView or leaving fullscreen. This event is useful when, for example, a video element requests to go fullscreen. The listener of ContainsFullScreenElementChanged can then resize the WebView in response.

191.1.67 ContentLoading(isErrorPage as Boolean, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The content loading event.d
Notes: ContentLoading fires before any content is loaded, including scripts added with AddScriptToExecuteOnDocumentCreated. ContentLoading will not fire if a same page navigation occurs (such as through fragment navigations or history.pushState navigations). This follows the NavigationStarting and SourceChanged events and precedes the HistoryChanged and NavigationCompleted events.

191.1.68 ContextualMenuItemSelected(selectedItem As DesktopMenuItem) As Boolean

Plugin Version: 22.1, Platform: Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

191.1.69 DocumentTitleChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report a document title change.
Notes: DocumentTitleChanged fires when the DocumentTitle property of the WebView changes and may fire before or after the NavigationCompleted event.

191.1.70 ExecuteScriptCompleted(JavaScript as String, ErrorCode as Integer, resultObjectAsJson as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report ExecuteScript method is done.

191.1.71 FocusLost

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function:

LostFocus fires when WebView lost focus.
In older Xojo versions, this event is named LostFocus.

Notes: In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

191.1.72 FocusReceived

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function:

GotFocus fires when WebView got focus.
In older Xojo versions, this event is named GotFocus.

191.1.73 FrameNavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: FrameNavigationCompleted fires when a child frame has completely loaded (body.onload has fired) or loading stopped with error.

191.1.74 FrameNavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: FrameNavigationStarting fires when a child frame in the WebView requests permission to navigate to a different URI. This will fire for redirects as well.
Notes:

Corresponding navigations can be blocked until the event handler returns.
Return true to block the request.

191.1.75 HistoryChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report history change.
Notes: HistoryChanged listens to the change of navigation history for the top level document. Use HistoryChanged to check if CanGoBack/CanGoForward value has changed. HistoryChanged also fires for using GoBack/GoForward. HistoryChanged fires after SourceChanged and ContentLoading.

191.1.76 MenuBarSelected

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

191.1.77 NavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report a navigation action completed.
Notes: NavigationCompleted fires when the WebView has completely loaded (body.onload has fired) or loading stopped with error.

191.1.78 NavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report a navigation action.
Notes:

NavigationStarting fires when the WebView main frame is requesting permission to navigate to a different URI. This will fire for redirects as well.
Corresponding navigations can be blocked until the event handler returns.

Return true to cancel it like Xojo's CancelLoad event.

This event is great to check the URL. If you like to block it, you may just return true. If the user initiated the request, you may instead want to load a warning page. Also check the URL and decide whether to turn scripting on or off.

191.1.79 NewWindowRequested(URL as String, IsUserInitiated as Boolean, WindowFeatures as WebView2WindowFeaturesMBS, byref NewWindow as Variant) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event called when a new window needs to be opened.
Notes:

Return true to indicate you handled the event.
If you create a new window with a DesktopWebView2ControlMBS (or DesktopDesktopWebView2ControlMBS), you can put it in NewWindow property.

IsUserInitiated:
True when the new window request was initiated through a user gesture.

Examples of user initiated requests are:
Selecting an anchor tag with target
Programmatic window open from a script that directly run as a result of user interaction such as via onclick handlers.
Non-user initiated requests are programmatic window opens from a script that are not directly triggered by user interaction, such as those that run while loading a new page or via timers. The Microsoft Edge popup blocker is disabled for WebView so the app is able to use this flag to block non-user initiated popups.

URL: The target uri of the new window requested.

NewWindow: Set the new control to use.

If the NewWindow is set, the top-level window returns as the opened WindowProxy. The NewWindow property should be set to a control that has not been navigated previously. Don't use methods that cause navigation or interact with the DOM on this web view. Setting event handlers, changing Settings properties, or other methods are fine to call. Changes to settings should be made before NewWindow is called to ensure that those settings take effect for the newly setup WebView. Once the NewWindow is set the underlying web contents of this CoreWebView2 will be replaced and navigated as appropriate for the new window. After setting new window it cannot be changed and error will be return otherwise.

191.1.80 Opened

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event called when browser initialization is done.
Notes:

Typical event flow is like this:

- Configure
- Open
- Window.Open

- Opened

Opened is called a few milliseconds later.

If you load an URL, the events happen like this:

- NavigationStarting
- SourceChanged
- ContentLoading
- HistoryChanged
- DocumentTitleChanged
- NavigationCompleted

191.1.81 Opening

Plugin Version: 21.5, Platform: Windows, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

191.1.82 PermissionRequested(URL as String, PermissionKind as Integer, IsUserInitiated as Boolean, byref State as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to query permissions from user.
Notes:

PermissionRequested fires when content in a WebView requests permission to access some privileged resources.
If a deferral is not taken on the event args, the subsequent scripts can be blocked until the event handler returns. If a deferral is taken, then the scripts are blocked until the deferral is completed.

URL: The origin of the web content that requests the permission.
PermissionKind: The type of the permission that is requested.
IsUserInitiated: True when the permission request was initiated through a user gesture.
State: The status of a permission request, i.e.

Please assign State the answer you like to provide.

191.1.83 ProcessFailed(processFailedKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: ProcessFailed fires when a WebView process is terminated unexpectedly or becomes unresponsive.

191.1.84 SourceChanged(isNewDocument as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event to report a change in the URL.
Notes: SourceChanged fires when the Source property changes. SourceChanged fires for navigating to a different site or fragment navigations. It will not fire for other types of navigations such as page reloads or history.pushState with the same URL as the current page. SourceChanged fires before ContentLoading for navigation to a new document.

191.1.85 WebMessageReceived(Source as String, webMessageAsJson as String, webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event called for a web message.
Notes:

WebMessageReceived fires when the IsWebMessageEnabled setting is set and the top level document of the WebView calls window.chrome.webview.postMessage. The postMessage function is void postMessage(object) where object is any object supported by JSON conversion.

webMessageAsString is empty if we can't serialize it to text.

191.1.86 WindowCloseRequested

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event where JavaScript asks to close window.
Notes: WindowCloseRequested fires when content inside the WebView requested to close the window, such as after window.close is called. The app should close the WebView and related app window if that makes sense to the app.

191.1.87 ZoomFactorChanged

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: ZoomFactorChanged fires when the ZoomFactor property of the WebView changes.
Notes: The event could fire because the caller modified the ZoomFactor property, or due to the user manually modifying the zoom. When it is modified by the caller via the ZoomFactor property, the internal zoom factor is updated immediately and there will be no ZoomFactorChanged event. WebView associates the last used zoom factor for each site. Therefore, it is possible for the zoom factor to change when navigating to a different page. When the zoom factor changes due to this, the ZoomFactorChanged event fires right after the ContentLoading event.

191.1.88 Constants

191.1.89 kCapturePreviewImageFormatJPEG = 1

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the image formats to capture preview.
Notes: JPEG format.

191.1.90 kCapturePreviewImageFormatPNG = 0

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the image formats to capture preview.
Notes: PNG format.

191.1.91 kPermissionKindCamera = 2

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Permission to capture video.

191.1.92 kPermissionKindClipboardRead = 6

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Permission to read system clipboard without a user gesture.

191.1.93 kPermissionKindGeoLocation = 3

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Permission to access geolocation.

191.1.94 kPermissionKindMicrophone = 1

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Permission to capture audio.

191.1.95 kPermissionKindNotifications = 4

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Permission to send web notifications.

191.1.96 kPermissionKindOtherSensors = 5

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Permission to access generic sensor.

191.1.97 kPermissionKindUnknownPermission = 0

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission kinds.
Notes: Unknown permission.

191.1.98 kPermissionStateAllow = 1

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission states.
Notes: Grant the permission request.

191.1.99 kPermissionStateDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission states.
Notes: Use default browser behavior, which normally prompt users for decision.

191.1.100 kPermissionStateDeny = 2

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the permission states.
Notes: Deny the permission request.

191.1.101 kProcessFailedKindBrowserProcessExited = 0

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the process failure kinds.
Notes: Indicates the browser process terminated unexpectedly.

191.1.102 kProcessFailedKindRenderProcessExited = 1

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the process failure kinds.
Notes: Indicates the render process terminated unexpectedly.

191.1.103 kProcessFailedKindRenderProcessUnresponsive = 2

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the process failure kinds.
Notes: Indicates the render process becomes unresponsive.

191.1.104 kWebErrorStatusCannotConnect = 12

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: Cannot connect to destination.

191.1.105 kWebErrorStatusCertificateCommonNameIsIncorrect = 1

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate common name does not match the web address.

191.1.106 kWebErrorStatusCertificateExpired = 2

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate has expired.

191.1.107 kWebErrorStatusCertificateIsInvalid = 5

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate is invalid – this could mean the certificate did not match the public key pins for the host name, the certificate is signed by an untrusted authority or using a weak sign algorithm, the certificate claimed DNS names violate name constraints, the certificate contains a weak key, the certificate's validity period is too long, lack of revocation information or revocation mechanism, non-unique host name, lack of certificate transparency information, or the certificate is chained to a legacy Symantec root.

191.1.108 kWebErrorStatusCertificateRevoked = 4

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate has been revoked.

191.1.109 kWebErrorStatusClientCertificateContainsErrors = 3

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The SSL client certificate contains errors.

191.1.110 kWebErrorStatusConnectionAborted = 9

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The connection was aborted.

191.1.111 kWebErrorStatusConnectionReset = 10

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The connection was reset.

191.1.112 kWebErrorStatusDisconnected = 11

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The Internet connection has been lost.

191.1.113 kWebErrorStatusErrorHttpInvalidServerResponse = 8

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The server returned an invalid or unrecognized response.

191.1.114 kWebErrorStatusHostNameNotResolved = 13

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: Could not resolve provided host name.

191.1.115 kWebErrorStatusOperationCanceled = 14

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The operation was canceled.

191.1.116 kWebErrorStatusRedirectFailed = 15

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The request redirect failed.

191.1.117 kWebErrorStatusServerUnreachable = 6

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The host is unreachable.

191.1.118 kWebErrorStatusTimeout = 7

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: The connection has timed out.

191.1.119 kWebErrorStatusUnexpectedError = 16

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: An unexpected error occurred.

191.1.120 kWebErrorStatusUnknown = 0

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the error status values for web navigations.
Notes: An unknown error occurred.

191.1.121 kWebResourceContextAll = 0

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: All resources.

191.1.122 kWebResourceContextCspViolationReport = 15

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: CSP Violation Reports.

191.1.123 kWebResourceContextDocument = 1

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Document resources.

191.1.124 kWebResourceContextEventSource = 10

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: EventSource API communication.

191.1.125 kWebResourceContextFetch = 8

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Fetch API communication.

191.1.126 kWebResourceContextFont = 5

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Font resources.

191.1.127 kWebResourceContextImage = 3

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Image resources.

191.1.128 kWebResourceContextManifest = 12

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Web App Manifests.

191.1.129 kWebResourceContextMedia = 4

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Other media resources such as videos.

191.1.130 kWebResourceContextOther = 16

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Other resources.

191.1.131 kWebResourceContextPing = 14

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Ping requests.

191.1.132 kWebResourceContextScript = 6

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Script resources.

191.1.133 kWebResourceContextSignedExchange = 13

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: Signed HTTP Exchanges.

191.1.134 kWebResourceContextStylesheet = 2

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: CSS resources.

191.1.135 kWebResourceContextTextTrack = 9

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: TextTrack resources.

191.1.136 kWebResourceContextWebSocket = 11

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: WebSocket API communication.

191.1.137 kWebResourceContextXMLHttpRequest = 7

MBS WinFrameworks Plugin, Plugin Version: 21.5.

Function: One of the web resource contexts.
Notes: XML HTTP requests.

191.2 control WebView2ControlMBS

191.2.1 control WebView2ControlMBS

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The MBS control for the Chrome based WebView2 control from Microsoft.
Notes:

Read about WebView2 control here:

https://developer.microsoft.com/en-us/microsoft-edge/webview2/

There you also fine the installers needed to install it, unless you have the 2021 version of Windows, which may include it preinstalled.

If you use this control on macOS and Linux, it will do nothing.
On Windows if the control fails to initialize, the Opened event will not fire.
But if it fires, it will be some time after the open event fired as initialization is asynchronous.

If you call LoadURL, LoadHTML or set URL property too early, we cache that and perform the action later when the web viewer is initialized properly.

If you add an event, we register it with the C++ control. So if you don't specify an event, you may get the default behavior.

191.2.6 Methods

191.2.7 AddScriptToExecuteOnDocumentCreated(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Add the provided JavaScript to a list of scripts that should be executed after the global object has been created, but before the HTML document has been parsed and before any other script included by

the HTML document is executed.
Notes:

This method injects a script that runs on all top-level document and child frame page navigations. This method runs asynchronously, and you must wait for the completion handler to finish before the injected script is ready to run. When this method completes, the handler's Invoke method is called with the id of the injected script. id is a string. To remove the injected script, use RemoveScriptToExecuteOnDocumentCreated.
Note that if an HTML document has sandboxing of some kind via sandbox properties or the Content-Security-Policy HTTP header this will affect the script run here. So, for example, if the 'allow-modals' keyword is not set then calls to the alert function will be ignored.

Calls AddScriptToExecuteOnDocumentCreatedCompleted event later when done.

191.2.8 AddWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Adds a URI and resource context filter to the WebResourceRequested event.
Notes: The URI parameter can be a wildcard string ('*': zero or more, '?': exactly one). See kWebResourceContext constants for description of resource context filters.

191.2.9 AvailableCoreWebView2BrowserVersionString as string

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The available version of the WebView2 browser.
Notes:

Allows you to query the browser version before creating a control.
Returns empty text if none is available.

191.2.10 CanGoBack as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a previous page in the navigation history.
Notes:

The HistoryChanged event will fire if CanGoBack changes value.

Returns false if the browser is not yet initialized.

191.2.11 CanGoForward as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if the WebView can navigate to a next page in the navigation history.
Notes:

The HistoryChanged event will fire if CanGoForward changes value.

Returns false if the browser is not yet initialized.

191.2.12 CapturePreview(ImageFormat as Integer = 0)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Capture an image of what WebView is displaying.
Notes:

Specify the format of the image with the imageFormat parameter. The resulting image binary data is passed to the CapturePreviewCompleted event.

Calls CapturePreviewCompleted event when done or failed.

191.2.13 ClearSelection

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to clear current selection.
Notes: This is the reverse for SelectAll.

191.2.14 Copy

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to copy current selection to clipboard.

191.2.15 Cut

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to cut current selection.
Notes: May do a copy, if selection is read only.

191.2.16 ExecuteScript(JavaScript as String, tag as variant = nil)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
dim web as WebView2ControlMBS // your control

web.ExecuteScript "1+5" , "tag value"

// triggers ExecuteScriptCompeleted later with result "6"

web.ExecuteScript "window.chrome.webview.postMessage( { 'Test': 'Hello, world!' } );"

// triggers later WebMessageReceived later
```

Notes:

This will execute asynchronously and when complete, if a handler is provided in the ExecuteScriptCompletedHandler parameter, its Invoke method will be called with the result of evaluating the provided JavaScript. The result value is a JSON encoded string. If the result is undefined, contains a reference cycle, or otherwise cannot be encoded into JSON, the JSON null value will be returned as the string 'null'. Note that a function that has no explicit return value returns undefined. If the executed script throws an unhandled exception, then the result is also 'null'. This method is applied asynchronously. If the method is called after NavigationStarting event during a navigation, the script will be executed in the new document when loading it, around the time ContentLoading is fired. ExecuteScript will work even if IsScriptEnabled is set to false.

Calls ExecuteScriptCompleted event later.

191.2.17 ExecuteScriptSync(JavaScript as String, byref ErrorCode as Integer) as String

MBS WinFrameworks Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop only.

Function: Execute JavaScript code from the javascript parameter in the current top level document rendered in the WebView.
Example:

```
dim web as WebView2ControlMBS // your control

dim errorCode as integer
dim s as string = web.ExecuteScriptSync("1+2", errorCode)

Break // s contains 3
```

Notes:

Same as ExecuteScript, but waits for event and returns result directly.
errorCode is zero on success.
Result is JSON as text, e.g. "null" if there is no result.

191.2.18 GoBack

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the previous page in the navigation history.

191.2.19 GoForward

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Navigates the WebView to the next page in the navigation history.

191.2.20 HTMLText as String

MBS WinFrameworks Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: Queries HTML text of the current website.
Example:

```
dim web as WebView2ControlMBS // your control

dim text as string = web.plaintext
dim html as string = web.HTMLText

break // check in debugger
```

191.2.21 LoadHTML(HTML as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Initiates a navigation to htmlContent as source HTML of a new document.
Notes: The htmlContent parameter may not be larger than 2 MB in total size. The origin of the new page will be about:blank.

191.2.22 LoadURL(URL as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Cause a navigation of the top level document to the specified URI.
Notes: See the navigation events for more information. Note that this starts a navigation and the corresponding NavigationStarting event will fire sometime after this Navigate call completes.

191.2.23 OpenDevToolsWindow

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Opens the DevTools window for the current document in the WebView.
Notes: Does nothing if called when the DevTools window is already open.

191.2.24 Paste

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to paste clipboard content into the current field.
Notes: This may do nothing if there is nothing to paste or nothing to receive (no field in focus).

191.2.25 PlainText as String

MBS WinFrameworks Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: Queries plain text of the current website.
Example:

```
dim web as WebView2ControlMBS // your control

dim text as string = web.plaintext
dim html as string = web.HTMLText

break // check in debugger
```

191.2.26 PostWebMessageAsJson(webMessageAsJson as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Post the specified webMessage to the top level document in this WebView.
Notes:

The top level document's window.chrome.webview's message event fires. JavaScript in that document may subscribe and unsubscribe to the event via the following:

```
window.chrome.webview.addEventListener('message', handler)
window.chrome.webview.removeEventListener('message', handler)
```

The event args is an instance of MessageEvent. The IsWebMessageEnabled setting must be true or this method will fail with E_INVALIDARG. The event arg's data property is the webMessage string parameter parsed as a JSON string into a JavaScript object. The event arg's source property is a reference to the window.chrome.webview object. See add_WebMessageReceived for information on sending messages from the HTML document in the WebView to the host. This message is sent asynchronously. If a navigation occurs before the message is posted to the page, then the message will not be sent.

191.2.27 PostWebMessageAsString(webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: This is a helper for posting a message that is a simple string rather than a JSON string representation of a JavaScript object..
Notes: This behaves in exactly the same manner as PostWebMessageAsJson but the window.chrome.webview message event arg's data property will be a string with the same value as webMessageAsString. Use this instead of PostWebMessageAsJson if you want to communicate via simple strings rather than JSON objects.

191.2.28 Print

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to show print dialog.

191.2.29 Reload

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Reload the current page.
Notes: This is similar to navigating to the URI of current top level document including all navigation events firing and respecting any entries in the HTTP cache. But, the back/forward history will not be modified.

191.2.30 RemoveScriptToExecuteOnDocumentCreated(ID as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Remove the corresponding JavaScript added using AddScriptToExecuteOnDocumentCreated with the specified script id.

191.2.31 RemoveWebResourceRequestedFilter(URL as String, resourceType as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Removes a matching WebResource filter that was previously added for the WebResourceRequested event.
Notes: If the same filter was added multiple times, then it will need to be removed as many times as it was added for the removal to be effective. Raises exception with E_INVALIDARG for a filter that was never added.

191.2.32 SelectAll

MBS WinFrameworks Plugin, Plugin Version: 22.2, Platform: Windows, Targets: Desktop only.

Function: Asks webview to select all text.

191.2.33 Stop

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Stop all navigations and pending resource fetches.
Notes: Does not stop scripts.

191.2.34 Properties

191.2.35 AdditionalBrowserArguments as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Additional browser arguments can be specified to change the behavior of the WebView.
Notes:

These will be passed to the browser process as part of the command line. See Run Chromium with Flags for more information about command line switches to browser process. If the app is launched with a command line switch –edge-webview-switches=xxx the value of that switch (xxx in the above example) will also be appended to the browser process command line. Certain switches like –user-data-dir are internal and important to WebView. Those switches will be ignored even if specified. If the same switches are specified multiple times, the last one wins. There is no attempt to merge the different values of the same switch, except for disabled and enabled features. The features specified by –enable-features and –disable-features will be merged with simple logic: the features will be the union of the specified features and built-in features, and if a feature is disabled, it will be removed from the enabled features list. App process's command line –edge-webview-switches value are processed after the additionalBrowserArguments parameter is processed. Certain features are disabled internally and can't be enabled. If parsing failed for the specified switches, they will be ignored. Default is to run browser process with no extra flags.
(Read and Write property)

191.2.36 AllowSingleSignOnUsingOSPrimaryAccount as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AllowSingleSignOnUsingOSPrimaryAccount property is used to enable single sign on with Azure Active Directory (AAD) resources inside WebView using the logged in Windows account and single sign on with web sites using Microsoft account associated with the login in Windows account.
Notes:

Default is disabled. Universal Windows Platform apps must also declare enterpriseCloudSSO restricted capability for the single sign on to work.
(Read and Write property)

191.2.37 areBrowserAcceleratorKeysEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Whether all accelerator keys are enabled.
Notes:

When this setting is set to false, it disables all accelerator keys that access features specific to a web browser, including but not limited to:

- Ctrl-F and F3 for Find on Page
- Ctrl-P for Print
- Ctrl-R and F5 for Reload
- Ctrl-Plus and Ctrl-Minus for zooming
- Ctrl-Shift-C and F12 for DevTools
- Special keys for browser functions, such as Back, Forward, and Search

It does not disable accelerator keys related to movement and text editing, such as:

- Home, End, Page Up, and Page Down
- Ctrl-X, Ctrl-C, Ctrl-V
- Ctrl-A for Select All
- Ctrl-Z for Undo

Those accelerator keys will always be enabled unless they are handled in the AcceleratorKeyPressed event. This setting has no effect on the AcceleratorKeyPressed event. The event will be fired for all accelerator keys, whether they are enabled or not.

The default value for AreBrowserAcceleratorKeysEnabled is true.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

191.2.38 AreDefaultContextMenusEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AreDefaultContextMenusEnabled property is used to prevent default context menus from being shown to user in WebView.
Notes:

It is true by default.
(Read and Write property)

191.2.39 AreDefaultScriptDialogsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: AreDefaultScriptDialogsEnabled is used when loading a new HTML document.
Notes:

If set to false, then WebView won't render the default JavaScript dialog box (Specifically those shown by the JavaScript alert, confirm, prompt functions and beforeunload event). Instead, if an event handler is set via add_ScriptDialogOpening, WebView will send an event that will contain all of the information for the dialog and allow the host app to show its own custom UI. It is true by default.
(Read and Write property)

191.2.40 AreDevToolsEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: AreDevToolsEnabled controls whether the user is able to use the context menu or keyboard shortcuts to open the DevTools window.
Notes:

It is true by default.
(Read and Write property)

191.2.41 AreHostObjectsAllowed as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The AreHostObjectsAllowed property is used to control whether host objects are accessible from the page in WebView.
Notes:

It is true by default.
(Read and Write property)

191.2.42 BrowserExecutableFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The path to the browser executable to use.
Notes:

Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

Use browserExecutableFolder to specify whether WebView2 controls use a fixed or installed version of the WebView2 Runtime that exists on a user machine. To use a fixed version of the WebView2 Runtime, pass the relative folder path that contains the fixed version of the WebView2 Runtime to browserExecutableFolder. To create WebView2 controls that use the installed version of the WebView2 Runtime that exists on user machines, pass a empty string to browserExecutableFolder. In this scenario, the API tries to find a compatible version of the WebView2 Runtime that is installed on the user machine (first at the machine level, and then per user) using the selected channel preference. The path of fixed version of the WebView2 Runtime should not contain \Edge\Application\. When such a path is used, the API fails with HRESULT_FROM_WIN32(ERROR_NOT_SUPPORTED).
(Read and Write property)

191.2.43 BrowserVersionString as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The browser version info of the current environment, including channel name if it is not the stable channel.
Notes:

This matches the format of the AvailableCoreWebView2BrowserVersionString API. Channel names are 'beta', 'dev', and 'canary'.
(Read only property)

191.2.44 ContainsFullScreenElement as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Indicates if the WebView contains a fullscreen HTML element.
Notes: (Read only property)

191.2.45 DefaultBackgroundColor as Color

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The DefaultBackgroundColor property is the color WebView renders underneath all web content.
Notes:

This means WebView renders this color when there is no web content loaded such as before the initial navigation or between navigations. This also means web pages with undefined css background properties or background properties containing transparent pixels will render their contents over this color. Web pages with defined and opaque background properties that span the page will obscure the DefaultBackgroundColor and display normally. The default value for this property is white to resemble the native browser experience.

The Color is specified by the color that represents an RGBA value. The A represents an Alpha value, meaning DefaultBackgroundColor can be transparent. In the case of a transparent DefaultBackgroundColor WebView will render hosting app content as the background. This Alpha value is not supported on Windows 7. Any A value other than 255 will result in an exception on Windows 7. It is supported on all other WebView compatible platforms.

Semi-transparent colors are not currently supported by this API and setting DefaultBackgroundColor to a semi-transparent color will fail with an exception. The only supported alpha values are 0 and 255, all other values will result in exception. DefaultBackgroundColor can only be an opaque color or transparent.

Requires version 1.0.774.44 of Webview2 or newer.
(Read and Write property)

191.2.46 DocumentTitle as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The title for the current top level document.
Notes:

If the document has no explicit title or is otherwise empty, a default that may or may not match the URI of the document will be used.
(Read only property)

191.2.47 IsBuiltInErrorPageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsBuiltInErrorPageEnabled property is used to disable built in error page for navigation failure and render process failure.
Notes:

It is true by default. When disabled, blank page will be shown when related error happens.
(Read and Write property)

191.2.48 IsGeneralAutofillEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Whether autofill for information like names, street and email addresses, phone numbers, and arbitrary input is enabled.
Notes:

This excludes password and credit card information. When IsGeneralAutofillEnabled is false, no suggestions appear, and no new information is saved. When IsGeneralAutofillEnabled is true, information is saved, suggestions appear and clicking on one will populate the form fields. The default value is true.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

191.2.49 IsPasswordAutosaveEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Whether autosave for password information is enabled.
Notes:

The IsPasswordAutosaveEnabled property behaves independently of the IsGeneralAutofillEnabled property. When IsPasswordAutosaveEnabled is false, no new password data is saved and no Save/Update Password prompts are displayed. However, if there was password data already saved before disabling this setting, then that password information is auto-populated, suggestions are shown and clicking on one will populate the fields. When IsPasswordAutosaveEnabled is true, password information is auto-populated, suggestions are shown and clicking on one will populate the fields, new data is saved, and a Save/Update Password prompt is displayed. The default value is false.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

191.2.50 IsPinchZoomEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: Enable or disable pitch zoom.
Notes:

Pinch-zoom, referred to as "Page Scale" zoom, is performed as a post-rendering step, it changes the page scale factor property and scales the surface the web page is rendered onto when user performs a pinch zooming action.

It does not change the layout but rather changes the viewport and clips the web content, the content outside of the viewport isn't visible onscreen and users can't reach this content using mouse.
The IsPinchZoomEnabled property enables or disables the ability of the end user to use a pinching motion on touch input enabled devices to scale the web content in the WebView2. It defaults to TRUE. When set to FALSE, the end user cannot pinch zoom after the next navigation. Disabling/Enabling IsPinchZoomEnabled only affects the end user's ability to use pinch motions and does not change the page scale factor. This API only affects the Page Scale zoom and has no effect on the existing browser zoom properties (IsZoomControlEnabled and ZoomFactor) or other end user mechanisms for zooming.

Needs WebView2 in version 1.0.902.49 or newer.
(Read and Write property)

191.2.51 IsScriptEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: Controls if JavaScript execution is enabled in all future navigations in the WebView.
Notes:

This only affects scripts in the document; scripts injected with ExecuteScript will run even if script is disabled. It is true by default.
(Read and Write property)

191.2.52 IsStatusBarEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: IsStatusBarEnabled controls whether the status bar will be displayed.
Notes:

The status bar is usually displayed in the lower left of the WebView and shows things such as the URI of a link when the user hovers over it and other information. It is true by default.
(Read and Write property)

191.2.53 IsWebMessageEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsWebMessageEnabled property is used when loading a new HTML document.
Notes:

If set to true, communication from the host to the WebView's top level HTML document is allowed via PostWebMessageAsJson, PostWebMessageAsString, and window.chrome.webview's message event (see PostWebMessageAsJson documentation for details). Communication from the WebView's top level HTML document to the host is allowed via window.chrome.webview's postMessage function and add_WebMessageReceived method (see add_WebMessageReceived documentation for details). If set to false, then communication is disallowed. PostWebMessageAsJson and PostWebMessageAsString will fail with E_ACCESSDENIED and window.chrome.webview.postMessage will fail by throwing an instance of an Error object. It is true by default.
(Read and Write property)

191.2.54 IsZoomControlEnabled as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The IsZoomControlEnabled property is used to prevent the user from impacting the zoom of the WebView.
Notes:

It is true by default. When disabled, user will not be able to zoom using ctrl+/- or ctrl+mouse wheel, but the zoom can be set via ZoomFactor API.
(Read and Write property)

191.2.55 Language as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The default language that WebView will run with.
Notes:

It applies to browser UIs like context menu and dialogs. It also applies to the accept-languages HTTP header that WebView sends to web sites. It is in the format of language [-country] where language is the 2 letter code from ISO 639 and country is the 2 letter code from ISO 3166.
(Read and Write property)

191.2.56 ProcessID as Integer

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The process id of the browser process that hosts the WebView.
Notes: (Read only property)

191.2.57 TargetCompatibleBrowserVersion as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The version of the Edge WebView2 Runtime binaries required to be compatible with the calling application.
Notes:

This defaults to the Edge WebView2 Runtime version that corresponds with the version of the SDK the application is using. The format of this value is the same as the format of the BrowserVersionString property and other BrowserVersion values. Only the version part of the BrowserVersion value is respected. The channel suffix, if it exists, is ignored. The version of the Edge WebView2 Runtime binaries actually used may be different from the specified TargetCompatibleBrowserVersion. They are only guaranteed to be compatible.

You can check the actual version on the BrowserVersionString property on the control.
(Read and Write property)

191.2.58 URL as String

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The URI of the current top level document.
Notes:

This value potentially changes as a part of the SourceChanged event firing for some cases such as navigating to a different site or fragment navigations. It will remain the same for other types of navigations such as page reloads or history.pushState with the same URL as the current page.

If assigned, calls LoadURL method.
(Read and Write property)

191.2.59 UserAgent as String

MBS WinFrameworks Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop only.

Function: The User Agent.
Notes:

The default value is the default User Agent of the Microsoft Edge browser.

This property may be overridden if the User-Agent header is set in a request. If the parameter is empty the User Agent will not be updated and the current User Agent will remain.

Needs WebView2 in version 1.0.864.35 or newer.
(Read and Write property)

191.2.60 UserDataFolder as String

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The user data folder location.
Notes:

Must be assigned very early, e.g. in Configure event, before initialization of the control runs.

You may specify the userDataFolder to change the default user data folder location for WebView2. The path

is either an absolute file path or a relative file path that is interpreted as relative to the compiled code for the current process. For UWP apps, the default user data folder is the app data folder for the package. For non-UWP apps, the default user data ({ Executable File Name } .WebView2) folder is created in the same directory next to the compiled code for the app. WebView2 creation fails if the compiled code is running in a directory in which the process does not have permission to create a new directory. The app is responsible to clean up the associated user data folder when it is done.
(Read and Write property)

191.2.61 ZoomFactor as Double

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The ZoomFactor property.
Notes: (Read and Write property)

191.2.62 Events

191.2.63 AddScriptToExecuteOnDocumentCreatedCompleted(JavaScript as String, ErrorCode as Integer, ID as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report that AddScriptToExecuteOnDocumentCreated is done and provide the ID.

191.2.64 CapturePreviewCompleted(ImageFormat as Integer, ErrorCode as Integer, PictureData as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called when CapturePreview call is done.
Notes:

We pass you the image data as a string, so you can e.g. write it to a PNG or JPEG file.
Otherwise ErrorCode tells you the reason for the error.

191.2.65 Close

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

The control is about to close.
In Xojo version 2021r3 and newer this event is named Closing.

191.2.66 Closing

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

The control is about to close.
In older Xojo versions, this event is named Close.

191.2.67 Configure

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called while initializing, where you can apply properties just before plugin reads them.

191.2.68 ConstructContextualMenu(base as MenuItem, x as Integer, y as Integer) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: .

Function: This event is called when it is appropriate to display a contextual menu for the control.

191.2.69 ContainsFullScreenElementChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: ContainsFullScreenElementChanged fires when the ContainsFullScreenElement property changes.
Notes: This means that an HTML element inside the WebView is entering fullscreen to the size of the WebView or leaving fullscreen. This event is useful when, for example, a video element requests to go fullscreen. The listener of ContainsFullScreenElementChanged can then resize the WebView in response.

191.2.70 ContentLoading(isErrorPage as Boolean, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The content loading event.d
Notes: ContentLoading fires before any content is loaded, including scripts added with AddScriptToExecu-

teOnDocumentCreated. ContentLoading will not fire if a same page navigation occurs (such as through fragment navigations or history.pushState navigations). This follows the NavigationStarting and SourceChanged events and precedes the HistoryChanged and NavigationCompleted events.

191.2.71 ContextualMenuAction(hitItem as MenuItem) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: .

Function: Called when a menuitem is choosen.
Notes: This allows the control to react on its relevant menu items. Please return true if you handled it or false to give others a chance.

191.2.72 DocumentTitleChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a document title change.
Notes: DocumentTitleChanged fires when the DocumentTitle property of the WebView changes and may fire before or after the NavigationCompleted event.

191.2.73 EnableMenuItems

MBS WinFrameworks Plugin, Plugin Version: 22.1, Platform: Windows, Targets: .

Function:

The event where you can enable menu items.
In Xojo version 2021r3 and newer this event is named MenuBarSelected.

191.2.74 ExecuteScriptCompleted(JavaScript as String, ErrorCode as Integer, resultObjectAsJson as String, Tag as Variant)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report ExecuteScript method is done.

191.2.75 FocusLost

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

LostFocus fires when WebView lost focus.
In older Xojo versions, this event is named LostFocus.
Notes: In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

191.2.76 FocusReceived

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

GotFocus fires when WebView got focus.
In older Xojo versions, this event is named GotFocus.

191.2.77 FrameNavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: FrameNavigationCompleted fires when a child frame has completely loaded (body.onload has fired) or loading stopped with error.

191.2.78 FrameNavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: FrameNavigationStarting fires when a child frame in the WebView requests permission to navigate to a different URI. This will fire for redirects as well.
Notes:

Corresponding navigations can be blocked until the event handler returns.
Return true to block the request.

191.2.79 GotFocus

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

GotFocus fires when WebView got focus.
In Xojo version 2021r3 and newer this event is named FocusReceived.

191.2.80 HistoryChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report history change.
Notes: HistoryChanged listens to the change of navigation history for the top level document. Use HistoryChanged to check if CanGoBack/CanGoForward value has changed. HistoryChanged also fires for using GoBack/GoForward. HistoryChanged fires after SourceChanged and ContentLoading.

191.2.81 LostFocus

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

LostFocus fires when WebView lost focus.
In Xojo version 2021r3 and newer this event is named FocusLost.
Notes: In the case where MoveFocusRequested event is fired, the focus is still on WebView when MoveFocusRequested event fires. LostFocus only fires afterwards when app's code or default action of MoveFocusRequested event set focus away from WebView.

191.2.82 MenuBarSelected

Plugin Version: 22.1, Platform: Windows, Targets: .

Function:

The event where you can enable menu items.
In older Xojo versions, this event is named EnableMenuItems.

191.2.83 NavigationCompleted(isSuccess as Boolean, ErrorStatus as Integer, NavigationID as UInt64)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a navigation action completed.
Notes: NavigationCompleted fires when the WebView has completely loaded (body.onload has fired) or loading stopped with error.

191.2.84 NavigationStarting(URL as String, IsUserInitiated as Boolean, IsRedirected as Boolean, NavigationID as UInt64) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a navigation action.
Notes:

NavigationStarting fires when the WebView main frame is requesting permission to navigate to a different URI. This will fire for redirects as well.
Corresponding navigations can be blocked until the event handler returns.

Return true to cancel it like Xojo's CancelLoad event.

This event is great to check the URL. If you like to block it, you may just return true. If the user initiated the request, you may instead want to load a warning page. Also check the URL and decide whether to turn scripting on or off.

191.2.85 NewWindowRequested(URL as String, IsUserInitiated as Boolean, WindowFeatures as WebView2WindowFeaturesMBS, byref NewWindow as Variant) as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: .

Function: The event called when a new window needs to be opened.
Notes:

Return true to indicate you handled the event.
If you create a new window with a WebView2ControlMBS (or DesktopWebView2ControlMBS), you can put it in NewWindow property.

IsUserInitiated:
True when the new window request was initiated through a user gesture.

Examples of user initiated requests are:
Selecting an anchor tag with target
Programmatic window open from a script that directly run as a result of user interaction such as via onclick handlers.
Non-user initiated requests are programmatic window opens from a script that are not directly triggered by user interaction, such as those that run while loading a new page or via timers. The Microsoft Edge popup blocker is disabled for WebView so the app is able to use this flag to block non-user initiated popups.

URL: The target uri of the new window requested.

NewWindow: Set the new control to use.

If the NewWindow is set, the top-level window returns as the opened WindowProxy. The NewWindow property should be set to a control that has not been navigated previously. Don't use methods that cause navigation or interact with the DOM on this web view. Setting event handlers, changing Settings properties, or other methods are fine to call. Changes to settings should be made before NewWindow is called to ensure that those settings take effect for the newly setup WebView. Once the NewWindow is set the underlying web contents of this CoreWebView2 will be replaced and navigated as appropriate for the new window. After setting new window it cannot be changed and error will be return otherwise.

191.2.86 Open

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

The control is about to was created and you can initialize it.
In Xojo version 2021r3 and newer this event is named Opening.

191.2.87 Opened

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called when browser initialization is done.
Notes:

Typical event flow is like this:

- Configure
- Open
- Window.Open
- Opened

Opened is called a few milliseconds later.

If you load an URL, the events happen like this:

- NavigationStarting
- SourceChanged

- ContentLoading
- HistoryChanged
- DocumentTitleChanged
- NavigationCompleted

191.2.88 Opening

Plugin Version: 20.5, Platform: Windows, Targets: .

Function:

The control is about to was created and you can initialize it.
In older Xojo versions, this event is named Open.

191.2.89 PermissionRequested(URL as String, PermissionKind as Integer, IsUserInitiated as Boolean, byref State as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to query permissions from user.
Notes:

PermissionRequested fires when content in a WebView requests permission to access some privileged resources.
If a deferral is not taken on the event args, the subsequent scripts can be blocked until the event handler returns. If a deferral is taken, then the scripts are blocked until the deferral is completed.

URL: The origin of the web content that requests the permission.
PermissionKind: The type of the permission that is requested.
IsUserInitiated: True when the permission request was initiated through a user gesture.
State: The status of a permission request, i.e.

Please assign State the answer you like to provide.

191.2.90 ProcessFailed(processFailedKind as Integer)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: ProcessFailed fires when a WebView process is terminated unexpectedly or becomes unresponsive.

191.2.91 SourceChanged(isNewDocument as Boolean)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event to report a change in the URL.
Notes: SourceChanged fires when the Source property changes. SourceChanged fires for navigating to a different site or fragment navigations. It will not fire for other types of navigations such as page reloads or history.pushState with the same URL as the current page. SourceChanged fires before ContentLoading for navigation to a new document.

191.2.92 WebMessageReceived(Source as String, webMessageAsJson as String, webMessageAsString as String)

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event called for a web message.
Notes:

WebMessageReceived fires when the IsWebMessageEnabled setting is set and the top level document of the WebView calls window.chrome.webview.postMessage. The postMessage function is void postMessage(object) where object is any object supported by JSON conversion.

webMessageAsString is empty if we can't serialize it to text.

191.2.93 WindowCloseRequested

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: The event where JavaScript asks to close window.
Notes: WindowCloseRequested fires when content inside the WebView requested to close the window, such as after window.close is called. The app should close the WebView and related app window if that makes sense to the app.

191.2.94 ZoomFactorChanged

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: .

Function: ZoomFactorChanged fires when the ZoomFactor property of the WebView changes.
Notes: The event could fire because the caller modified the ZoomFactor property, or due to the user manually modifying the zoom. When it is modified by the caller via the ZoomFactor property, the internal zoom factor is updated immediately and there will be no ZoomFactorChanged event. WebView associates the last used zoom factor for each site. Therefore, it is possible for the zoom factor to change when navigating to a different page. When the zoom factor changes due to this, the ZoomFactorChanged event fires right after

the ContentLoading event.

191.2.95 Constants

191.2.96 kCapturePreviewImageFormatJPEG = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the image formats to capture preview.
Notes: JPEG format.

191.2.97 kCapturePreviewImageFormatPNG = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the image formats to capture preview.
Notes: PNG format.

191.2.98 kPermissionKindCamera = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to capture video.

191.2.99 kPermissionKindClipboardRead = 6

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to read system clipboard without a user gesture.

191.2.100 kPermissionKindGeoLocation = 3

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to access geolocation.

191.2.101 kPermissionKindMicrophone = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to capture audio.

191.2.102 kPermissionKindNotifications = 4

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to send web notifications.

191.2.103 kPermissionKindOtherSensors = 5

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Permission to access generic sensor.

191.2.104 kPermissionKindUnknownPermission = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission kinds.
Notes: Unknown permission.

191.2.105 kPermissionStateAllow = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission states.
Notes: Grant the permission request.

191.2.106 kPermissionStateDefault = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission states.
Notes: Use default browser behavior, which normally prompt users for decision.

191.2.107 kPermissionStateDeny = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the permission states.
Notes: Deny the permission request.

191.2.108 kProcessFailedKindBrowserProcessExited = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the process failure kinds.
Notes: Indicates the browser process terminated unexpectedly.

191.2.109 kProcessFailedKindRenderProcessExited = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the process failure kinds.
Notes: Indicates the render process terminated unexpectedly.

191.2.110 kProcessFailedKindRenderProcessUnresponsive = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the process failure kinds.
Notes: Indicates the render process becomes unresponsive.

191.2.111 kWebErrorStatusCannotConnect = 12

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: Cannot connect to destination.

191.2.112 kWebErrorStatusCertificateCommonNameIsIncorrect = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate common name does not match the web address.

191.2.113 kWebErrorStatusCertificateExpired = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate has expired.

191.2.114 kWebErrorStatusCertificateIsInvalid = 5

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate is invalid – this could mean the certificate did not match the public key pins for the host name, the certificate is signed by an untrusted authority or using a weak sign algorithm, the certificate claimed DNS names violate name constraints, the certificate contains a weak key, the certificate's validity period is too long, lack of revocation information or revocation mechanism, non-unique host name, lack of certificate transparency information, or the certificate is chained to a legacy Symantec root.

191.2.115 kWebErrorStatusCertificateRevoked = 4

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL certificate has been revoked.

191.2.116 kWebErrorStatusClientCertificateContainsErrors = 3

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The SSL client certificate contains errors.

191.2.117 kWebErrorStatusConnectionAborted = 9

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The connection was aborted.

191.2.118 kWebErrorStatusConnectionReset = 10

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The connection was reset.

191.2.119 kWebErrorStatusDisconnected = 11

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The Internet connection has been lost.

191.2.120 kWebErrorStatusErrorHttpInvalidServerResponse = 8

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The server returned an invalid or unrecognized response.

191.2.121 kWebErrorStatusHostNameNotResolved = 13

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: Could not resolve provided host name.

191.2.122 kWebErrorStatusOperationCanceled = 14

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The operation was canceled.

191.2.123 kWebErrorStatusRedirectFailed = 15

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The request redirect failed.

191.2.124 kWebErrorStatusServerUnreachable = 6

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The host is unreachable.

191.2.125 kWebErrorStatusTimeout = 7

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: The connection has timed out.

191.2.126 kWebErrorStatusUnexpectedError = 16

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: An unexpected error occurred.

191.2.127 kWebErrorStatusUnknown = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the error status values for web navigations.
Notes: An unknown error occurred.

191.2.128 kWebResourceContextAll = 0

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: All resources.

191.2.129 kWebResourceContextCspViolationReport = 15

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: CSP Violation Reports.

191.2.130 kWebResourceContextDocument = 1

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Document resources.

191.2.131 kWebResourceContextEventSource = 10

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: EventSource API communication.

191.2.132 kWebResourceContextFetch = 8

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Fetch API communication.

191.2.133 kWebResourceContextFont = 5

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Font resources.

191.2.134 kWebResourceContextImage = 3

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Image resources.

191.2.135 kWebResourceContextManifest = 12

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Web App Manifests.

191.2.136 kWebResourceContextMedia = 4

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Other media resources such as videos.

191.2.137 kWebResourceContextOther = 16

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Other resources.

191.2.138 kWebResourceContextPing = 14

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Ping requests.

191.2.139 kWebResourceContextScript = 6

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Script resources.

191.2.140 kWebResourceContextSignedExchange = 13

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: Signed HTTP Exchanges.

191.2.141 kWebResourceContextStylesheet = 2

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: CSS resources.

191.2.142 kWebResourceContextTextTrack = 9

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: TextTrack resources.

191.2.143 kWebResourceContextWebSocket = 11

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: WebSocket API communication.

191.2.144 kWebResourceContextXMLHttpRequest = 7

MBS WinFrameworks Plugin, Plugin Version: 20.5.

Function: One of the web resource contexts.
Notes: XML HTTP requests.

191.3 class WebView2ExceptionMBS

191.3.1 class WebView2ExceptionMBS

MBS WinFrameworks Plugin, Plugin Version: 20.5, Platform: Windows, Targets: Desktop only.

Function: The class for the exceptions raised by our WebView2 control.
Notes: Subclass of the RuntimeException class.

191.4 class WebView2WindowFeaturesMBS

191.4.1 class WebView2WindowFeaturesMBS

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The window features for a WebView popup window.
Notes:

The fields match the windowFeatures passed to window.open as specified in Window features on MDN. There is no requirement for you to respect the values. If your app does not have corresponding UI features (for example, no toolbar) or if all instance of WebView are opened in tabs and do not have distinct size or positions, then your app does not respect the values. You may want to respect values, but perhaps only some apply to the UI of you app. Accordingly, you may respect all, some, or none of the properties as appropriate for your app. For all numeric properties, if the value that is passed to window.open is outside the range of an unsigned 32bit int, the resulting value is the absolute value of the maximum for unsigned 32bit integer. If you are not able to parse the value an integer, it is considered 0. If the value is a floating point value, it is rounded down to an integer.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

191.4.2 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.5
- MBS Xojo Plugins, version 21.5pr5

191.4.3 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.5
- MBS Xojo Plugins, version 21.5pr5

191.4.4 Methods

191.4.5 Constructor

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

191.4.6 Properties

191.4.7 HasPosition as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies left and top values.
Notes: (Read and Write property)

191.4.8 HasSize as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies height and width values.
Notes: (Read and Write property)

191.4.9 Height as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the height of the window.
Notes:

Minimum value is 100. If HasSize is set to false, this field is ignored.
(Read and Write property)

191.4.10 Left as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the left position of the window.
Notes:

If HasPosition is set to false, this field is ignored.
(Read and Write property)

191.4.11 ShouldDisplayMenuBar as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the menu bar is displayed.
Notes: (Read and Write property)

191.4.12 ShouldDisplayScrollBars as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the scroll bars are displayed.
Notes: (Read and Write property)

191.4.13 ShouldDisplayStatus as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the status bar is displayed.
Notes: (Read and Write property)

191.4.14 ShouldDisplayToolbar as Boolean

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Indicates that the browser toolbar is displayed.
Notes: (Read and Write property)

191.4.15 Top as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the top position of the window.
Notes:

If HasPosition is set to false, this field is ignored.
(Read and Write property)

191.4.16 Width as Integer

MBS WinFrameworks Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Specifies the width of the window.
Notes:

Minimum value is 100. If HasSize is set to false, this field is ignored.
(Read and Write property)

Chapter 192

Window

192.1 class DesktopWindow

192.1.1 class DesktopWindow

Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Extends Xojo's Window Class.
Example:

window1.HasNoTitleBarMBS = true

Notes: In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.1.2 Methods

192.1.3 ActivateWindowMBS

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Windows, Targets: Desktop only.

Function: Activates the window.
Notes:

This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they

are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

For MacOS Cocoa apps, we simply bring the window to the front.

192.1.4 BackingScaleFactorMBS as double

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the scale factor representing the number of backing store pixels corresponding to each linear unit in window space on this window.
Notes:

This is generally only necessary when building a bitmap context or image whose resolution needs to match that of a particular Window. Note that a Window's backing scale factor can change over time, such as when the window moves from one display to another, or when a display's resolution changes, so clients should not cache the value returned by this function.

If platform does not support scaling factor, we return 1.0. (on Windows, Linux and older Mac OS X)
Supported for Carbon and Cocoa windows.

For apps which are not enabled for retina support, the function returns 1. So you only see 2 here if app is Cocoa, display is retina and info.plist has the NSHighResolutionCapable key.

192.1.5 CGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContextMBS object for the given Window.
Example:

```
dim CGContext as CGContextMBS
dim OverlayPic as Picture=LogoMBS(500)
dim contentpicture as CGImageMBS= CGCreateImageMBS(OverlayPic)

CGContext=window1.CGContextMBS

CGContext.ClearRect CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
CGContext.DrawPicture contentpicture, CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
```

Notes:

Requires Mac OS X to work.
Please make sure the CGContextMBS object is released in the paint event if you use it there, so all the drawings are flushed. Not releasing it my be visible in missing statictext or other strange graphics effects.

But on a Cocoa window the context is not always available, so in the window paint event, you can context from Graphics object.

192.1.6 CleanUpTransparentMBS(refValue as integer)

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Cleans up transparency support for a Xojo window.
Example:

```
dim p as Integer // property on Windows

p = window1.MakeTransparentMBS

// later in close event

window1.CleanUpTransparentMBS p
```

Notes:

Call this in the close event of a window passing the value you got from the MakeTransparentMBS call.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

192.1.7 ClearTransparencyMBS

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Clears transparency of a window.

192.1.8 CollapsableMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window is collapsed. You can set it.
Example:

mainwindow.collapsedMBS=false 'show window

Notes:

Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.1.9 ConstrainWindowToScreenMBS(animate as Boolean)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Makes sure the window is on one screen visible.
Notes: Implemented on Mac for both Carbon and Cocoa.

192.1.10 GTKWindow as GTKWindowMBS

MBS Linux Plugin, Plugin Version: 21.5, Platform: Linux, Targets: Desktop only.

Function: Queries a GTKWindow object for this window.
Notes:

Returns only a valid object on linux.
On other platforms, this function returns nil.

192.1.11 InvalidateShadowMBS

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: This method causes a window's shadow to be recalculated.
Notes:

InvalidateShadowMBS is not typically used by applications. However, it may be useful for applications with customized window frames that change shape dynamically; in this case, after the application has drawn the new window shape, the window shadow must be recalculated to follow the new window shape.

This method causes the window shadow to be immediately recalculated and redrawn based on the current contents of the window's back buffer. For best performance and visual appearance, you should follow these steps when invalidating a window shadow: disable updates with DisableScreenUpdatesMBS, draw, flush, invalidate the shadow, and enable updates. For a compositing window, after invalidating any views that should be redrawn, you will need to explicitly draw and flush using HIWindowFlush, rather than waiting for the event loop to draw and flush the window, because you cannot disable updates or invalidate the window

shadow if drawing is done via the event loop.

192.1.12 IsFullScreenMBS as Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Queries whether window is fullscreen.
Notes:

Indicates that a window has fullscreen appearance.
A fullscreen window does not draw its titlebar, and may have special handling for its toolbar.
Available in Mac OS X v10.7 and later.

192.1.13 MakeTransparentMBS as integer

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Installs transparency support to a Xojo window.
Example:

```
dim p as Integer // property on Windows

p = window1.MakeTransparentMBS

// later in close event

window1.CleanUpTransparentMBS p
```

Notes:

Will return non zero value if successfull.
The window doesn't change if you don't use the CGContextMBS property.

Requires Mac OS X, Windows 2000 or Windows XP to work. The window must be a document window.

Set MacProcID of the window to 1104 and you can make it transparent without a title bar. (on Mac OS X)

With plugin version 11.1, we now return a value which should store with the window. Later in the Close event, you call CleanUpTransparentMBS passing this value.

Added Cocoa support in 11.3 plugins.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel. Calls

to MakeTransparentMBS and CleanUpTransparentMBS are not required for Linux.

192.1.14 NSPanelMBS as NSPanelMBS

MBS MacBase Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSPanel for the given Xojo window.
Example:

MsgBox window1.NSPanelMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target which are floating panels.

192.1.15 NSToolbarMBS as NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: The window's toolbar.
Notes:

So you can get the toolbar without going over NSWindowMBS.
But there you can assign a new toolbar...

192.1.16 NSWindowMBS as NSWindowMBS

MBS MacBase Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSWindow for the given Xojo window.
Example:

MsgBox window1.NSWindowMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target and for Carbon Windows in carbon targets.

192.1.17 RefreshThreadSafeMBS(immediately As Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes:

This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call Refresh method directly.
If called on other threads the plugin will schedule to call Refresh method a short time later on the main thread.
See also:

- 192.1.18 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately As Boolean = False) 26955

192.1.18 RefreshThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, immediately As Boolean = False)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes:

This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call RefreshRect method directly.
If called on other threads the plugin will schedule to call RefreshRect method a short time later on the main thread.
See also:

- 192.1.17 RefreshThreadSafeMBS(immediately As Boolean = False) 26954

192.1.19 RemoveWindowProxyIconMBS

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Removes any Proxy Icon from the Window.
Example:

mainwindow.RemoveWindowProxyIconMBS

Notes:

Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.1.20 ScreenshotWindowMBS as picture

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns the content of the window buffer on Mac OS X.
Example:

```
dim p as Picture
p=mainwindow.screenshotWindowMBS
```

Notes:

Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

192.1.21 ScreenshotWindowRectMBS(left as integer, top as integer, width as integer, height as integer) as picture

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns a part of the content of the window buffer on Mac OS X.
Example:

```
dim p as picture
p=mainwindow.ScreenshotWindowRectMBS(100,100,200,200)
```

Notes:

Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

192.1.22 SetTransparencyMBS(value as integer) as boolean

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Your window can have transparency on Mac OS X.

Example:

```
if window1.SetTransparencyMBS(127) then
'fine
else
'error
end if
```

Notes:

Use values between 0 and 255.
Requires Mac OS X, Windows 2000 or Windows XP to work.
May be limited to simple windows like normal document windows.
You need to call MakeTransparent before to install transparency.
(this function was replaced in v4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

192.1.23 SetWindowFeedbackSettingMBS(Feedback as Integer, value as Variant) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the feedback configuration for a window.
Example:

```
const FEEDBACK_TOUCH_CONTACTVISUALIZATION = 1
const FEEDBACK_PEN_BARRELVISUALIZATION = 2
const FEEDBACK_PEN_TAP = 3
const FEEDBACK_PEN_DOUBLETAP = 4
const FEEDBACK_PEN_PRESSANDHOLD = 5
const FEEDBACK_PEN_RIGHTTAP = 6
const FEEDBACK_TOUCH_TAP = 7
const FEEDBACK_TOUCH_DOUBLETAP = 8
const FEEDBACK_TOUCH_PRESSANDHOLD = 9
const FEEDBACK_TOUCH_RIGHTTAP = 10
const FEEDBACK_GESTURE_PRESSANDTAP = 11

dim r as Boolean = self.SetWindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, true)

if r then
dim value as Boolean
dim b as Boolean = self.WindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, value)
if b then
MsgBox "WindowFeedbackSettingMBS: "+str(value)
end if
```

```
end if
```

Notes:

Returns true if successful; otherwise, returns false.

Value can be nil to reset value. Or true/false to set it.
Requires Windows 8 or Windows Server 2012 in desktop apps only.

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

192.1.24 SetWindowIconMBS(Type as integer, File as FolderItem, IconID as integer) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the icon in the file.
Example:

```
call window1.SetWindowIconMBS(0,getfolderitem("icon.ico"),1)
```

Notes:

Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.

Type is 0 for a small icon and 1 for a big icon.
See also:

- 192.1.25 SetWindowIconMBS(Type as integer, Icon as Picture, Mask as Picture) as Boolean

192.1.25 SetWindowIconMBS(Type as integer, Icon as Picture, Mask as Picture) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the given picture with mask.
Example:

```
dim p as Picture
dim m as Picture

// random colored circle image
p=New Picture(16,16,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,16,16
p.Graphics.ForeColor=rgb(rnd*256,rnd*256,rnd*256)
p.Graphics.Filloval 0,0,16,16

// circle mask
m=New Picture(16,16,32)
m.Graphics.ForeColor=& cFFFFFF // transparent
m.Graphics.Fillrect 0,0,16,16
m.Graphics.ForeColor=& c000000 // color
m.Graphics.Filloval 0,0,16,16

Canvas1.Backdrop=p // show in canvas
Canvas2.Backdrop=m

call window1.SetWindowIconMBS(0,p,m)
```

Notes:

The mask picture ist converted to black/white.
What image depths are used and supported depends on the Windows version.
Returns true on success and false on failure.

Possible values for type:

ICON_BIG = 1	Set the large icon for the window.
ICON_SMALL = 0	Set the small icon for the window.

See also:

- 192.1.24 SetWindowIconMBS(Type as integer, File as FolderItem, IconID as integer) as Boolean 26958

192.1.26 SetWindowMaskMBS(p as picture, redraw as Boolean, transparentColor as color) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Sets the mask of a window.
Notes:

Redraw decides whether the window is redrawn after it has been changed.
Returns true if successfull.

If you want to do the same on Mac OS X, check the example projects "transparent window" and the Photoshop Splash Screen example.

192.1.27 ShowHideToolbarMBS(animate as Boolean, value as Boolean)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Shows or hides the toolbar.
Notes: Only working on MacOS.

192.1.28 SmoothResizeCenteredMBS(width as integer,height as integer)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly to all directions.
Example:

```
dim w,h as Integer

// get destination dimension

w=300
h=200

// Resize

window1.SmoothResizeCenteredMBS w,h

// Now resize via RB to make it permament.

width=w
height=h
```

Notes:

You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.1.29 SmoothResizeMBS(width as integer,height as integer)

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly.
Example:

```
dim w,h as Integer

// get destination dimension

w=300
h=200

// Resize

window1.SmoothResizeMBS w,h

// Now resize via RB to make it permament.

width=w
height=h
```

Notes:

You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.1.30 ToggleFullScreenMBS as Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Toggles fullscreen mode for this window.
Notes:

Returns true on success.
If an application supports fullscreen, it should add a menu item to the View menu with toggleFullScreen as the action.
Available in Mac OS X v10.7 and later.

This method does not much if you don't mark a window to be the primary fullscreen window.

192.1.31 UpdateNowMBS

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: On MacOS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update.
Example:

Mainwindow.UpdateNowMBS

Notes: Updated for 64-bit in plugin version 18.3.

192.1.32 UpdateNowRectMBS(left as integer, top as integer, width as integer, height as integer)

MBS MacOSX Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: On Mac OS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update for a part of your window.
Example:

Mainwindow.UpdateNowRectMBS Mainwindow.text.left, Mainwindow.text.top, Mainwindow.text.width, Mainwindow.text.height

192.1.33 WinAnimateWindowMBS(Flags as integer, Time as integer=200) as boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: The AnimateWindow function enables you to produce special effects when showing or hiding windows.
Example:

```
dim flags as Integer

const AW_SLIDE = & h040000 // Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
const AW_ACTIVATE = & h020000 // Activates the window. Do not use this value with AW_HIDE.
const AW_BLEND = & h080000 // Uses a fade effect. This flag can be used only if hwnd is a top-level
```

window.
const AW_HIDE = & h010000 //Hides the window. By default, the window is shown.
const AW_CENTER = & h10 // Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
const AW_HOR_POSITIVE = 1 // Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_HOR_NEGATIVE = 2 // Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_POSITIVE = 4 // Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_NEGATIVE = 8 // Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

```
window2.hide

flags=BitwiseOr(AW_SLIDE, AW_HOR_POSITIVE)

if window2.WinAnimateWindowMBS(flags, 1000) then
window2.show
else
MsgBox "Animatin failed."
end if
```

Notes:

There are four types of animation: roll, slide, collapse or expand, and alpha-blended fade.

self: The window to animate. The calling thread must own this window.
Time: Specifies how long it takes to play the animation, in milliseconds. Typically, an animation takes 200 milliseconds to play.
Flags: Specifies the type of animation. This parameter can be one or more of the following values. Note that, by default, these flags take effect when showing a window. To take effect when hiding a window, use AW_HIDE and a bitwiseor operator with the appropriate flags.

Return Value:
If the function succeeds, the return value is true.
If the function fails, the return value is false.
The function will fail in the following situations:

- If the window uses the window region. Windows XP: This does not cause the function to fail.
- If the window is already visible and you are trying to show the window.
- If the window is already hidden and you are trying to hide the window.
- If there is no direction specified for the slide or roll animation.

AW_SLIDE	= & h040000	Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
AW_ACTIVATE	= & h020000	Activates the window. Do not use this value with AW_HIDE.
AW_BLEND	= & h080000	Uses a fade effect. This flag can be used only if hwnd is a top-level window.
AW_HIDE	= & h010000	Hides the window. By default, the window is shown.
AW_CENTER	= & h10	Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
AW_HOR_POSITIVE	= 1	Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_HOR_NEGATIVE	= 2	Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_POSITIVE	= 4	Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_NEGATIVE	= 8	Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

- When trying to animate a child window with AW_BLEND.
- If the thread does not own the window. Note that, in this case, AnimateWindow fails but GetLastError returns ERROR_SUCCESS. To get extended error information, call the GetLastError function.

To show or hide a window without special effects, use Show.
When using slide or roll animation, you must specify the direction. It can be either AW_HOR_POSITIVE, AW_HOR_NEGATIVE, AW_VER_POSITIVE, or AW_VER_NEGATIVE.
You can combine AW_HOR_POSITIVE or AW_HOR_NEGATIVE with AW_VER_POSITIVE or AW_VER_NEGATIVE to animate a window diagonally.
The window procedures for the window and its child windows should handle any WM_PRINT or WM_PRINTCLIENT messages. Dialog boxes, controls, and common controls already handle WM_PRINTCLIENT. The default window procedure already handles WM_PRINT.
If a child window is displayed partially clipped, when it is animated it will have holes where it is clipped.
AnimateWindow supports RTL windows.
Avoid animating a window that has a drop shadow because it produces visually distracting, jerky animations.

192.1.34 WindowFeedbackSettingMBS(Feedback as Integer, byref value as boolean, IncludeAncestors as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves the feedback configuration for a window.
Notes:

IncludeAncestors: Specifies that the parent window chain should be checked.

Returns true if the specified feedback setting is configured on the specified window. Otherwise, it returns false (and config won't be modified).

Requires Windows 8 [desktop apps only] or Windows Server 2012 [desktop apps only] .

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

192.1.35 WinFlashWindowMBS(Invert as boolean)

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Flashes Window.
Example:

window1.WinFlashWindowMBS true

Notes:

Flashes the specified window one time. It does not change the active state of the window.

Invert: If this parameter is true, the window is flashed from one state to the other. If it is false, the window is returned to its original state (either active or inactive).

When an application is minimized and this parameter is true, the taskbar window button flashes active/inactive. If it is false, the taskbar window button flashes inactive, meaning that it does not change colors. It flashes, as if it were being redrawn, but it does not provide the visual invert clue to the user.

Flashing a window means changing the appearance of its caption bar as if the window were changing from inactive to active status, or vice versa. (An inactive caption bar changes to an active caption bar; an active caption bar changes to an inactive caption bar.)
Typically, a window is flashed to inform the user that the window requires attention but that it does not currently have the keyboard focus.
The FlashWindow function flashes the window only once; for repeated flashing, the application should create a system timer.

192.1.36 WinHideTooltipMBS as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Hides all tooltips.
Notes:

You can call that in window.deactivate event to hide tooltips which did not hide themselves.
Returns number of hidden tooltips.

192.1.37 Properties

192.1.38 CanBeVisibleWithoutLoginMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window can be visible before login.
Example:

```
window1.CanBeVisibleWithoutLoginMBS = true
```

Notes:

This window can be made visible prior to user login. By default, in Mac OS X 10.5 and later no windows can be visible before a user logs into the system; this protects the user against certain types of malicious use of insecure applications. However, some software, such as input methods or other accessibility software, may need to deliberately make windows available prior to user login. Such software should add this window attribute to its windows. Available for all windows in Mac OS X 10.5 and later.
(Read and Write computed property)

192.1.39 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Get or set the colorspace profile for this window.
Example:

```
dim c as CGColorSpaceMBS = window1.CGColorSpaceMBS

if c<>Nil then
MsgBox str(c.NumberOfComponents)
else
MsgBox "nil"
end if
```

Notes:

Requires MacOS 10.6 or newer.

On Cocoa, the NSColorSpace is queried and the matching CGColorspace is returned. For setting a NSColorSpace is created for the given CGColorspace.
In Carbon applications, the CoreGraphics color space is passed directly.
(Read and Write computed property)

192.1.40 CollapsedMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window can be collapsed.
Example:

MsgBox str(window1.CollapsableMBS)

Notes:

Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.41 FullScreenAuxiliaryMBS as Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the auxiliary fullscreen window.
Notes: (Read and Write computed property)

192.1.42 FullScreenPrimaryMBS as Boolean

MBS MacControls Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the primary fullscreen window.
Notes:

If true, the window receives the fullscreen widget in the title bar.
(Read and Write computed property)

192.1.43 HasBorderMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Decides whether the window has a border.
Example:

mainwindow.HasborderMBS=false ' Remove border

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it). This option removes the title bar. HasCaptionMBS removes even more.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.44 HasCaptionMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a caption (a title bar)
Example:

Window1.HasCaptionMBS=false

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.45 HasCloseBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a CloseBox.
Example:

mainwindow.HasCloseboxMBS=false 'remove closebox

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.46 HasCollapseBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a Collapsebox.
Example:

mainwindow.HasCollapseBoxMBS=false 'remove Collapsebox

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.47 HasMaximizeBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Maximize Button.
Example:

mainwindow.HasMaximizeBoxMBS=false 'remove Maximize button

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.48 HasMinimizeBoxMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Minimize Button.
Example:

mainwindow.HasMinimizeBoxMBS=false 'remove Minimize button

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.49 HasNoShadowMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has no shadow.
Example:

mainwindow.HasNoShadowMBS=true 'remove shadow

Notes:

Available for all windows on Mac OS X. This attribute is automatically given to windows of kOverlayWin-

dowClass.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.50 HasNoTitleBarMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: For Document, Floating, and Utility windows, this attribute allows you to hide the title bar of a window.
Example:

```
window1.HasNoTitleBarMBS = true

// for Cocoa:
window1.HasCloseBoxMBS = false
window1.HasCollapseBoxMBS = false
window1.IsResizableMBS = false
window1.HasNoTitleBarMBS = true
```

Deprecated: This item is deprecated and should no longer be used. You can use NSWindowMBS for Cocoa instead. **Notes:**

For Mac OS X 10.4 or later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.51 HasSystemMenuMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a system menu inside the title bar.
Example:

Window1.HasSystemMenuMBS=false

Notes:

This property has only an effect on Windows. It will disable the system menu and also the minimize, maximize and close buttons. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.52 HasToolbarButtonMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a toolbar button.
Example:

mainwindow.HasToolbarButtonMBS=true 'shows Toolbar Button

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
The Button is shown on next redraw of the window frame.

Use the CarbonWindowsEventsMBS class to receive events when the button is pressed.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.53 IgnoreClicksMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Can be used to control whether mouse clicks are ignored for this window.
Example:

Window1.IgnoreClicksMBS=true

Notes:

Whether this window never receives mouse events, even in areas that are opaque. Instead, clicks on the window will be passed through to windows beneath it. Available for all windows on Mac OS X 10.2 and later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.54 IsIconicMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window is inside the taskbar.
Example:

```
MsgBox str(window1.IsIconicMBS)
```

Notes:

If you set IsIconic to true the window is minimized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.55 IsMetalWindowMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window uses the Metal appearance.
Example:

```
if window1.Frame = window.FrameTypeMetal then
MsgBox "Window is metal. "+str(window1.IsMetalWindowMBS)
else
MsgBox "Window is not metal. "+str(window1.IsMetalWindowMBS)
```

end if

Notes:

Available for document windows on Mac OS X 10.2 and later, and for floating windows on Mac OS X 10.3 and later. Drawers can also be metal, but dynamically adjust their appearance based on their parent window's appearance; it is not necessary to specify this attribute for a metal drawer.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.56 IsResizableMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window is resizeable.
Example:

Window1.IsResizableMBS=false

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

Use GrowBoxTransparentMBS on Composite Mac OS windows to enable the transparent grow box.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works in Cocoa.
(Read and Write computed property)

192.1.57 IsZoomedMacMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Returns true if the window is zoomed.
Example:

MsgBox str(window1.IsZoomedMacMBS)

Notes:

Requires Mac OS 8.5 or newer.
Seems not to work correctly on RB 5.5.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.1.58 IsZoomedMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has been maximized.
Example:

MsgBox str(window1.IsZoomedMBS)

Notes:

If you set IsZoomed to true the window is maximized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa.
(Read and Write computed property)

192.1.59 ModifiedMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: You can set or get the value of the modified state.
Example:

mainwindow.modifiedMBS=true

Notes:

Requires Mac OS 8.5 or newer.
As long as you don't set modified to false the window keeps to tell you that it's modified. Not sure why, so just set modified to false early in creating the window.
(Read and Write computed property)

192.1.60 ToolbarVisibleMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether the toolbar is shown in this window or not.
Notes:

Value is false on any error.
Only working on MacOS.
(Read and Write computed property)

192.1.61 TransparencyMBS as single

MBS Util Plugin, Plugin Version: 21.5, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The transparency of the window on Mac OS X, Windows 2000 and Windows XP.
Notes:

1 for opaque, 0 for invisible.
Return 1 on any error. On Windows it returns always 1 as the current transparency value can't be queried.
You need to call MakeTransparent before to install transparency.
(Read and Write computed property)

192.1.62 UnifiedTitleAndToolbarMBS as Boolean

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: Whether this window has an unified title and toolbar look.
Example:

window1.UnifiedTitleAndToolbarMBS = true

Notes:

This window draws its window title and toolbar using a unified appearance that has no separator between the two areas. A window may not have both UnifiedTitleAndToolbar and Metal appearance. If a window

already has the metal attribute, attempting to set the Unified attribute will cause ChangeWindows to return an error, and vice versa. This constant was not added to this header file until Mac OS X 10.5, but it is actually available at runtime on Mac OS X 10.4 and later for windows of kDocumentWindowClass. However, on Mac OS X 10.5 and later, kHIWindowBitUnifiedTitleAndToolbar no longer has any effect, since all windows with toolbars now have a unified look.
(Read and Write computed property)

192.1.63 WindowProxyIconFileMBS as folderitem

MBS Util Plugin, Plugin Version: 21.5, Platform: macOS, Targets: Desktop only.

Function: That's the icon to the window which belongs to the file.
Example:

```
dim f as folderItem

f=getopenFolderItem("special/any")
if f<>nil then
window1.WindowProxyIconFileMBS=f
end if
```

Notes:

Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.64 WinMenuHandleMBS as integer

MBS Util Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: A property to access the handle used for the menu of a Window.
Example:

```
dim menu as Integer // global

if menu=0 then
menu=Window1.WinMenuHandleMBS // read it on the first window
else
Window1.winmenuHandleMBS=menu // set it on the second window
end if
```

Notes:

Used in the example "Menu in every Window" to have a menubar in every window on Windows. But never forget to quit your app after all windows were closed.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.1.65 WinTopMostWindowMBS as boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Example:

window1.WinTopMostWindowMBS=true

Notes:

If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays.
(Read and Write computed property)

192.2 class GTKWindowMBS

192.2.1 class GTKWindowMBS

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: The class to control a GTKWindow.
Notes:

We can directly modify a window on Linux using this class.
If you need methods to do something special, please do not hesitate to email us.

192.2.6 Methods

192.2.7 Constructor(win as DesktopWindow)

MBS Linux Plugin, Plugin Version: 22.0, Platform: Linux, Targets: Desktop only.

Function: Creates a new GTKWindow object pointing to a given window.
Notes: Raises exception on Mac/Win to prevent you from creating invalid object.
See also:

• 192.2.8 Constructor(win as window) 26980

192.2.8 Constructor(win as window)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Creates a new GTKWindow object pointing to a given window.
Notes: Raises exception on Mac/Win to prevent you from creating invalid object.

• 192.2.7 Constructor(win as DesktopWindow) 26979

192.2.9 Deiconify

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to deiconify (i.e. unminimize) the specified window.
Notes: Note that you shouldn't assume the window is definitely deiconified afterward, because other entities (e.g. the user or window manager) could iconify it again before your code which assumes deiconification gets to run.

192.2.10 Fullscreen

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to place window in the fullscreen state.
Notes: Note that you shouldn't assume the window is definitely full screen afterward, because other entities (e.g. the user or window manager) could unfullscreen it again, and not all window managers honor requests to fullscreen windows. But normally the window will end up fullscreen. Just don't write code that crashes if not.

192.2.11 Iconify

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to iconify (i.e. minimize) the specified window.
Notes:

Note that you shouldn't assume the window is definitely iconified afterward, because other entities (e.g. the user or window manager) could deiconify it again, or there may not be a window manager in which case iconification isn't possible, etc. But normally the window will end up iconified. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be iconified before it ever appears onscreen.

192.2.12 IsComposited as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Whether this window can rely on having its alpha channel drawn correctly.
Notes: On X11 this function returns whether a compositing manager is running for window's screen.

192.2.13 Maximize

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to maximize window, so that it becomes full-screen.
Notes:

Note that you shouldn't assume the window is definitely maximized afterward, because other entities (e.g. the user or window manager) could unmaximize it again, and not all window managers support maximization. But normally the window will end up maximized. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be maximized when it appears onscreen initially.

192.2.14 SetIcon(pic as picture)

MBS Linux Plugin, Plugin Version: 14.0, Platform: Linux, Targets: Desktop only.

Function: Assigns an icon to the picture.
Notes:

The operation system will scale the picture to required size, so please use bigger images.
Please use picture with alpha channel for best result.

192.2.15 SetKeepAbove(setting as boolean)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to keep window above, so that it stays on top.
Notes:

Note that you shouldn't assume the window is definitely above afterward, because other entities (e.g. the user or window manager) could not keep it above, and not all window managers support keeping windows above. But normally the window will end kept above. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be kept above when it appears onscreen initially.

Note that, according to the Extended Window Manager Hints specification, the above state is mainly meant for user preferences and should not be used by applications e.g. for drawing attention to their dialogs.

192.2.16 SetKeepBelow(setting as boolean)

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to keep window below, so that it stays in bottom.
Notes:

Note that you shouldn't assume the window is definitely below afterward, because other entities (e.g. the user or window manager) could not keep it below, and not all window managers support putting windows below. But normally the window will be kept below. Just don't write code that crashes if not.

It's permitted to call this function before showing a window, in which case the window will be kept below when it appears onscreen initially.

Note that, according to the Extended Window Manager Hints specification, the above state is mainly meant for user preferences and should not be used by applications e.g. for drawing attention to their dialogs.

192.2.17 Stick

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to stick window, which means that it will appear on all user desktops.
Notes:

Note that you shouldn't assume the window is definitely stuck afterward, because other entities (e.g. the user or window manager) could unstick it again, and some window managers do not support sticking windows. But normally the window will end up stuck. Just don't write code that crashes if not.

It's permitted to call this function before showing a window.

192.2.18 Unfullscreen

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to toggle off the fullscreen state for window.
Notes: Note that you shouldn't assume the window is definitely not full screen afterward, because other entities (e.g. the user or window manager) could fullscreen it again, and not all window managers honor requests to unfullscreen windows. But normally the window will end up restored to its normal state. Just don't write code that crashes if not.

192.2.19 Unmaximize

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to unmaximize window.
Notes: Note that you shouldn't assume the window is definitely unmaximized afterward, because other entities (e.g. the user or window manager) could maximize it again, and not all window managers honor requests to unmaximize. But normally the window will end up unmaximized. Just don't write code that crashes if not.

192.2.20 Unstick

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Asks to unstick window, which means that it will appear on only one of the user's desktops.
Notes: Note that you shouldn't assume the window is definitely unstuck afterward, because other entities (e.g. the user or window manager) could stick it again. But normally the window will end up stuck. Just don't write code that crashes if not.

192.2.21 Properties

192.2.22 Handle as Integer

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: The internal window handle.
Notes: (Read and Write property)

192.2.23 AcceptFocus as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get/Set whether window should receive focus.
Notes:

Windows may set a hint asking the desktop environment not to receive the input focus. This function sets this hint.
(Read and Write computed property)

192.2.24 Opacity as Double

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set the Opacity of this window.
Notes:

Request the windowing system to make window partially transparent, with opacity 0 being fully transparent and 1 fully opaque. (Values of the opacity parameter are clamped to the [0,1] range.) On X11 this has any effect only on X screens with a compositing manager running. See isComposited.
(Read and Write computed property)

192.2.25 Resizable as Boolean

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set whether the user can resize a window.
Notes: (Read and Write computed property)

192.2.26 Title as string

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Get or set the window title.
Notes:

The title of a window will be displayed in its title bar; on the X Window System, the title bar is rendered by the window manager, so exactly how the title appears to users may vary according to a user's exact configuration. The title should help a user distinguish this window from other windows they may have open. A good title might include the application name and current document filename, for example.
(Read and Write computed property)

192.3 class MAAttachedWindowMBS

192.3.1 class MAAttachedWindowMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: A class for attached windows in Cocoa.
Notes:

For Mac OS X 10.7 you can use NSPopoverMBS. This class does something similar for Mac OS X 10.4 to 10.7.

Base on MAAttachedWindow code by Matt Gemmell.
See his website http://mattgemmell.com/

Below are the positions the attached window can be displayed at.

ote that these positions are relative to the point passed to the constructor, e.g. MAPositionBottomRight will put the window below the point and towards the right, MAPositionTop will horizontally center the window above the point, MAPositionRightTop will put the window to the right and above the point, and so on.

You can also pass MAPositionAutomatic and the attached window will try to position itself sensibly, based on available screen-space.

Notes regarding automatically-positioned attached windows:

(a) The window prefers to position itself horizontally centered below the specified point. This gives a certain enhanced visual sense of an attachment/relationship.

(b) The window will try to align itself with its parent window (if any); i.e. it will attempt to stay within its parent window's frame if it can.

(c) The algorithm isn't perfect. :) If in doubt, do your own calculations and then explicitly request that the window attach itself to a particular side.

Notes regarding accessor methods:

1. The border is drawn inside the viewMargin area, expanding inwards; it does not increase the width/height of the window. You can use the BorderWidth and ViewMargin methods together to achieve the exact look/geometry you want. (viewMargin is the distance between the edge of the view and the window edge.)

2. The specified setter methods are primarily intended to be used _before_ the window is first shown. If

you use them while the window is already visible, be aware that they may cause the window to move and/or resize, in order to stay anchored to the point specified in the initializer. They may also cause the view to move within the window, in order to remain centered there.

Note that the HasArrow method can safely be used at any time, and will not cause moving/resizing of the window. This is for convenience, in case you want to add or remove the arrow in response to user interaction. For example, you could make the attached window movable by its background, and if the user dragged it away from its initial point, the arrow could be removed. This would duplicate how Aperture's attached windows behave.

3. drawsRoundCornerBesideArrow takes effect when the arrow is being drawn at a corner, i.e. when it's not at one of the four primary compass directions. In this situation, if drawsRoundCornerBesideArrow is true (the default), then that corner of the window will be rounded just like the other three corners, thus the arrow will be inset slightly from the edge of the window to allow room for the rounded corner. If this value is false, the corner beside the arrow will be a square corner, and the other three corners will be rounded.

This is useful when you want to attach a window very near the edge of another window, and don't want the attached window's edge to be visually outside the frame of the parent window.

4. Note that to retrieve the background color of the window, you should use the windowBackgroundColor method, instead of backgroundColor. This is because we draw the entire background of the window (rounded path, arrow, etc) in an NSColor pattern image, and set it as the backgroundColor of the window.
Subclass of the NSWindowMBS class.

192.3.4 Methods

192.3.5 attachedWindow(view as NSViewMBS, point as NSPointMBS = nil, window as NSWindowMBS = nil, onSide as Integer = 12, distance as Double = 0.0) as MAAttachedWindowMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Creates a new attached window.
Notes:

view: The view to display in the attached window. Must not be nil.
point: The point to which the attached window should be attached. If you are also specifying a parent window, the point should be in the coordinate system of that parent window. If you are not specifying a window, the point should be in the screen's coordinate space. This value is required.
window: The parent window to attach this one to. Note that no actual relationship is created (particularly, this window is not made a childWindow of the parent window). Default: nil.
onSide: The side of the specified point on which to attach this window. Default: MAPositionAutomatic.
distance: How far from the specified point this window should be. Default: 0.

Returns a new attached window.

192.3.6 Constructor(view as NSViewMBS, point as NSPointMBS = nil, window as NSWindowMBS = nil, onSide as Integer = 12, distance as Double = 0.0)

MBS MacExtras Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Creates a new attached window.
Notes:

After constructor finished without exception, please check handle property for success. Handle is zero on failure.

view: The view to display in the attached window. Must not be nil.
point: The point to which the attached window should be attached. If you are also specifying a parent window, the point should be in the coordinate system of that parent window. If you are not specifying a window, the point should be in the screen's coordinate space. This value is required.
window: The parent window to attach this one to. Note that no actual relationship is created (particularly, this window is not made a childWindow of the parent window). Default: nil.
onSide: The side of the specified point on which to attach this window. Default: MAPositionAutomatic.
distance: How far from the specified point this window should be. Default: 0.

192.3.7 setBackgroundImage(image as NSImageMBS)

MBS MacExtras Plugin, Plugin Version: 13.4, Platform: macOS, Targets: Desktop only.

Function: Here you can set the background image.

192.3.8 setPoint(point as NSPointMBS, side as Integer)

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Sets the position and redraws window.

192.3.9 side as Integer

MBS MacExtras Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Which side the attached window is showing at.
Notes: If you passed automatic side mode to Constructor or attachedWindow method, you can query here which side was chosen.

192.3.10 Properties

192.3.11 arrowBaseWidth as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The arrow base width.
Notes:

Default is 20.
(Read and Write computed property)

192.3.12 arrowHeight as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The height of the arrow.
Notes:

Default is 16.
(Read and Write computed property)

192.3.13 borderColor as NSColorMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The border color.
Notes:

Default is white.
(Read and Write computed property)

192.3.14 borderWidth as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The border width.
Notes:

Default is 2.
(Read and Write computed property)

192.3.15 cornerRadius as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The corner radius.
Notes:

Default is 8.
(Read and Write computed property)

192.3.16 drawsRoundCornerBesideArrow as boolean

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether to draw round corners beside arrow.
Notes:

Default is true.
(Read and Write computed property)

192.3.17 hasArrow as boolean

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether the window shows an arrow.
Notes:

Default is true.
(Read and Write computed property)

192.3.18 viewMargin as Double

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The view margin.
Notes:

Default is 2.
(Read and Write computed property)

192.3.19 windowBackgroundColor as NSColorMBS

MBS MacExtras Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: The window background color.
Notes:

Default is 25% dark gray.
(Read and Write computed property)

192.3.20 Constants

192.3.21 MAPositionAutomatic = 12

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: automatic

192.3.22 MAPositionBottom = 1

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: bottom

192.3.23 MAPositionBottomLeft = 10

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: bottom left

192.3.24 MAPositionBottomRight = 11

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: bottom right

192.3.25 MAPositionLeft = 0

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: left

192.3.26 MAPositionLeftBottom = 5

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: left bottom

192.3.27 MAPositionLeftTop = 4

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: left top

192.3.28 MAPositionRight = 2

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: right

192.3.29 MAPositionRightBottom = 7

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: right bottom

192.3.30 MAPositionRightTop = 6

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: right top

192.3.31 MAPositionTop = 3

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: top

192.3.32 MAPositionTopLeft = 8

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: top left

192.3.33 MAPositionTopRight = 9

MBS MacExtras Plugin, Plugin Version: 11.2.

Function: One of the position constants.
Notes: top right

192.4 Globals

192.4.1 DisableScreenUpdatesMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: Temporarily disables redraw of the screen after changes to window geometry or window contents.
Notes:

It is appropriate to disable updates if you are moving or resizing multiple windows and you want all of the geometry changes to appear onscreen simulataneously. In most other cases, you should strive to avoid disabling screen updates. The window server will automatically re-enable updates (and print a message to the Console log) if you leave updates disabled for a sufficiently long period of time, currently about 1 second.

The window server records the number of calls to DisableScreenUpdates and does not re-enable updates until a matching number of calls to EnableScreenUpdates have been made.

Updated for 64-bit in plugin version 18.3.

192.4.2 Blog Entries

- MBS Xojo Plugins, version 18.3pr3

192.4.3 EnableScreenUpdatesMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: Re-enables redraw of the screen after changes to window geometry or window contents.
Notes:

Screen redraw is not actually enabled until the number of calls to EnableScreenUpdatesMBS matches the number of calls to DisableScreenUpdatesMBS.

Updated for 64-bit in plugin version 18.3.

192.4.4 Blog Entries

- MBS Xojo Plugins, version 18.3pr3

192.5 class OverlayMBS

192.5.1 class OverlayMBS

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: This class gives you a window overlaying all other windows with an alpha channel.
Example:

```
dim o as OverlayMBS
dim p as Picture

o=new OverlayMBS(100,100,300,300)

p=New Picture(300,300,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,300,300

o.Pict=p

p=New Picture(300,300,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillOval 0,0,300,300
p.Graphics.ForeColor=& cFFFFFF
p.Graphics.FillOval 100,100,100,100

o.Mask=p

o.UpdateShow

// wait 5 seconds to see the window
DelayMBS 5
```

Notes:

Requires Mac OS X 10.3.9 or Windows 2000 or newer.

Cocoa implementation added with Mac OS X 10.4 class.
To support high resolution mode on Mac OS X high resolution displays, please make the picture+mask exact the double width and height of the window.

See also:

- 192.5.9 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, WindowsNoActivate as boolean = false, WindowsTopMost as boolean=true) 26997

192.5.9 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, WindowsNoActivate as boolean = false, WindowsTopMost as boolean=true)

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Creates a new window.
Example:

```
// a dark window with round edges

dim m,p as Picture
static o as OverlayMBS

const rect_width=300
const rect_height=300
const round_rect_int=30
```

```
p=New Picture(rect_width,rect_height,32)
m=New Picture(rect_width,rect_height,32)

p.Graphics.ForeColor = RGB( 20,20,20 )
p.Graphics.DrawRect 0, 0, rect_width, rect_height
p.Graphics.FillRect 0, 0, rect_width, rect_height

// fill the window mask with around 10% transparency
m.Graphics.ForeColor = RGB( 20,20,20 )
m.Graphics.FillRoundRect 0, 0, rect_width, rect_height, round_rect_int, round_rect_int

// write text into picture
p.Graphics.ForeColor=& cFFFFFF
p.Graphics.DrawString "Hello",10,20

// make the text not transparent
m.Graphics.ForeColor=& c000000
m.Graphics.DrawString "Hello",10,20

o=new OverlayMBS(200,200,rect_width, rect_height, true)
o.Pict=p
o.Mask=m
o.UpdateShow
```

Notes:

Requires Mac OS X 10.3.9 or Windows 2000 or newer.
On success the handle property is not zero.

If WindowsNoActivate the window is setup to not become the front window. This may be a better setup for a toolbar like window.
If WindowsTopMost is false the window is not floating in front of all other windows.

Seems like WindowsNoActivate on Windows works better if you call Show(4) right after the constructor.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.

- 192.5.8 Constructor(left as Integer, top as Integer, width as Integer, height as Integer, MacAttributes as Integer, WinExStyle as Integer, WinStyle as Integer) 26996

192.5.10 Hide

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Hides the window.

192.5.11 InvalidateShadow

MBS Overlay Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: Invalidates the shadow of the window.
Notes:

As soon as possible the operation system will recalculate the shadow.
Works only on Mac OS X with Carbon or Cocoa window.

192.5.12 Move(left as Integer, top as Integer)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Moves the window on the screen to the given position.

192.5.13 Resize(width as Integer, height as Integer)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Resizes the window.
Notes: You need to provide bigger picture before you call this method.

192.5.14 SetFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: Desktop only.

Function: The method to call to set focus to the overlay window.
Notes: Works for Windows and macOS Cocoa.

192.5.15 Show(WindowsShowMode as Integer = 0)

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the window onscreen.
Notes:

Values for the Windows show mode:

default 0
SW_SHOWNORMAL 1
SW_NORMAL 1
SW_SHOWMINIMIZED 2
SW_SHOWMAXIMIZED 3
SW_MAXIMIZE 3
SW_SHOWNOACTIVATE 4
SW_SHOW 5
SW_MINIMIZE 6
SW_SHOWMINNOACTIVE 7
SW_SHOWNA 8
SW_RESTORE 9
SW_SHOWDEFAULT 10
SW_FORCEMINIMIZE 11

192.5.16 Update

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Updates the window.
Notes: After you draw new content into the pict and mask pictures, you call this method to apply changes to the window.
See also:

- 192.5.17 Update(NSImage as Variant) 27000

192.5.17 Update(NSImage as Variant)

MBS Overlay Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Updates overlay window with given NSImage.
Notes:

Please pass NSImageMBS object.

Version 16.2 and newer also accepts CGImageMBS object here.
If you pass picture, we use it as CGImage or NSImage depending on what picture type you pass.
See also:

- 192.5.16 Update 27000

192.5.18 UpdateShow

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Shows the window and performs an update.
Notes: Runs Update and Show internally.

192.5.19 Properties

192.5.20 Alpha as Double

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The alpha value of the window.
Notes:

0 is invisible and 1.0 is visible.
(Read and Write property)

192.5.21 AutoCaptureMouse as Boolean

MBS Overlay Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop only.

Function: Whether the mouse should be captured automatically on Windows.
Notes:

If you return true from MouseDown the mouse is catched. This way you can get the drag events even if the mouse moves out of the window.
On MouseUp the mouse is released.
(Read and Write property)

192.5.22 CurrentImage as Variant

MBS Overlay Plugin, Plugin Version: 14.2, Platform: macOS, Targets: Desktop only.

Function: Last image drawn.
Notes:

For debugging only.
CGImageMBS or NSImageMBS depending on what you set.
(Read only property)

192.5.23 Height as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The height of the window.
Notes:

Using Resize method is more efficient than assigning width and height properties.
(Read and Write property)

192.5.24 IgnoreMouseClicks as Boolean

MBS Overlay Plugin, Plugin Version: 8.7, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether this window should react to mouse clicks.
Notes:

In Mac OS X 10.7 and newer setting IgnoreMouseClicks = false does not give the same behavior as without setting this property before.
(Read and Write property)

192.5.25 Left as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The position of the window.
Example:

```
static o as OverlayMBS // keep the variable global somewhere. Static or part of a module or in app class.

o = new OverlayMBS(100,100,100,100)

o.Pict = LogoMBS(100)
o.mask = LogoMBS(100)

o.Left = 200

o.UpdateShow
```

Notes:

Using Move method is more efficient than assigning left and top properties.
(Read and Write property)

192.5.26 Mask as Picture

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The mask for the window.
Notes:

You need to create and assign your own image.
If you assign nil for the mask, the plugin uses the mask or alpha channel of the picture.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
(Read and Write property)

192.5.27 NSView as Variant

MBS Overlay Plugin, Plugin Version: 15.3, Platform: macOS, Targets: Desktop only.

Function: The NSView showing the content of the overlay.
Notes: (Read only property)

192.5.28 NSWindow as Variant

MBS Overlay Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop only.

Function: Returns a reference to the NSWindowMBS object which you can use to make additional settings to the overlay window.
Example:

```
dim o as OverlayMBS // your window

dim n as NSWindowMBS = o.NSWindow
// this window should not hide if app hides
n.canHide = false
```

Notes:

Only for the Cocoa target in Xojo.
(Read only property)

192.5.29 Pict as Picture

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The picture for the window content.
Notes:

You need to provide your own picture here.
Pict and Mask pictures must have the same size.

Alpha Channel Pictures are not really supported.
But for Mac OS X an alpha channel picture does currently work.

For proper support of high resolutions, the pictures used here may need to be 2x or 3x times the window size.
(Read and Write property)

192.5.30 Top as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The position of the window.
Example:

```
static o as OverlayMBS // keep the variable global somewhere. Static or part of a module or in app class.

o = new OverlayMBS(100,100,100,100)

o.Pict = LogoMBS(100)
o.mask = LogoMBS(100)

o.top = 200

o.UpdateShow
```

Notes:

Using Move method is more efficient than assigning left and top properties.
(Read and Write property)

192.5.31 Visible as Boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: Whether the window is visible.
Example:

```
dim o as OverlayMBS
// ....
o.visible=true
```

Notes:

True if visible, false if hidden.
(Read and Write property)

192.5.32 Width as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The width of the window.
Notes:

Using Resize method is more efficient than assigning width and height properties.
(Read and Write property)

192.5.33 WindowHandle as Integer

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: Desktop only.

Function: The internal used window handle.
Notes:

On Mac OS a WindowRef and on Windows a HWND.
(Read only property)

192.5.34 WindowID as Integer

MBS Overlay Plugin, Plugin Version: 10.2, Platform: macOS, Targets: Desktop only.

Function: Queries the CoreGraphics Window ID for the given window.
Notes:

Returns 0 on any error.
This ID can be used for CGWindowListCreateImageMBS.
(Read only property)

192.5.35 WindowsClassName as String

MBS Overlay Plugin, Plugin Version: 18.4, Platform: Windows, Targets: Desktop only.

Function: The Windows' window class name.
Notes: (Read only property)

192.5.36 hasShadow as boolean

MBS Overlay Plugin, Plugin Version: 13.0, Platform: macOS, Targets: Desktop only.

Function: Whether the window has a shadow.
Notes: (Read and Write computed property)

192.5.37 Title as string

MBS Overlay Plugin, Plugin Version: 11.0, Platforms: macOS, Windows, Targets: Desktop only.

Function: The title of the window.
Notes:

This name is not visible as the window has no title bar.
But if you see the window in some window list, this title property will give your overlay window a name.
(Read and Write computed property)

192.5.38 WinIsTopMost as boolean

MBS Overlay Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Notes:

If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays.
(Read and Write computed property)

192.5.39 Events

192.5.40 Draw(CGContext as Variant, NSGraphicsContext as Variant)

MBS Overlay Plugin, Plugin Version: 18.4, Platform: macOS, Targets: .

Function: Draws the content of the window.
Example:

```
Sub Draw(CGContext as Variant, NSGraphicsContext as Variant)
dim c as CGContextMBS = CGContext
dim n as NSGraphicsMBS = NSGraphicsContext
// draw here
End Sub
```

Notes:

The drawing area is cleared for you.
Please put the given parameters in the local variables with correct type.
We use variants here to reduce plugin dependencies.

With version 19.5, the don't clear content anymore for you, so you may need to call ClearRect if needed.

192.5.41 GotFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The event called when focus is set on the overlay window.
Notes: Works for Windows and macOS Cocoa.

192.5.42 KeyDown(key as String, keyCode as Integer, modifiers as integer) as Boolean

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The key down event.
Notes:

The plugin translates keycodes into key as text, but also provides keycode and modifier flags.
Works for Windows and macOS Cocoa.

192.5.43 KeyUp(key as String, keyCode as Integer, modifiers as integer) as Boolean

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The key up event.
Notes:

The plugin translates keycodes into key as text, but also provides keycode and modifier flags.
Works for Windows and macOS Cocoa.

192.5.44 LostFocus

MBS Overlay Plugin, Plugin Version: 17.4, Platforms: macOS, Windows, Targets: .

Function: The event called when focus is lost on the overlay window.
Notes: Works for Windows and macOS Cocoa.

192.5.45 menuForEvent(NSEvent as variant) as Variant

MBS Overlay Plugin, Plugin Version: 17.3, Platform: macOS, Targets: .

Function: Provide a contextual menu for Cocoa Mac.
Notes:

NSEvent is an NSEventMBS object.
Please return NSMenuMBS object. (and please keep a reference somewhere)

192.5.46 MouseDown(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user clicks with the mouse inside the window.
Notes:

Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.47 MouseDragged(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user moves the mouse over the window while the mouse is pressed.
Notes:

Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.48 MouseEnter(x as Integer, y as Integer, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: .

Function: This is event is called when mouse enters window.
Notes:

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.49 MouseExit(x as Integer, y as Integer, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Windows, Targets: .

Function: This is event is called when mouse leaves window.
Notes:

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.50 MouseMoved(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user moves the mouse over the window.
Notes:

Return true if you handled this event.
modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.51 MouseUp(x as Integer, y as Integer, modifiers as Integer) as boolean

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the user releases the mousebutton inside the window.
Notes:

Return true if you handled this event.

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.52 MouseWheel(x as Integer, y as Integer, dx as Double, dy as Double, modifiers as Integer)

MBS Overlay Plugin, Plugin Version: 13.0, Platforms: macOS, Linux, Windows, Targets: .

Function: This event is called when the user uses the mouse wheel inside the window.
Notes:

modifiers: Platform dependent keyboard modifiers. Different values for Carbon, Cocoa and Windows!

For Cocoa to set mouse cursor, please use NSCursorMBS class.

192.5.53 WindowBoundsChanged

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called whenever the size of the window changes.
Notes: Can also be called on position changes.

192.5.54 WindowClosed

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the window is closed.

192.5.55 WindowHidden

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the window is hidden.
Notes: Cocoa support added for version 14.0.

192.5.56 WindowShown

MBS Overlay Plugin, Plugin Version: 8.6, Platforms: macOS, Windows, Targets: .

Function: This event is called when the window is shown.
Notes: Cocoa support added for version 14.0.

192.5.57 Constants

192.5.58 kModifierFlagCommand = 1048576

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The command key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagCommand) <>0 to check if the flag is set in key events.

192.5.59 kModifierFlagControl = 262144

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The control key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagControl) <>0 to check if the flag is set in key events.

192.5.60 kModifierFlagOption = 524288

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The option (alt) key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagOption) <>0 to check if the flag is set in key events.

192.5.61 kModifierFlagShift = 131072

MBS Overlay Plugin, Plugin Version: 17.4.

Function: One of the modifier constants.
Notes:

The shift key is pressed.
Use with BitwiseAnd(Modifiers, kModifierFlagShift) <>0 to check if the flag is set in key events.

192.6 class Window

192.6.1 class Window

Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Extends Xojo's Window Class.
Example:

window1.HasNoTitleBarMBS = true

Notes: In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.6.2 Methods

192.6.3 ActivateWindowMBS

MBS Util Plugin, Plugin Version: 19.2, Platforms: macOS, Windows, Targets: Desktop only.

Function: Activates the window.
Notes:

This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

For MacOS Cocoa apps, we simply bring the window to the front.

- 17.5, page 42: What's New in the MBS Plugins, With the Plugins growing every year, here are new capabilities you may have missed by Stefanie Juchmes

192.6.7 BackingScaleFactorMBS as Double

MBS Util Plugin, Plugin Version: 12.3, Platform: macOS, Targets: Desktop only.

Function: Returns the scale factor representing the number of backing store pixels corresponding to each linear unit in window space on this window.
Notes:

This is generally only necessary when building a bitmap context or image whose resolution needs to match that of a particular Window. Note that a Window's backing scale factor can change over time, such as when the window moves from one display to another, or when a display's resolution changes, so clients should not cache the value returned by this function.

If platform does not support scaling factor, we return 1.0. (on Windows, Linux and older Mac OS X)
Supported for Carbon and Cocoa windows.

For apps which are not enabled for retina support, the function returns 1. So you only see 2 here if app is Cocoa, display is retina and info.plist has the NSHighResolutionCapable key.

- High Resolution is coming
- MBS Real Studio Plugins, version 12.3pr5

192.6.9 CGContextMBS as CGContextMBS

MBS MacCG Plugin, Plugin Version: 2.7, Platform: macOS, Targets: Desktop only.

Function: Creates a new CGContextMBS object for the given Window.
Example:

```
dim CGContext as CGContextMBS
dim OverlayPic as Picture=LogoMBS(500)
dim contentpicture as CGImageMBS= CGCreateImageMBS(OverlayPic)

CGContext=window1.CGContextMBS

CGContext.ClearRect CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
CGContext.DrawPicture contentpicture, CGMakeRectMBS(0, 0, OverlayPic.width, OverlayPic.height)
```

Notes:

Requires Mac OS X to work.
Please make sure the CGContextMBS object is released in the paint event if you use it there, so all the drawings are flushed. Not releasing it my be visible in missing statictext or other strange graphics effects.

But on a Cocoa window the context is not always available, so in the window paint event, you can context from Graphics object.

192.6.10 CleanUpTransparentMBS(refValue as Integer)

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Cleans up transparency support for a Xojo window.
Example:

```
dim p as Integer // property on Windows

p = window1.MakeTransparentMBS

// later in close event

window1.CleanUpTransparentMBS p
```

Notes:

Call this in the close event of a window passing the value you got from the MakeTransparentMBS call.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

192.6.11 Blog Entries

- MBS REALbasic Plugins, version 11.1pr5

192.6.12 ClearTransparencyMBS

MBS Util Plugin, Plugin Version: 5.0, Platform: macOS, Targets: Desktop only.

Function: Clears transparency of a window.

192.6.13 CollapsableMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window can be collapsed.
Example:

MsgBox str(window1.CollapsableMBS)

Notes:

Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.

192.6.14 ConstrainWindowToScreenMBS(animate as boolean)

MBS Util Plugin, Plugin Version: 10.5, Platform: macOS, Targets: Desktop only.

Function: Makes sure the window is on one screen visible.
Notes: Implemented on Mac for both Carbon and Cocoa.

192.6.15 Blog Entries

- MBS REALbasic Plugins, version 10.6pr6

192.6.16 GTKWindow as GTKWindowMBS

MBS Linux Plugin, Plugin Version: 13.0, Platform: Linux, Targets: Desktop only.

Function: Queries a GTKWindow object for this window.
Notes:

Returns only a valid object on linux.
On other platforms, this function returns nil.

192.6.17 InvalidateRectThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Invalidate the rectangle.
Notes:

This method is to allow you to invalidate in a thread without a problem.

If called on main thread, the plugin will simply call InvalidateRect method directly.
If called on other threads the plugin will schedule to call InvalidateRect method a short time later on the main thread.

192.6.18 Blog Entries

- MBS Xojo Plugins, version 19.5pr3

192.6.19 InvalidateShadowMBS

MBS MacOSX Plugin, Plugin Version: 8.7, Platform: macOS, Targets: Desktop only.

Function: This method causes a window's shadow to be recalculated.
Notes:

InvalidateShadowMBS is not typically used by applications. However, it may be useful for applications with customized window frames that change shape dynamically; in this case, after the application has drawn the new window shape, the window shadow must be recalculated to follow the new window shape.

This method causes the window shadow to be immediately recalculated and redrawn based on the current contents of the window's back buffer. For best performance and visual appearance, you should follow these steps when invalidating a window shadow: disable updates with DisableScreenUpdatesMBS, draw, flush, invalidate the shadow, and enable updates. For a compositing window, after invalidating any views that should be redrawn, you will need to explicitly draw and flush using HIWindowFlush, rather than waiting for the event loop to draw and flush the window, because you cannot disable updates or invalidate the window shadow if drawing is done via the event loop.

192.6.20 InvalidateThreadSafeMBS(EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Invalidate the window.
Notes:

This method is to allow you to invalidate in a thread without a problem.

If called on main thread, the plugin will simply call Invalidate method directly.
If called on other threads the plugin will schedule to call Invalidate method a short time later on the main thread.

- MBS Real Studio Plugins, version 13.0pr5

192.6.22 IsFullScreenMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Queries whether window is fullscreen.
Notes:

Indicates that a window has fullscreen appearance.
A fullscreen window does not draw its titlebar, and may have special handling for its toolbar.
Available in Mac OS X v10.7 and later.

192.6.23 Blog Entries

- MBS Real Studio Plugins, version 11.2pr11
- MBS Real Studio Plugins, version 11.2pr9

192.6.24 MakeTransparentMBS as Integer

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Installs transparency support to a Xojo window.
Example:

```
dim p as Integer // property on Windows

p = window1.MakeTransparentMBS

// later in close event

window1.CleanUpTransparentMBS p
```

Notes:

Will return non zero value if successfull.
The window doesn't change if you don't use the CGContextMBS property.

Requires Mac OS X, Windows 2000 or Windows XP to work. The window must be a document window.

Set MacProcID of the window to 1104 and you can make it transparent without a title bar. (on Mac OS X)

With plugin version 11.1, we now return a value which should store with the window. Later in the Close event, you call CleanUpTransparentMBS passing this value.

Added Cocoa support in 11.3 plugins.
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel. Calls to MakeTransparentMBS and CleanUpTransparentMBS are not required for Linux.

192.6.27 NSPanelMBS as NSPanelMBS

MBS MacBase Plugin, Plugin Version: 12.5, Platform: macOS, Targets: Desktop only.

Function: Creates a NSPanel for the given Xojo window.
Example:

MsgBox window1.NSPanelMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target which are floating panels.

192.6.28 NSToolbarMBS as NSToolbarMBS

MBS MacControls Plugin, Plugin Version: 11.3, Platform: macOS, Targets: Desktop only.

Function: The window's toolbar.
Notes:

So you can get the toolbar without going over NSWindowMBS.
But there you can assign a new toolbar...

192.6.29 NSWindowMBS as NSWindowMBS

MBS MacBase Plugin, Plugin Version: 9.7, Platform: macOS, Targets: Desktop only.

Function: Creates a NSWindow for the given Xojo window.
Example:

MsgBox window1.NSWindowMBS.Title

Notes: Works only for Cocoa Windows in Cocoa target and for Carbon Windows in carbon targets.

192.6.30 RefreshRectThreadSafeMBS(X As Integer, Y As Integer, Width As Integer, Height As Integer, EraseBackground as boolean = true)

MBS Util Plugin, Plugin Version: 19.5, Platform: macOS, Targets: Desktop only.

Function: Refresh the rectangle.
Notes:

This method is to allow you to refresh in a thread without a problem.

If called on main thread, the plugin will simply call RefreshRect method directly.
If called on other threads the plugin will schedule to call RefreshRect method a short time later on the main

thread.

192.6.34 RemoveWindowProxyIconMBS

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Removes any Proxy Icon from the Window.
Example:

mainwindow.RemoveWindowProxyIconMBS

Notes:

Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.6.35 Blog Entries

- MBS REALbasic Plugins, version 11.1pr4

192.6.36 ScreenshotWindowMBS as picture

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns the content of the window buffer on Mac OS X.
Example:

```
dim p as Picture
p=mainwindow.screenshotWindowMBS
```

Notes:

Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

192.6.37 Blog Entries

- MBS Xojo Plugins, version 22.2pr2
- MBS Real Studio Plugins, version 11.1pr8

192.6.38 ScreenshotWindowRectMBS(left as Integer, top as Integer, width as Integer, height as Integer) as picture

MBS MacOSX Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Returns a part of the content of the window buffer on Mac OS X.
Example:

```
dim p as picture
p=mainwindow.ScreenshotWindowRectMBS(100,100,200,200)
```

Notes:

Only for Mac OS X. Image is taken from window back buffer.
This will not capture overlay windows.

On Xojo 2006 or newer, please add a self. on front of the method call in case you want to use the method on the current window.

- Tipp of the day: Blank HTMLViewer

192.6.40 SetTransparencyMBS(value as Integer) as boolean

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: Your window can have transparency on Mac OS X.
Example:

```
if window1.SetTransparencyMBS(127) then
'fine
else
'error
end if
```

Notes:

Use values between 0 and 255.
Requires Mac OS X, Windows 2000 or Windows XP to work.
May be limited to simple windows like normal document windows.
You need to call MakeTransparent before to install transparency.
(this function was replaced in v4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.

192.6.41 SetWindowFeedbackSettingMBS(Feedback as Integer, value as Variant) as Boolean

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Sets the feedback configuration for a window.
Example:

```
const FEEDBACK_TOUCH_CONTACTVISUALIZATION = 1
const FEEDBACK_PEN_BARRELVISUALIZATION = 2
const FEEDBACK_PEN_TAP = 3
const FEEDBACK_PEN_DOUBLETAP = 4
const FEEDBACK_PEN_PRESSANDHOLD = 5
const FEEDBACK_PEN_RIGHTTAP = 6
const FEEDBACK_TOUCH_TAP = 7
const FEEDBACK_TOUCH_DOUBLETAP = 8
```

```
const FEEDBACK_TOUCH_PRESSANDHOLD = 9
const FEEDBACK_TOUCH_RIGHTTAP = 10
const FEEDBACK_GESTURE_PRESSANDTAP = 11

dim r as Boolean = self.SetWindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, true)

if r then
dim value as Boolean
dim b as Boolean = self.WindowFeedbackSettingMBS(FEEDBACK_TOUCH_TAP, value)
if b then
MsgBox "WindowFeedbackSettingMBS: "+str(value)
end if
end if
```

Notes:

Returns true if successful; otherwise, returns false.

Value can be nil to reset value. Or true/false to set it.
Requires Windows 8 or Windows Server 2012 in desktop apps only.

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

192.6.44 SetWindowIconMBS(Type as Integer, File as FolderItem, IconID as Integer) as Boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the icon in the file.
Example:

```
call window1.SetWindowIconMBS(0,getfolderitem("icon.ico"),1)
```

Notes:

Returns true on success and false on failure.
What image depths are used and supported depends on the Windows version.

Type is 0 for a small icon and 1 for a big icon.
See also:

- 192.6.45 SetWindowIconMBS(Type as Integer, Icon as Picture, Mask as Picture) as Boolean 27025

192.6.45 SetWindowIconMBS(Type as Integer, Icon as Picture, Mask as Picture) as Boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Sets the window icon using the given picture with mask.
Example:

```
dim p as Picture
dim m as Picture

// random colored circle image
p=New Picture(16,16,32)
p.Graphics.ForeColor=& c000000
p.Graphics.FillRect 0,0,16,16
p.Graphics.ForeColor=rgb(rnd*256,rnd*256,rnd*256)
p.Graphics.Filloval 0,0,16,16

// circle mask
m=New Picture(16,16,32)
m.Graphics.ForeColor=& cFFFFFF // transparent
m.Graphics.Fillrect 0,0,16,16
m.Graphics.ForeColor=& c000000 // color
m.Graphics.Filloval 0,0,16,16

Canvas1.Backdrop=p // show in canvas
```

Canvas2.Backdrop=m

call window1.SetWindowIconMBS(0,p,m)

Notes:

The mask picture ist converted to black/white.
What image depths are used and supported depends on the Windows version.
Returns true on success and false on failure.

Possible values for type:

ICON_BIG = 1	Set the large icon for the window.
ICON_SMALL = 0	Set the small icon for the window.

See also:

- 192.6.44 SetWindowIconMBS(Type as Integer, File as FolderItem, IconID as Integer) as Boolean 27025

192.6.46 SetWindowMaskMBS(p as picture, redraw as Boolean, transparentColor as color) as Boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop only.

Function: Sets the mask of a window.
Notes:

Redraw decides whether the window is redrawn after it has been changed.
Returns true if successfull.

If you want to do the same on Mac OS X, check the example projects "transparent window" and the Photoshop Splash Screen example.

192.6.47 Xojo Developer Magazine

- 2.6, page 49: IRC Bots: Easy! Part II, Part II

192.6.48 ShowHideToolbarMBS(animate as boolean, value as boolean)

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Shows or hides the toolbar.
Notes: Only working on MacOS.

192.6.49 SmoothResizeCenteredMBS(width as Integer,height as Integer)

MBS Util Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly to all directions.
Example:

```
dim w,h as Integer

// get destination dimension

w=300
h=200

// Resize

window1.SmoothResizeCenteredMBS w,h

// Now resize via RB to make it permament.

width=w
height=h
```

Notes:

You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

192.6.50 Blog Entries

- MBS Real Studio Plugins, version 11.2pr3

192.6.51 SmoothResizeMBS(width as Integer,height as Integer)

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Resizes the window smoothly.
Example:

```
dim w,h as Integer
```

```
// get destination dimension

w=300
h=200

// Resize

window1.SmoothResizeMBS w,h

// Now resize via RB to make it permament.

width=w
height=h
```

Notes:

You need to set the new size using Xojo's Windows properties, too. (no longer needed with Xojo)
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa on 10.4 and newer.

192.6.52 Blog Entries

- MBS REALbasic Plugins, version 10.4pr13

192.6.53 ToggleFullScreenMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Toggles fullscreen mode for this window.
Notes:

Returns true on success.
If an application supports fullscreen, it should add a menu item to the View menu with toggleFullScreen as the action.
Available in Mac OS X v10.7 and later.
This method does not much if you don't mark a window to be the primary fullscreen window.

- MBS Real Studio Plugins, version 11.2pr11

- MBS Real Studio Plugins, version 11.2pr9

192.6.55 UpdateNowMBS

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: On MacOS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update.
Example:

Mainwindow.UpdateNowMBS

Notes: Updated for 64-bit in plugin version 18.3.

192.6.56 Blog Entries

- MBS Xojo Plugins, version 18.3pr3

192.6.57 UpdateNowRectMBS(left as Integer, top as Integer, width as Integer, height as Integer)

MBS MacOSX Plugin, Platform: macOS, Targets: Desktop only.

Function: On Mac OS all windows are doublebuffered and the OS updates the screen from time to time. This method forces a screen update for a part of your window.
Example:

Mainwindow.UpdateNowRectMBS Mainwindow.text.left, Mainwindow.text.top, Mainwindow.text.width, Mainwindow.text.height

Notes: Updated for 64-bit in plugin version 18.3.

192.6.58 WinAnimateWindowMBS(Flags as Integer, Time as Integer=200) as boolean

MBS Win Plugin, Plugin Version: 9.4, Platform: Windows, Targets: Desktop only.

Function: The AnimateWindow function enables you to produce special effects when showing or hiding windows.
Example:

```
dim flags as Integer

const AW_SLIDE = & h040000 // Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
const AW_ACTIVATE = & h020000 // Activates the window. Do not use this value with AW_HIDE.
const AW_BLEND = & h080000 // Uses a fade effect. This flag can be used only if hwnd is a top-level window.
const AW_HIDE = & h010000 //Hides the window. By default, the window is shown.
const AW_CENTER = & h10 // Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
const AW_HOR_POSITIVE = 1 // Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_HOR_NEGATIVE = 2 // Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_POSITIVE = 4 // Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
const AW_VER_NEGATIVE = 8 // Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

window2.hide

flags=BitwiseOr(AW_SLIDE, AW_HOR_POSITIVE)

if window2.WinAnimateWindowMBS(flags, 1000) then
window2.show
else
MsgBox "Animatin failed."
end if
```

Notes:

There are four types of animation: roll, slide, collapse or expand, and alpha-blended fade.

self: The window to animate. The calling thread must own this window.
Time: Specifies how long it takes to play the animation, in milliseconds. Typically, an animation takes 200 milliseconds to play.
Flags: Specifies the type of animation. This parameter can be one or more of the following values. Note that, by default, these flags take effect when showing a window. To take effect when hiding a window, use AW_HIDE and a bitwiseor operator with the appropriate flags.

Return Value:
If the function succeeds, the return value is true.
If the function fails, the return value is false.
The function will fail in the following situations:

AW_SLIDE	= & h040000	Uses slide animation. By default, roll animation is used. This flag is ignored when used with AW_CENTER.
AW_ACTIVATE	= & h020000	Activates the window. Do not use this value with AW_HIDE.
AW_BLEND	= & h080000	Uses a fade effect. This flag can be used only if hwnd is a top-level window.
AW_HIDE	= & h010000	Hides the window. By default, the window is shown.
AW_CENTER	= & h10	Makes the window appear to collapse inward if AW_HIDE is used or expand outward if the AW_HIDE is not used. The various direction flags have no effect.
AW_HOR_POSITIVE	= 1	Animates the window from left to right. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_HOR_NEGATIVE	= 2	Animates the window from right to left. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_POSITIVE	= 4	Animates the window from top to bottom. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.
AW_VER_NEGATIVE	= 8	Animates the window from bottom to top. This flag can be used with roll or slide animation. It is ignored when used with AW_CENTER or AW_BLEND.

- If the window uses the window region. Windows XP: This does not cause the function to fail.
- If the window is already visible and you are trying to show the window.
- If the window is already hidden and you are trying to hide the window.
- If there is no direction specified for the slide or roll animation.
- When trying to animate a child window with AW_BLEND.
- If the thread does not own the window. Note that, in this case, AnimateWindow fails but GetLastError returns ERROR_SUCCESS. To get extended error information, call the GetLastError function.

To show or hide a window without special effects, use Show.
When using slide or roll animation, you must specify the direction. It can be either AW_HOR_POSITIVE, AW_HOR_NEGATIVE, AW_VER_POSITIVE, or AW_VER_NEGATIVE.
You can combine AW_HOR_POSITIVE or AW_HOR_NEGATIVE with AW_VER_POSITIVE or AW_VER_NEGATIVE to animate a window diagonally.
The window procedures for the window and its child windows should handle any WM_PRINT or WM_PRINTCLIENT messages. Dialog boxes, controls, and common controls already handle WM_PRINTCLIENT. The default window procedure already handles WM_PRINT.
If a child window is displayed partially clipped, when it is animated it will have holes where it is clipped.
AnimateWindow supports RTL windows.
Avoid animating a window that has a drop shadow because it produces visually distracting, jerky animations.

192.6.59 WindowFeedbackSettingMBS(Feedback as Integer, byref value as boolean, IncludeAncestors as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves the feedback configuration for a window.
Notes:

IncludeAncestors: Specifies that the parent window chain should be checked.

Returns true if the specified feedback setting is configured on the specified window. Otherwise, it returns false (and config won't be modified).

Requires Windows 8 [desktop apps only] or Windows Server 2012 [desktop apps only] .

Constant Name	Value	Description
FEEDBACK_TOUCH_CONTACTVISUALIZATION	1	Feedback for a touch contact event.
FEEDBACK_PEN_BARRELVISUALIZATION	2	Feedback for a pen barrel-button event.
FEEDBACK_PEN_TAP	3	Feedback for a pen tap event.
FEEDBACK_PEN_DOUBLETAP	4	Feedback for a pen double-tap event.
FEEDBACK_PEN_PRESSANDHOLD	5	Feedback for a pen press-and-hold event.
FEEDBACK_PEN_RIGHTTAP	6	Feedback for a pen right-tap event.
FEEDBACK_TOUCH_TAP	7	Feedback for a touch tap event.
FEEDBACK_TOUCH_DOUBLETAP	8	Feedback for a touch double-tap event.
FEEDBACK_TOUCH_PRESSANDHOLD	9	Feedback for a touch press-and-hold event.
FEEDBACK_TOUCH_RIGHTTAP	10	Feedback for a touch right-tap event.
FEEDBACK_GESTURE_PRESSANDTAP	11	Feedback for a press-and-tap gesture.

192.6.60 Blog Entries

- MBS Xojo Plugins, version 17.5pr6

192.6.61 WinFlashWindowMBS(Invert as boolean)

MBS Util Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Flashes Window.
Example:

window1.WinFlashWindowMBS true

Notes:

Flashes the specified window one time. It does not change the active state of the window.

Invert: If this parameter is true, the window is flashed from one state to the other. If it is false, the window is returned to its original state (either active or inactive).

When an application is minimized and this parameter is true, the taskbar window button flashes active/inactive. If it is false, the taskbar window button flashes inactive, meaning that it does not change colors. It flashes, as if it were being redrawn, but it does not provide the visual invert clue to the user.

Flashing a window means changing the appearance of its caption bar as if the window were changing from inactive to active status, or vice versa. (An inactive caption bar changes to an active caption bar; an active caption bar changes to an inactive caption bar.)
Typically, a window is flashed to inform the user that the window requires attention but that it does not currently have the keyboard focus.
The FlashWindow function flashes the window only once; for repeated flashing, the application should create a system timer.

192.6.62 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr2

192.6.63 WinHideTooltipMBS as Integer

MBS Win Plugin, Plugin Version: 16.1, Platform: Windows, Targets: Desktop only.

Function: Hides all tooltips.
Notes:

You can call that in window.deactivate event to hide tooltips which did not hide themselves.
Returns number of hidden tooltips.

192.6.64 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.1pr4

192.6.65 Properties

192.6.66 CanBeVisibleWithoutLoginMBS as Boolean

MBS Util Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Whether this window can be visible before login.
Example:

window1.CanBeVisibleWithoutLoginMBS = true

Notes:

This window can be made visible prior to user login. By default, in Mac OS X 10.5 and later no windows can be visible before a user logs into the system; this protects the user against certain types of malicious use of insecure applications. However, some software, such as input methods or other accessibility software,

may need to deliberately make windows available prior to user login. Such software should add this window attribute to its windows. Available for all windows in Mac OS X 10.5 and later.
(Read and Write computed property)

192.6.67 CGColorSpaceMBS as CGColorSpaceMBS

MBS MacCG Plugin, Plugin Version: 10.4, Platform: macOS, Targets: Desktop only.

Function: Get or set the colorspace profile for this window.
Example:

```
dim c as CGColorSpaceMBS = window1.CGColorSpaceMBS

if c<>Nil then
MsgBox str(c.NumberOfComponents)
else
MsgBox "nil"
end if
```

Notes:

Requires MacOS 10.6 or newer.

On Cocoa, the NSColorSpace is queried and the matching CGColorspace is returned. For setting a NSColorSpace is created for the given CGColorspace.
In Carbon applications, the CoreGraphics color space is passed directly.
(Read and Write computed property)

192.6.68 collapsedMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Returns true if this window is collapsed. You can set it.
Example:

```
mainwindow.collapsedMBS=false 'show window
```

Notes:

Collapseable windows are the normal document windows.
You can't collapse dialogs or floating windows well.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.6.69 FullScreenAuxiliaryMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the auxiliary fullscreen window.
Notes: (Read and Write computed property)

192.6.70 FullScreenPrimaryMBS as Boolean

MBS MacControls Plugin, Plugin Version: 11.2, Platform: macOS, Targets: Desktop only.

Function: Whether this window is setup as being the primary fullscreen window.
Notes:

If true, the window receives the fullscreen widget in the title bar.
(Read and Write computed property)

192.6.71 HasborderMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Decides whether the window has a border.
Example:

mainwindow.HasborderMBS=false ' Remove border

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it). This option removes the title bar. HasCaptionMBS removes even more.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.72 HasCaptionMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a caption (a title bar)
Example:

Window1.HasCaptionMBS=false

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.73 HasCloseBoxMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a CloseBox.
Example:

mainwindow.HasCloseboxMBS=false 'remove closebox

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.74 HasCollapseBoxMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a Collapsebox.
Example:

mainwindow.HasCollapseBoxMBS=false 'remove Collapsebox

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.75 HasMaximizeBoxMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Maximize Button.
Example:

mainwindow.HasMaximizeBoxMBS=false 'remove Maximize button

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.76 HasMinimizeBoxMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has a Minimize Button.
Example:

mainwindow.HasMinimizeBoxMBS=false 'remove Minimize button

Notes:

This property has only an effect on Windows. The window needs to be redrawn before the change is visible

(for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.77 HasNoShadowMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has no shadow.
Example:

mainwindow.HasNoShadowMBS=true 'remove shadow

Notes:

Available for all windows on Mac OS X. This attribute is automatically given to windows of kOverlayWindowClass.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.6.78 HasNoTitleBarMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: For Document, Floating, and Utility windows, this attribute allows you to hide the title bar of a window.
Example:

```
window1.HasNoTitleBarMBS = true

// for Cocoa:
window1.HasCloseBoxMBS = false
window1.HasCollapseBoxMBS = false
window1.IsResizableMBS = false
window1.HasNoTitleBarMBS = true
```

Deprecated: This item is deprecated and should no longer be used. You can use NSWindowMBS for Cocoa instead. **Notes:**

For Mac OS X 10.4 or later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in Plugin version 10.4.
(Read and Write computed property)

192.6.79 HasSystemMenuMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop only.

Function: Whether the window has a system menu inside the title bar.
Example:

Window1.HasSystemMenuMBS=false

Notes:

This property has only an effect on Windows. It will disable the system menu and also the minimize, maximize and close buttons. The window needs to be redrawn before the change is visible (for example move it).

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.80 HasToolbarButtonMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: Whether this window has a toolbar button.
Example:

mainwindow.HasToolbarButtonMBS=true 'shows Toolbar Button

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
The Button is shown on next redraw of the window frame.

Use the CarbonWindowsEventsMBS class to receive events when the button is pressed.

Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.81 IgnoreClicksMBS as Boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Can be used to control whether mouse clicks are ignored for this window.
Example:

Window1.IgnoreClicksMBS=true

Notes:

Whether this window never receives mouse events, even in areas that are opaque. Instead, clicks on the window will be passed through to windows beneath it. Available for all windows on Mac OS X 10.2 and later.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.6.82 IsIconicMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window is inside the taskbar.
Example:

```
MsgBox str(window1.IsIconicMBS)
```

Notes:

If you set IsIconic to true the window is minimized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.83 IsMetalWindowMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Whether this window uses the Metal appearance.
Example:

```
if window1.Frame = window.FrameTypeMetal then
MsgBox "Window is metal. "+str(window1.IsMetalWindowMBS)
else
MsgBox "Window is not metal. "+str(window1.IsMetalWindowMBS)
end if
```

Notes:

Available for document windows on Mac OS X 10.2 and later, and for floating windows on Mac OS X 10.3 and later. Drawers can also be metal, but dynamically adjust their appearance based on their parent window's appearance; it is not necessary to specify this attribute for a metal drawer.

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.84 IsResizableMBS as Boolean

MBS Util Plugin, Plugin Version: 7.4, Platform: macOS, Targets: Desktop only.

Function: Whether this window is resizeable.
Example:

Window1.IsResizableMBS=false

Notes:

You can read the state on Mac Classic, but you can only change it on Mac Carbon.
Returns false on any error.

Use GrowBoxTransparentMBS on Composite Mac OS windows to enable the transparent grow box.

In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works in Cocoa.
(Read and Write computed property)

192.6.85 IsZoomedMacMBS as boolean

MBS Util Plugin, Plugin Version: 3.2, Platform: macOS, Targets: Desktop only.

Function: Returns true if the window is zoomed.
Example:

MsgBox str(window1.IsZoomedMacMBS)

Notes:

Requires Mac OS 8.5 or newer.
Seems not to work correctly on RB 5.5.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.6.86 IsZoomedMBS as boolean

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: Returns true if this window has been maximized.
Example:

MsgBox str(window1.IsZoomedMBS)

Notes:

If you set IsZoomed to true the window is maximized and if you set it to false the window size and position is restored.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Works on Cocoa.
(Read and Write computed property)

192.6.87 ModifiedMBS as boolean

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: You can set or get the value of the modified state.
Example:

mainwindow.modifiedMBS=true

Notes:

Requires Mac OS 8.5 or newer.
As long as you don't set modified to false the window keeps to tell you that it's modified. Not sure why, so just set modified to false early in creating the window.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.6.88 ToolbarVisibleMBS as boolean

MBS Util Plugin, Plugin Version: 4.0, Platform: macOS, Targets: Desktop only.

Function: Whether the toolbar is shown in this window or not.
Notes:

Value is false on any error.
Only working on MacOS.
(Read and Write computed property)

192.6.89 TransparencyMBS as single

MBS Util Plugin, Plugin Version: 5.0, Platforms: macOS, Linux, Windows, Targets: Desktop only.

Function: The transparency of the window on Mac OS X, Windows 2000 and Windows XP.
Notes:

1 for opaque, 0 for invisible.
Return 1 on any error. On Windows it returns always 1 as the current transparency value can't be queried.
You need to call MakeTransparent before to install transparency.
(added Windows support in version 4.4)
Linux supported added with 14.0, but works only with Linux desktop which support alpha channel.
(Read and Write computed property)

192.6.90 UnifiedTitleAndToolbarMBS as Boolean

MBS Util Plugin, Plugin Version: 8.1, Platform: macOS, Targets: Desktop only.

Function: Whether this window has an unified title and toolbar look.
Example:

window1.UnifiedTitleAndToolbarMBS = true

Notes:

This window draws its window title and toolbar using a unified appearance that has no separator between the two areas. A window may not have both UnifiedTitleAndToolbar and Metal appearance. If a window already has the metal attribute, attempting to set the Unified attribute will cause ChangeWindows to return an error, and vice versa. This constant was not added to this header file until Mac OS X 10.5, but it is actually available at runtime on Mac OS X 10.4 and later for windows of kDocumentWindowClass. However, on Mac OS X 10.5 and later, kHIWindowBitUnifiedTitleAndToolbar no longer has any effect, since all windows with toolbars now have a unified look.
(Read and Write computed property)

192.6.91 WindowProxyIconFileMBS as folderitem

MBS Util Plugin, Platform: macOS, Targets: Desktop only.

Function: That's the icon to the window which belongs to the file.
Example:

```
dim f as folderItem

f=getopenFolderItem("special/any")
if f<>nil then
window1.WindowProxyIconFileMBS=f
end if
```

Notes:

Requires Mac OS 8.5 or newer.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.

Added Cocoa support in plugin version 10.0.
(Read and Write computed property)

192.6.92 WinMenuHandleMBS as Integer

MBS Util Plugin, Platform: Windows, Targets: Desktop only.

Function: A property to access the handle used for the menu of a Window.
Example:

```
dim menu as Integer // global

if menu=0 then
menu=Window1.WinMenuHandleMBS // read it on the first window
else
Window1.winmenuHandleMBS=menu // set it on the second window
end if
```

Notes:

Used in the example "Menu in every Window" to have a menubar in every window on Windows. But never forget to quit your app after all windows were closed.
In Xojo 2005 and newer you need to use self. in front of the method as the propertyname alone is not accepted.
(Read and Write computed property)

192.6.93 WinTopMostWindowMBS as boolean

MBS Win Plugin, Plugin Version: 9.6, Platform: Windows, Targets: Desktop only.

Function: Whether a window is staying on the top of the other windows.
Example:

window1.WinTopMostWindowMBS=true

Notes:

If true the window stays in front of other windows. Default is false for Xojo windows and true for overlays. (Read and Write computed property)

Chapter 193

Windows

193.1 class DirectDrawGraphicsMBS

193.1.1 class DirectDrawGraphicsMBS

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for drawing with DirectDraw 2D into a graphics context in Xojo.
Example:

```
dim p as Picture = BitmapForCaching(me.Width, me.Height)
dim g as graphics = p.Graphics

// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

// now draw a few things
dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash

const size = 50
const offset = 10
const delta = offset + size

d.FillRectangle offset + delta * 0, offset + 0 * delta, offset + delta * 0 + size, offset + 0 * delta +
size
d.DrawRectangle offset + delta * 0, offset + 1 * delta, offset + delta * 0 + size, offset + 1 * delta + size

d.FillEllipse offset + delta * 1 + size/2, offset + 0 * delta + size/2, size /2, size /2
```

```
d.DrawEllipse offset + delta * 1 + size/2, offset + 1 * delta + size/2, size /2, size /2

d.FillRoundedRectangle offset + delta * 2, offset + 0 * delta, offset + delta * 2 + size, offset + 0 *
delta + size, 20, 20
d.DrawRoundedRectangle offset + delta * 2, offset + 1 * delta, offset + delta * 2 + size, offset + 1 * delta
+ size, 20, 20

// save to desktop
dim f as FolderItem = SpecialFolder.Desktop.Child("directdraw.jpg")
p.Save(f, Picture.Formats.JPEG, picture.QualityMaximum)

// show in window
window1.Backdrop = p
```

193.1.4 Methods

193.1.5 ClearStrokeStyle

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears stroke style.
Notes: If no stroke style is defined, a default one is used.

193.1.6 Constructor(Graphics as Graphics)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
d.DrawLine 10, 10, 190,190

Backdrop = p
```

Notes:

Pass the graphics in a paint event or from a picture.

Requires Xojo 2019r2 or newer.

193.1.7 CreateSolidColorBrush(c as Color) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new solid color brush that has the specified color and a base opacity of 1.0.
Example:

```
dim d as new DirectDrawGraphicsMBS(g)

// make full blue with no alpha
call d.CreateSolidColorBrush(& c0000FFFF)
```

Notes: Pass the red, green, blue, and alpha values of the brush's color as a Xojo color.
See also:

- 193.1.8 CreateSolidColorBrush(red as Single, green as Single, blue as Single, alpha as Single = 1.0) as Boolean 27050

193.1.8 CreateSolidColorBrush(red as Single, green as Single, blue as Single, alpha as Single = 1.0) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new solid color brush that has the specified color and a base opacity of 1.0.
Notes:

Pass the red, green, blue, and alpha values of the brush's color.
Range of values is from 0.0 to 1.0.
See also:

- 193.1.7 CreateSolidColorBrush(c as Color) as Boolean 27049

193.1.9 CreateStrokeStyle(startCap as Integer = 0, endCap as Integer = 0, dashCap as Integer = 0, lineJoin as Integer = 0, miterLimit as Single = 1.0, dashStyle as Integer = 0, dashOffset as Single = 0, Dashes() as Single = nil) as Boolean

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates an stroke style that describes start cap, dash pattern, and other features of a stroke.
Notes:

Creates and sets the stroke style. Returns true on success and false on failure.

193.1.10 Destructor

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

193.1.11 DrawEllipse(x as single, y as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of the specified ellipse using the specified stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
```

startCap	The cap applied to the start of all the open figures in a stroked geometry.
endCap	The cap applied to the end of all the open figures in a stroked geometry.
dashCap	The shape at either end of each dash segment.
lineJoin	A value that describes how segments are joined. This value is ignored for a vertex if the segment flags specify that the segment should have a smooth join.
miterLimit	The limit of the thickness of the join on a mitered corner. This value is always treated as though it is greater than or equal to 1.0.
dashStyle	A value that specifies whether the stroke has a dash pattern and, if so, the dash style.
dashOffset	A value that specifies an offset in the dash sequence. A positive dash offset value shifts the dash pattern, in units of stroke width, toward the start of the stroked geometry. A negative dash offset value shifts the dash pattern, in units of stroke width, toward the end of the stroked geometry.
Dashes	An array whose elements are set to the length of each dash and space in the dash pattern. The first element sets the length of a dash, the second element sets the length of a space, the third element sets the length of a dash, and so on. The length of each dash and space in the dash pattern is the product of the element value in the array and the stroke width.

```
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawEllipse 100, 100, 90, 90

Backdrop = p
```

Notes:

x/y: The position of the ellipse to draw, in device-independent pixels.
radiusX/radiusY: The radius of the ellipse to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

193.1.12 DrawLine(x1 as single, y1 as single, x2 as single, y2 as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws a line between the specified points using the specified stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
d.DrawLine 10, 10, 190,190

Backdrop = p
```

Notes:

x1/y1: The start point of the line, in device-independent pixels.
x2/y2: The end point of the line, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

193.1.13 DrawRectangle(left as single, top as single, right as single, bottom as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of a rectangle that has the specified dimensions and stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawRectangle 10, 10, 190, 190

Backdrop = p
```

Notes:

Pass the dimensions of the rectangle to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

193.1.14 DrawRoundedRectangle(left as single, top as single, right as single, bottom as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Draws the outline of the specified rounded rectangle using the specified stroke style.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)
call d.CreateStrokeStyle 0, 0, 0, 0, 0, d.DashStyleDash
d.DrawRoundedRectangle 10, 10, 190, 190, 20, 20

Backdrop = p
```

Notes:

Pass the dimensions of the rounded rectangle to draw, in device-independent pixels.

Uses current brush, strokeWidth and strokeStyle.

193.1.15 FillEllipse(x as single, y as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified ellipse.
Example:

```
dim p as new Picture(200,200)
```

```
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)

d.FillEllipse 100, 100, 90, 90

Backdrop = p
```

Notes:

The position and radius, in device-independent pixels, of the ellipse to paint.
Uses current brush.

193.1.16 FillRectangle(left as single, top as single, right as single, bottom as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified rectangle.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)

d.FillRectangle 10, 10, 190, 190

Backdrop = p
```

Notes:

The dimension of the rectangle to paint, in device-independent pixels.
Uses current brush.

193.1.17 FillRoundedRectangle(left as single, top as single, right as single, bottom as single, radiusX as single, radiusY as single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Paints the interior of the specified rounded rectangle.
Example:

```
dim p as new Picture(200,200)
dim g as Graphics = p.Graphics
// Clear image with white
g.DrawingColor = & cFFFFFF
g.FillRectangle 0, 0, g.Width, g.Height

dim d as new DirectDrawGraphicsMBS(g)

call d.CreateSolidColorBrush(& cFF0000)

d.FillRoundedRectangle 10, 10, 190, 190, 20, 20

Backdrop = p
```

Notes:

The dimensions of the rounded rectangle to paint, in device independent pixels.
Uses current brush.

193.1.18 GetTransform(byref m11 as Single, byref m12 as Single, byref m21 as Single, byref m22 as Single, byref dx as Single, byref dy as Single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the current transform of the render target.

193.1.19 RestoreDrawingState

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Restores the current drawing state.
Notes:

Our plugin manages the stack of drawing states saved.
We raise an exception if your calls to restore are not balanced with save.

193.1.20 SaveDrawingState

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Saves the current drawing state.
Notes: Our plugin manages the stack of drawing states saved, so you can restore them later.

193.1.21 SetTransform(m11 as Single, m12 as Single, m21 as Single, m22 as Single, dx as Single, dy as Single)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies the specified transform to the render target, replacing the existing transformation.
Notes: All subsequent drawing operations occur in the transformed space.

193.1.22 Properties

193.1.23 AntialiasMode as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The antialiasing mode of the render target.
Notes:

The antialiasing mode applies to all subsequent drawing operations, excluding text and glyph drawing operations.
To specify the antialiasing mode for text and glyph operations, use the SetTextAntialiasMode method.
(Read and Write property)

193.1.24 brushHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for current brush.
Notes:

Reference to ID2D1Brush object.
(Read and Write property)

193.1.25 DPIX as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Return the render target's dots per inch (DPI).
Notes:

The horizontal DPI of the render target.
(Read only property)

193.1.26 DPIY as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Return the render target's dots per inch (DPI).
Notes:

The vertical DPI of the render target.
(Read only property)

193.1.27 factoryHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for the factory.
Notes:

Reference to ID2D1Factory object.
(Read and Write property)

193.1.28 Handle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes:

Reference to ID2D1RenderTarget object.
(Read and Write property)

193.1.29 Height as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device-independent pixels.
Notes: (Read only property)

193.1.30 PixelHeight as UInt32

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device pixels.
Notes: (Read only property)

193.1.31 PixelWidth as UInt32

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device pixels.
Notes: (Read only property)

193.1.32 strokeStyleHandle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference for current stroke style.
Notes:

Reference to ID2D1StrokeStyle object.
(Read and Write property)

193.1.33 strokeWidth as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stroke width to use.
Notes:

Default is 1.

The width of the stroke, in device-independent pixels. The value must be greater than or equal to 0.0. If this parameter isn't specified, it defaults to 1.0. The stroke is centered on the line.
(Read and Write property)

193.1.34 TextAntialiasMode as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the antialiasing mode to use for subsequent text and glyph drawing operations.
Notes:

The antialiasing mode to use for subsequent text and glyph drawing operations.
(Read and Write property)

193.1.35 Width as Single

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the render target in device-independent pixels.
Notes: (Read only property)

193.1.36 Constants

193.1.37 AntiAliasModeAliased = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the anti alias modes.
Notes: Objects are aliased in most cases. Objects are antialiased only when they are drawn to a render target created by the CreateDxgiSurfaceRenderTarget method and Direct3D multisampling has been enabled on the backing DirectX Graphics Infrastructure (DXGI) surface.

193.1.38 AntiAliasModePerPrimitive = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the anti alias modes.
Notes: Edges are antialiased using the Direct2D per-primitive method of high-quality antialiasing.

193.1.39 CapStyleFlat = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: A cap that does not extend past the last point of the line. Comparable to cap used for objects other

than lines.

193.1.40 CapStyleRound = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: A semicircle that has a diameter equal to the line thickness.

193.1.41 CapStyleSquare = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: Half of a square that has a length equal to the line thickness.

193.1.42 CapStyleTriangle = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the cap styles.
Notes: An isosceles right triangle whose hypotenuse is equal in length to the thickness of the line.

193.1.43 DashStyleCustom = 5

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: The dash pattern is specified by an array of floating-point values.

193.1.44 DashStyleDash = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dash followed by a gap of equal length. The dash and the gap are each twice as long as the stroke thickness. The equivalent dash array for D2D1_DASH_STYLE_DASH is { 2, 2 } .

193.1.45 DashStyleDashDot = 3

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dash, followed by a gap, followed by a dot, followed by another gap. The equivalent dash array for D2D1_DASH_STYLE_DASH_DOT is { 2, 2, 0, 2 } .

193.1.46 DashStyleDashDotDot = 4

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dash, followed by a gap, followed by a dot, followed by another gap, followed by another dot, followed by another gap. The equivalent dash array for D2D1_DASH_STYLE_DASH_DOT_DOT is { 2, 2, 0, 2, 0, 2 } .

193.1.47 DashStyleDot = 2

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A dot followed by a longer gap. The equivalent dash array for D2D1_DASH_STYLE_DOT is { 0, 2 } .

193.1.48 DashStyleSolid = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the dash styles.
Notes: A solid line with no breaks.

193.1.49 LineJoinBevel = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Beveled vertices.

193.1.50 LineJoinMiter = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Regular angular vertices.

193.1.51 LineJoinMiterOrBevel = 3

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Regular angular vertices unless the join would extend beyond the miter limit; otherwise, beveled vertices.

193.1.52 LineJoinRound = 2

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the line join constants.
Notes: Rounded vertices.

193.1.53 TextAntiAliasModeAliased = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Do not use antialiasing.

193.1.54 TextAntiAliasModeClearType = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Use ClearType antialiasing.

193.1.55 TextAntiAliasModeDefault = 0

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Use the system default. See Remarks.

193.1.56 TextAntiAliasModeGrayscale = 1

MBS Win Plugin, Plugin Version: 20.3.

Function: One of the text anti alias modes.
Notes: Use grayscale antialiasing.

193.2 class MapiFileMBS

193.2.1 class MapiFileMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class contain information about a file containing a message attachment stored as a temporary file.
Example:

```
dim file as new MapiFileMBS
dim t as TextOutputStream
dim f as FolderItem

// write a temp file
f=SpecialFolder.Desktop.Child("test.txt")
t=TextOutputStream.Create(f)
t.WriteLine "Test file content"
t.Close

// create file
file=new MapiFileMBS
file.Path=f
file.Filename="test file"
file.Position=-1

// next add it to message
```

Notes:

Important:
Simple MAPI is not installed by Exchange Server 2003 or later. However, Simple MAPI is supported for use with Exchange 2003. To function properly, the underlying Exchange or Microsoft Outlook® MAPI subsystem must be properly installed on the client computer.

193.2.2 Properties

193.2.3 Filename as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The attachment filename seen by the recipient, which may differ from the filename in the PathName member if temporary files are being used.
Notes:

If the FileName member is empty, the filename from PathName is used.

(Read and Write property)

193.2.4 Flags as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

Currently not used with the plugin.
(Read and Write property)

193.2.5 Path as FolderItem

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The path of the attached file.
Notes:

When this property is set the PathName property is filled with the absolute path. If you query this property, you get the PathName property as a folderitem.
So this property was made for your convenience.
(Read and Write property)

193.2.6 PathName as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The fully qualified path of the attached file.
Notes:

This path should include the disk drive letter and directory name.
(Read and Write property)

193.2.7 Position as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: An integer used to indicate where in the message text to render the attachment.
Notes:

Attachments replace the character found at a certain position in the message text. That is, attachments replace the character in the MapiMessage NoteText property at offset nPosition (nPosition is zero based!).

A value of -1 means the attachment position is not indicated; the client application will have to provide a way for the user to access the attachment.
(Read and Write property)

193.3 class MapiMessageMBS

193.3.1 class MapiMessageMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a message.
Example:

```
dim m as new MapiMessageMBS
dim r as new MapiRecipientMBS
dim o as new MapiRecipientMBS

o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator

r.Address="SMTP:receiver@example.com"
r.Name="You"
r.Type=o.TypeTo

m.AddRecipient r
m.Originator=o
m.Subject="Test Email"
m.NoteText="Hello World"
m.Flags=0

dim SendFlags as integer = m.kSendFlagDialog + m.kSendFlagLogonDialog

title=str(m.SendMail(self, SendFlags, false))
```

193.3.4 Methods

193.3.5 AddFile(file as MapiFileMBS)

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a file to the message file list.
Notes: file must be not nil.

193.3.6 AddRecipient(recipient as MapiRecipientMBS)

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a recipient to the message.
Notes: recipient must be nil.

193.3.7 IsAvailable as boolean

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether MAPI is available.
Notes:

Checks whether the library was loaded and whether the MAPI Registry key exists, so this has been initialized.
(mail account may not exist)

Returns true if MAPI can be used.

193.3.8 IsUnicodeAvailable as boolean

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether MAPI is available with unicode.
Notes:

Checks whether the library was loaded and whether the MAPI Registry key exists, so this has been initialized.
(mail account may not exist)

Returns true if MAPI can be used with unicode.

193.3.9 SendMail(parent as DesktopWindow, SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Sends an email.
Notes:

Parameters:

parent:
The parent window for the dialogs used. If not nil the dialogs used will be modal.

SendFlags: Send flags. Default in older plugin versions was kSendFlagDialog when DisplayDialog parameter is true and kSendFlagLogonDialog if DisplayLogonDialog parameter was true.

Error codes:

const SUCCESS_SUCCESS = 0	No error.
const MAPI_USER_ABORT = 1	The user canceled one of the dialog boxes. No message was sent.
const MAPI_E_FAILURE = 2	One or more unspecified errors occurred. No message was sent.
const MAPI_E_LOGON_FAILURE = 3	There was no default logon, and the user failed to log on successfully when the logon dialog box was displayed. No message was sent.
const MAPI_E_DISK_FULL = 4	
const MAPI_E_INSUFFICIENT_MEMORY = 5	There was insufficient memory to proceed. No message was sent.
const MAPI_E_ACCESS_DENIED = 6	
const MAPI_E_TOO_MANY_SESSIONS = 8	
const MAPI_E_TOO_MANY_FILES = 9	There were too many file attachments. No message was sent.
const MAPI_E_TOO_MANY_RECIPIENTS = 10	There were too many recipients. No message was sent.
const MAPI_E_ATTACHMENT_NOT_FOUND = 11	The specified attachment was not found. No message was sent.
const MAPI_E_ATTACHMENT_OPEN_FAILURE = 12	The specified attachment could not be opened. No message was sent.
const MAPI_E_ATTACHMENT_WRITE_FAILURE = 13	
const MAPI_E_UNKNOWN_RECIPIENT = 14	
const MAPI_E_BAD_RECIPTYPE = 15	The type of a recipient was not TypeTO, TypeCC, or TypeBCC. No message was sent.
const MAPI_E_NO_MESSAGES = 16	
const MAPI_E_INVALID_MESSAGE = 17	
const MAPI_E_TEXT_TOO_LARGE = 18	The text in the message was too large. No message was sent.
const MAPI_E_INVALID_SESSION = 19	
const MAPI_E_TYPE_NOT_SUPPORTED = 20	
const MAPI_E_AMBIGUOUS_RECIPIENT = 21	A recipient matched more than one of the recipient descriptor structures and Dialog is false. No message was sent.
const MAPI_E_MESSAGE_IN_USE = 22	
const MAPI_E_NETWORK_FAILURE = 23	
const MAPI_E_INVALID_EDITFIELDS = 24	
const MAPI_E_INVALID_RECIPS = 25	One or more recipients were invalid or did not resolve to any address.
const MAPI_E_NOT_SUPPORTED = 26	

The MAPI SendMail function sends a standard message, with or without any user interaction. The profile must be configured so that MAPISendMail can open the default service providers without requiring user interaction.

Client applications can provide a full or partial list of recipient names, subject text, file attachments, or message text. If any information is missing, MAPISendMail can prompt the user for it. If no information is missing, either the message can be sent as is or the user can be prompted to verify the information, changing values if necessary.

A successful return from MAPISendMail does not necessarily imply recipient validation. The message might not have been sent to all recipients. Depending on the transport provider, recipient validation can be a lengthy process.

A "" value for the Subject indicates that there is no text for the subject of the message. A "" value for the NoteText member indicates that there is no message text. Some client applications can truncate subject lines that are too long or contain carriage returns, line feeds, or form feeds.

Each paragraph should be terminated with a CR (0x0d), an LF (0x0a), or a CRLF pair (0x0d0a). MAPISendMail wraps lines as appropriate. If the text exceeds system limits, the function returns the MAPI_E_TEXT_TOO_LARGE value.

The MessageType property is used only by non-IPM applications. Applications that handle IPM messages can set it to "".

The number of attachments per message can be limited in some messaging systems. If the limit is exceeded, the MAPI_E_TOO_MANY_FILES value is returned. File attachments are copied to the message before MAPISendMail returns; therefore, later changes to the files do not affect the contents of the message. The files must be closed when they are copied. Do not attempt to display attachments outside the range of the message text.

Some messaging systems can limit the number of recipients per message. If the client application passes a non-nil value indicating a number of recipients exceeding the system limit, MAPISendMail returns the MAPI_E_TOO_MANY_RECIPIENTS value. If the recipient array is empty, the Dialog parameter must be true in the call to MAPISendMail.

Note that the recipients can include either an entry identifier, the recipient's name, an address, or a name and address pair. The following table shows how MAPISendMail handles the variety of information that can be specified:

Information	Action
entry identifier	No name resolution; the name and address are ignored.
name	Name resolved using the Simple MAPI resolution rules.
address	No name resolution; address is used for both message delivery and for displaying the recipient name.
name and address	No name resolution; name used only for displaying the recipient name.

Client applications that send messages to custom recipients can avoid name resolution. Such clients should set the Address member of the recipient to the custom address.

MAPISendMail does not require an originator-type recipient to send a message.

Important Simple MAPI is not installed by Exchange Server 2003 or later. However, Simple MAPI is supported for use with Exchange 2003. To function properly, the underlying Exchange or Microsoft Outlook® MAPI subsystem must be properly installed on the client computer.

193.3.10 SendMail(parent as window, SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop only.

Function: Sends an email.
Notes:

Parameters:

parent:
The parent window for the dialogs used. If not nil the dialogs used will be modal.

SendFlags: Send flags. Default in older plugin versions was kSendFlagDialog when DisplayDialog parameter is true and kSendFlagLogonDialog if DisplayLogonDialog parameter was true.

Error codes:

The MAPI SendMail function sends a standard message, with or without any user interaction. The profile must be configured so that MAPISendMail can open the default service providers without requiring user interaction.

- 193.3.11 SendMail(SendFlags as Integer, Threaded as Boolean) as integer 27073

193.3.11 SendMail(SendFlags as Integer, Threaded as Boolean) as integer

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sends an email.
Notes: This method is without parent window for dialogs, so you can use it in a console project.
See also:

- 193.3.9 SendMail(parent as DesktopWindow, SendFlags as Integer, Threaded as Boolean) as integer 27069
- 193.3.10 SendMail(parent as window, SendFlags as Integer, Threaded as Boolean) as integer 27071

193.3.12 Properties

193.3.13 ConversationID as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string identifying the conversation thread to which the message belongs.
Notes:

Some messaging systems can ignore and not return this member.
(Read and Write property)

193.3.14 DateReceived as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string indicating the date when the message was received.
Notes:

The format is YYYY/MM/DD HH:MM, using a 24-hour clock.
(Read and Write property)

193.3.15 Flags as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Bitmask of message status flags.
Notes:

Can be a combination of kFlagsReceiptRequested, kFlagsSent and kFlagsUnread.
(Read and Write property)

193.3.16 MessageType as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string indicating a non-IPM type of message.
Notes:

Client applications can select message types for their non-IPM messages. Clients that only support IPM messages can ignore the MessageType member when reading messages and set it to empty when sending messages.
(Read and Write property)

193.3.17 NoteText as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string containing the message text.
Notes:

If this member is empty, there is no message text.
(Read and Write property)

193.3.18 Originator as MapiRecipientMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The reference to the originator of this message.
Notes: (Read and Write property)

193.3.19 Subject as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text string describing the message subject, typically limited to 256 characters or less.
Notes:

If this member is empty, the user has not entered subject text.
(Read and Write property)

193.3.20 UseUnicode as Boolean

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use Unicode API.
Notes:

Microsoft offers both unicode and ANSI interfaces.
By default UseUnicode is true and you can set it to false to use ANSI interface if needed.
If no unicode interface is needed, we automatically use the ANSI interface.
(Read and Write property)

193.3.21 Constants

193.3.22 kFlagsReceiptRequested = 2

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the flags property.
Notes:

A receipt notification is requested. Client applications set this flag when sending a message.

Note: Most email applications ignore the receipt notifications.

193.3.23 kFlagsSent = 4

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the flags property.
Notes: The message has been sent.

193.3.24 kFlagsUnread = 1

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the flags property.
Notes: The message has not been read.

193.3.25 kSendFlagDialog = 8

MBS Win Plugin, Plugin Version: 18.5.

Function: One of the flags for SendMail.
Notes:

Display a send note UI
A dialog box should be displayed to prompt the user for recipients and other sending options. When Dialog is false, at least one recipient must be specified.

193.3.26 kSendFlagLogonDialog = 1

MBS Win Plugin, Plugin Version: 18.5.

Function: One of the flags for SendMail.
Notes:

Display logon UI.
A dialog box should be displayed to prompt the user to log on if required. When the DisplayLogonDialog is false, the client application does not display a logon dialog box and returns an error value if the user is not logged on. SendMail ignores this flag if the MessageID parameter is empty.

193.3.27 kSendFlagNewSession = 2

MBS Win Plugin, Plugin Version: 18.5.

Function: One of the flags for SendMail.
Notes:

Don't use shared session
Create a new session.

193.4 class MapiRecipientMBS

193.4.1 class MapiRecipientMBS

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class contains information about a message sender or recipient.
Example:

```
dim o as new MapiRecipientMBS

o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator

// next add it to message
```

193.4.2 Properties

193.4.3 Address as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Optional the recipient or sender's address.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator
```

Notes:

This address is provider-specific message delivery data. Generally, the messaging system provides such addresses for inbound messages. For outbound messages, the Address member can point to an address entered by the user for a recipient not in an address book (that is, a custom recipient). The format of an address pointed to by the Address member is [address type] [e-mail address] . Examples of valid addresses are FAX:206-555-1212 and SMTP:M@X.COM.
(Read and Write property)

193.4.4 Name as String

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the recipient.
Notes: (Read and Write property)

193.4.5 Type as Integer

MBS Win Plugin, Plugin Version: 8.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Contains a numeric value that indicates the type of recipient.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:you@example.com"
o.Name="You"
o.Type=o.TypeTo
```

Notes:

Use one of the Type constants.
(Read and Write property)

193.4.6 Constants

193.4.7 TypeBCC=3

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Notes: Indicates a recipient of a blind copy.

193.4.8 TypeCC=2

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Notes: Indicates a recipient of a message copy.

193.4.9 TypeOriginator=0

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:sender@example.com"
o.Name="Me"
o.Type=o.TypeOriginator
```

Notes: Indicates the original sender of the message.

193.4.10 TypeTo=1

MBS Win Plugin, Plugin Version: 8.3.

Function: One of the constants for the type property.
Example:

```
dim o as new MapiRecipientMBS
o.Address="SMTP:you@example.com"
o.Name="You"
o.Type=o.TypeTo
```

Notes: Indicates a primary message recipient.

193.5 class TaskDialogButtonMBS

193.5.1 class TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a button.

193.5.2 Properties

193.5.3 Default as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is default button.
Notes:

Only one button can be default.
(Read and Write property)

193.5.4 Enabled as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to enable this button.
Notes:

Default: true.

This is a live property. Setting it while dialog is open changes the button state.
(Read and Write property)

193.5.5 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique ID for the button.
Notes:

The IDs should be unique for all buttons.
(Read and Write property)

193.5.6 Text as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The caption for the button.
Notes: (Read and Write property)

193.5.7 Visible as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this button is visible.
Notes:

Default true.
(Read and Write property)

193.6 class TaskDialogMBS

193.6.1 class TaskDialogMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a dialog in Windows.
Notes:

This class function creates, displays, and operates a task dialog. The task dialog contains application-defined icons, messages, title, verification check box, command links, push buttons, and radio buttons.

Requires Windows Vista or newer.

193.6.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.2pr2
- New TaskDialog Class

193.6.4 Methods

193.6.5 AppendButton(button as TaskDialogButtonMBS)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a button.
Example:

```
dim td as TaskDialogMBS

dim b as new TaskDialogButtonMBS
```

```
b.Text = "Hello"
b.ID = 123

td.AppendButton b
```

193.6.6 AppendRadioButton(button as TaskDialogButtonMBS)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds a radio button.
Example:

```
dim td as TaskDialogMBS

dim b as new TaskDialogButtonMBS
b.Text = "Hello"
b.ID = 123

td.AppendRadioButton b
```

193.6.7 CloseDialog

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the dialog.

193.6.8 FindButtonByID(ID as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Finds button by ID.
Notes:

This searches buttons and radiobuttons for given ID.
It will not find common buttons.
Returns button if found or nil if not found.

193.6.9 ShowDialog as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Shows the dialog.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes:

Returns true if everything worked right.
Returns false if creation of dialog failed.

Requires Windows Vista or newer.

193.6.10 Properties

193.6.11 AllowDialogCancellation as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to allow cancel.
Notes:

Indicates that the dialog should be able to be closed using Alt-F4, Escape, and the title bar's close button even if no cancel button is specified in either the CommonButtons or Buttons members.
(Read and Write property)

193.6.12 CanBeMinimized as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the task dialog can be minimized.
Notes: (Read and Write property)

193.6.13 CollapsedControlText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the button for expanding the expandable information.
Notes:

This member is ignored when the ExpandedInformation member is empty. If this member is empty and the CollapsedControlText is specified, then the CollapsedControlText value will be used for this member as well. (Read and Write property)

193.6.14 CommonButtons as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the push buttons displayed in the task dialog.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes:

If no common buttons are specified and no custom buttons are specified through buttons array, the task dialog will contain the OK button by default. This parameter may be a combination of flags from the following group:

kCommonButtonOK	The task dialog contains the push button: OK.
kCommonButtonYes	The task dialog contains the push button: Yes.
kCommonButtonNo	The task dialog contains the push button: No.
kCommonButtonCancel	The task dialog contains the push button: Cancel. If this button is specified, the task dialog will respond to typical cancel actions (Alt-F4 and Escape).
kCommonButtonRetry	The task dialog contains the push button: Retry.
kCommonButtonClose	The task dialog contains the push button: Close.

(Read and Write property)

193.6.15 Content as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the dialog's primary content.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes:

If the EnableHyperlinks flag is true, then this string may contain hyperlinks in the form: <A HREF="executablestring">Hyperlink Text</A>.
WARNING: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.
(Read and Write property)

193.6.16 DefaultButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The default button for the task dialog.
Notes:

This may be any of the values specified in ID of one of the buttons, or one of the IDs corresponding to the buttons specified in the CommonButtons property.

kIDCancel	Make the Cancel button the default.
kIDNo	Make the No button the default.
kIDOk	Make the OK button the default.
kIDRetry	Make the Retry button the default.
kIDYes	Make the Yes button the default.
kIDClose	Make the Close button the default.

You can also mark buttons default with their default flag.
(Read and Write property)

193.6.17 DefaultRadioButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The button ID of the radio button that is selected by default.
Notes:

If this value does not correspond to a button ID, the first button in the array is selected by default.
You can also mark buttons default with their default flag.
(Read and Write property)

193.6.18 DialogHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the dialog.
Notes:

This is only valid (and non zero) while dialog is visible.
(Read only property)

193.6.19 EnableHyperlinks as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to enable hyperlinks.
Notes:

Enables hyperlink processing for the strings specified in the Content, ExpandedInformation and Footer members. When enabled, these members may point to strings that contain hyperlinks in the following form:

<A HREF="executablestring">Hyperlink Text</A>

Warning: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.

Note: Task Dialogs will not actually execute any hyperlinks. Hyperlink execution must be handled in the HyperlinkClicked event.
(Read and Write property)

193.6.20 ExpandedByDefault as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the string specified by the ExpandedInformation member is displayed when the dialog is initially displayed.
Notes:

This flag is ignored if the ExpandedInformation member is empty.
(Read and Write property)

193.6.21 ExpandedControlText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the button for collapsing the expandable information.
Notes:

This member is ignored when the ExpandedInformation member is empty. If this member is empty and the CollapsedControlText is specified, then the CollapsedControlText value will be used for this member as well.
(Read and Write property)

193.6.22 ExpandedInformation as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for displaying additional information.
Notes:

The additional information is displayed either immediately below the content or below the footer text depending on whether the ExpandFooterArea flag is true. If the EnableHyperlinks flag is true, then this string may contain hyperlinks in the form: <A HREF="executablestring">Hyperlink Text</A>.
WARNING: Enabling hyperlinks when using content from an unsafe source may cause security vulnerabilities.
(Read and Write property)

193.6.23 ExpandFooterArea as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether expand footer area is displayed at the bottom.
Notes:

Indicates that the string specified by the ExpandedInformation member is displayed at the bottom of the dialog's footer area instead of immediately after the dialog's content. This flag is ignored if the ExpandedInformation member is empty.
(Read and Write property)

193.6.24 Flags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The flags.
Notes:

You should not need to set flags as we have properties for all relevant flags.
(Read and Write property)

193.6.25 Footer as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used in the footer area of the task dialog.
Notes:

If EnableHyperlinks is true, this can show clickable links.
(Read and Write property)

193.6.26 FooterIconPicture as Picture

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A picture to be used as Icon that is to be displayed in the footer of the task dialog.
Notes:

The picture must have a valid mask.
(Read and Write property)

193.6.27 Icon as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to be displayed in the task dialog.
Notes:

Can be one of the kIcon* constants.
Or you set IconPicture property.
(Read and Write property)

193.6.28 IconPicture as Picture

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The icon to be displayed in the task dialog.
Notes:

The picture must have a valid mask.
(Read and Write property)

193.6.29 MainInstruction as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the main instruction.
Notes: (Read and Write property)

193.6.30 NoDefaultRadioButton as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that no default item will be selected.
Notes: (Read and Write property)

193.6.31 parent as Variant

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Parent window.
Notes:

Can reference a Window or DesktopWindow object.
(Read and Write property)

193.6.32 parentHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Parent window handle.
Notes: (Read and Write property)

193.6.33 PositionRelativeToWindow as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that the task dialog is positioned (centered) relative to the window specified by parent.
Notes:

If the flag is not supplied (or no parent member is specified), the task dialog is positioned (centered) relative to the monitor.
(Read and Write property)

193.6.34 ProgressbarMax as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum of progress bar.
Notes:

Default is 100.
This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

193.6.35 ProgressbarMin as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The minimum value of the progress bar.
Notes:

This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

193.6.36 ProgressbarState as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the progress bar.
Notes:

Default kProgressbarNone.
Can be set to other states to turn on progressbar.
(Read and Write property)

193.6.37 ProgressbarValue as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current value of the progress bar.
Notes:

This is a live property. Setting it while dialog is open will change the control.
(Read and Write property)

193.6.38 RightToLeftLayout as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates that text is displayed reading right to left.
Notes: (Read and Write property)

193.6.39 SelectedButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID of the clicked button.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = BitwiseOr(td.kCommonButtonOK, td.kCommonButtonCancel)
td.Content = "Hello World"

if td.ShowDialog then

if td.SelectedButton = td.kIDOK then
MsgBox "OK"
else
MsgBox "Cancel"
end if

else
MsgBox "Failed"
end if
```

Notes: (Read and Write property)

193.6.40 SelectedRadioButton as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ID of the selected radio button.
Notes: (Read and Write property)

193.6.41 Showing as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether dialog is currently showing.
Notes: (Read and Write property)

193.6.42 TimedOut as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether we got a timeout.
Notes: (Read only property)

193.6.43 timeoutMS as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The timeout for the dialog.
Notes:

In Milliseconds. The dialog closes after given time.
(Read and Write property)

193.6.44 VerificationChecked as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the verification checkbox.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MsgBox "and we will not show again"
end if
```

Notes:

Before: Indicates whether the verification checkbox in the dialog is checked when the dialog is initially displayed.
After: True if the verification checkbox was checked when the dialog was dismissed.

This is a live property. Changing it while the dialog is open will change the checkbox.
(Read and Write property)

193.6.45 VerificationEnabled as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The enable state of the verification checkbox.
Notes:

Can be true to enable the checkbox or false to disable.
(Read and Write property)

193.6.46 VerificationText as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used to label the verification checkbox.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"

'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MsgBox "and we will not show again"
end if
```

Notes:

If this parameter is empty, the verification checkbox is not displayed in the task dialog. If the VerificationEnabled is false, the checkbox is not enabled.
(Read and Write property)

193.6.47 Width as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the task dialog's client area, in dialog units.
Notes:

If 0, the task dialog manager will calculate the ideal width.
(Read and Write property)

193.6.48 WindowTitle as String

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string to be used for the task dialog title.
Notes: (Read and Write property)

193.6.49 Yield as Boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to yield time.
Notes:

Whether the plugin should yield time to other Xojo threads while dialog is open.
(Read and Write property)

193.6.50 Button(index as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Array of the custom buttons that are to be displayed in the task dialog.
Notes:

You can create TaskDialogButtonMBS objects and assign them to indexes in the array.
(Read and Write computed property)

193.6.51 RadioButton(index as Integer) as TaskDialogButtonMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Array of the custom radio buttons that are to be displayed in the task dialog.
Notes:

You can create TaskDialogButtonMBS objects and assign them to indexes in the array.
(Read and Write computed property)

193.6.52 Events

193.6.53 ButtonClicked(ID as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that a button has been selected.
Notes:

The command ID of the button is specified by ID.
To prevent the task dialog from closing, the application must return true, otherwise the task dialog is closed and the button ID is returned via the original application call.

193.6.54 Close

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog has been destroyed.

193.6.55 Constructed

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog has been created but has not been displayed yet.
Notes: You can adjust here if you need.

193.6.56 ExpandButtonClicked(Expanded as Boolean)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the expand button has been selected.

193.6.57 Help

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the F1 key has been pressed while the Task Dialog has focus.

193.6.58 HyperlinkClicked(link as string)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that a hyperlink has been selected.

193.6.59 Navigated

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that navigation has occurred.

193.6.60 Open

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog has been created.

193.6.61 RadioButtonClicked(ID as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that a radio button has been selected.
Notes: The command ID of the radio button is specified by ID.

193.6.62 Timer(Time as Integer)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog timer has fired.
Notes:

The total elapsed time is specified by Time. You can update the progress bar by setting ProgressbarValue.

This is called regularly so you can do background work.
(or check time and dismiss dialog automatically)

193.6.63 VerificationClicked(Checked as Boolean)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Indicates that the Task Dialog verification check box has been selected.

193.6.64 Constants

193.6.65 kCommonButtonCancel = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Cancel. If this button is specified, the task dialog will respond to typical cancel actions (Alt-F4 and Escape).

193.6.66 kCommonButtonClose = 32

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Close.

193.6.67 kCommonButtonNo = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: No.

193.6.68 kCommonButtonOK = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Example:

```
dim td as new TaskDialogMBS

td.CommonButtons = td.kCommonButtonOK
td.Content = "Hello World"
```

```
'td.VerificationChecked = true
td.VerificationText = "Don't show again"

call td.ShowDialog

if td.VerificationChecked then
MsgBox "and we will not show again"
end if
```

Notes: The task dialog contains the push button: OK.

193.6.69 kCommonButtonRetry = 16

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Retry.

193.6.70 kCommonButtonYes = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the common button constants.
Notes: The task dialog contains the push button: Yes.

193.6.71 kIconApplication = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: An application icon appears in the task dialog.

193.6.72 kIconError = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: A stop-sign icon appears in the task dialog.

193.6.73 kIconInformation = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: An icon consisting of a lowercase letter i in a circle appears in the task dialog.

193.6.74 kIconNone = 0

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: No icon.

193.6.75 kIconShield = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: A shield icon appears in the task dialog.

193.6.76 kIconWarning = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the icon constants.
Notes: An exclamation-point icon appears in the task dialog.

193.6.77 kIDAbort = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Abort button

193.6.78 kIDCancel = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Cancel button

193.6.79 kIDIgnore = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Ignore button

193.6.80 kIDNo = 7

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: No button

193.6.81 kIDOK = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: OK Button

193.6.82 kIDRetry = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Retry Button

193.6.83 kIDYes = 6

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the standard button IDs.
Notes: Yes Button

193.6.84 kProgressbarError = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Error state.

193.6.85 kProgressbarMarquee = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Marquee state

193.6.86 kProgressbarNone = 0

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: No progress bar.

193.6.87 kProgressbarNormal = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Normal progressbar

193.6.88 kProgressbarPause = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the progressbar states.
Notes: Paused progress bar

193.7 class TimerMBS

193.7.1 class TimerMBS

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The class for a timer.
Notes:

This timer can work with smaller periods than the normal Xojo timers on Windows.
Works on Mac OS X and Linux, too.

193.7.6 Methods

193.7.7 Constructor(Period as Integer)

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

Please pass a period between 1 and 999 Milliseconds.

The timer will try to be as exact as possible, but if main thread is busy, action events are delayed.

193.7.8 Destructor

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The destructor.

193.7.9 Properties

193.7.10 Enabled as Boolean

MBS Win Plugin, Plugin Version: 19.1, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: Whether timer is enabled.
Notes:

Default is true, but you can set to false to disable the timer for some time.
(Read and Write property)

193.7.11 Period as Integer

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: Desktop, Console & Web.

Function: The period used.
Notes:

In milliseconds.
(Read only property)

193.7.12 Events

193.7.13 Action

MBS Win Plugin, Plugin Version: 14.3, Platforms: macOS, Linux, Windows, Targets: .

Function: The action event.

193.8 Globals

193.8.1 GetWindowsErrorMessageMBS(ErrorCode as Integer) as String

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Formats a windows error message for the given error code.
Example:

EditField1.text = GetWindowsErrorMessageMBS(-2147352567)

Notes: Returns empty string for unknown error codes.

193.8.2 Blog Entries

- MBS Real Studio Plugins, version 12.1pr6

193.8.3 InitMessageFilterMBS

MBS Win Plugin, Plugin Version: 18.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes COM message filter.
Notes: If a COM message can't be handled right away, COM may show a standard dialog to retry, switch task or cancel, which may bring your app in an endless dialog series. MBS Plugin implements a message filter which delays messages till the current processing is done and avoids the dialog. So long running options can perform well.

193.8.6 WindowsExecuteMBS(ApplicationName as string, CommandLine as string, CurrentDirectory as string, byref PID as integer, Flags as integer = 0, ShowWindow as Integer = -1) as integer

MBS Win Plugin, Plugin Version: 11.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new process and its primary thread. The new process runs in the security context of the calling process.
Example:

```
dim error, pid as Integer

pid = 0

error = WindowsExecuteMBS("", "explorer.exe", "", pid)
if error = 0 then
MsgBox "Launched explorer with process id: "+str(pid)
else
MsgBox "Error: "+str(error)
end if

pid = 0

error = WindowsExecuteMBS("", "notepad.exe ""C:\boot.ini""", "", pid)
if error = 0 then
MsgBox "Launched Notepad with process id: "+str(pid)
else
MsgBox "Error: "+str(error)
end if
```

Notes:

ApplicationName:
The name of the module to be executed. This module can be a Windows-based application. It can be some other type of module (for example, MS-DOS or OS/2) if the appropriate subsystem is available on the local computer.

The string can specify the full path and file name of the module to execute or it can specify a partial name. In the case of a partial name, the function uses the current drive and current directory to complete the specification. The function will not use the search path. This parameter must include the file name extension; no default extension is assumed.

The ApplicationName parameter can be empty. In that case, the module name must be the first white space–delimited token in the CommandLine string. If you are using a long file name that contains a space, use quoted strings to indicate where the file name ends and the arguments begin; otherwise, the file name is ambiguous. For example, consider the string "c:\program files\sub dir\program name". This string can be

interpreted in a number of ways. The system tries to interpret the possibilities in the following order:

- c:\program.exe files\sub dir\program name
- c:\program files\sub.exe dir\program name
- c:\program files\sub dir\program.exe name
- c:\program files\sub dir\program name.exe

If the executable module is a 16-bit application, ApplicationName should be empty, and the string pointed to by CommandLine should specify the executable module as well as its arguments.

To run a batch file, you must start the command interpreter; set ApplicationName to cmd.exe and set CommandLine to the following arguments: /c plus the name of the batch file.

CommandLine:
The command line to be executed. The maximum length of this string is 32,767 characters.. If ApplicationName is empty, the module name portion of CommandLine is limited to MAX_PATH (256) characters.

The CommandLine parameter can be empty. In that case, the function uses the string pointed to by ApplicationName as the command line.

If both ApplicationName and CommandLine are non-empty, the ApplicationName string specifies the module to execute, and the CommandLine string specifies the command line. The new process can use GetCommandLine to retrieve the entire command line. Console processes written in C can use the argc and argv arguments to parse the command line. Because argv [0] is the module name, C programmers generally repeat the module name as the first token in the command line.

If ApplicationName is empty, the first white space–delimited token of the command line specifies the module name. If you are using a long file name that contains a space, use quoted strings to indicate where the file name ends and the arguments begin (see the explanation for the ApplicationName parameter). If the file name does not contain an extension, .exe is appended. Therefore, if the file name extension is .com, this parameter must include the .com extension. If the file name ends in a period (.) with no extension, or if the file name contains a path, .exe is not appended. If the file name does not contain a directory path, the system searches for the executable file in the following sequence:

- The directory from which the application loaded.
- The current directory for the parent process.
- The 32-bit Windows system directory. Use the GetSystemDirectory function to get the path of this directory.

- The 16-bit Windows system directory. There is no function that obtains the path of this directory, but it is searched. The name of this directory is System.

- The Windows directory. Use the GetWindowsDirectory function to get the path of this directory.

- The directories that are listed in the PATH environment variable. Note that this function does not search the per-application path specified by the App Paths registry key. To include this per-application path in the search sequence, use the ShellExecute function.

- The system adds a terminating null character to the command-line string to separate the file name from the arguments. This divides the original string into two strings for internal processing.

CurrentDirectory:
The full path to the current directory for the process. The string can also specify a UNC path.

If this parameter is empty, the new process will have the same current drive and directory as the calling process. (This feature is provided primarily for shells that need to start an application and specify its initial drive and working directory.)

pid:
The variable to store the process ID of the new process.

Returns 0 for success or a windows error code for any error.

Note that the function returns before the process has finished initialization. If a required DLL cannot be located or fails to initialize, the process is terminated. To get the termination status of a process, call GetExitCodeProcess.

Possible Flags:

ShowWindow can be values for ShowWindow function to define how first window of new application is shown. Available values:

193.8.7 Blog Entries

- MonkeyBread Software Releases the MBS Xojo Plugins in version 21.0

- MBS Xojo Plugins, version 21.0pr8

- MBS REALbasic Plugins, version 11.0pr13

193.8.8 WindowsRunAsMBS(Username as string, Domain as string, Password as string, LoginFlags as Integer, ApplicationName as string, CommandLine as string, CurrentDirectory as string, byref PID as Integer, Flags as Integer = -1) as Integer

MBS Win Plugin, Plugin Version: 13.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs an application with a different user login.
Notes:

Please see Microsoft website for details:
http://msdn.microsoft.com/en-us/library/windows/desktop/ms682431(v=vs.85).aspx

The plugin passes parameters. If Flags is -1, we use CREATE_DEFAULT_ERROR_MODE Or CREATE_NEW_CONSOLE Or CREATE_NEW_PROCESS_GROUP.
The StartupInfo handles are closed and the PID is returned in the PID parameter.
Returns the Windows error code on failure. Else we return zero for success. On Mac and Linux the result is always -1.

193.8.9 WindowsShellExecuteAsAdminMBS(ParentWindowHandle as integer, File as string, Parameters as string = """, Directory as string = """, ShowCmd as integer = 5) as integer

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs given file as admin.
Example:

```
// run me as admin
Dim r As Integer = WindowsShellExecuteAsAdminMBS(0, app.ExecutableFile.NativePath, "", "", 3)

If r <>0 Then
MsgBox "error: "+Str(r)
End If
```

Notes:

See also WindowsShellExecuteMBS function.
Returns Windows error code, zero on success.

- 19.3, page 10: News

193.8.12 WinGetSysColorMBS(Index as Integer) as Color

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the current color of the specified display element.
Notes:

Display elements are the parts of a window and the display that appear on the system display screen.

Index: The display element whose color is to be retrieved. This parameter can be one of the following values.

Specifies the left side color in the color gradient of an active window's title bar if the gradient effect is enabled.

Specifies the left side color in the color gradient of an inactive window's title bar if the gradient effect is enabled.

Windows 2000: This value is not supported.

Windows 2000: This value is not supported.

The function returns the red, green, blue (RGB) color value of the given element.

193.8.13 WinOpenFolderAndSelectItemsMBS(folder as folderitem, files() as folderItem, ShowOnDesktop as Boolean = false, EditName as Boolean = false) as Integer

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens a Windows Explorer window with specified items in a particular folder selected.
Example:

```
dim file as FolderItem = SpecialFolder.Desktop.Child("test.rtf")
dim folder as FolderItem = file.Parent

dim r as Integer = WinOpenFolderAndSelectItemsMBS(folder, array(file))
```

```
if r = 0 then
MsgBox "OK"
else
MsgBox "Error: "+str(r)
end if
```

Notes:

Please pass a folder to open. Pass the files you want to select in that folder.
Returns Windows error code. Zero for success.

Under Windows XP the flag parameters are ignored. They work in Windows Vista and newer:

Editname: Pass true to select an item and put its name in edit mode. This flag can only be used when a single item is being selected. For multiple item selections, it is ignored.

ShowOnDesktop: Pass true to select the item or items on the desktop rather than in a Windows Explorer window. Note that if the desktop is obscured behind open windows, it will not be made visible.

For Mac, please use NSWorkspaceMBS.selectfile function.

- MBS Xojo / Real Studio Plugins, version 14.4pr3

193.8.15 WinSetSysColorMBS(Index as Integer, value as Color) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the colors for the specified display elements.
Notes:

Display elements are the various parts of a window and the display that appear on the system display screen.
If the function succeeds, the return value is true.
For indexes, please check WinGetSysColorMBS.

193.8.16 WindowsShellExecuteMBS(ParentWindowHandle as Integer, Operation as string, File as string, Parameters as string = """, Directory as string = """, ShowCmd as Integer = 5) as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Performs an operation on a specified file.
Example:

```
dim e as Integer
dim f as FolderItem

// show documents folder

f = SpecialFolder.Documents
e = WindowsShellExecuteMBS(0, "explore", f.NativePath, "", "", 10)

// Launch Notepad application

e = WindowsShellExecuteMBS(0, "", "notepad.exe", "", "", 10)

// launch file, folder or application

f = SpecialFolder.Desktop.Child("Auto1.JPG")
e = WindowsShellExecuteMBS(0, "", f.NativePath, "", "", 10)
```

Notes:

Use ConsoleExecuteMBS on Mac OS X and Linux.

ParentWindowHandle:
A handle to the owner window used for displaying a UI or error messages. This value can be 0 if the operation is not associated with a window. You can pass window.handle from a Xojo window.

Operation:
A string, referred to in this case as a verb, that specifies the action to be performed. The set of available verbs depends on the particular file or folder. Generally, the actions available from an object's shortcut menu are available verbs. The following verbs are commonly used:

File:
A string that specifies the file or object on which to execute the specified verb. To specify a Shell namespace object, pass the fully qualified parse name. Note that not all verbs are supported on all objects. For example, not all document types support the "print" verb. If a relative path is used for the Directory parameter do not use a relative path for File.

Parameters:
If File specifies an executable file, this parameter is a string that specifies the parameters to be passed to the application. The format of this string is determined by the verb that is to be invoked. If File specifies a document file, Parameters should be "".

Directory:
A string that specifies the default (working) directory for the action. If this value is NULL, the current working directory is used. If a relative path is provided at File, do not use a relative path for Directory.

ShowCmd:
The flags that specify how an application is to be displayed when it is opened. If File specifies a document file, the flag is simply passed to the associated application. It is up to the application to decide how to handle it.

Return Value:
If the function succeeds, it returns a value greater than 32. If the function fails, it returns an error value that indicates the cause of the failure. The return value is cast as an HINSTANCE for backward compatibility with 16-bit Windows applications.

This method allows you to execute any commands in a folder's shortcut menu or stored in the registry.
To open a folder, use either of the following calls:

WindowsShellExecuteMBS(handle, "", <fully_qualified_path_to_folder>, "", "", SW_SHOWNORMAL);
or
WindowsShellExecuteMBS(handle, "open", <fully_qualified_path_to_folder>, "", "", SW_SHOWNORMAL);

To explore a folder, use the following call:
WindowsShellExecuteMBS(handle, "explore", <fully_qualified_path_to_folder>, "", "", SW_SHOWNORMAL);
To launch the Shell's Find utility for a directory, use the following call.

WindowsShellExecuteMBS(handle, "find", <fully_qualified_path_to_folder>, "", "", 0);

If Operation is empty, the function opens the file specified by File. If Operation is "open" or "explore", the function attempts to open or explore the folder.

Note The Launch folder windows in a separate process setting in Folder Options affects ShellExecute. If that option is disabled (the default setting), ShellExecute uses an open Explorer window rather than launch a new one. If no Explorer window is open, ShellExecute launches a new one.

See also ConsoleExecuteMBS, WindowsShellExecuteAsAdminMBS, WindowsProcessMBS (Windows only),

NSTask (Mac only) and ShellMBS (cross platform).

193.8.17 DriveToUNCPathMBS(Driver as string) as string

MBS Win Plugin, Plugin Version: 13.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the system tables for which UNC network path belongs to a mapped drive.
Example:

msgbox DriveToUNCPathMBS("W:")

Notes:

Please pass the local drive name, which is drive letter and double colon.
Returns empty string on any error.

193.8.18 Blog Entries

- MBS Xojo / Real Studio Plugins, version 13.2pr5

193.8.19 GetFullWindowsNameMBS(UserName as string, Domain as string) as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the full username of an user in a domain.
Example:

```
dim ShortName as string = "your short name"
dim Domain as string = "your domain"

MsgBox GetFullWindowsNameMBS(ShortName, Domain)
```

Notes:

Returns an empty string on any error.

Use a current Windows NT-style domain, and a username that exists on the PDC.

This will work with any NT-Style PDC (tested on XP bound to Mac OS X Server running SMB as PDC). Windows 2000/2003 and 2008 should also work.

193.9 class WindowsADSystemInfoMBS

193.9.1 class WindowsADSystemInfoMBS

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class retrieves data about the local computer if it is running a Windows operating system in a Windows domain.
Notes: For example, you can get the domain, site, and distinguished name of the local computer.

193.9.6 Methods

193.9.7 AnyDCName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the DNS name of a domain controller in the local computer's domain.
Notes: Lasterror is set.

193.9.8 Constructor

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes: Raises unsupportedOperationException on failure.

193.9.9 DCSiteName(Server as String) as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the name of the Active Directory site that contains the local computer.
Notes:

Server: DNS name of the service server.

An Active Directory site is one or more well-connected TCP/IP subnets holding Active Directory domain controllers
Lasterror is set.

193.9.10 RefreshSchemaCache

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Refreshes the Active Directory schema cache.
Notes:

When you call this method, it does a Put() of the schemaUpdateNow function on the RootDSE. Normally, when you make changes to the schema, they are not updated to the RootDSE until the next automatic update. This method does an immediate update to the schema so that you can view the changes to the schema.
Lasterror is set.

193.9.11 Properties

193.9.12 ComputerName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the distinguished name of the local computer.
Notes:

Lasterror is set.
(Read only property)

193.9.13 DomainDNSName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the DNS name of the local computer's domain, such as "domainName.companyName.com".
Notes:

Lasterror is set.
(Read only property)

193.9.14 DomainShortName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the short name of the local computer's domain, such as "domainName".
Notes:

Lasterror is set.
(Read only property)

193.9.15 ForestDNSName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the DNS name of the local computer's forest.
Notes:

Lasterror is set.
(Read only property)

193.9.16 Handle as Integer

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read and Write property)

193.9.17 IsNativeMode as Boolean

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether the local computer's domain is in native or mixed mode.
Notes:

Lasterror is set.
(Read only property)

193.9.18 Lasterror as Integer

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error reported by any of the properties/methods.
Notes: (Read and Write property)

193.9.19 PDCRoleOwner as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the distinguished name of the directory service agent (DSA) object for the DC that owns the primary domain controller role in the local computer's domain.
Notes:

Lasterror is set.
(Read only property)

193.9.20 SchemaRoleOwner as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the distinguished name of the directory service agent (DSA) object for the DC that owns the schema master role in the local computer's forest.
Notes:

Lasterror is set.
(Read only property)

193.9.21 SiteName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the site name of the local computer.
Notes:

Lasterror is set.
(Read only property)

193.9.22 UserName as String

MBS Win Plugin, Plugin Version: 19.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the Active Directory distinguished name of the current user, which is the logged-on user or the user impersonated by the calling thread.
Notes:

Lasterror is set.
(Read only property)

Constant	Value	Description
CREATE_BREAKAWAY_FROM_JOB	& h01000000	The child processes of a process associated with a job are not associated with the job. If the calling process is not associated with a job, this constant has no effect. If the calling process is associated with a job, the job must set the JOB_OBJECT_LIMIT_BREAKAWAY_OK limit.
CREATE_DEFAULT_ERROR_MODE	& h04000000	The new process does not inherit the error mode of the calling process. Instead, the new process gets the default error mode. This feature is particularly useful for multi-threaded shell applications that run with hard errors disabled. The default behavior is for the new process to inherit the error mode of the caller. Setting this flag changes that default behavior.
CREATE_NEW_CONSOLE	& h00000010	The new process has a new console, instead of inheriting its parent's console (the default). For more information, see Creation of a Console. This flag cannot be used with DETACHED_PROCESS.
CREATE_NEW_PROCESS_GROUP	& h00000200	The new process is the root process of a new process group. The process group includes all processes that are descendants of this root process. The process identifier of the new process group is the same as the process identifier, which is returned in the lpProcessInformation parameter. Process groups are used by the GenerateConsoleCtrlEvent function to enable sending a CTRL+BREAK signal to a group of console processes. If this flag is specified, CTRL+C signals will be disabled for all processes within the new process group. This flag is ignored if specified with CREATE_NEW_CONSOLE.
CREATE_NO_WINDOW	& h08000000	The process is a console application that is being run without a console window. Therefore, the console handle for the application is not set. This flag is ignored if the application is not a console application, or if it is used with either CREATE_NEW_CONSOLE or DETACHED_PROCESS.
CREATE_PROTECTED_PROCESS	& h00040000	The process is to be run as a protected process. The system restricts access to protected processes and the threads of protected processes. For more information on how processes can interact with protected processes, see Process Security and Access Rights. To activate a protected process, the binary must have a special signature. This signature is provided by Microsoft but not currently available for non-Microsoft binaries. There are currently four protected processes: media foundation, audio engine, Windows error reporting, and system. Components that load into these binaries must also be signed. Multimedia companies can leverage the first two protected processes. For more information, see Overview of the Protected Media Path. Windows Server 2003 and Windows XP/2000: This value is not supported.
CREATE_PRESERVE_CODE_AUTHZ_LEVEL	& h02000000	Allows the caller to execute a child process that bypasses the process restrictions that would normally be applied automatically to the process. Windows 2000: This value is not supported.
CREATE_SEPARATE_WOW_VDM	& h00000800	This flag is valid only when starting a 16-bit Windows-based application. If set, the new process runs in a private Virtual DOS Machine (VDM). By default, all 16-bit Windows-based applications run as threads in a single, shared VDM. The advantage of running separately is that a crash only terminates the single VDM; any other programs running in distinct VDMs continue to function normally. Also, 16-bit Windows-based applications that are run in separate VDMs have separate input queues. That means that if one application stops responding momentarily, applications in separate VDMs continue to receive input. The disadvantage of running separately is that it takes significantly more memory to do so. You should use this flag only if the user requests that 16-bit applications should run in their own VDM.
CREATE_SHARED_WOW_VDM	& h00001000	The flag is valid only when starting a 16-bit Windows-based application. If the DefaultSeparateVDM switch in the Windows section of WIN.INI is TRUE, this flag overrides the switch. The new process is run in the shared Virtual DOS Machine.
CREATE_SUSPENDED	& h00000004	The primary thread of the new process is created in a suspended state, and does not run until the ResumeThread function is called.
CREATE_UNICODE_ENVIRONMENT	& h00000400	If this flag is set, the environment block pointed to by lpEnvironment uses Unicode characters. Otherwise, the environment block uses ANSI characters.
DEBUG_ONLY_THIS_PROCESS	& h00000002	The calling thread starts and debugs the new process. It can receive all related debug events using the WaitForDebugEvent function.
DEBUG_PROCESS	& h00000001	The calling thread starts and debugs the new process and all child processes created by the new process. It can receive all related debug events using the WaitForDebugEvent function. A process that uses DEBUG_PROCESS becomes the root of a debugging chain. This continues until another process in the chain is created with DEBUG_PROCESS. If this flag is combined with DEBUG_ONLY_THIS_PROCESS, the caller debugs only the new process, not any child processes.
DETACHED_PROCESS	& h00000008	For console processes, the new process does not inherit its parent's console (the default). The new process can call the AllocConsole function at a later time to create a console. For more information, see Creation of a Console. This value cannot be used with CREATE_NEW_CONSOLE.
EXTENDED_STARTUPINFO_PRESENT	& h00080000	The process is created with extended startup information; the lpStartupInfo parameter specifies a STARTUPINFOEX structure. Windows Server 2003 and Windows XP/2000: This value is not supported.
INHERIT_PARENT_AFFINITY	& h00010000	The process inherits its parent's affinity. If the parent process has threads in more than one processor group, the new process inherits the group-relative affinity of an arbitrary group in use by the parent. Windows Server 2008, Windows Vista, Windows Server 2003, and Windows XP/2000: This value is not supported.
ABOVE_NORMAL_PRIORITY_CLASS	& h00008000	Process that has priority above NORMAL_PRIORITY_CLASS but below HIGH_PRIORITY_CLASS.
BELOW_NORMAL_PRIORITY_CLASS	& h00004000	Process that has priority above IDLE_PRIORITY_CLASS but below NORMAL_PRIORITY_CLASS.
HIGH_PRIORITY_CLASS	& h00000080	Process that has priority above [illegible]

Constants	Value	Meaning
SW_FORCEMINIMIZE	11	Minimizes a window, even if the thread that owns the window is not responding. This flag should only be used when minimizing windows from a different thread.
SW_HIDE	0	Hides the window and activates another window.
SW_MAXIMIZE	3	Maximizes the specified window.
SW_MINIMIZE	6	Minimizes the specified window and activates the next top-level window in the Z order.
SW_RESTORE	9	Activates and displays the window. If the window is minimized or maximized, the system restores it to its original size and position. An application should specify this flag when restoring a minimized window.
SW_SHOW	5	Activates the window and displays it in its current size and position.
SW_SHOWDEFAULT	10	Sets the show state based on the SW_ value specified in the STARTUPINFO structure passed to the CreateProcess function by the program that started the application.
SW_SHOWMAXIMIZED	3	Activates the window and displays it as a maximized window.
SW_SHOWMINIMIZED	2	Activates the window and displays it as a minimized window.
SW_SHOWMINNOACTIVE	7	Displays the window as a minimized window. This value is similar to SW_SHOWMINIMIZED, except the window is not activated.
SW_SHOWNA	8	Displays the window in its current size and position. This value is similar to SW_SHOW, except that the window is not activated.
SW_SHOWNOACTIVATE	4	Displays a window in its most recent size and position. This value is similar to SW_SHOWNORMAL, except that the window is not activated.
SW_SHOWNORMAL	1	Activates and displays a window. If the window is minimized or maximized, the system restores it to its original size and position. An application should specify this flag when displaying the window for the first time.

Name	Value	Meaning
COLOR_3DDKSHADOW	21	Dark shadow for three-dimensional display elements.
COLOR_3DFACE	15	Face color for three-dimensional display elements and for dialog box backgrounds.
COLOR_3DHIGHLIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_3DHILIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_3DLIGHT	22	Light color for three-dimensional display elements (for edges facing the light source.)
COLOR_3DSHADOW	16	Shadow color for three-dimensional display elements (for edges facing away from the light source).
COLOR_ACTIVEBORDER	10	Active window border.
COLOR_ACTIVECAPTION	2	Active window title bar.

COLOR_APPWORKSPACE	12	Background color of multiple document interface (MDI) applications.
COLOR_BACKGROUND	1	Desktop.
COLOR_BTNFACE	15	Face color for three-dimensional display elements and for dialog box backgrounds.
COLOR_BTNHIGHLIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_BTNHILIGHT	20	Highlight color for three-dimensional display elements (for edges facing the light source.)
COLOR_BTNSHADOW	16	Shadow color for three-dimensional display elements (for edges facing away from the light source).
COLOR_BTNTEXT	18	Text on push buttons.
COLOR_CAPTIONTEXT	9	Text in caption, size box, and scroll bar arrow box.
COLOR_DESKTOP	1	Desktop.
COLOR_GRADIENTACTIVECAPTION	27	Right side color in the color gradient of an active window's title bar. COLOR_ACTIVECAPTION specifies the left side color. Use SPI_GETGRADIENTCAPTIONS with the SystemParametersInfo function to determine whether the gradient effect is enabled.
COLOR_GRADIENTINACTIVECAPTION	28	Right side color in the color gradient of an inactive window's title bar. COLOR_INACTIVECAPTION specifies the left side color.
COLOR_GRAYTEXT	17	Grayed (disabled) text. This color is set to 0 if the current display driver does not support a solid gray color.
COLOR_HIGHLIGHT	13	Item(s) selected in a control.
COLOR_HIGHLIGHTTEXT	14	Text of item(s) selected in a control.
COLOR_HOTLIGHT	26	Color for a hyperlink or hot-tracked item.
COLOR_INACTIVEBORDER	11	Inactive window border.
COLOR_INACTIVECAPTION	3	Inactive window caption.
COLOR_INACTIVECAPTIONTEXT	19	Color of text in an inactive caption.
COLOR_INFOBK	24	Background color for tooltip controls.
COLOR_INFOTEXT	23	Text color for tooltip controls.
COLOR_MENU	4	Menu background.
COLOR_MENUHILIGHT	29	The color used to highlight menu items when the menu appears as a flat menu (see SystemParametersInfo). The highlighted menu item is outlined with COLOR_HIGHLIGHT.
COLOR_MENUBAR	30	The background color for the menu bar when menus appear as flat menus (see SystemParametersInfo). However, COLOR_MENU continues to specify the background color of the menu popup.
COLOR_MENUTEXT	7	Text in menus.
COLOR_SCROLLBAR	0	Scroll bar gray area.
COLOR_WINDOW	5	Window background.
COLOR_WINDOWFRAME	6	Window frame.
COLOR_WINDOWTEXT	8	Text in windows.

edit	Launches an editor and opens the document for editing. If File is not a document file, the function will fail.
explore	Explores a folder specified by File.
find	Initiates a search beginning in the directory specified by Directory.
open	Opens the item specified by the File parameter. The item can be a file or folder.
print	Prints the file specified by File. If File is not a document file, the function fails.
""	In systems prior to Windows 2000, the default verb is used if it is valid and available in the registry. If not, the "open" verb is used. In Windows 2000 and later, the default verb is used if available. If not, the "open" verb is used. If neither verb is available, the system uses the first verb listed in the registry.

SW_HIDE	0	Hides the window and activates another window.
SW_MAXIMIZE	3	Maximizes the specified window.
SW_MINIMIZE	6	Minimizes the specified window and activates the next top-level window in the z-order.
SW_RESTORE	9	Activates and displays the window. If the window is minimized or maximized, Windows restores it to its original size and position. An application should specify this flag when restoring a minimized window.
SW_SHOW	5	Activates the window and displays it in its current size and position.
SW_SHOWDEFAULT	10	Sets the show state based on the SW_ flag specified in the STARTUPINFO structure passed to the CreateProcess function by the program that started the application. An application should call ShowWindow with this flag to set the initial show state of its main window.
SW_SHOWMAXIMIZED	3	Activates the window and displays it as a maximized window.
SW_SHOWMINIMIZED	2	Activates the window and displays it as a minimized window.
SW_SHOWMINNOACTIVE	7	Displays the window as a minimized window. The active window remains active.
SW_SHOWNA	8	Displays the window in its current state. The active window remains active.
SW_SHOWNOACTIVATE	4	Displays a window in its most recent size and position. The active window remains active.
SW_SHOWNORMAL	1	Activates and displays a window. If the window is minimized or maximized, Windows restores it to its original size and position. An application should specify this flag when displaying the window for the first time.

Return code	Description
0	The operating system is out of memory or resources.
ERROR_FILE_NOT_FOUND = 2	The specified file was not found.
ERROR_PATH_NOT_FOUND = 3	The specified path was not found.
ERROR_BAD_FORMAT = 11	The .exe file is invalid (non-Win32 .exe or error in .exe image).
SE_ERR_ACCESSDENIED = 5	The operating system denied access to the specified file.
SE_ERR_ASSOCINCOMPLETE = 27	The file name association is incomplete or invalid.
SE_ERR_DDEBUSY = 30	The DDE transaction could not be completed because other DDE transactions were being processed.
SE_ERR_DDEFAIL = 29	The DDE transaction failed.
SE_ERR_DDETIMEOUT = 28	The DDE transaction could not be completed because the request timed out.
SE_ERR_DLLNOTFOUND = 32	The specified DLL was not found.
SE_ERR_FNF = 2	The specified file was not found.
SE_ERR_NOASSOC = 31	There is no application associated with the given file name extension. This error will also be returned if you attempt to print a file that is not printable.
SE_ERR_OOM = 8	There was not enough memory to complete the operation.
SE_ERR_PNF = 3	The specified path was not found.
SE_ERR_SHARE = 26	A sharing violation occurred.

193.10 module WindowsBitmapMBS

193.10.1 module WindowsBitmapMBS

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Windows bitmap handling module.
Notes:

In this module we collect a few useful conversion functions for handling bitmap in Xojo.
Please contact us if you have idea for new function.

193.10.2 Blog Entries

- 13.4, page 10: News

193.10.6 Methods

193.10.7 BitmapToDIB(HBitmap as Ptr, HPalette as Ptr = nil) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HBitmap to a HDIB.
Notes: HPalette is optional a color palette handle for images with 8 bit or less per pixel.

193.10.8 DeleteBitmap(HBitmap as Ptr)

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Frees a HDIB or HBITMAP.
Notes: You need to free the images you allocate to make sure memory is released.

193.10.9 DIBToBitmap(HDIB as Ptr, HPalette as Ptr = nil) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HDIB to HBitmap.
Notes:

HPalette is optional a color palette handle for images with 8 bit or less per pixel.
Returns nil in case of no memory.

193.10.10 DuplicateHBitmap(HBitmap as Ptr, Width as Integer, Height as Integer) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Duplicates a bitmap handle.
Notes: Please use DeleteBitmap later to free bitmap.

193.10.11 HBitmapInfo(HBitmap as Ptr, byref Width as Integer, byref Height as Integer, byref WidthBytes as Integer, byref Planes as Integer, byref BitsPixel as Integer) as Boolean

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Queries details about a bitmap handle.
Notes: Returns true on success.

193.10.12 HBitmapToPicture(HBitmap as Ptr, UsingDraw as boolean = false) as Picture

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HBITMAP to Xojo picture.
Notes:

If UsingDraw is true, the plugin creates a new HBitmap and draws picture inside.
Else if UsingDraw is false, the plugin copies picture and mask into a new picture.

UsingDraw with false works only for 24 or 32 bit images with one plane.
See also:

- 193.10.13 HBitmapToPicture(HBitmap as Ptr, Width as Integer, Height as Integer) as Picture 27130

193.10.13 HBitmapToPicture(HBitmap as Ptr, Width as Integer, Height as Integer) as Picture

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Converts a HBITMAP to Xojo picture.
Notes:

Draws the HBitmap in a new picture of the given size.
This method can be used to resize the bitmap on the fly while drawing.
See also:

- 193.10.12 HBitmapToPicture(HBitmap as Ptr, UsingDraw as boolean = false) as Picture 27129

193.10.14 PictureToHBitmap(Pic as Picture) as Ptr

MBS Picture Plugin, Plugin Version: 15.1, Platform: Windows, Targets: All.

Function: Queries HBitmap of a picture.
Notes:

As Xojo picture's are internally HBitmaps, the plugin returns the handle of the picture.
No copy is made and you should not free the image. If you need a copy, please use DuplicateHBitmap function.

Please use DeleteBitmap later to free bitmap.

193.11 class WindowsClipboardMBS

193.11.1 class WindowsClipboardMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The windows clipboard class.
Notes:

Use it to access the clipboard on Windows.

Be aware that in the constructor we open the clipboard connection. Since Xojo may itself like to look into the clipboard to decide whether to enable copy & paste events, our clipboard connection may get taken or times out. Only one app at a time can have clipboard access.

193.11.8 Methods

193.11.9 Clear

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears the contents of the clipboard.

193.11.10 ClipboardFormats as Integer()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an array with all clipboard formats currently in the clipboard.

193.11.11 ClipboardSequenceNumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the clipboard sequence number for the current window station.
Notes:

The return value is the clipboard sequence number. If you do not have WINSTA_ACCESSCLIPBOARD access to the window station, the function returns zero.

The system keeps a serial number for the clipboard for each window station. This number is incremented whenever the contents of the clipboard change or the clipboard is emptied. You can track this value to determine whether the clipboard contents have changed and optimize creating DataObjects. If clipboard rendering is delayed, the sequence number is not incremented until the changes are rendered.

193.11.12 Constructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connects to the clipboard.
Notes: As the clipboard has exclusive access, do not keep WindowsClipboardMBS objects around. Best you only use them within a method so once the method ends, everything is released.

193.11.13 CountClipboardFormats as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the number of different data formats currently on the clipboard.
Notes:

If the function succeeds, the return value is the number of different data formats currently on the clipboard.

If the function fails, the return value is zero.

193.11.14 Destructor

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Automatically closes the clipboard.

193.11.15 EnumClipboardFormats(format as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enumerates the data formats currently available on the clipboard.
Notes:

Clipboard data formats are stored in an ordered list. To perform an enumeration of clipboard data formats, you make a series of calls to the EnumClipboardFormats function. For each call, the format parameter specifies an available clipboard format, and the function returns the next available clipboard format.

format: A clipboard format that is known to be available.

To start an enumeration of clipboard formats, set format to zero. When format is zero, the function retrieves the first available clipboard format. For subsequent calls during an enumeration, set format to the result of the previous EnumClipboardFormats call.

If the function succeeds, the return value is the clipboard format that follows the specified format, namely the next available clipboard format.

If the function fails, the return value is zero.
If there are no more clipboard formats to enumerate, the return value is zero.

You must open the clipboard before enumerating its formats. Use the OpenClipboard function to open the clipboard. The EnumClipboardFormats function fails if the clipboard is not open.

The EnumClipboardFormats function enumerates formats in the order that they were placed on the clipboard. If you are copying information to the clipboard, add clipboard objects in order from the most descriptive clipboard format to the least descriptive clipboard format. If you are pasting information from the clipboard, retrieve the first clipboard format that you can handle. That will be the most descriptive clipboard format that you can handle.

The system provides automatic type conversions for certain clipboard formats. In the case of such a format, this function enumerates the specified format, then enumerates the formats to which it can be converted. For more information, see Standard Clipboard Formats and Synthesized Clipboard Formats.

193.11.16 GetClipboardFormatName(format as Integer) as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves from the clipboard the name of the specified registered format. The function copies the name to the specified buffer.
Example:

```
// show items on clipboard

dim w as new WindowsClipboardMBS
dim types(-1) as integer = w.ClipboardFormats
dim names() as string

for each type as integer in types
dim n as string = w.GetClipboardFormatName(type)

n = str(type)+" "+n

names.append n
next

MsgBox Join(names,EndOfLine)
```

193.11.17 GetData(type as Integer) as string

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves data from the clipboard in a specified format.
Notes:

Format: A clipboard format.

If the function succeeds, the return value is the string with the clipboard data in the specified format.

If the function fails, the return value is "".

An application can enumerate the available formats in advance by using the EnumClipboardFormats function.

193.11.18 GetDIB as Picture

MBS Win Plugin, Plugin Version: 17.4, Platform: Windows, Targets: Desktop only.

Function: Queries DIB picture on the clipboard.
Notes:

Returns nil on any error.
This is using DIB type in clipboard for a Device Independent Bitmap.

Please use GetPicture for bitmap handles.

193.11.19 GetFiles as string()

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of file paths on the clipboard.
Notes: This is for working with Explorers copy & paste feature.

193.11.20 GetPicture as Picture

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop only.

Function: Queries bitmap on the clipboard.
Notes:

Returns nil on any error.
This is using BITMAP type in clipboard for a bitmap handle.

Please use GetDIB for Device Independent Bitmap.

193.11.21 IsClipboardFormatAvailable(type as Integer) as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Determines whether the clipboard contains data in the specified format.
Notes:

type: A standard or registered clipboard format.

If the clipboard format is available, the return value is true.
If the clipboard format is not available, the return value is false.

Typically, an application that recognizes only one clipboard format would call this function when processing the EnableMenuItems event. The application would then enable or disable the Paste menu item, depending on the return value.

193.11.22 RegisterClipboardFormat(type as string) as Integer

MBS Win Plugin, Plugin Version: 13.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers a new clipboard format. This format can then be used as a valid clipboard format.
Example:

```
dim TypeHTML as Integer
dim TypeRTF as Integer

TypeHTML = WindowsClipboardMBS.RegisterClipboardFormat("HTML Format")
TypeRTF = WindowsClipboardMBS.RegisterClipboardFormat("Rich Text Format")
```

Notes:

If the function succeeds, the return value identifies the registered clipboard format.
If the function fails, the return value is zero.

If a registered format with the specified name already exists, a new format is not registered and the return value identifies the existing format. This enables more than one application to copy and paste data using the same registered clipboard format. Note that the format name comparison is case-insensitive.
Registered clipboard formats are identified by values in the range & hC000 through & hFFFF.

193.11.23 SetData(type as Integer, rawData as string) as boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Places data on the clipboard in a specified clipboard format.
Notes:

Format: The clipboard format. This parameter can be a registered format or any of the standard clipboard formats.
rawData: A string with the data in the specified format.

If the function succeeds, the return value is true.
If the function fails, the return value is false.

The system performs implicit data format conversions between certain clipboard formats when an application calls the GetClipboardData function. For example, if the kTypeOEMTEXT format is on the clipboard, a window can retrieve data in the kTypeTEXT format. The format on the clipboard is converted to the requested format on demand. For more information, see Synthesized Clipboard Formats.

193.11.24 SetDIB(pic as Picture) as boolean

MBS Win Plugin, Plugin Version: 17.4, Platform: Windows, Targets: Desktop only.

Function: Puts a DIB picture on the clipboard.
Notes:

Returns true on success.
This is using DIB type in clipboard for a bitmap handle.

Please use SetPicture for Device Independent Bitmap.

193.11.25 SetFiles(paths() as string) as boolean

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Puts a list of file paths on the clipboard.
Notes:

This is for working with Explorers copy & paste feature.
Returns true on success.
Folder paths may work better if they have no training backslash.

193.11.26 SetPicture(pic as Picture) as boolean

MBS Win Plugin, Plugin Version: 14.4, Platform: Windows, Targets: Desktop only.

Function: Puts a bitmap picture on the clipboard.
Notes:

Returns true on success.
This is using BITMAP type in clipboard for a bitmap handle.

Please use SetDIB for Device Independent Bitmap.

193.11.27 Properties

193.11.28 Valid as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A flag whether the constructor got a clipboard connection.
Notes: (Read and Write property)

193.11.29 Constants

193.11.30 kTypeBitmap = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: A handle to a bitmap (HBITMAP).

193.11.31 kTypeDIB = 8

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: A memory object containing a BITMAPINFO structure followed by the bitmap bits.

193.11.32 kTypeDIBV5 = 17

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: A memory object containing a BITMAPV5HEADER structure followed by the bitmap color space information and the bitmap bits.

193.11.33 kTypeDIF = 5

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Software Arts' Data Interchange Format.

193.11.34 kTypeENHMetaFile = 14

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: A handle to an enhanced metafile (HENHMETAFILE).

193.11.35 kTypeHDROP = 15

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: A handle to type HDROP that identifies a list of files. An application can retrieve information about the files by passing the handle to the DragQueryFile function.

193.11.36 kTypeLocale = 16

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes:

The data is a handle to the locale identifier associated with text in the clipboard. When you close the clipboard, if it contains kTypeText data but no kTypeLocale data, the system automatically sets the kTypeLocale format to the current input language. You can use the kTypeLocale format to associate a different locale with the clipboard text.

An application that pastes text from the clipboard can retrieve this format to determine which character set was used to generate the text.

Note that the clipboard does not support plain text in multiple character sets. To achieve this, use a formatted text data type such as RTF instead.

The system uses the code page associated with kTypeLocale to implicitly convert from kTypeText to kTypeUnicodeText. Therefore, the correct code page table is used for the conversion.

193.11.37 kTypeMetaFilePict = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Handle to a metafile picture format as defined by the METAFILEPICT structure. When passing a kTypeMetaFilePict handle by means of DDE, the application responsible for deleting hMem should also free the metafile referred to by the kTypeMetaFilePict handle.

193.11.38 kTypeOEMText = 7

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Text format containing characters in the OEM character set. Each line ends with a carriage return/linefeed (CR-LF) combination. A null character signals the end of the data.

193.11.39 kTypePalette = 9

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes:

Handle to a color palette. Whenever an application places data in the clipboard that depends on or assumes a color palette, it should place the palette on the clipboard as well.

If the clipboard contains data in the kTypePalette (logical color palette) format, the application should use the SelectPalette and RealizePalette functions to realize (compare) any other data in the clipboard against that logical palette.

When displaying clipboard data, the clipboard always uses as its current palette any object on the clipboard that is in the kTypePalette format.

193.11.40 kTypePenData = 10

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Data for the pen extensions to the Microsoft Windows for Pen Computing

193.11.41 kTypeRIFF = 11

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Represents audio data more complex than can be represented in a CF_WAVE standard wave format.

193.11.42 kTypeSylk = 4

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.

Notes: Microsoft Symbolic Link (SYLK) format.

193.11.43 kTypeText = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Text format. Each line ends with a carriage return/linefeed (CR-LF) combination. A null character signals the end of the data. Use this format for ANSI text.

193.11.44 kTypeTIFF = 6

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Tagged-image file format.

193.11.45 kTypeUnicodeText = 13

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Unicode text format. Each line ends with a carriage return/linefeed (CR-LF) combination. A null character signals the end of the data.

193.11.46 kTypeWAVE = 12

MBS Win Plugin, Plugin Version: 10.4.

Function: One of standard clipboard formats defined by the system.
Notes: Represents audio data in one of the standard wave formats, such as 11 kHz or 22 kHz PCM.

193.12 class WindowsDeviceMBS

193.12.1 class WindowsDeviceMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This class is for device
Example:

```
dim devices(-1) as WindowsDeviceMBS = WindowsDeviceMBS.Devices
for each device as WindowsDeviceMBS in devices
msgbox device.Description
next
```

Notes:

For Mac you can take a look on the MacUSBDeviceMBS class and the IORegistryMBS class.
See also WinUSBDeviceMBS and WinUSBMBS classes.
For cross platform development also check LibUSBDeviceMBS classes.

193.12.4 Methods

193.12.5 CompatibleIDs as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The list of compatible IDs for a device.
Notes: A device has only one device ID that is the most specific ID for a device. A device can also have less specific hardware IDs and compatible IDs. Windows first tries to find an INF file that matches the device ID. If it does not find such a match, Windows next tries to find a match to one of the less specific hardware IDs or compatible IDs.

193.12.6 Devices(ClassGUID as string, present as boolean = true) as WindowsDeviceMBS()

MBS Win Plugin, Plugin Version: 11.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all devices on the system matching the given Class GUID.
Example:

```
const PortsGUID = " { 4D36E978-E325-11CE-BFC1-08002BE10318 } "
dim devices(-1) as WindowsDeviceMBS = WindowsDeviceMBS.Devices(PortsGUID)
```

Notes:

If present is true, only devices currently present on the system are returned.
The array is empty on any error.

Class	{ GUID }	Device Description
CDROM	{ 4D36E965-E325-11CE-BFC1-08002BE10318 }	CD/DVD/Blu-ray drives
DiskDrive	{ 4D36E967-E325-11CE-BFC1-08002BE10318 }	Hard drives
Display	{ 4D36E968-E325-11CE-BFC1-08002BE10318 }	Video adapters
FDC	{ 4D36E969-E325-11CE-BFC1-08002BE10318 }	Floppy controllers
FloppyDisk	{ 4D36E980-E325-11CE-BFC1-08002BE10318 }	Floppy drives

See also:

- 193.12.7 Devices(present as boolean = true) as WindowsDeviceMBS() 27145

193.12.7 Devices(present as boolean = true) as WindowsDeviceMBS()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all devices on the system.
Notes:

If present is true, only devices currently present on the system are returned.
The array is empty on any error.
See also:

- 193.12.6 Devices(ClassGUID as string, present as boolean = true) as WindowsDeviceMBS() 27144

193.12.8 HardwareID as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The list of hardware IDs for a device.

193.12.9 LocationPaths as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The location of the device in the device tree.
Notes: Windows Server 2003 and later.

193.12.10 LowerFilters as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The names of a device's lower-filter drivers.

193.12.11 UpperFilters as string()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The names of a device's upper filter drivers.

193.12.12 Properties

193.12.13 Address as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's address.
Notes: (Read and Write property)

193.12.14 BusNumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's bus number.
Notes: (Read and Write property)

193.12.15 BusTypeGUID as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GUID for the device's bus type.
Notes: (Read and Write property)

193.12.16 Capabilities as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device capabilities.
Notes:

A combination of the kDeviceCapability* constants.
(Read and Write property)

193.12.17 Characteristics as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device characteristics.
Notes: (Read and Write property)

193.12.18 ClassGUID as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The GUID that represents the device setup class of a device.
Notes: (Read and Write property)

193.12.19 ClassName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device setup class of a device.
Notes:

(This property should be named Class, but was renamed ClassName as Class is a reserved word in Xojo)
(Read and Write property)

193.12.20 ConfigFlags as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's configuration flags.
Notes: (Read and Write property)

193.12.21 Description as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The description of a device.
Notes:

Maybe localized.
(Read and Write property)

193.12.22 DeviceID as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: If a device is associated with this device entry, here you have the ID string for this device.
Notes: (Read and Write property)

193.12.23 DevicePath as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: For devices with device ID, this is the device path.
Notes: (Read and Write property)

193.12.24 DeviceType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's type.
Notes:

See kDeviceType* constants.
(Read and Write property)

193.12.25 Driver as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that identifies the device's software key (sometimes called the driver key).
Notes: (Read and Write property)

193.12.26 EnumeratorName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The string that contains the name of the device's enumerator.
Notes: (Read and Write property)

193.12.27 Exclusive as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a user can obtain exclusive use of the device.
Notes:

The value is true if exclusive use is allowed, or false otherwise.
(Read and Write property)

193.12.28 FriendlyName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The friendly name of a device.
Notes: (Read and Write property)

193.12.29 HID as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the plugin found additional HID details on the device.
Notes: (Read and Write property)

193.12.30 HIDAccessible as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the plugin was able to access the device and query the properties.
Notes:

HIDAccessible is true if and only if HID is also true.
(Read and Write property)

193.12.31 HIDFeatureReportByteLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the HID feature reports for this USB HID device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.32 HIDInputReportByteLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the HID input reports for this USB HID device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.33 HIDManufacturerName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The manufacturer name for this device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.34 HIDOutputReportByteLength as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The length of the HID output reports for this USB HID device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.35 HIDProductID as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product ID for this USB device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.36 HIDProductName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product name for this HID Device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.37 HIDSerialNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number for this USB device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.38 HIDVendorID as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID for this USB device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.39 HIDVersionNumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The version number for this HID Device.
Notes:

Only valid if HID and HIDAccessible are true.
(Read and Write property)

193.12.40 InstallState as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The install state of this device.
Notes:

See kInstallState* constants.
(Read and Write property)

193.12.41 LegacyBusType as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's legacy bus type.
Notes: (Read and Write property)

193.12.42 LocationInformation as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The hardware location of a device.
Notes: (Read and Write property)

193.12.43 Manufacturer as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the device manufacturer.
Notes: (Read and Write property)

193.12.44 PhysicalDeviceObjectName as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name that is associated with the device's PDO.
Notes: (Read and Write property)

193.12.45 RemovalPolicy as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's current removal policy.
Notes:

Windows XP and later
(Read and Write property)

193.12.46 RemovalPolicyHWDefault as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's hardware-specified default removal policy.
Notes:

Windows XP and later
(Read and Write property)

193.12.47 RemovalPolicyOverride as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's override removal policy (if it exists) from the registry.
Notes:

Windows XP and later
(Read and Write property)

193.12.48 SecurityDescriptor as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device's security descriptor.
Notes:

The format of security descriptor strings is described in Microsoft Windows SDK documentation.
(Read and Write property)

193.12.49 Service as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The service name for a device.
Notes: (Read and Write property)

193.12.50 UINumber as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The UINumber.
Notes:

Specifies a number associated with the device that can be displayed in the user interface.

This number is typically a user-perceived slot number, such as a number printed next to the slot on the board, or some other number that makes locating the physical device easier for the user. For buses with no such convention, or when the UINumber is unknown, the bus driver leaves this member at its default value

of -1.
(Read and Write property)

193.12.51 Constants

193.12.52 kDeviceCapabilityDockDevice = 8

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Dock Device

193.12.53 kDeviceCapabilityEjectSupported = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Eject Supported

193.12.54 kDeviceCapabilityHardwareDisabled = 256

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Hardware Disabled

193.12.55 kDeviceCapabilityLockSupported = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Lock Supported

193.12.56 kDeviceCapabilityNonDynamic = 512

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Non Dynamic

193.12.57 kDeviceCapabilityRAWDeviceOK = 64

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Raw Device OK

193.12.58 kDeviceCapabilityRemovable = 4

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Removable

193.12.59 kDeviceCapabilitySilentInstall = 32

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Silent Install

193.12.60 kDeviceCapabilitySurpriseRemovalOK = 128

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Surprise Removal OK

193.12.61 kDeviceCapabilityUniqueID = 16

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the capabilities constants.
Notes: Unique ID

193.12.62 kDeviceType8042Port = & h27

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.63 kDeviceTypeACPI = & h32

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.64 kDeviceTypeBattery = & h29

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.65 kDeviceTypeBeep = & h01

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.66 kDeviceTypeBusExtender = & h2a

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.67 kDeviceTypeCDROM = & h02

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.68 kDeviceTypeCDROWFileSystem = & h03

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

Function: One of the device type constants.

193.12.93 kDeviceTypeNetwork = & h12

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.94 kDeviceTypeNetworkBrowser = & h13

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.95 kDeviceTypeNetworkFileSystem= & h14

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.96 kDeviceTypeNetworkRedirector = & h28

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.97 kDeviceTypeNull = & h15

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.98 kDeviceTypeParallelPort = & h16

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.99 kDeviceTypePhysicalNetcard = & h17

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.100 kDeviceTypePrinter = & h18

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.101 kDeviceTypeScanner = & h19

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.102 kDeviceTypeScreen = & h1c

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.103 kDeviceTypeSerenum = & h37

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.104 kDeviceTypeSerialMousePort = & h1a

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.105 kDeviceTypeSerialPort = & h1b

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.106 kDeviceTypeSmartCard = & h31

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.107 kDeviceTypeSMB = & h2e

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.108 kDeviceTypeSound = & h1d

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.109 kDeviceTypeStreams = & h1e

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.110 kDeviceTypeTape = & h1f

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.111 kDeviceTypeTapeFileSystem = & h20

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.112 kDeviceTypeTermsrv = & h38

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.113 kDeviceTypeTransport = & h21

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.114 kDeviceTypeUnknown = & h22

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.115 kDeviceTypeVDM = & h2c

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.116 kDeviceTypeVideo = & h23

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.117 kDeviceTypeVirtualDisk = & h24

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.118 kDeviceTypeWaveIn = & h25

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.119 kDeviceTypeWaveOut = & h26

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the device type constants.

193.12.120 kInstallStateFailedInstall = 2

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the device's installation state.
Notes: The device did not install properly.

193.12.121 kInstallStateFinishInstall = 3

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the device's installation state.
Notes: The installation of this device is not yet complete.

193.12.122 kInstallStateInstalled = 0

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the device's installation state.
Notes: The device is installed.

193.12.123 kInstallStateNeedsReinstall = 1

MBS Win Plugin, Plugin Version: 10.4.

Function: One of the constants for the device's installation state.
Notes: The system will try to reinstall the device on a later enumeration.

193.13 class WindowsDiscInfoMBS

193.13.1 class WindowsDiscInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query details on a disc drive on Windows.
Example:

```
dim discs(-1) as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Devices

for each disc as WindowsDiscInfoMBS in discs
MsgBox disc.ModelNumber
next
```

193.13.2 Blog Entries

193.13.4 Methods

193.13.5 Device(file as folderitem) as WindowsDiscInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the device with the given path.
Example:

```
// volume(0) is boot volume
dim disc as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Device(volume(0))
```

Notes:

Returns nil on any error (like missing permissions).
Seems like on Windows Vista/7 you need admin rights to query this.
The path of the folderitem must be something starting with a drive letter.
See also:

- 193.13.6 Device(path as string) as WindowsDiscInfoMBS 27168

193.13.6 Device(path as string) as WindowsDiscInfoMBS

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the device with the given path.
Example:

```
dim disc as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Device("C")
```

Notes:

Returns nil on any error (like missing permissions).
Seems like on Windows Vista/7 you need admin rights to query this.
Path must be something starting with a drive letter.
See also:

- 193.13.5 Device(file as folderitem) as WindowsDiscInfoMBS 27167

193.13.7 Devices() as WindowsDiscInfoMBS()

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the device list.
Example:

```
// enumerate all drives
dim discs(-1) as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Devices
```

Notes:

Returns empty array on error.
May get more information on Windows Vista/7 if application runs as administrator.

193.13.8 Properties

193.13.9 BufferSize as Int64

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The buffer size of the disc controller.
Notes:

This value is set if Mode contains 1.
(Read only property)

193.13.10 BytesPerSector as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of bytes per sector.
Notes:

This value is set if Mode contains 4.
Typically 512 bytes, but that can increase in the future.
(Read and Write property)

193.13.11 Drive as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The drive number.
Notes: (Read and Write property)

193.13.12 Fixed as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this device is fixed.
Notes:

This value is set if Mode contains 1 or 4.
(Read and Write property)

193.13.13 Mode as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: This value shows which properties of the instance have been set with values.
Notes:

Mode is a bitwise or combination of values 1, 2 or 4. So value is 6 if mode 2 and 4 are set. You can test with bitwiseand(mode,mask). For example if bitwiseAnd(mode,4)=4 then BytesPerSector is valid.
(Read and Write property)

193.13.14 ModelNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The model number string for this device.
Example:

```
dim discs(-1) as WindowsDiscInfoMBS = WindowsDiscInfoMBS.Devices

for each disc as WindowsDiscInfoMBS in discs
MsgBox disc.ModelNumber
next
```

Notes:

This string is not available for all discs.
This value is set if Mode contains 1 or 2.
(Read and Write property)

193.13.15 ProductRevision as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product revision string.
Notes:

This string is not available for all discs.
This value is set if Mode contains 2.
(Read and Write property)

193.13.16 Removable as Boolean

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this device is removable.
Notes:

This value is set if Mode contains 1 or 4.
(Read and Write property)

193.13.17 RevisionNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The revision number of the disc.
Notes:

This string is not available for all discs.
This value is set if Mode contains 1.
(Read and Write property)

193.13.18 SectorsPerTrack as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of sectors per track.
Notes:

This value is set if Mode contains 4.
(Read and Write property)

193.13.19 SerialNumber as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the device.
Notes:

This string is not available for all discs.
This value is set if Mode contains 1 or 2.
(Read and Write property)

193.13.20 Size as Int64

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of this disc in bytes.
Notes:

This value is set if Mode contains 1 or 4.
(Read only property)

193.13.21 TracksPerCylinder as Integer

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of tracks per cylinder.
Notes:

This value is set if Mode contains 4.
(Read and Write property)

193.13.22 VendorId as String

MBS Win Plugin, Plugin Version: 10.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vendor ID of the disc.
Notes:

This value is set if Mode contains 2.
This string is not available for all discs.
(Read and Write property)

193.14 class WindowsDisplayMBS

193.14.1 class WindowsDisplayMBS

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for details on displays.

193.14.6 Methods

193.14.7 Displays as WindowsDisplayMBS()

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of displays.
Notes: Returns nil in case of error.

193.14.8 Properties

193.14.9 DeviceInstanceID as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device instance ID in setup database.
Notes: (Read only property)

193.14.10 DeviceName as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device name of display.
Notes: (Read only property)

193.14.11 DisplayAdapterActive as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a monitor is presented as being "on" by the respective GDI view.
Notes: (Read only property)

193.14.12 DisplayAdapterDeviceID as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID for the display adapter.
Notes: (Read only property)

193.14.13 DisplayAdapterDeviceKey as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The display adapter device key.
Notes: (Read only property)

193.14.14 DisplayAdapterDeviceName as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The adapter device name.
Notes: (Read only property)

193.14.15 DisplayAdapterDeviceString as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device context string.
Notes:

This is a description of the display adapter.
(Read only property)

193.14.16 DisplayAdapterRemovable as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device is removable; it cannot be the primary display.
Notes: (Read only property)

193.14.17 DisplayAdapterStateFlags as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state flags.
Notes: (Read only property)

193.14.18 DisplayMonitorActive as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether a monitor is presented as being ”on” by the respective GDI view.
Notes: (Read only property)

193.14.19 DisplayMonitorDeviceID as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device ID for the display monitor.
Notes: (Read only property)

193.14.20 DisplayMonitorDeviceKey as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The display monitor device key.
Notes: (Read only property)

193.14.21 DisplayMonitorDeviceName as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The monitor device name.
Notes: (Read only property)

193.14.22 DisplayMonitorDeviceString as String

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device context string.
Notes:

This is a description of the display monitor.
(Read only property)

193.14.23 DisplayMonitorRemovable as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device is removable; it cannot be the primary display.
Notes: (Read only property)

193.14.24 DisplayMonitorStateFlags as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state flags.
Notes: (Read only property)

193.14.25 Height as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the display in pixels.
Notes: (Read only property)

193.14.26 HeightDPI as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DPI for the display.
Notes:

Calculated based on HeightInch property.
(Read only property)

193.14.27 HeightInch as Double

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical height of the screen in inches.
Notes:

Value is zero if we don't know.
(Read only property)

193.14.28 HeightMM as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical height of the screen in millimeters.
Notes:

Value is zero if we don't know.
(Read only property)

193.14.29 LogPixelsX as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen width.
Notes:

In a system with multiple display monitors, this value is the same for all monitors.

e.g. 200% is 96 * 2 = 192
(Read only property)

193.14.30 LogPixelsY as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of pixels per logical inch along the screen height.
Notes:

In a system with multiple display monitors, this value is the same for all monitors.

e.g. 200% is 96 * 2 = 192
(Read only property)

193.14.31 MonitorHandle as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the monitor.
Notes: (Read only property)

193.14.32 MonitorHeight as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The monitor height.
Notes: (Read only property)

193.14.33 MonitorWidth as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The monitor width.
Notes: (Read only property)

193.14.34 MonitorX as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of monitor.
Notes:

The display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

193.14.35 MonitorY as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of monitor.
Notes:

The display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

193.14.36 Primary as Boolean

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is primary display.
Notes: (Read only property)

193.14.37 Width as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the display in pixels.
Notes: (Read only property)

193.14.38 WidthDPI as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The DPI for the display.
Notes:

Calculated based on WidthInch property.
(Read only property)

193.14.39 WidthInch as Double

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical width of the screen in inches.
Notes:

Value is zero if we don't know.
(Read only property)

193.14.40 WidthMM as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The physical width of the screen in millimeters.
Notes:

Value is zero if we don't know.
(Read only property)

193.14.41 WorkHeight as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area height in pixels.
Notes: (Read only property)

193.14.42 WorkWidth as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area width in pixels.
Notes: (Read only property)

193.14.43 WorkX as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area position.
Notes:

The work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area in rcMonitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

193.14.44 WorkY as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The work area position.
Notes:

The work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area in rcMonitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read only property)

193.14.45 X as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of the display in the virtual desktop space.
Notes:

Primary display is always at 0/0.
(Read only property)

193.14.46 Y as Integer

MBS Win Plugin, Plugin Version: 18.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The position of the display in the virtual desktop space.
Notes:

Primary display is always at 0/0.
(Read only property)

193.15 class WindowsFileCopyMBS

193.15.1 class WindowsFileCopyMBS

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to help you copying files on Windows using system functions.

193.15.4 Methods

193.15.5 CopyFileEx(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file, notifying the application of its progress through the progress event.
Notes:

Returns true on success and false on failure.

ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
Flags: Flags that specify how the file is to be copied. This parameter can be a combination of the CopyFile* constants.
See also:

- 193.15.6 CopyFileEx(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean 27184

193.15.6 CopyFileEx(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file, notifying the application of its progress through the progress event.
Notes:

Returns true on success and false on failure.

ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
Flags: Flags that specify how the file is to be copied. This parameter can be a combination of the CopyFile* constants.
See also:

- 193.15.5 CopyFileEx(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean 27183

193.15.7 CopyFileSimple(ExistingFileName as folderitem, NewFileName as folderitem, FailIfExists as boolean=false) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file.
Notes:

ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
FailIfExists: If this parameter is true and the new file specified by NewFileName already exists, the function

fails. If this parameter is false and the new file already exists, the function overwrites the existing file and succeeds.

Returns true on success and false on failure.
See also:

- 193.15.8 CopyFileSimple(ExistingFileName as String, NewFileName as String, FailIfExists as boolean=false) as boolean 27185

193.15.8 CopyFileSimple(ExistingFileName as String, NewFileName as String, FailIfExists as boolean=false) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copies an existing file to a new file.
Notes:

ExistingFileName: The name of an existing file.
NewFileName: The name of the new file.
FailIfExists: If this parameter is true and the new file specified by NewFileName already exists, the function fails. If this parameter is false and the new file already exists, the function overwrites the existing file and succeeds.

Returns true on success and false on failure.
See also:

- 193.15.7 CopyFileSimple(ExistingFileName as folderitem, NewFileName as folderitem, FailIfExists as boolean=false) as boolean 27184

193.15.9 FileOperationCopy(source as folderitem, dest as folderitem, Flags as Integer, ProgressTitle as string="") as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copy the files specified in the source parameter to the location specified in the dest parameter.
Notes:

This method has several varations so you can call it with a folderitem or a string to specify a file or folder. You can also pass an array of folderitems or strings to delete several files/folders in one operation.

source:
These names should be fully-qualified paths to prevent unexpected results.
Standard Microsoft MS-DOS wildcard characters, such as "*", are permitted only in the file-name position. Using a wildcard character elsewhere in the string will lead to unpredictable results.

dest:
The destination file or directory name. Wildcard characters are not allowed. Their use will lead to unpredictable results.

Copy and Move operations can specify destination directories that do not exist. In those cases, the system attempts to create them and normally displays a dialog box to ask the user if they want to create the new directory. To suppress this dialog box and have the directories created silently, set the FileOperationNoConfirmationMkDir flag in Flags.
For Copy and Move operations, the buffer can contain multiple destination file names if the fFlags member specifies FileOperationMultiDestFiles.
Use fully-qualified paths. Using relative paths is not prohibited, but can have unpredictable results.

Use the FileOperation* constants for the flags.
If a dialog is displayed, the window used in the parent property is used for the parent window.
If ProgressTitle is not empty, this string is used to specify the progress window title text.

Returns true on success and false on failure.

- 193.15.16 FileOperationCopy(source() as string, dest() as string, Flags as Integer, ProgressTitle as string="") as boolean 27194

193.15.13 FileOperationCopy(source() as folderitem, dest() as folderitem, Flags as Integer, ProgressTitle as string="") as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Copy the files specified in the source parameter to the location specified in the dest parameter.
Notes:

This method has several varations so you can call it with a folderitem or a string to specify a file or folder. You can also pass an array of folderitems or strings to delete several files/folders in one operation.

source:
These names should be fully-qualified paths to prevent unexpected results.
Standard Microsoft MS-DOS wildcard characters, such as "*", are permitted only in the file-name position. Using a wildcard character elsewhere in the string will lead to unpredictable results.

dest:
The destination file or directory name. Wildcard characters are not allowed. Their use will lead to unpredictable results.

Copy and Move operations can specify destination directories that do not exist. In those cases, the system attempts to create them and normally displays a dialog box to ask the user if they want to create the new directory. To suppress this dialog box and have the directories created silently, set the FileOperationNoConfirmationMkDir flag in Flags.
For Copy and Move operations, the buffer can contain multiple destination file names if the fFlags member specifies FileOperationMultiDestFiles.
Use fully-qualified paths. Using relative paths is not prohibited, but can have unpredictable results.

Use the FileOperation* constants for the flags.
If a dialog is displayed, the window used in the parent property is used for the parent window.
If ProgressTitle is not empty, this string is used to specify the progress window title text.

Returns true on success and false on failure.

In those cases, the system attempts to create them and normally displays a dialog box to ask the user if they want to create the new directory. To suppress this dialog box and have the directories created silently, set the FileOperationNoConfirmationMkDir flag in Flags.
For Copy and Move operations, the buffer can contain multiple destination file names if the fFlags member specifies FileOperationMultiDestFiles.

Use fully-qualified paths. Using relative paths is not prohibited, but can have unpredictable results.

Use the FileOperation* constants for the flags.
If a dialog is displayed, the window used in the parent property is used for the parent window.
If ProgressTitle is not empty, this string is used to specify the progress window title text.

Returns true on success and false on failure.

193.15.27 FileOperationMove(source() as string, dest as string, Flags as Integer, ProgressTitle as string="") as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Move the files specified in the source parameter to the location specified in the dest parameter.
Notes:

This method has several varations so you can call it with a folderitem or a string to specify a file or folder.
You can also pass an array of folderitems or strings to delete several files/folders in one operation.

source:
These names should be fully-qualified paths to prevent unexpected results.
Standard Microsoft MS-DOS wildcard characters, such as "*", are permitted only in the file-name position.
Using a wildcard character elsewhere in the string will lead to unpredictable results.

dest:
The destination file or directory name. Wildcard characters are not allowed. Their use will lead to unpredictable results.

Copy and Move operations can specify destination directories that do not exist. In those cases, the system attempts to create them and normally displays a dialog box to ask the user if they want to create the new directory. To suppress this dialog box and have the directories created silently, set the FileOperationNoConfirmationMkDir flag in Flags.
For Copy and Move operations, the buffer can contain multiple destination file names if the fFlags member specifies FileOperationMultiDestFiles.
Use fully-qualified paths. Using relative paths is not prohibited, but can have unpredictable results.

Use the FileOperation* constants for the flags.
If a dialog is displayed, the window used in the parent property is used for the parent window.
If ProgressTitle is not empty, this string is used to specify the progress window title text.

Returns true on success and false on failure.

193.15.29 MoveFileSimple(ExistingFileName as folderitem, NewFileName as folderitem) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves an existing file or a directory, including its children.
Notes:

ExistingFileName:The current name of the file or directory on the local computer.

NewFileName: The new name for the file or directory. The new name must not already exist. A new file may be on a different file system or drive. A new directory must be on the same drive.

Returns true on success and false on failure.

The MoveFile function will move (rename) either a file or a directory (including its children) either in the same directory or across directories. The one caveat is that the MoveFile function will fail on directory moves when the destination is on a different volume.

If a file is moved across volumes, MoveFile does not move the security descriptor with the file. The file will be assigned the default security descriptor in the destination directory.

The MoveFile function coordinates its operation with the link tracking service, so link sources can be tracked as they are moved.
See also:

- 193.15.30 MoveFileSimple(ExistingFileName as String, NewFileName as String) as boolean 27207

193.15.30 MoveFileSimple(ExistingFileName as String, NewFileName as String) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves an existing file or a directory, including its children.
Notes:

ExistingFileName:The current name of the file or directory on the local computer.

NewFileName: The new name for the file or directory. The new name must not already exist. A new file may be on a different file system or drive. A new directory must be on the same drive.

Returns true on success and false on failure.

The MoveFile function will move (rename) either a file or a directory (including its children) either in the same directory or across directories. The one caveat is that the MoveFile function will fail on directory moves when the destination is on a different volume.

If a file is moved across volumes, MoveFile does not move the security descriptor with the file. The file will be assigned the default security descriptor in the destination directory.

The MoveFile function coordinates its operation with the link tracking service, so link sources can be tracked as they are moved.
See also:

- 193.15.29 MoveFileSimple(ExistingFileName as folderitem, NewFileName as folderitem) as boolean 27207

193.15.31 MoveFileWithProgress(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves a file or directory, including its children.
Notes:

ExistingFileName: The name of the existing file or directory on the local computer.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT, the file cannot exist on a remote share because delayed operations are performed before the network is available.

NewFileName: The new name of the file or directory on the local computer.

When moving a file, NewFileName can be on a different file system or volume. If NewFileName is on another drive, you must set the MOVEFILE_COPY_ALLOWED flag in Flags.

When moving a directory, ExistingFileName and NewFileName must be on the same drive.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT and NewFileName is nil, MoveFileWithProgress registers ExistingFileName to be deleted when the system restarts. The function fails if it cannot access the registry to store the information about the delete operation. If ExistingFileName refers to a directory, the system removes the directory at restart only if the directory is empty.

Flags: The move options. This parameter can be one or more of the following values: MoveFileCopyAllowed, MoveFileReplaceExisting, MoveFileCreateHardLink, MoveFileDelayUntilReboot and MoveFileWriteThrough.

Return Value: If the function succeeds, the return value is true. If the function fails, the return value is false.

When moving a file across volumes, if the Progress event returns PROGRESS_CANCEL due to the user canceling the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

When moving a file across volumes, if the Progress event returns PROGRESS_STOP due to the user stopping the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.
See also:

- 193.15.32 MoveFileWithProgress(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean 27209

193.15.32 MoveFileWithProgress(ExistingFileName as String, NewFileName as String, Flags as Integer) as boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves a file or directory, including its children.
Notes:

ExistingFileName: The name of the existing file or directory on the local computer.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT, the file cannot exist on a remote share because delayed operations are performed before the network is available.

NewFileName: The new name of the file or directory on the local computer.

When moving a file, NewFileName can be on a different file system or volume. If NewFileName is on another drive, you must set the MOVEFILE_COPY_ALLOWED flag in Flags.

When moving a directory, ExistingFileName and NewFileName must be on the same drive.

If Flags specifies MOVEFILE_DELAY_UNTIL_REBOOT and NewFileName is "", MoveFileWithProgress registers ExistingFileName to be deleted when the system restarts. The function fails if it cannot access the registry to store the information about the delete operation. If ExistingFileName refers to a directory, the system removes the directory at restart only if the directory is empty.

Flags: The move options. This parameter can be one or more of the following values: MoveFileCopyAllowed, MoveFileReplaceExisting, MoveFileCreateHardLink, MoveFileDelayUntilReboot and MoveFileWriteThrough.

Return Value: If the function succeeds, the return value is true. If the function fails, the return value is false.

When moving a file across volumes, if the Progress event returns PROGRESS_CANCEL due to the user canceling the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

When moving a file across volumes, if the Progress event returns PROGRESS_STOP due to the user stopping the operation, MoveFileWithProgress will return zero and GetLastError will return ERROR_REQUEST_ABORTED. The existing file is left intact.

- 193.15.31 MoveFileWithProgress(ExistingFileName as folderitem, NewFileName as folderitem, Flags as Integer) as boolean 27208

193.15.33 Properties

193.15.34 Lasterror as Integer

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

This value is typically zero on success and -1 if the function is not supported by the plugin.

The FileOperation* functions have special error codes as following, but other methods have normal Windows Error codes:

(Read and Write property)

193.15.35 MultiThreaded as Boolean

MBS Win Plugin, Plugin Version: 12.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to use helper thread for better GUI responsiveness.
Notes:

This property allows you to call this method in a Thread. The plugin will perform the actual operation on a helper thread, so it does not block Xojo's threading. Your GUI can continue to run this way. Progress event fires asynchronously.
(Read and Write property)

DE_SAMEFILE	= & h71	The source and destination files are the same file.
DE_MANYSRC1DEST	= & h72	Multiple file paths were specified in the source buffer, but only one destination file path.
DE_DIFFDIR	= & h73	Rename operation was specified but the destination path is a different directory. Use the move operation instead.
DE_ROOTDIR	= & h74	The source is a root directory, which cannot be moved or renamed.
DE_OPCANCELLED	= & h75	The operation was cancelled by the user, or silently cancelled if the appropriate flags were supplied to SHFileOperation.
DE_DESTSUBTREE	= & h76	The destination is a subtree of the source.
DE_ACCESSDENIEDSRC	= & h78	Security settings denied access to the source.
DE_PATHTOODEEP	= & h79	The source or destination path exceeded or would exceed MAX_PATH.
DE_MANYDEST	= & h7A	The operation involved multiple destination paths, which can fail in the case of a move operation.
DE_INVALIDFILES	= & h7C	The path in the source or destination or both was invalid.
DE_DESTSAMETREE	= & h7D	The source and destination have the same parent folder.
DE_FLDDESTISFILE	= & h7E	The destination path is an existing file.
DE_FILEDESTISFLD	= & h80	The destination path is an existing folder.
DE_FILENAMETOOLONG	= & h81	The name of the file exceeds MAX_PATH.
DE_DEST_IS_CDROM	= & h82	The destination is a read-only CD-ROM, possibly unformatted.
DE_DEST_IS_DVD	= & h83	The destination is a read-only DVD, possibly unformatted.
DE_DEST_IS_CDRECORD	= & h84	The destination is a writable CD-ROM, possibly unformatted.
DE_FILE_TOO_LARGE	= & h85	The file involved in the operation is too large for the destination media or file system.
DE_SRC_IS_CDROM	= & h86	The source is a read-only CD-ROM, possibly unformatted.
DE_SRC_IS_DVD	= & h87	The source is a read-only DVD, possibly unformatted.
DE_SRC_IS_CDRECORD	= & h88	The source is a writable CD-ROM, possibly unformatted.
DE_ERROR_MAX	= & hB7	MAX_PATH was exceeded during the operation.
UnknownError	= & h402	An unknown error occurred. This is typically due to an invalid path in the source or destination. This error does not occur on Windows Vista and later.
ERRORONDEST	= & h10000	An unspecified error occurred on the destination.
DE_ROOTDIR | ERRORONDEST	= & h10074	Destination is a root directory and cannot be renamed.

193.15.36 OperationsAborted as Boolean

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: This flag is set by the FileOperation method to indicate whether the operation was aborted.
Notes: (Read and Write property)

193.15.37 Parent as Variant

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: Desktop only.

Function: The parent window for the FileOperation methods.
Notes:

Can reference a Window or DesktopWindow object.
(Read and Write property)

193.15.38 Events

193.15.39 Progress(TotalFileSize as int64, TotalBytesTransferred as int64, StreamSize as int64, StreamBytesTransferred as Int64, StreamNumber as Integer, Reason as Integer) as Integer

MBS Win Plugin, Plugin Version: 9.2, Platform: Windows, Targets: .

Function: It is called when a portion of a copy or move operation is completed.
Notes:

This event is called by the CopyFileEx and the MoveFileWithProgress methods.

TotalFileSize: The total size of the file, in bytes.
TotalBytesTransferred: The total number of bytes transferred from the source file to the destination file since the copy operation began.
StreamSize: The total size of the current file stream, in bytes.
StreamBytesTransferred: The total number of bytes in the current stream that have been transferred from the source file to the destination file since the copy operation began.
StreamNumber: A handle to the current stream. The first time CopyProgressRoutine is called, the stream number is 1.
Reason: CallbackChunkFinished or CallbackStreamSwitched.

Return ProgressCancel, ProgressStop, ProgressContinue or ProgressQuiet.
If you use multithreading option, you may receive additional events after you cancelled or stopped the operation due to the events coming asynchronously.

193.15.40 Constants

193.15.41 CallbackChunkFinished=0

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the reason constants for the Progress event.
Notes: Another part of the data file was copied.

193.15.42 CallbackStreamSwitched=1

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the reason constants for the Progress event.
Notes: Another stream was created and is about to be copied. This is the callback reason given when the callback routine is first invoked.

193.15.43 CopyFileAllowDecryptedDestination=8

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants used with CopyFileEx.
Notes: An attempt to copy an encrypted file will succeed even if the destination copy cannot be encrypted. Windows 2000: This value is not supported.

193.15.44 CopyFileCopySymLink=& h800

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants used with CopyFileEx.
Notes: If the source file is a symbolic link, the destination file is also a symbolic link pointing to the same file that the source symbolic link is pointing to. Windows Server 2003 and Windows XP/2000: This value is not supported.

193.15.45 CopyFileFailIfExists=1

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants used with CopyFileEx.
Notes: The copy operation fails immediately if the target file already exists.

193.15.46 CopyFileOpenSourceForWrite=4

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants used with CopyFileEx.
Notes: The file is copied and the original file is opened for write access.

193.15.47 CopyFileRestartable=2

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants used with CopyFileEx.
Notes: Progress of the copy is tracked in the target file in case the copy fails. The failed copy can be restarted at a later time by specifying the same values for source and dest as those used in the call that

failed.

193.15.48 FileOperationAllowUndo=& h40

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes:

Preserve undo information, if possible.
Prior to Windows Vista, operations could be undone only from the same process that performed the original operation.

In Windows Vista and later systems, the scope of the undo is a user session. Any process running in the user session can undo another operation. The undo state is held in the Explorer.exe process, and as long as that process is running, it can coordinate the undo functions.

If the source file parameter does not contain fully qualified path and file names, this flag is ignored.

193.15.49 FileOperationFilesOnly=& h80

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Perform the operation only on files (not on folders) if a wildcard file name (*.*) is specified.

193.15.50 FileOperationMultiDestFiles=1

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: The destination multiple destination files (one for each source file in from) rather than one directory where all source files are to be deposited.

193.15.51 FileOperationNoConfirmation=& h10

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Respond with Yes to All for any dialog box that is displayed.

193.15.52 FileOperationNoConfirmationMkDir=& h200

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Do not ask the user to confirm the creation of a new directory if the operation requires one to be created.

193.15.53 FileOperationNoConnectedElements=& H2000

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Do not move connected files as a group. Only move the specified files.

193.15.54 FileOperationNoCopySecurityAttributes=& h800

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Do not copy the security attributes of the file. The destination file receives the security attributes of its new folder.

193.15.55 FileOperationNoErrorUI=& h400

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Do not display a dialog to the user if an error occurs.

193.15.56 FileOperationNoRecursion=& h1000

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Only perform the operation in the local directory. Don't operate recursively into subdirectories, which is the default behavior.

193.15.57 FileOperationRenameCollision=8

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Give the file being operated on a new name in a move, copy, or rename operation if a file with the target name already exists at the destination.

193.15.58 FileOperationSilent=4

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Do not display a progress dialog box.

193.15.59 FileOperationSimpleProgress=& h100

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes:

Display a progress dialog box but do not show individual file names as they are operated on.

The plugin activates this flag if you pass in a window title.

193.15.60 FileOperationWantNukeWarning=& H4000

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the flag constants for the FileOperation methods.
Notes: Send a warning if a file is being permanently destroyed during a delete operation rather than recycled. This flag partially overrides FileOperationNoConfirmation.

193.15.61 MoveFileCopyAllowed=2

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the MoveFileWithProgress method.
Notes:

If the file is to be moved to a different volume, the function simulates the move by using the CopyFile and DeleteFile functions.
This value cannot be used with MoveFileDelayUntilReboot.

193.15.62 MoveFileCreateHardLink=16

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the MoveFileWithProgress method.
Notes: Reserved for future use.

193.15.63 MoveFileDelayUntilReboot=4

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the MoveFileWithProgress method.
Notes:

The system does not move the file until the operating system is restarted. The system moves the file immediately after AUTOCHK is executed, but before creating any paging files. Consequently, this parameter enables the function to delete paging files from previous startups.
This value can only be used if the process is in the context of a user who belongs to the administrators group or the LocalSystem account.
This value cannot be used with MoveFileCopyAllowed.

193.15.64 MoveFileReplaceExisting=1

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the MoveFileWithProgress method.
Notes:

If a file named lpNewFileName exists, the function replaces its contents with the contents of the lpExistingFileName file.
This value cannot be used if NewFileName or ExistingFileName names a directory.

193.15.65 MoveFileWriteThrough=8

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the MoveFileWithProgress method.
Notes:

The function does not return until the file has actually been moved on the disk.
Setting this value guarantees that a move performed as a copy and delete operation is flushed to disk before the function returns. The flush occurs at the end of the copy operation.
This value has no effect if MoveFileDelayUntilReboot is set.

193.15.66 ProgressCancel=1

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the Progress Event return value.
Notes: Cancel the copy operation and delete the destination file.

193.15.67 ProgressContinue=0

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the Progress Event return value.
Notes: Continue the copy operation.

193.15.68 ProgressQuiet=3

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the Progress Event return value.
Notes: Continue the copy operation, but stop invoking the event to report progress.

193.15.69 ProgressStop=2

MBS Win Plugin, Plugin Version: 9.2.

Function: One of the constants for the Progress Event return value.
Notes: Stop the copy operation. It can be restarted at a later time.

193.16 class WindowsFileInfoMBS

193.16.1 class WindowsFileInfoMBS

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window file information class.
Example:

```
dim f as FolderItem = SelectFolder

if f<>Nil then
dim w as new WindowsFileInfoMBS(f)
MsgBox str(w.FileIndex)
end if
```

Notes:

The identifier that is stored in the FileIndex members is called the file ID. Support for file IDs is file system-specific. File IDs are not guaranteed to be unique over time, because file systems are free to reuse them. In some cases, the file ID for a file can change over time.

In the FAT file system, the file ID is generated from the first cluster of the containing directory and the byte offset within the directory of the entry for the file. Some defragmentation products change this byte offset. (Windows in-box defragmentation does not.) Thus, a FAT file ID can change over time. Renaming a file in the FAT file system can also change the file ID, but only if the new file name is longer than the old one.

In the NTFS file system, a file keeps the same file ID until it is deleted. You can replace one file with another file without changing the file ID by using the ReplaceFile function. However, the file ID of the replacement file, not the replaced file, is retained as the file ID of the resulting file.

Not all file systems can record creation and last access time, and not all file systems record them in the same manner. For example, on a Windows FAT file system, create time has a resolution of 10 milliseconds, write time has a resolution of 2 seconds, and access time has a resolution of 1 day (the access date). On the NTFS file system, access time has a resolution of 1 hour. For more information, see File Times.

193.16.10 Constructor(handle as Integer)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a Windows File Handle.
Notes: On success the valid property is set to true.
See also:

- 193.16.9 Constructor(file as folderitem) 27220
- 193.16.11 Constructor(path as string) 27221
- 193.16.12 Constructor(stream as BinaryStream) 27221

193.16.11 Constructor(path as string)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a file path.
Notes: On success the valid property is set to true.
See also:

- 193.16.9 Constructor(file as folderitem) 27220
- 193.16.10 Constructor(handle as Integer) 27221
- 193.16.12 Constructor(stream as BinaryStream) 27221

193.16.12 Constructor(stream as BinaryStream)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor using a binarystream.
Notes: On success the valid property is set to true.
See also:

- 193.16.9 Constructor(file as folderitem) 27220
- 193.16.10 Constructor(handle as Integer) 27221
- 193.16.11 Constructor(path as string) 27221

193.16.13 Properties

193.16.14 CreationDate as Date

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A date that specifies when a file or directory is created.
Notes:

If the underlying file system does not support creation time, this member is nil.
(Read only property)

193.16.15 CreationTime as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: An UInt64 that specifies when a file or directory is created.
Notes:

If the underlying file system does not support creation time, this member is zero (0).
(Read only property)

193.16.16 FileAttributes as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file attributes.
Notes:

For possible values and their descriptions, see kFileAttribute* constants.
(Read only property)

193.16.17 FileIndex as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The unique identifier that is associated with a file.
Notes:

The identifier and the volume serial number uniquely identify a file on a single computer. To determine whether two open handles represent the same file, combine the identifier and the volume serial number for each file and compare them.
(Read only property)

193.16.18 FileSize as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file size.
Notes: (Read only property)

193.16.19 LastAccessDate as Date

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is read from or written to.
Notes:

For a directory, the structure specifies when the directory is created. For both files and directories, the specified date is correct, but the time of day is always set to midnight. If the underlying file system does not support the last access time, this member is nil.
(Read only property)

193.16.20 LastAccessTime as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is read from or written to.
Notes:

For a directory, the structure specifies when the directory is created. For both files and directories, the specified date is correct, but the time of day is always set to midnight. If the underlying file system does not support the last access time, this member is zero (0).
(Read only property)

193.16.21 LastWriteDate as Date

MBS Win Plugin, Plugin Version: 18.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is written to.
Notes:

For a directory, the structure specifies when the directory is created. If the underlying file system does not support the last write time, this member is nil.
(Read only property)

193.16.22 LastWriteTime as UInt64

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: For a file, the structure specifies the last time that a file is written to.
Notes:

For a directory, the structure specifies when the directory is created. If the underlying file system does not support the last write time, this member is zero (0).
(Read only property)

193.16.23 NumberOfLinks as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of links to this file.
Notes:

For the FAT file system this member is always 1. For the NTFS file system, it can be more than 1.
(Read only property)

193.16.24 Valid as Boolean

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the constructor got the values.
Notes: (Read only property)

193.16.25 VolumeSerialNumber as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The serial number of the volume that contains a file.
Notes: (Read only property)

193.16.26 Constants

193.16.27 kFileAttributeArchive = 32

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file or directory that is an archive file or directory. Applications typically use this attribute to mark files for backup or removal.

193.16.28 kFileAttributeCompressed = 2048

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file or directory that is compressed. For a file, all of the data in the file is compressed. For a directory, compression is the default for newly created files and subdirectories.

193.16.29 kFileAttributeDevice = 64

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: This value is reserved for system use.

193.16.30 kFileAttributeDirectory = 16

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: The handle that identifies a directory.

193.16.31 kFileAttributeEncrypted = 16384

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file or directory that is encrypted. For a file, all data streams in the file are encrypted. For a directory, encryption is the default for newly created files and subdirectories.

193.16.32 kFileAttributeHidden = 2

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: The file or directory is hidden. It is not included in an ordinary directory listing.

193.16.33 kFileAttributeNormal = 128

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file that does not have other attributes set. This attribute is valid only when used alone.

193.16.34 kFileAttributeNotContentIndexed = 8192

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: The file or directory is not to be indexed by the content indexing service.

193.16.35 kFileAttributeOffline = 4096

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: The data of a file is not available immediately. This attribute indicates that the file data is physically moved to offline storage. This attribute is used by Remote Storage, which is the hierarchical storage management software. Applications should not arbitrarily change this attribute.

193.16.36 kFileAttributeReadonly = 1

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file that is read-only. Applications can read the file, but cannot write to it or delete it. This attribute is not honored on directories. For more information, see "You cannot view or change the Read-only or the System attributes of folders in Windows Server 2003, in Windows XP, or in Windows Vista".

193.16.37 kFileAttributeReparsePoint = 1024

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file or directory that has an associated reparse point, or a file that is a symbolic link.

193.16.38 kFileAttributeSparseFile = 512

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file that is a sparse file.

193.16.39 kFileAttributeSystem = 4

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file or directory that the operating system uses a part of, or uses exclusively.

193.16.40 kFileAttributeTemporary = 256

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: A file that is being used for temporary storage. File systems avoid writing data back to mass storage if sufficient cache memory is available, because typically, an application deletes a temporary file after the handle is closed. In that scenario, the system can entirely avoid writing the data. Otherwise, the data is written after the handle is closed.

193.16.41 kFileAttributeVirtual = 65536

MBS Win Plugin, Plugin Version: 10.1.

Function: One of the file attribute constants.
Notes: This value is reserved for system use.

193.17 class WindowsFileStreamMBS

193.17.1 class WindowsFileStreamMBS

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for file streams on Windows.
Notes:

Windows can store more than one data stream in a file.

(on Mac/Linux, please check the ExtendedAttributesMBS module)
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

193.17.2 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

193.17.3 Blog Entries

- MBS Xojo / Real Studio Plugins, version 16.4pr5

193.17.4 Methods

193.17.5 Constructor

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The private constructor.

193.17.6 List(file as folderitem) as WindowsFileStreamMBS()

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Lists file streams in a file at given folderitem.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("test.txt")
dim w() as WindowsFileStreamMBS = WindowsFileStreamMBS.List(f)
```

Break

Notes:

Returns nil in case of error.
Else returns an array with stream details.

Requires Windows Vista or newer. Raises exception on Windows XP.
See also:

- 193.17.7 List(Path as String) as WindowsFileStreamMBS() 27229

193.17.7 List(Path as String) as WindowsFileStreamMBS()

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Lists file streams in a file at given path.
Notes:

Returns nil in case of error.
Else returns an array with stream details.

Requires Windows Vista or newer. Raises exception on Windows XP.
See also:

- 193.17.6 List(file as folderitem) as WindowsFileStreamMBS() 27228

193.17.8 Properties

193.17.9 Name as String

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the stream.
Notes: (Read only property)

193.17.10 Size as UInt64

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size in bytes.
Notes: (Read only property)

193.18 class WindowsFileVersionMBS

193.18.1 class WindowsFileVersionMBS

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to read Windows version information from a file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetInternalName
end if
```

193.18.2 Blog Entries

- Tipp of the day: WindowsFileVersionMBS

193.18.3 Blog Entries

- Tipp of the day: WindowsFileVersionMBS

193.18.4 Methods

193.18.5 FileVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file version in an user readable string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.FileVersion
end if
```

Notes: format is "1.2.3.4".

193.18.6 GetCompanyName as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key CompanyName.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetCompanyName
end if
```

193.18.7 GetFileDescription as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key FileDescription.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetFileDescription
end if
```

193.18.8 GetFileVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key FileVersion.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetFileVersion
end if
```

193.18.9 GetInternalName as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key InternalName.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetInternalName
end if
```

193.18.10 GetLegalCopyright as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key LegalCopyright.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetLegalCopyright
end if
```

193.18.11 GetOriginalFilename as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key OriginalFilename.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetOriginalFilename
end if
```

193.18.12 GetProductName as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key ProductName.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetProductName
end if
```

193.18.13 GetProductVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns value for key ProductVersion.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetProductVersion
end if
```

193.18.14 OpenFile(file as folderitem) as boolean

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads file information from a given file.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.GetCompanyName
end if
```

Notes: Returns true on success and false on failure.

193.18.15 ProductVersion as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The product version in an user readable string.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox w.ProductVersion
end if
```

Notes: format is "1.2.3.4"

193.18.16 QueryBinaryValue(key as string) as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Low level function to read a binary item from the information resource.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
// we define encoding as UTF16 as we know the value for ProductName is an UTF16 string.
MsgBox DefineEncoding(w.QueryBinaryValue("ProductName"), encodings.UTF16)
end if
```

Notes: Returns "" on any error.

193.18.17 QueryUnicodeValue(key as string) as string

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Low level function to read an unicode string item from the information resource.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.QueryUnicodeValue("ProductName"))
end if
```

Notes: Returns "" on any error.

193.18.18 Properties

193.18.19 FileDateLS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File date number. Lower part.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.FileDateLS)
end if
```

Notes:

Filedate is a 64 bit integer. This is the lower 32 bit part.

Specifies the least significant 32 bits of the file's 64-bit binary creation date and time stamp.
(Read and Write property)

193.18.20 FileDateMS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File date number. Higher part.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.FileDateMS)
end if
```

Notes:

Filedate is a 64 bit integer. This is the higher 32 bit part.

Specifies the most significant 32 bits of the file's 64-bit binary creation date and time stamp.
(Read and Write property)

193.18.21 FileFlags as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file flags.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.FileFlags)
end if
```

Notes:

Contains a bitmask that specifies the Boolean attributes of the file. This member can include one or more of the following values.

VS_FF_DEBUG	= 1	The file contains debugging information or is compiled with debugging features enabled.
VS_FF_INFOINFERRED	= 16	The file's version structure was created dynamically; therefore, some of the members in this structure may be empty or incorrect. This flag should never be set in a file's VS_VERSIONINFO data.
VS_FF_PATCHED	= 4	The file has been modified and is not identical to the original shipping file of the same version number.
VS_FF_PRERELEASE	= 2	The file is a development version, not a commercially released product.
VS_FF_PRIVATEBUILD	= 8	The file was not built using standard release procedures. If this flag is set, the StringFileInfo structure should contain a PrivateBuild entry.
VS_FF_SPECIALBUILD	= 32	The file was built by the original company using standard release procedures but is a variation of the normal file of the same version number. If this flag is set, the StringFileInfo structure should contain a SpecialBuild entry.

(Read and Write property)

193.18.22 FileOS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file os settings.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.FileOS)
end if
```

Notes:

Specifies the operating system for which this file was designed. This member can be one of the following values.

VOS_DOS	= & h00010000	The file was designed for MS-DOS.
VOS_NT	= & h00040000	The file was designed for Windows NT.
VOS___WINDOWS16	= & h00000001	The file was designed for 16-bit Windows.
VOS___WINDOWS32	= & h00000004	The file was designed for 32-bit Windows.
VOS_OS216	= & h00020000	The file was designed for 16-bit OS/2.
VOS_OS232	= & h00030000	The file was designed for 32-bit OS/2.
VOS___PM16	= & h00000002	The file was designed for 16-bit Presentation Manager.
VOS___PM32	= & h00000003	The file was designed for 32-bit Presentation Manager.
VOS_UNKNOWN	= & h00000000	The operating system for which the file was designed is unknown to the system.

An application can combine these values to indicate that the file was designed for one operating system running on another. The following FileOS values are examples of this, but are not a complete list.

VOS_DOS_WINDOWS16	= & h00010001	The file was designed for 16-bit Windows running on MS-DOS.
VOS_DOS_WINDOWS32	= & h00010004	The file was designed for 32-bit Windows running on MS-DOS.
VOS_NT_WINDOWS16	= ?	The file was designed for Windows NT.
VOS_OS216_PM16	= & h00020002	The file was designed for 16-bit Presentation Manager running on 16-bit OS/2.
VOS_OS232_PM32	= & h00030003	The file was designed for 32-bit Presentation Manager running on 32-bit OS/2.

(Read and Write property)

193.18.23 FileSubtype as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows file subtype code.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
```

```
MsgBox str(w.FileSubType)
end if
```

Notes:

Specifies the function of the file. The possible values depend on the value of FileType. For all values of FileType not described in the following list, FileSubtype is zero.

If FileType is VFT_DRV, FileSubtype can be one of the following values.

VFT2_UNKNOWN	= 0	The driver type is unknown by the system.
VFT2_DRV_COMM	= 10	The file contains a communications driver.
VFT2_DRV_PRINTER	= 1	The file contains a printer driver.
VFT2_DRV_KEYBOARD	= 2	The file contains a keyboard driver.
VFT2_DRV_LANGUAGE	= 3	The file contains a language driver.
VFT2_DRV_DISPLAY	= 4	The file contains a display driver.
VFT2_DRV_MOUSE	= 5	The file contains a mouse driver.
VFT2_DRV_NETWORK	= 6	The file contains a network driver.
VFT2_DRV_SYSTEM	= 7	The file contains a system driver.
VFT2_DRV_INSTALLABLE	= 8	The file contains an installable driver.
VFT2_DRV_SOUND	= 9	The file contains a sound driver.
VFT2_DRV_VERSIONED_PRINTER	= 10	The file contains a versioned printer driver.

If FileType is VFT_FONT, FileSubtype can be one of the following values.

VFT2_UNKNOWN	= 0	The font type is unknown by the system.
VFT2_FONT_RASTER	= 1	The file contains a raster font.
VFT2_FONT_VECTOR	= 2	The file contains a vector font.
VFT2_FONT_TRUETYPE	= 3	The file contains a TrueType font.

If FileType is VFT_VXD, FileSubtype contains the virtual device identifier included in the virtual device control block.
All FileSubtype values not listed here are reserved.
(Read and Write property)

193.18.24 FileType as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Windows file type code.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
```

```
if w.OpenFile(f) then
MsgBox str(w.FileType)
end if
```

Notes:

Specifies the general type of file. This member can be one of the following values. All other values are reserved.

VFT_UNKNOWN	= 0	The file type is unknown to the system.
VFT_APP	= 1	The file contains an application.
VFT_DLL	= 2	The file contains a DLL.
VFT_DRV	= 3	The file contains a device driver. If dwFileType is VFT_DRV, FileSubtype contains a more specific description of the driver.
VFT_FONT	= 4	The file contains a font. If dwFileType is VFT_FONT, FileSubtype contains a more specific description of the font file.
VFT_VXD	= 5	The file contains a virtual device.
VFT_STATIC_LIB	= 7	The file contains a static-link library.

(Read and Write property)

193.18.25 FileVersionLS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File version number. Lower part.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.FileVersionLS)
end if
```

Notes:

Fileversion is a 64 bit integer. This is the lower 32 bit part.

Specifies the least significant 32 bits of the file's binary version number. This member is used with FileVersionMS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

193.18.26 FileVersionMS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: File version number. Higher part.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.FileVersionMS)
end if
```

Notes:

Fileversion is a 64 bit integer. This is the higher 32 bit part.

Specifies the most significant 32 bits of the file's binary version number. This member is used with FileVersionLS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

193.18.27 LangCharset as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The language charset to use.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.LangCharset)
end if
```

Notes:

OpenFile sets this to the default value.
You can change it later.
Value is used on each call of GetOriginalFilename, GetFileVersion, GetCompanyName, GetProductName, GetInternalName, GetProductVersion, GetFileDescription, GetLegalCopyright, QueryUnicodeValue and QueryBinaryValue.
(Read and Write property)

193.18.28 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

Lasterror means no error has happend.
Normally a Windows error code.
(Read and Write property)

193.18.29 ProductVersionLS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Product version number. Lower part.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.ProductVersionLS)
end if
```

Notes:

Productversion is a 64 bit integer. This is the lower 32 bit part.

Specifies the least significant 32 bits of the binary version number of the product with which this file was distributed. This member is used with ProductVersionMS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

193.18.30 ProductVersionMS as Integer

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Product version number. Higher part.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.ProductVersionMS)
```

```
end if
```

Notes:

Productversion is a 64 bit integer. This is the higher 32 bit part.

Specifies the most significant 32 bits of the binary version number of the product with which this file was distributed. This member is used with ProductVersionLS to form a 64-bit value used for numeric comparisons.
(Read and Write property)

193.18.31 RawData as String

MBS Win Plugin, Plugin Version: 10.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the data of the file version record as string.
Notes: (Read only property)

193.18.32 Success as Boolean

MBS Win Plugin, Plugin Version: 6.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether last call to OpenFile was successful.
Example:

```
dim f as FolderItem = SpecialFolder.Desktop.Child("dbgview.exe")
dim w as new WindowsFileVersionMBS
if w.OpenFile(f) then
MsgBox str(w.Success)
end if
```

Notes: (Read and Write property)

193.19 class WindowsGraphicsDeviceContextMBS

193.19.1 class WindowsGraphicsDeviceContextMBS

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The class to safely access a HDC of a graphics object.
Notes: The plugin will get the handle in constructor and release it in destructor/close.

193.19.4 Methods

193.19.5 Close

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: Closes the handle by releasing memory.
Notes: Same as destructor.

193.19.6 Constructor(c as control)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: The constructor for a control object.
Notes:

Queries HDC for control object.
Raises exceptions on failure.
See also:

- 193.19.7 Constructor(c as DesktopControl) 27244
- 193.19.8 Constructor(g as graphics) 27244

- 193.19.10 Constructor(w as DesktopWindow) 27245
- 193.19.11 Constructor(w as window) 27245

193.19.7 Constructor(c as DesktopControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor for a control object.
Notes:

Queries HDC for control object.
Raises exceptions on failure.
See also:

- 193.19.6 Constructor(c as control) 27243
- 193.19.8 Constructor(g as graphics) 27244
- 193.19.9 Constructor(p as Picture) 27245
- 193.19.10 Constructor(w as DesktopWindow) 27245
- 193.19.11 Constructor(w as window) 27245

193.19.8 Constructor(g as graphics)

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The constructor for a graphics object.
Notes:

Queries HDC for graphics object.
Raises exceptions on failure.
See also:

- 193.19.6 Constructor(c as control) 27243
- 193.19.7 Constructor(c as DesktopControl) 27244

- 193.19.10 Constructor(w as DesktopWindow) 27245
- 193.19.11 Constructor(w as window) 27245

193.19.9 Constructor(p as Picture)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: The constructor for a picture object.
Notes:

Queries HDC for picture object.
Raises exceptions on failure.
See also:

- 193.19.6 Constructor(c as control) 27243
- 193.19.7 Constructor(c as DesktopControl) 27244
- 193.19.8 Constructor(g as graphics) 27244
- 193.19.10 Constructor(w as DesktopWindow) 27245
- 193.19.11 Constructor(w as window) 27245

193.19.10 Constructor(w as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor for a window object.
Notes:

Queries HDC for window object.
Raises exceptions on failure.
See also:

- 193.19.6 Constructor(c as control) 27243
- 193.19.7 Constructor(c as DesktopControl) 27244
- 193.19.8 Constructor(g as graphics) 27244
- 193.19.9 Constructor(p as Picture) 27245
- 193.19.11 Constructor(w as window) 27245

193.19.11 Constructor(w as window)

MBS Win Plugin, Plugin Version: 21.1, Platform: Windows, Targets: Desktop only.

Function: The constructor for a window object.
Notes:

Queries HDC for window object.
Raises exceptions on failure.
See also:

- 193.19.6 Constructor(c as control) 27243
- 193.19.7 Constructor(c as DesktopControl) 27244
- 193.19.8 Constructor(g as graphics) 27244
- 193.19.9 Constructor(p as Picture) 27245
- 193.19.10 Constructor(w as DesktopWindow) 27245

193.19.12 Properties

193.19.13 Graphics as Graphics

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The references graphics object.
Notes: (Read only property)

193.19.14 Handle as Integer

MBS Win Plugin, Plugin Version: 20.3, Platform: Windows, Targets: Desktop only.

Function: The handle.
Notes:

This is HDC to be used with declares.
(Read only property)

193.20 class WindowsGUIResourcesMBS

193.20.1 class WindowsGUIResourcesMBS

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Class to retrieves the count of handles to graphical user interface (GUI) objects in use by the specified process.
Notes:

Allows you to monitor how many handles you use from GDI.
As they are limited, your app will crash if it hits a limit.

193.20.6 Methods

193.20.7 Constructor

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

Examines current process and sets properties.

If the constructor succeeds, the properties are set to the count of handles to GUI objects in use by the process. If no GUI objects are in use, the return value is zero.

A process without a graphical user interface does not use GUI resources, therefore, GetGuiResources will return zero.
See also:

- 193.20.8 Constructor(ProcessID as integer) 27248

193.20.8 Constructor(ProcessID as integer)

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

Examines given process and sets properties.

If the constructor succeeds, the properties are set to the count of handles to GUI objects in use by the process. If no GUI objects are in use, the return value is zero.

A process without a graphical user interface does not use GUI resources, therefore, GetGuiResources will return zero.
See also:

- 193.20.7 Constructor 27248

193.20.9 Properties

193.20.10 GDIObjectCount as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The count of GDI objects.
Notes: (Read only property)

193.20.11 GDIObjectPeak as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak count of GDI objects.
Notes: (Read only property)

193.20.12 LastError as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error from Windows.
Notes:

Should be zero on success.
But could give error code like permissions denied, if you want to examine another process.
(Read only property)

193.20.13 UserObjectCount as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The count of USER objects.
Notes: (Read only property)

193.20.14 UserObjectPeak as Integer

MBS Win Plugin, Plugin Version: 18.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The peak count of USER objects.
Notes: (Read only property)

193.21 class WindowsIniMBS

193.21.1 class WindowsIniMBS

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to handle INI files on Windows.
Notes:

Ini files are build by this:

[Sectionname]
key1=value1

[Appname]
key2=value2

An ini file contains one or more sections which are labeled with a name of a section or in the Win.ini file with the application name.
Each section is filled with one or more key = value pairs.

193.21.3 Blog Entries

- MBS Real Studio Plugins, version 13.0pr10

193.21.4 Methods

193.21.5 GetPrivateProfileInt(appname as string, keyname as string, defaultValue as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads an integer value from the ini file.
Notes:

This is the function to work on a private ini file.
Returns the default value on any error.

193.21.6 GetPrivateProfileSection(appname as string) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns a section from an ini file.
Notes:

This is the function to work on a private ini file.
The string is built using CStrings (with ending chr(0)).
Returns "" on any error.

193.21.7 GetPrivateProfileString(appname as string, keyname as string, defaultValue as string = "") as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a string from an ini file.
Notes:

This is the function to work on a private ini file.
Returns the default value on any error.

193.21.8 GetPrivateProfileStruct(section as string, keyname as string, size as Integer) as memoryblock

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads a structure from an ini file.
Notes:

This is the function to work on a private ini file.
Size is the size of the memoryblock returned.
Returns nil on any error.
A checksum is checked to verify that the data is unchanged.

193.21.9 GetProfileInt(appname as string, keyname as string, defaultValue as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an integer value of the Win.ini file.
Notes: Returns the default value on any error.

193.21.10 GetProfileSection(appname as string) as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns a profile section of the Win.ini file.
Notes:

The string is built using CStrings (with ending chr(0)).
Returns "" on any error.

193.21.11 GetProfileString(appname as string, keyname as string, defaultValue as string = "") as string

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns an integer value of the Win.ini file.
Notes:

Searches for a string.
All three parameters are not allowed to be empty. And you must pass trimmed strings (no space on the left and/or right side)
Returns the default string on any error.

193.21.12 WritePrivateProfileSection(appname as string, value as string) as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Write a section to an ini file.
Notes:

This is the function to work on a private ini file.
Value is an array of strings concated with chr(0) as the delimiter.
Returns true if successfull.

193.21.13 WritePrivateProfileString(appname as string, keyname as string, value as string) as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a string to an ini file.
Example:

```
dim l as windowsIniMBS
```

```
l=new windowsIniMBS
l.filename="c:\test.ini"

if l.writePrivateProfileString("appname","keyname","value") then
msgBox "ok"
end if
```

Notes: This is the function to work on a private ini file.

193.21.14 WritePrivateProfileStruct(section as string, keyname as string, mem as memoryblock, size as Integer) as boolean

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes a memoryblock as a structure to a ini file.
Notes:

This is the function to work on a private ini file.
Returns true if successfull.
A checksum is stored to verify later whether the data was changed.

193.21.15 Properties

193.21.16 BufferSize as Integer

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the buffer used for reading strings from the INI files.
Notes:

Should not be bigger than 32767 bytes on Windows 95/98/ME.
Default size is 32000.
(Read and Write property)

193.21.17 Filename as String

MBS Win Plugin, Plugin Version: 3.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The file path of the private profile file to use.
Notes:

e.g. "C:\Test.ini" or just "myapp.ini".
(Read and Write property)

193.22 class WindowsKeyboardLayoutMBS

193.22.1 class WindowsKeyboardLayoutMBS

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a keyboard layout on Windows.

193.22.2 Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

193.22.3 Blog Entries

- MBS Real Studio Plugins, version 12.5pr8

193.22.4 Methods

193.22.5 Constructor

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new keyboard layout object with current layout.
Example:

```
dim w as new WindowsKeyboardLayoutMBS
MsgBox w.name
```

See also:

- 193.22.6 Constructor(SubLanguageID as Integer, PrimaryLanguageID as Integer) 27255

193.22.6 Constructor(SubLanguageID as Integer, PrimaryLanguageID as Integer)

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a new keyboard layout object with the given ID.
See also:

- 193.22.5 Constructor 27255

193.22.7 KeyboardLayoutName as string

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

Function: Returns the name of the current keyboard layout name.
Example:

msgbox WindowsKeyboardLayoutMBS.KeyboardLayoutName

193.22.8 List as WindowsKeyboardLayoutMBS()

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop only.

Function: Returns a list of all keyboard layouts installed.
Example:

```
dim list() as WindowsKeyboardLayoutMBS = WindowsKeyboardLayoutMBS.List
MsgBox str(UBound(list)+1)+" keyboard layouts."
```

193.22.9 Properties

193.22.10 Handle as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal ID of the keyboard layout.
Notes: (Read only property)

193.22.11 Name as String

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the name of the keyboard layout.
Example:

```
dim w as new WindowsKeyboardLayoutMBS
MsgBox w.name
```

Notes: (Read only property)

193.22.12 PrimaryLanguageID as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The primary ID for this language.
Notes: (Read and Write property)

193.22.13 SubLanguageID as Integer

MBS Win Plugin, Plugin Version: 12.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The sub language ID.
Notes:

This is needed as there are for example 16 different English variants.
(Read and Write property)

193.22.14 Constants

193.23 class WindowsKeyFilterMBS

193.23.1 class WindowsKeyFilterMBS

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to filter several windows keyboard shortcuts with a low level event filter.
Notes:

There is no need to keep the instance as all internal data is stored in global variables.

Key codes for Windows:

193.23.2 Blog Entries

- MBS Xojo Plugins, version 21.5pr5

193.23.3 Blog Entries

- MBS Xojo Plugins, version 21.5pr5

193.23.4 Methods

193.23.5 Install as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Install the event filter.
Notes:

Returns true on success and false on failure.
Second call in an application will return false unless Uninstall was called between.

193.23.6 Uninstall as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Uninstalls the event filter.
Notes: You only call this after Install returned true.

193.23.7 Properties

193.23.8 BlockAlt as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the alt key.
Notes: (Read and Write property)

193.23.9 BlockAltEscape as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Alt-Escape key combination.
Notes: (Read and Write property)

193.23.10 BlockAltF4 as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the ALT-F4 key combination.
Notes:

By default this one closes the application.
(Read and Write property)

193.23.11 BlockAltTab as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the ALT-Tab key combination.
Notes:

This combination is for task switching.
(Read and Write property)

193.23.12 BlockApplicationWindowsKey as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the application windows key.
Notes: (Read and Write property)

193.23.13 BlockBack as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the back key.
Notes: (Read and Write property)

193.23.14 BlockCancel as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Cancel key.
Notes: (Read and Write property)

193.23.15 BlockCapital as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the CapsLock key.
Notes: (Read and Write property)

193.23.16 BlockClear as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Clear key.
Notes: (Read and Write property)

193.23.17 BlockControl as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the control key.
Notes: (Read and Write property)

193.23.18 BlockControlAltDelete as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Control-Alt-Delete key combination.
Notes:

Sorry, does not have any effect as this key combination is processed earlier in event chain.
(Read and Write property)

193.23.19 BlockControlEscape as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Control-Escape key combination.
Notes: (Read and Write property)

193.23.20 BlockDelete as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the delete key.
Notes: (Read and Write property)

193.23.21 BlockDown as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the down key.
Notes: (Read and Write property)

193.23.22 BlockEnd as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the end key.
Notes: (Read and Write property)

193.23.23 BlockEscape as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the escape key.
Notes: (Read and Write property)

193.23.24 BlockExecute as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the execute key.
Notes: (Read and Write property)

193.23.25 BlockF1 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F1 key.
Notes: (Read and Write property)

193.23.26 BlockF10 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F10 key.
Notes: (Read and Write property)

193.23.27 BlockF11 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F11 key.
Notes: (Read and Write property)

193.23.28 BlockF12 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F12 key.
Notes: (Read and Write property)

193.23.29 BlockF13 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F13 key.
Notes: (Read and Write property)

193.23.30 BlockF14 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F14 key.
Notes: (Read and Write property)

193.23.31 BlockF15 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F15 key.
Notes: (Read and Write property)

193.23.32 BlockF16 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F16 key.
Notes: (Read and Write property)

193.23.33 BlockF17 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F17 key.
Notes: (Read and Write property)

193.23.34 BlockF18 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F18 key.
Notes: (Read and Write property)

193.23.35 BlockF19 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F19 key.
Notes: (Read and Write property)

193.23.36 BlockF2 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F2 key.
Notes: (Read and Write property)

193.23.37 BlockF20 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F20 key.
Notes: (Read and Write property)

193.23.38 BlockF21 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F21 key.
Notes: (Read and Write property)

193.23.39 BlockF22 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F22 key.
Notes: (Read and Write property)

193.23.40 BlockF23 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F23 key.
Notes: (Read and Write property)

193.23.41 BlockF24 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F24 key.
Notes: (Read and Write property)

193.23.42 BlockF3 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F3 key.
Notes: (Read and Write property)

193.23.43 BlockF4 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F4 key.
Notes: (Read and Write property)

193.23.44 BlockF5 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F5 key.
Notes: (Read and Write property)

193.23.45 BlockF6 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F6 key.
Notes: (Read and Write property)

193.23.46 BlockF7 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F7 key.
Notes: (Read and Write property)

193.23.47 BlockF8 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F8 key.
Notes: (Read and Write property)

193.23.48 BlockF9 as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the F9 key.
Notes: (Read and Write property)

193.23.49 BlockHelp as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the help key.
Notes: (Read and Write property)

193.23.50 BlockHome as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the home key.
Notes: (Read and Write property)

193.23.51 BlockInsert as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the insert key.
Notes: (Read and Write property)

193.23.52 BlockLeft as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the left key.
Notes: (Read and Write property)

193.23.53 BlockLeftButton as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the left mouse button.
Notes: (Read and Write property)

193.23.54 BlockLeftWindowsKey as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the left windows key.
Notes: (Read and Write property)

193.23.55 BlockMiddleButton as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the middle mouse button.
Notes: (Read and Write property)

193.23.56 BlockPause as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the pause key.
Notes: (Read and Write property)

193.23.57 BlockPrint as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the print key.
Notes:

BlockSnapshot is to block screenshots.
(Read and Write property)

193.23.58 BlockReturn as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the return key.
Notes: (Read and Write property)

193.23.59 BlockRight as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the right key.
Notes: (Read and Write property)

193.23.60 BlockRightButton as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the right mouse button.
Notes: (Read and Write property)

193.23.61 BlockRightWindowsKey as boolean

MBS Win Plugin, Plugin Version: 6.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the right windows key.
Notes: (Read and Write property)

193.23.62 BlockSelect as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the select key.
Notes: (Read and Write property)

193.23.63 BlockShift as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the shift key.
Notes: (Read and Write property)

193.23.64 BlockShiftSpace as boolean

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the Shift-Space key combination.
Notes:

This combination is for making non-breakable spaces.
(Read and Write property)

193.23.65 BlockSleep as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the sleep key.
Notes: (Read and Write property)

193.23.66 BlockSnapshot as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the snapshot key.
Notes:

This is the print key to do screenshots.
(Read and Write property)

193.23.67 BlockSpace as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the space key.
Notes: (Read and Write property)

193.23.68 BlockTab as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the tab key.
Notes: (Read and Write property)

193.23.69 BlockUp as Boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to filter the up key.
Notes: (Read and Write property)

193.23.70 BlockKey(virtualkeycode as Integer) as boolean

MBS Win Plugin, Plugin Version: 7.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to block a key with a specific virtual key code.
Notes:

You can set this to true for all keys you want to block.
The virtual key codes are in the windows header files.
For most common keys this class has properties. More can be added.

(Read and Write computed property)

193.23.71 Events

193.23.72 KeyDown(vkCode as Integer, scanCode as Integer, flags as Integer, time as Integer) as Boolean

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: .

Function: The key down event.
Notes:

vkCode: Specifies a virtual-key code. The code must be a value in the range 1 to 254.
scanCode: Specifies a hardware scan code for the key.
flags: Specifies the extended-key flag, event-injected flag, context code, and transition-state flag. This member is specified as follows.
time: Specifies the time stamp for this message.

the flag bits are like this:
bit 0: Specifies whether the key is an extended key, such as a function key or a key on the numeric keypad. The value is 1 if the key is an extended key; otherwise, it is 0.
bit 4: Specifies whether the event was injected. The value is 1 if the event was injected; otherwise, it is 0.
bit 5: Specifies the context code. The value is 1 if the ALT key is pressed; otherwise, it is 0.
bit 7: Specifies the transition state. The value is 0 if the key is pressed and 1 if it is being released.
Other bits are reserved.

There can be only one WindowsKeyFilterMBS object in your application which receives this events.

We have currently no idea in what context this event is received. And you should return as soon as possible as this event may be called a lot of times and can block user input.

Return true if you handled the key and false if you did not handle it.
Please have this event being as fast as possible. Do not put msgbox there. Better detect a key shortcut and launch a timer to perform the action a millisecond later, so you don't block the keyboard event system.
Blocks only KeyUp or only KeyDown can lead to trouble if the internal counters for special keys get our of sync.

193.23.73 KeyUp(vkCode as Integer, scanCode as Integer, flags as Integer, time as Integer) as Boolean

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: .

Function: The key up event.
Notes:

vkCode: Specifies a virtual-key code. The code must be a value in the range 1 to 254.
scanCode: Specifies a hardware scan code for the key.
flags: Specifies the extended-key flag, event-injected flag, context code, and transition-state flag. This member is specified as follows.
time: Specifies the time stamp for this message.

the flag bits are like this:
bit 0: Specifies whether the key is an extended key, such as a function key or a key on the numeric keypad. The value is 1 if the key is an extended key; otherwise, it is 0.
bit 4: Specifies whether the event was injected. The value is 1 if the event was injected; otherwise, it is 0.
bit 5: Specifies the context code. The value is 1 if the ALT key is pressed; otherwise, it is 0.
bit 7: Specifies the transition state. The value is 0 if the key is pressed and 1 if it is being released.
Other bits are reserved.

There can be only one WindowsKeyFilterMBS object in your application which receives this events.

We have currently no idea in what context this event is received. And you should return as soon as possible as this event may be called a lot of times and can block user input.

Return true if you handled the key and false if you did not handle it.
Please have this event being as fast as possible. Do not put msgbox there. Better detect a key shortcut and launch a timer to perform the action a millisecond later, so you don't block the keyboard event system.

193.24 class WindowsListMBS

193.24.1 class WindowsListMBS

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to list all the windows on a Windows system.
Notes:

To find all processes on Mac, use the ProcessMBS class.
To find all windows on Mac OS X, use the CGSWindowListMBS class.

193.24.2 Blog Entries

- MBS Xojo Plugins, version 19.2pr1
- SetFrontMost for Windows
- MBS Xojo / Real Studio Plugins, version 16.4pr1

193.24.3 Blog Entries

- MBS Xojo Plugins, version 19.2pr1
- SetFrontMost for Windows
- MBS Xojo / Real Studio Plugins, version 16.4pr1

193.24.4 Methods

193.24.5 ActivateWindow(index as integer)

MBS Win Plugin, Plugin Version: 19.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Activates the window.
Notes:

This function does more than just show. if the window has been minimized, it will restore it. Also the window is moved to front and made the current window for keyboard input.

Sadly windows limits which windows can go to front, so some windows may not come to front unless they are clicked on.

As activation can be asynchronously, the window may activate later, e.g. after current method ends.

193.24.6 Constructor

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which queries the values.
See also:

- 193.24.7 Constructor(win as DesktopWindow) 27333
- 193.24.8 Constructor(win as window) 27333
- 193.24.9 Constructor(WindowHandle as Integer) 27333

193.24.7 Constructor(win as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor which queries the values.
Notes: If win is not nil, we lookup child windows of this window.
See also:

- 193.24.6 Constructor 27333
- 193.24.8 Constructor(win as window) 27333
- 193.24.9 Constructor(WindowHandle as Integer) 27333

193.24.8 Constructor(win as window)

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop only.

Function: The constructor which queries the values.
Notes: If win is not nil, we lookup child windows of this window.
See also:

- 193.24.6 Constructor 27333
- 193.24.7 Constructor(win as DesktopWindow) 27333
- 193.24.9 Constructor(WindowHandle as Integer) 27333

193.24.9 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which queries the values.
Notes: If WindowHandle is not zero, we lookup child windows of this window.
See also:

- 193.24.6 Constructor 27333
- 193.24.7 Constructor(win as DesktopWindow) 27333
- 193.24.8 Constructor(win as window) 27333

193.24.10 Focus as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the handle to the window that has the keyboard focus, if the window is attached to the calling thread's message queue.
Notes: If the calling thread's message queue does not have an associated window with the keyboard focus, the return value is 0.

193.24.11 ForegroundWindow as Integer

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a handle to the foreground window (the window with which the user is currently working).
Notes:

The system assigns a slightly higher priority to the thread that creates the foreground window than it does to other threads.
The return value is a handle to the foreground window. The foreground window can be 0 in certain circumstances, such as when a window is losing activation.

193.24.12 Update

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the values and returns true on success.

193.24.13 WindowClassName(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the window class name of the window with the given index.
Notes:

For example "SciCalc" for the calc.exe main window.

This may send a message to the thread owning the window and if that one doesn't answer quickly, the call may wait for an answer.
You may want to skip your own process windows to not wait for your own threads.

193.24.14 WindowClassNameFromHandle(Handle as Integer) as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the window class name of the window with the given handle.
Notes: For example "SciCalc" for the calc.exe main window.

193.24.15 WindowHandle(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.16 WindowHeight(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.17 WindowIconic(index as Integer) as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the window with the given index is minimized.

193.24.18 WindowImageFileName(index as Integer) as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the path to the execuable file of the process which owns the window with the given index.
Notes:

Requires Windows XP or newer.
Returns an empty string on any error.

193.24.19 WindowLeft(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The x position of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.20 WindowProcessID(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The process ID of the process which ows the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.21 WindowText(index as Integer) as string

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the title of the window with the given index.
Notes:

This may send a message to the thread owning the window and if that one doesn't answer quickly, the call may wait for an answer.
You may want to skip your own process windows to not wait for your own threads.

193.24.22 WindowTextFromHandle(Handle as Integer) as String

MBS Win Plugin, Plugin Version: 15.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Returns the title of the window with the given handle.
Notes:

This may send a message to the thread owning the window and if that one doesn't answer quickly, the call may wait for an answer.
You may want to skip your own process windows to not wait for your own threads.

193.24.23 WindowThreadHandle(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The thread handle of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.24 WindowTop(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The Y position of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.25 WindowVisible(index as Integer) as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the window with the given index is visible.

193.24.26 WindowWidth(index as Integer) as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the window with the given index.
Notes: This value is updated by the Constructor and the Update method.

193.24.27 WindowZoomed(index as Integer) as boolean

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the window with the given index is zoomed.

193.24.28 Properties

193.24.29 CurrentProcessID as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current process ID.
Notes:

This value is updated by the Constructor and the Update method.
(Read and Write property)

193.24.30 CurrentThreadID as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current thread ID.
Notes:

This value is updated by the Constructor and the Update method.
(Read and Write property)

193.24.31 DesktopWindowHandle as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the desktop window.
Notes:

This value is updated by the Constructor and the Update method.
(Read and Write property)

193.24.32 ForegroundWindowHandle as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the foreground window.
Notes:

This value is updated by the Constructor and the Update method.
(Read and Write property)

193.24.33 ParentWindowHandle as Integer

MBS Win Plugin, Plugin Version: 16.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle of the parent window.
Notes:

This value is set by the Constructor.
(Read and Write property)

193.24.34 WindowCount as Integer

MBS Win Plugin, Plugin Version: 8.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of windows.
Notes:

This value is updated by the Constructor and the Update method.
(Read and Write property)

193.25 class WindowsMonitorMBS

193.25.1 class WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to query monitor details on Windows.
Example:

```
for each m as WindowsMonitorMBS in WindowsMonitorMBS.AllMonitors
MsgBox m.DeviceName+": "+str(m.Left)+"x"+str(m.top)+" "+str(m.Width)+"x"+str(m.Height)
next
```

193.25.2 Blog Entries

- MBS Real Studio Plugins, version 11.3pr2

193.25.3 Blog Entries

- MBS Real Studio Plugins, version 11.3pr2

193.25.4 Methods

193.25.5 AllMonitors as WindowsMonitorMBS()

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all monitors.
Example:

```
for each m as WindowsMonitorMBS in WindowsMonitorMBS.AllMonitors
MsgBox m.DeviceName+": "+str(m.Left)+"x"+str(m.top)+" "+str(m.Width)+"x"+str(m.Height)
next
```

Notes: Returns an array with an entry for each monitor connected to this computer.
See also:

- 193.25.6 AllMonitors(monitors() as WindowsMonitorMBS) as Integer 27340

193.25.6 AllMonitors(monitors() as WindowsMonitorMBS) as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries all monitors.
Notes:

Returns the number of monitors found and sets the monitor objects in the array.
if the array is too short, you get the first ubound(monitors)+1 fonts set there.
See also:

- 193.25.5 AllMonitors as WindowsMonitorMBS() 27340

193.25.7 MonitorFromPoint(x as Integer, y as Integer, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MonitorFromPoint function retrieves a handle to the display monitor that contains a specified point.
Example:

```
dim m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromPoint(1900, 1000)

if m = nil then
MsgBox "Your display is smaller than 1900 x 1000"
else
MsgBox m.DeviceName
end if
```

Notes:

x and y: The point of interest in virtual-screen coordinates.
Flags: Determines the function's return value if the point is not contained within any display monitor.

This parameter can be one of the following values.

Value	Meaning
kDefaultToNearest	Returns a handle to the display monitor that is nearest to the point.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns a handle to the primary display monitor.

If the point is contained by a display monitor, the return value is that display monitor.
If the point is not contained by a display monitor, the return value depends on the value of flags.

193.25.8 MonitorFromRect(left as Integer, top as Integer, width as Integer, height as Integer, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MonitorFromRect function retrieves the display monitor that has the largest area of intersection with a specified rectangle.
Example:

```
dim m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromRect(0,0,100,100)
MsgBox m.DeviceName
```

Notes:

left, top, width, height: The rectangle of interest in virtual-screen coordinates.
Flags: Determines the function's return value if the rectangle does not intersect any display monitor.

This parameter can be one of the following values.

Value	Meaning
kDefaultToNearest	Returns a handle to the display monitor that is nearest to the rectangle.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns a handle to the primary display monitor.

If the rectangle intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the rectangle.
If the rectangle does not intersect a display monitor, the return value depends on the value of Flags.

193.25.9 MonitorFromWindow(win as DesktopWindow, flags as integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The MonitorFromWindow function retrieves the display monitor that has the largest area of intersection with the bounding rectangle of a specified window.
Notes:

win: The window of interest.
Flags: Determines the function's return value if the window does not intersect any display monitor.

This parameter can be one of the following values:

Value	Meaning
kDefaultToNearest	Returns the display monitor that is nearest to the window.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns the primary display monitor.

If the window intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the window.

If the window does not intersect a display monitor, the return value depends on the value of Flags.
If the window is currently minimized, MonitorFromWindow uses the rectangle of the window before it was minimized.
See also:

- 193.25.10 MonitorFromWindow(win as window, flags as Integer = 0) as WindowsMonitorMBS 27343
- 193.25.11 MonitorFromWindow(WindowHandle as Integer, flags as Integer = 0) as WindowsMonitorMBS 27344

193.25.10 MonitorFromWindow(win as window, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop only.

Function: The MonitorFromWindow function retrieves the display monitor that has the largest area of intersection with the bounding rectangle of a specified window.
Example:

```
dim m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromWindow(window1)
MsgBox m.DeviceName
```

Notes:

win: The window of interest.
Flags: Determines the function's return value if the window does not intersect any display monitor.

This parameter can be one of the following values:

Value	Meaning
kDefaultToNearest	Returns the display monitor that is nearest to the window.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns the primary display monitor.

If the window intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the window.

If the window does not intersect a display monitor, the return value depends on the value of Flags.
If the window is currently minimized, MonitorFromWindow uses the rectangle of the window before it was minimized.
See also:

- 193.25.9 MonitorFromWindow(win as DesktopWindow, flags as integer = 0) as WindowsMonitorMBS 27342
- 193.25.11 MonitorFromWindow(WindowHandle as Integer, flags as Integer = 0) as WindowsMonitorMBS 27344

193.25.11 MonitorFromWindow(WindowHandle as Integer, flags as Integer = 0) as WindowsMonitorMBS

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The MonitorFromWindow function retrieves the display monitor that has the largest area of intersection with the bounding rectangle of a specified window.
Example:

```
dim m as WindowsMonitorMBS = WindowsMonitorMBS.MonitorFromWindow(window1.handle)
MsgBox m.DeviceName
```

Notes:

WindowHandle: A handle to the window of interest.
Flags: Determines the function's return value if the window does not intersect any display monitor.

This parameter can be one of the following values:

Value	Meaning
kDefaultToNearest	Returns the display monitor that is nearest to the window.
kDefaultToNull	Returns nil.
kDefaultToPrimary	Returns the primary display monitor.

If the window intersects one or more display monitor rectangles, the return value is the display monitor that has the largest area of intersection with the window.

If the window does not intersect a display monitor, the return value depends on the value of Flags.
If the window is currently minimized, MonitorFromWindow uses the rectangle of the window before it was

minimized.
See also:

- 193.25.9 MonitorFromWindow(win as DesktopWindow, flags as integer = 0) as WindowsMonitorMBS 27342
- 193.25.10 MonitorFromWindow(win as window, flags as Integer = 0) as WindowsMonitorMBS 27343

193.25.12 Properties

193.25.13 Bottom as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bottom value of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.14 DeviceName as String

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A string that specifies the device name of the monitor being used.
Notes: (Read and Write property)

193.25.15 Height as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.16 HMonitor as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal window handle for this monitor.
Notes: (Read and Write property)

193.25.17 IsPrimary as Boolean

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is the primary display monitor.
Notes: (Read and Write property)

193.25.18 Left as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The left position of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.19 Right as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The right value of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.20 Top as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The top position of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.21 Width as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the display monitor.
Notes:

Specifies the display monitor rectangle, expressed in virtual-screen coordinates. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.22 WorkBottom as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The bottom value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.23 WorkHeight as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.24 WorkLeft as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The left value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in

virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.25 WorkRight as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The right value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.26 WorkTop as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The top value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.27 WorkWidth as Integer

MBS Win Plugin, Plugin Version: 11.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width value from useable screen area.
Notes:

Specifies the work area rectangle of the display monitor that can be used by applications, expressed in virtual-screen coordinates. Windows uses this rectangle to maximize an application on the monitor. The rest of the area of the monitor contains system windows such as the task bar and side bars. Note that if the monitor is not the primary display monitor, some of the rectangle's coordinates may be negative values.
(Read and Write property)

193.25.28 Constants

193.25.29 kDefaultToNearest = 2

MBS Win Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Return the display monitor that is nearest to the window, point or rectangle.

193.25.30 kDefaultToNull = 0

MBS Win Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Returns nil if no monitor matches is located at point, window or rectangle.

193.25.31 kDefaultToPrimary = 1

MBS Win Plugin, Plugin Version: 11.3.

Function: One of the flag constants.
Notes: Returns the primary display monitor if point, rect or window does not point to a monitor.

193.26 class WindowsPipeMBS

193.26.1 class WindowsPipeMBS

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a Windos Pipe.
Notes:

A replacement for IPCSocket on Windows.
Can be used in two applications to exchange data.

193.26.8 Methods

193.26.9 Close

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Closes the pipe.
Notes: Called by destructor automatically.

193.26.10 Constructor

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

193.26.11 CreatePipe(Name as string, MessageMode as Boolean = false, BufferSize as Integer = & h100000, AllowAllUsers as Boolean = false) as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Creates a named pipe.
Notes:

Buffersize defines the size for input/output buffers.
Returns true on success or false on failure.
Lasterror is set.

Normally the pipe allows only same user.
But if AllowAllUsers is true, you can talk to other users or from service to user.

If name does not start with \then we prefix it with "\\.\Pipe\".

193.26.12 OpenPipe(Name as string) as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Opens an existing named pipe from client side.
Notes:

Returns true on success or false on failure.
Lasterror is set.

If name does not start with \then we prefix it with "\\.\Pipe\".

193.26.13 Peek(ByteCount as Integer) as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data without removing it from the buffer.
Notes:

Reads up to the given number of bytes.
BytesRead property is set and data is returned.
LastError property is set.

193.26.14 PeekAll as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads all data without removing it from the buffer.
Notes:

Reads whole message or in byte mode
BytesRead property is set and data is returned.
LastError property is set.

193.26.15 Read(ByteCount as Integer) as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads data.
Notes:

Reads up to the given number of bytes.
BytesRead property is set and data is returned.
LastError property is set.

193.26.16 ReadAll as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads all data.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Dim r As String = pipe.ReadAll
Dim d As String = DefineEncoding(r, Encodings.UTF8)

List.AddRow d
```

Notes:

Reads whole message or in byte mode what is available.
BytesRead property is set and data is returned.
LastError property is set.

193.26.17 Write(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data.
Notes:

Lasterror is set.
BytesWritten is set to number of bytes sent.
See also:

- 193.26.18 Write(data as string) 27353

193.26.18 Write(data as string)

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes data.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Dim d As String = ConvertEncoding(MessageField.Text, encodings.UTF8)
If d.Len >0 Then
pipe.Write d
MessageField.Text = ""
End If
```

Notes:

Lasterror is set.

BytesWritten is set to number of bytes sent.
See also:

- 193.26.17 Write(data as MemoryBlock) 27353

193.26.19 Properties

193.26.20 BytesAvailable as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of bytes available in buffer.
Notes: (Read only property)

193.26.21 BytesRead as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of bytes read.
Notes: (Read and Write property)

193.26.22 BytesWritten as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Number of bytes written.
Notes: (Read and Write property)

193.26.23 Handle as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle for the pipe.
Notes: (Read only property)

193.26.24 InputBufferSize as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The input buffer size.
Notes: (Read only property)

193.26.25 IsClient as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is client or server side.
Notes:

True if this is client side.
(Read only property)

193.26.26 IsMessageMode as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this pipe is in message mode.
Notes: (Read only property)

193.26.27 IsOpen as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries whether pipe is open.
Notes: (Read only property)

193.26.28 IsServer as Boolean

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this is client or server side.
Notes:

True if this is server side.
(Read only property)

193.26.29 LastError as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

A Windows error code.
(Read and Write property)

193.26.30 MessageBytesAvailable as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries number of bytes available for current message.
Notes: (Read only property)

193.26.31 Name as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the pipe.
Notes:

This is name as used in CreatePipe or OpenPipe method.
(Read and Write property)

193.26.32 NamedPipeClientComputerName as String

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the client computer name for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeClientComputerName: "+pipe.NamedPipeClientComputerName
```

Notes: (Read only property)

193.26.33 NamedPipeClientProcessId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the client process identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeClientProcessId: "+str(pipe.NamedPipeClientProcessId)
```

Notes: (Read only property)

193.26.34 NamedPipeClientSessionId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the client session identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeClientSessionId: "+str(pipe.NamedPipeClientSessionId)
```

Notes: (Read only property)

193.26.35 NamedPipeServerProcessId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the server process identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeServerProcessId: "+str(pipe.NamedPipeServerProcessId)
```

Notes: (Read only property)

193.26.36 NamedPipeServerSessionId as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the server session identifier for the specified named pipe.
Example:

```
dim Pipe as WindowsPipeMBS // your pipe

Msgbox "NamedPipeServerSessionId: "+str(pipe.NamedPipeServerSessionId)
```

Notes: (Read only property)

193.26.37 OutputBufferSize as Integer

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The output buffer size.
Notes: (Read only property)

193.26.38 Events

193.26.39 Connected

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: .

Function: The connected event.
Notes: Called when pipe is connected on either client or server side.

193.26.40 DataAvailable(BytesAvailable as Integer, MessageBytesAvailable as Integer)

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: .

Function: The event called when new data is available.

193.26.41 PipeBroken

MBS Win Plugin, Plugin Version: 19.5, Platform: Windows, Targets: .

Function: The event called when pipe breaks.
Notes:

The plugin will stop calling DataAvailable handler.
You can call Close and CreatePipe method to open pipe again.

193.27 class WindowsPreviewHandlerMBS

193.27.1 class WindowsPreviewHandlerMBS

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for showing previews on windows.
Notes:

This is linke a control which you can put into a window to show a preview for a file.

Uses IPreviewHandler class from Microsoft, so also see here:
https://docs.microsoft.com/en-us/windows/win32/api/shobjidl_core/nn-shobjidl_core-ipreviewhandler
https://docs.microsoft.com/de-de/windows/win32/shell/preview-handlers

The preview handlers we find are those listed in the registry here:
Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\PreviewHandlers

193.27.6 Methods

193.27.7 Constructor(ClassID as string)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes the object with loading the class with the given classid.
Notes: You find those ClassIDs in the registry (See example project).

193.27.8 DoPreview

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Directs the preview handler to load data from the source specified in an earlier Initialize method call, and to begin rendering to the previewer window.
Notes:

Lasterror is set.

If the previewer window has not yet been created, then it must be created after this method has been called. The preview handler is responsible for painting the area specified in SetWindow or SetRect. If these methods are called while the preview handler is rendering, the window must be reparented/resized without stopping or restarting the rendering of the item.
This method should be called only after SetWindow has been called.
Aditionally, this method should be called only after Constructor has been called.

193.27.9 InitWithData(data as MemoryBlock)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads the given data.
Notes: Lasterror is set.
See also:

- 193.27.10 InitWithData(data as string) 27361

193.27.10 InitWithData(data as string)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads the given data.
Notes: Lasterror is set.
See also:

- 193.27.9 InitWithData(data as MemoryBlock) 27361

193.27.11 InitWithFile(file as folderitem)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Loads the given file.
Notes:

Lasterror is set.
If the preview handler does not support reading file, the plugin reads the file and passes as data.

193.27.12 SetBackgroundColor(red as Integer, green as Integer, blue as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the background color of the preview handler.
Notes:

Lasterror is set.
Not all preview handlers implement this method.

193.27.13 SetFocus

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Directs the preview handler to set focus to itself.
Notes: Lasterror is set.

193.27.14 SetFont(size as Integer, font as string)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the font attributes to be used for text within the preview handler.
Notes:

Lasterror is set.
Not all preview handlers implement this method.

193.27.15 SetRect(left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Directs the preview handler to change the area within the parent hwnd that it draws into.
Notes:

Lasterror is set.

If called before the preview handler window has been created, the new rectangle replaces the rectangle previously received in the SetWindow call.
If called after the preview handler window has been created, the preview handler window must be resized.
If the preview handler is already rendering, then the preview must be resized without interrupting the render process.

193.27.16 SetTextColor(red as Integer, green as Integer, blue as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the color of the text within the preview handler.
Notes:

Lasterror is set.
Not all preview handlers implement this method.

193.27.17 SetWindow(win as ContainerControl, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop only.

Function: Sets the parent to a container control.
See also:

- 193.27.18 SetWindow(win as Control, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.19 SetWindow(win as DesktopContainer, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.20 SetWindow(win as DesktopControl, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.21 SetWindow(win as DesktopWindow, left as integer, top as integer, width as integer, height as integer) 27365

- 193.27.22 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 27366

193.27.18 SetWindow(win as Control, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop only.

Function: Sets the parent to a control.
See also:

- 193.27.17 SetWindow(win as ContainerControl, left as integer, top as integer, width as integer, height as integer) 27363
- 193.27.19 SetWindow(win as DesktopContainer, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.20 SetWindow(win as DesktopControl, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.21 SetWindow(win as DesktopWindow, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.22 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 27366

193.27.19 SetWindow(win as DesktopContainer, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop only.

Function: Sets the parent to a desktop container control.
See also:

- 193.27.17 SetWindow(win as ContainerControl, left as integer, top as integer, width as integer, height as integer) 27363
- 193.27.18 SetWindow(win as Control, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.20 SetWindow(win as DesktopControl, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.21 SetWindow(win as DesktopWindow, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.22 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 27366

193.27.20 SetWindow(win as DesktopControl, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.1, Platform: Windows, Targets: Desktop only.

Function: Sets the parent to a desktop control.
See also:

- 193.27.17 SetWindow(win as ContainerControl, left as integer, top as integer, width as integer, height as integer) 27363
- 193.27.18 SetWindow(win as Control, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.19 SetWindow(win as DesktopContainer, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.21 SetWindow(win as DesktopWindow, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.22 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 27366

193.27.21 SetWindow(win as DesktopWindow, left as integer, top as integer, width as integer, height as integer)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Sets the parent window of the previewer window, as well as the area within the parent to be used for the previewer window.
Notes:

Pass the window and the area for the previewer.
Lasterror is set.

The preview handler is responsible for painting the entire area. If the previewer window has been created, the preview handler must associate the previewer window to the new parent hwnd and resize the previewer window to the area defined by the rectangle. If the previewer window has not yet been created, the preview handler must remember this information for when the previewer window is created in DoPreview.
It is preferred that this information be stored prior to calling DoPreview. Doing so increases performance at setup time for any cases where the preview does not start.

- 193.27.19 SetWindow(win as DesktopContainer, left as integer, top as integer, width as integer, height as integer) 27364
- 193.27.20 SetWindow(win as DesktopControl, left as integer, top as integer, width as integer, height as integer) 27365
- 193.27.22 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer) 27366

193.27.22 SetWindow(win as window, left as Integer, top as Integer, width as Integer, height as Integer)

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: Sets the parent window of the previewer window, as well as the area within the parent to be used for the previewer window.
Notes:

Pass the window and the area for the previewer.
Lasterror is set.

The preview handler is responsible for painting the entire area. If the previewer window has been created, the preview handler must associate the previewer window to the new parent hwnd and resize the previewer window to the area defined by the rectangle. If the previewer window has not yet been created, the preview handler must remember this information for when the previewer window is created in DoPreview.
It is preferred that this information be stored prior to calling DoPreview. Doing so increases performance at setup time for any cases where the preview does not start.

193.27.23 Unload

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Directs the preview handler to cease rendering a preview and to release all resources that have been allocated based on the item passed in during the initialization.
Notes:

Lasterror is set.
When called, the preview window will be destroyed.

This method should be called only after Constructor has been called. All resources associated with this initialization will be released. Prior to calling DoPreview, this preview handler will be re-initialized with a call to one of the initialization interfaces and a call to SetWindow.

193.27.24 Properties

193.27.25 Handle as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal object reference.
Notes: (Read only property)

193.27.26 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

193.27.27 LasterrorString as String

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the error number in the lasterror property.
Notes: (Read only property)

193.27.28 SupportsDataLoading as Boolean

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the preview handler supports loading data from a string or memoryblock.
Notes: (Read only property)

193.27.29 SupportsFileLoading as Boolean

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether the preview handler supports loading files.
Notes:

As the plugin can also load file and pass as data if needed, this function also returns true if SupportsDataLoading is also true.
(Read only property)

193.27.30 Window as Variant

MBS Win Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop only.

Function: The parent window.
Notes:

Can reference a Window or DesktopWindow object.
(Read only property)

193.28 class WindowsPropertiesMBS

193.28.1 class WindowsPropertiesMBS

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The class for window properties.
Example:

```
dim w as new WindowsPropertiesMBS(self)

dim key as string = w.EdgeGestureDisableTouchWhenFullscreen

w.Value(key) = true

dim c as integer = w.count
for i as integer = 0 to c-1
dim k as string = w.key(i)
MsgBox k+" "+w.Value(k)
next
```

193.28.6 Methods

193.28.7 Close

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Closes properties.
Notes: Same as destructor.

193.28.8 Commit

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Commits values.
Notes:

Optional as window properties are set directly.
LastError and LastErrorMessage are set.

193.28.9 Constructor(Win as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves an object that represents a specific window's collection of properties, which allows those properties to be queried or set.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.

An application can use this function to obtain access to a window's property store so that it can set an explicit Application User Model ID (AppUserModelID) in the System.AppUserModel.ID property.

Raises FunctionNotFoundException if function is not available, PlatformNotSupportedException if not running on Windows, NilObjectException if window is nil or invalid and UnsupportedOperationException if Window properties can't be queried.
See also:

- 193.28.10 Constructor(Win as Window)

193.28.10 Constructor(Win as Window)

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Retrieves an object that represents a specific window's collection of properties, which allows those properties to be queried or set.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.

An application can use this function to obtain access to a window's property store so that it can set an explicit Application User Model ID (AppUserModelID) in the System.AppUserModel.ID property.

Raises FunctionNotFoundException if function is not available, PlatformNotSupportedException if not running on Windows, NilObjectException if window is nil or invalid and UnsupportedOperationException if Window properties can't be queried.
See also:

- 193.28.9 Constructor(Win as DesktopWindow) 27370

193.28.11 Count as Integer

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Queries number of values.
Example:

```
dim w as new WindowsPropertiesMBS(self)

// show all keys with values
dim c as integer = w.count
for i as integer = 0 to c-1
dim k as string = w.key(i)
MsgBox k+" "+w.Value(k)
next
```

Notes: LastError and LastErrorMessage are set.

193.28.12 EdgeGestureDisableTouchWhenFullscreen as String

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The property name used to disable touch gesture with full screen window.
Example:

```
dim w as new WindowsPropertiesMBS(self)
dim key as string = w.EdgeGestureDisableTouchWhenFullscreen

w.Value(key) = true
```

193.28.13 Key(Index as Integer) as String

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The key with given index.
Notes:

Index from 0 to Count-1.
Keys are passed as UUID followed by property ID.
LastError and LastErrorMessage are set.

193.28.14 Values as Dictionary

MBS Win Plugin, Plugin Version: 20.0, Platform: Windows, Targets: Desktop only.

Function: Queries all values as dictionary.
Notes: The dictionary is a copy, so changes to the dictionary are not going back to the window.

193.28.15 Properties

193.28.16 Handle as Integer

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The internal object reference.
Notes: (Read and Write property)

193.28.17 LastError as Integer

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The last error code.
Notes: (Read and Write property)

193.28.18 LastErrorMessage as String

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: The last error message.
Notes: (Read and Write property)

193.28.19 Value(Key as String) as Variant

MBS Win Plugin, Plugin Version: 17.5, Platform: Windows, Targets: Desktop only.

Function: Set or query property value.
Example:

```
dim w as new WindowsPropertiesMBS(self)

// show all keys with values
dim c as integer = w.count
for i as integer = 0 to c-1
dim k as string = w.key(i)
MsgBox k+" "+w.Value(k)
next
```

Notes:

Keys are passed as UUID followed by property ID.
LastError and LastErrorMessage are set.
(Read and Write computed property)

193.29 class WindowsReportErrorMBS

193.29.1 class WindowsReportErrorMBS

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for an event source on Windows to report errors.
Example:

```
// early on app start, setup this
dim r as new WindowsReportErrorMBS("Application")

// later report something
const Category = 1
const EventID = 1000
r.Report r.kEventLogWarningType, Category, EventID, array("Hello World")
```

193.29.6 Methods

193.29.7 Constructor(SourceName as String, UNCServerName as String = "")

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves a registered handle to the specified event log.
Notes:

UNCServerName: The Universal Naming Convention (UNC) name of the remote server on which this operation is to be performed. If this parameter is "", the local computer is used.
SourceName: The name of the event source whose handle is to be retrieved. The source name must be a subkey of a log under the Eventlog registry key. Note that the Security log is for system use only.
Note This string must not contain characters prohibited in XML Attributes, with the exception of XML Escape sequences such as & lt & gl.

If the source name cannot be found, the event logging service uses the Application log. Although events will be reported , the events will not include descriptions because there are no message and category message files for looking up descriptions related to the event identifiers.

Raises exception on failure.

193.29.8 Report(Type as Integer, Category as Integer, EventID as Integer, Strings() as string = nil, RawData as MemoryBlock = nil)

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes an entry at the end of the event log.
Notes:

Type: The type of event to be logged. See kEventLog* constants.
Category: The event category. This is source-specific information; the category can have any value.
EventID: The event identifier. The event identifier specifies the entry in the message file associated with the event source.
Strings: An array of strings that are merged into the message before Event Viewer displays the string to the user. This parameter must can be nil for no strings. Each string is limited to 31,839 characters.
RawData:

193.29.9 Properties

193.29.10 Handle as Integer

MBS Win Plugin, Plugin Version: 21.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle to the event source.
Notes: (Read and Write property)

193.29.11 Constants

193.29.12 kEventLogAuditFailure = 16

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the event type constants.
Notes: Failure Audit event

193.29.13 kEventLogAuditSuccess = 8

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the event type constants.
Notes: Success Audit event

193.29.14 kEventLogErrorType = 1

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the event type constants.
Notes: Error event

193.29.15 kEventLogInformationType = 4

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the event type constants.
Notes: Information event

193.29.16 kEventLogSuccess = 0

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the event type constants.
Notes: Information event

193.29.17 kEventLogWarningType = 2

MBS Win Plugin, Plugin Version: 21.0.

Function: One of the event type constants.
Notes: Warning event

193.30 class WindowsScriptErrorExceptionMBS

193.30.1 class WindowsScriptErrorExceptionMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The exception class raised when an error happens while executing a script.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MsgBox e.message
```

Notes: Subclass of the RuntimeException class.

193.30.2 Blog Entries

- Windows Scripts in REALbasic

193.30.3 Blog Entries

- Windows Scripts in REALbasic

193.31 class WindowsScriptErrorMBS

193.31.1 class WindowsScriptErrorMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for error details.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "JScript"

try
w.AddCode "function Test(a,b) { 1 return a+b; } " // 1 is there to make error

dim p(-1) as string = array("Hello ", "World from JavaScript")
dim x as string = w.Run("Test", p)
catch e as WindowsScriptErrorExceptionMBS
dim error as WindowsScriptErrorMBS = w.Error
MsgBox error.Description+EndOfLine+"in "+str(error.Line)+":"+str(error.Column)
end try
```

193.31.2 Properties

193.31.3 Column as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Source code column position where the error occurred.
Notes: (Read and Write property)

193.31.4 Description as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Friendly description of error.
Notes: (Read and Write property)

193.31.5 Line as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Source code line number where the error occurred.
Notes: (Read and Write property)

193.31.6 Number as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Error number.
Notes: (Read and Write property)

193.31.7 Source as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Source of the error.
Notes: (Read and Write property)

193.31.8 Text as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Line of source code on which the error occurred.
Notes: (Read and Write property)

193.32 class WindowsScriptMBS

193.32.1 class WindowsScriptMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to run Windows Scripts.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "JScript"
w.AddCode "function Test(a,b) { return a+b; } "

dim p(-1) as string = array("Hello ", "World from JavaScript")
dim x as string = w.Run("Test", p)

MsgBox x
```

193.32.4 Methods

193.32.5 AddCode(code as string)

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Add code to the global module.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1" // define some global variables
w.AddCode "b = 2"
```

Notes: If you use VBScript, you don't need "dim" keyword for defining variables.

193.32.6 ClearError

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Clears the current error.

193.32.7 Eval(code as string) as string

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Evaluate an expression within the context of the global module.

193.32.8 ExecuteStatement(statement as string)

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Execute a statement within the context of the global module.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
```

```
w.AddCode "b = 2"

w.AllowUI = true
w.ExecuteStatement "msgbox a+b" // shows 3

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MsgBox e.message
```

193.32.9 Reset

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reset the scripting engine to a newly created state.

193.32.10 Run(functionName as string, parameters() as string) as string

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Call a procedure defined in the global module.
Example:

```
dim w as new WindowsScriptMBS

// First try VBScript
w.Language = "VBScript"

dim lines(-1) as string

lines.append "Function Test(a,b)"
lines.append "Test = a+b"
lines.append "End Function"

w.AddCode Join(lines, EndOfLine.Windows)

dim p(-1) as string = array("Hello ", "World from VBScript")
dim x as string = w.Run("Test", p)

'MsgBox x

// Second try JScript
w.Language = "JScript"
```

```
redim lines(-1)
lines.append "function Test(a,b)"
lines.Append " { "
lines.append "return a+b;"
lines.append " } "

w.AddCode Join(lines, EndOfLine.Windows)

p = array("Hello ", "World from JavaScript")
x = w.Run("Test", p)

MsgBox x

Exception e as WindowsScriptErrorExceptionMBS
MsgBox "Exception: "+e.message
```

193.32.11 Properties

193.32.12 AllowUI as Boolean

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enable or disable display of the UI.
Example:

```
dim w as new WindowsScriptMBS

w.Language = "VBScript"

w.AddCode "a = 1"
w.AddCode "b = 2"

w.AllowUI = true
w.ExecuteStatement "msgbox a+b" // shows 3

w.AllowUI = false
w.ExecuteStatement "msgbox a+b" // shows exception with access denied

Exception e as WindowsScriptErrorExceptionMBS
MsgBox e.message
```

Notes: (Read and Write property)

193.32.13 Error as WindowsScriptErrorMBS

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current error status.
Notes: (Read only property)

193.32.14 Language as String

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Language engine to use.
Example:

```
dim w as new WindowsScriptMBS

w.Language = w.kLanguageJScript

MsgBox w.Language // shows "JScript"

w.Language = w.kLanguageVBScript

MsgBox w.Language // shows "VBScript"
```

Notes:

Use kLanguageVBScript or kLanguageJScript constants.
Setting this property calls reset internally.
(Read and Write property)

193.32.15 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes:

0 is no error. -1 is a parameter error on the plugin side. All other codes are from Windows.
(Read and Write property)

193.32.16 SitehWnd as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window handle for the window being parent to any window the scripts create.
Example:

```
dim w as new WindowsScriptMBS
w.SitehWnd = window1.handle
```

Notes:

The window is used as the parent window for message boxes, alerts, etc.
(Read and Write property)

193.32.17 Timeout as Integer

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Length of time in milliseconds that a script can execute before being considered hung.
Notes: (Read and Write property)

193.32.18 UseSafeSubset as Boolean

MBS Win Plugin, Plugin Version: 10.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Force script to execute in safe mode and disallow potentially harmful actions.
Notes: (Read and Write property)

193.32.19 Constants

193.32.20 kLanguageJScript = "JScript"

MBS Win Plugin, Plugin Version: 10.0.

Function: One of the language constants.
Notes: Using this constant you can switch to JavaScript.

193.32.21 kLanguageVBScript = "VBScript"

MBS Win Plugin, Plugin Version: 10.0.

Function: One of the language constants.
Notes: Using this constant you can switch to VBScript.

193.33 class WindowsSerialPortsMBS

193.33.1 class WindowsSerialPortsMBS

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: This is a class to query the serial ports on a Windows system.
Notes: This class was created in response to feedback report 8212: Serial Port Hangup on Windows.

193.33.6 Methods

193.33.7 Constructor(OnlyPresent as boolean = true)

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor which builds the list of devices.

193.33.8 Description(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The description of this serial port.

193.33.9 DevicePath(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The device path of this serial port.

193.33.10 FriendlyName(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The display name of this serial port.

193.33.11 Location(index as Integer) as string

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The location of this serial port.

193.33.12 QueryComDevices as String()

MBS Win Plugin, Plugin Version: 19.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries list of DOS COM Port names.
Notes:

While Constructor builds a list based on registry information (setup database), this function will use QueryDosDevice to ask Windows about device names for DOS starting with COM in their name and return the list.

Returns nil in case of failure.

193.33.13 Properties

193.33.14 Count as Integer

MBS Win Plugin, Plugin Version: 10.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: The number of serial ports found.
Notes: (Read and Write property)

193.34 class WindowsTaskbarListMBS

193.34.1 class WindowsTaskbarListMBS

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for windows with methods that control the taskbar.
Notes: It allows you to dynamically add, remove, and activate items on the taskbar.

193.34.2 Blog Entries

- Show progress in task bar on Windows
- SetProgressState on Windows
- MBS REALbasic plug-ins version 10.2

193.34.3 Blog Entries

- Show progress in task bar on Windows
- SetProgressState on Windows
- MBS REALbasic plug-ins version 10.2

193.34.4 Methods

193.34.5 ActivateTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Activates an item on the taskbar.
Notes:

The window is not actually activated; the window's item on the taskbar is merely displayed as active.
Lasterror is set.

193.34.6 AddTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Adds an item to the taskbar.
Notes:

Any type of window can be added to the taskbar, but it is recommended that the window at least have the WS_CAPTION style.

Any window added with this method must be removed with the DeleteTab method when the added window is destroyed.

Lasterror is set.

193.34.7 DeleteTab(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Deletes an item from the taskbar.

193.34.8 MarkFullscreenWindow(WindowHandle as Integer, Fullscreen as Boolean)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Marks a window as full-screen.
Notes:

Fullscreen: A Boolean value marking the desired full-screen status of the window.

Setting the value of fFullscreen to TRUE, the Shell treats this window as a full-screen window, and the taskbar is moved to the bottom of the z-order when this window is active. Setting the value of fFullscreen to FALSE removes the full-screen marking, but does not cause the Shell to treat the window as though it were definitely not full-screen. With a FALSEfFullscreen value, the Shell depends on its automatic detection facility to specify how the window should be treated, possibly still flagging the window as full-screen.

Requires Windows XP or Windows Server 2003 or newer.
Lasterror is set.

193.34.9 RegisterTab(TabWindowHandle as Integer, MDIWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Informs the taskbar that a new tab or document thumbnail has been provided for display in an application's taskbar group flyout.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
By itself, registering a tab thumbnail alone will not result in its being displayed. You must also call SetTabOrder to instruct the group where to display it.

193.34.10 SetActiveAlt(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Marks a taskbar item as active but does not visually activate it.
Notes: SetActiveAlt marks the item associated with hwnd as the currently active item for the window's process without changing the pressed state of any item. Any user action that would activate a different tab in that process will activate the tab associated with hwnd instead. The active state of the window's item is not guaranteed to be preserved when the process associated with this window is not active. To ensure that a given tab is always active, call SetActiveAlt whenever any of your windows are activated. Calling SetActiveAlt with a nil window handle clears this state.

193.34.11 SetOverlayIcon(TabWindowHandle as Integer, IconHandle as Integer, Description as string)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Applies an overlay to a taskbar button to indicate application status or a notification to the user.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle:
The handle of the window whose associated taskbar button receives the overlay. This handle must belong to a calling process associated with the button's application and must be a valid HWND or the call is ignored.

IconHandle:
The handle of an icon to use as the overlay. This should be a small icon, measuring 16x16 pixels at 96 dpi. If an overlay icon is already applied to the taskbar button, that existing overlay is replaced.

This value can be 0. How a 0 value is handled depends on whether the taskbar button represents a single window or a group of windows.

- If the taskbar button represents a single window, the overlay icon is removed from the display.
- If the taskbar button represents a group of windows and a previous overlay is still available (received

earlier than the current overlay, but not yet freed by a 0 value), then that previous overlay is displayed in place of the current overlay.

It is the responsibility of the calling application to free hIcon when it is no longer needed. This can generally be done after you've called SetOverlayIcon because the taskbar makes and uses its own copy of the icon.

Description:
A string that provides an alt text version of the information conveyed by the overlay, for accessibility purposes.

In versions of Windows earlier than Windows 7, applications often used icons in the notification area of the taskbar to display application status and notifications to the user. The Windows 7 taskbar allows an application to provide that same sort of user feedback through its taskbar button, centralizing more of the application information in one place. These overlays are similar to existing overlays used for shortcut icons or security notifications, displayed at the lower-right corner of the button.

The following illustration shows an overlay (the small, green square that indicates the user status as "Available") applied to the far-right taskbar button.

Windows Messenger taskbar button with an overlay to indicate an Available status.

Icon overlays serve as a contextual notification of status, and are intended to negate the need for a separate notification area status icon to communicate that information to the user. The application designer must decide during the development cycle which method—icon overlay or notification area status icon—best serves that application. Overlay icons are intended to supply important, long-standing status or notifications such as network status, messenger status, or new mail. They should not be frequently changed, nor should they be animated.

To display an overlay icon, the taskbar must be in the default large icon mode. If the taskbar is configured through Taskbar and Start Menu Properties to show small icons, overlays cannot be applied and calls to this method are ignored.

Because a single overlay is applied to the taskbar button instead of to the individual window thumbnails, this is a per-group feature rather than per-window. Requests for overlay icons can be received from individual windows in a taskbar group, but they do not queue. The last overlay received is the overlay shown. If the last overlay received is removed, the overlay that it replaced is restored so long as it is still active. As an example, windows 1, 2, and 3 set, in order, overlays A, B, and C. Because overlay C was received last, it is shown on the taskbar button. Window 2 calls SetOverlayIcon with a 0 value to remove overlay B. Window 3 then does the same to remove overlay C. Because window 1's overlay A is still active, that overlay is then displayed on the taskbar button.

If Windows Explorer shuts down unexpectedly, overlays are not restored when Windows Explorer is restored. The application should wait to receive the TaskbarButtonCreated message that indicates that Windows Explorer has restarted and the taskbar button has been re-created, and then call SetOverlayIcon again to

reapply the overlay.

193.34.12 SetProgressState(WindowHandle as Integer, Flags as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the type and state of the progress indicator displayed on a taskbar button.
Notes:

Use the ProgressStateFlag* constants. Flags that control the current state of the progress button. Specify only one of the following flags; all states are mutually exclusive of all others.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

Progress bar information is not shown in high contrast color schemes to guarantee that no accessibility needs are compromised.

Developers accustomed to the existing progress bar control should find the taskbar button progress indicator to be a similar experience both in concept and visuals. Here, the taskbar button itself becomes a progress bar. A taskbar button's progress indicator should be a reflection of a more detailed progress bar in the associated window. This allows the user to see specifics, such as the percentage number and the amount of time remaining, that cannot be shown in a taskbar button. Also, because a taskbar button can show the progress of only a single window in a group, it allows the user to check the progress of individual windows. It also provides progress information to the user when the taskbar button cannot, such as in a high-contrast color scheme.

Note that a taskbar button progress bar is not intended for use with normally peripheral actions such as the loading of a Web page or the printing of a document. That type of progress should continue to be shown in a window's status bar.

The progress indicator is displayed between the taskbar button's icon or text and the background. If progress is shown for both the active taskbar button and an inactive button, shading in the respective progress bars is such that the active button is still obvious to the user. Also, button functionality such as the display of thumbnails continues to work normally when the button is being used to display progress.

When exiting an error or paused state, call this method again with the ProgressStateFlagNormal or ProgressStateFlagIndeterminate flag to continue in the original state or TBPF_NOPROGRESS if the operation is cancelled.

How the Taskbar Button Chooses the Progress Indicator for a Group

The taskbar button can show a progress indicator for only one window at a time. This includes the situation where the taskbar button represents a group and more than one window in that group is broadcasting progress information. In that case, the taskbar button chooses its progress display based on state priority. State priority is shown in the following table with priority 1 being the highest.

Priority	State
1	ProgressStateFlagError
2	ProgressStateFlagPaused
3	ProgressStateFlagNormal
4	ProgressStateFlagIndeterminate

Changing a window's state changes its priority in relation to other windows in the group which in turn might change which window in a group is used for the progress indicator in the taskbar button.

In the case of a priority collision between two windows that are broadcasting determinate progress, the window with the least progress is used.

Based on this priority, the indeterminate progress indicator can be displayed in the taskbar button only in these cases:

- The taskbar button does not represent a group and the single window that it represents has set ProgressStateFlagIndeterminate.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window has set ProgressStateFlagIndeterminate.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, and all of those windows have set ProgressStateFlagIndeterminate.

A determinate progress indicator can be displayed in these cases:

- The taskbar button does not represent a group and the single window that it represents is broadcasting determinate progress information.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window is broadcasting determinate progress information.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, at least one of those windows is broadcasting determinate progress information, and no window has set ProgressStateFlagError or ProgressStateFlagPaused.

Note that a call to SetProgressValue will switch a progress indicator currently in an indeterminate mode (ProgressStateFlagIndeterminate) to a normal (determinate) display and clear the ProgressStateFlagIndeterminate flag.

193.34.13 SetProgressValue(WindowHandle as Integer, Completed as UInt64, Total as UInt64)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Displays or updates a progress bar hosted in a taskbar button to show the specific percentage completed of the full operation.
Notes:

Completed: An application-defined value that indicates the proportion of the operation that has been completed at the time the method is called.
Total: An application-defined value that specifies the value ullCompleted will have when the operation is complete.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

Determinate Progress Bar Lifecycle

An application first calls SetProgressValue to begin the display of a determinate progress bar, and then calls it again as needed to update the bar as the progress changes. When progress is complete, the application must call SetProgressState with the TBPF_NOPROGRESS flag to dismiss the progress bar.

How the Taskbar Button Chooses the Progress Indicator for a Group

The taskbar button can show a progress indicator for only one window at a time. When the taskbar button represents a group and more than one of the windows in that group are broadcasting progress information, the taskbar button chooses its progress display based on the following state priority.

Priority	State
1	ProgressStateFlagError
2	ProgressStateFlagPaused
3	ProgressStateFlagNormal
4	ProgressStateFlagIndeterminate

Unless SetProgressState has set a blocking state (ProgressStateFlagError or ProgressStateFlagPaused) for the window, a call to SetProgressValue assumes the ProgressStateFlagNormal state even if it is not explicitly

set. A call to SetProgressValue overrides and clears the ProgressStateFlagIndeterminate state.

In the case of a priority collision where two windows are broadcasting determinate progress, the window with the least progress is used.

Based on that priority, this determinate (specific percentage) progress indicator can be displayed in these cases:

- The taskbar button does not represent a group and the single window that it represents is broadcasting determinate progress information through this method.
- The taskbar button represents a group, only one window in that group is broadcasting progress information, and that window is broadcasting determinate progress information through this method.
- The taskbar button represents a group, multiple windows in that group are broadcasting progress information, at least one of those windows is broadcasting progress information through this method, and none of those windows has set the ProgressStateFlagError or ProgressStateFlagPaused state.

If a window in the group has set ProgressStateFlagError or ProgressStateFlagPaused, that state will be used for the button display. However, you can still make calls to SetProgressValue on other, unblocked windows in the group to update their progress in the background.

193.34.14 SetTabActive(TabWindowHandle as Integer, MDIWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Informs the taskbar that a tab or document window has been made the active window.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle: Handle of the active tab window. This handle must already be registered through RegisterTab. This value can be 0 if no tab is active.

MDIWindowHandle: Handle of the application's main window. This value tells the taskbar which group the thumbnail is a member of. This value is required and cannot be 0.

193.34.15 SetTabOrder(TabWindowHandle as Integer, InsertBeforeWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Inserts a new thumbnail into a tabbed-document interface (TDI) or multiple-document interface (MDI) application's group flyout or moves an existing thumbnail to a new position in the application's group.
Notes:

TabWindowHandle: The handle of the tab window whose thumbnail is being placed. This value is required, must already be registered through RegisterTab, and cannot be 0.
InsertBeforeWindowHandle: The handle of the tab window whose thumbnail that hwndTab is inserted to the left of. This handle must already be registered through RegisterTab. If this value is 0, the new thumbnail is added to the end of the list.

193.34.16 SetTabProperties(TabWindowHandle as Integer, flags as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Allows a tab to specify whether the main application frame window or the tab window should be used as a thumbnail or in the peek feature under certain circumstances.
Notes:

An application might want to use the thumbnail or peek representation of its associated parent window if the application cannot generate its own thumbnail for a tab or for its active tab content (such as an animation) to appear live.

flags: One of the TabPropertyFlag* constants.
Available on Windows 7 or Windows Server 2008 R2 or newer.

193.34.17 SetThumbnailClip(TabWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects a portion of a window's client area to display as that window's thumbnail in the taskbar.
Notes:

This variant of the method clears the clip that is already in place and return to the default display of the thumbnail.

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
See also:

- 193.34.18 SetThumbnailClip(TabWindowHandle as Integer, x as Integer, y as Integer, w as Integer, h

as Integer) 27400

193.34.18 SetThumbnailClip(TabWindowHandle as Integer, x as Integer, y as Integer, w as Integer, h as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Selects a portion of a window's client area to display as that window's thumbnail in the taskbar.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.
See also:

- 193.34.17 SetThumbnailClip(TabWindowHandle as Integer) 27399

193.34.19 SetThumbnailTooltip(TabWindowHandle as Integer, tip as string)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies or updates the text of the tooltip that is displayed when the mouse pointer rests on an individual preview thumbnail in a taskbar button flyout.
Notes:

Requires Windows 7 or Windows Server 2008 R2 or newer.
Lasterror is set.

TabWindowHandle: The handle to the window whose thumbnail displays the tooltip. This handle must belong to the calling process.

tip: The text to be displayed in the tooltip. This value can be empty, in which case the title of the window specified by WindowHandle is used as the tooltip.

193.34.20 UnregisterTab(TabWindowHandle as Integer)

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes a thumbnail from an application's preview group when that tab or document is closed in the application.
Notes:

It is the responsibility of the calling application to free hwndTab through DestroyWindow. UnregisterTab must be called before the handle is freed.
Requires Windows 7 or Windows Server 2008 R2 or newer.

Lasterror is set.

193.34.21 Properties

193.34.22 Handle1 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList interface.
Notes:

The ITaskbarList interface is available on Windows 2000 Professional, Windows XP or Windows 2000 Server or newer.
(Read and Write property)

193.34.23 Handle2 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList2 interface.
Notes:

The ITaskbarList4 interface is available on Windows XP or Windows Server 2003 or newer.
(Read and Write property)

193.34.24 Handle3 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList3 interface.
Notes:

The ITaskbarList3 interface is available on Windows 7 or Windows Server 2008 R2 or newer.
none
(Read and Write property)

193.34.25 Handle4 as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal reference for the ITaskbarList4 interface.
Notes:

The ITaskbarList4 interface is available on Windows 7 or Windows Server 2008 R2 or newer.
(Read and Write property)

193.34.26 Lasterror as Integer

MBS Win Plugin, Plugin Version: 10.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code from one of the methods.
Notes: (Read and Write property)

193.34.27 Constants

193.34.28 ProgressStateFlagError = 4

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the progress state flag constants.
Notes: The progress indicator turns red to show that an error has occurred in one of the windows that is broadcasting progress. This is a determinate state. If the progress indicator is in the indeterminate state, it switches to a red determinate display of a generic percentage not indicative of actual progress.

193.34.29 ProgressStateFlagIndeterminate = 1

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the progress state flag constants.
Notes: The progress indicator does not grow in size, but cycles repeatedly along the length of the taskbar button. This indicates activity without specifying what proportion of the progress is complete. Progress is taking place, but there is no prediction as to how long the operation will take.

193.34.30 ProgressStateFlagNoProgress = 0

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the progress state flag constants.
Notes: Stops displaying progress and returns the button to its normal state. Call this method with this flag to dismiss the progress bar when the operation is complete or cancelled.

193.34.31 ProgressStateFlagNormal = 2

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the progress state flag constants.
Notes: The progress indicator grows in size from left to right in proportion to the estimated amount of the operation completed. This is a determinate progress indicator; a prediction is being made as to the duration of the operation.

193.34.32 ProgressStateFlagPaused = 8

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the progress state flag constants.
Notes: he progress indicator turns yellow to show that progress is currently stopped in one of the windows but can be resumed by the user. No error condition exists and nothing is preventing the progress from continuing. This is a determinate state. If the progress indicator is in the indeterminate state, it switches to a yellow determinate display of a generic percentage not indicative of actual progress.

193.34.33 TabPropertyFlagNone = 0

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the flag values you can use with SetTabProperties.
Notes: No specific property values are specified. The default behavior is used: the tab window provides a thumbnail and peek image, either live or static as appropriate.

193.34.34 TabPropertyFlagUseAppPeekAlways = 4

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the flag values you can use with SetTabProperties.
Notes: Always use the peek image provided by the main application frame window rather than a peek image provided by the individual tab window. Do not combine this value with TabPropertyFlagUseAppPeekWhen-Active; doing so will result in an error.

193.34.35 TabPropertyFlagUseAppPeekWhenActive = 8

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the flag values you can use with SetTabProperties.
Notes: When the application tab is active and a live representation of its window is available, show the

main application frame in the peek feature. At other times, use the tab window. Do not combine this value with TabPropertyFlagUseAppPeekAlways; doing so will result in an error.

193.34.36 TabPropertyFlagUseAppThumbnailAlways = 1

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the flag values you can use with SetTabProperties.
Notes: Always use the thumbnail provided by the main application frame window rather than a thumbnail provided by the individual tab window. Do not combine this value with TabPropertyFlagUseAppThumbnailWhenActive; doing so will result in an error.

193.34.37 TabPropertyFlagUseAppThumbnailWhenActive = 2

MBS Win Plugin, Plugin Version: 10.2.

Function: One of the flag values you can use with SetTabProperties.
Notes: When the application tab is active and a live representation of its window is available, use the main application frame window thumbnail. At other times, use the tab window thumbnail. Do not combine this value with TabPropertyFlagUseAppThumbnailAlways; doing so will result in an error.

193.35 class WindowsVerticalBlankMBS

193.35.1 class WindowsVerticalBlankMBS

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for checking on Windows with the retrace of the display.
Notes: Sometimes you may want to draw only if the device is currently not touching the video memory.

193.35.2 Blog Entries

- MBS Real Studio Plugins, version 12.3pr10

193.35.3 Blog Entries

- MBS Real Studio Plugins, version 12.3pr10

193.35.4 Methods

193.35.5 Constructor

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes the class.

193.35.6 GetMonitorFrequency as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the frequency of the monitor that the DirectDraw object controls.
Notes:

Returns the monitor frequency, in Hz.
Lasterror is set.

193.35.7 GetScanLine as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: This method retrieves the scan line that is currently being drawn on the monitor.
Notes:

To synchronize with the vertical blank, use the WaitForVerticalBlank method.
Lasterror is set.

Scan lines are reported as zero-based integers.
The returned scan line value is between 0 and n, where scan line 0 is the first visible scan line on the screen and n is the last visible scan line, plus scan lines that occur during the vertical blank period.
So, in a case where an application is running at 640x480, and there are 12 scan lines during the vertical blank period, the values returned by this method will range from 0 to 491.

193.35.8 GetVerticalBlankStatus as boolean

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Retrieves the status of the vertical blank.
Notes:

Returns the status of the vertical blank. True if a vertical blank is occurring, and false otherwise.
Lasterror is set.

193.35.9 WaitForVerticalBlankBegin

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Helps the application synchronize itself with the vertical-blank interval.
Notes:

WaitForVerticalBlank returns when the vertical-blank interval begins.
Lasterror is set.

193.35.10 WaitForVerticalBlankEnd

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Helps the application synchronize itself with the vertical-blank interval.
Notes:

WaitForVerticalBlank returns when the vertical-blank interval ends and the display begins.
Lasterror is set.

193.35.11 Properties

193.35.12 Available as Boolean

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this class will work.
Notes: (Read and Write property)

193.35.13 Lasterror as Integer

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last windows error string.
Notes: (Read and Write property)

193.35.14 LasterrorString as String

MBS ComputerControl Plugin, Plugin Version: 12.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last windows error string.
Notes: (Read only property)

193.36 class WindowsWMIMBS

193.36.1 class WindowsWMIMBS

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to run queries in the Windows Management Interface.
Example:

```
dim w as WindowsWMIMBS

w=new WindowsWMIMBS

if w.ConnectServer("root\cimv2") then
MsgBox "ConnectServer: ok"

if w.query("WQL","SELECT * FROM Win32_Processor") then
MsgBox "query: ok"

if w.NextItem then
MsgBox "NextItem: ok"

MsgBox w.GetPropertyString("Name") // string
MsgBox str(w.GetPropertyInteger("MaxClockSpeed")) // uint32
MsgBox str(w.GetPropertyInteger("ProcessorType")) // uint16

else
MsgBox "NextItem: fail"
end if
else
MsgBox "query: fail"
end if

else
MsgBox "ConnectServer: fail"
end if
```

Notes:

In Windows 8.1 (or later) it looks like WindowsWMIMBS.InitSecurity(false) must be called at app.Constructor time as Xojo will do some things in background when opening first window which block our queries. Subclass of the WMIObjectMBS class.

193.36.4 Methods

193.36.5 CancelAsyncCall as boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stops events being delivered to this WindowsWMIMBS object.
Notes: Lasterror is set.

193.36.6 ConnectServer(NetworkResource as string, Username as string="", Password as string="", Locale as string="", Authority as string="") as boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Connect to WMI server.
Example:

```
dim w as WindowsWMIMBS // your WMI object
call w.ConnectServer("root\cimv2")
```

Notes:

Returns true on success and false on failure.
Authority parameter added in plugin version 12.2.

193.36.7 Constructor

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

193.36.8 ExecNotificationQueryAsync(QueryLanguage as string, QueryText as string) as boolean

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The ExecNotificationQueryAsync method executes a query to receive events.
Notes:

The plugin receives events and enqueues them in a queue. You read objects from this queue in a timer and process them.
NextItem returns nil if the queue is empty.

Returns true on success and false on failure.
Lasterror is set. e.g. & h80041018 if you have syntax error in the query or & h80041058 if the query can't be parsed.

193.36.9 InitAuthentication(User as string, Domain as string, Password as string) as boolean

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes authentication data.
Notes:

Call before ConnectServer.
This settings are passed to objects for authentication.

193.36.10 InitSecurity(AuthnLevel as Integer, ImpLevel as Integer) as boolean

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Registers security and sets the default security values for the process.
Notes:

You can call this method before creating WindowsWMIMBS object, you can prepare security settings for remote connections.

AuthnLevel:
The default authentication level for the process. Both servers and clients use this parameter when they call CoInitializeSecurity. COM will fail calls that arrive with a lower authentication level. By default, all proxies will use at least this authentication level. This value should contain one of the authentication level constants. By default, all calls to IUnknown are made at this level.

ImpLevel:
The default impersonation level for proxies. The value of this parameter is used only when the process is a client. It should be a value from the impersonation level constants, except for kImpersonationLevelDefault, which is not for use with CoInitializeSecurity.
Outgoing calls from the client always use the impersonation level as specified. (It is not negotiated.) Incoming calls to the client can be at any impersonation level. By default, all IUnknown calls are made with this impersonation level, so even security-aware applications should set this level carefully. To determine which impersonation levels each authentication service supports, see the description of the authentication services in COM and Security Packages. For more information about impersonation levels, see Impersonation.

Please call in App.Constructor before Xojo can initialize COM and prevent our function from working!
See also:

- 193.36.11 InitSecurity(remote as boolean) as boolean 27411

193.36.11 InitSecurity(remote as boolean) as boolean

MBS Win Plugin, Plugin Version: 12.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Initializes security.
Notes:

You can call this method before creating WindowsWMIMBS object, you can prepare security settings for remote connections.

Calling InitSecurity with remote=true will initialize security with kImpersonationLevelImpersonate. If remote=false, we use kImpersonationLevelIdentity which is the default.

Please call in App.Constructor before Xojo can initialize COM and prevent our function from working!

See also:

- 193.36.10 InitSecurity(AuthnLevel as Integer, ImpLevel as Integer) as boolean 27411

193.36.12 NextItem as boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Moves to next item in the list.
Notes:

You need to call this at least once to move to the first item.
Returns false if no more items are there.

193.36.13 Query(QueryLanguage as string, QueryText as string) as boolean

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Runs a query.
Example:

```
dim w as WindowsWMIMBS
call w.query("WQL","SELECT * FROM Win32_Processor")
```

Notes: Returns true on success and false on failure.

193.36.14 Properties

193.36.15 EnumeratorHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the used IEnumWbemClassObject object.
Notes: (Read only property)

193.36.16 LocatorHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the used IWbemLocator object.
Notes: (Read only property)

193.36.17 ServiceHandle as Integer

MBS Win Plugin, Plugin Version: 7.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The handle to the used IWbemServices object.
Notes: (Read only property)

193.36.18 Constants

193.36.19 kAuthenticationLevelCall = 3

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Authenticates only at the beginning of each remote procedure call when the server receives the request. Datagram transports use kAuthenticationLevelPaket instead.

193.36.20 kAuthenticationLevelConnect = 2

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Authenticates the credentials of the client only when the client establishes a relationship with the server. Datagram transports always use kAuthenticationLevelPacket instead.

193.36.21 kAuthenticationLevelDefault = 0

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Tells DCOM to choose the authentication level using its normal security blanket negotiation algorithm. For more information, see Security Blanket Negotiation.

193.36.22 kAuthenticationLevelNone = 1

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Performs no authentication.

193.36.23 kAuthenticationLevelPacket = 4

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Authenticates that all data received is from the expected client.

193.36.24 kAuthenticationLevelPacketIntegrity = 5

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Authenticates and verifies that none of the data transferred between client and server has been modified.

193.36.25 kAuthenticationLevelPacketPrivacy = 6

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the authentication level constants.
Notes: Authenticates all previous levels and encrypts the argument value of each remote procedure call.

193.36.26 kImpersonationLevelAnonymous = 1

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the impersonation level constants.
Notes: The client is anonymous to the server. The server process can impersonate the client, but the impersonation token will not contain any information and cannot be used.

193.36.27 kImpersonationLevelDefault = 0

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the impersonation level constants.
Notes: DCOM can choose the impersonation level using its normal security blanket negotiation algorithm.

For more information, see Security Blanket Negotiation.

193.36.28 kImpersonationLevelDelegate = 4

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the impersonation level constants.
Notes: The server process can impersonate the client's security context while acting on behalf of the client. The server process can also make outgoing calls to other servers while acting on behalf of the client, using cloaking. The server may use the client's security context on other machines to access local and remote resources as the client. When impersonating at this level, the impersonation token can be passed across any number of computer boundaries.

193.36.29 kImpersonationLevelIdentity = 2

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the impersonation level constants.
Notes: The server can obtain the client's identity. The server can impersonate the client for ACL checking, but it cannot access system objects as the client.

193.36.30 kImpersonationLevelImpersonate = 3

MBS Win Plugin, Plugin Version: 13.1.

Function: One of the impersonation level constants.
Notes: The server process can impersonate the client's security context while acting on behalf of the client. This level of impersonation can be used to access local resources such as files. When impersonating at this level, the impersonation token can only be passed across one machine boundary. The Schannel authentication service only supports this level of impersonation.

193.37 class WinExceptionMBS

193.37.1 class WinExceptionMBS

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to catch windows system exceptions.
Notes:

This class was made to intercept crashes in a Xojo application.
Whenever the application crashes, this class will fire its event so you have a chance to report that crash to your user and maybe save a crash report.

Do not try to save data as this could overwrite good data with bad data. Remember your application already crashed. Maybe because of data corruption!

Only one instance can exist in your application.

193.37.2 Methods

193.37.3 Close

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: Removes the exception handler from the system.

193.37.4 Properties

193.37.5 ExceptionAddress as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The address in memory where the exception was raised.
Notes: (Read only property)

193.37.6 ExceptionCode as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The code of this exception.
Notes:

Normally one of the kException* constants.
(Read only property)

193.37.7 ExceptionFlags as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The exception flags.
Notes: (Read only property)

193.37.8 ExceptionIsNonContinuable as Boolean

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether this exception allows to continue in code.
Notes:

For example a division by zero can be continued.
(Read only property)

193.37.9 ExceptionName as String

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: Desktop, Console & Web.

Function: The name of the exception.
Notes:

If ExceptionCode=kExceptionAccessViolation then returns "ExceptionAccessViolation".

This is a convenience function which you can use to show the exception to the user.
(Read only property)

193.37.10 Events

193.37.11 GotException() as Integer

MBS Win Plugin, Plugin Version: 8.7, Platform: Windows, Targets: .

Function: The event called when an exception was received.
Notes:

Your application has crashed on this point, but instead of seeing the Microsoft dialog to tell you that the application crashed, your application has the chance to report that problem.

Return one of the following constants: kExecuteHandler, kContinueCode, kNextHandler, kExecuteHandlerNoDialog.

The plugin already removed the crash callback from the system so if the code in this event crashes again, the system dialog shows.

193.37.12 Constants

193.37.13 kContinueCode = 2

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants you can use for the GotException event return value.
Notes: This one is not recommented as it can raise the same exception again or crash your application.

193.37.14 kExceptionAccessViolation = & hC0000005

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to read from or write to a virtual address for which it does not have access.

193.37.15 kExceptionArrayBoundsExceeded = & hC000008C

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to access an array element that is out of bounds, and the underlying hardware supports bounds checking.

193.37.16 kExceptionBreakPoint = & h80000003

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: A breakpoint is encountered.

193.37.17 kExceptionDataTypeMisalignment = & h80000002

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to read or write data that is misaligned on hardware that does not provide alignment. For example, 16-bit values must be aligned on 2-byte boundaries, 32-bit values on 4-byte boundaries, and so on.

193.37.18 kExceptionFloatDenormalOperand = & hC000008D

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: One of the operands in a floating point operation is denormal. A denormal value is one that is too small to represent as a standard floating point value.

193.37.19 kExceptionFloatDivideByZero = & hC000008E

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to divide a floating point value by a floating point divisor of 0 (zero).

193.37.20 kExceptionFloatInexactResult = & hC000008F

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The result of a floating point operation cannot be represented exactly as a decimal fraction.

193.37.21 kExceptionFloatInvalidOperation = & hC0000090

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: A floating point exception that is not included in this list.

193.37.22 kExceptionFloatOverflow = & hC0000091

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The exponent of a floating point operation is greater than the magnitude allowed by the corresponding type.

193.37.23 kExceptionFloatStackCheck = & hC0000092

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The stack has overflowed or underflowed, because of a floating point operation.

193.37.24 kExceptionFloatUnderflow = & hC0000093

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The exponent of a floating point operation is less than the magnitude allowed by the corresponding type.

193.37.25 kExceptionIllegalInstruction = & hC000001D

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread tries to execute an invalid instruction.

193.37.26 kExceptionInPageError = & hC0000006

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread tries to access a page that is not present, and the system is unable to load the page. For example, this exception might occur if a network connection is lost while running a program over a network.

193.37.27 kExceptionIntegerDivideByZero = & hC0000094

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to divide an integer value by an integer divisor of 0 (zero).

193.37.28 kExceptionIntegerOverflow = & hC0000095

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The result of an integer operation causes a carry out of the most significant bit of the result.

193.37.29 kExceptionInvalidDisposition = & hC0000026

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: An exception handler returns an invalid disposition to the exception dispatcher. Programmers using a high-level language such as C should never encounter this exception.

193.37.30 kExceptionNonContinueableException = & hC0000025

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to continue execution after a non-continuable exception occurs.

193.37.31 kExceptionPrivilegedInstruction = & hC0000096

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread attempts to execute an instruction with an operation that is not allowed in the current computer mode.

193.37.32 kExceptionSingleStep = & h80000004

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: A trace trap or other single instruction mechanism signals that one instruction is executed.

193.37.33 kExceptionStackOverflow = & hC00000FD

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants for exception codes.
Notes: The thread uses up its stack.

193.37.34 kExecuteHandler = 1

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants you can use for the GotException event return value.
Notes:

Windows will execute the default handler for this exception.
This can show a Windows error dialog.

193.37.35 kExecuteHandlerNoDialog = 4

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants you can use for the GotException event return value.
Notes: Windows will execute the default handler for this exception, but not show a dialog.

193.37.36 kNextHandler = 3

MBS Win Plugin, Plugin Version: 8.7.

Function: One of the constants you can use for the GotException event return value.
Notes: Windows will call the next exception handler.

193.38 class WinGestureConfigMBS

193.38.1 class WinGestureConfigMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: ets and sets the configuration for enabling gesture messages and the type of this configuration.
Example:

```
// make a config for accepting pan/rotate gestures
dim c1 as new WinGestureConfigMBS

c1.ID = c1.kGestureIDPan
c1.Want = c1.kPan
c1.Block = 0

dim c2 as new WinGestureConfigMBS
c2.ID = c2.kGestureIDRotate
c2.Want = c2.kRotate
c2.Block = 0

dim configs() as WinGestureConfigMBS
configs.Append c1
configs.Append c2

// and add to window
if WinPointerEventsMBS.SetGestureConfig(window1, configs) then
MsgBox "OK"
end if
```

Notes:

It is impossible to disable two-finger panning and keep single finger panning. You must set the want bits for GC_PAN before you can set them for GC_PAN_WITH_SINGLE_FINGER_HORIZONTALLY or GC_PAN_WITH_SINGLE_FINGER_VERTICALLY.
An inertia vector is included in the GID_PAN message with the GF_END flag if inertia was disabled by a call to SetGestureConfig.
When you pass this structure, the dwID member contains information for a set of gestures. This determines what the other flags will mean. If you set flags for pan messages, they will be different from those flags that are set for rotation messages.
The following table indicates the various identifiers for gestures that are supported by the dwID member of the GESTURECONFIG structure. Note that setting dwID to 0 indicates that global gesture configuration flags are set.

The following flags are used when dwID is set to 0.

Name	Value	Description
GID_ZOOM	3	Indicates configuration settings for the zoom gesture.
GID_PAN	4	Indicates the pan gesture.
GID_ROTATE	5	Indicates the rotation gesture.
GID_TWOFINGERTAP	6	Indicates the two-finger tap gesture.
GID_PRESSANDTAP	7	Indicates the press and tap gesture.

Name	Value	Description
GC_ALLGESTURES	0x00000001	Indicates all of the gestures.

The following flags are used when dwID is set to GID_ZOOM.

Name	Value	Description
GC_ZOOM	0x00000001	Indicates the zoom gesture.

The following flags are used when dwID is set to GID_PAN.

Note Setting the GID_PAN flags in SetGestureConfig will affect the default gesture handler for panning. You should not have both dwWant and dwBlock set for the same flags; this will result in unexpected behavior. See Windows Touch Gestures for more information on panning and legacy panning support; see SetGestureConfig for examples of enabling and blocking gestures.

The following flags are used when dwID is set to GID_ROTATE.

The following flags are used when dwID is set to GID_TWOFINGERTAP.

The following flags are used when dwID is set to GID_PRESSANDTAP.

193.38.2 Blog Entries

- Windows Touch Events

193.38.3 Videos

- Presentation from Munich conference about MBS Plugins.

Name	Value	Description
GC_PAN	0x00000001	Indicates all pan gestures.
GC_PAN_WITH_SINGLE_FINGER_VERTICALLY	0x00000002	Indicates vertical pans with one finger.
GC_PAN_WITH_SINGLE_FINGER_HORIZONTALLY	0x00000004	Indicates horizontal pans with one finger.
GC_PAN_WITH_GUTTER	0x00000008	Limits perpendicular movement to primary direction until a threshold is reached to break out of the gutter.
GC_PAN_WITH_INERTIA	0x00000010	Indicates panning with inertia to smoothly slow when pan gestures stop.

Name	Value	Description
GC_ROTATE	0x00000001	Indicates the rotation gesture.

193.38.4 Blog Entries

- Windows Touch Events

193.38.5 Videos

- Presentation from Munich conference about MBS Plugins.

193.38.6 Properties

193.38.7 Block as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The messages to disable.
Example:

```
// make a config for accepting some pan gestures
dim c as new WinGestureConfigMBS

c.ID = kGestureIDPan
c.Want = c.kPanWithSingleFingerVertically + c.kPanWithGutter + c.kPanWithInteria
c.Block = c.kPanWithSingleFingerHorizontally
```

Notes: (Read and Write property)

193.38.8 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identifier for the type of configuration that will have messages enabled or disabled.
Example:

Name	Value	Description
GC_TWOFINGERTAP	0x00000001	Indicates the two-finger tap gesture.

Name	Value	Description
GC_PRESSANDTAP	0x00000001	Indicates the press and tap gesture.

```
// make a config for accepting some pan/rotate gestures
dim c1 as new WinGestureConfigMBS

c1.ID = 0
c1.Want = c1.kAllGestures
c1.Block = 0

dim configs() as WinGestureConfigMBS
configs.Append c1

// and add to window
if WinPointerEventsMBS.SetGestureConfig(window1, configs) then
MsgBox "OK"
end if
```

Notes: (Read and Write property)

193.38.9 Want as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The messages to enable.
Example:

```
// make a config for accepting all gestures
dim c as new WinGestureConfigMBS

c.ID = 0 // catch all IDs
c.Want = c.kAllGestures
```

Notes: (Read and Write property)

193.38.10 Constants

193.38.11 kAllGestures = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates all of the gestures. (for ID = 0)

193.38.12 kGestureIDBegin = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Begin of gesture.

193.38.13 kGestureIDEnd = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: End of a gesture

193.38.14 kGestureIDPan = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Pan gesture

193.38.15 kGestureIDPressAndTap = 7

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Press and Tap gesture

193.38.16 kGestureIDRotate = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Rotate gesture

193.38.17 kGestureIDTwoFingerTap = 6

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Two-Finger Tap

193.38.18 kGestureIDZoom = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Zoom gesture

193.38.19 kPan = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates all pan gestures.

193.38.20 kPanWithGutter = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Limits perpendicular movement to primary direction until a threshold is reached to break out of the gutter.

193.38.21 kPanWithInteria = 16

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates panning with inertia to smoothly slow when pan gestures stop.

193.38.22 kPanWithSingleFingerHorizontally = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates horizontal pans with one finger.

193.38.23 kPanWithSingleFingerVertically = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates vertical pans with one finger.

193.38.24 kPressAndTap = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates the press and tap gesture.

193.38.25 kRotate = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates the rotation gesture.

193.38.26 kTwoFingerTap = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates the two-finger tap gesture.

193.38.27 kZoom = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture option flags.
Notes: Indicates the zoom gesture. (for ID = kGestureIDZoom)

193.39 class WinGestureInfoMBS

193.39.1 class WinGestureInfoMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Stores information about a gesture.
Notes:

Parameters for touches:
If kFlagBegin flag is set, save Location so you have first point. And save argument to check later.

For Zoom, get second point from this class. Than you can calculate center point and zoom factor is OldArgumentsLower/NewArgumentsLower.

For Pan, check difference between last point and new point to know how much moved.

For Rotate, please check difference between old RotateAngle and new RotateAngle.
This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

193.39.4 Methods

193.39.5 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

193.39.6 Properties

193.39.7 Arguments as Int64

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A 64-bit unsigned integer that contains the arguments for gestures that fit into 8 bytes.
Notes: (Read only property)

193.39.8 ArgumentsHigher as UInt32

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The higher 32bits from Arguments.
Notes: (Read only property)

193.39.9 ArgumentsLower as UInt32

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The lower 32bits from Arguments.
Notes:

Most events just use lower bits.
(Read only property)

193.39.10 Flags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The state of the gesture.
Notes:

See kFlagBegin/kFlagInertia/kFlagEnd constants.
(Read only property)

193.39.11 ID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The identifier of the gesture command.
Notes:

see kGestureID* constants.
(Read only property)

193.39.12 InstanceID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An internally used identifier for the structure.
Notes: (Read only property)

193.39.13 LocationInWindowX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes:

This is LocationX relative to target window.
(Read only property)

193.39.14 LocationInWindowY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes:

This is LocationY relative to target window.
(Read only property)

193.39.15 LocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes:

These coordinates are always relative to the origin of the screen.
(Read only property)

193.39.16 LocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A x coordinate associated with the gesture.
Notes:

These coordinates are always relative to the origin of the screen.
(Read only property)

193.39.17 RotateAngle as Double

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The argument as angle for rotate gesture.
Notes: (Read only property)

193.39.18 SequenceID as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An internally used identifier for the sequence.
Notes: (Read only property)

193.39.19 TargetWindow as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A handle to the window that is targeted by this gesture.
Notes: (Read only property)

193.39.20 Constants

193.39.21 kFlagBegin = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag values.
Notes: A gesture is starting.

193.39.22 kFlagEnd = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag values.
Notes: A gesture has finished.

193.39.23 kFlagInertia = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag values.
Notes: A gesture has triggered inertia.

193.39.24 kGestureIDBegin = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Begin of a gesture

193.39.25 kGestureIDEnd = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: End of a gesture

193.39.26 kGestureIDPan = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Pan gesture

193.39.27 kGestureIDPressAndTap = 7

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Press and Tap gesture

193.39.28 kGestureIDRotate = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Rotate gesture

193.39.29 kGestureIDTwoFingerTap = 6

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Two-Finger Tap

193.39.30 kGestureIDZoom = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the gesture IDs.
Notes: Zoom gesture

193.40 class WinMouseFilterMBS

193.40.1 class WinMouseFilterMBS

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class to filter mouse events in the whole application.
Notes:

You may be able to intercept all mouse actions and block mouse events.

You can only have one instance to receive events at a time.

193.40.6 Methods

193.40.7 Constructor

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

193.40.8 Properties

193.40.9 Enabled as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Global flag to enable/disable it.
Notes:

Set true to enable or false to disable.
(Read and Write property)

193.40.10 IncludeMouseHOver as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to include hover events.
Notes:

By default false to disable hover events.
Set to true to include those.
(Read and Write property)

193.40.11 IncludeMouseMove as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to include move events.
Notes:

By default false to disable move events.
Set to true to include those.
(Read and Write property)

193.40.12 IncludeMouseWheel as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Whether to include wheel events.
Notes:

By default false to disable wheel events.
Set to true to include those.
(Read and Write property)

193.40.13 Events

193.40.14 ReceivedEvent(Message as Integer, mouseX as Integer, mouseY as Integer, windowHandle as Integer, HitTestCode as Integer, ExtraInfo as Integer) as Boolean

MBS Win Plugin, Plugin Version: 21.4, Platform: Windows, Targets: .

Function: Received an event.
Notes:

Message: The identifier of the mouse message. See constants.
mouseX and mouseY: The x- and y-coordinates of the cursor, in screen coordinates.
WindowHandle: A handle to the window that will receive the mouse message corresponding to the mouse event.
HitTestCode: The hit-test value. For a list of hit-test values, see the description of the WM_NCHITTEST message.
ExtraInfo: Additional information associated with the message.

193.40.15 Constants

193.40.16 kLButtonDoubleClick = & h0203

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Left mouse button double click

193.40.17 kLButtonDown = & h0201

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Left mouse button down

193.40.18 kLButtonUp = & h0202

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Left mouse button up

193.40.19 kMButtonDoubleClick = & h0209

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Middle mouse button double click

193.40.20 kMButtonDown = & h0207

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Middle mouse button down

193.40.21 kMButtonUp = & h0208

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Middle mouse button up

193.40.22 kMouseHOver = & h02a1

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Mouse hover

193.40.23 kMouseHWheel = & h020e

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Horizontal mouse wheel

193.40.24 kMouseLeave = & h02a3

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Mouse Leave

193.40.25 kMouseMove = & h0200

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Mouse moved

193.40.26 kMouseWheel = & h020a

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Vertical mouse wheel

193.40.27 kRButtonDoubleClick = & h0206

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Right mouse button double click

193.40.28 kRButtonDown = & h0204

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Right mouse button down

193.40.29 kRButtonUp = & h0205

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Right mouse button up

193.40.30 kXButtonDoubleClick = & h020d

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Other mouse button double click

193.40.31 kXButtonDown = & h020b

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Other mouse button down

193.40.32 kXButtonUp = & h020c

MBS Win Plugin, Plugin Version: 21.4.

Function: One of the mouse event constants.
Notes: Other mouse button up

193.41 class WinPointerEventsMBS

193.41.1 class WinPointerEventsMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to capture touch events on Windows.
Notes: The plugin can only deliver events the Xojo runtime doesn't consume.

193.41.6 Methods

193.41.7 Close

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Cleans up.
Notes:

Optional and does same as destructor, but now.
You can call this in a window's close event to shutdown the event handler class.

193.41.8 Constructor(control as DesktopUIControl)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a control.
Notes: Call in a control's open event to attach event listener to the control.
See also:

- 193.41.9 Constructor(control as RectControl) 27444
- 193.41.10 Constructor(win as DesktopWindow) 27444
- 193.41.11 Constructor(win as window) 27445
- 193.41.12 Constructor(WindowHandle as Integer) 27445

193.41.9 Constructor(control as RectControl)

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a control.
Notes: Call in a control's open event to attach event listener to the control.
See also:

- 193.41.8 Constructor(control as DesktopUIControl) 27444
- 193.41.10 Constructor(win as DesktopWindow) 27444
- 193.41.11 Constructor(win as window) 27445
- 193.41.12 Constructor(WindowHandle as Integer) 27445

193.41.10 Constructor(win as DesktopWindow)

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a window.
Notes: Call in a window's open event to attach event listener to the window.
See also:

- 193.41.8 Constructor(control as DesktopUIControl) 27444
- 193.41.9 Constructor(control as RectControl) 27444
- 193.41.11 Constructor(win as window) 27445
- 193.41.12 Constructor(WindowHandle as Integer) 27445

193.41.11 Constructor(win as window)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The constructor events to a window.
Notes: Call in a window's open event to attach event listener to the window.
See also:

- 193.41.8 Constructor(control as DesktopUIControl) 27444
- 193.41.9 Constructor(control as RectControl) 27444
- 193.41.10 Constructor(win as DesktopWindow) 27444
- 193.41.12 Constructor(WindowHandle as Integer) 27445

193.41.12 Constructor(WindowHandle as Integer)

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.
Notes:

This method allows you to attach to any window.
So this works in console projects, too.
With any window, not just xojo windows.
See also:

- 193.41.8 Constructor(control as DesktopUIControl) 27444
- 193.41.9 Constructor(control as RectControl) 27444
- 193.41.10 Constructor(win as DesktopWindow) 27444
- 193.41.11 Constructor(win as window) 27445

193.41.13 EnableMouseInPointer(enable as boolean) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Enables the mouse to act as a pointer input device and send pointer events.
Notes:

Requires Windows 8 or newer.

If the function succeeds, the return value is true.
If the function fails, the return value is false.
To get extended error information, call GetLastError.

This function can be called only once in the context of a process lifetime. Prior to the first call, Windows Store apps run with mouse-in-pointer enabled, as do any desktop applications that consume mshtml.dll. All other desktop applications run with mouse-in-pointer disabled.

On the first call in the process lifetime, the state is changed as specified and the call succeeds.
On subsequent calls, the state will not change. If the current state is not equal to the specified state, the call fails.

Call IsMouseInPointerEnabled to verify the mouse-in-pointer state.

193.41.14 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: Same as other GetGestureConfig, but for a control, not a window.
See also:

- 193.41.15 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27446
- 193.41.16 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27447
- 193.41.17 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27447

193.41.15 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes: Same as other GetGestureConfig, but for a control, not a window.
See also:

- 193.41.14 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27446
- 193.41.16 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27447
- 193.41.17 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27447

193.41.16 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes:

win: The window to get the gesture configuration from.
Flags: A gesture command flag value indicating options for retrieving the gesture configuration. Can be 1 to return consolidated configuration for the specified window and its parent window chain.
Config: an array of gesture configuration structures that specify the gesture configuration.

Please pass an empty array and the plugin appends config objects.

Return function returns number of configs found.
Returns -1 in case of error.
See also:

- 193.41.14 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27446
- 193.41.15 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27446
- 193.41.17 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27447

193.41.17 GetGestureConfig(win as window, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Retrieves the configuration for which Windows Touch gesture messages are sent from a window.
Notes:

win: The window to get the gesture configuration from.
Flags: A gesture command flag value indicating options for retrieving the gesture configuration. Can be 1 to return consolidated configuration for the specified window and its parent window chain.
Config: an array of gesture configuration structures that specify the gesture configuration.

Please pass an empty array and the plugin appends config objects.

Return function returns number of configs found.
Returns -1 in case of error.
See also:

- 193.41.14 GetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27446
- 193.41.15 GetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27446
- 193.41.16 GetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS, flags as Integer = 0) as Integer 27447

193.41.18 IsMouseInPointerEnabled as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates whether EnableMouseInPointer is set for the mouse to act as a pointer input device and send pointer events.
Notes:

Requires Windows 8 or newer.

If EnableMouseInPointer is set, the return value is true.
If EnableMouseInPointer is not set, the return value is false.

EnableMouseInPointer can be called only once in the context of a process lifetime. Prior to the first call, Windows Store apps run with mouse-in-pointer enabled, as do any desktop applications that consume mshtml.dll. All other desktop applications run with mouse-in-pointer disabled.
On the first call to EnableMouseInPointer in the process lifetime, the state is changed as specified and the call succeeds.
On subsequent calls to EnableMouseInPointer, the state will not change. If the current state is not equal to the specified state, the call fails.
Call IsMouseInPointerEnabled to verify the mouse-in-pointer state.

193.41.19 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Same as other SetGestureConfig, but for a control, not a window.
See also:

- 193.41.20 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 27449
- 193.41.21 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean 27449
- 193.41.22 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 27449

193.41.20 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 17.0, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes: Same as other SetGestureConfig, but for a control, not a window.
See also:

- 193.41.19 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean 27448
- 193.41.21 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean 27449
- 193.41.22 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 27449

193.41.21 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 22.0, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes:

Win: The window to set the gesture configuration on.
config: An array of gesture configuration structures that specify the gesture configuration.

If the function succeeds, the return value is true, else false.

If you don't expect to change the gesture configuration, call SetGestureConfig at window creation time. If you want to dynamically change the gesture configuration, call SetGestureConfig in response to GestureNotify event.
See also:

- 193.41.19 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean 27448
- 193.41.20 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 27449
- 193.41.22 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean 27449

193.41.22 SetGestureConfig(win as window, config() as WinGestureConfigMBS = nil) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: Configures the messages that are sent from a window for Windows Touch gestures.
Notes:

Win: The window to set the gesture configuration on.
config: An array of gesture configuration structures that specify the gesture configuration.

If the function succeeds, the return value is true, else false.

If you don't expect to change the gesture configuration, call SetGestureConfig at window creation time. If you want to dynamically change the gesture configuration, call SetGestureConfig in response to GestureNotify event.
See also:

- 193.41.19 SetGestureConfig(Control as DesktopUIControl, config() as WinGestureConfigMBS = nil) as boolean 27448
- 193.41.20 SetGestureConfig(Control as RectControl, config() as WinGestureConfigMBS = nil) as boolean 27449
- 193.41.21 SetGestureConfig(win as DesktopWindow, config() as WinGestureConfigMBS = nil) as boolean 27449

193.41.23 Properties

193.41.24 WindowHandle as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The window handle.
Notes: (Read only property)

193.41.25 Events

193.41.26 Gesture(info as WinGestureInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Passes information about a gesture.
Notes: Return true, if you processed the message, else false.

193.41.27 GestureNotify

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Gives you a chance to set the gesture configuration.
Notes: When the GestureNotify event is received, the application can use SetGestureConfig to specify the gestures to receive.

193.41.28 PointerDeviceChange(Change as Integer, Param as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Sent to a window when there is a change in the settings of a monitor that has a digitizer attached to it.
Notes:

This message contains information regarding the scaling of the display mode.
See kDeviceChange* constants.

193.41.29 PointerDeviceInRange(Param1 as Integer, Param2 as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Sent to a window when a pointer device is detected within range of an input digitizer.
Notes:

This message contains information regarding the device and its proximity.

If the application processes this message, it should return true, else false.

193.41.30 PointerDeviceOutOfRange(Param1 as Integer, Param2 as Integer) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Sent to a window when a pointer device has departed the range of an input digitizer.
Notes:

This message contains information regarding the device and its proximity.

If the application processes this message, it should return true, else false.

193.41.31 PointerDown(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Posted when a pointer makes contact over the client area of a window.
Notes:

This input message targets the window over which the pointer makes contact, and the pointer is implicitly captured to the window so that the window continues to receive input for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down. A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Important When a window loses capture of a pointer and it receives the PointerCaptureChanged notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnter event is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate events while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a PointerLeave event.
When a pointer is aborted, kFlagCanceled is set.
A WM_POINTERLEAVE message may also be generated when a non-captured pointer moves outside the bounds of a window.

To convert the lParam parameter to a POINTS structure, use the MAKEPOINTS macro.
To retrieve further information associated with the message, use the GetPointerInfo function.
To determine the keyboard modifier key states associated with this message, use the GetKeyState function.
For example, to detect that the ALT key was pressed, check whether GetKeyState(VK_MENU) <0.
Note that if the application does not process this message, DefWindowProc may generate one or more WM_GESTURE messages if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, DefWindowProc may generate mouse input.
If an application selectively consumes some pointer input and passes the rest to DefWindowProc, the resulting behavior is undefined.
When a window loses capture of a pointer and receives the WM_POINTERCAPTURECHANGED notification, it will typically not receive any further notifications. Therefore, it is important that a window does not make any assumptions of its pointer status, regardless of whether it receives evenly paired DOWN / UP or ENTER / LEAVE notifications.

193.41.32 PointerEnter(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Sent to a window when a new pointer enters detection range over the window (hover) or when an existing pointer moves within the boundaries of the window.
Notes:

We provide Pointer ID, Flags, X and Y.

Contains the point location of the pointer.
Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	Indicates whether this message is the first message generated by a new pointer entering detection range (hover).
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Indicates whether this message was generated by a pointer that has not left detection range. This flag is always set for PointerEnter messages.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact. This flag is not set for a pointer in detection range (hover).

simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

The PointerEnter notification can be used by a window to provide feedback to the user while the pointer is over its surface or to otherwise react to the presence of a pointer over its surface.
This notification is only sent to the window that is receiving input for the pointer. The following table lists some of the situations in which this notification is sent.

Action	Flags Set	Notifications Sent To
A new pointer enters detection range (hover).	kFlagNew and kFlagInRange	Window over which the pointer enters detection range.
A hovering pointer crosses within the window boundaries.	kFlagInRange	Window within which the pointer has crossed.

Important:
When a window loses capture of a pointer and it receives the PointerCaptureChange notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

When inputs come from the mouse, as a result of mouse and pointer message integration, PointerEnter is not sent.

193.41.33 PointerHWheel(PointerID as Integer, Delta as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Posted to the window with foreground keyboard focus when a horizontal scroll wheel is rotated.
Notes:

We provide, the pointer ID, the delta and x/y coordinate.
Info object provides pointer details.

To retrieve the wheel scroll units, use the inputData filed of the WinPointerInfoMBS object. This field contains a signed value and is expressed in a multiple of WHEEL_DELTA (120). A positive value indicates a rotation forward and a negative value indicates a rotation backward.
Note that the wheel inputs may be delivered even if the mouse cursor is located outside of application's

window. The wheel messages are delivered in a way very similar to the keyboard inputs. The focus window of the foregournd message queue receives the wheel messages.

193.41.34 PointerLeave(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Sent to a window when a pointer leaves detection range over the window (hover) or when a pointer moves outside the boundaries of the window.
Notes:

We provide the pointer ID, Flags, X and Y values.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Indicates whether this message was generated by a pointer that has not left detection range. This flag is not set when the pointer leaves the detection range of the window.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact. This flag is not set for a pointer in detection range (hover).

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

The PointerLeave notification can be used by a window to change mode or stop any feedback to the user while the pointer is over the window surface.
This notification is only sent to the window that is receiving input for the pointer. The following table lists some of the situations in which this notification is sent.

Action	Flags Set	Notifications Sent To
A hovering pointer crosses window boundaries.	BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	Window outside of whose boundary the pointer moved.
A pointer goes out of detection range.	N/A	Window for which the pointer leaves detection range.

Important:
When a window loses capture of a pointer and it receives the PointerCaptureChange notification, it typically will not receive any further notifications. For this reason, it is important that you not make any assumptions based on evenly paired PointerDown/PointerUp or PointerEnter/PointerLeave notifications.

If contact is maintained with the input digitizer and the pointer moves outside the window, PointerLeave is not generated. PointerLeave is generated only when a hovering pointer crosses window boundaries or contact is terminated.

PointerLeave is posted to the posted message queue if the input is originated from a mouse device.

193.41.35 PointerUp(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Posted when a pointer that made contact over the client area of a window breaks contact.
Notes:

This input message targets the window over which the pointer makes contact and the pointer is, at that point, implicitly captured to the window so that the window continues to receive input messages including the WM_POINTERUP notification for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down. A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

See Pointer Flags for more details.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling

GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnter event is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.
During its lifetime, a pointer may generate a series of PointerUpdate event while it is hovering or in contact.
The lifetime of a pointer ends when it is no longer detected. This generates a WM_POINTERLEAVE message.
When a pointer is aborted, kFlagCanceled is set.
A PointerLeave event may also be generated when a non-captured pointer moves outside the bounds of a window.
To obtain the horizontal and vertical position of a pointer, use the following:

If the application does not process this message, Windows may generate one or more Gesture event if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, DefWindowProc may generate mouse input.
If an application selectively consumes some pointer input and passes the rest back to Windows, the resulting behavior is undefined.

193.41.36 PointerUpdate(PointerID as Integer, Flags as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Posted to provide an update on a pointer that made contact over the client area of a window or on a hovering uncaptured pointer over the client area of a window.
Notes:

While the pointer is hovering, the message targets whichever window the pointer happens to be over. While the pointer is in contact with the surface, the pointer is implicitly captured to the window over which the pointer made contact and that window continues to receive input for the pointer until it breaks contact.

We provide pointer ID, flags, X and Y.

A pen pointer will have this set when it is in contact with the digitizer surface with the pen barrel button

BitwiseAnd(flags, WinPointerInfoMBS.kFlagNew) <>0	A flag that indicates whether this message represents the first input generated by a new pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInRange) <>0	A flag that indicates whether this message was generated by a pointer during its lifetime. This flag is not set on messages that indicate that the pointer has left detection range
BitwiseAnd(flags, WinPointerInfoMBS.kFlagInContact) <>0	A flag that indicates whether this message was generated by a pointer that is in contact with the window surface. This flag is not set on messages that indicate a hovering pointer.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagPrimary) <>0	Indicates that this pointer has been designated as primary.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFirstButton) <>0	A flag that indicates whether there is a primary action. This is analogous to a mouse left button down. A touch pointer will have this set when it is in contact with the digitizer surface. A pen pointer will have this set when it is in contact with the digitizer surface with no buttons pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagSecondButton) <>0	A flag that indicates whether there is a secondary action. This is analogous to a mouse right button down.

pressed.

BitwiseAnd(flags, WinPointerInfoMBS.kFlagThirdButton) <>0	A flag that indicates whether there are one or more tertiary actions based on the pointer type; applications that wish to respond to tertiary actions must retrieve information specific to the pointer type to determine which tertiary buttons are pressed. For example, an application can determine the buttons states of a pen by calling GetPointerPenInfo and examining the flags that specify button states.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFourthButton) <>0	A flag that indicates whether the specified pointer took fourth action. Applications that wish to respond to fourth actions must retrieve information specific to the pointer type to determine if the first extended mouse (XButton1) button is pressed.
BitwiseAnd(flags, WinPointerInfoMBS.kFlagFifthButton) <>0	A flag that indicates whether the specified pointer took fifth action. Applications that wish to respond to fifth actions must retrieve information specific to the pointer type to determine if the second extended mouse (XButton2) button is pressed.

See Pointer Flags for more details.

Note:
A hovering pointer has none of the button flags set. This is analogous to a mouse move with no mouse buttons down. An application can determine the buttons states of a hovering pen, for example, by calling GetPointerPenInfo and examining the flags that specify button states.

Note:
Because the pointer may make contact with the device over a non-trivial area, this point location may be a simplification of a more complex pointer area. Whenever possible, an application should use the complete pointer area information instead of the point location.

If an application processes this message, it should return true, else false.

Each pointer has a unique pointer identifier during its lifetime. The lifetime of a pointer begins when it is first detected.
A PointerEnterevent is generated if a hovering pointer is detected. A PointerDown event followed by a PointerEnter event is generated if a non-hovering pointer is detected.

During its lifetime, a pointer may generate a series of PointerUpdate events while it is hovering or in contact. The lifetime of a pointer ends when it is no longer detected. This generates a PointerLeave event.
When a pointer is aborted, kFlagCanceled is set.
A PointerLeave event may also be generated when a non-captured pointer moves outside the bounds of a window.

If the application does not process this message, Windows may generate one or more Gesture event if the sequence of input from this and, possibly, other pointers is recognized as a gesture. If a gesture is not recognized, Windows may generate mouse input.
If an application selectively consumes some pointer input and passes the rest back to Windows, the resulting behavior is undefined.
If the application does not process these messages as fast as they are generated, some moves may be coalesced. The history of inputs that were coalesced into this message can be retrieved using the GetPointerInfoHistory function.

193.41.37 PointerWheel(PointerID as Integer, Delta as Integer, X as Integer, Y as Integer, info as WinPointerInfoMBS) as boolean

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: .

Function: Posted to the window with foreground keyboard focus when a vertical scroll wheel is rotated.
Notes:

We provide, the pointer ID, the delta and x/y coordinate.
Info object provides pointer details.

To retrieve the wheel scroll units, use the inputData filed of the WinPointerInfoMBS object. This field contains a signed value and is expressed in a multiple of WHEEL_DELTA (120). A positive value indicates a rotation forward and a negative value indicates a rotation backward.
Note that the wheel inputs may be delivered even if the mouse cursor is located outside of application's window. The wheel messages are delivered in a way very similar to the keyboard inputs. The focus window of the foregournd message queue receives the wheel messages.

193.41.38 Constants

193.41.39 kDeviceChangeArrival = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: A new device is attached.

193.41.40 kDeviceChangeAspectRatioPreserved = 2048

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: The display aspect ratio.

193.41.41 kDeviceChangeMapping = 256

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: The change in display to digitizer mapping.

193.41.42 kDeviceChangeModeCentered = 128

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: Centered display mode.

193.41.43 kDeviceChangeModeDefault = 64

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: The default display mode.

193.41.44 kDeviceChangeOrientation0 = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: Orientation of the device: 0°

193.41.45 kDeviceChangeOrientation180 = 16

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: Orientation of the device: 180°

193.41.46 kDeviceChangeOrientation270 = 32

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: Orientation of the device: 270°

193.41.47 kDeviceChangeOrientation90 = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: Orientation of the device: 90°

193.41.48 kDeviceChangeOrigin = 1024

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: The display origin.

193.41.49 kDeviceChangeRemoval = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: A device has been detached.

193.41.50 kDeviceChangeResolution = 512

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the device change flags.
Notes: Display resolution.

193.42 class WinPointerInfoMBS

193.42.1 class WinPointerInfoMBS

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for pointer input details.
Notes: This is an abstract class. You can't create an instance, but you can get one from various plugin functions.

193.42.2 Blog Entries

- Windows Touch Events

193.42.3 Blog Entries

- Windows Touch Events

193.42.4 Methods

193.42.5 Constructor

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop only.

Function: The private constructor.

193.42.6 Properties

193.42.7 ButtonChangeType as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Specifies the change in button state between this input and the previous input.
Notes:

See kPointerChange* constants.
(Read only property)

193.42.8 frameId as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An identifier common to multiple pointers for which the source device reported an update in a single input frame.
Notes:

For example, a parallel-mode multi-touch digitizer may report the positions of multiple touch contacts in a single update to the system.
Note that frame identifier is assigned as input is reported to the system for all pointers across all devices. Therefore, this field may not contain strictly sequential values in a single series of messages that a window receives. However, this field will contain the same numerical value for all input updates that were reported in the same input frame by a single device.
(Read only property)

193.42.9 HimetricLocationRawX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in HIMETRIC units.
Notes:

For adjusted screen coordinates, see HimetricLocation.
(Read only property)

193.42.10 HimetricLocationRawY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in HIMETRIC units.
Notes:

For adjusted screen coordinates, see HimetricLocation.
(Read only property)

193.42.11 HimetricLocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in HIMETRIC units.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptHimetricLocationRaw).
(Read only property)

193.42.12 HimetricLocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in HIMETRIC units.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptHimetricLocationRaw).
(Read only property)

193.42.13 historyCount as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Count of inputs that were coalesced into this message.
Notes:

This count matches the total count of entries that can be returned by a call to GetPointerInfoHistory. If no coalescing occurred, this count is 1 for the single input represented by the message.
(Read only property)

193.42.14 hwndTarget as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Window to which this message was targeted.
Notes:

If the pointer is captured, either implicitly by virtue of having made contact over this window or explicitly using the pointer capture API, this is the capture window. If the pointer is uncaptured, this is the window over which the pointer was when this message was generated.
(Read only property)

193.42.15 InputData as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: A value whose meaning depends on the nature of input.
Notes:

When flags indicate kFlagWheel, this value indicates the distance the wheel is rotated, expressed in multiples or factors of WHEEL_DELTA. A positive value indicates that the wheel was rotated forward and a negative

value indicates that the wheel was rotated backward.
When flags indicate kFlagWheel, this value indicates the distance the wheel is rotated, expressed in multiples or factors of WHEEL_DELTA. A positive value indicates that the wheel was rotated to the right and a negative value indicates that the wheel was rotated to the left.
(Read only property)

193.42.16 KeyStates as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Indicates which keyboard modifier keys were pressed at the time the input was generated.
Notes:

May be zero or a combination of the following values:

8	A SHIFT key was pressed.
4	A CTRL key was pressed.

(Read only property)

193.42.17 PerformanceCount as Int64

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The value of the high-resolution performance counter when the pointer message was received (high-precision, 64 bit alternative to Time).
Notes:

The value can be calibrated when the touch digitizer hardware supports the scan timestamp information in its input report.
(Read only property)

193.42.18 PixelLocationRawX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in pixels.
Notes:

For adjusted screen coordinates, see PixelLocation.
(Read only property)

193.42.19 PixelLocationRawY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The screen coordinates of the pointer, in pixels.
Notes:

For adjusted screen coordinates, see PixelLocation.
(Read only property)

193.42.20 PixelLocationX as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in pixels.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptPixelLocationRaw).
(Read only property)

193.42.21 PixelLocationY as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The predicted screen coordinates of the pointer, in pixels.
Notes:

The predicted value is based on the pointer position reported by the digitizer and the motion of the pointer. This correction can compensate for visual lag due to inherent delays in sensing and processing the pointer location on the digitizer. This is applicable to pointers of type touch. For other pointer types, the predicted value will be the same as the non-predicted value (see ptPixelLocationRaw).
(Read only property)

193.42.22 pointerFlags as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: May be any reasonable combination of flags from the flags constants.
Notes:

See kFlag* constants.
(Read only property)

193.42.23 pointerId as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: An identifier that uniquely identifies a pointer during its lifetime.
Notes:

A pointer comes into existence when it is first detected and ends its existence when it goes out of detection range. Note that if a physical entity (finger or pen) goes out of detection range and then returns to be detected again, it is treated as a new pointer and may be assigned a new pointer identifier.
(Read only property)

193.42.24 pointerType as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The pointer type.
Notes:

See kType* constants.
(Read only property)

193.42.25 sourceDevice as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: Handle to the source device that can be used in calls to the raw input device API and the digitizer device API.
Notes: (Read only property)

193.42.26 Time as Integer

MBS Win Plugin, Plugin Version: 16.2, Platform: Windows, Targets: Desktop, Console & Web.

Function: The time of the event.
Notes:

Value is 0 or the time stamp of the message, based on the system tick count when the message was received. The application can specify the input time stamp in either Time or PerformanceCount. The value cannot be more recent than the current tick count or QueryPerformanceCount (QPC) value of the injection thread. Once a frame is injected with a time stamp, all subsequent frames must include a timestamp until all contacts

in the frame go to an UP state. The custom timestamp value must also be provided for the first element in the contacts array. The time stamp values after the first element are ignored. The custom timestamp value must increment in every injection frame.
When PerformanceCount is specified, the time stamp will be converted to the current time in .1 millisecond resolution upon actual injection. If a custom PerformanceCount resulted in the same .1 millisecond window from the previous injection, ERROR_NOT_READY is returned and injection will not occur. While injection will not be invalidated immediately by the error, the next successful injection must have a PerformanceCount value that is at least 0.1 millisecond from the previously successful injection. This is also true if Time is used.
If both Time and PerformanceCount are specified in InjectTouchInput, ERROR_INVALID_PARAMETER is returned.
InjectTouchInput cannot switch between Time and PerformanceCount once injection has started.
If neither Time and PerformanceCount are specified, InjectTouchInput allocates the timestamp based on the timing of the call. If InjectTouchInput calls are repeatedly less than 0.1 millisecond apart, ERROR_NOT_READY might be returned. The error will not invalidate the input immediately, but the injection application needs to retry the same frame again for injection to succeed.
(Read only property)

193.42.27 Constants

193.42.28 kFlagCanceled = & h8000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates that the pointer is departing in an abnormal manner, such as when the system receives invalid input for the pointer or when a device with active pointers departs abruptly. If the application receiving the input is in a position to do so, it should treat the interaction as not completed and reverse any effects of the concerned pointer.

193.42.29 kFlagCaptureChanged = & h200000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates that this pointer was captured by (associated with) another element and the original element has lost capture.

193.42.30 kFlagConfidence = & h4000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.

Notes: Confidence is a suggestion from the source device about whether the pointer represents an intended or accidental interaction, which is especially relevant for touch pointers where an accidental interaction (such as with the palm of the hand) can trigger input. The presence of this flag indicates that the source device has high confidence that this input is part of an intended interaction.

193.42.31 kFlagDown = & h10000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates that this pointer transitioned to a down state; that is, it made contact with the digitizer surface.

193.42.32 kFlagFifthButton = & h100

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Analogous to a second extended mouse (XButton2) button down.
A touch pointer does not use this flag.
A pen pointer does not use this flag.
A mouse pointer has this flag set when the second extended mouse (XBUTTON2) button is down.

193.42.33 kFlagFirstButton = & h10

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Indicates a primary action, analogous to a left mouse button down.
A touch pointer has this flag set when it is in contact with the digitizer surface.
A pen pointer has this flag set when it is in contact with the digitizer surface with no buttons pressed.
A mouse pointer has this flag set when the left mouse button is down.

193.42.34 kFlagFourthButton = & h80

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Analogous to a first extended mouse (XButton1) button down.
A touch pointer does not use this flag.
A pen pointer does not use this flag.
A mouse pointer has this flag set when the first extended mouse (XBUTTON1) button is down.

193.42.35 kFlagHasTransform = & h400000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates that this pointer has an associated transform.

193.42.36 kFlagHWheel = & h100000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates input associated with a pointer h-wheel. For mouse pointers, this is equivalent to the action of the mouse horizontal scroll wheel.

193.42.37 kFlagInContact = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Indicates that this pointer is in contact with the digitizer surface.
When this flag is not set, it indicates a hovering pointer.

193.42.38 kFlagInRange = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Indicates that this pointer continues to exist. When this flag is not set, it indicates the pointer has left detection range.

This flag is typically not set only when a hovering pointer leaves detection range (kFlagUpdate is set) or when a pointer in contact with a window surface leaves detection range (kFlagUp is set).

193.42.39 kFlagNew = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates the arrival of a new pointer.

193.42.40 kFlagNone = 0

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Default

193.42.41 kFlagPrimary = & h2000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Indicates that this pointer has been designated as the primary pointer. A primary pointer is a single pointer that can perform actions beyond those available to non-primary pointers. For example, when a primary pointer makes contact with a window's surface, it may provide the window an opportunity to activate by sending it a PointerActivate event.
The primary pointer is identified from all current user interactions on the system (mouse, touch, pen, and so on). As such, the primary pointer might not be associated with your app. The first contact in a multi-touch interaction is set as the primary pointer. Once a primary pointer is identified, all contacts must be lifted before a new contact can be identified as a primary pointer. For apps that don't process pointer input, only the primary pointer's events are promoted to mouse events.

193.42.42 kFlagSecondButton = & h20

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Indicates a secondary action, analogous to a right mouse button down.

A touch pointer does not use this flag.
A pen pointer has this flag set when it is in contact with the digitizer surface with the pen barrel button pressed.
A mouse pointer has this flag set when the right mouse button is down.

193.42.43 kFlagThirdButton = & h40

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes:

Analogous to a mouse wheel button down.
A touch pointer does not use this flag.
A pen pointer does not use this flag.
A mouse pointer has this flag set when the mouse wheel button is down.

193.42.44 kFlagUp = & h40000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates that this pointer transitioned to an up state; that is, contact with the digitizer surface ended.

193.42.45 kFlagUpdate = & h20000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates that this is a simple update that does not include pointer state changes.

193.42.46 kFlagWheel = & h80000

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the flag constants.
Notes: Indicates input associated with a pointer wheel. For mouse pointers, this is equivalent to the action of the mouse scroll wheel.

193.42.47 kPointerChangeFifthButtonDown = 9

MBS Win Plugin, Plugin Version: 16.2.

Function: The fifth button transitioned to a pressed state.

193.42.48 kPointerChangeFifthButtonUp = 10

MBS Win Plugin, Plugin Version: 16.2.

Function: The fifth button transitioned to a released state.

193.42.49 kPointerChangeFirstButtonDown = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: The first button transitioned to a pressed state.

193.42.50 kPointerChangeFirstButtonUp = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: The first button transitioned to a released state.

193.42.51 kPointerChangeFourthButtonDown = 7

MBS Win Plugin, Plugin Version: 16.2.

Function: The fourth button transitioned to a pressed state.

193.42.52 kPointerChangeFourthButtonUp = 8

MBS Win Plugin, Plugin Version: 16.2.

Function: The fourth button transitioned to a released state.

193.42.53 kPointerChangeNone = 0

MBS Win Plugin, Plugin Version: 16.2.

Function: No change in button state.

193.42.54 kPointerChangeSecondButtonDown = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: The second button transitioned to a pressed state.

193.42.55 kPointerChangeSecondButtonUp = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: The second button transitioned to a released state.

193.42.56 kPointerChangeThirdButtonDown = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: The third button transitioned to a pressed state.

193.42.57 kPointerChangeThirdButtonUp = 6

MBS Win Plugin, Plugin Version: 16.2.

Function: The third button transitioned to a released state.

193.42.58 kTypeMouse = 4

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the pointer types.
Notes: Mouse pointer type.

193.42.59 kTypePen = 3

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the pointer types.
Notes: Pen pointer type.

193.42.60 kTypePointer = 1

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the pointer types.
Notes:

Generic pointer type.
This type never appears in pointer messages or pointer data. Some data query functions allow the caller to restrict the query to specific pointer type. The kTypePointer type can be used in these functions to specify that the query is to include pointers of all types

193.42.61 kTypeTouch = 2

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the pointer types.
Notes: Touch pointer type.

193.42.62 kTypeTouchpad = 5

MBS Win Plugin, Plugin Version: 16.2.

Function: One of the pointer types.
Notes: Touchpad pointer type (Windows 8.1 and later).

193.43 class WinThreadPoolMBS

193.43.1 class WinThreadPoolMBS

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class to control Windows Thread Pool.
Example:

```
static pool as WinThreadPoolMBS // global or window property

pool = New WinThreadPoolMBS
pool.ThreadMaximum = 4
```

Notes:

You can have an instance of this class to create and define a thread pool.
If you never initialize a pool with this class, the default pool is used.

193.43.4 Methods

193.43.5 Constructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The constructor.

193.43.6 Destructor

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.

193.43.7 Properties

193.43.8 Handle as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The internal handle of the thread pool.
Notes: (Read and Write property)

193.43.9 LastError as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code.
Notes: (Read and Write property)

193.43.10 StackCommit as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stack commit size.
Notes:

Default is 4 KB for the default stack grow size.
The rate the stack grows.
Should be in page size multiplies, e.g. 4096.

Sets the stack reserve and commit sizes for new threads in the specified thread pool. Stack reserve and commit sizes for existing threads are not changed.
(Read and Write property)

193.43.11 StackReserve as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The stack reservie size.
Example:

```
static pool as WinThreadPoolMBS // property or global

// increase stack size from default
pool = New WinThreadPoolMBS
pool.StackReserve = 2048*1024
```

Notes:

Default is 1 MB for the default stack size.
The rate the stack grows.
Should be in page size multiplies, e.g. 4096.

Sets the stack reserve and commit sizes for new threads in the specified thread pool. Stack reserve and commit sizes for existing threads are not changed.
(Read and Write property)

193.43.12 ThreadMaximum as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The upper limit for thread count.
Example:

```
static pool as WinThreadPoolMBS // property or global

pool = New WinThreadPoolMBS
pool.StackReserve = 2048*1024
pool.ThreadMaximum = 4
```

Notes:

Default for Windows is 500, but it may be much lower in practice as it's relative to the number of CPU cores and jobs.
(Read and Write property)

193.43.13 ThreadMinimum as Integer

MBS Win Plugin, Plugin Version: 21.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The lower limit for thread count.
Notes:

Default 0 to allow having no thread.
(Read and Write property)

193.44 class WMIObjectMBS

193.44.1 class WMIObjectMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The class for a WMI object.

193.44.2 Blog Entries

193.44.4 Methods

193.44.5 GetNames as string()

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Queries the names of all properties in this object.

193.44.6 GetProperty(Name as string) as Variant

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a variant.
Notes:

Objects, booleans, strings and numbers are supported directly. Also string arrays in version 13.1. Other values are casted to string first.

193.44.7 GetPropertyBoolean(Name as string) as Boolean

MBS Win Plugin, Plugin Version: 13.4, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as an integer.
Notes: Value must be of a numeric type.

193.44.8 GetPropertyDouble(Name as string) as Double

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as a double.
Notes: Value must be of a numeric type.

193.44.9 GetPropertyInt64(Name as string) as Int64

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as an integer value.

193.44.10 GetPropertyInteger(Name as string) as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as an integer.
Example:

```
dim w as WindowsWMIMBS // your WMI object

MsgBox str(w.GetPropertyInteger("MaxClockSpeed")) // uint32
```

Notes: Value must be of a numeric type.

193.44.11 GetPropertyObject(Name as string) as WMIObjectMBS

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a value as an object.
Notes: Value must be of an IUnknown type.

193.44.12 GetPropertyString(Name as string) as string

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a string.
Example:

```
dim w as WindowsWMIMBS
MsgBox w.GetPropertyString("Name") // string
```

193.44.13 GetPropertyStringArray(Name as string) as string()

MBS Win Plugin, Plugin Version: 13.1, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets a property as a string array.
Example:

```
dim w as WindowsWMIMBS
MsgBox join(w.GetPropertyStringArray("Name"), ", ")
```

193.44.14 GetPropertyType(Name as string) as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the type of a property.
Notes: You can send in the value you get here and the plugin can be changed to handle this type, too. Currently only numbers and strings are handled.

193.44.15 GetPropertyTypeString(Name as string) as string

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Gets the type of a property as a string.
Notes: For example type 8 is returned as "string".

193.44.16 Properties

193.44.17 Handle as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: Internal object reference.
Notes: (Read and Write property)

193.44.18 Lasterror as Integer

MBS Win Plugin, Plugin Version: 12.0, Platform: Windows, Targets: Desktop, Console & Web.

Function: The last error code reported from one of the functions.
Notes:

-1 is the value used by the plugin if the function is not available.
(Read and Write property)

193.44.19 LasterrorMessage as String

MBS Win Plugin, Plugin Version: 13.5, Platform: Windows, Targets: Desktop, Console & Web.

Function: The error message for the last error.
Notes:

This may help to debug the errors.
(Read only property)

Chapter 194

Windows Console

194.1 class ConsoleStateMBS

194.1.1 class ConsoleStateMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for handling a console window state.

194.1.2 Properties

194.1.3 BackColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The colorcode of the background.
Notes:

Color codes can be build up from red, blue, green and highlight.
red=1, blue=2, green=4 and highlight=8.
(Read and Write property)

194.1.4 CursorX as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The horizontal cursor position in characters.
Notes: (Read and Write property)

194.1.5 CursorY as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The vertical cursor position in characters.
Notes: (Read and Write property)

194.1.6 Height as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the window in characters.
Notes: (Read and Write property)

194.1.7 MaxHeight as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum height of the window in characters.
Notes: (Read and Write property)

194.1.8 MaxWidth as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The maximum width of the window in characters.
Notes: (Read and Write property)

194.1.9 TextColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The colorcode of the text.
Notes:

Color codes can be build up from red, blue, green and highlight.
red=1, blue=2, green=4 and highlight=8.
(Read and Write property)

194.1.10 Width as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the window in characters.
Notes: (Read and Write property)

194.1.11 WindowHeight as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The height of the console window.
Notes: (Read and Write property)

194.1.12 WindowLeft as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The left position of the console window.
Notes: (Read and Write property)

194.1.13 WindowTop as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The top position of the console window.
Notes: (Read and Write property)

194.1.14 WindowWidth as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The width of the console window.
Notes: (Read and Write property)

194.2 class WindowsConsoleMBS

194.2.1 class WindowsConsoleMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: A class for handling a console window in Windows.

194.2.2 Methods

194.2.3 Close

MBS Win Plugin, Plugin Version: 4.3, Platform: Windows, Targets: Desktop, Console & Web.

Function: The destructor.
Notes: There is no need to call this method except you want to free all resources of this object now without waiting for Xojo to do it for you.

194.2.4 FlushConsole

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The FlushConsole function flushes the console input buffer.
Notes: All input records currently in the input buffer are discarded.

194.2.5 ReadConsole(maxcount as Integer) as string

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Reads maximum of maxcount characters from the input stream.

194.2.6 SetCursorPosition(x as Integer,y as Integer)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the cursor position inside the console window.

194.2.7 SetWindowPosition(absolute as boolean, left as Integer,top as Integer, right as Integer, bottom as Integer)

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Sets the window position and size.
Notes: If absolute=false, the coordinates are relative to the current one.

194.2.8 State as ConsoleStateMBS

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The current state of the console window.

194.2.9 WriteConsole(message as string) as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Writes the message to the console.
Notes: Returns true if successfull.

194.2.10 Properties

194.2.11 AutoScrollAtEOL as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Automatical scrolling at end of line?
Notes:

When writing with WriteConsole or echoing with ReadFile, the cursor moves to the beginning of the next row when it reaches the end of the current row. This causes the rows displayed in the console window to scroll up automatically when the cursor advances beyond the last row in the window. It also causes the contents of the screen buffer to scroll up (discarding the top row of the screen buffer) when the cursor advances beyond the last row in the screen buffer. If this mode is disabled, the last character in the row is overwritten with any subsequent characters.
(Read and Write property)

194.2.12 BackColor as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The text background color used.
Notes: (Read and Write property)

194.2.13 CursorSize as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: The size of the cursor in percent (from 0 to 100).
Notes: (Read and Write property)

194.2.14 CursorVisible as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Is the cursor visible?
Notes: (Read and Write property)

194.2.15 EchoInput as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Echo the input on the screen?
Notes:

Characters read by the ReadFile function are written to the active screen buffer as they are read. This mode can be used only if the WaitForReturn mode is also enabled.
(Read and Write property)

194.2.16 GotConsole as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: whether the console was created inside the constructor.
Notes: (Read only property)

194.2.17 InputCodepage as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Codepage of the input stream.
Notes: (Read and Write property)

194.2.18 OutputCodepage as Integer

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Codepage of the output stream.
Notes: (Read and Write property)

194.2.19 ProcessInput as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Process input before reading?
Notes:

Ctrl+c is processed by the system and is not placed in the input buffer. If the input buffer is being read by ReadConsole, other control keys are processed by the system and are not returned in the ReadConsole buffer. If the WaitForReturn mode is also enabled, backspace, carriage return, and linefeed characters are handled by the system.
(Read and Write property)

194.2.20 ProcessOutput as boolean

MBS Win Plugin, Platform: Windows, Targets: Desktop, Console & Web.

Function: Process output before reading?
Notes:
